To which is added a Tractate of the Cure of Infants. *Part* 1. Of the Diet and Government of Infants. The *second Section.* Of Diseases and Symptoms in Children.

6. *Sennertus* fifth Book of Practical Physick, Or the Art of Chyrurgery in six Parts. 1. Of Tumors. 2. Of Ulcers. 3. Of the Skin, Hair and Nails. 4. Of Wounds, with an excellent Treatise of the Weapon Salve. 5. Of Fractures. 6. Of Luxations.

7. *Sennertus* sixth and last Book of Practical Physick in nine Parts. 1. Of Diseases from occult Qualities in general 2. Of occult, malignant, and venemous Diseases arising from the internal fault of the humors. 3 Of occult Diseases from water, air, and infections, and of infectious diseases. 4. Of the Venereal Pox. 5. Of outward Poysons in general. 6. Of Poysons from Minerals and Metals. 7. Of Poysons from Plants. 8. Of Poysons that come from Living Creatures. 9. Of Diseases by Witchcraft, Incantation, and Charmes.

8. *Sennertus* Treatise of Chymistry, shewing the Agreement and Disagreement of Chymists and Galenists.

9. *Sennertus* two Treatises. 1. Of the Pox. 2. Of the Gout.

10 *Sennertus* thirteen Books of Natural Philosophy: Or the Nature of all things in the world.

11. Twenty four Books of the Practice of Physick, being the Works of that Learned and Renowned Doctor *Lazarus Riverius*, Physitian and Counsellor to the late King, &c.

12. Idea of Practical Physick in twelve Books.

13. *Bartholinus* Anatomy, with very many larger Brass Figures, than any other Anatomy in English.

14. *Veslingus* Anatomy of the Body of Man

15. *Riolanus* Anatomy.

16. A Translation of the New Dispensatory, made by the Colledg of Physitians of *London*, in Folio and in Octavo. Whereunto is added, The Key of *Galen's* Method of Physick.

17. A Directory for Midwives, or a guide for women

18. *Galens* Art of Physick.

19. A new Method both of studying and practising Physick.

20. A Treatise of the Rickets.

21. Medicaments for the Poor: Or, Physick for the Common People.

22. Health for the Rich and Poor, by Diet without Physick

23. One thousand New, Famous and Rare Cures, in Folio and Octavo.

24. A Treatise of Pulses and Urins.

25. A Treatise of Bloodletting, and Cures performed thereby.

26. A Treatise of Scarification, and Cures performed thereby.

27. The English Physitian enlarged.

The *London Dispensatory* in Folio, of a great Caracter in Latin.

Divinity Books Printed by Peter Cole, &c.

Eighteen Several Books of Mr. *Burroughs's* viz. on *Matth.* 11.

1 Christs Call to all those that are weary and heavy laden, to come to him for rest.

2 Christ the great Teacher of Souls that come to him.

3 Christ the Humble Teacher of those that come to him.

4 The only easie way to Heaven.

5 The Excellency of Holy Courage in Evil times.

6 Gospel Reconciliation.

7 The Rare Jewel of Christian Contentment.

8 Gospel-Worship.

9 Gospel-Conversation.

10 A Treatise of *Earthly Mindedness*, and of *Heavenly Mindedness*, and Walking with God. And eight several Books more.

Twenty one several Books of Mr. Willia n Bridge, *Collected into two Volumes*, Viz.

1 Scripture light, the most sure Light.

2 Christ in Travel.

3 A lifting up for the cast down.

4 Sin against the Holy Ghost.

5 Sins of Infirmity.

6 The false Apostle tried and discovered.

7 The good and means of Establishment.

8 The great things Faith can do.

9 The great things Faith can suffer.

10 The great Gospel Mystery of the Saints Comfort and Holiness, opened and applied from Christs Priestly Office. And eleven several Books more.

New Books of Mr. *Sydrach Sympson*, *VIZ.*

1 Of Unbelief, or the want of readiness to lay hold on the comfort given by Christ.

2 Not going to Christ for Life and Salvation, is an exceeding great sin, yet pardonable.

3 Of Faith, *Or*, That believing is receiving Christ; and receiving Christ, is believing.

4 Of Coveteousness.

Mr. Hookers *New Books in three Volumes: One in Octavo, and two in Quarto.*

These Eleven New Books of Mr. *Thomas Hooker* made in *New-England*, are attested in an Epistle by Mr. *Thomas Goodwin* and Mr. *Philip Nye*, to be written with the Authors own hand: None being written by himself before. One Volume being a Comment upon Christ's last Prayer, in the seventeenth of *John.*

Mr. *Rogers* on *Naaman* the Syrian, his Disease and Cure discovering the Leprosie of Sin and Self love, with the Cure, *viz.* Self-denial and Faith

A Godly and fruitful Exposition, on the first Epistle of *Peter*: By Mr. *John Rogers*, Minister of the word of God at *Dedham* in *Essex.*

An Exposition on the Gospel of the Evangelist St. *Matthew*: By Mr. *Ward.*

Mr. *Stephen Marshals* New WORKS.

A

GOLDEN Practice of Physick.

IN

FIVE BOOKS,

AND

Three Tomes.

After a New, Easie, and Plain Method; of Knowing, Foretelling, Preventing, and Curing, all Diseases Incident to the Body of Man.

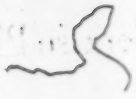
Full of Proper Observations and Remedies: Both of Ancient and Modern Physitians.

Being the Fruits of one and thirty years Travel: And fifty years Practice of Physick.

By { *Felix Plater*, Cheif Physitian and Professor in Ordinary at *Basil*. And *R. W.*
Abdiah Cole, Doctor of Physick, and the Liberal Arts.
Nich. Culpeper, Gent. Student in Physick, and Astrology.

Unto which is added two excellent Treatises.
1. *Of the French Pox.* 2. *Of the Gout.*

LONDON:
Printed by *Peter Cole*, Printer and Book-seller, at the Sign of the Printing-press in Cornhill, near the Royal Exchange. 1662.



To the Reader.

Concerning the Order or Method of the whole Work.

THe Infirmities that hurt mens bodies (which are againſt and beſides Nature) being **T**hree namely, **T**he *Diſeaſe*, the *Cauſe*, and the *Symptome*. We ſhall begin at thoſe Infirmities which are manifeſt to ſenſe, which the Patient and all Standers by may eaſily perceive, and ſuch as they firſt complain of to the Phyſitian: And according to theſe manifeſt Infirmities we have in all our practical writings, divided the Heads.

Theſe Infirmities are commonly *Symptomes*, all which are apparent to *Senſe*, and are ſigns of other Infirmities from whence they proceed, namely, of the Diſeaſes and cauſes of them, which two are propounded and explained in the cauſes of the *Symptomes*. Therefore we propound no peculiar heads of ſecret Diſeaſes that are not apparent to ſenſe (as of the Diſtemper or obſtruction of the Liver or Stomach) as others do who in writing their practice, ſometimes treat in their Chapters under the names of Diſeaſes, and ſomtimes under the names of Symptomes. But we treat only under the names of Symptomes, and deſcribe their Diſeaſes in the cauſes (as in thoſe mentioned of the Liver and Stomach, and in the cauſes of Heart-burning, Loathing, Vomiting, Cachexy and Dropſie) The Diſeaſes apparent to Senſe as thoſe that are without, as Tumors, Ulcers, &c. and the like, are explained as Symptomes, in their particular chapters. Moreover in regard theſe Infirmities apparent to ſenſe are ſeldom ſimple, or one alone, but many, and of divers kinds; we (although they ſhal be mentioned in general) ſhall treat particularly of them in their Kinds, Cauſes, and Cures, where they moſt declare themſelves: As for example; although we ſpeak particularly of a *Suffuſion* which is a Film in the Eye that hinders Sight, in the chapter of the hurt of Sight, yet we ſpeak alſo of it in the general, in the Deſcription of Faults in the Eye.

The cheif kinds of all Diſeaſes apparent to ſenſe, are obſerved in the Hurt of Functions of Man, or other accidents, as moleſtations and pains, Deformities and Corruptions: or in things ejected.

In this work we ſhall ſpeak firſt of the Functions Hurt, how they are out of order, either in quantity when they are defective wholly, or in part; or in quality when they are depraved, or not right. The firſt Book ſpeaks of the *Hurt of Senſe*, the ſecond, of the *Hurt of Motion*, under which all the Hurts of Functions are comprehended. In the Books following, we ſhal ſpeak of Accidents, and things ejected.

Yours {*Felix Plater*, *Abdiah Cole*.

Books Printed by Peter Cole, *Printer and Book-seller of* London, *at the Sign of the Printing-preſs, near the Royal Exchange.*

Several Phyſick Books of Nich. Culpeper *Phyſitian and Aſtrologer; and* Abdiah Cole *Doctor of Phyſick, and of the Liberal Arts.*

The Phyſitians Library, containing all the Works in Engliſh of Riverius, Sennertus, *Dr.* Plater, *Dr.* Cole *and* Nich. Culpeper; *In that Order they ought to be Read and Studied, in ſeveral Volums.*

1. A GOULDEN Practice of Phyſick: After a new eaſie and plain Method, of Knowing, Foretelling, Preventing and Curing all Diſeaſes Incident to the Body of Man. Ful of proper Obſervations and Remedies: Both of Ancient and Moderne Phyſitians. Being the Fruit of one and thirty years Travel: And fifty years Practice of Phyſick. By Dr. *Plater*, Dr. *Cole* and *Nich. Culpeper.*

2. *Sennertus* thirteen Books of Natural Phyloſophy: Or, the Nature of all things in the World.

3. *Riolanus* Anatomy.

4. The Engliſh Phyſitian Enlarged.

5. *Sennertus* Art of Chyrurgery in ſix Parts. 1. Of Tumors. 2. Of Ulcers. 3. Of the Skin, Hair and Nailes. 4. Of Wounds: with an excellent Treatiſe of the weapon Salve. 5. Of Fractures. 6. Of Luxations.

6. *Sennertus* two Treatiſes. 1. Of the Pox. 2. Of the Gout.

7. Idea of Practical Phyſick in twelve Books.

8. Twenty four Books of the Practice of Phyſick, being the Works of that Learned and Renowned Doctor, *Lazarus Riverius*: Phyſitian and Councellor to the late King, &c.

9. *Veſlingus* Anatomy of the Body of Man.

10. A Tranſlation of the New Diſpenſatory, made by the Colledg of Phyſitians of *London*. Wherein is added, The Key to *Galens* Method of Phyſick, in Folio, and in Octavo.

11. A Directory for Midwives, or a Guide for Women.

12. *Galens* Art of Phyſick.

13. New Method both of ſtudying and practiſing Phyſick.

14. A Treatiſe of the Rickets.

15. Medicaments for the Poor, Or Phyſick for the Common People.

16. Health for the Rich and Poor, by Diet without Phyſick.

17. Three hundred new Famous and Rare Cures, in Folio, and Octavo.

The *London Diſpenſatory* in Folio, of a great Character in Latin.

The *London Diſpenſatory* in twelves, a ſmall Pocket Book in Latin.

Mr. *Burroughs* WORKS, *Viz.* on *Matthew*, 11.

1. Chriſts call to all thoſe that are Weary, and Heavy Laden, to come to him for Reſt.

2. Chriſt the Great Teacher of Souls that come to him.

3. Chriſt the Humble Teacher of thoſe that come to him.

4. The only Eaſie way to Heaven.

5. The Excellency of holy Courage in Evil Times.

6. Goſpel Reconciliation.

7. The Rare Jewel of Chriſtian Contentment.

8. Goſpel-Worſhip.

9. Goſpel-Converſation.

10. A Treatiſe of *Earthly Mindedneſs.*

11. An Expoſition of the Propheſie of *Hoſea.*

12. The Evil of Evils, or the exceeding ſinfulneſs of Sin.

13. Of Precious Faith.

14. Of Hope.

15. Of Walking by Faith.

16. A Catechiſm.

17. *Moſes* Choice.

Twenty one ſeveral Books of Mr. William Bridge, *Collected into two Volums,* VIZ.

1. Scripture Light the moſt ſure Light.

2. Chriſt in Travel.

3. A Lifting up for the caſt down.

4. Of the Sin againſt the Holy Ghoſt.

5. Of Sins of Infirmity.

6. The falſe Apoſtle tried and diſcovered.

7. The good and means of Eſtabliſhment.

8. The great things Faith can do.

9. The great things Faith can ſuffer.

10. The Great Goſpel Myſtery of the Saints Comfort and Holyneſs, opened and applyed from Chriſts Prieſtly Office.

11. Satans power to Tempt, and Chriſts Love to, and Care of his People under Temptation.

12. Thankfulneſs required in every Condition.

13. Grace for Grace. A Treatiſe of Chriſts fulneſs.

New Books of Mr. *Sydrach Simpſon,* VIZ.

1. Of Unbeleif; or the want of Readineſs to lay hold on the comfort given by Chriſt.

2. Not going to Chriſt for Life and Salvation, is an exceeding great Sin, yet Pardonable.

3. Of Faith, *Or*, That beleeving is receiving Chriſt; And receiving Chriſt is Beleeving.

4. Of Coveteouſneſs.

Mr. Hookers *New Books in three Volums: One in Octavo, and two in Quarto.*

Theſe Eleven New Books of Mr. *Thomas Hooker* made in *New England.* Are atteſted in an Epiſtle by Mr. *Thomas Goodwin*, and Mr. *Philip Nye*, To be written with the Authors own hand: None being written by himſelf before. One Volum being a Comment upon Chriſt's laſt Prayer in the ſeventeenth of *John.*

Wherein is ſhewed,

1. That the end why the Saints receive all glorious Grace, is, That they may be one, as the Father and Chriſt are one.

2. That God the Father loveth the Faithful, as he loveth Jeſus Chriſt.

3. That our Savior deſired to have the Faithful in Heaven with himſelf.

4. That the Happineſs of our being in Heaven, is, to ſee Chriſts Glory.

5. That there is much wanting in the Knowledg of Gods Love, in the moſt able Saints.

6. That the Lord Chriſt lends dayly Direction, according to the dayly Need of his Servants.

7. That it is the deſire and endeavor of our Savior, that the deareſt of Gods Love, which was beſtowed on himſelf, ſhould be given to his faithful Servants.

8. That our Union and Communion with God in Chriſt, is the top of our Happineſs in Heaven.

Ten Books of the Application of Redemption by the Effectual Work of the Word, and Spirit of Chriſt, for the bringing home of loſt ſinners to God. By *Thomas Hooker.*

Dr. Hills *WORKS.*

The Kings Tryal at the High Court of Juſtice.

The Wiſe Virgin Publiſhed by Mr. *Thomas Weld*, of *New-England.*

A Godly and Fruitful Expoſition, on the firſt Epiſtle of *Peter.* By Mr. *John Rogers*, Miniſter of the Word of God at *Dedham* in *Eſſex.*

Mr. *Rogers* on *Naaman* the Syrian, his Diſeaſe and Cure: Diſcovering the Leproſie of Sin and Self-love; with the Cure, *viz.* Self-denial and Faith.

THE

THE FIRST BOOK OF THE Hurts of the Functions.

Containing the Hurt of the *SENSES.*

THe Senſes are Internal or External, we ſhall ſpeak firſt of the Internal, for they being hurt, the External Senſes and motions are ſomtimes offended, the Internal Senſes are three. Imagination, Reaſon, and Memory, which we call all together by the name of the Mind, when theſe are hurt they either ſuffer all together or particularly.

The Functions of the mind are defective, when they are Diminiſhed or Aboliſhed. For by accident when the vital motion is hurt, theſe Functions may ceaſe as well as the reſt in the whole Body, but then they are refer'd to the hurts of vital motion, and there explained.

The Functions of the Mind are diminiſhed, when they do not ſufficiently act, in their divers kinds, as when there is dulneſs of Mind, ſlow Wit, Imprudence, forgetfulneſs of which we ſhall ſpeak in Imbecility of Mind, the firſt Chapter, Page 1.

The Functions are aboliſhed when they are not, as in divers kinds of Sleep and Aſtoniſhments, as when there is immoderate Sleep, or profound Sleep, Carus, Lethargy, Typhomania, Deviliſh Sleep, Sleep with aſtoniſhment, Ecplixis, Apoplexy, Epilepſie, Convulſion, Catalepſis or Congelation, Extaſie. Of which we ſhall ſpeak under the title Conſternation of Mind, Chapter the ſecond, Page 4.

The actions of the Mind are depraved when they are, but not decently; as they ſhould be; or more then they ought to be.

The internal Senſes are prepoſterous in divers kinds, as when there is Fooliſhneſs, Drunkenneſs, commotion of Mind, Love, Melancholy, Hypochondriack Melancholly, Madneſs, deviliſh Poſſeſſion, fear of water, Phrenſie, Paraphrenitis, Saltus vitæ, of which under Alienation of Mind, Chapter the third, Page 26.

The Functions are more then ordinary in Watchings and Dreams, of which we ſhall ſpeak in Defatigation of Mind, Chapter the fourth, Page 47.

The external Senſes are five: Touching, Taſting, Sight, Hearing, Smelling, theſe are either Defective or Depraved, when out of order.

The kinds of Defect and Depravation of Touching are Numneſs or Stupor, Formication, falſe Senſe of heat or cold Hæmodia of which in Hurt of Touching, Chapter the fifth, Page 50.

The Taſt is aboliſhed, Diminiſhed and Depraved in the defect of Taſting and in a Depraved or half Taſt, of which in Hurt of Taſt, Chapter the ſixth, Page 52.

The ſight ſuffers many inconveniences when either it is not, or is diminiſhed, or is Evil, as in divers kinds, eſpecially in Blindneſs, Anauroſis, Scoloma or Miſt, Amblyopia,

Amblyopia, Catigo, *Evil ſight in young or old*, Myopia, Nyctalopia, Veſpertina, Acies or *Owle ſight*, Hallucination, Imagination, Nubecula *or* Cloud, Colours, *falſe* Splendors, Megrim, Scotodinos, *of theſe in* Hurt of Sight, Chapter the ſeventh, Page 56.

The hearing alſo ſuffers, in Surdity or Deafneſs, thick Hearing, Obaudition, tinckling, and hiſſing in the Ears: as in Hurt of Hearing, Chapter the eight, Page 80.

The Smelling is alſo Aboliſhed, Diminiſhed or Depraved, as in defect of Scent and Depravation of ſcent, of theſe in Hurt of Smelling, Chapter the ninth, Page 87.

CHAP. I.

CHAP. I.

Of a Weakneſs of the Minde.

The Kinds of it.

A *Weakneſs of the Minde* may be ſaid to be, whenas any one is leſs able in Apprehenſion or Wit, in Judgment or Reaſon and Memory, then an ingenious and induſtrious Man. Which ſomtimes happens in Diſeaſes, at other times befals thoſe that are not Sick, but otherwiſe Well, of which we will here Treat. But

Dulneſs of the Minde. ſomtimes theſe internal ſenſes are all of them together dulled, and both Wit, Judgment and Memory fail, and then it may be called *a dulneſs of the Minde.*

Of ſlowneſs of Wit. Otherwiſe ſome want Wit, when they ſcarcely learn to ſpeak, and they apprehend Learning, and other Arts with difficulty; and it may be called *a ſlowneſs of Wit.*

Imprudence, a defect of judgment. Somtimes they are void of Judgment, in judging of thoſe things which they have apprehended, and this may be called *Imprudence.*

For the moſt part the Memory is weakned when they hardly retain thoſe things which they have apprehended and learned; and its called *Oblivion*, of

Oblivion which fault many do complaine, eſpecially the Aged, and therefore Phyſitians have

The Memory impaired made mention of that only almoſt in their Cures, under their Titles *of the Memory impaired*: whereas the defects of the other internal ſenſes alſo have the ſame Cauſes, and the ſame Cure; which we ſhall at once apply to them all.

The Cauſes.

The Part affected. But the Brain which is the organ of theſe ſenſes, is here affected; the which notwithſtanding is not ſo vehemently hurt, that theſe internal ſenſes are wholly aboliſht or together with them, the external ſenſes alſo and motion; as it doth happen in grievous hurts of the Brain. But that more or fewer ſenſes are weakned, and thoſe more or leſs, that happens according as the whol ſubſtance of the Brain is affected, or only part of it: not as the formoſt, middle, or hindermoſt ventricles are affected, as ſome would have it; furthermore theſe things vary according to the Nature of the Diſeaſe, with which the Brain is afflicted, as ſhall be ſaid.

Weakneſs, a Cauſe of the Mindes weakneſs. Some have contracted and derived this weakneſs Hæreditary *from their Parents* by inbred Cauſes; whence it often comes to paſs that as the ingenious and induſtrious do beget their like, ſo drones beget drones which is eaſily collected by their Signs, that they were ſuch from their Infancy, and had ſuch Parents. This happens to ſome by reaſon *of Age*, whence old folks become for the moſt part forgetful and ſomtimes dul, by reaſon of the defect of native heat, unleſs it happen from ſome diſtemper of the Brain as ſhall be ſaid by and by.

A Concuſſion or blow of the Head, leaving behind it ſome weakneſs in the Brain, may alſo be the cauſe of it.

Alſo *too great a ſhedding of Blood* from what part of the Body ſoever, or ſome other too great evacuation exhauſting the Spirits: on which ſcore alſo *too much Venery* doth very much impare the ſenſes, eſpecially the Memory.

Alſo *a Diſeaſe of long continuance* deſtroying the native heat, eſpecially of the Head, as after *a Carus*; alſo after *Melancholy*, and *Convulſion*, we have ſeen men become very forgetful. Or *a Malignant Diſeaſe, or proceeding from ſome Poyſon*, of which nature perhaps that was, which given to *Ulyſſes* companions by *Circe*, took away the remembrance of all things paſt, the which alſo ſomtimes *Love Potions* have done; and *the unhappy uſe of Narcoticks* may do the like.

One writes that *by reaſon of a Wound ſtruck deep into the ſeat of the Eye*, one did ſo far looſe his Memory, that he was fain to learn a new the grounds of learning whenas before he was skilled, both in Greek and Latin.

Alſo when *the Functions of the Minde are more remiſſly imployed*, then the native heat growing dul with idleneſs, and not brought into act, they proceed but ſlugiſhly,

Which alſo may happen upon the contrary reaſon, to wit, if *the Minde be diſquieted with too much ſtudy, thoughts, watchings, cares.* Yet when the Memory for the moſt part is firſt hurt, eſpecially in the aged, their judgment notwithſtanding continues acute. That it doth not happen to them only by reaſon of weakneſs, though by this means alſo it may happen, may be elegantly collected thus, becauſe their Minde, which through the whol ſpace of their life hath received ſo many Species, Images, and Conceptions of things, is ſo overwhelm'd with them, that it cannot long retain thoſe new ones which it receiveth, as if there were no more place left for them; whence alſo it comes to paſs that old men do firmly retain to the laſt, thoſe things which they apprehended, when young; but thoſe things which they treat and think of now ſtrucken in Age, they indeed do eaſily conceive, and they judg right and well; but they preſently forget them again: in like manner after ſome ſort as we ſee moſt old men, to ſee and judg of things far diſtant, more rightly then of thoſe neer hand; the which notwithſtanding doth proceed from another cauſe, as we ſhall explaine *in the weakneſs of the Sight.*

Furthermore, and *if the Minde be diſtracted with divers Studies* and be overwhelm'd at once with many things, it comes to paſs that the ſenſe being Intent on many things is not only leſs fit for each particular, but alſo that while theſe things do confound one another, and one is hindred and obſcured by another (as when two griefs moleſt one part, the more vehement is wont to obſcure the other) the Memory of that which is weakeſt, doth preſently alſo vaniſh.

The fault of the inſtrument is a Cauſe of the weakneſs of the Minde.

The imperfection of the inſtrument alſo doth make the internal ſenſes more languid. In tender Infants, whoſe Brain is yet more ſoft and fluid, and not yet perfected by grouth it performs but dul operations. In thoſe of riper age alſo, if the Brain hath not obtained its juſt bulk, and then for the moſt part they have a ſmal Head.

An uncomely Figure of the Brain, and *a perverſion of its Scituation*, cauſed either *by Nature* or *by Violence* doth cauſe the ſame; which is hardly known unleſs the Head anſwer to the form of the Brain.

The temper of the Brain changed doth cauſe a weakneſs of Minde.

The Temperament of the Brain changed from its Natural ſtate, as yet not producing more grievous Diſeaſes of the Brain, doth alſo cauſe that *ſluggiſhneſs of the internal Senſes.*

And that eſpecially when it is *more moiſt* then it ought to be by Nature, which Phyſitians hold to be the chief cauſe *of the Memory impaired*, and that becauſe in a more moiſt Brain, and therefore ſofter, the Images of things imprinted can leſs remain. But we believe that comes to paſs, becauſe it becomes more languid to exerciſe its Operations. But the cauſe of this Moiſture ſomtimes depends on ſome cold and moiſt Diſeaſe of the Brain foregoing, from which, though for the moſt part it be taken away, yet this moiſt conſtitution imprinted on it doth remain; which alſo may be from external cauſes of the Air and Medicines. But this defect is known to proceed from Moiſture, becauſe then *they are ſleepy*, and by other ſigns of a moiſt Brain. Alſo *a more dry* conſtitution of the Brain is held to be the Cauſe, becauſe they hardly apprehend things, and becauſe in a dry Body, things are more difficultly imprinted; and many alſo do teach that *this Dryneſs* may be the cauſe *of Oblivion*, and declare the Cure *of the Memory impaired by Dryneſs*, whenas after *burning Feavers*, after too much *watching and ſtudy*, the memory becomes *treacherous*, which we have taught formerly to happen rather from a weakneſs contracted thence.

The Cure.

A Prædiction.

The defect of the internal ſenſes *is incurable* if it happen from a weakneſs contracted from *the Parents*, or *by reaſon of Age*, or from ſome *eminent hurt of the Brain*: or if it ariſe from *a perverſe conformation of the Brain.* Alſo *that præternatural conſtitution imprinted on the Brain*, whether it be *moiſt* or *dry*, *is hardly* corrected: yet for the correcting of that, to which Phyſitians do chiefly apply their Cures, in treating of *the Memory hurt*: we alſo ſhall ſhew the manner of operation, how thoſe faults may at leaſt be corrected, if not wholly taken away.

The Cure of the weakneſs of Minde, from weakneſs, and a too moiſt temper of the Brain.

Exerciſe, As it doth ſet an edge on all dul functions, and as it were bring them into Act, may alſo do good here in the operations of the Minde if they be dulled by reaſon of the ſluggiſh and remiſs uſe of them Alſo in a weakneſs, although it can ſcarce be mended; ſince that the native heat is renewed by exerciſe, and cuſtome is a ſecond Nature, *the exerciſe of the Minde* may do ſomwhat at leaſt in this. But in a *moiſt temper of it*, when as the agitations of the Minde doth conſume Excrements, it will do good.

This may be done by often exerciſing theſe Functions of the Minde, thoſe eſpecially which are done with pleaſure (ſince nothing is to be done againſt *Nature*) and thoſe either all together; or ſingly *the Wit*, if they learn to ſpeak, learning languages and arts, by which the apprehenſion and *Wit* is made acute, which otherwiſe growes dul by idleneſs. *The judgment*, if they diſcerne and judg of things eſpecially things ſcrupulous, and that often; as we ſee many ignorant of law by uſe to have acquired a natural knowledg and prudence in the laws. They may whet *the Memory* by ſtudying to remember and retain, and committing other arts to Memory; in which this is particularly to be obſerved, that thoſe things which are conceived and repeated in the evening after ſupper before ſleep do remain more firmly imprinted in the morning.

Alſo *a reſt* of the Functions of the minde, being wearied with too much uſe and watchings, and ſo at length weakned, doth much refreſh them.

Which is done if they moderat themſelves from the too much ſtudy of knowing or handling of things, and from the immoderate affections of the Minde; if they ſleep at due times, and as much as is needful, whenas ſleep is the reſt of the Minde, and by it the internal actions of ſenſe are reſpited, unleſs in ſome ſort they do a little exerciſe themſelves in dreams.

As concerning *Evacuations*, if the ſluggiſhneſs ariſe from a too moiſt conſtitution of the Brain, and there be plenty of Excrements in the Brain, they muſt be emptied ſucceſſively, as is wont to be done in Diſeaſes of the Brain, ariſing from flegmatick and ſerous Humors; which may be done by this Method.

The common Excrements muſt firſt be waſhed away, with this fallowing *Clyſter* or the like; as, Take *of the Herbs Mallows, Marſh-mallows, Pellitory of the Wall, Beets, Mercury, Betony, Sage, Hyſop, of each one handful; the flowers of Chamomel, Melilote, Elder, Lavender, of each one pugil; Bran one pugil; Fennel and Caraway ſeed, of each three drams; make a Decoction*: Diſſolve in it, *of the juyce of Mercury, one ounce; of Honey, one ounce and an half: Oyl of Rue, two ounces; of Benedicta Laxativa, or ſome ſtrong Hiera, half an ounce; of Salt, one dram.* Make a Clyſter.

Then the humors muſt be prepared with this Decoction, Take *of the Roots of Orrice, the true Aconus, Elecampane, of each half an ounce; Pellitory of Spain*: it helps the Memory much) *Galangal, Ginger, of each two drams; the Herbs Betony, Marjoram, Time, of each half an ounce; Balm, two drams; the flowers of Lavender or Spike, Sage, French Lavender, of each two drams; Roſemary flowers, three drams; Liquoriſh, ſix drams; Annis and Fennel ſeed, of each one dram and an half; Caraways, one dram; Cubebs, half a dram: Make a Decoction in Wine and Water*; And in a pound and an half of that ſtrained, Diſſolve of *Honey or Sugar as much as is ſufficient*, Aromatize it with *Cinnamon and Nutmeg.* For five or ſix mornings.

A Wine may be made with the infuſion of theſe, with *the Honey and Sugar* if they like ſweet things, if not, you may ſubſtitute *Wormwood* in their room, with whoſe ſmel they are much delighted, and abhor not the bitterneſs of it.

The ſame may be done *with Syrups*, if leſs pains, and more gratefulneſs be required: Take *of the Syrups of Betony and French Lavender, Honey of Roſes, of each half an ounce; of the Water of Betony and Marjoram a double quantity*, Aromatize it with *Cinnamon*; Let him drink as often of it, as was ſaid *of the Decoction.*

This being done, Purge the Body with theſe *Pills*: Take *of Cochiæ Pills, two ſcruples; of Caſtor* ('tis peculiarly good) *half a ſcruple; with ſweet Wine*; Make up *Pills.*

O-

Or with this potion, Take *of the electuary Diacarthamum, two drams; or one Doſe of any other Phlegmagoge, of Agarick infuſed in Oxymel, one dram; Syrup of Liquoriſh, one ounce; the Waters of Balm and Betony as much as is ſufficient:* And make a Potion.

This being done, and the Brain ſtrengthned, as it ought to be after purging, if the Head be ſtil excrementitious, theſe things may be repeated preſently, or at fit time, or by interuals.

Which may be done by *a Syrup* which may be prepared out of the precedent *Decoction*; adding, *Senna, wild Saffron, Agarick, Turbith,* to which we may add, *Sea Fennel,* ſince that if it be new, it doth purge Flegm, and with an addition of *Sugar* and *Honey:* Boyl them to a conſiſtence.

Alſo *the uſual Pills that purge Flegm,* may be made uſe of.

Wines are leſs proper if they ought to be kept long, when as they do eaſily corrupt; but if purging be to be uſed for five or ſix daies together, they may be made of the ſame things, as the Decoction was, infuſed in Wine.

Alſo if a wateriſh humor abound, the Head muſt be purged by times; *by particular Evacuations*, called *Head purges*, as *Maſticatories, Gargariſmes, Errhines*, as it hath been ſaid in its proper place.

As concerning *things Alterative*, all thoſe things which ſtrengthen the Head, and ſtir up its innate heat, being applied inwardly and outwardly may do good; amongſt which, thoſe that act potentially, ought to be moſt hot in this moiſt conſtitution of the Brain, whereas this is ſo imprinted, and the temperament of the Brain ſo changed, are hardly reduced, and therefore require ſtronger means, that ſo their operation may better reach to the Brain; neither can things taken inwardly too much inflame the Brain being a part far diſtant, nor things outwardly applied, by reaſon of the thickneſs of the Head. The reſt found out by experience, are thought to reſtore the Memory by a certain propriety.

Thoſe things therefore which are taken chiefly to reſtore the Memory in a moiſt cauſe as was ſaid, are as follow.

In the form of *a Pouder* this is cried up to be excellent to preſerve the Memory: Take *of Male Frankincenſe* or *Olibanum, half a ſcruple: Make a Pouder*; Let him take it often by it ſelf or with *Wine* or ſome convenient *Water*.

If both *round* and *long Pepper* be added, tis a moſt commendable remedy thus prepared: Take *Male Frankincenſe, fifteen drams; Pepper, five drams:* Make a *Pouder*; give one dram every morning for forty daies.

Ginger condite in Syrup or *dry*, as tis wont to be prepared, taken in the morning is approved of; alſo the *conditure of the true Acorus, that is, the Aromatick Cane*.

Alſo *the Root of Pellitory of Spain*, whiles it is *new candid* eaten like *Ginger* is highly eſteemed, whoſe Decoction *Paracelſus* approves of againſt forgetfulneſs.

The Confection Anacardine was chiefly invented to repair the Memory, eſpecially if it be prepared without *Caſtor* by reaſon of its ungratefulneſs, as *Gordonius* teacheth, of which half an ounce or an ounce or more may be given according to *Gordonius* with ſome convenient *water* as of *Fennel* or *Smallage*, which if it heat the body too much may be prepared thus:

Take *of Confection Anacardine one dram, Conſerve of Marjoram, Roſemary, of each half an ounce:* Let him take once or twice a week a dram for a doſe.

Compounds of the aforementioned and other things convenient for the Head and appropriate to the memory impaired as *Myrobolans, Cyperus root, the Skul of a Man* and the like, are thus made for the ſtrengthning of the Brain.

Take *of confection anacardine one dram, Frankincenſe two drams, Pepper, Ginger, each half a dram; Sugar diſſolved in Cinnamon and Marjoram water* twelve ounces: make *Tables* give one every morning, or every other morning.

Others more efficacious are prepared thus. Take *of male Frankincenſe three drams, Pepper, Ginger each half a dram, Cinnamon two ſcruples Corall one dram, the ſhavings of Mans Skull two drams, Harts-horn, Ivory, each half a dram, ad of Sugar ſix ounces or the double quantity and make a pouder*; or diſſolving *the Sugar in Marjoram water* make *Tables*; or abate of the quantity of *Sugar*, and with the *Infuſion of Gum Tragacanth in Roſe-water* make *Lozenges*, and uſe them.

Electuaries alſo may be made for the ſame Uſe of things for the head after this manner. Take *of the conditures of Ginger, the true Acorus, Pellitory of Spain*, as was ſaid *each half an ounce, of Chebul and Emblick Myrobalans each two; of Marjoram, Roſemary-flowers, Lavender or French Lavender, Sage each ſix drams, conſerve of Roſes, Bugloſs each three drams, the Roots of Cyprus, Galangall, Cloves each half a dram, Pepper two ſcruples, Cubebs one ſcruple, Olibanum one dram and an half, pouder of Diamber and Diamoſchum each half a dram, (Muſk or Amber we may add) of a Mans Skul if you pleaſe, two drams, of Honey anacardine* as much as is ſufficient: make an *Electuary*. Let him take from one dram and an half to two drams going to Bed.

They commend alſo *Treacle and Methridate*, which we would rather omit by reaſon of the *Opium* which makes al the ſenſes more ſtupid or languid although the Compoſition be old; whenas other things are not wanting, and no pain here or Neceſſity requires it, neither is there any malignity of the Humor.

If we muſt needs uſe things unpleaſing it is beſt to give them in form of *Pills*. Take *of Frankincenſe two dram, Pepper, Ginger, Cubebs each one dram, Caſtor half a dram, Muſk, Amber each ſix grains, with the Confection or Honey anacardine* make *Pills*, give going to Bed two of them for many daies.

A Wine convenient for this may be made thus, Take *of the Roots of true Acorus, Galangall, each half an ounce; Ginger a dram and an half, the herbs Marjoram, Sage, the flowers of Lavender, French Lavender, Roſemary, Roſes, each three drams; Pepper, Cloves, Cubebs, of each half a dram*; Infuſe them bruiſed in *Wine*, let him drink ſomtimes a draught in a morning when he takes broath.

Diſtilled Waters are approved, the ſimple of *Roſemary flowers*, or the like, or compounded of divers, pouring to them the Water of Wine which they call *Aqua Vitæ* which they write (alſo alone) wil do good, if in the morn the quantity of one ſpoonful be taken.

A Compound one may be made thus. Take *of the Materials above mentioned for the Wine, bruiſed*, and pour to them *Spirits of Wine, or Malago wine that it may be above it one fingers breadth, Confection Anacardine ſix drams*: Let them be diſtilled in *Balneo Mariæ* and let him uſe it.

At meals, many of this ſort may be given, eſpecially the more grateful for Sauces, as the Spices forementioned, *Pepper, Ginger*, for ſtuffings, *Marjoram, Sage*, and the like.

Alſo *Muſtard ſeed* is a Junket with *Honey*, as tis wont to be preſented to Tables; or the ſame covered over with *Sugar*, becauſe this ſeed doth by a propriety whet the memory.

In *Wine* alſo the like *Herbs* may be infuſed and ſteeped.

The

The like *External Remedies* may be uſed, which may ſtir up the heat and conſume moiſtures; as theſe are.

To rub the head in the morning with a Comb, and uſually with cloaths after ſleep: Somtimes to *waſh* the head with a *Lie*, but preſently again to dry it with warm cloaths ſmoaked with *Frankincenſe* ſeeing *Frankincenſe* as 'tis ſaid, by a peculiar vertue helps the memory, but the *Lye* may be thus made. Take *of Agarick two drams, the herbs Sage, Betony, Marjoram, Celtick Spike, Pennyroyal, Bayes, Roſemary flowers, Spike, Lavender, Red Roſes, Chamomel, of each one handful; Bay and Juniper berries, of each an ounce; Pepper one dram:* Let them be bruiſed and boyled in a *Barbers Lye, made with water wherein Iron hath been quencht.*

Not only the hinder region of the Brain is anointed in the memory hurt, but alſo the whol Superficies of the head for the ſame, as take *of the Oyl of Muſtard by expreſſion*, anoint it.

It will be more effectual thus, Take, *of the Oyl of Bean, Elders, of each one ounce, Muſtard ſeed, long Pepper, each one dram, Euphorbium, Caſtor, each one ſcruple, wax a little:* Make *a Liniment.*

There are ſome who *anoint the head, with Confection Anacardine, diſſolved in ſpirits of wine.*

Quilts and Caps, alſo are worne night and day, of things that ſtrengthen the head: of which in their place.

Amulets alſo do help, if not by their own virtue, at leaſt waies by imagination, as *the tongue of a Lapwing* hanged about one, is thought by *Rhaſes* to take away forgetfulneſs: *The Amethiſt ſtone* worne about one, doth quicken all the ſenſes, as one writes; and alſo that *the Beryll ſtone* worne doth cauſe a good underſtandiug.

The Cure of Memory impaired by the drineſs of the Brain.

In a dry conſtitution of the brain, whence they ſay the memory is impaired, if the body be foul, it muſt be purged, as was ſaid of *Melancholy*, whenas in pure bodies medicines applyed do more rightly operate.

Let it be moiſtned with *meats of good juyce* ſuch as are deſcribed in the *Hectick and Melancholical.*

Let him abſtain from all drying things, and immoderate evacuations, eſpecially Venery, then which nothing is more hurtful.

He may uſe this *Electuary* at times. Take *of the Conſerves of the flowers or Roots of Succory, Bugloſs, Borrage, Violets, Maidenhair, Betony, each one ounce and an half; Of the pouder of Diatragacantum frigidum and Triaſantalum each half a dram; with ſyrup of Violets make an Electuary:* Let him take the quantity of a Cheſnut or one dram and an half: Or let him uſe theſe kind of *Tables.* Take *of the Flowers of Bugloſs, Burrage, Violets of each one ſcruple, the leaves of Marjoram half a dram, male frankincenſe one dram, the Skul of a man burnt half a dram; with Sugar diſſolved in Violet and Roſe Water, make Tablets.*

The Topicks mentioned *in melancholly* muſt be applied to the head, eſpecially this *Lotion* of the head and feet is very profitable. Take *of the Decoction of the Head and Feet of a Weather as much as is ſufficient, adding the herbs Bugloſs, Burrage, Violets with their flowers* (if they may be had) *flowers of Roſes, Betony*, (for hot things muſt be mixt with cold: when we moiſten, as was ſaid in melancholy) *each one handful: Boyl them.*

This following alſo is good. Take *of the roots of Marſhmallows half a pound, the herbs Betony Marjoram each one handful; flowers of Violets, Roſes, Chamomel, Melilot, Lavender, each one pugil: Boyl them in milk, to waſh the Head.*

Alſo ſuch an *Unction* is commended, eſpecially after the Lotion. Take *Oyl of ſweet Almonds, Roſes, each one ounce; the fat of a Drake half an ounce, one white of an Eg, Milk half an ounce*; ſtir them together for a *Liniment.*

Chap. 2. *Of a Conſternation of the mind.*

The Kinds.

WE cal that *a Conſternation of the mind* when the *Senſes* either only *oppreſt* or almoſt wholly *taken away*, either they ſleep after a *non-natural manner*, or are *Stupid*; and that either with a languiſhing and reſolution of the body, or with an Agitation or Convulſion of it, or with a Rigidity or Stiffneſs; which four are the chief and higheſt Kinds of Conſternation of mind, particularly here to be explained.

That is a *preternatural ſleep* which laſts longer then a natural, and then 'tis called *immoderate*, and which doth more lull the Senſes, and therefore 'tis called *profound*; ſomtimes too great a propenſion to ſleep, or a very profound ſleep happens to them that are *well*; at other times it befals them in *Diſeaſes*, and ſomtimes without, ſomtimes with a Fever, ſomtimes alſo it invadeth with Ravings or with Stupidity.

Immoderate ſleep.

Too great a propenſion to ſleep in thoſe otherwiſe *well*, is a frequent fault in ſome men; not when this befals certain natures by reaſon of their Age, as in Infants and old folks, 'tis accuſtomary and good; or by reaſon of the *Country* (in which 'tis natural for ſome to ſleep night and day) but when it proceeds from a cauſe that ought not to be, whence not onely too long indulging to ſleep by night, they riſe late in the morning; but alſo by day time, eſpecially preſently after taking of meat, and chiefly in a hot place or ſeaſon, they are ſo forced to ſleep, that it is altogether neceſſary for them to ſleep, to which ſome are ſo prone, that though they do no waies at all compoſe themſelves to it, but do ſomwhat to ſhake it off, yet notwithſtanding they fall aſleep in that very work, and I have ſeen one of them, even when he drank at Table, and moved the cup to his mouth, in that poſture fallen aſleep; or doing ſomwhat elſe, he was wont to ſleep in that form of body.

Profound ſleep.

Profound ſleep ſomtimes doth ſteal upon *ſound men* after drinking of *Wine* in Drunkards, or ſome other *Narcotick* taken; which is not laſting if the uſe of them hath been gentle; but if more vehement, 'tis turned into a *Stupidity*, as ſhal be ſaid there.

In a Diſeaſe heavy ſleep is called, *Caros, Coma, Cataphora, Lethargus, Veternus, Subeth*, in which as in that naturall, they ſleep with their Eyes ſhut, and Body proſtrate: but in that that the internall Sences, and by conſequence the externall do not only reſt, as in a naturall ſleep, but are as it were overwhelm'd, they are more or leſs dulled, ſo that they can ſcarce or never be rouſed up, and being wakned, they complain of no Pain, onely that they feel their Head heavy and weighty, and ſo fall aſleep again. The motion alſo of the body is more languid, yet not aboliſht as in the *Apoplectical* with a reſolution of the Limbs, neither is their breathing hindred as in them, but free and eaſie, unleſs in ſome it be depraved with yawning and noiſe, their pulſe alſo although it be weaker, yet it doth not ceaſe as in a *Syncope.*

Sleepineſs with a Fever is a Lethargie.

Someimes a *Fever* is joyned with *Sleep* which if it begin together with this, it hath obtained the name of a *Lethargie*, which notwithſtanding is common to the reſt alſo, in which beſides the ſigns of ſleep, a preternatural heat of the body, a quick pulſe, a

deep

deep dyed Urin, declare a Fever preſent: but alſo a *Caros* ſomtimes following a *Fever*, and is its Symptome.

Sleep with Deliration.

Beſides theſe Species of *Sleep*, there is one alſo found in which though there be the greateſt propenſion to ſleep, and they expreſs the ſame by lying down with their Eyes ſhut, notwithſtanding they watch, and divers ſhapes and apparitions are preſented to them; or if they do ſleep, they are troubled with divers horrible dreams, which afterwards when they awake they declare; who being forced do hardly lift up their Eyes, and look upon him that toucheth them, but know him not, and though they do feel and are moved, yet they cannot riſe out of the bed, and do the work of one awake; this they call a *Cataphora* or a *ſleepleſs Coma*; Some cal it a *Typhomania*, as it were an *aſtoniſht madneſs*; neither may it unfitly be called a *Raving ſleep* and be refer'd to *Delirations*, or a heavy ſleep with terrible dreams: another Species of it is deſcribed; the common people call them *Exſtatical*, as if they were taken with an *Extaſie*.

Diabolical ſleep.

Hither alſo may be refer'd the *Dæmoniacal ſleep* of Witches, in which they think that they are carried through the Air, feed deliciouſly, dance and lie with the Devil, and waking they continue in the ſame error.

I have ſeen another kind ſomwhat like to theſe, in a

Sleep with Stupidity.

certain Baron who for a long time aſtoniſht and ſleepy, did nothing according to reaſon, he would ask for no meat, nor take it unleſs thruſt in by force,; neither would he go to bed unleſs compel'd, but all day long leaning with his Arm on the Table, and with his eyes ſhut, he ſate as one aſleep; neither would he anſwer any thing unleſs asked and often admoniſht, and then that which was little to the purpoſe.

A *Stupidity* with a Languidneſs or Reſolution of the body is called *Obſtupefcentia*, *Ecplexis*, or an Apoplexy;

Stupidity with a reſolution is an Apoplexy.

and tis an affect in which they do not ſleep, but aſtoniſht they lie ſtupid like ſtocks, all the Senſes alike, and motion alſo being aboliſht together: which accidents are ſomtimes more mild, at other times more grievous, in which both the internal and external ſenſes are taken away together, whence they have underſtanding of nothing; neither do they ſee, though ſome of them do ſeem to look upon a man with fixt eyes, neither do they hear a noiſe, neither do they ſhow any ſign of ſence, though you prick them or burn them: Alſo being deprived of all motion of the body in a moment, they fall down, and all their members being reſolved do languiſh: they neither ſpeak nor ſwallow, breathing only remainiug, and that very obſcurely, the blowing forth of which from the mouth or noſtrils can ſomtimes hardly be diſcern'd, by the motion of a piece of Cotton applied to them, or the motion of the breaſt to detect that, by the motion of a cup of water placed on the breaſt; or the breath is drawn with a great deal of difficulty and noiſe, as in dying people; the pulſe being in the interim full and ſtrong in this difficulty of breathing, but diſcovering it ſelf to be very unequal; and that ſo loug, till their Senſes returning they come to themſelves again, which happens in a gentler ſpecies of it; or if it be more grievous, they continue reſolved; or if it be worſt of all, their breath being wholly taken away they are by and by choaked, froth then flowing out of their mouth.

A Stupidity with Convulſion is an Epilepſie.

A *Stupidity* with a Convulſion or vehement agitation of body is called an *Epilepſie* and 'tis an diſeaſe in which all the Senſes are ſuddenly taken away, and the whol body for a time is ſhaken and pulled with an inordniate motion, aſſailing a man by turns or fits, which becauſe it doth ſuddenly apprehend one, hath the name of *Epilepſie*; becauſe it puſs him, the name of *Convulſion*, of which we meet with chiefly two different kinds, in as much as one is of Continuance, another Short.

The *Diuturnall* is that which laſts long, and whether it happen before the age of youth, and doth not leave them when that comes; or whether it begins firſt after that age, for the moſt part it aſſails the ſick for the whole life time, ſomtimes at certain times, hours, daies, months, years, or changes of the Moon (whence 'tis alſo called the *Lunatick Diſeaſe*) whoſe Functions becauſe it doth not ſuddenly deſtroy them, but only weakens them by degrees, therefore it comes to paſs that when they are free from the fit, they can nevertheleſs go about their buſineſs, and becauſe they fall, if they be taken with this evil, whiles they are about their buſineſs, hence alſo it is called the *Falling ſickneſs*, and whenas their ſudden fall, and horrid ſymptoms, are wont to ſtrike a great terror, ſo that ſome from the apprehenſion of it only, have preſently fallen into the ſame affect, and upon that account moſt men do fly the ſight of them; and if it happen in a Congregation of people (as in our age in aſſembles) the company is diſſolved, amongſt the Ancients their meetings upon the ſame cauſe were diſſolved, whence called by them the *Conuental Diſeaſe* which name it retains; which alſo by reaſon of its pertinacy, was called the *Great*, *Sontick*, and *Herculean Diſeaſe*, and tis to this kind to which they have applied the name of *Epilepſie* rather than to the reſt, when notwithſtanding it agrees with them all.

The *Short* and not ſo continued *Convulſion* is which either preſently ceaſes, or at leaſtwiſe is not protracted ſo long as the former, which again as 'tis either *Gentler* or *Worſe* is divided into two Species

The *Gentler* though it be not free from danger, is accounted that, whoſe cauſe is neither great not perſeverirg; as that which happens to Infants, when their Teeth firſt break forth, or Worms diſturb them, and by and by ceaſeth: and that which befalls Virgins before their Courſes flow, but they coming it remits: and that which betides great-bellied Women chiefly at the firſt month; but at the middle time of their going, or after the birth preſently ends: This, that they might not bring fear by the dreadful name of the *Falling-ſickneſs*, becauſe it often happens in Child-hood, they call the *Childrens Diſeaſe*, mitigating the cruelty of the Diſeaſe by the ſmoothneſs of the name.

The *Worſe* and highly dangerous Species is, which following grievous diſeaſes, as Wounds, Fevers, pains of the Collick, and others, at any age, ſomtimes with one or two fits, ſomtimes with more, and that continual, or ſomtimes with intermitting acceſſions, doth perplex the Patient with a terrible aſpect, and for the moſt part kil him; or if he be helped, yet ſomtimes it leaves behind it the worſt of ſymptoms, as Contraction of the Limbs, hurts the Voice and Senſes, or other diſcommodities; which Species they call a *Convulſion* or *Spaſm* only, not an *Epilepſie*, when notwithſtanding thoſe affected with this Species, are no leſs ſuddenly taken in this caſe than the *Epileptical*, and cal that *general* to difference it from a *particular Convulſion* or *Spaſm*: of which kind alſo there may be found, in the Senſes being unhurt only ſome parts are convelled, we ſhall ſhew in the hurts of motion: But this Species if it happen to Children, as it is wont often to kill them, both Infants, and of riper years: they call it alſo the *Child.* [illegible] *Diſeaſe*.

The accidents in all the Species of an *Epilepſie* both *continued* and *ſhort* do almoſt concur the ſame; and they may as well vary in all, as well thoſe which are obſerved in *the hurts of the ſenſes* as of *motion*.

For all the *Internal ſenſes* and by conſequence the *External* too, are aboliſht in all, the whol time they are poſſeſt with the fit, they underſtanding, judging or feeling nothing at all: wherefore they refrain not from violent motions though thereby they hurt themſelves; and after they come to themſelves, they remember none of thoſe things they have ſufferd, neither do they know that they have ſufferd this evil, unleſs they be told of it, or ſuſpect it, by taking ſome ſignal, from the marke of ſome hurt left behind, as a Wound or Contuſion.

All *Motion* alſo both voluntary which wholly depends on our power, and that which is performed by help of Nature, as breathing and evacuating; and that of the Pulſes which Nature alone performs, continuing in all theſe Species diſtinguiſheth the *Epileptical* from the *Apoplectick*, and *Syncopal* in whom theſe motions do fail (the Pulſe only remaining in the *Apoplectick*.) The which notwithſtanding being deprived in the *Convulſive*, doth cauſe that they fal, and uſe inordinate motions.

But they fall, not by reaſon of a privation of the ſenſes, but becauſe their whol Body at once and of a ſuddain is convelled; ſo that unleſs they be forewarned by a *Vertigo* which is wont ſomtimes to go before it, or being taught by *Cuſtome* of the fit at a day or hour, if it be wont to come at ſet times, they have a care of themſelves, being ſeazed with it whiles they are upright, they preſently fall down like to the *Apoplectick* and thoſe that fall into Swonings and as tis commonly ſaid are free neither from Water nor fire, but are in the greateſt jeopardy by danger of the fall: and if upon this account tis leſs danger for thoſe, who lying in their Bed by reaſon of ſome ſickneſs, cannot fall when the *Convulſions* come upon them, yet they are more hazarded by the cruelty of the Diſeaſe: So that every *Epilepſie* is horrible and abominable, which the ancients therefore called *the ſacred Diſeaſe* as ſent by the Gods by way of puniſhment, and others have Superſtitiouſly impoſed the Names of the Gods on it.

They alſo ſo ſtir their Body with inordinate motions. That oftentimes tis all of a fire, and the pulſe becomes more ſwift, and ſomtimes ſweats break forth. Wreathing and diſtorting their Back, Neck, Head Arms, Feet, into divers Figures, and with them beating and ſhaking every thing in the way as the Bed, Walls, Ground, bruiſing and wounding their own Limbs, gnaſhing with their Teeth ſet, and bitterly biting their Tongues if they be out, rowling their Eyes about, which being opened and very much drawn aſunder, as alſo the bending of the Face towards the hinder parts, do uſually give the firſt ſign of the fit aſſailing; which at length in the end of the fit, lying as men wearied and aſtoniſht, they keep fixt and ſterne, til they come to themſelves again.

Their breathing alſo is very unequal, whenas ſomtimes they hold it for a while ſo that from the ſtopping of their breath, and vehement ſtriving, they ſomtimes caſt forth their ordure and Urine, and ſeed to, eſpecially if it abound. But at other times they fetch their Breath with difficulty and noiſe, both when an *Epilepſie of the Womb* hath the ſaid *ſtrangulation* its companion and cauſe, and when Flegm falling upon the Jawes and Noſtrils hinders it; and they bring forth a froth at the Mouth and Noſe, ariſing from Flegm, confuſed and ſtirred there with the Air (which happens not to *the Apoplectick* and *Strangulated* unleſs they die, ſaith *Hippocrates*;) and oftentimes they make a noiſe with crying out.

But theſe accidents which we have related, as they come on a ſuddain, ſo the fit ceaſing they preſently remit: Yet ſomtimes certain relicks of them do remaine, and the ſenſes being yet weakned, they cannot rightly underſtand Reaſon, or remember any thing; or *an alienation of Minde* coming upon it, they do all things amiſs and blaſpheme, or they break forth into a great Laughter, perhaps that which *Cicero* calls *Sardonian*; and that till a new fit return, which is wont to attend theſe foretelling ſigns: but before and after theſe fits, ſome *particular convulſions* ſomtimes either went before or remain, as *a diſtortion of the Mouth*, *a difficulty of ſwallowing* or *a ſpaſme of ſome other parts* as ſhall be explained in its place; or *that Spaſme* which they call *Flatulent* which ſomtimes alſo threatens *Convulſions* if it be by reaſon of the Nerves as ſhall be ſaid; as alſo that *convulſive Palpitation* which alſo cauſed from an affect of the Nerves doth oftentimes along while forego an *Epilepſie* and remain ſtill in the Members after it, and exerciſe it ſelf: or other Symptomes of motions do ſomtimes trouble them, as with Geſticulations, ſomtimes Dancings or ſome other diſturbance of the Limbs, and tremblings of them.

A Stupidity with Rigidneſs of Body, is a rare and wonderful affect, which is called a *Catocha* or *Catalepſis*, that is, *a laying hold off*, which they cal alſo *a Congelation* whenas they are as ſtiff as if they were frozen: in which all the internal ſenſes and external are ſuddainly aboliſht; but only the motion of the Body is depraved, whenas they keep that form which the Body had before it was ſeazed on with this evil, whether Lying, Sitting, or Going, and being taken like a ſtatue they cannot change it, neither of their own accord nor by compulſion; and with their Eyes open, whence they have called it *the watchful Stupidity*, yet blind and altogether ſpeechleſs, breathing in the interim not taken away, or very much hindred nor the Pulſe.

A Stupidity with rigidneſs is a Catalepſis.

But it happens alſo in ſome, that though they lie rigid like a ſtock without motion and ſpeech, yet neverthelefs they perceive thoſe things, which the ſtanders by do ſpeak off, and can afterwards relate them, which they have called *Ecſtatick*. But others remaining in the ſame ſtate like to dead Men, although they heard nothing, nor ſaw not, now being prickt ſet nothing, yet if any thing were put into their Mouth, they ſwallowed it, and being lift up do ſtand, being forced do walk, and keep their Members fixt in that poſture as they are bent for them. In a certain Woman thus taken, only the Belly and Breaſt were very much moved, all the reſt of the Body being ſtupid.

A Stupidity with hearing remaining.

A Stupidity with motion remaining.

The Cauſes.

In all the forementiond kinds *of Sleep and Stupidity with Languiſhing*, *Convulſion* or *Rigor* it muſt needs be that *the Brain* is affected whenas all motion and ſenſe proceed from that. Neither here as they would have it, are the Functions diverſely weakend, as the former, middle or hinder Ventricles of the Brain are hurt; nor as the Brain is affected before or behind, whenas the ſubſtance of the Brain doth on every part perform its Functions, but as it is more or leſs hurt, it looſeth more or fewer Functions. For if the hurt be great ſo affecting

the

the Brain that all the ſenſes be aboliſht, then it muſt needs be that motion alſo doth ceaſe; other Functions in the interim remaining, which the Brain is not the cauſe of, as the Pulſe which the Heart yeids; and whenas the motion of breathing is partly Natural, partly Voluntary, and therefore doth proceed from the Or-Organs of both motions, both the Midrif and Lungs, tis no wonder, that that alſo, if the Brain be very much hurt, ſo that all Voluntary motion do ceaſe as it comes to paſs in *the Apoplectical* the Midrif or Muſcles of the Breaſt then contributing nothing to Motion, but the Lungs only after a ſort moving themſelves ſtil, and whils they are dilated and filled with Air, which they do by their prover Natural motion, a little lifting up the Breaſt) do a little while Perſevere, but very much hinderd and difficult, ſo that unleſs that hurt of the Brain do ſpeedily ceaſe, the Patient muſt needs be choaked breathing being wholly taken away; but when voluntary motion is not wholly taken away with the ſenſes, that then reſpiration doth remain ſtill more free. But if the Brain be affected with a leſs affect compared to the former, by which the ſenſes are only oppreſt as *in a ſleepineſs or gentle Stupidity*, then motion, though it do reſt a little by reaſon of *Sleep and Conſternation*, yet nevertheleſs it doth perſevere; or if this come to paſs only by reaſon of the ſpirits of the Brain only extravagant, as ſhall be ſaid in a *Convulſion* and *Catalepſis* that motion doth alſo continue, and they ſooner return to themſelves; as ſhall be explained how this comes to paſs, in the Particular cauſes from which theſe proceed. But the cauſes of all *Conſternation of Minde* that happen are, either *ſome affect ſo hurting the Brain* (which gives Senſe and Motion) *by it ſelf or by conſent that theſe its Functions do more or leſs* fail; as are *Diſtemper, Repletion from a flegmatick or ſanguine Humor: ſome eminent hurt; a Tumor, a diſtemper of the Brain proceeding from a Vapor or Malignant quality; or a defect of the Animal ſpirits of the Brain*: of all which cauſes and their effects we will now treat in Particular.

A cold Diſtemper, the Cauſe of Stupidity: a Moiſt: of immoderate Sleep.

A cold Diſtemper only without matter altering the Brain, becauſe it is wont to hurt the Functions, may make it *Stupid*. And if it be *Moiſt too*, which is ſeldom without matter, it may alſo cauſe *Immoderate Sleep*; as ſomtimes by Reaſon of *Age* or the continuance of a Diſeaſe, a diſtemper left in the Brain, doth make men perpetually Prone to Sleep or as it was ſaid *in the Weakneſs of the Minde* more dul; which we have taught doth happen rather by reaſon of Weakneſs then Coldneſs.

Or indeed by other cauſes, eſpecially from *the cold external Air, the North Wind blowing, outwardly cooling the Head, or by the Pores piercing to the Brain*, it may cauſe a *great Stupidity*.

They write alſo that *a watchful Stupidity* or *Catalepſis* may ariſe from *a Cold and dry diſtemper congealing the Spirits*: but whenas the Spirits cannot be congealed, or if they could be, then a greater *Stupidity* would follow, we cannot at all allow of this.

That *Convulſions* are ſomtimes cauſed from *Dryneſs* which they call *Inanition* is a common opinion, which doth not happen in this *Convulſion*, but in a *Particular one* as we ſhall there explaine.

Flegm is very often the cauſe of *Sleep and Supidity* (under which Name we comprehend all the Watery, Cold and Moiſt Excrements of the Brain) which immoderately heaped up within the Skul (as the Brain doth ever and a non heap up ſuch things, from Flegmatick blood carried up to it. and the weakneſs of the part) if it be ſuppreſt and flow not forth through the paſſages appointed for it, then if it perfuſe the ſubſtance of the Brain with a large humor, and cool it, it cauſeth *a Carus*. Or if by its long impulſe it ſo moiſten the ſame, that that great bulk of the Brain becoming more ſoft and lax, do ſuddainly flow abroad and ſink and preſs the original of the Nerves at the baſis of the Skul proceeding from the Brain, and ſtop the paſſage of the Animal ſpirit, it procures *a grievous Apoplexy*. As when Flegm doth ſuddainly fill the Ventricles or Cavities of the Brain, not by obſtructing, whenas the Animal Spirit is not ſeated in them but every where in the ſubſtance of the Brain and Nerves, neither doth it paſs through the Ventricles but after the ſame manner by oppreſſing the baſis of the Brain, it may alſo induce an *Apoplexy*; the which notwithſtanding, if the humor deſcending from them, do ſollow the courſe of the Nerves, may end in *a Palſie*. That all theſe things are thus in *a Carus* and *Apoplexy* we have learnt from the dead, becauſe this humor hath ſomtimes flown from their mouths in a plentiful manner. And we have obſerved alſo by diligent diſſection, that the thick Membrane of the Brain open'd, in ſome abundance of Humor hath preſently lept forth, by the Region of the Head, and deſcended even to the Breaſt: and the very ſubſtance of the Brain in a certain *old Woman* which died of an *Apoplexy* diſſolved like to Cream, after the ſame manner hath run all over her Face. But we know that theſe affects proceeded from the Cauſe, by the precedent conſtitution of the Body, eſpecially in old Age, which is Obnoxious to this evil; and from a cold conſtitution of the ſeaſon and Air; and becauſe they have firſt complained of a heavineſs in the Head and a weight with ſleggiſhneſs, darkneſs of the ſight, and alſo of a want of that accuſtomary voiding of Flegm by the Noſe and Mouth: and becauſe in the dead, of *an Apoplexy* eſpecially, oft times a great quantity of Flegm flows forth by the ſaid paſſages.

From the ſame *Flegmatick Humor obſtructing the paſſages of the Brain*; many have written that as *an Apoplexy* ſo alſo *an Epilepſie* may be cauſed; and therefore as in that ſo in this, that all the ſenſes are aboliſht, but do preſently return again, becauſe the Brain by concuſſion, doth ſpeedily ſhake it of; and then that motion with the ſenſes doth no way ceaſe here, as is *an Apoplexy* becauſe the Ventricles are not altogether, but only in part, obſtructed, or as others will have it, the former only are obſtructed, the hindermoſt being unhurt, ſo that a portion of the Spirits may nevertheleſs paſs by to the Nerves. Which though it may be condemned for many things, yet let it ſuffice to have brought this eſpecially to deſtroy this opinion; *viz.* that if a ſufficient quantity of the Animal Spirits did not deſcend, the Functions of the Brain would rather follow to be impared in ſenſe and motion, then partly aboliſht, partly depraved; and that if Flegm were the cauſe, and that ſuddainly ſhaken of from the Brain did flow down, it would induce that *Palſie* which is wont to follow *an Apoplexy* for the ſame Reaſon.

They teach *that Flegm putrifying in the Brain*, doth Cauſe *a Lethargie*, and *a Feaver its companion* is kindled from thence: but whenas we have ſhewed in *Feavers* that from the Putrefaction of Flegm eſpecially in the Head, that *a Feaver* can in no wiſe be kindled; and we find no reaſon, how the ſame Flegmatick Humor being putrified, by its coldneſs can cauſe *a Carus*, and by its heat *a Feaver*, and one and the ſame thing can be cold and hot, when as contraries are inconſiſtent in the ſame ſubject; we ſhall aſſign a far different cauſe of *a Lethargie* by and by when we treat of *a Carus cauſed by*

conſent.

conſent, and that not much different, from the *Carus* which follows *Fevers*.

They teach alſo that *flegm not ſimply but mixt with choler*, doth cauſe *a watchful ſtupidity* or *Catalepſis* for this reaſon, *Flegm* cauſeth *Sleep*, *Choler*, *Watchings*, and ſo from the mixture of contrary cauſes are produced contrary effects; which indeed might be, if they were in divers places, but two contraries mixt and confounded in the ſame ſubject, do produce a certain middle effect, or rather one compounded of them both, than contrary: for which reaſon, theſe cauſes were found out rather from the effect, than their certain ſigns, that they might ſhew by what means at the ſame time, a man might be ſtupid and watchful (not ſleeep, ſince 'tis impoſſible to ſleep and watch at the ſame time) and attribute to each its proper humors.

Blood the cauſe of a Carus and Apoplexy.

Blood alſo *continued as yet in the ventricles of the brain*, as there is at other times a great *quantity* of it there, ſo it *abounding* more yet, if it be *more crude*, *ſerous*, *cold*, *by oppreſſing the brain* may make it *more ſtupid*, or *by cooling it*, may make it *ſleepy*; The which doubleſs a pain of the head præceded, and ſomtimes doth ſtill remain its companion, and this is known by a fulneſs of blood and redneſs of the face.

Ætius tels us that *from much blood abundantly and ſuddenly overwhelming the ſubſtance of the Brain*, that Species of a *Catalepſis* is generated, from which a yong man was freed by a flux of blood from his noſe; which flux of blood being often accuſtomary in ſolution of Diſeaſes by natures motion, cannot therefore argue this Diſeaſe proceeding from blood, for which we ſhal propound another cauſe; as we can neither grant that lighter ſpecies of it, called an *Aphony* when the voice only is intercepted, to proceed from a fulneſs of blood intercepting the paſſage of the animal ſpirit, as *Hollerius* writes, for which we ſhal by and by alleadg another cauſe. Neither can we allow that an *Epilepſie* which ſome alſo have delivered from *plenty of blood poſſeſſing the Ventricles of the Brain, and obſtructing the paſſages of the ſpirits*, doth ariſe from this humor and after this manner. As neither from *Blood* or a *melancholly* or *Cholerick juyce* from which ſome teach, that ſpecies of a *Catalepſis* is generated, which is wont to happen to perſons melancholical: and by reaſon of the *coldneſs* and *drineſs* of that humor the ſpirits to be ſo congeal'd, as was ſaid in the like diſtemper, which we have denied to be for that reaſon, and from *Melancholly* we have thought to proceed melancholly accidents rather than thoſe of a *Catalepſis* unleſs ſome other cauſe be joyned, as ſhall be ſaid; neither can we by any means admit an *Epilepſie* alſo to ariſe from the ſame *obſtructing the Ventricles* as ſome have ſpred abroad theſe opinions: when as the aforementioned affects as laſting no longer, but ſeazing and ceaſing by courſe have no fixt cauſe in the Brain, but happen, that being affected only by conſent, as ſhal afterwards be declared.

The Blood carried out of the Veſſels, if infuſed into the ſubſtance of the Brain, it breeds not an Inflammation, and then a Phrenſie would follow, but it obſtruct the *Windings and Ventricles by ſuddenly filling of them*, and it oppreſs *the beginning of the Nerves* then it cauſeth a *Stupidity* and *Apoplexy*: as it often happens a Vein being broke, and that ſomtimes by reaſon of a fulneſs of the Veſſels, eſpecially in thoſe in whom ſome accuſtomary Hæmorrhages of the Courſes, Hæmrods or Noſe are ſtopt: in whom yet living, and after their death, I have obſerved that a great quantity of blood hath broken forth from their mouth and noſe, that ſomtimes I have perſwaded my ſelf, that this was the chief cauſe of an *Apoplexy*. The ſame may happen from *an external violent cauſe*, as a *Contuſion of the Brain* from a *Blow* or *Fall* although the *ſubſtance of the Brain be no wates wounded* that the blood alſo may fil up the Cavities of the Brain, and its ſubſtance, in thoſe places eſpecially where it is contuſed; as Women do daily ſee comes to paſs in the Brain of Buls killed with a Hatchet, whenas they firſt purge the Brain from the clotted blood, before they boyl it; from whence it muſt needs be that an *Apoplexy* doth ſuddenly ariſe unleſs the blood preſently break forth by the Noſtrils, Ears and other parts or adjoyning paſſages, as ſometimes alſo it doth; or if the fall be lighter, there follows rather *a lighter obſtupuleſency*: though oftentimes alſo *the flux of blood turned into clots and retained a long time if it putrifie* it cauſeth a *Phrenzy*, *Convulſions* which before death do follow *Lethargies* and *Apoplexies* and kill the Patient.

But alſo from the ſame *violent external cauſe*, if the ſubſtance of the Brain be hurt, *by Contuſion, or by cutting or pricking*, ſeeing it is a principal part, whoſe action is then deſtroyed, it muſt needs be that an *Apoplexy* doth ſuddenly follow. Or if the *Skull* be only *broken* thereby or *depreſt* ſo that it preſs the *Brain lying under it*, it happens alſo that a *Stupidity* doth follow. Or if from *ſome ſtronger force the bulk of Brain* ruſh together and preſs the beginning of the *Nerves*, an *Apoplexy* likewiſe follows; all which are made manifeſt from the cauſes foregoing.

A hurt of the Brain is the cauſe of a Stupidity & Apoplexy.

A *hard preternatural Tumor*, *affecting* rather by its *weight*, than *diſtemper* cauſeth a *Stupidity by degrees ingendred with the Tumor*, but of *long continuance*: which is hardly diſcovered till after death the Skull being opened, as was found in Noble *Bonecourtius* who for ſome years like to one aſtoniſht as was ſaid before, lay Stupid; viz. a great hard Glandule being generated over a callous body with plenty of humor, which watring the Brain, did cauſe a ſleepineſs joyued with a Stupidity, as we have formerly expounded this kind. The cauſe of which might be a blow with which he was ſtruck on the head, although it were done a long time before he fel into the diſeaſe; but they being ignorant alſo of the true cauſes of a *Catalepſis*, phancying many other beſides thoſe above mentioned, they have thought alſo that it might proceed from a *Tumor of the Brain*. And ſome alſo have writ that a *Lethargie* doth proceed from a *flegmatick Impoſthumation*; the which whenas we have formerly ſhewed, that a *Fever* could not be cauſed from any cauſe lying in the brain, the ſame we aſſert cannot happen here: and ſome alſo have held that an *Abceſs* may be the cauſe of it, the which notwithſtanding generated in the brain from hot ſtumors, doth cauſe rather a *Phrenſie* and *Convulſions* than a *Lethargy*

A Tumor of the Brain is the cauſe of a Stupidity and Apoplexy.

A Vapor carried up to the Brain, or heaped up there, may be the cauſe of *immoderate ſleep cauſed by conſent* if it be carried thither *plentiful and ſteeming do oppreſs the ſpirits*, or *being crude it do ſo moiſten the brain*, that it becomes *languid to perform its actions*.

A Vapor the cauſe of ſleep.

Such a one is raiſed from plenty of Meat or drink, or from that which is vaporous or more moiſt; which if they be more moderete, procure that ſleep which is wont to moleſt men after dinner or ſupper, eſpecially if they drink Wine as 'tis uſually the cuſtom, which we ſhal by and by ſhew hath certain narcotick vertue, and the conſtitution of the brain be moiſt, as it is in old folks which propenſion to ſleep is cuſtomary after meat, the reſt

reſt of the body alſo doth very much further, which after labor whiles they take their repaſt, is compleated by ſitting ſtil, and ſo much the more alſo inviting the mind to reſt by ſleep by how much they are longer at dinner or ſupper, and if the heat of a South Sun be joyned, or of the Country or place as of a hot-houſe, it helps ſomwhat, both becauſe heat cals the vapors upwards, and becauſe recreating the wearied bodies, and more aptly diſpoſing them to quiet, it cauſeth that the mind alſo is inclined to reſt. But *immoderate Sleep* alſo may be cauſed from the *immoderate uſe of meat and drink* or *certain nouriſhments* not *dulling the brain by a ſtupefactive quality*, but *filling of it with many vapors*: which is known by this, if after carrouſing though not to drunkenneſs, of which hereafter, or after the uſe of certain meats, they ſuffer thus, and afterwards come to themſelves.

A Vapor the cauſe of deep ſleep.

Vapors raiſed up and and down the body from humors and vaporus and moiſt excrements are ſomtimes wont to beget *ſleep*. If they be gathered together in the Stomach or Womb, whence many other diſeaſes of the brain cauſed by conſent do proceed, and ſomtimes alſo they induce *immoderate ſleep, if the brain be troubled with thoſe vapors* which is eaſily known by the affects of thoſe parts, that it proceeds from thence, *from Worms putrifying* in the Guts, ſuch *evaporations ſent to the head* do often cauſe *ſleep* eſpecially in Infants: and by the ſigns of Worms 'tis ſhewn from whence it proceeds although this *ſleep* is commonly promoted by reaſon of a *Fever* accompanying.

A Vapor the cauſe of a Carus and Lethargie in Fevers.

The matter intermitting Feavers putrifying in the meſaraick Veins as the moſt capacious receptacle of humors corrupting for a light cauſe by reaſon of the neerneſs of the Guts, and the moſt dangerous fuel of many diſeaſes, *being attenuated by heat and carried plentifully up to the head* eeſpecially at the firſt invaſion, breeds this Sleep hapning in ſome Tertians and Quartans at the beginning of the fit, while coldneſs yet poſſeſſeth them, and the body is not yet through hot, and ſomtimes it laſteth to the end of the fit. And alſo *in continual Fevers* I have often obſerved that *the Brain weaken'd with a long continued and grievous pain foregoing* in *the vigor* or *after it*, being ſtruck with a *Carus* following, hath brought the Patient into a great deal of danger. The which alſo if it happen in the beginning of *continual Fevers* and by and by, by reaſon of too much evaporation, this principal part the brain, eſpecially by ſome means diſpoſed to a *Carus*, be ſo weakened, that *a heavy ſleep* do follow, it wil be *that Lethargie which is coupled with a continual Fever* and preſently after invades with it, no otherwiſe differing from that other *Carus* which happens in the declination of Fevers, which is alſo dangerous, but in this that it preſently begins with the *Fever*.

Many aſſert that *from evaporations from the Stomach, Womb, and the reſt of the body aſſailing the brain, an Epilepſy by conſent is cauſed*: as alſo ſome have written that ſome ſpecies of a *Catalepſis* doth proceed from *Melancholly vapors*, and how it is done they variouſly aſſign, whenas ſome of them think it is done by filling up the Ventricles of the brain, or affecting it ſome other way, or by irritation; the which notwithſtanding how it comes to paſs by reaſon of the nervous kind affected, we ſhal by and by explain.

Somtimes an *occult quality by an unknown propriety* is wont to be the cauſe of *Sleep* and *Stupidity* of which kind is the *narcotick* vertue, which acts not by coldneſs as hath hitherto been beleeved, but by that propriety by which it lulls aſleep the ſenſes, and by ſuch medicines taken and entring into the body (although by their ſmell alſo they may offend ſomwhat, but being only applied they ſcarce work ſo far as to induce a *Stupidity*) if they be gentler they cauſe a *ſleep* not natural but as it were *artificial*; but if it work more powerfully ſtronger things being given, it makes them ſo ſtupid, that like to the *Apoplectical* they lie without ſenſe and motion, and unleſs they come to themſelves they are choaked for want of breath; as we have often found hath hapen'd from *the juyce of Poppy* and other things, upon which account their uſe is very dangerous; and alſo from *the immoderate uſe of Wine*; not by reaſon of the evaporations as ſome have thought, but *by reaſon of its narcotick vertue, immoderate ſleep and ſtupidity* alſo do follow in Drunkards, which makes them no leſs aſtoniſht, than if they had taken *Opium* and often kils them: as it happens alſo from *the Liquor extracted from Wine* which they call *the Spirit of Wine*, and by ſo much the more powerful, as its force is reduced and collected into a narrower compaſs, by the drinking of which we have ſeen killed ſome Infants that drink of it by chance, and ſome of riper age lying aſtoniſht.

A Narcotick vertue is the cauſe of ſleep and ſtupidity

Some *venemous things* do cauſe the ſame effects by *a hidden vertue, being outwardly infer'd*, by a *ſtroke* of certain *Beaſts*, as from *the biting of the Aſp a deadly ſleep* follows, as *Plutarch* writes in the death of *Cleopatra* which kind of *malignant vertue* may be raiſed alſo *in the body* from *the humors degenerating into a poyſonous quality*: *in malignant and peſtilent Fevers, by whoſe evaporations the brain infected*, may be oppreſt with *a heavy ſleep and Lethargie* which happens alſo in an *Epilepſie* proceeding from thence, towards the end of the fit, that they are longer oppreſt than with *ſleep* or *ſtupidneſs*; not ſo much by reaſon of the brain tired by too much ſtirring, as becauſe theſe malignant vapors which before did cauſe thoſe *Epileptical* motions by affecting the nervous parts, as ſhal be ſaid by and by, afterwards weakning the brain do induce a *ſleep* or *ſtupidneſs* for a while, til theſe vapors are diſcuſt, and the fit be ended: which alſo may happen in a *Catalepſis* for the like reaſon, ſince that it is a certain ſpecies of *Convulſion*.

A poyſonous quality is the cauſe of ſleep and ſtupidity

If the cauſe of that doting *ſleep* proceed from the *Devil* with which *he* deludes *Witches* 'tis not our task to ſearch out thoſe hidden cauſes, which the Witches attribute to *the oyntments* with which they anoint things, by the Devils command, or *to Decoctions* with which they dream they can cauſe Hail, and draw Clouds from Heaven: ſuch as *Eotis* in *Apuleins* and *Homers Circe* did prepare *by bruiſing together Garlick Wild Time and ſtinking Plants* which we renounce.

The Devil the cauſe of Dæmonical ſleep.

By reaſon of a defect of animal ſpirits in the brain, it muſt needs be alſo that a *ſtupidity* follow, *the functions of the brain being taken away*; which may happen upon a double account, they being either *waſted* or at leaſtwiſe *poured forth and extravagant*.

The Animal ſpirits being waſted in the brain, if they were only impaired or too few whence follows a weakneſs of the brain, its functions alſo muſt be weakned, as hath been ſaid *in the Weakneſs of the mind*: but if they be *altogether*, or *ſo far conſumed* as that not only *a weakneſs of the functions* do follow, but *a total Oblition* of them, there wil be *a grievous Apoplexy and ſuddenly killing the Patient*, of which we have oftentimes ſeen old men die of, and the com-

The Conſumption of the animal ſpirit is cauſe of an Apoplexy.

mon People ſtill hath believed it cauſed from a Flegmatick Humor; as we ſee *the vital Spirit being impared* there follows *a want of ſtrength, but being wholly conſumed Death.*

Too great a pouring forth of the Animal Spirit from the Brain into the Nerves is the cauſe of a Stupidity of divers kinds of a Catalepſis and Epilepſie.

The Animal Spirits being ſhed or poured forth from the Brain into the Nerves continuous with the Brain (for they can be extravagant no where elſe, whenas they can conſiſt no where but in the Brain and Nerves) then it happens that the *Internal ſenſe*, either *all* or *ſome* do ceaſe, according as a greater or leſs quantity of them leaves the Brain; but the motive power is no waies aboliſht, ſince as thoſe Spirits do yet perſiſt in the Nerves, neither are the Nerves left deſtitute of them, as it comes to paſs in *a reſolution*, their paſſage from the Brain to the Nerves being then hinderd: furthermore ſince that the Animal ſpirit is contained alſo in the Nerves, as well as in the Brain, of which they are portions, though the the Functions of the Brain may ceaſe for a while, yet they nevertheleſs may ſtill for a time exerciſe the power of moving, which they contain in themſelves: the which alſo we may very well gueſs doth proceed rather from the Nerves, then the Brain in ſome creatures, who excel more in motion then in the ſenſes, becauſe they have none or a very little Brain, but a marrow of the Back, large and plentiful, part of which alſo cut off from the reſt, yet nevertheleſs moves for a while: and this is the true and Legitimate cauſe, why the ſenſes being aboliſht, yet motion nevertheleſs may perſiſt for a time: in finding out of which both the ancient and moderne Phyſitians have ſo much tormented themſelves, and deliverd their far different opinions, viz. *This effuſion of the Spirits into the Nerves:* which proceeding chiefly from *two cauſes* produceth accidents ſomwhat diverſe, as ſhall preſently be explained.

The firſt of which is *the too much, Vehement, and Perſevering operation of the internal Senſes* by which, as in great paſſions of the Heart, we ſee the vital Spirits ſo carried forth, that thence follows *a Fainting away*: and ſo if there be a diſſipation of the Animal Spirits into the Organs of the external ſenſes by a more vehement Cogitation and intention upon ſome thing, it may come to paſs that as men aſtoniſht they may be lightly ſtupid, and either by and by, they returning again they may come to themſelves, or if they continue longer, thoſe diverſe Species of *a Catalepſis* may proceed, which we have demonſtrated in the explication of the former kinds, to have ſomtimes happen'd from *too much Study*, or *Love*, or *ſome other great affects of the Minde*, eſpecially *Melancholly* (whence it came to paſs that many have put *a Melancholly juyce* as the Cauſe of *a Catalepſis*) In which if the Spirits being not wholly poured forth, ſome portions of them remain in the Brain, ſome Sences alſo wil remain, the other ceaſing, and as they are poured forth into the Nerves, Motion may alſo either at leaſt remain, or exerciſe it ſelf with a rigidneſs without concuſſion, if there be no contraction of the nerves as ſhal be ſaid in an *Epilepſie* and this ſeems very likely to be the cauſe of the diverſity of Species of a *Catalepſis* as we have ſhewed formerly in diverſe Hiſtories of it, yet as alſo if the ſpirits be ſo carried forth, by a violent affect of the Minde, that for awhile they cannot recollect themſelves, we have ſeen them fal down like to the *Epileptical* their pulſe remaining, by which they were diſtinguiſht from *thoſe that faint away* and ſome when they made a ſpeech or deſpute at great meetings, by reaſon of the too great contention of the Minde and Senſes, fear ſomtimes or ſhame coming upon them, the Spirits being troubled, have ſufferd the like; from whence perhaps becauſe the ſame was wont to happen for this reaſon at ſome meetings, *an Epilepſie* was called the *Comitial Diſeaſe*. In which vehement motions of the Minde as it may come to paſs, ſo it is commonly believed alſo that from *Anger Convulſions* may eaſily proceed; which opinion happily had its riſe, becauſe in thoſe diſpoſed, the fit is by this means promoted: unleſs perhaps this may happen by the ſtirring of Choller through Anger, as we ſhal declare by and by.

But the other and more frequent Cauſe of pouring out the Spirit into the Nerves, from whence follow *the more grievous Symptoms of an Epilepſie and Catalepſis is an irritation of the Brain*: ſuch a one by which its expulſive faculty ſtirred up, riſing to caſt of that which is troubleſome to it, doth together drive forth the Spirits: as Nature every where feeling pain and trouble is wont to thruſt Spirits thither, and together with them blood alſo, oftentimes ſo powerfully that there follows an inflamation of that part which receives them.

Which trouble or irritation of the Brain indeed, they demonſtrate to happen *rather by conſent, and compaſſion with ſome part* then from *its proper effect*; becauſe we ſee Convulſions happen rather from *an affect and Diſeaſe of another part*. Somtimes alſo far diſtant from the Brain, then of the Brain it ſelf, as from *a Nerve Pricke, or ſome violent Medicine taken*: where as if it did happen from ſome grievous Diſeaſe of the Brain (as indeed it muſt needs be a grievous Diſeaſe, which muſt induce ſo vehement a Symptone) the accidents of *Convulſions* which it cauſeth, would not ſo ſoon remit; as alſo in other hurts of this principal part, we ſee there ſucceeds long continued and laſting ſymptoms as you ſee in *an Apoplexy*: and thoſe affects which happning to the Nerves do cauſe *Convulſions* as a *Puncture Inflamation* if they were in the Brain would not cauſe them, but *an Apoplexy* and *Phrenſie*: although the Brain thus moleſted by conſent alſo, if the cauſe offending be great, and follow continually, not only irritating the Brain it ſelf, but alſo by its vehemency and frequency ſo hurting it, that it contract alſo its proper diſeaſe, then the contention of *Convulſions* laſts almoſt continually, neither do the ſick exactly come any more to themſelves, or the fit wholly ceaſe, till the Patient be quite dead. Yet it may be alſo that from *the ſame Cauſe* as we ſhall by and by ſpeak of that which is *Poyſenous, both the Nervous kind and the Brain hurt together, Convulſions* may happen *coupled together* with *other hurts of the Minde*,

But that we may find out this part which is firſt affected, and with which the Brain condoles, if we conſider the Symptoms, *viz.* the inordinate motion and privation of ſenſes, that muſt be it which hath ſo great conſent with the Muſcles exerciſing voluntary motion, and with the Brain commnnicating ſenſes, that that being hurt, the Muſcles are forced and the Brain ceaſeth a while from its Function which we ſay is *that Nervous kind becauſe it proceeds from the Brain and ends in the Muſcles*, under which Name we underſtand all the Nerves of the whol Body both within and without the Skul, eſpecially thoſe endued with the ſenſe of feeling and the Nervous parts which are compounded of them, which are of moſt exquiſite ſenſe: the which being ſo hurt, that the Functions of the Brain are aboliſht by ſympathy and thoſe of the Muſcles augmented, it muſt needs be that *Convulſions* follow; which how it comes to paſs we will Explain.

The offence of the Nervous kind, not that which weakens its Functions, but that which by bringing trouble to it doth rather ſtir up its faculty, if it be cauſed either in one place or more, a Nerve or Nervous part

is

is affected; and if the offenſe be great, then the whol nervous kind riſing up, whiles it endeavors to ſhake off that with which tis offended, doth together exagitate the Brain from whence it proceeds, and draws it into conſent, ſo that that alſo feeling theſe affects of the Nerves whiles it endeavors to help them to expell the trouble, driving the animall Spirits from it ſelf into the beginning of the Nerves, tis a while left deſtitute of its Functions: no otherwiſe then we obſerve ſomtimes in *a Syncope* that the Heart without any proper affect of its own, the Spirits wandring for ſome other cauſe, doth ceaſe from its Function til they return again. In which effuſion of the Spirits into the Nerves, it happens that the motive Power doth continue in them, not only as was declared formerly, by alſo by reaſon of the plenty of Spirits of the Nerves, the Muſcles alſo are ſtirred up to exerciſe Motion; but cheifly that inordinate and violent Motion in the beginning of Epileptical Fits is performed for this cauſe, that whiles the nervous kind doth endeavour to expell this Offenſe, it is contracted into it ſelf, and then again dilated, and it forceth the Muſcles of the whol Body, into whoſe beginnings the Nerves are inſerted, by conſecution to commit thoſe inordinate Motions, by pulling or drawing, and then remitting them; and that ſo long till the hurtfull Matter is expel'd from them, or by reaſon of dejection of ſtrength and as it were wearineſs, when they can no longer exerciſe Motion, yet notwithſtanding they retain their Limbes convulſed or attracted, ſtiff and fixt for a while, till at laſt they come wholly to themſelves. The which happens in a *Catalepſie* preſently at the beginning, no agitation of the Body foregoing, perhaps becauſe in that there is not ſo great an effuſion of Spirits into the nerves, whenas in that ſomtimes ſome ſenſes do yet remain, and there is a leſs irritation of the Nerves, whence it may be accounted a certain lighter ſort of *Epilepſie*, yet very ſeldom happning, otherwiſe proceeding from the ſame cauſe which breeds an *Epilepſie*, but which either doth leſs affect the nervous kind by irritation or elſe hath that propriety, that it produces that *ſtupidity or rigidneſs of the Members* rather then *Convulſions*.

But that theſe cauſes of offenſe to the Nervous kind, from whence *an Epilepſie* often proceeds, *a Catalepſis* more ſeldom, are diverſe and frequent it is no wonder, whenas the Nerves by reaſon of their moſt exquiſite ſenſe, are not only unable to endure great troubles or pains, but alſo are ſo eaſily offended by the ſlighteſt, that they cannot ſuffer the touch of a Body, (on which account, whiles they are carried in the body, Nature hath provided for them that they touch not the bones, neither are they joyned to any other parts, beſides thoſe into which they are inſerted) from which notwithſtanding they are not exaſperated by divers incurſions; unleſs they be great and violent, ſo that they be convulſed; of which ſort are thoſe which may happen to them from *a wound, irritation or infection* either acting ſingly, or more of them together.

That a *Convulſion* may be cauſed from *a Wound made either in a Nerve, or nervous part* ſuch caſes frequently hapning, do ſufficiently declare; yet not from every wound of a Nerve, but only from that almoſt, by which *a Nerve* is hurt *by pricking*, *Convulſions* are wont to follow its function, being there ſtirred up by reaſon of the offence, which if the Nerve be wholly cut in two, is rather aboliſht; for which reaſon alſo, if we cut off a Nerve convulſed, we cure *the Convulſion* cauſed in it; but this moleſtation of the Nerve, proceeding from the ſolution of its continuity, is yet more increaſed by *an Inflammation*, or *putrefaction* from the corruption retained in the narrow hole of the Puncture of the Nerve, and by the great *pain* from thence, which for the moſt part do attend this affect: or if *the Wound happen from Iron* of its own Nature *an enemy* to the Nerves, commonly by reaſon of *its Ruſt*, or becauſe tis *infected*; or *a bite* or *blow of a poyſonous Beaſt*.

But alſo *a nervous part being wounded* eſpecially in that *place, where the Nerves go under it, and conſtitute the greater part* of it; as *the Bladder being hurt at the Neck*, *the Muſcles about their beginnings* either *by chance* or *whiles the Chirurgion and lithotomiſt attempt a Section of the Body*, moſt commonly *dangerous Convulſions* ſucceed; which *a difficulty of ſwallowing* going before (which the Chirurgions ſo greatly fear, calling of it as was ſaid before, *a ſpaſme of the Stomach*) is wont moſt commonly to foretell.

An irritation of the nervous Kind, if it be *vehement*, may alſo cauſe *Convulſions*; the which proceeds either from *the cauſe* which becauſe it torments *the Nerves with grievous pain*, maketh *Convulſions by accident*, or the which *by it ſelf ſtimulating the Nerves by a manifeſt Quality*, and cauſing *Pain* or none together with it, doth convell them: which *cauſe* proceeds either *from Medicines* or internall *Humors* as *Blood, Choler and Flegm* moleſting the Nerves by their proper ſubſtance, or by a Vapor only.

But Convulſions are cheifly cauſed by occaſion *of pain*, either if *the Torments be unreaſonable and of long continuace* ſuch as in *Cholicks* do often cauſe *Convulſions*, or if they trouble Bodies endued with moſt exquiſite ſenſe and which by reaſon of their Tenderneſs, do hardly undergo ſuch torments: on which account alſo Infants, not only in diverſe ſorts of ſickneſſes, but when they begin to breed Teeth, being exaſperated with pains, are often times convulſive: and alſo *immoderate Tickling* made in the like Bodies, becauſe that alſo gives trouble and a ſad ſence, experience doth teſtifie hath cauſed *Convulſions* in ſome; nay tis confeſt by all that even a *light Tickling* cauſed *by Wormes* creeping up and down the Gutts and Stomach, and ſucking them with their Mouths, doth move in Infants not only horrors, and ſcratching of the Noſe, but alſo *light epilepticall Convulſions*.

Medicines taken which ſtimulates the expulſive Faculty of the ſtomach and Guts, if they excite thoſe parts too much, as they cauſe *a convulſive Motion* which is *by Hiccoping*; ſo if they be very biting and burning, as thoſe things put up into the Noſe, they move Sneezing; and ſo a *purging Faculty* eſpecially joyned to them, by which they ſollicite Nature at once very much both by Vomit and ſtool, by reaſon of their eminent efficacy they often produce *Convulſions*, ſuch as happen from *Hellebore* and the uſe of other things; and thoſe *deadly too* if by too much inſinuating themſelves into thee parts, they ceaſe not to exagitate them: but *not yet deadly* if when they firſt begin to ſollicite Nature, being repulſed by her, they be caſt forth upwards and downwards; as I have obſerved from the uſe *of Antimony and Aſarabacca* ſome feeling only forerunings of *a Spaſme in their Thighes* but others alſo *convulſive*, to have returned to themſelves.

Corrupt and putrifying Blood if it be carried into *the nervous kind* by affecting of them, may alſo cauſe *Convulſions*. As it ſometimes happens from *a blow of the Head* penetrating the Skull, yet not deviding the ſubſtance of the Brain (whence rather an Apoplexy would follow) but only wounding the Membranes of the Brain; the Blood then being poured forth, and retained under the Skull, which putrefying infects the Membranes of the Brain with a maligne quality, by conſent of which and alſo that ſinking, and poſſeſſing and affecting the beginning of the Nerves produced from the Baſis of the Brain, it breeds *Convulſions* which follow *Wounds of the Head*.

Head: which ſort of *Convulſions* alſo in Impoſthumations, are ſomtimes wont to follow a *Phrenzie* that went before.

Choler of all humors is wont to be the chief, both the *Yellow*, and the *Green* and *Black*, which by its acrimony is wont to ſtimulate and irritate *the Nerves and nervous parts* the which alſo by its thinneſs it eaſily enters: which in *Pains of the Colick* doth cauſe thoſe *Convulſions*, not only becauſe it breeds theſe Torments, but alſo becauſe inſinuating it ſelf into the Stomach and Guts, it doth too much ſollicit them with a kind of *cauſtick* vertue, which Convulſions laſt, as long as this acrid humor ceaſes not to irritate; that there is no need to fancy any other reaſon that it is far fetcht to the Nerves, if it ought to cauſe *Convulſions:* and alſo if a *Convulſion* proceed from anger, they think it may happen by reaſon of the boyling and effuſion of Choler, although that rather proceed, from this too much motion of the mind, ſtirring up the ſpirits as was ſaid before.

Alſo from *thin ſalt and acrid flegm* falling down *from the brain into the ſpaces through which the Nerves are carried* and pulling of them, an *Epilepſie* may be cauſed; as in a *Palſie* ſomtimes bedewing the Nerves, it firſt cauſeth *Reſolutions*, afterwards by its acrimony, which it either had before, or by putrefaction hath newly acquired, ſoliciting the Nerves, it raiſeth thoſe *Convulſions* which ſomtimes follow *Palſies*; which, *ſneezing* ariſing, from the ſame flegm, diſtilled alſo from the Brain into the Noſe, is wont to go before and foretell; whence perhaps the cuſtom of praying after ſneezing took its firſt riſe, whenas they had ſomtimes obſerved that *ſneezing* was a forerunner of an *Epilepſie*.

Alſo *filthy and acrid vapors* eſpecially if ſome *malignity* be joyned, as ſhal be ſaid, *being raiſed in the body* and eſpecially *pulling the beginning of the Nerves* or elſe where ſolliciting, eſpecially the greater, do beget an *Epilepſie* which they ſay is cauſed *by conſent* ſuch as are from vitious, corrupt and putrid meats, humors, excrements, worms, collected in the ſtomach, guts, womb, veins, in divers diſeaſes of thoſe parts, or of the whol body as thoſe raiſed *from Fevers* which do produce *Convulſions* which are wont to follow theſe diſeaſes.

But thoſe things which cauſe *Convulſions by a poyſonous and pernicious quality* are *various*; which according to the divers nature *of the poyſons*, and as they are either inimicous only to the nervous kind, they do infect that only, or alſo the brain together with that, do produce either *Convulſions* or the brain being hurt alſo other accidents, which ſomtimes alſo *after the Epilepticall fit is over* do continue in *the hurts of the ſenſes*, eſpecially in *an alienation of mind and depraved motion*, as hath been ſaid. Amongſt which poyſonous cauſes that ſomtimes alſo offers it ſelf, which by its propriety and private hurt brings forth the accidents of a *Catalepſis* rather than of a true *Convulſion*; yet becauſe 'tis a diſeaſe very rare, it evidently ſhews, that ſeldom ſuch a venenate quality, is raiſed in our body, which may produce ſuch an effect in the body, as alſo that which cauſeth *true Convulſions* is moſt often: but of what kind ſoever that be, its *Fountain* and *Original* ſomtimes lurks *intrinſecally in the brain, or bowels, or in the veins or habit of the body* and ſometimes *extrinſecally to the body*.

Fernelius witneſſeth that he hath found by diſection, *an Epilepſie of long continuance* cauſed in the *Brain* from the *corruption* or *impoſthumation of the membranes of the brain* and by reaſon that *a filthy vapor* raiſed from them, at ſet times entring the ventricles did cauſe the fits; but that theſe things do cauſe rather *ſhort* and *deadly* than *long continued Epilepſies* and not becauſe they ſend a filthy vapor to the Ventricles, but for another reaſon, hath been demonſtrated formerly, whenas if they did poſſeſs the ſubſtance of the brain or its Ventricles and ſo much hurt them, they would induce rather an *Apoplexy* than *Convulſions*. In the interim notwithſtanding we do no waies deny the cauſe of an *Epilepſie* oftentimes to lie in the head; and we confeſs we meet with many faults within the Skul, both in the membranes of the brain, and in its ſubſtance alſo, or in its humors, which raging with their poyſonous and adverſe quality at ſet times as the nature of the poyſon is, by ſoliciting the membranes and nervous kind, do cauſe that *long continued Epilepſie* and almoſt incurable. Yet the nature of which cauſe as alſo of other poyſons, we can no otherwiſe know, then as by diſſection made, ſomtimes a *Speck* is diſcovered, ſomtimes ſome *humor black* or *froathy* in ſome *inward part of the Skul* or *bone* or *membrane* or *brain*, but ſomtimes nothing at all; but that 'tis a poyſenous faculty we collect from this, becauſe it is not with a manifeſt cauſe, or of ſuch moment, nevertheleſs produces ſuch horrid ſymptomes, and yet in the interim doth not kil the man, nor yeilds to no Remedies.

And alſo this *poyſonous* cauſe lying in the *bowels* produceth the like *long continued* and *pertinacious Epilepſies*; as *poyſons* taken in the *Stomach* and *Guts* which have ſome propriety of begetting an *Epilepſie*: or *meat* changed into the *nature of poyſon* or *excrements* putting on a *venenate quality* conteined in thoſe places, or alſo in the *Womb* as they would have it. Of all which that theſe are the cauſes and do lie in the veins is judged and known from the affects concurring with them, as hath been ſaid, or from others offering themſelves about the heart ſtrings and the veins, and from the faults of the womb and ſtomach.

The Veins alſo if they be filled with *malignant and venenate humors* of this kind, as it often happens *in pernicious diſeaſes* eſpecially in *the peſtiferous, epidemical, and contagious*, and that malignant vertue do beſiege not only the *heart* but eſpecially the *nervous* kind, then *deadly Convulſions* do follow, ſuch as are wont to happen in Fevers, not by reaſon of too much extinction of the Nerves from vehement heat, but by reaſon of the malignant nature of the humor: or alſo if *without* theſe *diſeaſes a humor heaped up in the veins* changed *into a malignant quality* do put on that nature inimicous to the brain and Nerves, that induceth rather *epileptical* accidents than others (as in *melancholy* that ſuch a poyſonous quality is there alſo wont to cauſe *the true melancholy and madneſs* we ſhal ſhew in the *alienation of the mind*) then I ſuppoſe that *long continued and incurable Epilepſie* doth chiefly proceed from this cauſe: as alſo a poyſonous cauſe raiſed from the ſame place, doth cauſe that *madneſs* that *laſts ſo long*; the which alſo for the like reaſon 'tis probable doth happen in the *meſaraick veins* ſuch matter being collected there, which do produce rather an *Epilepſie* than *hypochondriack melancholly:* where alſo many do write that a *Catalepſis* is conteined, to wit a *melancholly humor* which we moreover hold to be *malignant*, from whence vapors raiſed up do cauſe it. And the manner of curing a *Catalepſis* they apply to this place and humor, as we ſhall by and by ſhew.

And alſo in *Women* ſuch matter is wont more commonly to be heaped up about *the veins of the Womb*; where alſo *the blood reteined and corrupted* rather than *the ſeed* (which we think can ſcarce come to that malignity) doth cauſe *Convulſion*, ſuch as are often wont to happen in *Virgins and Women that are hyſterical their courſes being ſtopt* before and after their childing, and it may alſo give an occaſion for a *Catalepſis*.

That the like quality may ariſe in *the habit of the body* and cauſe an *Epilepſie* experience witneſſeth; with which *Galen* and *Fernelius* being inſtructed they write that they have obſerved, the one that *an Ait in an Epileptick Child* aſcending from *his Foot*, the other that *a Vapor* running

running from the *Crown* through the outward parts of the head, did give occaſion of *the Epileptical fits* as often as they came; and we alſo have ſomtimes obſerved that an Air running from *the hand* where afterwards *an Impoſthume* hath bred as alſo from *the feet* other or places hath done the like.

That the like *poyſon* entring the body *from without* doth occaſion Epilepſies for the like reaſon, as in other Countries *the bitings of virulent Beaſts* eſpecially *of the Viper and ſtinging of the Scorpion* do ſhew; ſo in our Countries 'tis manifeſt thatit doth happen *from the biting of a mad Dog* and beſides the ſymptomes of *madneſs* and other cruel ones, they are endangered *by Convulſions* and at length by many fits the Patients are carried away.

Tis not yet ſufficiently manifeſt, whether there be any things found out, which can produce *an Epilepſie anew* only *by their malignant ſmel* yet that *epileptical fits* are furthered by *the ſmel* of ſome things is certain, which do it either by a certain propriety, of which are reckoned, *the aſhes of an Aſſes hoof, Goats horn, Weathers feet burnt*, alſo *the ſmel of Bitumen, Myrrhe, Smallage*, and alſo the breathings of the Goats fleſh, or *the Liver of the Hee-Goat* and ſo much the more if they be eaten: or becauſe by a vehement and ſubtile vapor they aſſail the head and the nerves, made weak by the continuance of this diſeaſe (as alſo *Wine* which beſides this, doth eaſily alof its own nature trouble the Nerves) they occaſion *Epileptical fits*.

The Cure.

In theſe kind of caſes proceeding from the brain, all the operation of the Phyſitian which conſiſts in prediction and Cure, muſt be applied to the Cauſe, not neglecting in the mean time that ſymptome which is moſt urgent.

The Cure of ſleep and ſtupididity from a cold diſtemper.

If therfore from a *ſimple diſtemper cold and moiſt imprinted on the brain* as we have ſaid in old folks might happen by reaſon of their age, or from a diſeaſe of long continuance, they become *ſleepy* or *ſtupid* yet are not altogether ſick, as that is hardly corrected, ſo this fault is hardly taken away; yet *this diſtemper* may be ſomewhat mended, as was ſaid in *a weakneſs of the mind* generated from the like cauſes, by the ſame *altering medicines and nouriſhments*, both *taken* and *applied*.

As alſo if *the ſtupidity* happen from *a cold and dry diſtemper* thoſe things wil ſerve which are ſpoken of there in mending of the ſame *diſtemper*; but if a ſtupidity follow the brain actually cooled by *the external air or wind*, it wil be amended by applying of *ſkins* and *feathers* and other things actually hot, alſo by *ſuffumigations* which becauſe they ſerve alſo in *a flegmatick* cauſe they ſhall there be explained more fully.

The Cure of a Carus and Apoplexy from flegm.

But if a heavy *ſleep* be from *flegm* or an *affluxe of a cold humor* or from *the excrements of the brain* as was ſaid, although the common people deſpair of them, which they judg uot oppreſt with *ſleep* but toucht with an *appoplexy* and indeed they are not free from danger, yet the hopes of Cure is not to be caſt off, whenas many of them are cured, unleſs ſome grievous accident ſupervene, as *a Convulſion* and the humor putrefying *an acute Feaver* as ſhal be ſaid, do accompany it, as in a *Lethargie* which in old folks is deadly; though I have ſeen alſo after ſome *fits of Convulſions* they have nevertheleſs recovered of *a Carus*, yet *there was left in the ſight and memory* ſome *error* which afterwards by reaſon of old age could no waies be amended.

But if *flegm* cauſe an *Appoplexy* then unleſs that *falling* downwards into the beginng of the ſpinal marrow do cauſe a *Palſie* as was ſaid, the breath being taken away it preſently kils the Patient.

Whether *flegm* cauſe *a ſleepineſs* or *ſtupidity* the Cure is almoſt the ſame, but that *ſtronger things* muſt be uſed in *an Apoplexy* whenas its cauſe is greater, and there is more haſt to be made in the Cure by the reaſon of the danger; that which ends in a *Palſie* muſt be cured as a *Palſie*: and they apply alſo to a *Lethargie* no other Cure than to a *Carus* only a few things changed as ſhall be ſaid, by reaſon of the *Fever*.

In all theſe therefore we *will revell* the *flegm from the head by general and particular evacuations*; and we will derive it alſo by neighboring *places* deſtined for the evacuation of flegm, as the *Mouth, Noſe*: and we will endeavor to reſolve it with things that draw it to *the Superficies of the head*: and with things *altering inwardly and outwardly* applied we wil endeavor to diſſolve and waſt it, to heat and ſtrengthen the Head by proceeding as followeth.

In *ſleepineſs* if there be a great fulneſs they perſwade *drawing of blood* by opening that *Vein of the Arm which is called Cephalick*, and in an *Apoplexy* the ſame ſigns appearing they grant it alſo ſomtimes for *Revulſion*, but done *ſparingly*, and if it ſeem to have done any good they reiterate it: ſomtimes alſo they open *the vein of the Forehead*, others in theſe diſeaſes would rather open *a Vein in the Foot*, all which muſt be done conſiderately eſpecially in *the Apoplectical* left we may ſeem thus to have haſtned death.

The belly muſt be provoked in both ſpecies, and be ſtimulated that they may ſtool, both for *Revulſion* and to ſtir up *the facultties laid aſleep*, and that by caſting in ſharp *Clyſters* and *Suppoſitories*, whenas otherwiſe they ſcarce go ſtool.

Suppoſitories ſeeing they do egregiouſly irritate, and may quickly be prepared and by reaſon of their dulneſs they cannot keep *Clyſters*, are very convenient and oftentimes to be repeated, eſpecially in the *Apoplexy*, in which alſo thoſe things that burn, whenas the ſick are without ſenſe, can no waies do any harm.

Therefote *the gentler* being firſt tried, if they do no good, the following ſtronger things ſhall be uſed: Take *of Honey two ounces, juyce of Mercury, half an ounce*; *Bulls Gall half an ounce*: boyl them, add towards the end *of the root of white Hellebore and Pellitory of Spain of each half a dram*; *Coloquintida half a ſcruple, Salt Gem half a dram*: make a *Suppoſitory*, or that it may be prepared ſooner let theſe pouders be mixt with *raw Honey* and make *Suppoſitories*.

Clyſters are good not only before *opening a vein* if that be done, to waſh the Guts, but alſo after it, made firſt of things emollient and hot ſtimulaters proper for the head, by and by alſo of ſtrong irritaters, which alſo whenas they do not keep them long muſt be repeated, and by ſo much the oftner as the diſeaſe is more urgent, as in the *apoplectical*.

At firſt therefore let ſuch *a Gentle one* be given. Take *of Mallows, Mercury or Beets, Sage, Rue, Pennyroyal of each one handful*; *freſh Orrice roots three ounces, Bran, Chamomel flowers, Roſemary flowers of each one pugil*; *Carraway ſeed two drams*; make a *Decoction*, diſſolve in a fit quantity of it, *of Honey one ounce, Benedicta Laxativa two drams, Oyl of Bayes and Rue of each one ounce, Salt one dram*, make a *Clyſter*.

A ſtronger may be made thus, which may be given after the firſt, preſently at the beginning, if the evil be urgent. Take *of the Roots of freſh Orris, Solomons Seal*,

ſeal, Sours bread, of each one ounce; Maſter wort, ſix drams; the Herbs Rue, Time, Sage, Bayes, Penny-royal, Organy, Calamint, Hyſſop, of each one handful; French Lavender, Roſemary flowers, of each one pugil; Caraway, Cummin ſeeds, of each two drams; Baſtard Saffron ſeed, Bay, Juniper Berries of each half an ounce; Agarick tied in a Rag, two drams; Make *a Decoction:* Diſſolve in a *ſufficient quantity Hiera of Coloquintida, three drams; Honey of Roſemary flowers, one ounce; the juyce of Mercury, or Beets, one ounce; of Oxe Gaule, half an ounce; Oyl of Rue, two ounces; of Caſtor, half an ounce; of Foſſile ſalt, one dram;* Make *a Clyſter.*

The ſtrongeſt of all highly irritating in *an Apoplexy:* Take *of the Roots of Orice, Pellitory of Spain, of each one ounce; of Cuckow-pintle or graſs Plantane, half an ounce; Hellebore Roots, one dram; the Herbs Rue, Sage, Time, the tops of Centory, Water-creſſes, of each one handful; Caraway ſeed, half an ounce; Nettles and Rue, of each one dram; Muſtard ſeed, two drams; the Pulp of Coloquintida tied up in a Rag, half a dram; Roſemary flowers, two pugils;* Make *a Decoction;* Diſſolve *of Hiera of Coloquintida, half an ounce; Honey, one ounce and an half; Oyl of Rue, three ounces; Caſtor, Euphorbium, of each one ſcruple; Foſſile ſalt, one dram:* Make *a Clyſter,*

Although it were good to move *Vomiting* both becauſe that ſtraining doth rouſe them up, and alſo revel, yet in *the Apoplectical* tis not to be attempted, for fear of ſuffocation, whenas if an endeavoring to Vomit do urge them of their own accord; or a Cough, they are ſooner ſtrangled being forced by that violent motion, as I have ſeen it: Yet, in *a Sleepineſs* if their ſtrength be firm, a vomiting cauſed, for the ſame reaſon doth very much help; which may be actually done *by irritating the Throat*, or by giving of *a Vomit* deſtined alſo to Evacuate Flegm.

Purgers given to the *Apoplectick* by the Mouth, when as they ſwallow nothing, either flow forth again without any benefit, or if, as it often comes to paſs, they fal into their rough Artery, they induce a danger of ſuffocation, but when they are come to themſelves, then they are to be purged as thoſe *palſied* as ſhall be ſaid in *a Palſie.* But in *a Carus* or *lighter Stupidity* when as they can take ſomewhat; at firſt preſent *Purging Medicines* muſt be adminiſtred to them, but ſuch as in a ſmall quantity may quick be ſwallowed by them, whiles they are rouſed up, as at one draught, with little pains, whenas they are ſcarce obedient.

And therefore if we would give *Pills* whenas tis hard to take them, we rather diſſolve them nothing fearing here their ingratefulneſs, whenas they being a little ſtupid, do little obſerve that, as Take *of Cochiæ, fœtidæ Pils half a dram, Caſtor half a ſcruple,* diſſolve them with *Sage or Roſemary or Cinnamon Water,* and give *to drink.*

But we ſhall more rightly give *Lozenges* diſſolved as of *Diacarthamum, Diaturbith, of the Citron ſolutive* or the like *Electuaries* as *Diaphœnicon, Indum majus, and other purgers of Flegm;* the *Heiræ of Coloquintida* we may infuſe, unleſs their extraordinary bitterneſs do hinder.

In the progreſs alſo purgers muſt be repeated, the humor being firſt prepared, eſpecially if it be thick, and they muſt be reiterated again, if the evil yeelds not to the former and that the Patient recover.

It ſhall be prepared therefore after this manner. Take *of the Syrup of Bettony, of Hyſop each two ounces, Oxymel of Squills one ounce Syrup of french Lavender half an ounce Roſemary, Sage, Baurm water each two ounces,* make *a Julep* for four doſes, aromatize it with *Cinnamon* or ſomwhat elſe.

Or take *of the apening Roots ſteeped in Wine each one ounce, of Orice half an ounce Angelica two drams, Lyquoris ſix drams, the herbs Sage, Marjoram, Time, ground Pine, Bettony each half an ounce, Aniſe, Fennel ſeed each one dram, Gith, Parſley each half a dram, the flowers of Roſemary, Lavender, or french Lavender, Elder, Primroſe each two drams,* make *a Decoction* and to a pint and half add *Sugar or Honey*, or ſome of the foreſaid *Syrups* to ſweeten it, clarifie it and aromatize it with *Cinnamon* for four doſes.

Or let theſe *ſimples* be infuſed *in white Wine* adding the *Topps of the leſſer Centory two drams,* becauſe it doth very much devide Flegm, *Wormwood three drams* to give it a good ſmell, and let him uſe it.

If you will make *the Syrup for your uſe* add to the forementioned *Decoction of baſtard Saffron, Sena each an ounce and an half, Agarick three drams, Turbith two drams, Ginger one dram,* and with *Honey* or *Sugar* let it boil, let him take one ounce at a time.

After the ſame Rule you may make a *purging Wine* by mixing theſe Purgers with other things according to art.

A purging Potion alſo may be made thus, Take *of Agarick infuſed in Oxymel and Sage and Roſemary Waters one dram and an half, of Ginger* likewiſe *infuſed one ſcruple;* ſtrain it, diſſolve afterwards of *Diaphœnicon and Diacarthanum each two drams and an half,* make *a Potion.*

By the paſſages deſtined to purge *Flegm* as the *Mouth, Noſe, and Eyes,* we muſt derive the Flegm from the Head, with thoſe *Medicines* which do this by irritating the coat of the Mouth and Noſe which is very ſenſible, that the expulſive faculty being ſtirred up by theſe may drive forth the Flegm and Tears by theſe parts and the Eyes adjoyning; but when as they are not able *to Gargle* or *Maſticate* we do not uſe this form of *Head Purgers* till they come to themſelves.

But *we rub the Palate* with thoſe things that draw forth Flegm, yet in that quantity and form, that if they do fal into the rough Artery of the *Apoplectical* they may not ſuffocate them.

Muſtard ſeed which is very powerful; doth ſo provoke Flegm, that it preſently moves teares. Tis boyled in *Aqua vita* or *ſtrong Wine* and the *Palate* is rubbed with that *Decoction*; or reduced into a *Pouder* and mixt with *Honey*, tis anointed: inſtead of which the *common Compoſition* will ſerve, which being made of *Muſtard ſeed* is uſed at meals for ſavce, which we may have quickly ready at hand.

The Root of Pellitory of Spain boyled in Oxymel doth the ſame, uſed after the ſame manner.

Euphorbium alſo diſſolved in *Aqua vita*, and other things that fire the Jaws,

As alſo *Caſtor* mixed after the like manner and given.

Some rub the *Hieræ* and other *Purging Electuaries* on the Palate, but without any fruit or benefit, inſtead of which tis better to uſe the *Confection Anacardine* which doth ſomwhat inflame.

Or make ſuch a *Compoſition*; Take *of Muſtard ſeed, long Pepper, the root of Pellitory of Spain,* Pouder them and mix them with *Honey and the juyce of Rue, Horſe-Radiſh.* Make *an Oyntment.* we omit the *Vinegar* which they add, becauſe it duls the vertue of thoſe acrid things, as we ſee it comes to paſs in *Onions* and *Radiſhes* if they be eaten with *Vinegar.*

A vellication of the coat of the Noſtrils which is very ſenſible, doth Egregiouſly draw forth Flegm, either dropping from the *Noſe without violence* and flowing forth by *Tares from the Eyes*, or with a certain *violence* by *ſneezing*; which if it happen to the *Apoplectical*, is a good ſign. Yet this violent rouſing up is not to be attempted in a *Sleepineſs* before the matter be a little emptied, leaſt the humor yet filling the Brain being moved do

oppreſs

oppreſs it, or ſuddainly falling into the beginning of the Nerves, do breed *a convulſion* or *reſolution* the which is ſcarce to be feared in the *Apoplexy* when as they are no otherwiſe cured, unleſs *a Palſie* follow it; but theſe things may be done divers waies, amongſt which *Errhines* are leſs proper, when as the ſick do not attract them, therefore this may be performed after another manner. Thus,

Let the Noſtrils be anointed with the ſame *Ointment* which we ſaid ought to be rubbed on the Palate, or leaſt that thicker things ſhould ſtop up the Noſtrils, which ought to be free for reſpiration ſake in *the Apoplectical*, we muſt uſe theſe that are *more thin*; Take *of the juyces of Radiſh, Onions, Orrice, of each equal parts*; Let *a Feather dipt* in theſe be often put up into *the Noſe*.

Let *the Pouders of Hellebore, Pellitory of Spain, Pepper, Euphorbium* be blowed up, but in a ſmal quantity.

The actual *Irritation of the Noſtrils with a Fibre of Hellebor*, or *a Hogs briſſel*, or ſome *thicker Hair*, doth powerfully worke and draw forth Flegm.

The ſmel of Onions doth wonderfully provoke *Tears* upon which account if the thin outward Rinde be taken off and they applied to the *Noſe* it doth much good: *the ſmel of Muſtard ſeed* alſo and *Radiſh* do the ſame, and the *Leaves of Spear wort* bruiſed and ſmelt to do it moſt powerfully.

Theſe being done, if ſo they come to themſelves that they can uſe *Errhines, Maſticatories, Gargariſmes*, then theſe muſt not be neglected, as ſhall be explained in their place.

We will endeavor alſo to revel the Humor from the part affected *by thoſe things that draw to the ſuperficies of the Body* whether they do it by *heat* or *pain*, the which alſo will work more powerfully, if together *by diſſolving the continuity* they open a paſſage for the Humor attracted by which it may be emptied.

Upon this account *ſtrong Frictions* muſt be made *with the Hands or with a rough Cloth*, beginning with *the Head* and going downwards by *the Back*: Alſo of *the Arms, Thighs*, and thoſe places which are moſt cold, which we ought to rub til they grow hot and red, adding ſomtime alſo *hot Oyl* or *Salt*.

For which cauſe alſo *Ligatures* muſt be made in the extream parts which may cauſe pain which muſt be ſomtimes looſed and tied again.

Lotions alſo of *the Feet* will do good, *of the Decoction of Sage, Rue, Bettony, Penny-royal, Calamint, Dill, Chamomel, Roſes*.

Cupping-glaſſes alſo with a great deal of Fire, muſt firſt be applied *to the hinder part of the Head*, if perhaps the Humor may be derived through its great mouth, for which cauſe they muſt by and by be applied *to the hinder part of the Neck*; then *to the Shoulder blade* and *Shoulders*.

And ſomtimes alſo *Scarification* muſt be made in thoſe places before the Cupping-glaſſes be applied, and *the Wounds made* muſt be rubbed with *Pickle*.

Pulling of the Hairs about *the Privities*, from under the *the Armpits*, alſo *vellications of the Beard and Hairs* made up and down *the Body*, and *Prickings* and *Burnings* will profit much.

A frying Pan or Shovell, or ſome other *Iron plate red hot*, ſo long applied *to the Region of the Head* till it heat it very much, and as it were curle the Hair yet doth uot burn the Head, by egregiouſly drawing outwards, hath oftentimes cauſed *the Apoplectical* to come to themſelves; the uſe of which *the Arabians* brought up.

A Dropax alſo or *Pication* applied *to the Region of the Head* being firſt *ſhaved* and being often taken off whiles tis yet hot and renew'd, doth help alſo by calling forth the Humors to the ſuperficies; both if it be *ſimple*, and if it be *Compounded*, the which alſo may be thus made more effectual, by the addition of moſt hot things and it will raiſe bliſters; Take *of Pitch, half a pound*; *Oyl of Rue, as much as will ſuffice that it may melt*, perhaps to *one ounce and an half*; add *of the Root of Pellitory of Spain, Muſtard ſeed, Pepper, of each one dram, Euphorbium, half a dram*. Mix them.

Sinapiſmes will do the ſame applied upon *the Head* and thoſe both *ſimple*, or thus *Compounded*; Take *of the Pulp of Figs extracted from a light Decoction of them, Muſtard ſeed, of each one ounce and an half*; *Pigeons or Swallows Dung* (which is found every where in their houſes) *three drams*; *Pepper, Euphorbium, of each half a dram*; *Caſtor, one dram*; *Oyl of Spike, ſix drops*; Mix them with *the ſharpeſt Vinegar*.

The leaves of Nettles, do as it were actually raiſe bliſters, which are rubbed on *the Nape of the Neck*, and for revulſion on *the Thighs*.

Alſo *Spearewort bruiſed* doth do it moſt powerfully, if it be laid to *the hinder part of the Neck*.

Alſo *a Potential cautery* applied to *the Region of the Head*, or to *the ſaid part of the Neck*, although when neceſſity doth require as in an *Apoplexy an actual one* is more rightly applied, whenas it works ſooner, and they do not feel it, by which the Hairs of the Head may be burnt, and the Skin alſo a little.

Things altering which ought to diſſolve and diſcuſs the Humor and ſtrengthen the Brain, are given *by the Mouth* rather *in thoſe that are ſleepy*, then *Apoplectical* who ſwallow nothing almoſt, the which notwithſtanding if they be prepared in a very little quantity and yet effectual, may be by drops alſo poured into the Mouth *of the Apoplectical*, when as being contained in the Mouth they exert their vertues; the which notwithſtanding falling into the rough Artery, that they may not move coughing or ſuffocate them, ought rather to be *Liquid*.

So *ſtilled Waters* are chiefly commended ſuch as are eſpecially *that of Roſe-mary, Sage, Rue, Lavender*, which being dried and infuſed *in Wine*, if they be diſtilled, do yeild a more efficacious *Water*: *the diſtilled Water of cinnamon* as it is pleaſant and Odorous ſo tis highly effectual, *the water extracted from the flowers of the Lilly of the Vallies and of the Linden Tree* whiles they are yet *freſh* in this caſe is highly eſteemed amongſt the vulgar: Some alſo commended *the water of Marigold flowers* and *the water of the Herbs* Celandine *and* Balm.

Thoſe Compound are more effectual, of which ſort there are deſcribed innumerable we from the more choice and appropriate may prepare ſuch a one, As, Take *of Sage, Roſemary, Time, Marjoram, of each half an ounce*; *Rue, two drams*; *Lavender flowers, three drams*; *French Lavender, one dram*; *Rocket ſeed, one dram*; *Cinnamon, half an ounce*; *Nutmegs, two drams*; *Cloves, one dram and an half*; *Cubebs, one dram*: Pouder them, infuſe them *in the moſt excellent Wine* that it may be above them the ſpace of two inches, then diſtil them; give one ſpoonful, two, or three, according as he can ſwallow: *Caſtor* may be mixed with the ſame *Water* being ſomtimes ſtrained and ſo given; neither is it to be mixt with the whol *compoſition* as they are wont to do; for it is better to reſerve that which is grateful ſtill for your uſe, and when there is need, to mix theſe ungateful things with ſome part of that and ſo give it: they think that *Maſtick* mixt with theſe *ſtilled waters* or *infuſion* doth very much increaſe their vertue.

Alſo if you infuſe the above mentioned *Herbs* in *the ſpirit* or *moſt excellent ſtilled liquor of Wine*; and macerate them a long time in *the Sun* or ſome other *heat* or make it ſtronger *by reiterated infuſions* you ſhall make a moſt

moſt excellent liquor for theſe uſes, or if out of every *herb* a part, you make ſuch an *infuſion* every one ſhall be effectual for the ſame; as alſo if you mix many of them ſo together then alſo you may ſo give a ſtrong *compound water*; amongſt which *the water* which is made *of the infuſion or diſtillation of Roſemary* is extold above the reſt; but though *the ſpirit of Wine* have ſome ſtupefying vertue, yet becauſe by the extream ſubtilty and heat with which it is endued, it carries the vertue of other things ſtrongly to the brain, and caſts forth flegm and ſtirs up the native heat and drowzied faculties, by reaſon of theſe commodities, the aforeſaid ſimples commodiouſly infuſed in it, do lay down their vertues in it & dulling its *narcotick vertue* do make it a fit medicine for the cure of the foreſaid affects: the which *ſpirit of Wine* yet to give alone, as ſome do adviſe we think is not good by reaſon of its ſtupefactive power; as neither can we allow *Treacle waters* or *others* made of *Opiates*, as neither *the Electuaries* themſelves by any means, by reaſon of *the Opium* which they contain, which though they be old, yet do in no wiſe leave their *narcotick vertue* which in *a ſtupidity* and *ſleepineſs* we ought by all means to ſhun.

Oyls extracted by the art of chymiſtry from the aforementioned things above all the reſt do exert the greateſt power, given in the leaſt drop, and therefore in all thoſe *that are ſtupid* are moſt profitable, if *one* or *two drops* be powred into the mouth or diſſolved in *a convenient liquor* be given to thoſe that can ſwallow, of which ſort is *the Oyl of of Marjoram, Sage, Lavender* and that ſweet *Oyl of Cinnamon* and *of Cloves*. *Hollerius* extols *the Spirit of Vitriol* rather than which they call *the Oyl* which becauſe it is ſharp may cauſe watchings; they attribute much alſo *to the Oyl of Amber*.

More ſolid Medicines may be given after the like manner *infuſed* and *diluted* as long as they hardly admit of medicaments, and when they are to come to themſelves that they can alſo take groſſer things, then, as alſo in the whol proceſs of the diſeaſe afterwards. theſe may be given alſo in other forms.

The Confection Anacardine as 'tis approved of in all cold diſeaſes of the brain, ſo here alſo chiefly, which we wil uſe rather than *Treacle* or other *Opiates* giving it *by it ſelf* or diſſolving with *Aqua Vitæ* in which the aforementioned are firſt infuſed. *Galen* gives *Caſtor four or five grains* weight *with Oxymel* in *a Lethargie* the which we may uſe alſo in the other ſpecies, to which we may add *ſome grains of Euphorbium* the which alſo may be given with *ſpirits of Wine made by infuſion*.

Muſtard ſeed bruiſed and given in like manner *half a dram weight* is wonderfully convenient, becauſe its vertue is carried upwards to the head, or give *the condite* of it, and add it to the meats *by way* of Sawce.

The juyce of Onions may be given with *Rue* or *Sage* water or with *the ſaid infuſion to two drams* or with *Wine* that it may be more grateful.

The eating of *Woter-creſſes* alſo is approved, whoſe *ſharp juyce for the quantity of one ſpoonful* may be given after the like manner as the reſt.

The following *Electuary* is very convenient, the which we may uſe in the progreſs of the Diſeaſe. Take *of the Conſerve of Orrice, the true Acorus that is the Calamus in ſhops of each one ounce; of Sage. Roſemary, Marjoram, French Lavender or Lavender each half an ounce; Confection Anacardine two drams, the pouder of Diambra Diimoſcon each half a dram; the ſeeds of Rocket, Rue, of each one dram: with Oxymel of Squils or Honey Anacardine* make *an Electuary*, let him take the quantity of a *Cheſnut* every other day.

One dram of this Confection may be taken, and ſome *grains of Caſtor or Euphorbium* may be mixt with it, when neceſſity urgeth, and ſo drank off.

The Chymiſts give *the Extract of Sage in an Apoplexy* for a great ſecret.

Of thoſe things which are applied *outwardly* for alteration ſake, thoſe things alſo which are moved to *the Noſe* do it moſt effectually, ſeeing their vertue penetrates in a ſtrait way to the brain, wherefore *the noſtrils* muſt be anointed with theſe *juyces*. Take *of the juyces of Rue, Marjoram, the ſtrongeſt Vinegar* (which is chiefly uſed in a *Sleepineſs* that it may cauſe watchings) *of each alike quantity*, and *with a Pencil* or *Feather* dipt in them anoint *the noſtrils within*,

Or thus, Take *of Caſtor, Aſſa Fætida each ſome quantity* which diſſolved in *the ſtrongeſt Vinegar* apply it after the ſame manner

Alſo take *of Oyl of Rue two drams, Vinegar of Squils one dram, the juyce of ſea Onions half a dram, Caſtor one ſcruple*, mix them for an *oyntment for the noſtrils*.

Oyls extracted by the art of Chymiſtry are moſt powerful, if *one drop* be put into *the Noſe* ſuch as we have formerly ſaid might be exhibited; eſpecially *Oyl of Spike* which by its ſubtile evaporation doth wonderfully heat, and by mordication of the Eyes, doth alſo draw forth Tears.

Odors alſo by penetrating to the upper parts do very much help, ſuch as is *the moſt ſtrong ſmel of Vinegar* received at *the Noſtrils* which by drying doth cauſe *Watchings*.

A Suffumigation alſo from that if it be poured upon a red hot plate, and received by *the Noſe* is convenient.

Groſſer Fumes, ſo that they choak not, admitted *at the Noſe* wil do good, as *the fume* which is raiſed from *mans hair burnt*, eſpecially if before they be burnt, they be firſt moiſtned with *Vinegar*; and that which is cauſed from *feathers burnt* whoſe matter is the ſame with that *of hairs*, amongſt which the common people judg *the feathers of Partridges* and *Peacocks* to be beſt.

And being made thus alſo it will very much help. Take *of the hairs of a man cut ſmal and moiſtned with the ſtrongeſt Vinegar half an ounce, the ſhavings of Harts horn half a dram, Gum. Galbanum, Amoniack, Opopanax, the Agat each one dram; Caſtor half a dram, Gith ſeed one dram; mix them:* let ſome of it be caſt upon the coals, and let him receive *the fume*.

The ſmoak of Brimſtone fired is wonderful effectual, which is ſufficiently apparent by this that makes *red Roſes* white.

Alſo *things put into the ears* if they be very effectual, may do ſome good, as if *Oyl of Spike* be dropt into them, or *ſpirit of Wine with the infuſions* as was ſaid formerly; alſo *the Oyl of Rue*, but that which is extracted *by diſtillation* rather than by *maceration*.

Alſo the following things are applied *to the ſuperficies of the Head* firſt *ſhaved* for alteration ſake, as *fomentations* or *embrocations* as followeth, Take *of the roots of Orrice, Cyperus, the true Acorus of each one ounce; the herbs Marjoram, Bayes, Sage, Wild Time, Penny royal, Savory, Balm, of each one handful; flowers of Lavender, French Lavender, Chamomel, of each one pugil; ſeeds of chaſte tree one dram*; boyl them in *a Lye* adding a little *Wine*, foment or irrigate *the Head*.

Or thus. Take *of the Oyl of Nuts two pound, Aqua vitæ one ounce and an half, juyce of Rue one ounce, Pennyroyal, Wild Time, Sage, of each two drams*; cut them and boyl them for *a fomentation of the Head*.

Afterwards anoint *the Head* with theſe things following. Take *of the Oyls of Rue, Bayes, of each two ounces; the juyce of Rue one ounce, Vinegar oue ounce, Aqua vitæ one ounce:* boyl them to a conſiſtence adding *Caſtor one dram, Euphorbium half a dram*, anoint the head.

It

It wil be *more effectual* thus. Take *of the Oyls of Rue two ounces, of Pepper, Muſtard ſeed of each one ounce; the diſtilled Oyl of Spike, Oyl of Roſemary or Time made by diſtillation of each half a ſcruple; the Gums of Opopanax, Bdellium diſſolved in Aqua vitæ of each half an ounce; the ſeeds of Rue, Muſtard each one dram; Caſtor, Euphorbium, of each half a dram; the Hairs of a man burnt half a dram, Wax as much as is ſufficient,* make *a Liniment.*

A Plaiſter, may be prepared of the ſame adding *Pitch* or *Roſin,* or *a Cerote* the quantity *of the Wax* being increaſed, in the preparing of which the weight *of the Gums* is augmented, adding alſo *Ammoniacum* and *Aſſafœtida,* which being thus prepared, they are applied *to the head like a Cap.*

Cataplaſms of herbs and roots bruiſed may be made after the like manner. As, Take *of the Leaves of Rue, Pennyroyal, Sage, of each one handful; freſh Orrice roots two ounces;* boyl them in *ſtrong Wine,* to which you ſhal mix *of Vinegar, Aqua vitæ each one ounce,* adding afterwards *of Sea Onion roaſted under the aſhes one ounce, rotten Apples one ounce and an half,* bruiſe them and afterwards add *Oyl of Orrice, Rue, of each one ounce, Oyl of Spike half a dram, the root of Pellitory of Spain one dram, Pigeons or Swallows dung, two drams, Caſtor, Euphorbium, of each half a dram:* mix them and make *a Cataplaſm.*

Some apply *the Lights of a Hog in a Lethargie.*

Others anoint *the Head* with *the blood of a Batt.*

Beſides theſe *Remedies* which are applied *to the Head,* there are *Remedies* alſo applied *to the Back-bone in the Apoplexy* that the matter may be carried downwards, to the beginning of which this *attractive Plaiſter* is applied. Take *of Gum Opopanax, Sagapen, of each one ounce;* diſſolve them in *Aqua vitæ,* afterwards mix *of Muſtard ſeed two drams, Caſtor, Euphorbium, of each one dram;* make *a Plaſter,* apply it *to the nape of the neck,* and afterwards anoint *the whol Back-bone with hot oyls* ſuch as is *Oyl of Rue* drawing your hands downwards.

It wil not be unprofitable alſo to rub *the palms of the hands of Perſons apoplectical with Sulphur and Vitriol* diſſolved in *hot Oyl* and mixt together.

Amongſt *Amulets* they affirm that the *Emrold* hanged about *the neck* doth very much good if it touch the bare fleſh: *a Nightingale* laid under *the Pillow, the head of a Bat* laid between *the Tiles* of the houſe, are thought by a propriety to rouze up from *ſleep.*

The cure of a Carus and Apoplexy from Blood.

If *the ſleepineſs* be *from blood,* becauſe the blood is then remaining in the veſſels 'tis eaſily cured, unleſs ſome more grievous diſeaſe lie hid: but if *a vein being broke the blood poured forth into the brain* do cauſe *an Apoplexy,* whether this happen from *a plenitude,* or *a violent cauſe,* unleſs it preſently break forth *out of the Skul* by *the Noſtrils* or *Ears,* as it often comes to paſs, being preſently turned into clots it bringeth death, and ſo much the ſooner if the ſubſtance of the brain be alſo hurt; *a Convulſion* then going before, if the blood firſt putrefie, before the Patient die.

But we ought preſently in caſes of this nature, and that very ſpeedily whiles the matter is yet flowing, *to revel, derive, and drive forth the blood* in the order following,

Firſt of all *a vein is to be opened* if nothing hinder, to wit *the ſhoulder vein in the Arm* and if *the plenitude* be *great* in both Arms; then alſo in *the Leg the vein of the Ham or Ankle* muſt be opened, which ſome do before that of *the ſhoulder* that there may be *the greater revulſion* the which notwithſtanding is more rightly performed in the Arm, and then *the vein of the Forehead* and *Noſe* may be opened, which *Rondoletius* doth by pricking with briſtles, or *under the Tongue for derivation ſake Revulſions* being premiſed, the which wil ſuffice if *the plenitude* be not very great for it is dangerous to open *the jugular vein,* as ſome teach: and thus *ſleepineſs* proceeding *from plenty of blood* is eaſily remedied; and in *a contuſion of the Head* it brings great help.

Scarrification with *Cupping-glaſſes* applied there eſpecially where *the jugulars* run up *by the neck,* doth very much derive, the which alſo they approve done upon *the chin*: the which alſo may be continued *by Leeches* if time give leave, eſpecially if they be applied *to the fundament* the Hæmroides being ſuppreſt, the which if they were accuſtomary before, and now are ſtopt, or otherwiſe ſwel, we ought to open.

Cupping-glaſſes alone alſo applied to thoſe places, and *to the ſhoulders* and *ſhoulder-blades* when *the plenitude* is not ſo great may ſuffice.

The which alſo *Ligatures and Frictions of the extream parts* may perform.

Moving of the Belly in this cauſe, doth equally revell, as if it were from flegm; and that *by Suppoſitories or clyſters* highly ſtimulating, yet leſs inflaming than in another cauſe, and that preſenly after *a vein opened* which here ought to go firſt as the better.

Such wil be this following *Clyſter* which that it may be preſently at hand is thus eaſie to be made. Take *of herb Mercury or Beets in the winter time two handfuls, Of Violet Leavs one handful,* pour to them *of Lye as much as is ſufficient,* make *a Decoction,* and *in one pound of it* diſſolve *of Honey two ounces, Foſſile Salt one dram, Butter or Oyl one ounce* (leaſt the too great quantity may infringe the vertue of the others) make a Clyſter.

'Tis good to cauſe *ſneezing in the Apoplectical* after ſome *Clyſters* adminiſtred yet not too violently.

We muſt repel *with Oxyrrhodines* if it appear that the head be very hot, but with ſuch as are aſtringent rather by drying than cooling, yet by warily uſing of them, leaſt we drive the matter inward if it be in the ſuperficies; and therefore *Rondoletius* doth uſe only *a drying Ointment and Sinapiſm in a Carus* yet when neceſſity requires ſuch a one made, Take *of Roſewater three ounces, juyce of Plantane one ounce, or the water of it two ounces,* becauſe the vertue of this inhibiting the influx of blood is wonderful, *of Roſe Vinegar one ounce, the Whites of Eggs beaten two,* mix them. *Oyls* are omitted by reaſon of their laxneſs.

A young Pidgeon Chicken or Puppy dog cut in the middle and applied to the head, have a wonderful vertue in diſcuſſing the blood, as alſo other things expreſt in *a Phrenſie, Rondoletius* writes that *Water-creſſes eaten* in *Broth* or *Sallets* do heal *a Carus proceeding from blood.*

If *a Contuſion* appear in *the head* and there is ſuſpicion *of clotted blood in the brain* thoſe things which ſhal be ſpoken of in *Contuſions,* muſt be outwardly applied.

Of which ſort is this *Cataplaſm.* Take *of Wormwood one handful, Flowers of Red Roſes* and *Chamomel of each one pugil;* make *a poulder,* boyl it in *Oyl of Roſes,* beat it adding *of Bean flower one ounce, Sanguis Draconis two drams, Mummy three drams,* and apply it.

When they can take any thing *by the mouth* upon the ſame account things diſſolving *clots of blood* are given, of which we ſhall treat in their place.

The Cure of an Apoplexy from the hurt of the brain.

But if that *the ſubſtance of the brain being hurt* doth cauſe an *Apoplexy,* whenas it is *deadly,* both becauſe the continuity of a principal part is diſſolved, and becauſe by the injury offered from without, it muſt needs be that the boſomes of the membranes are hurt too from whence comes a great flux of blood, they are to be left to Prognoſticks, yet

most excellent liquor for these uses, or if out of every *herb* a part, you make such an *infusion* every one shall be effectual for the same; as also if you mix many of them together then also you may so give a strong *compound water*; amongst which *the water* which is made *of the infusion or distillation of Rosemary* is extold above the rest; but though *the spirit of Wine* have some stupefying vertue, yet because by the extream subtility and heat with which it is endued, it carries the vertue of other things strongly to the brain, and casts forth flegm and stirs up the native heat and drowzied faculties, by reason of these commodities, the aforesaid simples commodiously infused in it, do lay down their vertues in it & dulling its *narcotick vertue* do make it a fit medicine for the cure of the foresaid affects: the which *spirit of Wine* yet to give alone, as some do advise we think is not good by reason of its stupefactive power; as neither can we allow *Treacle waters* or *others* made of *Opiates*, as neither *the Electuaries* themselves by any means, by reason of *the Opium* which they contain, which though they be old, yet do in no wise leave their *narcotick vertue* which in *a stupidity* and *sleepiness* we ought by all means to shun.

Oyls extracted by the art of chymistry from the aforementioned things above all the rest do exert the greatest power, given in the least drop, and therefore in all those *that are stupid* are most profitable, if *one* or *two drops* be powred into the mouth or dissolved in *a convenient liquor* be given to those that can swallow, of which sort is *the Oyl of of Marjoram, Sage, Lavender* and that sweet *Oyl of Cinnamon* and *of Cloves*. *Hollerius* extols *the Spirit of Vitriol* rather than which they call *the Oyl* which because it is sharp may cause watchings; they attribute much also *to the Oyl of Amber*.

More solid Medicines may be given after the like manner *infused* and *diluted* as long as they hardly admit of medicaments, and when they are to come to themselves that they can also take grosser things, then, as also in the whol process of the disease afterwards. these may be given also in other forms.

The Confection Anacardine as 'tis approved of in all cold diseases of the brain, so here also chiefly, which we will use rather than *Treacle* or other *Opiates* giving it *by it self* or dissolving with *Aqua Vitæ* in which the aforementioned are first infused. *Galen* gives *Castor four or five grains* weight *with Oxymel* in *a Letharge* the which we may use also in the other species, to which we may add *some grains of Euphorbium* the which also may be given with *Spirits of Wine made by infusion*.

Mustard seed bruised and given in like manner *half a dram weight* is wonderfully convenient, because its vertue is carried upwards to the head, or give *the condite* of it, and add it to the meats *by way* of Sawce.

The juice of Onions may be given with *Rue* or *Sage* water or with *the said infusion to two drams* or with *Wine* that it may be more grateful.

The eating of *Water-cresses* also is approved, whose *sharp juice for the quantity of one spoonful* may be given after the like manner as the rest.

The following *Electuary* is very convenient, the which we may use in the progress of the Disease. Take *of the Conserve of Orrice, the true Acorus that is the Calamus in shops of each one ounce; of Sage, Rosemary, Marjoram, French Lavender or Lavender each half an ounce; Confection Anacardine two drams, the pouder of Diambra Diamoschon each half a dram; the seeds of Rocket, Rue, of each one dram: with Oxymel of Squils or Honey Anacardine* make *an Electuary*, let him take the quantity of a *Chesnut* every other day.

One dram of this Confection may be taken, and some *grains of Castor or Euphorbium* may be mixt with it, when sweetly ingeth, and so drank off.

The Chymists give *the Extract of Sage in an Apoplexy* for a great secret.

Of those things which are applied *outwardly* for alteration sake, those things also which are moved to *the Nose* do it most effectually, seeing their vertue penetrates in a strait way to the brain, wherefore *the nostrils* must be anointed with these *juyces*. Take *of the juyces of Rue, Marjoram, the strongest Vinegar* (which is chiefly used in a *Sleepiness* that it may cause watchings) *of each alike quantity*, and *with a Pencil* or *Feather* dipt in them anoint *the nostrils within*.

Or thus, Take *of Castor, Assa Fœtida each some quantity* which dissolved in *the strongest Vinegar* apply it after the same manner.

Also take *of Oyl of Rue two drams, Vinegar of Squils one dram, the juyce of sea Onions half a dram, Castor one scruple*, mix them for an *oyntment for the nostrils*.

Oyls extracted by the art of Chymistry are most powerful, if *one drop* be put into *the Nose* such as we have formerly said might be exhibited; especially *Oyl of Spike* which by its subtile evaporation doth wonderfully heat, and by mordication of the Eyes, doth also draw forth Tears.

Odors also by penetrating to the upper parts do very much help, such as is *the most strong smel of Vinegar* received at *the Nostrils* which by drying doth cause *Watchings*.

A Suffumigation also from that if it be poured upon a red hot plate, and received by *the Nose* is convenient.

Grosser Fumes, so that they choak not, admitted *at the Nose* will do good, as *the fume* which is raised from *mans hair burnt*, especially if before they be burnt, they be first moistned with *Vinegar*; and that which is caused from *feathers burnt* whose matter is the same with that *of hairs*, amongst which the common people judg *the feathers of Partridges* and *Peacocks* to be best.

And being made thus also it will very much help. Take *of the hairs of a man cut small and moistned with the strongest Vinegar half an ounce, the shavings of Harts horn half a dram, Gum. Galbanum, Amoniack, Opopanax, the Agat each one dram; Castor half a dram, Gith seed one dram; mix them*: let some of it be cast upon the coals, and let him receive *the fume*.

The smoak of Brimstone fired is wonderful effectual, which is sufficiently apparent by this that makes *red Roses* white.

Also *things put into the ears* if they be very effectual, may do some good, as if *Oyl of Spike* be dropt into them, or *Spirit of Wine with the infusions* as was said formerly; also *the Oyl of Rue*, but that which is extracted *by distillation* rather than by *maceration*.

Also the following things are applied *to the superficies of the Head* first *shaved* for alteration sake, as *fomentations* or *embrocations* as followeth, Take *of the roots of Orrice, Cyperus, the true Acorus of each one ounce; the herbs Marjoram, Bayes, Sage, Wild Time, Penny royal, Savory, Balm, of each one handful; flowers of Lavender, French Lavender, Chamomel, of each one pugil; seeds of chaste tree one dram*; boyl them in *a Lye* adding a little *Wine*, foment or irrigate *the Head*.

Or thus. Take *of the Oyl of Nuts two pound, Aqua vitæ one ounce and an half, juyce of Rue one ounce, Pennyroyal, Wild Time, Sage, of each two drams*; cut them and boyl them for *a fomentation of the Head*.

Afterwards anoint *the Head* with these things following. Take *of the Oyls of Rue, Bayes, of each two ounces; the juyce of Rue one ounce, Vinegar one ounce, Aqua vitæ one ounce*: boyl them to a consistence adding *Castor one dram, Euphorbium half a dram*, anoint the head.

It wil be *more effectual* thus. Take *of the Oyls of Rue two ounces, of Pepper, Muſtard ſeed of each one ounce; the diſtilled Oyl of Spike, Oyl of Roſemary or Time made by diſtillation of each half a ſcruple; the Gums of Opopanax, Bdellium diſſolved in Aqua vitæ of each half an ounce; the ſeeds of Rue, Muſtard each one dram; Caſtor, Euphorbium, of each half a dram; the Hairs of a man burnt half a dram, Wax as much as is ſufficient,* make *a Liniment.*

A Plaiſter, may be prepared of the ſame adding *Pitch* or *Rozin,* or *a Cerote* the quantity *of the Wax* being increaſed, in the preparing of which the weight *of the Gums* is augmented, adding alſo *Ammoniacum* and *Aſſafœtida,* which being thus prepared, they are applied *to the head like a Cap.*

Cataplaſms of herbs and roots bruiſed may be made after the like manner. As, Take *of the Leaves of Rue, Pennyroyal, Sage, of each one handful; freſh Orrice roots two ounces;* boyl them in *ſtrong Wine,* to which you ſhal mix *of Vinegar, Aqua vitæ each one ounce,* adding afterwards *of Sea Onion roaſted under the aſhes one ounce, rotten Apples one ounce and an half,* bruiſe them and afterwards add *Oyl of Orrice, Rue, of each one ounce, Oyl of Spike half a dram, the root of Pellitory of Spain one dram, Pigeons or Swallows dung, two drams, Caſtor, Euphorbium, of each half a dram:* mix them and make *a Cataplaſm.*

Some apply *the Lights of a Hog in a Lethargie.*

Others anoint *the Head* with *the blood of a Bat.*

Beſides theſe *Remedies* which are applied *to the Head,* there are *Remedies* alſo applied *to the Back-bone in the Apoplexy* that the matter may be carried downwards, to the beginning of which this *attractive Plaiſter* is applied. Take *of Gum Opopanax, Sagapen, of each one ounce;* diſſolve them in *Aqua vitæ,* afterwards mix *of Muſtard ſeed two drams, Caſtor, Euphorbium, of each one dram;* make *a Plaſter,* apply it *to the nape of the neck,* and afterwards anoint *the whol Back-bone with hot oyls* ſuch as is *Oyl of Rue* drawing your hands downwards.

It wil not be unprofitable alſo to rub *the palms of the hands of Perſons apoplectical with Sulphur and Vitriol* diſſolved in *hot Oyl* and mixt together.

Amongſt *Amulets* they affirm that the *Emrold* hanged about *the neck* doth very much good if it touch the bare fleſh: *a Nightingale* laid under *the Pillow, the head of a Bat* laid between *the Tiles* of the houſe, are thought by a propriety to rouze up from *ſleep.*

The cure of a Carus and Apoplexy from Blood.

If *the ſleepineſs* be *from blood,* becauſe the blood is then remaining in the veſſels 'tis eaſily cured, unleſs ſome more grievous diſeaſe lie hid: but if *a vein being broke the blood poured forth into the brain* do cauſe *an Apoplexy,* whether this happen from *a plenitude,* or *a violent cauſe,* unleſs it preſently break forth *out of the Skul* by *the Noſtrils* or *Ears,* as it often comes to paſs, being preſently turned into clots it bringeth death, and ſo much the ſooner if the ſubſtance of the brain be alſo hurt; *a Convulſion* then going before, if the blood firſt putrefie, before the Patient die.

But we ought preſently in caſes of this nature, and that very ſpeedily whiles the matter is yet flowing, *to revel, derive, and drive forth the blood* in the order following,

Firſt of all *a vein is to be opened* if nothing hinder, to wit *the ſhoulder vein in the Arm* and if *the plenitude* be *great* in both Arms; then alſo in *the Leg the vein of the Ham or Ankle* muſt be opened, which ſome do before that of *the ſhoulder* that there may be *the greater revulſion* the which notwithſtanding is more rightly performed in the Arm, and then *the vein of the Forehead* and *Noſe* may be opened, which *Rondoletius* doth by pricking with briſtles, or *under the Tongue for derivation ſake Revulſions* being premiſed, the which wil ſuffice if *the plenitude* be not very great for it is dangerous to open *the jugular vein,* as ſome teach: and thus *ſleepineſs* proceeding *from plenty of blood* is eaſily remedied; and in *a contuſion of the Head* it brings great help.

Scarrification with *Cupping-glaſſes* applied there eſpecially where *the jugulars* run up *by the neck,* doth very much derive, the which alſo they approve done upon *the chin:* the which alſo may be continued *by Leeches* if time give leave, eſpecially if they be applied *to the fundament* the Hæmroides being ſuppreſt, the which if they were accuſtomary before, and now are ſtopt, or otherwiſe ſwel, we ought to open.

Cupping-glaſſes alone alſo applied to thoſe places, and *to the ſhoulders* and *ſhoulder-blades* when *the plenitude* is not ſo great may ſuffice.

The which alſo *Ligatures and Frictions of the extream parts* may perform.

Moving of the Belly in this cauſe, doth equally revell, as if it were from flegm; and that *by Suppoſitories or clyſters* highly ſtimulating, yet leſs inflaming than in another cauſe, and that preſenly after *a vein opened* which here ought to go firſt as the better.

Such wil be this following *Clyſter* which that it may be preſently at hand is thus eaſie to be made. Take *of herb Mercury or Beets in the winter time two handfuls, Of Violet Leavs one handful,* pour to them *of Lye as much as is ſufficient,* make *a Decoction,* and *in one pound of it* diſſolve *of Honey two ounces, Foſſile Salt one dram, Butter or Oyl one ounce* (leaſt the too great quantity may infringe the vertue of the others) make a Clyſter.

'Tis good to cauſe *ſneezing in the Apoplectical* after ſome *Clyſters* adminiſtred yet not too violently.

We muſt repel *with Oxyrhodines* if it appear that the head be very hot, but with ſuch as are aſtringent rather by drying than cooling, yet by warily uſing of them, leaſt we drive the matter inward if it be in the ſuperficies; and therefore *Rondoletius* doth uſe only *a drying Ointment and Sinapiſm in a Carus* yet when neceſſity requires ſuch a one made, Take *of Roſewater three ounces, juyce of Plantane one ounce, or the water of it two ounces,* becauſe the vertue of this inhibiting the influx of blood is wonderful, *of Roſe Vinegar one ounce, the Whites of Eggs beaten two,* mix them. *Oyls* are omitted by reaſon of their laxneſs.

A yong Pidgeon Chicken or Puppy dog cut in the middle and applied to the head, have a wonderful vertue in diſcuſſing the blood, as alſo other things expreſt in *a Phrenſie, Rondolenius* writes that *Water-creſſes eaten* in *Broth* or *Sallets* do heal *a Carus proceeding from blood.*

If *a Contuſion* appear in *the head* and there is ſuſpicion *of clotted blood in the brain* thoſe things which ſhal be ſpoken of in *Contuſions,* muſt be outwardly applied.

Of which ſort is this *Cataplaſm.* Take *of Wormwood one handful, Flowers of Red Roſes and Chamomel of each one pugil;* make *a pouder,* boyl it in *Oyl of Roſes,* beat it adding *of Bean flower one ounce, Sanguis Draconis two drams, Mummy three drams,* and apply it.

When they can take any thing *by the mouth* upon the ſame account things diſſolving *clots of blood* are given, of which we ſhall treat in their place.

The Cure of an Apoplexy from the hurt of the brain.

But if that *the ſubſtance of the brain being hurt* doth cauſe an *Apoplexy,* whenas it is *deadly,* both becauſe the continuity of a principal part is diſſolved, and becauſe by the injury offered from without, it muſt needs be that the boſomes of the membranes are hurt too from whence comes a great flux of blood, they are to be left to Prognoſticks, yet

in the interim as long as they live, *the Wound* nevertheleſs whether *cut*, *prickt* or *contuſed*, ſo it ought to be handled.

But if *a depreſt part of the Skul broken* do cauſe *a Stupidity by preſſing the Brain* it muſt be lifted up and drawn forth by *an Inſtrument and other Arts*, if there be *any ſinal Bones* the which alſo do often prick they muſt be taken out: *the Blood* muſt be waſht out, and as *Fractures* and *Wounds* ought to be healed, muſt here alſo be proceeded, for ſo if the ſubject part be no waies hurt, they come to themſelves and are reſtored to health.

The Cure of a ſleepy Stupidity from a Tumor of the Brain.

If *a Tumor in the Brain* cauſe *a Stupidity* or as ſome have thought *a Lethargie*, becauſe it can hardly be known the man living, there is ſcarce any other Cure applyable to it, then that which is due to cold Humors, when as this Humor muſt be cold, which can cauſe that, for a hot one would rather cauſe *a Phrenſie*; but *the Stupidity*, will then be of long continuance, and *Mortal* when this Tumor hid in the Brain, cannot be mollified nor reſolved.

Vapors alone, unleſs there be ſome occult quality, as ſhall be ſaid, ſcarce breed *a Stupidity*, though ſome write that *an Apoplexy* may be cauſed thence, which by the toſſing and concuſſing of the Body only, the vapors being diſcuſſed, is healed: but they often cauſe *a ſleedineſs* in which we ought to have reſpect unto *the part that ſends them*, or *the Stomach*, *Womb*, *Guts and the Veins in Feavers*, *and the part receiving them*, viz. *the Head*.

If by default of the ſtomach after eating and drinking that *inclination to ſleep* do happen, which is wont to trouble many after Dinner and Supper, in thoſe accuſtomed and ſome Natures, it doth good rather then harm by refreſhing the wearied Body and therefore they become afterwards more chearful to undergo their Duties; but if ſo be that it oppreſs *the Head* and cauſe *plenty of Excrements* in it, it will be prevented *by parſimony and temperance in means by the moderate uſe of Wine and that ſinal*, if alſo they protract not their *Dinner too long* nor ſit *too long at Table* but after a ſhort Dinner, preſently riſe, Walk, and do things ſportful, which by inviting the minde another way, do no waies ſuffer it to be at reſt: the which in ſome is done by *Muſick* in others by *Play* or ſome *other actions agreeable* to every ones *Genius*; and when *heat* cauſeth *ſleep*, if at that time they take their Victuals in *a temperate* or rather *ſomwhat cold place*, and and be converſant there, and ſtuddy to correct this ill cuſtome by degrees *leaving it off*,

The Cure of a deep ſleep from a Vapor.

But if *a deep ſleep* be cauſed by reaſon of the plenty *of Meat and Drink* taken *that is too much Vaporous*, *a Vomit* will help, *being repeated* if it do no good at the firſt time; and *emptying the ſtomach* by *Pills* will be profitable.

But if *Vapors* raiſed up *from Humors* exiſtent *in the ſtomach* induce *a Carus* they muſt be emptied, and the ſtomach ſtrengthened, as alſo if they proceed by reaſon *of the Womb*, *the remedies* muſt cheifly be applied to that; and if from *Worms* the ſcope of curing muſt be directed to the killing and voiding of them.

The Cure of Carus or Lethargie in Feavers.

But if that *a Vapor* elevated in *Feavers from the Veins*, do cauſe *a ſleepineſs*, *the companion of the Feavers*, in the Cure of that we muſt alſo have reſpect unto *the Feaver*, which if it begin preſently in the ſaid *Lethargie*, ſinceu it is very dangerous, and for the moſt part kills old folks, and upon that account doth draw the Cure rather to it ſelf then to *the Feaver* it muſt be thus ordered, that when as *hot remedies* do agree with that alſo as in another *Carus*, by reaſon of *the Feaver accompanying*, In other *Feavers* if *a Carus* ſupervene in the declination, becauſe *the Feavers* is now ceaſed, the whol Cure muſt be directed to the turning away of this grievous Symptom. *In intermitting Feavers* ſleep invading at *the beginning of the Fits* when as it is not very dangerous, it requires no other *private* Cure then what is agreeable to *the Feaver* only as ſhall be ſaid by the way, reſpect muſt be had unto *the Head*.

But for *the Brains* ſake which receives thoſe *Vapors* which produce *ſleep*, thoſe things muſt be adminiſtred, which may hinder the aſcent of them.

By giving thoſe things which do as it were depreſs and beat back thoſe Vapors raiſed in a part; which may be done if they riſe from *the ſtomach by aſtringent remedies* and thoſe which diſcuſs them and alſo *Wind*: and in *Feavers* if *altering things* be given which repreſs their Evaporation, as was ſaid in thoſe places.

Then we muſt draw back *thoſe Vapors* already *carried to the Brain* by *things that revel* and derive them from the part affected, eſpecially if that *grievous Lethargie* invade and *a Feaver* after the ſame manner as in a ſimple *Carus* with the ſame things which we ſaid did revel Flegm from the Head, and by ſo much the more here, becauſe Vapors do aſſail the Head, therefore in *a Lethargie* alſo this muſt be attempred by *Bleeding*, *Scarifications*, *Cupping Glaſſes*, *Clyſters* and other things: the which alſo take place when *a Carus* follows *a Feaver*.

Outwardly thoſe things muſt he applied to *the Head* which do repreſs *Vapors* in all *the Species* cauſed by *conſent* eſpecially *in Feavers* and *a Lethargie* alſo at the beginning.

Of which ſort are thoſe following *Oxyrrhodines*: Take *of Roſe water*, *three ounces*; *Vinegar of Roſes*, *three ounces*; *Oyl of Roſes*, *one ounce*: Mix them, apply it *to the Head* as it ought to be, or anoint *the Head* with it.

In the progreſs make it thus if the Diſeaſe continue: Take *of Vinegar of Roſes*, *two ounces*; *Oyl of Roſes*, *one ounce*; *of Camomel*, *half an ounce*; *Oxymel of Squils*, *one ounce and an half*: Make an *Oxyrrhodine* according to *Rondeletius*.

Afterwards we muſt proceed to *ſtronger and hotter things* by degrees, if *the Lethargie* do not yet ceaſe, ſuch as already are explained in *a Carus* when as in the progreſs of the Diſeaſe, the cure of *a Lethargie* ought little or nothing to differ from that of *a Carus* and therefore for the moſt part they are deſcribed by Practitioners in the ſame Chapter.

If a certain *hidden quality* cauſe *a heavy ſleepy and Stupidity* the Cure muſt firſt be diſtinguiſhed, whether they come from *a Narcotick* or *Maligant* quality or whether they proceed from *the Devil*.

The Cure of ſleep and Stupidity from a Narcotick quality.

If the ſaid *Narcoticks being taken* do induce *ſleep* or *Stupidity* then *Vomiting* muſt be procured ſpeedily, by *actually* irritating *the Throat*, or *giving of Vomits* if they can ſwallow.

Alſo thoſe things muſt be given to drink which can abate the vertue of *the Narcoticks* of which ſort hitherto hath been beleeved hot thing are, which by abating the coldneſs of the Narcoticks do ſo do good, and therefore they give the hotteſt things, ſuch as are *juyce of Onions*, *Garlick*, *Pepper*, *Caſtor*, *Euphorbium*. But we who have elſewhere ſufficiently declared that *Narcoticks* alſo are hot, do think, if theſe do any good they do it rather becauſe they ſtir up the benumed faculty and the native heat then that they abate the ſtrength *of the Narcoticks*, but *Treacle* which many approve of in this

this caſe, we do no waies allow, by reaſon the Opium which is in it, wherefore it rather encreaſeth than impaireth the ſtrength of the Narcoticks, whence neither do we give the ſtrongeſt wine as they teach alſo much leſs its ſpirit upon this account, ſince that theſe alſo are Narcoticks; whence *Dioſcorides* writes truly that Hemlock if it be given with Wine doth kil the ſooner, although here they feign another cauſe why it doth it; viz. becauſe it carries the vertue of the medicine ſooner to the brain.

But thoſe things which indeed do debilitate the ſtrength of Narcoticks are thoſe which by leanifying by a certain temper do correct their heat rather than coldneſs, the which we then chiefly uſe when the body is vehemently inflamed by a Narcotick as we have ſaid by Spirits of Wine a deadly Stupidity and alſo an exceſſive heat is raiſed in which caſe as alſo in others raiſed from the like cauſe, we give Natural Milk and Factitious made of Almonds and Guord Seeds alſo Butter, common Oyl and Oyl of Almonds and other Fat and mucilaginous things the which alſo we ſaid were proper in corroding poyſons.

Alſo Acid things given, as they do quel the heat of Acrid humors and Choler, ſo alſo the efficacy of Narcoticks which I am wont rather to give, as Acid juyces or ſyrups or Vinegar it ſelf which therefore we have ſaid elſewhere is the moſt certain Remedy for Drunkenneſs, the other things which do it by a certain propriety ſhal be explained in the Remedies.

The Cure of a ſleepineſs & ſtupidity from a malignant quality.

If *a malignant quality*, which we cannot rightly explain, come from without from the Stroke of a Beaſt from whence a Sleepineſs or ſtupidity enſues, then things *antipharmacal* reſiſting theſe Poyſons muſt be given, ſuch as are deſcribed in their place, but if that ſuch a Malignity be raiſed up in the body as in Malignant Feavers we have ſaid that then alſo a Sleepineſs and Stupidity doth happen, and then applying thoſe things which the malignity of the ſame method of cureing is to be obſerved which was mentioned in a Lethargy.

The Cure of Dæmonical ſleep from an evil Spirit.

If a *Dæmonical Sleep* delude Witches as we have ſaid, ſeeing the cauſe is preternatural, it will not be cured by natural Remedies but by prayers and amendment of life, but if they refuſe to do that they are worthy to be purged by fire.

The Cure of an Apoplexy from the waſting of the animal Spirits.

The animal ſpirits being ſpent in the Brain, if a man become Apoplectical death it ſelf prevents al manner of cure, which we ought to foretel to be ready at hand.

The Cure of an Epilepſie Catalepſie and Stupidity from the too much profuſion of the animal ſpirit out of the Brain.

But the Spirits being ſpent in the Brain by great meditations if ſomtime they become ſtupid they eaſily come to themſelves again upon the return of the ſpirits, but if that *by ſome vehement affection of the mind* the ſpirits be ſo carried forth, that being taken with a grievous ſtupidity, with Rigor they become Cataleptical; then the evil is very pertinacious and that eſpecially if this diſeaſe have its original from Melancholly for thoſe thus affected are hardly cured, and though they be freed from it, yet they continue Stupid and Melancholly. And if from Anger alſo they fall into an Epilepſie they are not free from danger, in which ſpecies whiles they are in the Fit, the ſame Remedies are likewiſe applied, which are uſed in the reſt of the Epilepical to the quickly taking off of their fits, the which ceaſing, the cauſe muſt be turn'd away, this being done if the evil do ſtil return, whenas by that we know that the internal cauſe is yet preſent, which the external did firſt move, then the care muſt be fitted to the taking away of that, which in a Catalepſis they apply to Melancholly, in an Epilepſie to the purging of Flegm, as ſhal be ſaid.

But if that a *Convulſion*, or which ſeldomer comes to paſs, a Catalepſis do follow from a Diſeaſe of the Nerves drawing the Brain into conſent and ſomtimes affecting of it too, the Cauſe it ſelf muſt be diligently conſidered, and according to that we muſt foretell and order the cure; which we have ſaid was in that continued Epilepſie as alſo ſomtimes in a Catalepſis, but ſeldom happning, a certain malignant, melancholly, and poyſonous humor, conſiſting in the hidden parts of the body, of the Veins, about the inward parts of the body, or alſo the outward parts, and otherwiſe lurking in the habit of the body or alſo within the Skul ariſing from ſome fault that doth not yet deſtroy the brain, but by courſe affecting the Nerves, but of a milder and Shorter Epilepſie, certain evaporations proceeding here and there from the inward bowels from a Cauſe leſs perſevering and ſomtimes alſo Pains or only Troubles, when though they have no ſuch great cauſe, in weak Children, yet they may produce Epileptical fits, but of the reſt of Convulſions which are Short we ſaid the internal cauſes were a poyſonous humor, alſo in the Veins in Feavers, which theſe Convulſions do follow; or otherwiſe Acrid, Pernicious cholerick or ſerous humor, or blood corrupted, or it depends on the taking of things deſtructive or poyſonous, or proceeds from grievous pain, either from a Wound, or the biting of Beaſts.

In all which ſpecies ſince they are all difficult, we muſt not raſhly foretel any thing of good, although a fit cure and benefit of nature doth ſomtimes mitigate the Prognoſtick: to wit, The long continued Epilepſie ſo called, if it begin before the time of youth, and ceaſe not when that time comes, viz. when men can eject ſeed, or when women have their courſes, as alſo that which firſt begins after youth is Incurable and deſperate which will afflict them to the laſt day of their lives for a long time, unleſs the cruelty of the ſymptomes doth make death more ſpeedy; but from the Shorter Epilepſie that Convulſion which is called the Worſe is deadly, and that alſo which is called the Milder ſpecies, wants not its danger.

Which things ſince that they are thus, theſe Prognoſticks being premiſed, the Cure muſt nevertheleſs be attempted, which we ſhal not firſt of al divide according to the Cauſes ſeeing they are ſo various and abſtruſe, but proceeding by the manner of operation we ſhal explain how by medicines emptying and altering found out partly by Uſe and partly appropriated to the Cauſe for ſome Reaſon, we ought to heal Epilepſies and Convulſions or at leaſtwiſe to keep off or mitigate their fits.

Evacuating Remedies are thoſe which do carry another way the Cauſes procreating or Fomenting Convulſions, whether they be vapors or humors, either by revelling and deriving from the part affected, or by Repelling and hindring them to come to the part, and that either by opening made by Cutting, Sucking, Burning, or by Purgations ordered by divers paſſages of the body, or by other operations outwardly applied.

Amongſt the kinds of Cutting, Phlebotomy preſents it ſelf for the leſſning of the blood, which in a long continued Epilepſie wil take place, if the Patient be Plethorick or the Hemrhoids which before were accuſtomary, be ſuppreſt, ſome general eminent and appearing Vein being made choyce of for this purpoſe; yet

many

many do adviſe to open the Shoulder-vein called the Cephalick for the heads ſake, alſo blood taken from the Veins of the Ham and Ankles is very convenient, and ſo much the more if the Courſes be ſtopt in Women: the which alſo ſome commend if taken from the Veins of the Forehead and Tongue, and if we do conjecture its cauſe to depend upon malignant blood, theſe detractions of blood muſt be often repeated, whenas we have ſhewed that in Madneſs, in a Cauſe not very much unlike, this is the Principal Remedy; whence here alſo, if it proceed from corrupt blood this kind of Remedy often uſed wil profit very much, as alſo in a Catalepſis if it ariſe from the like reaſon, whenas 'tis ſometimes cured by a Hæmorhage flowing voluntarily from the Noſe: But in other cauſes placed out of blood eſpeally in bodies waſted with a long Epilepſie, and alſo in Convulſions following Diſeaſes in which the ſtrength of the Patient ſuffering the Convulſion is impaired by the cruelty of the Diſeaſe, it is no waies to be adviſed to draw blood, but Scarification is not unprofitably ordered inſtead of bleeding in Children and Aged, whenas we would rather turn the blood another way, then let it out, making it at thoſe places where our intent is to draw the blood: and alſo a Paracentheſis, and Opening made by Setons and Trepanning by taking out part of the Skul-bone may be made tryal of in theſe deſperate Diſeaſes.

Sucking drawing forth blood is done by help of Leeches which being applid to the Forehead and the reſt of the compaſs of the Head they write doth good in Curing of an Epilepſie, but eſpecially when the Hemroids are ſuppreſt being faſtned to the Fundament by ſucking out this blood, which we can otherwiſe hardly provoke by any other Art, in this caſe they are very convenient.

Burning made both by an actual and potential cautery as in deſperate Diſeaſes it is the laſt Remedy, ſo here alſo the evil preſerving, eſpecially if the cauſe be in the Head it may at length not irrationally be applied, if by chance by this means the cauſe may be derived from the Nerves to the more ignoble parts; by which means 'tis reported that at *Florence* they are wont to burn the the Head of new born Infants to averſt the Epilepſie which in thoſe places is accoſtomary to Infants; for which cauſes and being moved by experience we think it not unadviſed to attempt burning with a red hot Iron (the which whiles they are poſſeſt with the Fit, and are ſtupid we may act in them without any ſenſe of pain) or by applying a Cauſtick to experiment the ſame, in a long continued Epilepſie if it reject all other Remedies; which ſome alſo do apply not only in that part of the Head, where the Sutures meet but alſo in the Neck and Feet: or if in ſome certain place an Air elevated doth cauſe an Epilepſie a Cauſtick applied to this part doth very much revel it.

Purgations by the appointed places of the body the Belly, Mouth, Noſe, and Womb in Women are ordered divers waies; amongſt which that dejection which is made by the belly carrying forth divers excrements, which is wont to be cauſed by the uſe of Purgers is diverſly accompliſht according to the divers kinds of Convulſions.

For in a long continued and falling Epilepſie whenas in all long continued diſeaſes there is plenty of excrements, that the body may be made pure it muſt be purged again and again by courſe, and as often as they are heaped up anew, at convenient times; firſt by waſhing the Belly, afterwards by preparing and bringing forth humors which give occaſion of this affect. In which whenas Authors as it was ſaid do ſo much vary, 'tis no wonder that alſo divers purging medicines are ordered by them, for many uſe above the reſt *Phlegmagoges* and thoſe which draw Flegm from the head, who are perſwaded that an Epilepſie is bred from that humor; others who hold that Yellow or black choller is the cauſe contend that amongſt Purging medicine, *Cholagoges* rather, or *Melanagoges*, are more prevalent than the reſt; but we as we find the body either ſtuft or polluted with humors do fit our Remedies to the drawing forth of this or that humor, making our choice of them from this eſpecially, whether there be need of Gentler or Stronger Catharticks to expell the humor (ommitting that too ſcrupilous and obſcure propriety and ſimilitude of Catharticks with the humors) we chooſe thoſe which are either more mild or more efficacious as the nature of the humor, and the ſtrength and conſtitution of the body do require, and thoſe which are approved of by the ancient and modern, eſpecially in this caſe commended by the authority of *Dioſcorides* of which ſort for the Gentler we allow of Whey, Agarick, Seny, and for the Stronger Hellebore, and being according to the aforeſaid intention, we think them conducible in an Epilepſie; but chiefly having a care, that when an acrid or malignant matter doth cauſe an Epilepſie we do not ſtir the body beyond meaſure, with too Hot or Acrid or too ſtrong Purgers, and if the cauſe be doubtful or abſtruſe, that by too ſolicitouſly relying on the emptying of one humor according to the common opinion, we do not more weaken the bodies than help them, and alſo to the like fit Cathartick medicines thoſe things muſt be mixed which by a peculiar vertue viſit reſiſt an Epilepſie, are proper to the Nerves, amongſt which the juyce of Peony taken plentifully doth alſo looſen the Belly, and thoſe things which do prepare to, if it have need of preparation) all which ſhall be explained in things that alter) and alſo thoſe things which do open the Courſes and Hemorrhoids if they be ſtopt, being mixt with them do procure that they are eaſier provoked, becauſe the expulſive faculty is then forced divers waies.

But that we may demonſtrate theſe things alſo by examples, obſerving this method in a long continued Epilepſie as alſo in a Catalepſis, we muſt thus proceed.

Firſt of all the Belly muſt be moved, that the excrements and the filth mixt with them may be brought forth from the firſt paſſages, and that both before the uſe of Purgers and alſo ſomtimes in the Fit that they may ſooner come to themſelves, or by courſe alſo if the belly do not ſufficiently anſwer your deſire.

Which may be done by any Suppoſitories or by putting up theſe following. Take *of Honey, the juyce of Rue of each alike quantity*; boyl them and add towards the end *as much Salt as is ſufficient, and a little pouder of Peony root.*

Or caſt in Clyſters, Firſt Laxative, then Stimulating, at laſt Stronger, appropriate both to the Brain and Nerves.

Of which ſort this may be the chief for the Flegmatick. Take *of the roots of Lillies, freſh Peony, of each one ounce and an half; of round or common Birthwort, half an ounce, the herbs Mallows, Beets, Sage, Rue, the leſſer Century of each one handful; the flowers of Lavender or french Lavender, Roſemary, Primroſe, Chamomel, of each one pugil; Bran one pugil, Seed of Peony one dram and half, Caraways one dram.* make *a decoction*, diſſolve *of juyce of Mercury or Beets Honey or Red Sugar of each one ounce; Hiera Picra and Logadij of each two drams; Oyl of Rue one dram and an half, a little Salt* make *a Clyſter.*

The humor abounding is prepared *before Purging* as it is either *Flegmatick* or *Cholerick*, or *Melancolick*, giving what follows for three or four daeis.

The

The Flegmatick after this manner. Take *of Syrup of Hyſop two ounces* ('tis very much commended in this caſe) *of french Lavender, Oxymel of Squils, of each one ounce, the waters of Betony, Piony, Hyſſop, Balm, of each two ounces*; mix them, aromatize it, or let him take *a convenient Lozenge*, by and by after the taking of it.

Or make *a Melicrate*. Take *of Hyſop, Calamint of each one handful*; *french Lavender flowers, red Cicers of each one pugil*; adding *Honey* boyl it a little.

Or *a Decoction*. Take *of the Roots of Peony, thick Galangal of each one ounce, Miſſleto of the Oak, Elecampane roots, round Birthwort, of each half an ounce, the roots of Graſs, Aſparagus, Liquoriſh of each one ounce*; *the herbs Hyſop, Betony, Balm, Calamint, of each one handful*; *flowers of french Lavender, Roſemary, Sage, of each one pugil; Aniſe, Fennel ſeed, of each two drams*; *ſeed of Baſil, Peony, of each one dram*; *Raiſons two ounces*, make *a decoction*, diſſolve *in one pound of the ſtreined Syrup, of Hyſſop, of Vinegar, of each two ounces*, mix it, make an *Apozem*.

Or *a Wine*. Take *of the herbs Wormwood, Groundpine, Germander, Calamint, Hyſop, the flowers of french Lavender of each alike*, infuſe them in *Wine*.

A melancholly humor wil be prepared thus Take *of Syrup of Fumitory two ounces, of french Lavender, of Hyſop each one ounce*; *with the waters of Betony, Bugloſs, Fumitory, Hyſop as much as is ſufficient*.

Or this *Decoction* which wil be proper alſo in a *Catalepſis*. Take *of the opening Roots ſteept in Wine of each half an ounce*; *the roots of freſh Bugloſs one ounce, Peony half an ounce*; *the bark of Tamarisk ſix drams, the herbs Balm, Fumitory, Hyſop, the tops of Time of each one handful*; *of the Cordial flowers of each one pugil, the ſeeds of Parſly, Fennel, Carawaies, of each one dram*; *and in one pound* diſſolve *of Sugar as much as is ſufficient* make *a Julep clarified and aromatized with Cinnamon*.

If *a Cholerick humor* abound make it thus. Take *of Syrup of Endive, of Vinegar ſimple of each three ounces, the water of Endive, Sorrel, Peony, of each as much as is ſufficient*.

Or make this *Decoction*. Take *of the roots of Graſs, Aſparagus, Succory, of each one ounce, the roots of Piony, miſſleto, of each half an ounce*; *the herbs Endive, all the Capillary, both Bugloſſes root and all, of each one handful*; *Betony, half a handful, Violes flowers one pugil, Aniſe ſeed one dram and an half, Peony ſeed one dram, Raiſons one ounce, Prunes in number ſix*, make a *Decoction*, diſſolve *Syrup of Violets and Endive of each two ounces*, mix them.

The humor being prepared ſuch like *Purgers* may be adminiſtred, firſt of all in *a flegmatick body*.

The following *Potion* made of uſual *Electuaries* is effectual but bitter. Take *of the Electuary of Diaphœnicon three drams, Hiera of Coloquintida and Rufus one dram and an half, Syrup of Fumitory compound one dram, the waters of Hyſop and Piony as much as is ſufficient* make *a Potion*, in *ſtronger bodies* alſo *the ſhops Hiera Logadii* may be given.

Another with *a convenient decoction*. Take *of the roots of the Acorus, Peony, of each half an ounce, Liquoriſh ſix drams, Miſileto of the Oak two drams, the herbs Hyſop, Balm Betony, of each two drams*; *the flowers of french Lavender one dram and an half, the flowers of both Bugloſſes of each one dram*; *Peony ſeeds two drams, Fennel ſeed one dram, Polipody, Senna of each ſix drams, Dodder of Time two drams, Raiſons one ounce*, make a *Decoction*, infuſe *Agararick one dram and an half, Ginger half a dram, and ſtrein it*, diſſolve *of the Electuary Hiera of Coloquintida one dram, or if they refuſe bitter things, of Diaphœnicon two drams, ſyrup of Roſes ſolutive one ounce*, make a *Potion*.

Or in the form *of Pills* after this manner; Take *of pills Cochiæ half a dram*; *Sine Quibus of Sarcocal, of each one ſcruple*: *with ſyrup of French Lavender, or Hyſop water*: Make *Pills*.

In the Cholerick and *Melancholy* the things following are more convenient; Take *of Polypody ſix drams*; *Senna half an ounce*; *Dodder of Time two drams*; *Fennel ſeed one dram*; *Piony Roots half an ounce*: Infuſe them *in Goats Whey*, Boyl them; Diſſolve *of Catholicon half an ounce*; *Confectio hamech two drams*; *Syrup of Fumitory, one ounce*: Make *a Potion*.

Or thus, Take *of french Piony Roots one ounce*; *the Herbs of Betony, Clary, Succory, Endive, Hops, of each half a handful*; *the Cordial flowers, Broom flowers, of each one pugil*; *Annis, Fennel ſeeds, of each one dram*; *Raiſons twenty, Prunes, Sebeſtens, of each ten*; *Polipody, ſix drams*; *Senna half an ounce*; *Tamarinds, half an ounce*; *Citron, Myrobalanes rubbed, with the juyce of Roſes, one dram and an half*: Make *a Decoction*, infuſe *choice Rubarb one dram*; *Spicknard one ſcruple*; Strain it, diſſolve *ſyrup of Roſes ſolutive, or of Fumitory, or of ſweet ſmelling Apples half an ounce*: Make *a potion*.

Thoſe things which are uſed *many times* either *continually* or *by intermiſſions* are preſcribed in theſe *forms*.

Such *a Syrup* may be made; Take *of the freſh Roots of Piony two ounces*; *the true Acorus Roots, Miſleto of the Oak, of each one ounce*; *round Birthwort half an ounce*; *Squil prepared, Pellitory of Spain Root, of each two drams*; *Fennel, Liquoriſh Roots, of each one ounce*; *the Herbs Hyſop, Betony, Sage, Marjoram, Balm, of each one handful*; *Rue, Time, Prim-roſe, Ground-pine, Endive, Hops, Fumitory, of each half a handful*; *the flowers of French Lavender, Roſemary, Burrage, Bugloſs, Broom, of each one pugil*; *Piony ſeeds two drams*; *Seeds of Rue, Fennel, Annis, Mountain Hartwort, of each one dram*; *Raiſons ſtoty*; *Figs, Prunes, of each ten*; *Polipody, four ounces*; *Dodder of Time ſix drams*; *Senna, wild Saffron, of each three ounces*; *Agarick five drams*; *Rhubarb three drams or half an ounce*; *Turbith three drams*; *black Hellebore, thick Galangal, Nutmeg, of each two drams*; *Ginger, Spik, Cardamom, of each one dram*: Make *a Decoction according to art in water and a third part of Wine*, and add to that ſtrained *of the juyce of Piony Roots, and ſweet ſmelling Apples, of each two ounces*; *the juyce of Mercury one ounce*; *the juyce of Hyſop half an ounce*; *Sugar half a pound*. Boyl it to a conſiſtence, of which let him take from *one ounce* to *two ounces* with *Piony water*.

A Wine to be taken for ſome daies, may be made of the ſame things or fewer, Thus; Take *of Senna, one ounce and an half*; *Agarick trochiſcate, half an ounce*; *Turbith two drams*; *Pulp of Coloquintida half a dram*; *Tartar three drams*; *the Roots of Piony, Acorus, of each half an ounce*; *the herbs Wormwood, Hyſop, Bettony, of each three drams*; *the leaves of Rue one dram*; *flowers of French Lavender or Lavender two drams*; *Fennel ſeed one dram and an half*; *thick Galangal two drams*; *Ginger one dram*; *Cardamome half a dram*: Bruiſe them, add *Wine* that they may be well ſteeped; let him try the quantity of one draught, and drink it for ſome daies after.

A uſual Electuary may be made, thus: Take *Hiera of Coloquintida one ounce*; *Diaphœnicon half an ounce*; *Diacarthamum, Diaſena, of each two drams with Syrup of French Lavender and Hyſop*: Make an *Electuary for your uſe*, beginning *from two drams*.

Or in form *of Pils*. Take *the ſpeacies of ſimple Hiera half an ounce*; *Agarick two drams*; *Rhubarb one dram and an half*; *black Hellebore one dram*; *Trochiſks of Alhandal two ſcruples*; *Lazulus ſtone prepared one dram*; *the pulp of Piony ſeeds, Arabian Sacchas, of each one dram*; *Caſtor ſix grains*; *Salt Gem one ſcruple with ſyrup of Hyſop*: Make *a Maſs*: Let him begin *with half a dram*.

In *the Gentler* called *the Childrens Epilepſie* we muſt uſe *Purgers* alſo, but *the gentleſt*, becauſe it is not ſafe to purge *Infants* or *great bellied Women*, with ſtronger, which ſeeing

ing they are vehemently hot, in thoſe they would too much inflame the body and in theſe they would expell the Child:

Therefore *the Gentler* of the aforementioned may be made uſe of, or if they be *Infants* ſtil, becauſe they refuſe ingrateful and bitter things, we may give *ſweet things* as *Manna*, or *Caſſia with Sugar*; or give *Milk in which Roſes, Violets, Senna, and the like* have been boyled; but if they ſuck ſtil, let the Nurſe alſo be gently purged, that the Milk which they Suck may be leſs excrementitious.

To others give of this *Confection of Raiſons*, which is thus prepared convenient for this caſe. Take *of the Leaves of Senna one ounce, Agarick, Peony roots of each half an ounce; Hyſop leaves two drams*, infuſe them in *water* and boyl them a little, ſtrain it, then put to it *one quarter and an half of Raiſons* boyl them again and ſtrain it, and boyl it to the conſiſtence *of Honey*, give firſt one dram making tryal according to the age.

A Pouder alſo may be given which is thus. Take *of Tartar two drams, Diagridium half a ſcruple, Aniſe one ſcruple, of Peony root half a dram, Sugar ſix drams*; give *half a dram.*

But eſpecially if *the Epilepſie* do ariſe from *Worms* thoſe things muſt be made choice of, which beſides that they do purge, may alſo kil *Worms* of which ſort are *Aloe, Rhubarb*; and we muſt mix with them, thoſe things which reſiſt *putrefaction* as are *the juyces and ſeed of Citrons, Lemmons, Harts-horn and Corals*, and thoſe things which reſiſt an *Epilepſie*, as *the root and ſeed of Peony, Miſſleto of the Oak* and the like, and they are given in the form of Pils, or Pouders, or Lozenges.

Pills are very convenient by reaſon of the Aloes if they can ſwallow them, ſuch as theſe are, Take *of Aloes, Rhubarb each one dram; Wormſeed, Coralline, the pulp Peony ſeed, of each half a dram*; *Diagridium ſix grains*, mix them up with Syrup of Lemmons, make little Pils, let him ſwallow them.

For the moſt part they are more pleaſed with Lozenges which may be made thus, Take *of Rhubarb one dram and an half, Wormſeed half a dram, the pulp of Citron and Peony ſeed, the ſhavings of Harts-horn, Ivory of each one ſcruple*; *Coral two ſcruples, Miſſleto of the Oak one ſcruple, Diagridium half a ſcruple, Sugar diſſolved in Purſlane water*, adding *the juyce of Lemmons or a little Vinegar to one ounce and an half* make *Lozenges*, let him take for *one doſe one dram.*

But in the *worſer Convulſion* which caſts down the ſtrength already weakned by the cruelty of the Diſeaſe which it follows, or whoſe cauſe hath a ſudden progreſs from things external; to enervate the body with Purgers is either ſuperfluous or dangerous; yet if it happen after pains of the Collick from the ſame humor not yet, or not ſufficiently purged forth, then with one and the ſame labor, by purging we ſhal provide againſt the Colick pains and Convulſions ariſing from thence; amongſt which Clyſters for the moſt part performing both, are commended above the reſt (although the common people do evilly think that by uſe of them the Convulſions and Palſies do happen which are wont to follow thoſe Colick paſſions) the which alſo being uſed in other evil Convulſions in which otherwiſe we ought not to uſe Purgers, they are to be preferd before all other forms of Purging, becauſe they revell, and in the interim do not too much offend nature.

Amongſt the kinds of Evacuations which are made by the Mouth, and Noſe a Vomit wil help them, when the Epilepſie hath its riſe or increaſe from things taken, or other repletions of the Stomach; which alſo in the Fit it ſelf being cauſed by thruſting down a Feather into the Throat, or by other means, doth make the Fit ſhorter if Vomiting do follow.

The which alſo may be done by Sneezing cauſed at the ſame time (the which as it doth ſomtimes go before the falling in an Epilepſie ſo ſomtimes it ends it) the which is commodiouſly moved in this caſe, by blowing up of Pellitory of Spain into the Noſtrils or with this following pouder, Take *of the roots of white Hellebore half a ſcruple, Pellitory of Spain, Pepper, of each one ſcruple, Peony root, Freneh Lavender flowers of each half a ſcruple*; make *a ſneezing pouder.*

Errhines put up into the Noſe wil do the ſame, ſuch a one as this may be, Take *of the juyces of Rue, Sows-bread of each two drams, the juyce of Peony one dram, Caſtor, Gall, of each half a dram*; *Honey one dram*, make it like a Liniment for the Noſtrils: Errhines alſo when the Patient is out of his Fit being uſed by courſe, will yeild ſome benefit if the head be ſtuft with flegm.

As alſo Spitting upon the ſame account cauſed much in a morning is convenient, which as *Dioſcorides* teacheth is here profitably moved, by chawing of Pepper or by other Apophlegmatiſms as maſticating the following forms. Take *of Maſtick half an ounce, Roots of Pellitory of Spain three drams, Cubebs, Muſtard ſeed of each one dram*; *Root of Peony, Nutmeg, of each half a dram*; Make a Pouder, mix them with Wax and make Maſticatories. They very much commend the root of Acorus candied and chawed a good while.

The Courſes promoted through the Womb in the Fæminine ſex, both by thoſe things which are given by the mouth and thoſe that are put up into the orifice of the Womb and applied to the Region of that, if the cauſe of the evil do lie in the blood retained there, they do oftentimes cure an Epilepſie.

Amongſt thoſe things which do it theſe Pills are very profitable, Take *of Agarick trochiſcate, Aloes of each one dram*; *Rhubarb one dram and an half, Myrrh half a dram, Caſtor one ſcruple, the pulp of Peony ſeed half a ſcruple with the juyce of a Leek* make Pills; let him take from half a dram to a dram at midnight.

Alſo ſuch a Peſſary put up doth powerfully move the Courſes, Take *of the root of Orice, the ſeed of Gith, of each one dram*; *Electuarium half a ſcruple or Coloquintida one ſcruple, Caſtor half a ſcruple*, mix them with Honey, the which let them be boyled to a convenient thickneſs with ſome part of juyce of Sows-bread or Mercury, and make Peſſaries.

To move the Hæmorrhoids by things given and applied, is a ſingular Remedy, if the cauſe of the Epilepſie lie chiefly in the meſaraick Veins as was ſaid; the which alſo may be done by Lecches, and other Remedies expreſt in their place.

Amongſt the other operations which are outwardly performed for Evacuation ſake, both in the Fit and out of it, the application of Cupping-Glaſſes is numbred, which ſomtimes are applied to the hinder part of the Head, ſomtimes to the Shoulders, ſomtimes to the Hypochondries, ſomtimes to the Groyns for diverſion; as alſo frictions of the extream parts, by all which revelling vapors and humors from the nerves we make the Fits both fewer and ſhorter; and alſo *Galen* on his Epileptical Child hath committed to memory upon experience, that a certain Air giving cauſe to an Epilepſie from ſome part which may be bound, if ligature be made above the Riſe of it, it may be hindred that it ſhall not run forth to cauſe an Epileptical Fit: as alſo ſome do teſtitifie, that by Repellers outwardly applied to the Head the ſame ſucceſs hath ſomtimes been.

The altering Remedies which are applied in the Cure *of Convulſions*, are fetcht from things which do reſiſt the malignity

lignity of their Cauſe by a certain *Propriety*, and that rather by *an occult* then *manifeſt Propriety* viz. by which they are adverſe to an *Epilepſie* in generall, from what cauſe ſoever it is raiſed; or they are *alexiterial* the which whether an *Epilepſie* or *Catalepſis* proceed from ſome *venenate quality*, are contrary to ſuch kind of *Poyſons*, or the which helping *the Nervee* do effect, that it is not ſo readily afiected by the Cauſe, and that becauſe they render it firm *by ſtrengthing it*, or ſmooth it *by lenifying* or make it impatible *by ſtupefying it*; or which altering *the whol Body* do change its Conſtitution which was prone to an *Epilepſie*.

Uſe hath found out and approved of many *Remedies* that do drive away an *Epilepſie* by a certain *Propriety*, as are *Piony, Miſleto of the Oak, the Skulls of a Man, an Aſſe hoof, a Swallow, and many other* ſuch like *helps* explained in the *Remedies*; which though they may be uſed in all Cauſes of it, yet whenas beſides this Vertue they are alſo either *hot* or *cold* or *temperate*, although they uſe them confuſedly without reſpect to theſe we think it more adviſed, that they ought to be ſelected according to the Nature of the Conſtitution of *the Patient* or *the Diſeaſe* and this or that to be preferred before the reſt; what things do return *the venenate quality* inducing an *Epilepſie* or *Catalepſis*, beſides thoſe which we have ſaid already do by a propriety reſiſt an *Epilepſie*, and what *Antidotes* are privately adverſe to this *Poyſon*, (as in other *Poyſons* there are found thoſe things which do reſiſt them,) hitherto no Experience hath found them out which can readily and quickly do it: wherefore if *the Epilepſie* be from a *poyſonous Humor or Vapor, thoſe common Remedies Alexipharmacall* which in generall are adverſe to all poyſons, as *Treacle and the like Compoſitions* as they are uſed in all *venenate* aud *peſtiferous Diſeaſes*, ſo alſo in theſe caſes being mixed with thoſe things which by a propriety reſiſt *the Epilepſie*, they are given to deſtroy and correct the cauſe thereof; and if *Poyſon from without by the blow of a Beaſt, or the biting of a mad Dog entring into the Body* hath cauſed an *Epilepſie*, we cure the ſame with things *alexiterial*, as the reſt of the Symptoms ariſing thence.

Thoſe things which add ſtrength to the Nerves are appropriate Remedies, which being repared of capital and arthritical Simples, Sage, Roſemary, Marjoram, Bettony, French Lavender, Primroſe and Ivy, are good in the *Palſie* and other *cold and moiſt Diſeaſes of the Brain*, which ſeeng they furniſh *the Nerves* as it were with new forces, that it may the ſtronger reſiſt thoſe things which do moleſt it, they are wont not unprofitably to be added to the reſt of the Medicines which we uſe in an *Epilepſie*, but not for that end or intention, but becauſe they beleeved that an *Epilepſie* was cauſed by Flegm obſtructing the Brain, they have applyed not only theſe *hot things appropriate to the Nerves*, but thoſe things which are *moiſt*, *hot* that the *thick Flegm* might be cut aud attenuated, *Caſtor, Euphorbium, Pellitory of Spain, Squills and divers Spices*, for the moſt part *Remedies* in the Cure of an *Epilepſie*; the which notwithſtanding we, if *an Epilepſie be from an irritation of the Nerves*, becauſe they do more inflame the Body, as we do no wayes ſee it is cured by theſe things, ſo we have known by Experience that they do irritate more, promote and exaſperate its fits; and therefore whenas we have either found or received from apvroved Authors and worthy of Belief that they do more hurt by their heat then they can do good, unleſs *in a cold and moiſt Conſtitution of Body* or when they are furniſht with *another Propriety* above, by which they reſiſt *Poyſon* or *this Diſeaſe* we think them otherwiſe not raſhly to be adminiſtred.

Of which ſort for Examples ſake we will deſcribe *the more choice Remedies* from the Obſervations of the Ancients and modern, and our own, as well thoſe *endued with an occult contrariety* as thoſe *appropriate to the Nerves* or thoſe compounded *of them both* together *in their differents formes* in which are either *given* or propoſed *for ſmell* or are *otherwiſe applied to the Body*.

Amongſt thoſe things which *are taken* many of *thoſe appropriated* many be uſed amongſt *Nouriſhments* as *the brain of Swallows, Kites, Dawes, Cuckows, Chickens, Hare* eaten. The reſt which Nature abhors and which are not accuſtomary we omit, as *Blood drunken up hot from a man killed*, which the Common people ſo much approve of; *dry Figgs* alſo are commended *Plantane with Lentil, the Topps of the black Vine* as *Dioſcorides* teacheth the which may be taken with *Vinegar* and *Oyl*, as alſo *Capers* which *Fontanous* ſo much commends; and if *the Meats* be ſauced with *Hyſop, Sage, Marjoram and other ſimples appropriate to the Nerves*.

Amongſt things *medicinal* this *Drink* may be given. Take *of the Roots of Piony one ounce, of Miſletoe of the Oak half an ounce, the Roots of Aſarabacca, Birthwort each two drams, Piony ſeeds one dram, Aniſe half a dram, Chamels hey one ſcruple*: make *a Decoction in Broth, or Wine and Water or an appropriate Water*, diſſolving *Honey of Squills half an ounce*, make *a Draught*, give it when *the Fit* is feared.

In plethorick Bodies this *Decoction* may be prepared; Take *of the ſhavings of Guaicum half a pound, Miſletoe of the Oak a quarter of a pound, Piony root one ounce*: boyl them in *twelve pound of Water to the conſumption of a third part*, let him drink it inſtead *of wine* or *allay wine* with it.

They put into *the Mouth* in *the fit, the juyce of the greater Houſleek or Rue* preſently preſt forth, ſometimes adding a little *Caſtor*.

Or ſuch like *Medicines* may be thus prepared, that they may be alwaies ready *for uſe*. Take *of the juyces of Miſletoe, Rue the greater, Houſleek, bleſſed Thiſtle each two ounces, of Sage, Marigolds each one ounce, Sugar four ounces*: boyl them *to the conſiſtance of a Syrup*, let him take often one or two ſpoonfulls.

A Syrup of Piony may be made *for uſe* after this manner, *of the juyce of Piony ſix ounces, Honey of Squills an ounce and an half, Vinegar of Squills half an ounce, Sugar two ounces*: boyl them *to the conſiſtance of a Syrup*, tis laxative, and becauſe ſomwhat ſharpe, by ſo much the more pleaſing: *Syrup of Succory* is much commended for Children.

A Compound one may be made thus; Take *of the roots of Piony one ounce and an half, the Roots of Eringoes, Dropwort, white Dittander, Birthwort each one ounce, the Roots of Maſterwort, Pellitory of Spain, Squills prepared each half an ounce, Miſletoe of the Oak ſix drams, the herbs Hyſop, Sage, Marjoram, Rue, Bettony, bleſſed Thiſtle, Ground pine, Germander, Milfoil, Cinquefoil, St. Johns-wort, Plantane, white Vine each one handful, Flowers of French Lavender, Lavender, Violets, Clove Gilliflowers each one pugil, Piony ſeed three drams, of Rue, Trifoyl each one dram and an half, Aniſe, Fennel ſeed each two drams*: make *a Decoction* and *to that ſtrained* ad *of the juyce of the Roots of Piony and of Hyſop each two ounces, Honey of Squills three ounces, Sugar five ounces*, aromatize it *with Cinnamon two drams*, and make *a Syrup* boiled decently that it may keep, of which let him take often from *half an ounce to one ounce* by it ſelf or diſſolving it with ſome convenient Liquor.

A Wine may be prepared in a Veſſel from the ſame things and *infuſed in four* or *ſix meaſures of Wine* or the ſame may be done with fewer of them, either if you put *in Wine, Guaicum ſhaved, Miſletoe of the Oak*, adding *Piony root*, as was ſaid formerly *of the Decoction*, or if you give *the Wine of Squills* as *Dioſcorides* teacheth.

There are *uſual Waters* prepared for theſe Uſes, and

reſerved, which either a part or mixt may be made after this manner. Take *of the waters of Piony flowers, Lilly of the Vallies, Linden-tree, black Cherries ripe each half an ounce*, give it from *half an ounce to one ounce in two ounces of* which *Water* if you infuſe *one ſcruple of Caſtor* it will be more effectuall, and much more if you add ſo much *of Aſſa fœtida*, the which notwithſtanding by reaſon of its ſtinkingneſs is ſcarcely admitted by the Patient unleſs *in the fit* being then ſtupid.

A moſt effectual Water made up of divers things may be prepared thus; Take *of young Swallows fifteen, the Daws, Cuckoors young ones four* or if they cannot be had, *Swallows twenty five, of Mans or Goats Blood three ounces, the skull of a Man one ounce, Caſtor half an ounce, Piony Roots one quarter of an ounce and of the ſeed one ounce, Squills prepared two drams, Miſletoe of the Oak, half an ounce, the herbs Rue, Hyſop each two handfuls, Bettony, Marjoram, Sage, Roſe-flowers, Lavender one handful, Cinnamon two drams, Cloves, Cubebs, Pepper each one dram, the moſt excellent Wine or Malligo three pound, the water of Lilly of the Vallies, and the flowers of Linden-tree each two ounces, Aqua vitæ one ounce*, let them ſteep only a few hours that they be not corrupted, then diſtil them; it is given from *half an ounce to one ounce* for prevention, the which *Water* alſo given *in the fit* doth rouze them up, and the ſooner if you infuſe *Aſſa fœtida* in part of it, as was ſaid before.

Another may be prepared *out of Blood* after this manner. Take *of the Blood of a Man newly killed, or gathered from a Vein opened in a ſound Man half a pound, freſh Piony Roots ſliced two ounces, Piony ſeeds half an ounce, Hyſop, Rue each, one handful, the Skull of a Man one ounce*, draw forth *a Water* preſently whiles it is hot, of which give *one ounce* for prevention.

Powders are made thus; Take *of the Root and ſeed of Piony, Miſletoe of the Oak each one dram, Marjoram, Nutmeg, Aniſe ſeed each half a dram*: make *a Pouder*. You may add *of the Skull of a Man poudered one dram*, and if there be *worms in Children, Dittander root, ſhavings of Harts Horn each half a dram, Wormwood and Purſlane ſeed each one ſcruple, Coral half a ſcruple*: make *a Pouder*, give it by it ſelf or a lding *of Sugar* make *a Tragem, or Lozenges, the Sugar* being diſſolved *in Piony water or other*.

Or thus, Take *of a Mans skull one dram, an Aſſes hoof, Swallows aſhes each half one dram, ſhavings of Ivory one ſcruple, red Coral one dram, Pearl prepared half a dram, filings of Gold one ſcruple, Piony ſeed half a dram, Diamoſcum one ſcruple*, (which *Pouder* is thought appropriate for curing *an Epilepſie*) make *a Pouder*, there may be added *as much Sugar as is ſufficient* and *the Pouder* remain, or it may be reduced into *Lozenges with ſome convenient water*.

Electuaries and Conſerves are made thus; Take *of the Conſerve of the flowers of Peony, and french Lavender, Roſemary, Sage, Betony each one ounce; Conſerve of the flowers of Succory and Violets each half an ounce; of the roots of Peony and its ſeed one dram and an half, Roots of Pellitory of Spain, Leaves of Hyſop, each one dram; ſeeds of Baſil half a dram, a mans Skul one dram, with Honey of Squils as much as is ſufficient*, make an Electuary.

Or thus, Take *of the roots of Peony, Pellitory of Spain, each one dram an half; Hyſop, ſeeds of Peony each two drams; Honey of Squils as much as is ſufficient*, make an Electuary.

Galen doth very much comend a Remedy made of Squils which wil be more proper made thus, Take *of freſh Squils ſliced, the choiceſt Honey each half a pound; add to it of the pouder of Peony root one ounce, and of the ſeed half an ounce, the root of Pellitory of Spain one dram, Miſleto of the Oak, Leaves of Hyſop, Rue, Agarick, each two drams; the skul of a man three drams*: let theſe be receiv'd in a Glaſs ſhut up and ſuffered to ſteep in the heat of dung or of Sand in the Sun for fifteen daies daies, afterwards give the Juyce preſt forth by it ſelf, or let it be firſt gently boyled, that it may be kept for uſe, let the Patient take one or two full ſpoonfuls twice or thrice in a week.

Or thus make a Remedy compoſed of divers things, and as it were an Antidote againſt the Epilepſie, Take *of the roots of Peony, Miſſleto of the Oak of each two drams; Roots of Tormentil, Round Birthwort, Dropwort, Cinquefoil, Dittander, of each one dram; Squils prepared one dram and an half, Agarick, the Leaves of Hyſop, Marjoram, of each two drams, flowers of french Lavender, and Lavender of each one dram; Peony ſeeds one dram and an half, ſeeds of Clary one dram, ſeeds of Hartwort of Candy, Baſil, Creſſes of each half a dram, Cinnamon, Cubebs, Cardamom, Nutmeg, of each one dram; Long Pepper, Ginger, of each half a dram, Pouder of ſweet Diamoſcum, two ſcruples, Pleres Archonticon, cold Diamargaritum of each one ſcruple, the Skul of a man poudered half an ounce, Aſſes hoof two drams, Swallows and Cuckoos aſhes of each one dram and an half; the ſhavings of Ivory and Harts-horn, of each half a dram, a Hares Runnet two drams, Benjamin, Maſtick, Ammoniacum diſſolved in Vinegar of Squils of each one dram; with Hony of Squils* make *an Electuary*.

Or thoſe things which reſiſt Poyſon in general, and privately the Epilepſie, and do ſomwhat dull the Senſe, make an Opiate thus. Take *of old Treacle three drams, the root and ſeed of Peony Miſſleto of the Oak each one dram; ſeed of Clary, Baſil, of each half a dram; the Skul of a man two drams, with Honey of Squils or Syrup of Poppy* if you would ſtupefie more, make an Opiate, give one dram at night to him going to bed.

In form of Pils ingrateful things are given for prevention after this manner. Take *of Caſtor, Aſſa fœtida of each half a dram; Gum Ammoniacum, Sagapen diſſolved in Vinegar of Squils of each half a ſcruple; the Gall of a Bear half a ſcruple; Oyl of Amber* (which is highly commended of the Chymiſts) *four drops, with the juyce of the root of Peony*, make a Maſs: give him half a ſcruple going to bed.

The ſame things diſſolved in the juyce of Rue put into the mouth whiles they are poſſeſt with the fit, do ſhorten it, as alſo Caſtor alone mixt with Oxymel, anointing the inner parts of the mouth with it; the which alſo done with Gall doth very much help, whenas theſe ingrateful things by powerfully moving the ſenſe of taſting do cauſe that they come ſooner to themſelves.

Upon the ſame account Odors and Suffumigations are applied to the Patient to ſmel to, which though they do oftentimes further and diſcover Epileptical Fits, yet by diſcuſſing them, as they ſay, eſpecially put into the Noſtrils in the Fit, they make them ſhorter, and rouze up the Patient.

This is chiefly performed by Caſtor, Aſſa fœtida, Galbanum, Rue applied to the Noſtrils which are endued with a ſtinking and ſtrong ſmel.

Or make a Suffumigation of theſe things following, Take *of Ladanum two drams, Benjamin, Styrax Calamite, Mummy* (by reaſon of the Bitumen) *Maſtick of each one dram; ſeeds of Gith, Peony of each half a dram*; make a pouder, burn it upon the Coals.

And alſo out of the Fit the Chamber may be fumed, yet with things not too much ſtinking.

And carry a Pomander, and ſmel to it often, which is made thus, Take *of the roots and ſeeds of Peony each three drams; Leaves of Hyſop, Rue, ſeeds of Gith, Coriander each one dram; Ladanum half an ounce, Styrax Calamite two drams, Gum Ammoniacum* as is ſufficient make a Pomander.

Of things applied to the Head, Pouders may be ſewed in a Cap which they may wear a nights, or be applied

ed in Bags or put into Pillows uſed to lie under their head, or the hairs of their head being firſt anointed they ſtrewed on them.

Such a one as this is, Take *of the roots of Peony two ſcruples, Cyperus, Orrice, Miſſleto of the Oak each one dram and an half; Rue, Hyſop, Marjoram, Coriander ſeed prepared, Peony ſeed each one dram; ſeeds of Baſil, Gith, each two ſcruples; Cloves, Red Roſes, Lavender flowers, each half a ſcruple; Gallia Moſchata one dram,* make a Pouder.

Or thus, Take *of the roots of Orrice two drams, Galangal, Cyperus, each one dram; Nutmeg, Cloves, each half a dram; Leaves of Marjoram, Balm, each one dram; flowers of Lavender, Roſemary, Roſes, each one dram; Dying berries half a dram;* make a Pouder.

The Head being firſt ſhaved is anointed with theſe things following, Take *of the Oyls of Chamomel, Lillies, Elders, each one ounce; Aqua vitæ one ounce,* mix them together.

The Head alſo muſt be fomented with things moderately hot, as with this Fomentation, Take *of the roots of Marſh-mallows, white Lillies, each one ounce; herb Mallows two handfuls, Betony, Sage, Marjoram, Balm, each one handful; flowers of Chamomel, Elder, Roſemary, each one pugil; ſeeds of Flax, Fænugreek, each half an ounce; Caraway ſeed; one dram,* make a Decoction in Water and Wine or in a weak Lye, for a Fomentation or Lotion of the Head.

Repelling Oxyrhodines are applied to the Head if it be from Vapors, Or this moſt fine Pouder is ſtrewed on the Hairs, Take *Coriander ſeed prepared two drams, Myrtle berries, flowers of red Roſes, Maſtick, red Saunders, the root, of Cyperus, and* Peony *each one dram, of Cloves, Roſemary, flowers each half a dram*; make a Pouder.

If the Back-bone be anointed with Oyl of Lizards 'tis good, or with other things ſtrengthning the Nerves, as was ſaid in the Remedies.

Alſo the following Plaſter may be applied to the Region of the heart and to the Pulſes, Take *of Treacle or Mithridate half an ounce, the Roots of Peony, the Leaves of Rue bruiſed each two drams,* mix them with Vinegar into a body.

Add this applied at the ſame time to the Region of the Neck will do good.

Lotions of the extream parts or Baths made of Plants appropriate for an Epilepſie, and for the Head and Nerves, as of Peony, Rue, Hyſop and and other things as was ſaid in the Remedies will benefit much.

The uſual Amulets that we hang and bear about, for the moſt part are, Peony, Miſleto of the Oak, Elks hoof, the reſt have been explained in the Remedies.

But thoſe Remedies which by Lenifying do aſſwage the Nerves as they are profitably applied in all kinds of Convulſions ſo eſpecially when there is great danger imminent from the Nerves ſo much affected, by reaſon of the vehemency of the Cauſe, to wit, in thoſe which are called The worſer Species of Convulſions, which by their moderate heat, humor and temper by Moiſtening and Mollifying may Relax and Refreſh the contracted and convulſed Nerves, many of which ſort are explained in a particular Convulſion in which the Muſcles with the Nerves are truly bound up.

Which for the moſt part are applied outwardly to the Back-bone where is plenty of Nerves and their original, by anointing Oyl of ſweet Almonds, of Violets, Butter, Mucilages and the like; and by application of Cataplaſms ſuch as are prepared of Mallows, Marſh-mallows, Oyl of Violets, and the flower of Flax-ſeed.

Or they are adminiſtred in form of a Bath, moiſt, Fat, and Warm, in which let him ſtay a while, in which Mallows, Peony, Chamomel, and other things may be boyled.

Or they apply them to the Head alſo, embrocating them with Milk, eſpecially in Infants, for which Cauſe their Mothers do milk out the warm Milk from their Breaſts upon their Heads; or by anointing it with Oyl of Violets.

The ſame alſo is done by benefit of emollient and moiſtning Glyſters.

And by giving fat things with the meat or Medicines, as freſh butter, and Oyl of ſweet Almonds drank plentifully, which is counted a ſingular Remedy for Convulſions; upon which acount *Dioſcorides* commends the drinking of Whey and the Decoction of Violets, the Syrup alſo is approved of in Children, and Almond Milk is profitably given to drink, to which may be commodiouſly mixed an Emulſion of Peony ſeeds, of which a Lambitive being made by adding of Sugar, and given to the Child before it be ſuckled, is made a a profitable Preſervative againſt the Epilepſie as ſome write.

Things that ſtupefie the Nerves, becauſe by dulling their ſenſe, they cauſe them to be leſs affected with their trouble when they are irritated, and for that reaſon are not ſo eaſily convulſed; if the Gentler of them be given in Grievous and Dangerous Convulſions which proceed from an acrid and malignant matter, I have often found by experience they have done very much good; upon which account I think Treacle and other Opiates to be convenient in Convulſions (which in this caſe practitioners allow of to ſtrengthen and heat the Nerves) not only becauſe they do infringe the poyſonous cauſe of an Epilepſie, but becauſe alſo they do in a manner lay aſleep the Exquiſite ſenſe of the Nerves.

Experience hath proved that thoſe things which do change and alter the conſtitution of the whol body, and make as it were its Temperament new as in many long continued deſperate Diſeaſes, ſo alſo in a long continued Epilepſie and otherwiſe incurable they may ſomtimes do ſomwhat ſingular: which are perfected by great changes and new evacuations, made in the body.

By change of Age it ſomtimes happens, whenas the temperament of the body either is changed too, as that which invaded in Child-hood is cured when Youth comes; and that which firſt happens to thoſe of ripe age, if it ceaſe not in old age, yet it undergoes ſome change; ſo alſo the change of the Country, eſpecially if it be from a place where this diſeaſe is Popular, or otherwiſe from an unhealthful to a healthful place, it brings much help for the cure of this evil; and a change of the ſex as it were, which by eunuchiſm makes the body which was virile and maſculine to be effeminate, done by the ancients by Gelding, hath been commended as the laſt Remedy in an Epilepſie.

New and not yet accuſtomary evacuations eſpecially thoſe natural ones of ſeed and blood coming at their due time, whenas they do alſo very much alter the body, 'tis no wonder that if the years of youth beginning, the Epilepſie doth then ceaſe, not only by reaſon of the change of age, but alſo becauſe that then they begin to eject ſeed, and Maids have their menſtruous blood flow; and the Hæmorrhoides breaking forth in ſome natures, the ſame ſomtimes ceaſes; and the Epilepſie forſakes Great-bellied Women after they are delivered and wel purged: the which whenas Phyſitians ſee ſucceeds well by theſe like Purgations which nature attempts, they alſo in a deſperate Epilepſie make triall of divers evacuations, ordered oftner by chance than method.

By reaſon of the Symptomes of which ſort we meet

with divers in the ſundry kinds of conſternation of minde, beſides the lawful cure which is due to removing the cauſe, the which being taken away they alſo ceaſe, preſently when they are urgent, we muſt adminiſter ſome things; the chief of which to which we ought to have reſpect, are *Suffocation, Falling, Violent motion, Sleep and Stupidity, Dotage, Weakneſs.*

From a ſuddain and unexpected fall the Apoplectick and Epileptick are in very great danger, by which oftentimes daſhing their head they are killed; or otherwiſe grievouſly hurt, unleſs by cuſtome, or a Vertigo going before, the Epileptical be forewarned of the time, and then by ſitting or lying do prevent their fall.

Danger of ſuffocation hangs over *thoſe that are ſick of a grievous Apoplexy* becauſe they are not troubled only by reaſon of breathing hindred, but alſo by an impediment that their Teeth being faſt ſet, and their mouth ſhut, the free paſſage of the Air is intercepted. Therefore their Teeth muſt be preſently opened and if they yeeld not eaſily they muſt be puld a ſunder by an inſtrument thruſt in by force, and keeping that between them we muſt have a care that they be not ſhut again, and it muſt be hard, that they do not bite it off, for which purpoſe either a bone or hard piece of wood will ſerve whatſoever we light on firſt (as ſpoones for the moſt part are moſt readily found for this uſe. whoſe handle may be interpoſed) the which if they cannot be thruſt in betwixt the Teeth already cloſed, they muſt be parted by a dividing Inſtrument made for that purpoſe, and by interpoſition of that as was even now ſaid they muſt be kept that they be not joyned, or if they cannot be disjoyned thus neither, then a Tooth or two muſt be pulled out; then the Body muſt be ſo placed that the Breaſt being leſs preſt may be moved more freely, yet we muſt not ſtir it too violently whiles we move it whence follows quick breathing, the which whenas they cannot ſo ſpeedily perform, they are ſuffocated, as it often happens for want of care.

We ſhall prevent the Epileptical from wounding themſelves, or otherwiſe hurting by that vehement commotion and Agitation of the Body, if by interpoſing ſoft Cuſhions, Clothes, we take care they hit not their limbs againſt hard things; for it is no waies ſafe either to hold them or to bind them, ſeeing the matter of the Epilepſie is ſhaken of and diſcuſt by motion; and becauſe in ſuch like Convulſions of the Body they bite alſo, and ſomtimes vehemently wound their Tongue, we muſt put preſently between their Teeth (before they be ſhut, not our finger, which ſtanders by offentimes raſhly do with danger, but an inſtrument; as this in the Apoplectical ought to be done for fear of Suffocation, ſo in the Epileptical to relieve the Tongue when as they are no waies endangered of ſuffocation; and if the Tongue be already laid hold on by the Teeth, we muſt ſuccour it with a dividing Inſtrument.

Sleep and Stupidity in theſe affects, if they continue long, or returne often do oppreſs the Native heat, therefore the Apoplectical alſo being taken with to much or profound Sleep and a vehement Stupidity they muſt be roufed now and then, and hinder'd that they relapſe not, which may be done by moving the outward ſenſes with ſtrong objects that they may force and provoke the internal ones into act: thus the hearing is moved with crying in the Eares making a high ſound and noiſe; the ſight with much ſhining of light and fire; the taſt with bitter and ſharp things the ſmel with ſtinking things mentioned before, but eſpecially the feeling ſeeing it doth very much move the ſence, if it be done with pain in parts endued with exquiſite ſenſe, as in the Skin by pulling the hairs, Burning, Pricking, doth very much rouſe them up which alſo may be done by irritating the Noſtrils, which have an excellent ſenſe, with ordors and other things which move ſneezing too, by which the Body ſhaken is more roufed up; as alſo if we ſtir up the Eyes with a ſuddain light, and prick them with other things that move Tears; alſo we may ſollicite the belly with ſuppoſitories to excretion, the throat with our finger, a feather to vomiting: of all which whenas they do at once revel and derive the cauſe we have already ſpoken formerly.

The weakneſs is not ſo urgent, that there is due to this any other reſtauration of ſtrength then to other Diſeaſes, by courſe of Diet or Cordial Medicines amongſt which notwithſtanding External things which are wont to be applied to the Region of the Heart and Pulſes challenge the firſt place, when as before they come to themſelves, they ſcarcely take any thing, and if the Diſeaſe be of long continuance, they muſt be reſtored with an efficacious courſe of Diet, and other means.

Chap. 3. *Of an Alienation of the Mind.*

The Kinds.

AN Alienation or error of the Minde is called a *Paraphroſyne* when they feigne judg and remember thoſe things which are not, as if they were, or thoſe things which are unlikly and beſides reaſon, and that either together or a part, whether this be done only by Cogitation, or they expreſs the ſame by words and deeds.

This for the moſt part coming from inbred Cauſes is a certain innate fooliſhneſs otherwiſe proceeding from external cauſes if from things taken tis called *Temulency*, if it ariſe from ſome vehement affect it ſhall be called *a commotion of the Mind*; but ſomtimes depending upon internal cauſes it is deſipiency, which happening either without a Feaver accompanying it, is Melancholly, or with fury is *Mania* or Madneſs, or coupled with a Feaver, tis called a *Phrenſie*, all whoſe accidents we ſhall explain ſingly.

Fooliſhneſs although it be not aſcribed to children only when they are yet deſtitute of Judgment, and old Folks who are ſaid to be twice Children (the which notwithſtanding is rather a weakneſs of Minde in them, then a depravation) but alſo to every Age and all men upon that account, that all their humane actions ſeem to be fooliſh as *Eraſmus* in his *Moria Brandus in navi Stultorum* have elegantly ſhewed it in all ſtates of men; yet tis properly ſaid of them who being borne truly Fools and Silly do preſently even in their very infancy give ſigns of folly by geſticulations beſides the cuſtome of other Infants, and do not eaſily obey, are blockiſh, ſo that oftentimes they learne not to ſpeak, much leſs to performe other Duties, in which any induſtry is required; which in ſome Countries is a common evil as they write of *Egypt*, and at *Bremis* a Village off *Valeſia* as I my ſelf have ſeen, and in the Valley of *Carinthia*, it is wont to befal many Infants, which beſides an inbred fooliſhneſs, ſomtimes with an unſhapen head, a great and ſwel'd Tongue, being dumb oftentimes with a ſtrumous Throat, do ſhew a deformed ſight, and ſetting in the waies and looking upon the Sun, and putting little ſticks between the ſpaces of their Fingers, and variouſly wreathing their Bodies, with an open Mouth, they

Fooliſhneſs

they move Laughter and admiration to thoſe that paſs by.

But *others on whom ſome mark of folly was firſt imprinted from their birth* or *afterwards*, although they rightly perform all other actions of their life, and in ſome things are able to do ſingularly well beyond others, and are ſtrong in wit and excel in ſome Art, as of Painting, Engraving, Building, Muſick, and others, yet betray their Folly by theſe things, that they willingly hear themſelves praiſed that they tell and act ridiculous things, for which thing great men are delighted with their company, whom alſo by reaſon of the divers Phantaſms that preſent themſelves to them, they call Phantaſtical.

But *others yet more fools with divers Trifles, geſtures and jeſts*, as 'tis ſaid, do thruſt forth their Aſſes Ears, ſome of which have in them vices not acceptable to all and thoſe oftentimes grievous ones, which according to the variety of their natures they bring forth ſomtimes in Anger, ſomtimes in Fury, ſomtimes in Sadneſs, ſomtimes in other things, all which it were ſuperfluous to expreſs.

Temulency | *Temulenlency* or *Drunkenneſs* proceeding from *Wine* and certain *other things*, as ſhall be ſaid in the Cauſes, and not yet going ſo far, as to cauſe *ſleepineſs* and *ſtupidity* of which we have already ſpoken, but going beyond the bounds *of Mirth*, in which Wine moderately doth cheer the heart of man, making them mad, according to the diverſity of natures as afore was ſaid alſo of fools, doth diſcover divers effects *of Temulency and Drunkenneſs*; whenas *ſome Drunkards* are rather like *to fools* in their profuſe and immoderate laughter, laying open their folly by their laughing and cackling (whence is the Proverb, *By much laughing you may know a Fool*) alſo by prating, Singing, laughing, kiſſing, loving: but *others* do rather expreſs *the manners of mad folks* by Clamors, Anger, Blows, Biting. *Others* are ſad like *melancholly men*, Weep, talk much of Religion and Death, which deſipiency of theirs for the moſt part *ſleep* or *ſtupidity* following, as was explained there, it doth ſo far alay it, til rouzed up they return to themſelves again being oftentimes forgetful of the madneſs that went before, and ſome time after being troubled *with a pain and heavineſs in the Head* they do pennance for their *Folly*.

The Commotion of the mind. | *A vehement or laſting commotion of the mind*, ariſing from ſom *affect of it* as ſhal be ſaid in the Cauſes, is likewiſe a ſpecies *of alination of mind* ſo much depraving it, that that it either acts or thinks many things eſtranged from reaſon; as is that *fooliſh* too much Joy with which being puft up they ſpeak many and ſtrange things childiſhly, and undertake them vaporing, and in laughing do cry for joy as the Comædian ſaith. Alſo that *ſhort madneſs* in which *the Anger-ſtrucken* do ſwear and are carried headlong, fearing no dangers that they may be able to revenge themſelves, and then *that melancholy conceived out of ſadneſs and fear*, which oftentimes is wont to degenerate into a true and laſting one, as ſhal appear in the Cauſes; and hitherto alſo ought to be refer'd *the pertinacious Phanſie of them who are oppreſt with great Love* ſpringing from a corrupt judgment & imagination, which doth ſo change men, that as he ſaith, you cannot know them to be the ſame; which doth not only make men mad but women alſo young men and old folks, which ſort of madneſs they call by the name of *Heroical* becauſe 'tis wont to happen to *Heroes* or rich men but very inconſiderately, whenas the pooreſt cannot ſcape *Cupids* darts; this *conturbation of the mind* is a certain *affection compounded of all* the other *paſſions of the mind*, whenas ſomtimes the effects of joy

Love is a Species of commotion of mind.

ſhine forth in it, ſomtimes of Sadneſs, ſomtimes of Anger, and nothing is more unconſtant than Lovers, who that they may enjoy their love, become ſo thoughtfull, that they neglect things neceſſary for the body, as to take meat, to ſleep, or other duties, who omitting weighty and ſerious buſineſſes, or following them ſlowly, ſpend their time rather in Neatneſs, Muſick, and other things which may pleaſe their Miſtreſs: and when they perſwade themſelves that they can obtain ſomwhat of their love, breaking forth into profuſe joy, they often ſpeak many fooliſh and obſcæne things, and act them too, and laying aſide all ſhame ſomtimes commit filthy wickedneſſes, and fear not to expoſe themſelves to grievous dangers; or if they deſpair of mutual love and good wil, they continually afflict themſelves with mourning and lamenting, and by no means admit of comfort, they refuſe good counſels, and expreſs their grief by ſhedding of tears, often ſighs, paleneſs (for every Lover is pallid) and pain of the heart with which they chiefly complain they are troubled; whoſe pulſe alſo is inſtable according as their mind is raiſed or depreſt, and by beholding or remembring their Miſtreſs 'tis raiſed & ſtird up (by which ſign *Eriſiſtratus* diſcovered love) or by deſpair it becomes languid and calmed: with which accidents being oppreſt, at laſt they fall into grievous Diſeaſes and haſten their own death, or oftentimes in deſpair lay violent hands on themſelves.

Melancholly | *Melancholly denominated from black Choler, is a ſpecies of alienation of the mind* in which *the imagination* and *judgment* are ſo perverted, that without any cauſe they are very ſad and fearful, and they can alleadg no certain cauſe of their ſadneſs and fear, but that which is of no moment, or that falſe opinion which they have conceived from depraved apprehenſion.

As when they perſwade themſelves that they *are damned, that God takes no care of them, that they are not predeſtinated*, although in the interim they be godly and religious, and they fear the laſt judgment, and eternal puniſhment, which *horrible melancholly* (and oft times driving men to deſpair) is the moſt frequent ſpecies, in the curing of which I have oftentimes been much hindered, with which thoſe that have been taken have oftentimes confeſſed to me with many tears, deep ſighs, great anguiſh of heart and trembling of the whole body, that they have been ſtirred up to Blaſphemy againſt God, to commit horrible things, to lay violent hands on themſelves, to kil Husband, Wife, Child ren, Neighbours, their Prince, being moved with no *jealouſie*, no envy towards them whom they intimately love, but are compel'd as it were againſt their will, and ſuch thoughts do ſteal upon them whether they will or no, when in the mean time they ceaſe not inſtantly to begg of God, that he would vouchſafe to free them from thoſe wicked thoughts.

But *others* are very much troubled with the *terrors of death and the fears thereof*, whiles they falſly imagine with themſelves, that they are out of favor with the Princes and Magiſtrates, and that they have committed ſomewhat, and are drawn to puniſhment; or who otherwiſe do highly fear death, which they fancy is even now hanging over their heads.

Others by other triffling falſhoods conceived and imprinted in their mind, do deceive *themſelves*, as he who thinking himſelf to be made an *Earthen veſſel* gave way to every one he met, leaſt they ſhould break him with a touch: as ſome have beleeved themſelves turned into *brute beaſts*: and another who thinking he had *a very large Noſe*, would not change this Opinion, til *the Chirurgeon* deceived him by a Counterfeit ſtroke, and ſhewing him

a piece

a piece of fleſh, that he had cut a part of it. And as *that Woman who* was wonderfully grieved that ſhee was forced *every day to put on her cloaths and put them off again: and another woman* who as often as ſhe though that when ſhe was dead, her Husband would marry another Wife, ſhe was tranſported to theſe accidents: *ſome* think they have *ſwallowed Serpents and Frogs* and that they carry them ſtil alive in their body, or by other tricks are deluded; and they dream of many and wonderful things of this nature, which ſomtimes relating with a great deal of affection and griet, I have heard ſomtimes with laughter, ſomtimes with great admiration and Pitty: in all which caſes they ſhew marks of ſadneſs and fear, whiles they complain, cry, with many and continual tears, and do wonderfully exagitate both body and mind.

Otherwiſe they are *idle* and *ſilent*, being asked anſwer not, being driven ſcarce go forward, they love ſolitudes and ſhun the company of men which ſpecies for that reaſon is called *Miſanthropia* from rhe hatred of men; and if hating the light, they covet darkneſs repair to woods, and hide themſelves in lurking places and caves as the holy writ teſtifieth of *Nabuchadnæſor* then they call it *Lycanthropia* from the cuſtom of Wolves, others *the wolfiſh melancholy*.

With which *perverſe imaginations, pains and cruel tortures of mind*, thoſe afflicted oftentimes not only many months, but years alſo, and at laſt overcome, unleſs they return to themſelves and be helped by Counſel and Art, either they die waſting, or that death which before they feared they haſten to themſelves by hanging or drowning, or by ſome other violence, as we have known many ſad examples of this nature.

Which forementioned *paſſions of Sadneſs and Fear* as they do not produce equal effects in all, but do pervert the mind in ſome more in ſome leſs, ſo they do continually poſſeſs thoſe which they have once invaded. Yet they have *by courſes their exacerbations and remiſſions*, as we have, ſhewed alſo they did otherwiſe happen in continal Feavers for a cauſe contained in the Veins after the like manner; yet we have obſerved ſome to be thus troubled only *at certain times, as ſome ſeaſon of the year* or *change of the Moon*, and eſpecially *Women while they are with Child, or have brought forth*, or *have their Courſes*.

Melancholy Hypochondriacal a Species.

There is alſo another ſpecies of it which they denominate from the place affected *Hypochondriacal Melancholy*, in which the forementioned accidents do often intermit and again return upon the ſame day, and thoſe who are ſick of it, as oft as they come to themſelves, otherwiſe then the reſt (who unleſs ſome other thing be joyned, do only complain of *a pain of the Head*, or ſomtimes of *a Heavineſs*) do acknowledg that they are truly ſick, and though they ſcarce or ſeldome lie by it, and notwithſtanding are able to undergo other duties, yet they complain perpetually *of a pain of the Hypochondries* eſpecially in the left ſide (which they call *a pain at the Heart*) *a Heat, Pulſe, Murmur, Belchings, Vomiting, Spitting, pain of the Head, Vertigo, a ringing in the Ears, beating of the Arteries*, and innumerable other affects which they feel, and ſometimes Phanſie to themſelves; and they trie Phyſitians, deſire Cure, and trie divers Remedies, and unleſs they be eaſed preſently, they change Phyſitians and Medicines.

Madneſs.

Mania or Madneſs is ſo great a depravation of all the the Functions of the Mind, that they feign judge and remember moſt things falſly, acting not only as the mournfull an fearful Melancholick, but all things beſides reaſon, and ſomtimes without fury they commit more moneſtly thoſe things which they ſpeak and do, but moſt commonly being turned to Madneſs, by their ſtern aſpect and by their words and deeds they expreſs the violence of their Minds, whenas they tell falſe, obſcœne and horrid things, cry out, ſwear, and with a certain bruiſh Appetite they go about diverſe things like beaſts, and ſome of them otherwiſe unuſual even to men; and eſpecially ſome of them deſire Venery very much; as I have ſeen it befal a noble Matron otherwiſe moſt honeſt, who did invite both men and dogs to Copulation by moſt filthy words and geſtures. Moreover they ſtrive to offer violence both to themſelves and others, wherefore they pull out their hairs, tear their cloaths and ſometimes hurt their own Body, by biting, and other waies, and unleſs they be diligently reſtrained with Bonds and Chains, the which they ſtudy to break with all endeavor, and be kept cloſe in cuſtody, where they try to break open the gates, and oftentimes by a certain induſtry digging their Pryſon to make a paſſage for themſelves, falling violently on the ſtanders by, like Beaſts they endeavor to ſcratch them, bite, ſtrangle, kill.

Poſſeſſion by the Devil a ſort of Madneſs.

But ſome amongſt theſe *maniacal* or *Melancholick* ſom times ſhewing forth theſe accidents *more vehement*, ſomtimes *more mild*, and alſo acting and ſpeaking things preternatural and monſtrous, do manifeſtly declare that they are *poſſeſſed by the Devil*, which for that reaſon they call *men poſſeſt* and *Demoniacal*; who beſides the depraved actions of the Mind, as was ſaid, are wont diverſly as *the Divel* doth to impoſe marvellouſly upon Men, and to bewitch them, oftentimes they continue dumb for a long while; ſomtimes alſo they abſtain longer from meat, then Nature otherwiſe could bear, yet without any hurt: and ſometimes they ſo wreath their Body, bend and winde it, that as I have ſeen with my own Eyes, it could by no meanes be done Naturally without Luxations of the Joynts; or by gueſſing, propheſying, they divine and foretel things otherwiſe obſtruſe, or they ſpeak with Tongues which they learnt not, neither underſtood when they were well, the Divel as it were ſpeaking thorough their Mouth, the divers ſtories of which we could bring, we purpoſely omit.

Hydrophobie a Species of Madneſs.

There is alſo a certain ſort *of Madneſs*, in which *thoſe bitten by a mad Creature* are converted into the ſame *madneſs* with which the Creature was troubled; as if this be done by a *Dog* they bark like Dogs, or if it happen from *a Wolfe*, they howl and ſet upon thoſe they meet to bite them, ſhunning the light and thoſe things which are clear and bright, when as in them doth appear the Image of the Dog, by which they were hurt, inſtead of the proper figure of a man, as ſome would have it, and eſpecially fearing water, and trembling at the ſight of it, whence this Species of *Madneſs* is peculiarly named *Hydrophibia*, long exerciſing the man with a diſtenſion of the Nerves, and a Redneſs of the whole Body eſpecially of the face, and with ſweat, and at length killing him unleſs releived.

Vitus dance.

Hither alſo is to be refer'd that horrid and wonderful but rare affect in which being ſtruck with a certain mad fury of skipping, they continually deſire to dances, which Diſeaſe they therefore cal *Vitus dance* from a Saint by invocation of whom they beleeve they are freed from it; which though ſome counterfeit that they may extort the greater Almes, or are therefore ſuborned that they may imprint the falſe opinion of the common people the more in the minds of men; yet there are ſome found of both Sexes, which indeed being poſſeſt with this evil are

carried

carried with an inordinate deſire to dancing, as that no time interpoſed that deſire to dance with others without any reſt night and day not only for ſome daies but weeks alſo, and in the interim are ſcarce yet tired, but are wonderfully recreated and refreſht, and unleſs they do ſo they are very much hurt; whence when they take meat by compulſion, or being oppreſt with ſleep they are forced a little while to ceaſe from dancing, yet they do no waies obſtain from the Agitation of their Body, and preſently again laying hold on any body they ſollicite them to dance; and that ſo long till at laſt their ſtrength being wholly overthrown and feet bruiſed, comming to themſelves again they feel an exceeding weakneſs, from which they can hardly be reſtored and made up again; an example of which I when I was a young man ſaw in *a Woman* here at *Baſil* dancing thus a whol months ſpace in a publique place for whom the Magiſtrate ſuborned certain perſons, ſtrong men, that ſhould dance with her by turnes, ſeeing one was no waies able; and many writers do teſtefie, that it hath ſomtimes happen'd, and the common people alſo is wont to imprecate this as a known evil: and ſome *Arabians* have called it the dancing diſpoſition of the Limbs, and would have it to be a Species of Convulſion when yet here is no Convulſion of the Limbs, but the Mind Alienated is carried and forced into this madneſs and perverſe appetite, as alſo in other Species of Melancholly and Madneſs they are poſſeſt with a deſire of other things. which after another manner appear alſo too horrible; as even now we ſaid thoſe who are bitten by a mad Dog are rather tormented with the fear of water, as according to the nature of the venenate cauſe theſe different accidents proceeds, as we ſhall ſay in the Cauſes: if ſo be that this inordinate dancing alſo do not proceed from the Devil, and befall men by way of puniſhment by Gods permiſſion, becauſe they have offended by dancing.

Dotage. *A Phrenſie* is a *Dotage*, in which equally as in *Madneſs*, the *Mind* is wholly Alienated, yet more or leſs as the affect is great, the which alſo they make known after the ſame manner by words and deeds, now ſporting it more pleaſingly with Laughter, Jeſts and Trifles, now raving Angrily with Scoldings, Clamors, Blaſphemies and deſiring alſo to do hurt as the *Maniacal*: to whom this happens peculiarly, that becauſe they think, that Flies, Locks of Wooll. Straws are before their Eyes, and divers apparitions do appear from their falſe Imagination, they endeavor to hunt them, pull them, gather them, drive them away.

A Phrenſie is a Species of Dotage. *A baſtard Phrenſie is another Species of Dotage.* But beſides theſe like faults of the Mind which are common to them with the *Maniacal* there is a companion another grievous hot Diſeaſe, eſpecially a Feaver to which if a *Dotage* be preſently coupled at the firſt invaſion, this affect is called *a Phrenſie*; if that come after the Feaver hath laſted a little while, and a pain of the Head alſo went before, about the ſtate eſpecially if the Feaver be continual; or if it come firſt at the beginning of the fit, or in the vigor, if the Feaver be intermitting then it is deſigned by the name of a *Baſtard Phrenſie*.

Therefore together with a *Dotage* which is ſomtimes very grievous ſomtimes more milde, as was ſaid, the Symptoms alſo of a continual Feaver do concur, more vehement or gentler alſo as the feaveriſh heat offers it ſelf greater or more pleaſing, as are by Reaſon of the heat of the heart a ſwift pulſe quick breathing and ſomtimes drawn with ſighs by long intervals, faintings away, and by reaſon of the Natural parts enflamed, thirſt, drineſs of the Tongue but eſpecially by reaſon of the Brain over heated beſides a Delirium, Watchings, Dreams, Suffuſions, Vertigoes, which if the Brain be more vehemently inflamed, do preſent themſelves more and more grievous, as ſhall be ſaid in the Cauſes.

The Cauſes.

The Cauſe of every Alienation of Mind, is one Preternatural proceeding from an evil Spirit, the other Natural, a certain affect ſo affecting the Brain the ſeat of Reaſon, by it ſelf if the Cauſe lie hid in that, or by conſent if it be elſe where that the Functions of the Mind are rather depraved then impaired; but there is ſomtimes aquality working by an occult propriety, which doth it, the which ſeeing we are not able to explain, from the effect we will call one the drunken vertue, the other the poyſonous: but otherwiſe it will be ſome Diſeaſe to wit a certain diſtemper of the Brain, of which ſort is that abſtruſe and unknown one, whoſe high efficacy is ſufficiently known by this, that it vehemently diſturbs the Mind, but ſeeing that makes an evil of long continuance, and yet in the interim the ſick do no waies lie by it, when nevertheleſs other manifeſt diſtempers of the Brain if they continue long, are very dangerous for hurting the Brain; certainly it is very difficult to be explained which we do certainly find that this comes to paſs by reaſon of the Spirits of the Bain which are every where implanted in it, and connate and bound up to the ſubſtance of it, do call a to great Agitation and Confuſion of the Spirits of the Brain and the other Species we would rather call a perturbation of them, or a mixture of them with a ſtrange matter, then feigne ſuch a diſtemper, which cannot cauſe that, as they write of the cold one: but a manifeſt diſtemper of the Brain, alſo inducing a dangerous Diſeaſe, may likewiſe cauſe it; of which ſort is a vehement hot one, eſpecially if it be joyned with a Tumor: and alſo a fault in conformation; alſo ſome ſpeck or putrefaction found in the Brain, all which how they do Alienate the Mind, we ſhall expreſs in order.

An Evil Spirit the Cauſe of thoſe poſſeſſed. An Evil Spirit the Devil, becauſe he is the enemy of mankind, doth not only continually infeſt the Mind, the moſt ezcellent and as it were the divine Function of Man, and ſo trouble them, that acting many things evilly againſt the divine Law he leads them into ſin; but alſo exagitating, bewitching with his Atts doth oftentimes induce a grievous Melancholy, or a Diabolical Madneſs, or altogether entring the Body, makes them called *the poſſeſſed* and *Daemoniacal* the which to diſpute or enquire how it is done, is not our intent, (although *Matthiolus* that he might refer all theſe kind of Madneſſes to black Choler, affirms that the *Cacodaemons* do this by Mediation of that Humor, in which he ſaith they have their reſidence) this ſurely is certain, that there were ſuch alſo in old time, as divers Hiſtories Sacred and Prophane do teſtefie, as alſo we can no waies deny but that they may be found in our Age too.

The Temulent quality cauſed by Drunkenneſs. *The Drunken Diſpoſition* ſo called becauſe it aſſailes the Head, ariſing from the propriety of certain things, produceth an Alienation of the Mind, which they call Drunkenneſs or Temulency, this proceeds from thoſe things, which according to the diverſity of Natures, and as they are uſed

can induce Sleep and Stupidity and for that reaſon alſo are called *Narcoticks*.

Some of which taken inward do it, as Wine more commonly then the reſt, becauſe it is ordinary Drink, which cauſeth this ſpecies *of Temulency* called *Drunkenneſs* if it be drank too immoderate or ſtrongly, yet not ſo far as to cauſe a perfect ſtupidity; and that for this cauſe, becauſe by its propriety it lightly obſcuring the Senſes (whence is the beginning of Stupidity) amongſt which the memory for the moſt part is wont firſt to fail, by producing a certain oblivion of griefes and labours, it brings a fooliſh joy and that effuſion which happens with reaſon from Wine yet moderately taken; its heat moreover helping, by which at once heating and inflaming the ſpirits it doth to much exagitate the actions; which happens more powerfully from diſtilled Wine, becauſe its concenterd Vertue, and heat is greater, upon which account Country Fellows are wont to drink it in the morning, that afterwards they may be more chearful to perform their ſervices. This alſo the Juyces of ſome other Plants will do, if thoſe Plants be eaten, or their Juyce preſt forth be given or extracted by Decoction; as are *Hops* from which Beer takes its Vertue of foxing, and flies if they drink of it do dye taken with ſtupidity, *Hemp* alſo, whoſe Pouder if it be given with Wine, doth fox the ſooner; the *ſeed of Darnel* and *Gith* perhaps *the falſe Nigella* in Bread, which faults of Corn if they abound, the Bread made of theſe makes Men ſleepy, and by continual uſe hurts many every where, the which notwithſtanding they do not obſerve: and ſuch is *that Plant*, or rather the ſeed of it, a ſort *of Millet* called *Avate* of which the *Indians* make an intoxicating Drink called *Caou-in*; but alſo other *Narcoticks* may do it, eſpecially if they be uſed mixt with things very hot, both Vertues then acting, as was ſaid even now of Wine as if *Henbane ſeed* be boiled in *Beer* as ſome are wont to do, it foxeth ſooner and vehemently; if *the Bark of Mandrake* be boiled in Wine till it look red; if *Opium* be drank with the ſtrongeſt *wine*; as *Belonius* relates *Turks* do drink without any harm *Opium half a dram* with *Wine* when they go forth to battel, that being more bold and furious they may leſs fear danger; as alſo *Dioſcorides* writes that *Hemlock* taken with *Wine* doth work more effectual and kill the ſooner; yet all which as we have ſaid formerly of *wine* do more or leſs make mad, according to the variety of Temperaments: as alſo I have obſerved, that a weakneſs of the Brain may be the cauſe that they are ſooner affected, in him who by reaſon of a fall had a peice of his Skull taken out, and therefore was quickly drunk.

Some things applied to the Head can do the ſame as *Rondeletius* witneſſeth bringing an Example of him, who whenas he had applied *Henbane leaves* to his Head to procure ſleep, became *mad*.

By Inſpiration alſo drawing in *the fume of Henbane of Peru*, which they cal *Petum or Tobacco*, ſucking it through their mouthand Noſe, or as *the Engliſh* call it drinking it who for the voiding of Flegm, and alſo to induce Mirth do highly eſteem the accuſtomary uſe of it, that men are made like to Drunkards, and looſe all Appetite of eating and drinking and ſo can ſuffer Hunger a long time, thoſe that have writ of it, and tried the ſame, do witneſs. The which alſo happens as *Matthiolus* ſhews if the *root of the greater Nightſhade*, which they cal *deadly* be infuſed in *wine*, & the Infuſion given that hunger & thirſt do ceaſe; til by taking of *Vinegar* that fault is corrected but Sleep coming doth cure them both, as alſo in others.

A poyſonous Quality the cauſe of Madneſs.

A poyſonous Quality entring the Body from without, or *proceeding from things taken in* (for concerning that which is raiſed intrinſecally in the humors, ſhall be ſpoke off in a Melancholly humor) from ſome poyſons which hurt rather by Alienating the Minde then any other way, as the effects and hurts of Poyſons are Various, may alſo diſturbe the Mind; of which ſort *Dioſcorides* propoſeth many things which can do it rather by a poyſenous then narcotick quality and we purpoſely omit them when as they are rare with us: amongſt which alſo *Pliny* thought, that menſtruous blood devoured, was able to make Mad both Men and Dogs.

As alſo we oftentimes find by experience that from *biting of Creatures turned Mad, the Poyſon entring mans Body by the Spittle*, the like *Madneſs* doth befal them, eſpecially from *Dogs*, which do eaſier become Mad then other Creatures, to wit, about the heat of the Dog daies, ſo called for this Reaſon; or alſo about the greateſt cold as *Dioſcorides* will have it; and they are known by this, that they loath meat, ſend forth a foam, hang down their tail, and fly upon thoſe alſo which before they loved, and bite them: whoſe biting though at firſt it bring no greater diſcommodity then the wound and pain, yet if it be neglected, ſomtimes the firſt fortieth day, ſomtimes ſooner, ſomtimes after ſix months or a year, it induceth that *Hydrophobite* and *Madneſs* wonderfully changing the Mind of a man, as was ſaid formerly, and convertingit into doggiſh manners. In which there is ſo great vertue of Poyſon, that ſome amongſt whom *Avicen* is one, have dared to teſtifie for truth, that ſome have piſt forth Whelps or ſome fleſh like to them: and *Dioſcorides* proves by the Teſtimony of one that this evil hath layen hid for ſeven years, and then firſt of all broke forth; and *Matthiolus* writes that the touching of certain woods eſpecially the Dog-tree and the Bloody-rod, will occaſion that this Madneſs do ſooner appear: and *Dioſcorides* alſo hath delivered, that by the Converſation only with one infected, a certain man contracted the like affect; and *Galen* teacheth that the ſpittle of Mad Dogs, if it touch the naked parts of the Body, is able to make Men Mad, all one as if they were bitten.

Which things as they do more commonly happen from Mad Dogs becauſe they live with men in great plenty and more familiarly then other Creatures, ſo alſo they witneſs that they happen from Wolfes run Mad and I have twice obſerved a dreadful and deadly Madneſs proceeding thence, and doubtleſs as *Ariſtotle* hath write the ſame from the bitings of other Mad Creatures as of the Camel and Horſe, and *Avicen* of the Mule ſo alſo the ſame may happen from the bitings of a Fox, a Weaſil, a Poulecat, a Ferret whoſe bitings at other times have ſomwhat of Poyſon in them, Nay of an Ape alſo, and even of a Man himſelf now ſick of this Madneſs whoſe ſpittle hath put on the Nature of Poyſon.

As it is very likely alſo that Madneſs may be raiſed from the Blood of ſome Poyſenous Beaſts as other accidents from other Poyſons, of which ſeeing we are deſtitute in our Countries, and therefore no danger hangs over us from them, tis needleſs here to ſpeak more.

The Agitation of Spirits the cauſe of commotion of Mind.

The too great *Agitation* or *Confuſion of the Spirit of the Brain*, inducing not only a light or ſhort affection which preſently ceaſeth, but ſomtimes an imprinted and permanent affect, is the cauſe of *a commotion of the Mind* in thoſe eſpecially which are diſpoſed to it, or who by reaſon of their cowardize, or weakneſs of reaſon, cannot reſiſt affects; but that is done by that *Commotion* which is done ſuddainly with a certain violence as by Joy, Anger, Fear,

Or

or by that which is wont to happen *vehement and of long continuance as in Grief*, or that which happens *long continued and depraved in counterfeit Folly*.

Great joy for ſome thing obtained, eſpecially if it happen unexpectedly, and that to the weaker ſort as old Men and Women it begets that fooliſh ſpecies *of perturbation of the Mind with fooliſh joy* as was ſaid, the ſpirits being ſo poured forth with the Blood, that the Face is not only over ſpread with red, but tears drop forth of their Eyes and all their Members being heated are unquiet.

Anger for ſome offence raiſeth that *furious ſpecies of commotion of the Mind* the ſpirits and blood being vehemently inflamed, and caſt forth with deſire of revenge, yet by and by returning again by reaſon of grief of mind, whence they look ſo red at firſt, by and by wax pale and yellow: the which happens more eaſily to hotter and cholerick Natures, and to thoſe who are firſt heated with Wine, and made ſottiſh, hence then many Cauſes concurring together, they are as it were mad.

A Fright or *grievous Fear* eſpecially happning of a ſuddain doth not only aſtoniſh the Mind, but if it be ſo imprinted in the mind, and move, change and confound the whole Body and Spirits, eſpecially in thoſe diſpoſed, that it can either never, or very difficultly be got out of it, it oftentimes induceth a true Melancholy and that moſt grievous and worſt almoſt then that which happens from an internal Cauſe, as ſhall be ſaid by and by, the impreſſion being ſo made upon the Spirits and Humors, and the Brain it ſelf, that it can hardly be drawn forth, unleſs the whole Maſs of Blood be exhauſted, as ſhall be explained; and this is that ſpecies *of Melancholy* in which as it hath been ſhewed, they are vext with horrid and wicked Temptations, the which ſpecies I have often met withal, poſſeſſing both Women and Men, not ſparing even the younger ſort.

But this proceeds either from ſome *horrid Viſion* appearing either *by Dreams* or *in deed* as of ſome *Ghoſt*, or *the Carkaſs of a Man hanged*, as in that *Maid* who beholding one hanging upon a Croſs without the citty, fell into ſuch a *Melancholy* which ending in *Convulſions* cauſed her Death; and *a Woman* who paſſing by a Gibbet late, and fearing leaſt being ſhut out of the City ſhe ſhould be forced to lie there all Night fell into *a long continued Melancholy*; *another* alſo who by chance beholding the Carkaſs of a Theefe, who hanged himſelf in the Priſon, whiles he was put into a Barrel to be caſt into the River, being aſtoniſh't in Mind, miſerably remaining many years *Melancholick* could ſcarce any more come to her ſelf: the which alſo oftentimes proceed from the Imagination only and fear of ſome Danger of Theeves when they converſe alone in Woods, or at night in the dark, in which all things become more dreadful; or they proceed from fear of eternal Judgement for ſome grievous ſin committed, as that *Concubine* of the Prieſts pretended in her *grievous Melancholy*, becauſe ſhe had brought forth ſo many Children from an unlawful Bed; which imagination and perſwaſion conceived from that, even thoſe that do now ſuffer this affect do retain, and do expreſs by words and very deed ſuch like things which gave them the occaſion, as was ſaid in the accidents of *Melancholy*.

Sadneſs or *vehement Grief* laſting long doth alſo beget *a Melancholick Perturbation of the Mind*, which alſo may degenerate into the true one if it take deeper roote and diſturb the Spirits, and change the Temperament of the Body: or it induceth a certain Phanſie ſometimes fooliſh, ſometimes maddiſh, and ſometimes deſperation as we have deſcribed in explaining the kinds.

But this *Sadneſs of Mind* proceeds from grief or mourning moſt commonly for ſome things loſt of Money, Honour, or any other thing, as the Death of Children, Parents, Friends, with which the Mind oftentimes is wonderfully tormented and afflicted for a long time; or from Shame and Baſhfulneſs, with which generous minds eſpecially are ſo troubled for ſome error commited, that it is plain ſome have thereby been driven to deſpair; as they write it happened to *Homer*, becauſe he could not reſolve the Fiſher-men their Riddle. *Envy* alſo doth ſo afflict a man, and as they are wont to ſay gnaw the Heart, that theſe alſo become wholly *Melancholick* and by their Face and Geſtures expreſs envy all manner of waies, as *Ovid* ſets it forth. Alſo divers affects of the Mind proceeds chiefly from *the too great Appetite* or *Concupiſcence of ſome thing honeſt* or *diſhoneſt* which they perſwade themſelves will be profitable or honeſt; as ſeeing by the immoderate ſtudy or Science men oftentimes being too intent, do procure to themſelves a certain Phanſie, and thoſe whom ambition and vain glory torments, and who are taken with the love of themſelves (Philauty) boaſtingly, they talk and do many fooliſh and ridiculous things, which *the Comædians* have elegantly ſhown in the vain glorious Souldier under the perſons of *Thraſo* and *Pyr*, *Gopolynices* in their *Comædies*, or when the deſire of revenge not ceaſing after anger, being carried into a permanent Hatred, and Enmity, which can ſcarce any more be blotted out, continually thirſting Revenge, and intent on that, they do nothing rightly, but moſt things unhappily, being troubled in Mind; or *carried on the Coveteouſneſs, the love of Riches*; they are ſo madded, that they run headlong into many Vices, Sins and enormous Deeds; whether alſo that *Dotage of the Alchymiſts* ought to be referred who ſeeking *the Philoſophers ſtone* with ſo great heat, all though they ſee they looſe their Labour and Coſt, and can do nothing, nor know nothing done by others yet they bate not of their unwearied Labour, and led on by continual Hope, no waies ceaſing from their Labour, they waſt their whole ſubſtance; laſt of all and chiefly that *vehement Heat and Concupiſcence proceeding from love* in both ſexes, when they cannot alwaies enjoy it, or not all, 'tis a Cauſe of that *Grief* (for every Lover mourns) with which being overcome at laſt, they are vext and tormented with ſo many different Paſſions of the mind, that deſpairing they think attempt and perform, things ridiculous or weighty and dangerous, as was ſaid in the accidents to which love, ſometimes and elegant beauty, ſometimes lovely conditions, every one according to his Phanſie, for the moſt part with a blind judgment, ſometimes a certain Sympathy and confirmity of manners, gave the beginning, occaſion, and fomented it.

Counterfeit Folly and *long continued*, conſtantly exagitateing the ſpirits depravedly doth cauſe that by this cuſtom changing Nature, ſome *Fools* who for their gullet Belly and profit ſake, exerciſe their Folly before great Men, who delight in the Converſation of Fools, ſeeing they have fitted and accuſtomed themſelves to this from their Youth, they acquire that Habit in it, which afterwards ſeeing it can no waies be blotted out, they continue *Fools indeed*.

A perturbation of the Spirits of the Brain not that which raiſed from the Affections of the Mind doth too much exagitate and confound them, or affects them with an occult quality of which we have ſpoken already, but *that which being raiſed intrinſecally from ſome matter mixt with the Spirits* doth cloud obſcure, darken the animal Spirits which ought to be bright clear lucid and moſt pure; may induce the ſaid

A perturbation of the Spirits the cauſe of Melancholy and Madneſs,

Melan-

Melancholly and *Madneſs* alſo, if it Act more vehemently:

Which matter they cal Melancholick becauſe they think it is black, and they contend that it doth alter the Mind not only by troubling the Spirits, but alſo by cooling the Brain; ſeeing they hold this humor is cold and dry, but ſeeing we have ſhewed in *Sleepineſs* and *Supidity* that from the coldneſs of the Brain, whether joyned with moiſture or drineſs its Functions would rather be impaired or aboliſht, then intended; this *Melancholick matter* which we alſo call *Turbulent impure and filthy* doth not by cooling, but becauſe tis mixt with the ſpirits diſturbs them, and the Brain in whoſe ſubſtance the Spirits are every where connate, we have proved in *Anatomy*; and by a certain Malignity which it hath alſo attained it doth at laſt imprint that hurt from which follow ſuch enormous, accidents, the which notwithſtanding cannot therefore ſuddainly bring Death, becauſe it is an evil of long continuance. The which matter is either a Melancholick vapor or humor.

A Vapor the Cauſe of the perterbation of Spirits in Hypochondriacal Melancholy.

A Melancholick filthy Vapor troubling the Spirits and affecting the Head breeds that Species of *Melancholy* which they call *Hypochondriacal*, becauſe they chiefly complain of that place affected; for the cauſe of this evil lurkes in the parts of the Belly under the Ribes or Hypochondries, which the *Arabians* call *Mirach* and from thence denominate this Species *miraohal melancholly*, and from that part a vapor raiſed upwards to the Head at a certain time, then when it aſſails it, it makes this melancholly exert it ſelf. Moſt men write that the fewel of this is the *Spleen* becauſe it is the natural ſeat of *melancholly* and becauſe they are moſt troubled in the left ſide, but others affirm that this matter is contained in the *ſtomach* alſo which doth moſt poſſeſs the left hypochondria, and in its neighboring part: others alſo place in *the Liver* and *Meſentary* and the *Veins* of that called *meſaraicks*: which we alſo affirm is heaped and lies hid in the *meſarick Veins* not only thoſe that through the meſentery and call, but alſo the other natural bowels, eſpecially in thoſe places where theſe branches of the *Vena porta* being more and greater do tend towards the Spleen and Stomach in the left ſide, although this matter may be heaped up alſo in other places, upon which account they feel their pain moſt commonly in the left ſide, yet ſomtimes in the right part of the hypochondries and back, where the Spleen and chief bowels lie hid.

But moſt do give out that the *matter* lying there, from which this evaporation riſing doth affect the mind, to be *melancholly blood*, which we alſo can no waies deny, but we deny it to be cold, ſeeing that burning which the Patient feels in that place where the humor lurks doth ſufficiently declare the acrimony and heat of the humor: for as it was ſaid in *Feavers* that the *blood* in the *Vena cava* did cauſe *continual Feavers*, but that in the branches of the *Vena porta*, being more cholerick and excrementitious which is continually heaped up from the meat and drink lately changed into chyle, when it putrifies it doth by its evaporation cauſe *intermitting Feavers*; ſo alſo it happens in this caſe, as we ſhall by and by ſhew, that as from *melancholly blood* contained in the branches of the *Vena cava* the *true melancholly* is cauſed, ſo from that which is accumulated in the branches of the *Vena porta* and there fils up the Veins in certain places, yet doth not putrefie, but is aduſt, fæculent, and hath alſo ſome malignity; if the vapors of that raiſed up, keeping the condition of the humor from whence they proceed, do aſſail the brain they wil cauſe *a melancholly returning by courſe* which laſts ſo long, til they being diſcuſt again do grant ſome eaſe to the Patient, ſo long til new vapors ariſe, which for the moſt part is every day.

And hence it comes to paſs that this *melancholly* otherwiſe than the true, hath its *intermiſſions*, then eſpecially when ſome *excretion* of *wind* chiefly, with which this evaporation doth fil the Stomach and Guts, is made by *belching*; which carries with it a heat by reaſon of the humor from whence it proceeds, and an acidity by reaſon of the Stomach, in which that a certain acidity is alwaies contained we ſhal declare in its proper place, or when theſe vapors which tend upwards are partly emptied by *vomiting* or partly reveld by *Farts* and *Stools*, or when by *cold meat* yet moderately taken, thoſe heats being mitigated and vapors repreſt they do a little eaſe the evil, as by taking that which is hot and plentiful, that affect by reaſon of the boyling of thoſe parts and plenty of wind, is exaſperated: becauſe the ſtomach is compreſt with theſe and pained puft up, and together with the Guts makes a murmuring, rumbling and waving the aforeſaid *windes* are ſo frequent in this affect, that it is called alſo *the windy melancholly* and divers Excrements thruſt thither from *the meſaraick Veins* are the Cauſes, by reaſon of which alſo they then feel heats in thoſe places where this matter principally lurks, as hath been ſaid: but alſo theſe *filthy vapors aſcending* upwards, becauſe the heart alſo by the way is oftentimes grieviouſly affected they complain of *a palpitation of the heart, and beating of the Arteries* and the *Midriff* being ſomwhat *hindred* of ſome *ſuffocation*: ſo that ſcarce any other evil doth ſo long torment a man as this affect doth, if he lie not down by the Diſeaſe, with ſo many *accidents* in *the hurts of the natural, vital, animal parts* infinite of which they continually complain.

But *the cauſe* and *original* of this *melancholly blood* collected in the meſaraick veins proceeds from *an ill courſe of Diet* long continued, begetting the melancholly juyce, or thick cholerick, whence by degrees a great filth of it is heaped up at length: as in *intermitting Fevers* for the like reaſon we ſaid that cholerick blood was produced; which may come to paſs from all meats of evil juyce, hard concoction, being corrupted, and from thoſe that are hot, rather than from the cold and dry (unleſs in as much as theſe being hardly diſgeſted do corrupt alſo) in which we offend chiefly for gluttony and pleaſures ſake, whenas they are ſweet, ſalt Fat, Acrid: although moſt men believe *the fleſh* which is taken from *wild Beaſts* and from *ſolitary* or *melancholly creatures*, as that of *Hares*, *Veniſon*, to be more apt to produce *a melancholly juyce*, as amongſt *Plants*, *Colewarts*, and *Lentils*; and it gives a great and principal occaſion of this evil, if the excretions went to be made at ſome certaintimes, by which nature was wont to evacuate theſe things at firſt collected in the ſtomach or guts, as *looſneſſes of the belly* or *Vomiting* be no more; or if this filth being collected in the meſaraick Veins, *the Hemorrhoids* be ſuppreſt, eſpecially if they did once flow, which ſomtimes is the chief original of this evil.

A melancholly humor is the cauſe of the perturbation of the ſpirits in melancholly and Madneſs.

The humor producing *true melancholly* and oftentimes *madneſs* is called *a melancholick blood* ſuch as they think to be either black choler it ſelf, or that which is fæculent, but we have already ſaid formerly that this *matter* doth no waies want ſome *malignity* and we may by right alſo call it *poyſonous* ſeeing it can-

not

not otherwiſe be rightly explained, as *Galen* ſhews *l. 6. de loc. affect.* that a poyſonous matter is generated from ſeed and blood corrupted; the which its enormous accidents do ſufficiently declare, which ſhow themſelves in them as if they were ſtruck with poyſon eſpecially madneſs; when notwithſtanding there is no other hurt, no manifeſt diſeaſe nor danger of death, and ſeeing they ſuffer theſe things for many years, oftentimes without any other damage; which certainly can no waies be cauſed from a cold humor, ſuch as they think the dregs of blood to be, nor from black choler which if it be confounded with the blood is wont to bring *the black jaundies* and other grievous diſeaſes of the Skin; therefore we ſhould rather recur to *a malignant poyſonous and occult quality* ſuch as we ſhal often declare is found in many the like pertinacious and horrid diſeaſes, which they thought did ſpring from black Choler, as hath been ſaid, and in which by reaſon of their malignity *Mathiolus* aſſerted *the Cacodæmons* had their reſidence; then teach and allow of thoſe things for true, which are thus believed out of a certain cuſtom and thought it to be ſeen in that blood let which is black, when notwithſtanding congealed blood of its own nature even in the ſound is wont to look blackiſh, and bein kept long, to appear black like pitch and we wil embrace truth rather than Opinions, or we will openly confeſs that we are not able rightly to explain the true cauſe.

But the blood now mentioned is contained in the branches of the *Vena Cava* as that which cauſed *a hypochondriacal melancholly* is in the branches of the *Vena porta* and therefore it raiſeth *a melancholly* or *madneſs perſevering* not invading by courſes as the *hypochondriacal* doth, unleſs as it hath its exacerbations and remiſſions, as we ſaid alſo it came to paſs *in continual Fevers* for the ſame cauſe; as hath been explained that by reaſon of the difference of theſe Veins, in which the matter of *Fevers* is contained, for the ſame reaſon they become *continual* or *intermitting*.

But it is certain that the matter is contained ſomtimes in the veins of the head only, & other times in the veins of the whol body, eſpecially in the greater, and upon that account doth cauſe more grievous or more mild accidents; for as it was declared in *continual Fevers* if *the matter* putrifie *about the heart* there is cauſed *a moſt burning Fever* called a *Cauſus*, ſo it fals out here, to wit, that if ſuch *matter* be contained in *the ventricles of the brain*, where otherwiſe the blood of the Veins and Arteries confounded together is very hot, *a madneſs* or *grievous melancholly* is raiſed or if *about a more noble part* as *the Womb the Blood* which is wont to abound there and *the ſeed* alſo being retained be corrupted and changed into *that poyſonous matter* as was alleadged formerly by the teſtimony of *Galen*; it cauſeth that *madneſs of the Womb* in which they ſo much deſire enormous and brutiſh copulation, as hath been demonſtrated by the example of a *Woman* who by reaſon of a long continued ſickneſs of her Husband, by reteining her ſeed fell into this diſeaſe, and covered copulation with dogs: and by how much *the further ſcituation* it hath *from a principal part* in the lower parts, by ſo much *the more mild melancholly ariſeth*.

All which things muſt be judged how they are, by the nature of the accidents, and from this that no *other external cauſes* went before, as was ſaid of *a fright* from which *a grievous melancholly* is commonly cauſed; rather then by the conſtitution, which they ſet forth to be *melancholly from the hairs of the body, the color of the Skin, and the habit* alſo from the *excrements*, ſeeing theſe diſeaſes may happen not only to people *ſwarthy, lean, and ſad by nature*, but *to all Natures, all Ages*, as I have often obſerved.

But that *the cauſe* of it may depend upon *a melancholly conſtitution*, which they have contracted to themſelves by *nature* or by an *ill courſe of living*, as was ſhewed *in the hypochondriacal*, we do no waies deny, ſeeing *melancholly blood being turbid and impure* doth the eaſier acquire *malignity*; as alſo we have ſomtimes found that *hypochondriacal melancholly* hath paſſed into the true one, the blood in the Veins being at laſt infected by the long continued evaporation of heat: and alſo that *melancholly* which proceeds from *the affection of the mind* if it fall upon a fit conſtitution, called *the melancholick* it wil have *a double cauſe* concurring to excite *a true melancholly*; laſtly *from the ſuppreſſion* of ſuch *excrements* which eaſily paſs into this poyſonous matter, as from *the retention* eſpecially of *the menſtruous bleod* or *ſeed*, as ſomtimes *a Suffocation of the Womb* doth proceed, ſo at other times *a madneſs of the Womb* as hath been explained.

A hot diſtemper affecting the brain and its membranes, for the moſt part cauſe that firſt *a pain of the Head* and if it be more intenſe, *a dotage*, by too much exagitating the functions of the mind; but it grows hot ſomtimes from *a hot vapor* which is raiſed up either from *hot meat and drink* but unleſs then there be joyned *a Narcotick* or *madding faculty* as was ſaid of Wine, heat alone wil ſcarce bring *a deliration* but only *a pain of the head*: but this is ſooner done from *hot humors*, blood too much evaporating, eſpecially if it contract ſome *malignity* alſo which is wont preſently to make the brain mad, as hath been ſhewed in the cauſes *of melancholly*, which eaſily happens *in blood altered or putrified* whether *in the Veins* or *out of them* that by corruption it acquires ſome *malignity*, from that therefore the like *vapor* being carried up to the brain it breeds *a baſtard phrenſie* ſo called, in many diſeaſes generated from ſuch like humors, whoſe ſymptom it is.

A hot diſtemper the cauſe of dotage, a hot vapor the cauſe a hot diſtemper and dotage in a baſtard phrenſie.

So ſomtimes *a dotage* is wont to follow, *a hot expiration raiſed foom blood* in diſeaſes generated from inflamed blood, as in *diary Feavers, aſinochis and internal inflammations*, which is known to proced from thence by the diſeaſe accompanying it: alſo from *humors putrifying* and ſo getting a preternatural heat *a dotage* doth ſomtimes invade all *putrid Feavers* at what time chiefly the hot expiration doth very much aſſail the head, as in intermitting Feavers oftentimes at the beginning, otherwiſe about the State, and then alſo chiefly in continual Feavers; the heat of the brain helping, which by reaſon of *the Fever* together with all the parts of the body is heated alſo; for the ſame reaſon alſo Children do oftentimes Rave, by reaſon of *Worms* when they putrifie *a Fever* for the moſt part coming upon it. *Choller poured forth into the Stomach* ſending alſo a hot evaporation to the brain, becauſe it is acrid and ſubtile, doth rather cauſe *a pain* and *a Vertigo* than a *dotage* as ſhall be ſaid in its place.

Alſo *Blood* made *too hot* and eſpecially *too thin* contained in the ventricles and Veſſels of the Brain, inflaming the brain not only by a vapor but alſo by its proper ſubſtance induceth *a baſtard Phrenſie*; as it ſomtimes comes to paſs, when by a blow, or Fall, or in Feavers it flows thither.

An hot Humor is the Cauſe of a hot Diſtemper and Dotage in a baſtard Phrenſie.

An Inflammation is the cauſe of a hot diſtemper or Dotage in a Phrenſie,

But if that it be carried out of the Veſſels and poured upon the brain and its membranes, it breeds an *Inflammation* or *Eryſipelas* according as the Blood is, then it cauſeth *a true Phrenſie* which alſo is called *a Syriaſis* eſpecially if it befal Children whoſe external and violent Cauſe may be that which ſhatters or hurts the Head, or the *internal, a Fulneſs of Blood* and *inflammation* of it whence *a ſynochus Feaver* ariſing, pouring forth a portion of its hotter blood into this principal part, which before did very much aboundwith blood it makes this grievous Diſeaſe, whoſe Companion is *a continual Feaver* as hath been declared *in Feavers:* differing therefore from *a baſtard Phrenſie*, becauſe *the feaver* in that goes before *the Dotage* but in *a Phrenſie* they both invade together; by which ſigne alſo tis chiefly known.

An evil Conformation of the Brain, as if it be too big, or little, or otherwiſe be not rightly formed for the moſt part creates the ſaid Fooliſhneſs bred in ſome from their Birth, whenas this proceeds from implanted Cauſes, as from the ſeed of the Parents, who either were Fools themſelves, or their ſeed had contracted ſome fault; and tis eaſily known by this that they were Fools from their Birth, becauſe the Head anſwers the *unſhapen Brain in Greatneſs or Smaleneſs or Deformity*; which fault if it reach *to the Nerves* alſo and other parts tis no wonder that theſe are ſomtimes born as we have deſcribed, either *deaf* or *dum* or *crooked*, or or *otherwiſe faulty*; the which certainly is the chief Cauſe *of Original Folly*, as ſomtimes this apparent Deformity of theirs doth ſhew, ſomtimes tis not diſcovered but by opening after Death.

An evil Conformation, the Cauſe of Folly.

So alſo we do not deny that this may happen from an *evil Diſtemper of the Brain*, the which notwithſtanding ſeeing it cannot be rightly explained, nor corrected, is no further to be enquired into.

Diſtemper the cauſe of Fooliſhneſs.

It hath been ſomtimes found out, that a certain *black ſpeck* in *the brain* or *membranes* diſcovered by Diſſection, hath been the Cauſe of *Madneſs*, as ſometimes alſo *Putrefaction* bred in ſome part of the Membranes of the brain, from which tis likely that *filthy Vapors* being continually raiſed did trouble the Spirits, which ſome alſo have delivered may happen from *Worms* generated in the Brain; which hidden faults ſeeing they are firſt manifeſted after Death by opening the Skull, we can hardly conjecture what they are while the Man lives, unleſs in General, from this, becauſe other ſigns are wanting here which ſhould demonſtrate other Cauſes.

A ſpeck in the brain the cauſe of Madneſs.

Putrefaction in the Brain the Cauſe of Madneſs.

Worms in the Brain the Cauſe of Madneſs.

The Cure.

In the Cure *the Cauſes* muſt be diſtinguiſht, and *the Remedies* fitted to them; which we ſaid were either *a malignant Spirit*, or *a drunken* or *poyſonous Quality*; *an agitation* or *perturbation of the Spirits, a hot Diſtemper and ſome faults of the Brain.*

The Cure of thoſe poſſeſt with the Divel.

The *preternatural Cauſe* proceeding from *the Divel* as it doth no waies belong to the Phyſitian, ſo neither the Cure; for *the Divel* is forcibly expel'd by the Prayers of Divines and godly people in the Name of Jeſus; as Chriſt caſt forth *Divels* and gave his Diſciples that Power; but alſo *the Divel* ſomtimes feining himſelf of his own accord to be put to flight by certain Words and Ceremonies of men, doth delude Mortals.

The Cure of Drunkenneſs from a temulent quality.

If Drunkenneſs ariſe from *Wine and other inebriating things* as hath been ſaid, after ſome hours the Vapors being diſcuſt, eſpecially by the intervention of ſleep, they come to themſelves of their own accord; and if Vomiting follow it, it is good, upon which account *Avicen* thought it good to be drunk once a month.

But if they continue this Courſe of life, the Nerves being weakned by reaſon of their frequent ſtupidity, which is diſcovered by this even then to come to paſs, if preſently after that they have not yet drank immoderately, they begin to ſtutter and ſtumble; they become Tremulous, Paralytical, Gouty, Hydropical, as ſhall be ſaid in thoſe places.

Therefore that they may have a Care of themſelves they are to be admoniſht *from Drunkenueſs* and to be frighted by declaring the Danger of it; and if they cannot refrain ſome have delivered that this may be effected, that they ſhall wholly loath Wine, by ſtrangling an Eele in Wine, or a Frog or the barbel Fiſh, or the Rotchet Fiſh being putrefied in it, or the Sea Grape, and that Wine afterwards being drunk off.

But if ſometimes a Neceſſity of drinking and contending in Cups do urge, as this is brought into uſe as a Civil thing at Banquets to the great hurt of mankind, for prevention it hath been obſerved that theſe things following being taken before do prevent Drunkennel- or at leaſt wiſe make it more gentle.

Five or ſix *bitter Almonds* eaten before meat.

Wormwood alſo, whoſe *Wine* notwithſtanding the Swillers do uſe rather the day after a Fox, that they may correct their Stomach offended with Choller, (whenas to contemperate that they fil themſelves with drink again) from whence theſe *Verſes*.

If thou be hurt by drinking over night
Riſe early to't this Medicine is full right.

Rue becauſe it makes *the Cup ſafe*, as *the Verſe* ſounds, is commended for this uſe, which I think is rather ſaid ſo, becauſe it preſerves from Poyſon.

Coleworts taken at meat hinder *Drunkenneſs*, and ſo doth *its Seed.*

If one drink *Milk* faſting, he ſhall be ſafe that day.

Pliny teacheth that *the Lungs of Creatures roaſted* eaten and do keep of *Drunkenneſs* other expreſs by Name *the Lungs of Sheep.*

One writes that *the pouder of Swallows burnt* being taken, will not ſuffer oue to be drunk to Æternity.

A pouder hindring Drunkenneſs may be made thus, of which give one ſpoonful with *Auſtere Wine.* Take *of the ſeeds of Coleworts one dram, Coriander half a dram, Camphire two grains:* make *a pouder.*

A more *Compounded one* may be made thus, of which give one ſpoonful or two drams with *Wine of Pomegranates*, or with ſome *other acid, ſtiptick*, or with *cold Water*, or with *Sugar* let it be reduced into the form of *Lozenges*, Take *of the ſeeds of coleworts one dram, of Plantane, Purſlane, Bar-berries each half a dram, Coriander prepared two drams, flowers of red roſes, water-lillies, red Sanders each half a dram, Maſtich, Amber each one ſcruple, burnt Ivory one ſcruple, ſalt half a ſcruple, Camphire ſix grains:* make *a pouder.*

This may be uſed in the form of an *Electuary*, and given before drinking, Take *of conſerve of Roſes, the Rob of Currance and Barberries each half an ounce, bitter Almonds branched and bruiſed twelve ſeeds, of Coleworts one dram,*

dram, red Roſes one dram, Syrup of Sloes as much as is ſufficient make *an Electuary.*

An elegant *Syrup* of which *one ounce* ought to be taken before they drink Wine, Take *of the juyce of white Coleworts, four Pomegranates, Currance each two ounces, Vinegar one ounce*; boil them together for your uſe.

They are leſs foxed who drink laſt not till their ſtomach is well filled with Victuals; but they quickly who haſten to drink Wine faſting, or preſently at the beginning of a Meal.

Outwardly *Ivy* applied to *the Head like a Garland* or the Juyce of it moved to the Head keeps off Drunkenneſs.

Alſo the wearing of an *Amethyſt ſtone* is beleeved can do the like.

But to cure thoſe that are already drunk, that the wine may do them the leſs hurt, Vomiting doth very much help; or if you give them acid things preſently at the end of the Meal, or the ſooner the better, and let them be taken plentifully, becauſe as it was ſaid in *Narcoticks* they weaken the efficacy of the Wine, of which ſort are theſe following.

Frumenty of Milk and Barley flower with Vinegar
alſo *ſour Milk* as it is wont to concrete.

Sour Apples eaten, alſo *acid Peaches and their juyce* as alſo *Quinces.*

The Heads of Coleworts condite, and *Rapes* till they grow acid, as our Country men are wont to prepare them, do very much help.

Vinegar drank *diluted with water*, or taken by it ſelf in a good quantity, is *an Antidote againſt Drunkenneſs*, with which a certain eminent Foxer, for a long time being dayly drunk, was wont to guard himſelf, that he might take no hurt by it.

Beſides theſe, *Lettice, Mint, Wormwood, Myrtle-berries* being eaten, or *the Juyces* of them taken do keep off Drunkenneſs.

The diſtilled water of Saffron flowers being drunk doth the ſame.

The ſmell of *Camphyre* and *Saunders* likewiſe do good,

Alſo *Oxyrrhodines* applied to the Head.

And if *the Cods* be moiſtned with *Vinegar* or *cold water.*

All which doubtleſs will do good not only in that *temulency* which is contracted by Wine, but alſo in that which proceeds from the like inebriating things, as hath been ſaid, as alſo we have ſaid that *Narcoticks* for the ſame reaſon are corrected by acid things; and for the taking of *mad Nightſhade* we have ſhewed that *Vinegar* is a Remedy,

But what things beſides theſe mentioned, do by a certain propriety reſiſt ſome as wel *Narcoticks* as others, ſhall be explained in their place.

The Cure of Hydrophoby from the biting of a mad dog.

Melancholly or *Madneſs* ariſing from Poyſon either taken in, or *by a bite* or *blow* entring the Body, that *Madneſs* only which is cauſed by *the biting of a mad Dog* is here propounded, whenas the other ſpecies are rarely exiſtent becauſe the Cauſe is rare, neither is there any other cure applied to them, then what is due alſo to other Poyſon.

In *the biting* therefore of *a mad Dog* or *Wolf* (for they differ not in the Cure) although it be a very dangerous affect, yet Remedies being ſuddainly applied very many are healed; but after the evil hath ſo far gathered ſtrength, that they now are afraid of the Water, they are very hardly reſtored, as *Dioſcorides* mentions and moſt of them die; in which notwithſtanding ſome hopes of recovery is conceived by this ſigne, if looking upon a looking Glaſs or the Water, in which the image of a Dog is repreſented to them, as hath been ſaid, they take notice that it is an error, and that they are deceived, or that not appearing they acknowledg their own figure offering it ſelf.

Preſently therefore *the wound made by a bite muſt be dilated* and *the Lips of the wound muſt be ſcarified* that the Blood may flow very well, and with *Cupping glaſſes* applied with *much fire* or with *Leeches* if they be at hand; the ſtrength of the Poyſon muſt be drawn forth, becauſe though the wound be great and large, which by reaſon of the plenty of blood flowing forth, with which part of the virulent ſpittle is exhauſted, is better then if it were ſmall and narrow, nevertheleſs it muſt be done, and *the fleſh torn and cut round about with a Pen-knife muſt be cut off.*

Burning alſo made with *an actual Cautery* ſeeing the fire doth tame Poyſon and ſuffer it not to go further, is a moſt ready Remedy: and we muſt have a Care that the eſcar falling off, the wound be not cicatrized, before the fortieth day or till after that time, and that either by *a ſeptick* or *corroding Medicine* ſuch as is *precipitate* the which alſo we may uſe at firſt if he will not endure *burning* inſtead of that, or elſe *burning* muſt be repeated; and we muſt take Care that the wound be rather ſordid and ill diſpoſed, then clean, and that it be not cloſed up, by applying thoſe things, which beſides that they do attract Poyſon, may alſo ſuppurate the fleſh.

Which may be done, if *grains of Wheat chewed* or *baked* be applied to *the wound*, becauſe they ſuppurate and dilate the wound, and when they are chewed by reaſon of the ſpittle they help alſo by a propriety.

An Onion, wild Garlick and Rue bruiſed together, and made up with *Honey* and *Salt* do egregiouſly attract Poyſon, and the more if *Treacle* alſo be mixt with them to which *Dioſcorides* adds the *Cyrenaick juyce.*

If *a fourth part of Opoponax* and *a ſixth of Vinegar* be added to *Brutian pitch*, or inſtead of it you may take *the common*, it will make *an attractive Plaiſter* moſt effectual for theſe things as *Galen* teacheth.

The ſalted fleſh of the Fiſh Smaris and *Omotarichus* applied and other *ſalt things* do good; alſo *the ſauce of all ſalt Fiſh* applied for Fomentation.

Sour Docks, pounded, ſtinking Horehound, Fennel Roots, Rue, Angelica Roots, Laſer, Herculean Panax, bruiſed with *Honey* and *Salt* do the ſame.

Such *Remedies* alſo muſt be given preſently to drink as may by a propriety overcome the force of this poyſon, ſuch as are made *of the true River Crab* called *Carcinus*, which *Diaſcorides* and *Galen* have much approved; inſtead of which *Rondeletius* takes *the ſea Crab*, and that found in the ſtanding Pool by the Sea of *Monſpeſſulus*; and we perhaps may take with equal ſucceſs our *River Crab* ſince that alſo reſiſts poyſons.

But theſe *Antidotes* muſt be prepared after this manner, Take *of the aſhes of the true River Crab* burnt in the *primings of the white Vine* and poudered *two parts, the roots of Gentian* moſt finely poudered, *one part*, mix them, give two ſpoonefuls with *clear wine* for four daies after which give the trebble weight, *Dioſcorides* doth witneſs that this one thing hath benefited many, and *Democrates* before *Dioſcorides* deſcribed this *Antidote* in Verſe, and *Galen* ſo commends it, that he teſtifies no man died that uſed it.

Galen alſo prepares and gives *the pouder of the ſimple aſhes the Crabs being burnt alive in a copper Diſh.*

Or he gives it *Compounded* thus, which he relates he had from his Maſter *Æſchion the Emperick*, and he highly commends it, Take *of the aſhes of river Crabs burnt ten parts, the Roots of Gentian five parts, Frankincenſe one part*, inſtead of which the Ancients added *Roſin of the Turpentine*

tine tree, make *a pouder*, give every day the measure of a great spoonful sprinkled *in water* for forty daies, or if the Physitian come late let him give two spoonfuls at a time.

There are who prepare this *Medicine* thus. Take *of the ashes of Crabs parts two, Gentian roots part one and an half, Myrrh part one*, make *a pouder*.

Besides these *Antidotes Dioscorides* and *Galen* do magnifie *the Liver of a mad Dog roasted* and given.

Also *the blood and urine of a Dog*, as also the *Runnet of a Hare, Fox*, or *Goat*.

Galen's Dry Alysson given forty daies together in *Hydromel*, he testifies is *Archigenes* Effectual Remedy.

Aetius teacheth that *Iudiack Bitumen one dram*, drank with *Water* doth cure this affect.

The roots of Swallow-wort drank *one dram and an half* weight, with *the Water of Blessed Thistle* for forty daies, is *Mathiolus* Remedy. *Star-vervain* also is good, and *the bark of Wild fig tree*, drank with *water*, also *the root of Vipers grass* or *the juyce of it*, as also *the root of Angelico* with *Niter*.

Also *Honey of Roses* drank saith *Dioscorides*,

Mithridate and Treacle, as they are adverse to all poysons, so to this also.

But those things which profit both *taken and applied*, are as follow.

The *Sea-horse* wrought with *Honey* and *Vinegar*.

Balm, Mugwort, Wormwood, Centory, round Birthwort, Germander, Pennyroyal, the root of roundish leav'd Dock, shard Dock and Bryony.

For matter of Diet, 'tis good if they eat *Garlick, Leeks Onions*, also *the true River Crabs*, season their *meat with Spices*, drink *pure and sweet Wine*. *Avicen* commands to drink *Irond, or steeled water*, also Milk Curds which moves to stool, and tames poyson,

In the first place *drinking of water* which they so much fear, doth cure the *Hydrophobous*, wherefore they must be deceived by al means that they may drink it through a long pipe, or by some other sleight and not behold it, for which cause they advised to boyl *back Vetches* in it which also resist poyson, that so the water being made more darkish to him to behold it, it may represent no Image which may strike fear into them, and also that they may be made very thirsty *a young Dogs runnet* is given to drink with *Vinegar* for then *Aetius* writes that they are taken with a desire of *water*, and he highly commends it.

Avicen teacheth that *the provocation of urin*, so far and with such strong *medicines* that they pisse blood too, doth very much help, who as it hath been said, thought that puppy Dogs or somwhat like them hath been voided by urine.

And for this cause commends the use of *Cantharides*, which may more rightly be given thus, Take *of Cantharides breaking off their tender wings one dram, Lentiles clensed half a dram, Spike, Cloves, Saffron, of each half a dram*; give *half a scruple* with *Wine* to them fasting for three or four daies til they void blood.

Sharp Dock if it be given to drink causeth a plentifull and turbulent pissing with which plant alone given, if also the wound be fomented with the *Decoction* of it and be anointed with the *juyce* of it, a certain man did perfectly cure *those bitten with a mad Dog*, as *Avicen* teaches.

Dioscorides teacheth that the provoking *of sweat* before and after meat doth good.

The same writes that *Evacuations by the Belly* do also bring great help, if it be caused by *Hiera of Coloquintida* or by *Hellebore* whose quality he thinks is so great that it will cure almost the desperate, the which also may be done by *other purgers* chiefly *destined to melancholick Humors*.

Dioscorides also useth *Dropacismes, Sinapismes over the whole Body* as some also do allow of *Cauteries* applied *to the hinder part of the Head* and *behind the Ears*.

Amongst *Amulets* a *Tooth* drawn from *the Dog that bit* and tied to *the Arm* also *Hares* pul'd from the same Dog and laid on *the wound* are thought to do much.

They write that in some places *the Priests* do cure this evil with *exorcismes* which seeing they are things preternatural, we leave them.

The Cure of commotion of Mind from agitation of the Spirits.

A perturbation or *commotion of the Mind conceived* from *a vehement* or *long continued affect of the Mind* sometimes ceason of its own accord, sometimes hardly gives way, oftentimes can never be corrected: for *profuse joy* easily vanisheth, *anger* also is a *short Madness* especially in those, who presently grow hot and look red but suddainly again abate, who then are wont almost to be sorry that they were angry; *Sadness from grief of Mind* ceaseth with time, seeing there is no grief as *Cicero* saith, which the length of time doth not either change or diminish, *envy* conceived is hardly blotted out; *ambition* in some, and *coveteousness* especially in the aged once imprinted in their Minds, can scarce be rooted out: all which notwithstanding do not so much make men mad as *Love* doth in which although there seem to be onely a light *Alienation of the mind* at first, yet if it take deeper Root, it doth so disturb it that sometimes it drives men to *true madness and dispair*: *a true* and *persevering melancholy* arising from *fright* is more pertinacious then al the rest, and hard to be cured, oftimes tormenting and consuming a man for many years and at length making them desperate; and also we cannot correct that *Folly contracted by custom*,

Yet *the Cure* must not be neglected, if the evil persevere, and there be hurt or Danger, which may be done,

First of all by *taking away the Cause* and *the occasions* from which these proceed, if they being still present do foment or increase the affect; as in *anger* by turning away that which offends, in *sadness* that which troubles, and so of the rest; but chiefly the principal *Remedy of Love* is to remove *the object and sting of it, speedily a far off and a long time* which the vulgar intimate by this Proverb, out of sight, out of mind; and what is wont to be said is good in *the Plague quickly, a far off, slowly*, here also is the principal Rule of Cure.

Oftentimes the affections of the mind are mitigated or driven away by *Counsel, Admonition, Perswasion*, by propounding according as the mind is affected that it is nothing or of no moment, then by explaining the Discomodities that follow from thence, sometimes the offence to God, and comforting them with the hopes of changing the present life for a future that is better and not far off: the which if they avail not, by severely threatning also Gods displeasure and the punishment of Hell, by reproving them, and chastising them also with stripes if they obey not, til those things which they love be loathsome to them, as *Gordonius* writes.

But principally in some *passions of the mind* it brings a great deal of help, to move *the affections of the Mind which are contrary to this affect* that troubles, and so to bring them into a contrary passion, seeing they do bring them to a mean, as contraries are wont to be cured by contraries, and so those things are taken away which otherwise would not give place; thus those lifted up with *too much joy*, if they hear *ill News*, do presently abate; and *those that are sad* are refreshed with *unex-*

pected

pected and vehement gladneſs; ſo *the angry* are mitigated if *they be frighted*, if *thoſe frighted* be ſtirred up to *anger* they are freed; thoſe that *hate vehemently* are reconciled being moved with *mercy*; and thoſe that are oppreſt with *grievous Love* if they can be driven to hate the perſon which they Love, they are moſt certainly freed, whether they may ſometimes be brought, if they hear diſhoneſt and filthy things of her, which are either invented or true, but blind Lovers ſee them not, but eſpecially in generous minds, if they think themſelves deſpiſed by their Love and ſuffer a repulſe (for nothing foſters love equally as reciprocal love, and nothing is more deer than to be beloved again) preſently indignation follows which perſevering, unleſs it be extinguiſht by ſome falſe and extorted tear, breeds hatred: hither alſo is referd *the vehement intention of the mind upon ſome other things* which is wont to put out that *conceived before*, or at leaſt waies to diminiſh it, whence *the Poet* ſaith, *Shun Idleneſs and* Cupids *darts are loſt*, and if the apprehenſion be divided into two or three affects though the ſame, it comes to paſs that being divided or diſperſed 'tis leſs ſtrong than if it were united; for *the ſenſe intent on many things is leſs able for each particular* whence *Ovid* reckon'd it amongſt *the Remedies of love* for one man to have two Miſtreſſes.

But what chiefly concerns the operation of the Phyſitian, *in ſudden and vehement paſſions of the mind*, he muſt diligently obſerve *the commotion of the ſpirits and humors, which in ſome affects* are moved from *the Center to the ſuperficies, in others on the contrary*, and muſt reduce them by *a contrary motion to the ſeat deſtined* for them; but *we call forth* thoſe which do as it were oppreſs *the heart* in *frights* and *ſadneſs* with *frictions and pleaſant exerciſes* and eſpecially with thoſe that are proper, & with *a bath*; and again thoſe which are poured forth with *Anger*, *Joy*, we repell again to the inward parts, not only by *a contrary affect of mind* as hath been ſaid, but alſo *by ſprinkling of cold water* and *bleeding*, the which notwithſtanding ought not to be done in the very *madneſs*, but a little after.

But *in perſevering paſſions of the mind* and *thoſe* that already *change the body* according to the conſtitution of the body, and redundancy of the humors viz. of a plenitude or Cacochymie, we wil order *the evacuations* and *alterations* both *for the cure* and *preſervation* if they be diſpoſed to theſe or thoſe affects; and if *a true Melancholly* or *maddeſs* do follow thence, as hath been ſaid doth chiefly happen from a fright, the cure muſt be perfected after the ſame manner as ſhall be explained there.

If *a melancholick, thick, burning and malignant blood* contained in *the meſaraick veins* as hath been ſaid, by its *vapor* do produce the ſaid *hypochondriacal melancholly*, although it be *milder* becauſe 'tis ſometimes mitigated or ceaſeth, than *the true one* ſeems to be, yet it is alſo very *grievous*, both becauſe it doth not only diſturb the mind but alſo induceth ſo many other affects offering themſelves eſpecially about the natural parts, as hath been expounded; and becauſe tis an evil ſo pertinacious & laſting, and ſo hardly admitting of cure, and that therefore, becauſe the matter of it lying hid in the meſaraick veins and being ever and anon new, increaſed from the excrements of things taken continually heaped up, and cannot be drawn forth *by drawing of blood* unleſs this be done by *the hemoroidal* veins, nor doth eaſily give way *to purgers*, as alſo we have demonſtrated in *Feavers* that the cauſe of continuance of a *quartan Ague* doth happen by occaſion of this place, & almoſt the like matter, into which alſo this affect is often changed, if putrifaction invade the blood, or otherwiſe it breeds obſtructions and tumors of the neighboring bowels, the Spleen, Liver, and of their veins, and ſometimes by its vapor infecting the maſs of blood in the reſt of the body, it is converted into *the true and perſevering melancholly*.

The ſcope of curing conſiſts in this, that *that melancholick matter* contained in the meſaraick veins, *be emptied* either *by bleeding*, or by calling it forth to the ſtomach and Guts, *by vomit*, and *ſtool*, with thoſe things which open obſtructions and ſolicit nature to excretion, than *by preventing* that new matter be not generated again, by ordering *a good concoction*; and *by diverting the vapors* that they be not carried upwards, and diſturb *the head* eſpecially, and create trouble alſo to *the heart*; and *by ſtrengthening theſe principal parts, and providing for the ſtomach, Liver, Spleen*, that they be not hurt.

Taking away of blood would be very convenient, if it could be done from *the branches of the Vena porta*, which ſeeing they can be opened no where unleſs about the Arſe, or the mouths belonging to the Stomach and Guts, and this unleſs nature do it of her own accord, 'tis dangerous to attempt otherwiſe with *medicines* which muſt be highly acrid, as *Coloquintida* (unleſs things vehemently bitter could do it *as Aloes* which is wont to open the veins, and is convenient here alſo as ſhall be ſaid) nothing wil be more excellent than to open *the Hemorrhoids*, unleſs they flow of their own accord, by applying of *Leeches* or by *other applications*, and if they ſwell, and appear, by *Section*: the which flowing either *of themſelves* or being opened by *force* this affect hath been often cured, which before could not be cured; alſo by the courſes Women will find very much help, ſeeing it is a natural evacuation, if being ſuppreſt they be provoked, becauſe by theſe alſo perhaps the meſaraick veins may exonerate themſelves; but to open the other *cutaneous veins* which are *branches of the Vena Cava* unleſs *a plenitude* perſwade it, or that *blood* alſo be already *infected* is, otherwiſe ſupervacaneous.

A Vomit, eſpecially in thoſe uſed to it, and the evil being now very far protracted, is very convenient, becauſe the excrements which in thoſe places are continually almoſt collected at the firſt concoction, are ſuddenly caſt forth, and ſomtimes the matter retained in the meſaraick veins alſo, by this paſſage, as was ſaid in *intermitting Feavers*, or ſome part of it, eſpecially the chollerick, the which notwithſtanding may be ordered with *gentler things* at firſt, afterwards if they help not, with *ſtronger* in *ſtrong bodies*.

An irritation and laxation of the belly do revell the vapors flying upwards, and makes a way for the wind generated of them, as alſo from crudities to break forth and it wil do ſo much the more good, if the belly be bound. This is done by *Supoſitories*, and to more benefit with *Clyſters*, which ſeeing they do wholly enter the Guts, they do empty part of the filth from the meſaraick veins alſo; which if they be caſt in *every other day* or daily, it wil be far ſafer than to give things *too much purging*, which they loath at laſt, and by reaſon of the long continuance of the diſeaſe do ſcarce endure, and ſo to draw down the matter ſucceſſively from the neighboring parts to the Guts, wherefore they muſt be often repeated, which are prepared after this manner, *of things moiſt, lenitive, diſcuſſing, wind-ſtimulating, and purging*. Take *of the leaves of Mallows, Coleworts, Mercury or Beets, of each one handful*; *roots of Oak fern one ounce, Dodder of Time or Vetches, Time, of each two drams*; *Flowers of Chamomel, Feverfew, Dill, Violets* (by reaſon of the heat) *of each one pugil*; *of Bran one pugil*, make *a Decoction*, and in *a decent quantity of that ſtrained*, diſſolve *Honey of Roſes one ounce, red Sugar half an ounce, Hiera Picra, two drams, Oyl of Lillies, Chamomel one ounce and an half*; *a little Salt*, make *a Clyſter*: if *you would evacuate ſtronger*, in *the Decoction* add *Fumitory and Senna* (we omit *Hops* be-

cauſe they aſſail the Head) and diſſolve *Confection of Hamech*, or *the juyce of Mercury*, &c. as ſhall be explained in the *Clyſters in Melancholy*.

Purging muſt be uſed which may drive forth the matter from the Meſaraick Veins and often reiterated by courſe, the paſſages being firſt opened which are wont to be obſtructed, and the humor prepared for Evacuation, yet we muſt have a care of things ſtrongly Heating, Drying, becauſe they increaſe the Diſeaſe, adminiſtring them almoſt after the ſame manner, as they ought to be uſed in Quartane Feavers.

It ſhall be prepared therefore with this Julep taking it for ſome daies before Purging: Take *of Syrup Bizantine ſimple, Endive, of each two ounces; ſweet ſmelling Apples, Dodder of Time, of each half an ounce; the waters of Bugloſs, Succory, Fumitory, of each three ounces*: Make a Julep, Aromatiſe it with Pouder of Diarrhodon, or let him take a Lozenge of it afterwards.

Such a Decoction may be given inſtead of that after the ſame manner. Take *of the Roots of Graſs, Aſparagus, Borrage, of each one ounce; Liquoriſh half an ounce; Endive, Succory, Maiden-hare, Ceterach, Betony, of each one handful; Flowers of Borrage, Bugloſs, Scabious, Tamariſk, of each one pugil: Roſemary flowers, half a pugil; the four greater cold Seeds, Annis ſeed of each two drams; Fennel ſeed one dram*: Make a Decoction, and in *one pound* of it add, *of the juyce of Apples boyled away to a third, three ounces*: Aromatiſe it with a little *Cinnamon*.

Or, Let them uſe it with *Wine* if they would open more vehemently, after this manner, with better ſucceſs for the moſt part, becauſe our *Wine* doth not heat ſo much, as hath been ſaid elſewhere: Take *of the roots of Succory, Graſs, of each one ounce; Elecampane* (becauſe it makes merry) *two drams; Multwaſte, Aſparagus, Germander, Fumatory, of each two drams; of the Cordial flowers, of each one dram and an half; Fennel ſeed one dram*: Being bruiſed, infuſe them in common *white Wine*, or if it be *ſtronge dilute* it, let him uſe it four or five daies in the morne.

Let him be Purged then with a gentle Decoction, for the evil is exaſperated by ſtrong Medicines, of which ſort this of many is convenient. Take *of Senna cleanſed, Oak ferne, wild Saffron, of each half an ounce; Dodder of Time two drams, Raiſons twenty, Prunes ten, freſh Borrage Roots one ounce, Liquoriſh one ounce, of the Cordial flowers, of each one pugil; Annis ſeed half an ounce*. Make a Decoction in *Water* and *white Wine*; in *four ounces of that ſtrained*, Diſſolve *of Catholicon half an ounce*, or *ſyrup of Roſes ſolutive one ounce*.

Or let him uſe this following: Take *of Catholicon one ounce, Confection Hamech one dram and an half, Syrup of Roſes ſolutive with Rhubarb, infuſed one ounce with the waters of Bugloſs, Fumitory as much as is ſufficient, and a little Cinnamon*, to Aromatiſe it.

Purgers muſt be repeated by courſe in a long continued Diſeaſe, eſpecially if he will not uſe *Clyſters*, or they muſt be uſed ſucceſſively, that the obſtructions being taken away, and Nature conſtantly ſolicited may the rather caſt off the Excrements to the Guts from the Meſaraick Veins; and that *in divers formes of Syrups, Wine, Pills* ſo prepared that they may be kept long for uſe: before which preparatives ought alwaies to be premiſed for ſome daies, or muſt be mixt together with them in the Compoſitions of which we will bring theſe few examples.

A thickned Syrup therefore may be made thus, which he may uſe every other day or three daies together; and after ſome few daies repeat it: Take *of the Roots of Graſs, Succory, of each one ounce; Fennel, Parſly, of each half an ounce; Orrice two drams, freſh Borrage one ounce and an half, Aſarabacca two drams, the bark of Capers, Tamariſk, of each half an ounce: the herbs of Fumitory, Hops, Germander, Ground-pine, Milt-waſt, Betony, of each one handful; the four Cordial flowers, and of Tamariſk, of each one pugil; Annis ſeed half an ounce, Fennel ſeed two drams, Raiſons one ounce, Senna two ounces and an half, Oak Fern, wild Saffron, of each one ounce and an half; Dodder of Time half an ounce*: Make a *Decoction*, and in that *Strained*, infuſe *Rhubarb two drams, Agarick three drams, Cinnamon one dram, Ginger half a dram; the juyce of Appels thickned three ounces, of Borrage one ounce, Sugar three ounces*: Make a Decoction to the thickneſs of a Syrup: give *two ounces*, more or leſs as it ſhall work, diſſolve it in *Water, Broth*, or *Wine*.

Matthiolus doth very much commend *Syrup of Oak Fern* againſt this affect.

A Wine may be prepared of the ſame thing dryed and infuſed, adding *Wormwood three drams, Marjoram one dram*: But becauſe it corrupts being long kept, let only one half of it be infuſed, and let him take it for two daies, afterwards when there ſhall be need again, make a new infuſion of the other part.

Pills in this caſe as in all the like obſtructions are moſt profitable, the which provoke both the *Hemrods* and *Courſes*: Take *of Aloes two drams, Myrrh half a dram* (againſt putrid Humors) *Dodder of Time one dram, Roots of Gentian, Aſarabacca, of each half a dram; Gum Amoniack diſſolved in Vinegar one ſcruple* (if there be a hardneſs about the *Glandules of the caule and Meſentery*, as oftentimes there is) *Parſly ſeed half a dram, Choice Rhubarb one dram and an half, Spike one ſcruple. With juyce of Wormwood*, Make a Maſs, let him take *two ſcruples* every other or third day, *Meſues Tryphera of Dodder of Time* if it be given every other day is *a ſingular remedy in Hypochondriacal Melancholly*.

After the uſe of *Purgers* let *the Patient be ſtrengthened* the next day, by uſing *Conſerves of the roots of Bugloſs, or ſome ſuch like*.

In the interim that the obſtructions may be diſſolved, and the matter be called forth from the Meſaraick Veins to the Guts, remedies muſt be applied to the whol Belly, becauſe through that, the Meſaraick Veins do enter into the caul and Meſentery.

And firſt make a Fomentation after this manner, with which the Belly may be fomented warm with a Spunge, once a day before taking of meat, or twice in the morning and evening at the firſt: Take *of the Herbs Wormwood, Southernwood, Feverfew, Time, of each one handful; Flowers of Chamemel, Melilot, Elder, Broom, of each one pugil; Bay berries one ounce and an half, Annis ſeed two drams, the Bark of Danewort, Roots of Oak ferne, Senna, Dodder of Time, of each three drams*; Make a *Decoction in equal parts of Water and Wine*, adding *a little white Wine Vinegar* or *of Squils*, for a *Fomentation*.

Inſtead *of a Fomentation, a Bath of ſweet water, and other temperate and moiſting things* is convenient.

After *the Fomentation or Bath let the Region of the Stomach, Hypochondries and Belly be anointed with ſuch an Oyntment*: Take *of Oyl of ſweet Almonds, Chamomel, Dill, of each one ounce; of bitter Almonds, Elder, Capers, of each ſix drams: of Orrice, Spik, of each half an ounce; juyce of wormwood one ounce, white Wine Vinegar of Squils one ounce*; Boyl them *to a Conſumption of the juyces*, add *Gum Ammoniack diſſolved in Vinegar one ounce, Aſarabacca root one dram, ſeeds of Gith, Colewort of each half a dram, Saffron one ſcruple, Wax as much as is ſufficient*: Make *a Liniment*.

Cupping Glaſſes ſomtimes applied *on the Belly without Scarification, with much flame*, do egregiouſly diſcuſs wind, and call forth the matter.

Rubefiers alſo upon that accompt are ſomtimes applied,

plied, amongſt which the *Plaiſter of Muſtard ſeed* is very much commended, there are alſo who do apply *Veſicatories. Pication* made on the Belly being firſt anointed with Oyl, is very much approved off in ſome.

But that matter may not be continually heaped up a new, we muſt take care *by a good Courſe of Dyet of good juyce, temperate*, and *no waies windy*. Upon which account *thoſe things which diſcuſs wind, as Annis ſeed, Fennel ſeed, Carawaies, Pepper, Ginger* are added *to the Meats*, yet in *that quantity that they do not to much inflame* which we muſt chiefly have a care on for which cauſe alſo if they can intermit the uſe of *Wine*, *Rhazis* ſaith they need no other Medicine, he underſtanding *ſtrong wine*, becauſe that which is *thin* and *gentle* can no waies hurt eſpecially thoſe that are accuſtomed to it.

Laſt of all the Vapors and Wine may be diſcuſt by giving a Pouder every other day after Meat or before, the weight of one ſpoonful, which may be prepared thus, Take *of the ſeeds of Annis half an ounce, Fennel two drams, Carawaies one dram, the Cordial flowers, of each half a dram*: Make a *Pouder*, add *of the Tables of Sugar Roſate two ounces*.

We muſt divert the aſcent of Vapors with Frictions, Ligatures, and Lotions of the extream Parts rightly applied to their due time.

We muſt alſo *have a care of the principal parts; the Head, Heart, Stomach, Spleen, Liver*, which are at laſt hurt by the long continuance and Malice of the Diſeaſe; *by watring, Anointing the Head* which is chiefly affected, as ſhall be ſaid in the true Melancholly; by ſtrengthing alſo the Heart with Epithems, Bags, which is hurt and palpitates by reaſon of theſe Vapors: by comforting the Stomach which belches being troubled with wind, with external and internal Confections that further Concoction, yet not too hot: and by taking care that the Liver and Spleen be not hardend, by external and internal means, as ſhall be propounded in their faults of this Nature.

The Cure of Melancholly and Madneſs, from a Melancholly a Humor troubling the Spirits.

A Melancholly blood in the Vena Cava, ſuch as we have deſcribed to be Malignant, abounding either in the Head or about the greater Veins of the trunk of the Body, or about the Womb in the Blood there, which is the matter of the menſtruous Blood and Seed, producing a Melancholy or Madneſs, if it be worſe, becauſe it can hardly all be drawn forth as long as there yet remaines ſome portion of that blood, ſo long that pertinatious and long continued evil laſts; with which oftentimes they are miſerably afflicted, not only for ſome months but years alſo ſomtimes to the end of their life; and if they be Mad, they are kept incloſed in Priſons, nevertheleſs performing the other Vital and Natural actions; unleſs theſe be weakend, becauſe when they are troubled in Minde they offend in many things, and becauſe they waiſt themſelves with grief if they have yet any Reaſon left: therefore we ought not raſhly to promiſe any hopes of recovery, although we have known many Cured as ſhall be ſaid eſpecially by large Bleeding, and ſome Mad and Raging from their youth until extream old age, in which they have ſo come to themſelves, that afterwards going about free from their Priſon and Bands, they would no more hurt any Body, or provoke them with words; and then alſo there is better hopes, if they yet act all things moderately, and do things rather laughing then with a ſterne look, and are ſomtimes obedient to thoſe that admoniſh them, and do admit of Medicines.

The Method and Indication for Cure will be ſuch; that we Evacuate that matter out of the Veins and divert it from the more Noble Parts that are hurt by it, from the Brain chiefly and the Heart; for as experience hath taught that other Diſeaſes alſo generated from a certain Malignant matter are ſomtimes cured by many Evacuations (as is apparent in the French Pox) ſo we have ſeen oftentimes both in Melancholly and Madneſs proceeding from this Malignant matter that Empericks by many and frequent Evacuations have cured many left off by other Phyſitians, who were afraid to uſe them, and we our ſelves have often tried it with happy ſucceſs, which may be done by divers forms and manners as by drawing blood from the body, or deriving it to other places by Purgations made by ſtool and by vomiting; then we will correct with things altering or changing that diſtemper or Melancholick conſtitution in the Blood almoſt of the whol Body, and in the ptincipal body, and in the principal bowls eſpecially the Brain and Heart, by giving of Medicines and applying outward helps to the Head, Heart, Liver, Spleen, and certain other parts of the Body; alſo with actual operation by gelding, and hanging on Amulets, in the interim providing for the ſtrength alſo by a fit courſe of living which alſo may correct theſe faults. Laſt of all we muſt have reſpect unto ſome other Symptoms which ſomtimes are ſupervenient to them, all which how they muſt be prepared and adminiſtred we ſhall explain in order.

Letting of blood therefore in ſome great and apparent Cutaneous Vein when as it may not only Evacuate the Blood but together with that the matter of this Diſeaſe lurking in the Veins, it will be the prime and principal remedy for the Cure of theſe affects, if they proceed from this canſe; which though very many I know have not taught it, and ſome alſo have diſallowed it, yet I have known by long obſervation that innumerable have been cured by this means, by certain Chyrurgeons or others who did profeſſedly labor in curing theſe Diſeaſes, who by opening of a Vein twenty nay ſixty times have ſo reſtored the perfectly Mad or Melancholick, that afterwards they have yet lived in health a long life; who were not Scrupulous in chooſing ſome certain Vein but ſomtimes opend a Vein of the Arm, by and by this or that in the Foot, anon in another place without any difference, which kind of remedy therefore we alſo ought to uſe and no waies neglect, but with greater care and providence then they who undertake to cure only thoſe who are as it were given over, Methodically premiſing alwaies waſhings of the Belly, and Purgations intermixt, as ſhall be ſaid.

Therefore ſome Vein of the Arm which is moſt apparent muſt be firſt opened and reiterated; next muſt be opened a Vein in the Hand eſpecially the Salvatella of the left Hand, privatly for the Spleens ſake, with which it is thought to have conſent; and alſo in the Feet the Vein of the Ankle called the Saphæna and the ſooner if the Courſes flow not right; or that which runs to the great Toe which Empericks do open chiefly in this caſe, becauſe it is thought to communicate with the Head. Alſo the Vein of the Forehead, if the Evil do continue, and the Cauſe be diſcovered to lie chiefly about the Head, muſt be opened, and Blood muſt be provoked from the Noſtrils, by thruſting of Briſtles, applying of Leeches, and putting up other rough things, alſo knotted Veins appear in the Thighs or elſe where ſeeing they contain a great quantity of this like Melancholick matter thruſt thither by nature and there heaped up, they muſt be opened and the filth muſt be let out this way, which cannot but profit very much; a Provocation of the Courſes if they be not decently purged, or be ſtopt, wil help much, ſeeing they may be the cauſe of this evil

as

as hath been ſaid; alſo the opening of the Hemorrhoids, although they be branches of the *Vena porta* in thoſe that are accuſtomed to them wil help very much: Hither alſo may be refer'd Scarifications, made eſpecially in thoſe places where otherwiſe we ought to open a Vein, as in the Arms and Feet, or ſomtimes where we are not wont to open a Vein as in the Shoulders, which certainly do not only evacuate the blood, but if Cupping-Glaſſes be applied, they do alſo egregiouſly revell the matter from the Head, and as I have obſerved do oftentimes profit much.

Upon which account alſo are applied, Frictions, Dropaxes, Veſicatories, Cauteries and Cuttings made in the Head, and Trepanning in thoſe that are deſperate, part of the bone being taken away, and the hole left open for a month.

It is conveninent to Cleanſe the Guts often from their excrements with Suppoſitories and more rightly with Clyſters, which although they do not ſo much empty the Melancholly matter lurking in the more diſtant veins, as they do in the Hypochondriacal, in which it is neer to the Guts, yet before Bleeding and other Purgations, that they may ſucceed the better, 'tis ſafer firſt of all to bring forth the thicker excrements by Clyſters, to which ſometimes we muſt mix thoſe things which are good to evacuate Melancholly, which being continued will effect ſomething alſo in a cauſe more difficult.

A more ſimple one therefore which is moſt excellent Egregiouſly ſtimulating may be made thus, Take *of juyces of Mercury or Beets two ounces, Mallows one ounce, common Honey two ounces*, let them be diſſolved *with the fat and ſalt broth of fleſh*, and let it be given.

A more Compound one may be made thus which he may uſe by courſe, which is Emollient purging and ſtimulating, Take *of the herbs Mallows, Orach, Bleets, Beets or Mercury, both Bugloſſes, Fumitory, of each one handful; flowers of Chamomel, Melilot, Elder, of each one pugil; Figs twelve, Bran one pugil, Flax ſeed half an ounce, Mallows, Fennel, of each two drams*; make *a Decoction*, diſſolve *Honey of Violets or Roſes two ounces, juyce of Mercury or Beets one ounce, Benedicta Laxativa two drams, Oyl of Chamomel, Butter, of each one ounce and an half; a little Salt*, make *a Clyſter*.

In Mad Folks eſpecially, it ſhal be prepared of ſtronger Purgers, thus, Take *of the roots of Marſh-mallows one ounce, the herbs Mallows, both Bugloſſes, Mercury, Hops, Fumitory, Time, of each one handful; flowers of Chamomel, Elder, both Bugloſs, Violets, of each one pugil; Flax ſeed, Guords, of each half an ounce; ſeeds of Mallows, Fennel, of each two drams; ſeeds of Rue, Chaſt tree, of each one dram; Figs twelve, Tamarinds half an ounce, Bran, Barley, of each one pugil; Oak fern, Senna, wild Saffron, of each ſix drams; white Hellebore half a dram, or black one dram*, make *a Decoction*, diſſolve *Honey of Violets, red Sugar, of each one ounce; Hiera of Coloquintida, Diaſena ſolutive, Confection Hamech, of each two drams; juyce of Mercury one ounce and an half, Oyl of Violets, Chamomel, Lillies, of each one ounce; Salt as much as is ſufficient*, make *a Clyſter*.

'Tis convenient to Purge this Matter out of the Veins beginning with the Gentler and going to Stronger, and continuing them for a long time, for they can endure it for the moſt part eaſily, and though they be ſomwhat weakned, nevertheleſs it doth good, ſeeing upon that account they become more calmed and quiet, neither can it hurt them much, ſeeing they may alſo be continually refreſhed: therefore the humor being firſt prepared, Evacuation ought preſently to follow, being adminiſtred once, twice, or thrice together, and this muſt weekly be repeated once or twice, intermixing letting of blood, as hath been ſaid; and once in a month alſo as *Avicen* teacheth, we muſt give a very ſtrong Purger, for the chief nature of the Cure conſiſts in thoſe great Evacuations of the blood and Excrements, whence ſucceſſively the matter of the diſeaſe is taken away as hath been ſaid.

The Humor is prepared before Purging, by obſerving whether they be very Cholerick that are affected with this evil, for then we muſt uſe things more Cold and Acrid, after this manner. Take *of Syrup of Violets, Borrage, of each two ounces, of Vinegar ſimple one ounce, the waters of both Bugloſſes, Lettice, Water-lillies, of each as much as is ſufficient*, make *a Julep* for four or five times aromatizing it with *the pouder of the three Sanders*, or giving *a Lozenge* of it after every doſe.

Or make one thus of Juyces, Take *of the juyces of both Bugloſſes, of ſweet ſmelling apples of each two ounces and an half, the waters of both Bugloſs, Fumitory, of each three ounces; Sugar two ounces*, boyl them, and clarifie them, and aromatize it with Cinnamon, for ſome doſes.

By a Decoction or Infuſion let it be prepared thus, Take *of the Roots of both Bugloſſes, Liquoriſh of each one ounce; the bark of Tamariſk half an ounce, Fumitory one handful, Miltwaſt half a handful, the Cordial flowers, of each one pugil; Water-lilly flowers half a pugil, Time one pugil*, boyl them *in common water and a Cup of Wine*, add *of Sugar and the juyce of Apples each two ounces*, aromatize it for ſome doſes.

Or let them be infuſed in thin Wine adding for the ſcents ſake a little Wormwood, and let him drink it.

Then let the Humor be purged as hath been ſaid by giving of divers forms dedicated to the Melancholick humor, which if the Patients wil not obey, may be prepared thus, that under the form of Wine or of ſome other Medicine that is moſt familiar to them, we may be able to deceive them, many of which have been ſpoken of in the Melanagoge purging Remedies, here we wil propound certain choyce ones.

At the beginning therefore, the Humor being prepared let this preſently be given, Take *of Catholicon one ounce, Confection Hamech two drams, Syrup of Roſes ſolutive one ounce*, diſſolve them in Whey or Bugloſs water, and give it.

Or, Take *of Senna Oak-fern, of each half an ounce; Dodder of Time two drams*, infuſe them in *Goats Whey* add *of freſh Mercury one ounce, Aniſe ſeed two drams, Syrup of Fumitory compound*, or *of ſweet ſmelling Apples half an ounce*, make *a Potion*.

Or, Take *of the Pills of the five kinds of the Indian Myrobolans, of Lazulus Stones, each one ſcruple*; with *white Wine* make *Pils*.

That the body may be purged ſucceſſively and at many times, the following things are convenient.

Firſt a Compound Apozem which may be made thus, Take *of the roots of Polipody three ounces, the Leaves of Senna two ounces, wild Saffron ſeed one ounce, Dodder of Time half an ounce, Turbith three drams, Myrobalans, Indian, Citrine, Chebuline, rubbed with Oyl of ſweet Almonds of each one dram; black Hellebore one dram, White half a dram*,) if you would purge *Gentler* we omit *Hellebore* if *ſtronger*, we increaſe it) *the roots of Graſs, Cinquefoyl, Liquoriſh, of each one ounce, Elecampane half an ounce, the barks of Aſh, Tamariſk, Danewort, of each half an ounce; the herbs Mercury, Fumitory, Hops, Harts-tongue, both Bugloſs with their roots, Miltwaſt, Maidenhair, Time, Balm, of each one handful; the cordial flowers, of Tamariſk, Scabious, Broom, of each one pugil, ſeeds of Aniſe, Melons, of each half an ounce; Guord ſeeds ſix drams, Purſlane ſeed two drams, ſeed of Baſil, Chaſt tree, of each one dram; Tamarinds, Raiſons, of each one ounce and an half; Prunes*

twelve

twelve, Jujubes, Sebeſtens, of each ten; make *a Decoction according to art*, in *two pound of that ſtrained*, infuſe *of choice Rhubarb half an ounce, Cinnamon two drams, Spike one ſcruple*, ſtrain it, add *the juyce of ſweet Apples one pound*, boyl them again a little, let him uſe this *Syrup* for four or five daies early in the morning.

A Syrup alſo may be made of the ſame Decoction to be kept for uſe, with all things doubled, if a juſt quantity of Sugar be added to the Decoction or inſtead of it the Decoction of Apples, and it be boyled to a thickneſs: of which when you have a mind to purge you may give two or three ſpoonfuls according as it works.

Another Gentler may be prepared thus of the Juyces, Take *of the roots of Polipody two ounces, Senna cleanſed four ounces, Dodder of Time half an ounce, flowers of Borrage, Violets of each one pugil; Aniſe ſeed half an ounce, Cinnamon two drams*, bruiſe them a little, pour to them *the juyce of Sweet Apples three pound, the juyce of Borrage clarified three ounces*, let them ſtand in *a hot Infuſion twenty four hours*, then let them boyl a little, ſtrain them, boyl them again to half the thickneſs of *Wine boyled away*, or of *a Syrup*, let him take *two ounces* more or leſs *by it ſelf* or with *Wine*.

Being Infuſed alſo in Goats Whey, they will do good, or in Broth of an old Cock, and give the Decoction.

A Wine very profitable for this uſe, may be prepared thus, which muſt be given at three or four times, ſeeing it cannot be kept longer, unleſs it be prepared in a Barrel in a greater quantity, all things being doubled or trebled, according as the quantity of Wine or Muſt ſhall be greater or leſs, and thoſe things which are put in be firſt very wel dried. Take *of Senna two ounces, Turbith three drams, Agarick two drams, Mirobalans Indian citrine, chebulane of each one dram; Dodder of Time, Time, of each three drams; the Cordial flowers of each two pugils; the herbs Wormwood, Fumitory, of each three drams; Fennel ſeed three drams, Ginger half a dram*, let them be bruiſed and infuſed *in four pound of white Wine* boyl them a little in a double veſſel let him drink it three or four times.

And becauſe the Remedies ought to be changed, other forms alſo may be thought upon, as of the following Electuary, for tryal of which he may take at the firſt time three ounces, by it ſelf or diſſolved, and according to the ſucceſs, increaſe or diminiſh the doſe. Take *of the pulp of Tamarinds and Caſſia extracted with white Wine* (for gratefulneſs) *each one ounce, choyce Manna, fix drams, of Catholicon or* Meſues *Triphera, of Dodder of Time, or the Perſian, or the great, two ounces, the bark of Myrobalans Indian, chebuline, rubbed with Oyl of Sweet Almonds of each one dram, Rhubarb a little Mollefied in wine one dram and an half, Senna firſt waſht in wine, Dodder of Time, of each two drams; Annis ſeed two drams, Cinnamon three drams*: Make a *moſt fine Pouder, and with Syrup of Roſes ſolutive*, Make *an Electuary*; If you would have it work more powerfully in a leſs quantity, Take *two drams*, and add *Confection Hamech one dram*, and give it.

Such a Pouder may be prepared to deceive the ſick, which ſhal be given at once by it ſelf or with Wine, broth Milk, Hydromel: Take *of Lazulus ſtone waſht oftentimes in Hydromel two ſcruples, Dodder of Time one ſcruple, Sugar one dram*; Pouder them. Or thus: Take *of Lazulus ſtone prepared one ſcruple, Digredium half a ſcruple, Turbith one dram, Sugar one dram and an half*; give it: Or *a uſual Compound one*, may be made thus, of which give at firſt *Time one dram and an half*, by way of tryal, afterwards proceeding with that quantity which ſhall be found righteſt: Take *of Lazulus ſtone often waſht in wine and water two drams, Diagridium half a dram, Turbith one dram and an half, Senna half an ounce, Dodder of Time two drams, Tartar one dram, Annis, Cinnamon, of each two drams; Saffron half a ſcruple, Sugar-candy, the weight of them all*, pouder them.

Lozenges may be made of them, or others may be given ſuch as are, the Tablets of the Electuary of Citron &c.

Vomiting cauſed ſomtimes doth very much good, ſeeing it doth egregiouſly ſolicite nature to excretion, eſpecially if it be provoked by giving of thoſe things which do at once empty upwards, whenas they being more robuſt do eaſily endure theſe alſo, as hath been ſaid in Purgers, but amongſt the reſt Hellebore eſpecially is ſo much commended in Madneſs that it is become a Proverb, Thoſe who are Mad have need of Hellebore, but it is given divers waies, as when we would purge more by the lower parts we rather chooſe the Black as hath been ſaid in Purgers, but if we would chiefly cauſe Vomiting we take the white, the Pouder of which or rather the Infuſion in Wine is moſt conveniently given, when they have eaten much and drunk Broth, that they may be hurt the leſs: or the ſlips or fibres of it thruſt through thin ſlices of Radiſh and left all night, and afterwards diligently taken out again and the ſlices ſteeped in Oxymel, and ſo give one of them to drink.

This following Helleboriſm is very much commended by many, if one ſpoonful of it be given with fat Broth, Take *of the ſhavings of Hellebore one ounce*, infuſe them three daies in *Rain-water four ounces*, boyl them with a gentle fire to a third, to *that ſtrained* add of *Honey wel Skimmed two ounces*, keep it for your uſe.

But if we be minded to empty downwords alſo, give one ſpoonful of this following, Take *of the pouder of Hiera of Coloquintida four ſcruples, Dodder of Time, Senna each two drams*, make *a pouder*, mix it in *Honey of Hellebore*.

Now they often give for this uſe, the Pouder of Stibium burnt til it looks cleer or only lightly calcined, as I have tried it, in a few grains, or the Infuſion of it in Wine, from whence they are wont plentifully to Vomit, and ſend downwards Cholerick, Yellowiſh or Green matter, the which alſo *Mathiolus* commends and I have often tried it in ſtrong bodies without any hurt.

The Medicines which they ought to take for alteration ſake, are prepared of thoſe things which by a temperate Moiſture do correct the force of this filthy and acrid humor, and by a propriety its Malignity; and amend the diſtemper of the brain which is chiefly affected, and the heart whoſe complexion in theſe caſes *Avicen* thinks is chiefly corrupted, having reſpect alſo unto the Spleen where they think the ſeat of Melancholly, and the Liver which they Suppoſe alſo to be affected by reaſon of that, of which theſe Medicines are made up, which if we conſider the accuſtomary Compoſitions, they are almoſt wholly Cordial, the which ſeeing they do not only refreſh, but alſo do reſiſt the malignant and venenate matter, of which ſort this is, we alſo do allow them, but ſhunning things too hot and dry, and do preſcribe them as followeth.

For an Infuſion in Wine or Decoction the which either we uſe ſimple, adding Sugar Spices, or to make a Syrup theſe things may be taken, to be uſed by courſe, Take *of the flowers of both Bugloſſes* (which are appropriated to the heart and Spleen) as much as is ſufficient, let them ſteep in ordinary Wine, or let them be boyled in Broths.

For the ſame reaſon alſo other things may be infuſed in

in Wine as the *Leaves of Harts-Tongue*, which the common people is wont to do in this caſe.

A more Compound infuſion or Decoction may be made thus: Take *of the flowers of Roſes, Violets, both Bugloſſes, Scabious, Tamarisk, of each one pugil; the Leaves of Betony, Balm, Harts-tongue* or *Milt-waiſt, of each one handful; the Root of Elecampane two drams, the ſeed of Baſil one dram*: Bruiſe them for your uſe.

A Syrup may be made of this Decoction as hath been ſaid, or the following be prepared of Juyces: Take *of the Juyces of ſweet Apples one pound, of Borrage three ounces, of Mallows* (which is thought very profitable) *two*, clarifie them and adding, *Sugar half a pound*: Boyl them to a conſiſtence.

We uſe alſo *Juleps* rather, then thoſe *Compound Cordial waters* which ſome preſcribe, becauſe they too much inflame the Body: Take *of Roſe water three ounces, Bugloſs two ounces, Balm one ounce, Cinnamon half an ounce, Orange flower water* (which they cal *water of naffe*) *two drams, whitt wine one ounce, the whiteſt Sugar* as much as is ſufficient, Make *a Julep*.

Electuaries to be taken by courſe every other day, drinking after a little of the ſaid *Julep*, or its *water* with a *little wine* are made thus, of fewer or more things. Take *of the conſerves of Roſes, Violets, the flowers of both Bugloſſes, Water Lillies, the Roots of Bugloſs and Citron Pill candied, of each half an ounce, the Root of Elecampane one dram, ſeed of Baſil one dram, Pouder of Diamargaritum Frigidum one dram, with Syrup of ſweet Apples*: Mix them.

Another made of many rare and pretious things, is thus prepared: Take *of the Conſerves of the four Cordial flowers, of each one ounce, Conſerve of water Lillies, Scabious, Clove-gilli-flowers, Tamarisk, Succory, Lange-de-beef, Eringoes, Satyrion, Roſe-mary, Betony flowers, of each half an ounce; the Roots of Bugloſs, Lettice, Coleworts, Guords, and fleſh of Citrons, Citron pill condited of each one ounce, Emblick Myrobalanes two, the ſeeds of Guord and Melons clenſed, of each half an ounce, Citron ſeed clenſed one dram, ſeed of Baſil one dram and an half, ſeed of Lettice one dram, kermes Berries two drams, ſweet Sanders half a dram, Cinnamon one dram, ſhaving of Harts-horn, Ivory, of each one dram; Vnicorns horn* (for Rich men) *one ſcruple, Red Coral one dram, the Pouder of Diamargaritum frigidum* or *the Electuary of Gems half a dram, Roſata Novella, Diaſmoſchum, Diarrhodon, Aromaticum Roſatum, Trionſantalon, of each one ſcruple, Trochiſks of Camphire two ſcruples, Confection of Alkermes and Hyacinth of each one dram, Rhaſis Lætificans two drams, with Syrup of ſweet Apples boyled thick*, that the Confection which ought to be kept a long time be not corrupted, Make *an Electuary*.

Theophraſtus commends *Southern-wood* taken with *Honey* and *Vinegar*.

We may alſo uſe Pouders, and adding *Sugar one ounce and an half*, to *one dram* of them, Make *Comfits*, or diſſolve the *Sugar* in the *Waters* and *Julep* expreſt, to make *Lozenges*.

The firſt ſhall be ſuch; Take *of the Roots of Swallow-wort one dram, Citron pill, ſeeds of Baſil, of each half a dram; Pearl half a ſcruple*: Make a Pouder for uſe as hath been ſaid,

Or thus, Take *of the Cordial flowers, the Leaves of Balm, Marjoram, of each one ſcruple, Citron pill, Baſil ſeed, of each half a dram; ſweet Saunders one ſcruple, ſhaving of Ivory one ſcruple, Coral half a dram, Pearl half a ſcruple, Cinnamon half a dram*: Make a Pouder.

Or out of the uſuall Pouders, as *Diamargariton*, or the *Electuary of Gems* and other things in the ſaid *Electuaries* both *Pouders* and *Lozenges* may be made.

Lozenges made after this manner are very Cordial and appropriate to the Head: Take *of Confection Alkermes* or *of Hyacinth one dram, Pouder of Diamargaritum Frigidum, Electuary of Gems, of each half a dram, Diamoſchum, Aromaticum Roſatum, of each half a dram; ſeed of Baſil one ſcruple, Sugar diſſolved in the Juyce of ſweet Apples as much as is ſufficient*; Make *Lozenges*.

Remedies are outwardly applied to the Head in which the Brain reſiding is alwaies affected in theſe Diſeaſes, either by it ſelf or by conſent, and where ſomtimes the cauſe of the evil lies hid.

And firſt of all at the beginning uſe only *Repellers* if it be *Hypochondriacal Melancholy* from a Vapor lifted up, or *a great fury* in *Madneſs*: then in the beginning we uſe an *Oxyrrhodine* to which notwithſtanding we add *Oyl of Violets* and *Chamomel* that it dry not too much.

Or we anoynt the Head with *Oyl of Roſes, Myrtles, Quinces, Violets* and *Chamomel*. But afterwards we muſt uſe things very moiſtning which may alſo diſolve a little, and ſtrengthen the Head, and alſo cauſe ſleep, becauſe they are much troubled with watching. Let *Irrigations* or *Embrocations* be made which are more accuſtomary to our people, or waſhing and wetting of the Head, and that once a day, or twice, Morning and Evening for many daies, according as we conjecture there is more or leſs need by their watchings and reſtleſneſs; the which alſo if we uſe with a *Bath* before and after the uſe of it, as ſhall be ſaid we muſt irrigate the Head with the ſame *Bath*.

But here we do no waies uſe Lyes, becauſe they dry too much, but the following *Decoctions*; Take *of the Roots of Marſh-mallows one ounce, the Herbs of Violets, Lettice and Mallows, of each one handful; Flowers of Violets, water Lillies, Burrage, Chamomel, Melilot, Barley, of each one pugil; Flax ſeed one ounce*, (*Fænygreek* by reaſon of its ſtrong ſmel we omit) *Poppy half an ounce*: Make a *Decoction* in *the Broth of a Calves Head and Gethers*, add *a little Wine* for an *Irrigation*.

Another when we would alſo procure ſleep, which for the moſt part is neceſſary; Take *of the Leaves of Willow, Lettice, Violets, tender Ruſtes, flowers of Violets, water Lillies, Chamomel, Feaverfew, Time*, (eſpecially towards the end) *of each one pugil, Guord ſeeds bruiſed one ounce, Coriandar two drams, ſeeds of Lettice, Marſh-mallows, Dill, of each one dram, of the bark or Heads of Poppy* or *Roots of Mandracke one ounce, the Leaves of Henbane one handful*: Make *a Decoction in the Broth of the Head and Feet of a Weather*, or *a Calf*, or *of Chickens*, or *Swallows*, or *of a Rams Lungs*, adding *a little Wine*,

Or thus, Take *of the Emulſion of the ſeeds of white Poppy and Guord ſeeds made in Violet water three ounces, Milk two ounces, the Mucilage of the Seeds of Fleawort one ounce*, ſtir them together *and apply them*.

A profitable *waſhing* or *Embrocation* may be thus prepared out of *Vnctuous things*: Take *of Oyl of Violets, Lettice, of each two ounces; Chamomel one ounce, the whites of Egs well beaten two, Womens Milk or other Milk four ounces or more*; Mix them deligently.

An Unctuous anointing or application to the Head may be made about the Temples, Forehead, and if it be ſhaved, alſo on the Hairy part, for the ſame intention, after irrigation when it is dry again, or elſe without it, oftentimes by it ſelf, after this manner: Take *of Oyl of Violets, Water Lillies, ſweet Almonds, of each one ounce; Chamomel half an ounce, freſh Hogs greaſe one ounce, the Mucilage of Flax ſeed one ounce, white Wax as much as is ſufficient*: Make *a Liniment*.

A more ſimple one but nevertheleſs effectual, may be made thus: Take *of the Mucilage of the ſeed of Flax, Fenugreek, Mallows, Butter, of each two ounces: Hogs-greaſe four ounces, the Marrow of an Ox or Hog one ounce*, apply it.

But

But a Compound one and more effectual, will be this: Take *of Oyl of Violets, Guord ſeeds, of each two ounces; of Poppy ſeed half an ounce, the Mucilage of the ſeeds of Fleawort one ounce, of the ſeeds of Lettice, Henbane, of each one dram; Coriander, Myrtles, of each half a dram, Saffron one ſcruple:* Mix them:

Or if they be very much troubled with Watchings: Take *of the ſeeds of Henbane, white Poppy, of each two drams; Mandrake Root one dram, Opium half a ſcruple, Saffron ſix grains:* Mix them with *Oyl of Violets one ounce Chamomel half an ounce:* Apply them to the Region of the Head.

About the declination hotter things muſt be added, in *Irringations and Oyntments*, made *of Time, flowers of Roſemary, French Lavender, Lavender.*

And to ſtrengthen the Head, we muſt ſtrow the following Pouders on the Hair at night, and in the morning by gentle combeing cleanſe them again: Take *of the ſeeds of Coriander half an ounce, Myrtles two drams, of Lettice, white Poppy, of each one dram; Alkermes berries two drams, flowers of Violets, Roſes, each one dram and an half; flowers of Roſemary, Chamomel, of each one dram; Citron pill one dram, Mace, Cloves, of each one ſcruple:* Make a Pouder.

It will be very convenient in a high Fury and Madneſs, if we apply to the Crown of the Head, the Lights of a Ram newly taken out, whiles they are yet hot, or if they be cold, heat them again, or apply a Lamb ſo cut open through the back and Emboweld, or we may lay on the Head a young Pegion cut in the middle and ſprinkled with the Pouder of Henbane, and other things which ſhall by and by be ſpoken of in a Phrenſie we may uſe for the like reaſon.

The heart alſo which we have taught is affected and troubled in theſe affects, as it hath been demonſtrated that it ought to be ſtrengthned by things taken, ſo it muſt be furniſhed with External things endued with the ſame vertues, that it may be able to reſiſt this venemous humor.

Epithems received as they ought to be in fine linnen muſt be applied to the Region of the Heart, whiles they are yet falting, or to the Pulſes. ſuch as theſe are: Take *of Roſe water three ounces, of Violets, water Lillies, Bugloſs, of each two ounces; Balm one ounce, the juyce of ſweet Apples, Odoriferous wine, of each one ounce; Vinegar of Roſes of each half an ounce, Seeds of Baſil two drams, of Sorrel one dram, Wood of Aloes and Muſk, Sanders, of each half a dram, Trochiſks of Camphyre, Pouder Diamargaritum Frigidum, of each half a dram:* Make an Epithem, *Saffron* ſhould be added; if its yellowneſs, with which it ſtains things did not hinder, and *Ambergreaſe*, alſo if it were not too dear.

Two Cordial bags may be prepared of a ſquare figure, guilted as they ought to be, one of which ought to be ſprinkled with Wine and Roſe water, and if it be too moiſt, to be ſqueeſed and ſo applied dayly, and when tis removed, the other dry one muſt be laid on and worn continually.

Which may be made thus: Take *of the four Cordial flowers, water Lillies of each one dram; Roſemary flowers one dram, the Leaves of Balm, Marjoram, Coaſtmary of each one dram and an half; ſeeds of Baſil, Citrons, of each two drams, Sorrel, Lettice, Purſlane, of each one dram; Alkermes berries one dram, Muſk Sanders one dram, Wood of Aloes half a dram, Cloves one dram, white and red Ben, of each half a dram;* Pouder them for your uſe, alſo the uſual Cordial Pouders, *Diamargaritum, de Gemmis*, and others may be added.

The Liver and Spleen muſt not be neglected, as being principal parts alſo if they ſuffer a preternatural heat, or any hurt from this filthy humor, but they muſt be refreſht alſo with Epithems and Oyntments.

Alſo remedies applied to certain other parts of the Body may correct its perverſe diſtemper, and refreſh it, as if the chief part of it be plunged in a Bath the Feet be waſht, the Back bone and Breaſt be anointed.

A Bath of River water will do good in young and ſtrong bodies being ſomtimes repeated, by ſwimming in it for a while when it is fitting by reaſon of ſummer or by ſetting in it at home being made warm; or if by the addition, of moiſtning things, it be made Artificial, let the patient ſet in it warm a little while before meat, and afterwards let him reſt in his bed, and without uſing any force, let him ſweat of his own accord.

As this is, Take *of the Herbs Mallows, both Bugloſſes, Sallow, the Vine, Lettice, water Lillies, Violets of each one handful: flowers of Chamomel, Melilot, of each one pugil, Marſh-mallow roots two ounces, Flax ſeed one ounce:* Let them be boyled in River or Roſe Water, to which may be added ſome fat or glutinous Decoction, made with the parts of living Creatures, or Milk for Rich Folks.

With the ſame Bath the Head may be irrigated, and the Feet waſhed.

The length of the Back bone under which lie the Trunks of the *Vena Cava* and the great Artery, in which the principal cauſe of the Diſeaſe is, after bathing is anointed,

After this manner: Take *Oyl of ſweet Almonds two ounces, Violets one ounce, Hens greaſe one ounce and an half, white Wax a little:* Mix them.

The Breaſt being anointed with the ſame, it will benefit thoſe parts.

Gelding was wont to be uſed by the Antients in certain deſperate Diſeaſes as was ſaid in an Epilepſie, becauſe it changes the temperament of a man, quels his virility and vehemency, and renders the Body more lax and moiſt, in mad Men eſpecially that have been long impriſoned and are diſperate, being otherwiſe unſerviceable, it is good to ſee what benefit can be reaped by it, the which all circumſtances being diligently examined tis lawful to make tryal of, if other things help not.

Amulets muſt not be neglected, amongſt which they write thus of one; that Stone found in the Mawe of a Swallow which is red, tied to the right Arm, is good againſt the Phantaſtical Illuſions of Melancholy, cures the Lunatick and Mad, and makes them lovely and pleaſant.

The Courſe of Living or Diet, muſt be ſo ordered, that both laudable hnmors may be generated, and the Malignant diſtemper of others and evil conſtitution of the Body may be amended and contemperated, and the ſtrength refreſhed, which may be done thus.

An aire and place temperate and pure are convenient; and alſo the changing of theſe do very much good, eſpecially if certain places be ſuſpected, or be contrary to them, or do afford ſome occaſion of ſadneſs by which alone Diſeaſes otherwiſe of long continuance and very grievous, are oftentimes cured.

Nouriſhing Meat that is by its Nature of a temperate moiſture is good, which ought to be of a good juyce eaſie of diſgeſtion and ſomwhat moiſt, ſuch as is the fleſh both of Animals and Fiſhes, not that which is old, and hard, and kept a long time, or ſmoak-dryed, or too ſalt, or very much ſeaſoned with Spices or other hot things, but that which is young, freſh, and ſimply boyled or roaſt, amongſt which the fleſh of a young Hauk and Night-Owl being eaten, it is thought to be of force by a propriety, as on the contrary the fleſh of Goats, wild Beaſts, Hares, are thought to be hurtful for the

the cauſes forementiond; Milk, good Cheeſ, not too much ſalted, nor rotten, Butter, common Oyl, and Oyl of Almonds may be granted to thoſe that are accuſtomed to them.

Eggs alſo are convenient unleſs they do corrupt, as it moſt eaſily comes to paſs in cholerick Stomachs, Bread made of pure flower, not tainted with the faults of grain, whence by reaſon of Darnel many have been brought to a Stupidity or Madneſs, Levend a little, ſalted and rightly baked, is good: and of Grains and Pulſe, Barley and all kinds of Pears, ſo boyled and prepared that they may eaſily be diſgeſted, and do not puff up, but Lentils and Beans are diſallowed becauſe they are thought to beget a Melancholy juyce. Of Fruits Apples eſpecially are convenient as Appropriate all manner of waies, and other fleeting Fruits, and thoſe which are kept hanged up or dryed, as Prunes, Raiſons, Cherries and the like, and of harder things Freſh Nuts, and Almonds; of Plants thoſe that are temperate are allowed, as *Spinage, Lettice, Endive, Beets, both Bugloſſes* are extold in the firſt place as appropriate, onely *Colewoorts* is condemned, becauſe it is beleeved to produce *Melancholy*; the which notwithſtanding I judgeing by its taſt, do think if it be rightly prepared that it doth rather cauſe good Blood then other Plants, ſeeing it is tender and ſweet.

There muſt be ſpecial care had of the Drink, and we muſt allow ſomwhat to cuſtom, in thoſe that drink Water or Wine, ſeeing Weak wine can no waies hurt, nor Strong if it be diluted and moderately taken, but ſeeing it makes merry, it doth rather profit them, but if that we ſee that they become more ſad or more fierce by the uſe of it, we muſt temper it yet more, or wholly withdraw it; the ſame judgment muſt be of drink: and alſo the drinking of Whey is very much commended in theſe diſeaſes, becauſe it is laxative, as alſo Almond milk, which can no waies ſo much aſſail the Head as ſome have thought.

Sleep is very much commended, not ſo much becauſe it moiſtens, as they would have it, but becauſe it refretheth the body and mind, and therefore if it do not invite them, it muſt be procured by giving Soporiferous things or application of Externals as ſhall be explained.

The Inordinate motions eſpacially of Mad Folks muſt be quelled with the ſame Soporiferous things, and they muſt be reſtrained with Chidings, Blows, Bonds, Guards, Priſons, for this alſo as experience teacheth, makes for the Cure of Mad Folks, whom Empericks beat with Rods and Scourges.

We muſt procure that natural Excretions be done decently, and if Nuns or Virgins do rage with a turgid matter by reaſon of the retention of their Seed, if they marry they are cured.

Affections of the mind in the firſt place muſt be removed from them by Arguments eſpecially when they proceed from no manifeſt cauſe, as hath been ſaid in the perturbation of Mind; and if they pretend falſe cauſes, as one the Greatneſs of his Noſe, or another Plenty of of Serpents in his body, that by ſatisfying of them this Opinion conceaved may be taken away, they muſt ingeniouſly be deceived and made believe that theſe are cut off or purged away, by ſhewing ſome ſuch like thing privately conveighed, or by ſome other art: they muſt be recreated alſo with pleaſant things which muſt be offered to their Senſes, and with thoſe things which we ſee them chiefly delighted with, with which notwithſtanding for the moſt part they are not moved; or if they be altogether mad they no waies underſtanding nor apprehending them, do neglect and ſleight them and are the rather more offended by them.

The other Symptoms which betide the Melancholick and Mad if they be too urgent they muſt be corrected as ſhall be explained in their particular chapters, amongſt which Watchings alſo are corrected with thoſe things which we have ſaid muſt be applied to the Head and by Lotions of the Feet, and if they be very troubleſome by giving things that cauſe reſt expreſt in Watchings, and every where in this Book, a Pain of the Stomach, Belly, Womb, a diſtention of the Hypochondries are corrected by Unctions, Fomentations of the Belly, and other things as ſhal be taught in their places, and if any thing be given by the mouth upon that account, muſt alwaies mix with them, thoſe things which do reſiſt melancholly.

As if in plenty of Winds and bad digeſtion ſuch a pouder be preſcribed to be uſed after meat. Take *of the pouder* Diacydonides fine ſpeciebus *two drams, Aniſe ſeeds three drams, Coriander prepared two drams, Cinnamon three drams, Squinanth half a dram, Indian Leaf, Marjoram of each one ſcruple; flowers of Roſes, Bugloſs each half a dram; Pearl one dram,* make *a pouder,* add *Sugar the weight of them all.*

The Cure of a Phrenſie and baſtard Phrenſie from a hot diſtemper & Inflammation of the brain.

A Hot Diſtemper of the Brain if it cauſe a Raving and it be a true Phrenſie which ariſeth from an Inflammation and its membranes, and preſently invades with a Feaver it is a moſt dangerous and moſt acute Diſeaſe, which ſomtimes is terminated on the third day; but if they be leſs fierce, and Rave with Laughter, theſe things afford us great hopes of recovery; but if it be a baſtard Phrenſie and the brain be not yet inflamed, but is only heated by a humor or vapor, as it commonly comes to paſs, and it follow a hot Diſeaſe, chiefly a Feaver, we muſt foretel according to the condition of the Diſeaſe; for if this be in the fits of Intermitting Feavers either in the beginning or ſtate, as this is wont to be common with Children the Fever remits again together with the Fit; but if this happen in continual Feavers about the ſtate, it can in no wiſe be free from danger, the brain conſenting then with the heart that is oppreſt, where yet if nature overcome the Diſeaſe, the Feaver declining, the Raving alſo ceaſeth; alſo in Peſtilential Feavers according to the nature of the Diſeaſe which is Curable or Killing, the Raving becomes Deadly or no waies ſuch yet it denotes no good if it ſupervene, and then if the pulſe alſo remit, and ſpots break forth, Death is at hand; in the Worms of Children alſo it is judged according to the nature of the Feaver and oftentimes foretels Convulſions to come upon it, otherwiſe without any hurt 'tis taken away with the Feaver.

The intention of Curing in a true Phrenſie is this, that firſt of all with things evacuating we revell and derive from the Head, the bloody humor heating or inflaming the Brain, and that chiefly by taking away of Blood and alſo by Medicines that looſen the Belly, next that by things altering uſed inwardly and outwardly, and by a courſe of diet we correct the heat chiefly in the Head, alſo in the Liver, Heart, which alſo as the whol body have grown hot by reaſon of the Feaver and towards the end diſcuſs the remaining matter, in the interim alſo having reſpect unto the Symptoms, if there be any beſides theſe; the which alſo are adminiſtred in a baſtard Phrenſie but guided by the nature of the Diſeaſe accompanying, from whence it proceeds, in which alſo let it be your intention to hinder by this means the aſcent of Vapors, and to revell thoſe already carried up.

Drawing of Blood for Revulſion ſake ought to be

ſuddenly

ſuddenly done in a true Phrenſie, & that largely or often repeated in a Vein of the Arme moſt apparent, eſpecially the Shoulder Vein. But the Vein muſt not be opened with too large an orifice as the French are wont to cut with their Lancets; leſt whiles they are unruly the flux of Blood cannot wel be ſtopt. In a baſtard Phrenſie likewiſe if we ſee a great afflux of humors carried to the Head, by the greatneſs of the Raving and the Veins of the Eyes ſwelling, unleſs by reaſon of the Feaver becauſe it is in its ſtate, or becauſe laſting long, or by its malignity it hath overthrown the ſtrength, we be compeld to forbear it, and nothing elſe hinder. A vein alſo muſt be opened, although it hath been alreaddy open'd in reſpect of the Feaver.

Alſo for Derivation in a Phrenſie alwaies, and ſomtimes in a baſtard Phrenſie, if the Raving be vehement whence we ſuſpect the vehement heat doth raiſe an afflux of humors, even at that time when we are forbid to open ſome general vein, ſomtimes being forced, we ought to open a particular one, by which there may not be ſo great an effuſion of Blood, although it be in the ſtate, for fear leſt the falſe Phrenſie ſhould be changed into a true one: of which kind chiefly is the Vein under the Tongue, which being opened doth oftentimes very much help in Ravings: upon which account it is convenient alſo to open a Vein in the Forehead, when great neceſſity urgeth, and we are not compeld to dilate it, by girting the Neck with a Swath, by which the blood is too much forced upwards; and to open the Veins of the Noſtrils with Briſtles or other rough things by pricking and rubbing them; or to ſuck out the Blood applying Leeches behind the Ears, to the Forehead, Noſtrils, Fundament.

Scarification alſo doth good with Cupping-Glaſſes applied for Revulſion in both Species of Raving; and when it is not fit to open a Vein in a Baſtard Phrenſie, then alſo inſtead of that it ſhall be applied for revulſion ſake to the Shoulder-blades, Shoulders, Arms; which I am wont to do with good ſucceſs inſtead of Derivation on the ſides of the Neck about the jugular Veins, others alſo approve of it done on the griſly part of the Ears: for which Scarification if they will not endure it, Cupping-Glaſſes only may be uſed.

We ought alſo by Fricions of the extream parts to revel, and by making Ligatures alſo in thoſe places, to reſtrain the too much motion to the upper parts, the which alſo may be performed by Lotions of the Feet which we ſhall by and by preſcribe, for the cauſing of ſleep.

If they admit not of Clyſters they muſt be caſt in by force, and that they may keep them, their Fundament muſt be ſtopt with a Cloth, for they revel much by ſtimulating, and correct the heat of the Body by altering, and evacuating the Cholerick Excrements, upon which account, both by reaſon of the Raving, and the Feavers accompanying it, they are convenient in both Species of a Phrenſie: the which ought to be caſt in before bleeding, and afterwards muſt oftentimes be repeated, many of which have been preſcribed in Feavers.

For example ſake we propoſe theſe only: Take *of Caſſia newly drawn ſix drams, Red or courſe Sugar one ounce, Oyl of Violets three ounces, juyce of Beets or Mercury one ounce, Salt one dram, with the Decoction of the four Emollient herbs,* Make a Clyſter.

A more Compound one is made thus: Take *of the Herb Mallows, Marſh-mallows with the Roorts, Pellitory of the Wall, Beets, Mercury, Lettice, Violets of each one handful. Whol Barley one pugil, Guord ſeeds half an ounce, Prunes ſix:* Make a Decoction. In a fit quantity diſſolve *Honey of Violets, Red Sugar, of each one ounce; Catholicon, Caſſia, of each half an ounce; juyce of Beets* or *Mercury, of each one ounce; Oyl of violets three ounces, a little Salt;* Make a Clyſter. *Laxatives* and ſomwhat *Stimulating* may be given, eſpecially in thoſe that are bound to looſen the Belly, chiefly when they will not admit of Clyſters or do not keep them. But we muſt have a care of purgers that heat the Body, in which thing Empiricks knowing nothing elſe but to purge, are oftentimes grievouſly faulty.

Therefore a day after a Vein hath been open'd ſuch a ſolutive Medicine may be given: Take *of the ſimple Syrup of Roſes ſolutive two ounces, water of Violets, Lettice, Bugloſs as much as is ſufficient,* to dilute it, and give it.

Or this, Take *of the juce of Roſes one ounce and an half, Sugar ſix drams, diſſolved in Roſe water;* Boyl it gently, ſtrain it and give it.

Otherwiſe after this manner: Take *of Syrup of Roſes ſolutive, Violets, of each one ounce,* with *Meſues* Decoction of Fruits, give it.

If at any time we muſt paſs to ſtronger Medicines, it may be done thus: Take *of Rhubarb four ſcruples,* infuſe it in *Water of Roſes and Violets,* ſtrain it, add *Syrup of Roſes ſolutive one ounce or more,* give it.

Or, Take *of Sena* (whoſe juyce is not unlike *the juyce of Rhubarb*) *two drams* or *three, Polypody half an ounce, ſomwhat ſharp Prunes ſix:* Boyl them, to the ſtrained Liquor add, *Syrup of Roſes ſolutive, Violets, of each half an ounce:* Make a Potion.

Things altering are given both by reaſon of the Feaver accompanying, and becauſe of the hot diſtemper of the head, in a form chiefly acceptable to them, eſpecially of drink, becauſe they are very thirſty, for they do not willingly take things Medicinal, with which alſo we ought to prepare the Cholerick Humor, if there be any, before we purge it, you meet with various compoſitions of theſe in Feavers therefore here only a few examples are propoſed.

In their Broths are boyled, *Sorrel, Lettice, Bugloſs,* and their *Waters* are mixed with them, as alſo *the juyce of Citron* and *Roſe Vinegar.*

Inſtead of Beer, we muſt mix with the boyled water which he drinks, *Syrup of Currans, Pomegranates, Lemmons, Wine of Pomegranates or other Acid juyces.*

Or you may give by courſe, Juleps in a fit quantity by themſelves, or mixt with Beer after this manner: Take *of Syrup or Wine of Pomegranates, of Barberries, of each two ounces, Violets one ounce, of Poppy* (by reaſon of watchings) *half an ounce, water of Lettice, Sorrel, Roſes, Bugloſs, of each four times the quantity,* let him drink it. In place of Syrups, Juyces may be uſed.

A Conſerve made fot the ſame uſe to be often taken, As, Take *of the Conſerve of the four Cordial flowers of each one ounce; Coleworts, Lettice, fleſh of Citrons condite of each ſix drams; ſeeds of Sorrel, Endive, Purſlane, of each half a dram; Pouder of Diamargaritum frigidum one ſcruple, Syrup of Pomegranates* or *Currans:* Make an Electuary.

Things cold and ſomwhat aſtringent muſt be applied to the Head at the beginning preſently, whiles the Humor flows, or Vapors aſcend, the which do repel them.

Oxyrhodines are fit for this uſe, prepared thus: Take *of water of Roſes, Plantane, of each two ounces; Oyl of Roſes two ounces, Vinegar of Roſes one ounce.* Mix them.

Or thus, Take *of the Oyl of Roſes Omphacine one ounce and an half*, Unguentum Populeum, *Vinegar, of each half an ounce, the white of an Egg*, beat them together and apply them to the Forehead.

But a repelling Decoction may be made thus, Take *of the Leaves of Sallow, Lettice, Plantane, of each one handful; Flowers of Roſes two pugils, Violets one pugil, ſeeds of Plantane, Myrtle, of each two drams*; boyl them in *iron'd water*.

Afterwards Coolers and Moiſtners are applied, with which we mix things cauſing reſt

In this form, Take *of the juyces of Lettice, Nightſhade, of each two ounces*; *Plantane one ounce*, let cloaths dipt in them be applied.

In Summer time we prepare them of Waters, Take *of the waters of Roſes, Nightſhade, Lettice, Water-lillies of each two ounces*; *Plantane one ounce*, let cloaths dipt in them be applied.

A Decoction for Irrigation may be made thus, Take *of the Leaves of Violets, Lettice, Nightſhade, Water-lilles, Houſleek, Purſlane of each one handful*; *flowers of Violets, Water-lillies, Borrage, of each one pugil*; *ſeeds of Lettice, Poppy of each two drams*; *of Henbane one dram*; make a Decoction for an Irrigation.

Afterwards let the Head be anointed with the following Unguent, Take *Oyl of Violets Water-lillies, of each one ounce*; *of Roſes ſix drams, of Poppy, Mandrake, each half an ounce*; Unguentum Populeum *one ounce*, (we add no Camphire, becauſe it cauſeth watchings) mix them with a little white Wax, for an Oyntment.

Then we may ſtrew Pouders on the place anointed, after this manner, Take *of the flowers of Roſes, Violets, Water-lillies, Lettice ſeed, of each two drams*; *of white and black Poppy of each one dram*; *red Saunders, Coriander, of each half a dram*: mix them.

When the raving begins to abate, we add certain diſcuſſive things to the forementioned forms, ſuch as have been preſcribed in a Melancholly humor, cauſing Melancholly and Madneſs, but ſomwhat more temperate: and then eſpecially we are content with Anointings adding Oyl in which Mother of Time and Chamomel have been boyled: and afterwards Sinapizing the head as they cal it.

As with the following Pouder which alſo ſtrengthens the Brain. Take *of Coriander ſeeds two drams, flowers of Roſes, Chamomel, Lavender, Roſemary of each one dram*; *Orrice root half a dram, of all the Saunders one dram*; make a Pouder.

Beſides theſe things, when the raving is at the higheſt, there is a ſingular and approved Remedy, made of the Fleſh and Blood of Animals, being applied to the Crown of the Head whiles they are yet hot, which being roaſted as it were with exceſſive heat of the Head, when they are laid aſide, do ſeem to ſend forth a certain vapor, and I have often obſerved that they alone almoſt have helped: which whether they do it by diſcuſſing as ſome would have it, or by ſtopping the force of the blood, I will not here any longer diſpute, this I know, as ſhal be ſaid in the Hæmorrhages that theſe do wonderfully ſtop the blood flowing out of a wound, but for this uſe the following things are for the moſt part made choice.

Certain whol Animals cut through the back, and preſently unboweld, as a Lamb, a Puppy-dog, a young Pigeon or Chicken, or the bloudy parts of them, as the Lungs of a Ram Gelt, of a Lamb, or the Livers, or alſo other fleſhy parts, hot from the Creature new killed, as alſo other things muſt be applied, or if they be cooled, they muſt be heated again.

For the hearts ſake, ſtrengthening Epithems are applied to the region of it, by reaſon of its double diſeaſe, both of a Fever and becauſe of its Weakneſs, which alſo may be bound to the Pulſes in a cloth, ſuch as have been propoſed in Feavers and formerly in Melancholly.

And a more ſimple one may be made thus. Take *of Roſe water four ounces, of Violets, Bugloſs, of each two ounces*; *Vinegar half an ounce, of all the Saunders each one dram*; *Saffron half a ſcruple, Camphire five grains*; mix them.

For the ſame cauſe alſo regard is had to the Liver, and Epithems are applied to that.

The Breaſt alſo is anointed with cold relaxing Oyls as Oyls of Violets.

And the Cods are cooled with things working actually and potentially.

The Thighes and Arms of the whol body are waſhed for coolneſs ſake, and that they may the eaſier ſleep, with the Decoction of the Plants of the Vine, Violets, Lettice, Poppy and the like.

A Courſe of diet is to be ordered, not ſo much to preſerve Strength, as to help ſomwhat by Alteration.

Let the Air incline to cold, but whether they ought to be kept in Darkneſs or Light, that they may rave the leſs, ſome do very much trouble themſelves, ſeeing falſe apparitions do appear to them, as wel in the light as darkneſs, but it is better that they be kept in a place ſomwhat obſcure.

Their meat ought to be cooling and moiſtning, ſuch as is convenient for the Feveriſh, ſeaſon'd with herbs and other cool things, as Lettice, Endive and the like, alſo with the juyce of unripe Grapes, and Vinegar, and other cold juyces, and ſeeing theſe Delirous know not what they do, and oftentimes do not devour their meat only, but alſo other abominable things, we muſt not humor them, but when the Diet ought to be Slender we muſt withdraw it, and they muſt be fed with Barley, Prunes, and other lighter things.

Let their Drink whiles they rage be Water, taken of it ſelf, or firſt prepared with boyling, to which we may mix Syrups, as was ſaid before, for preparation and alteration ſake.

Thoſe things which concern *ſleep, motion, and the affects of the mind*, ſhall be explained now in the Symptoms.

For *the ſymptoms* which happens beſides *Raving* are others alſo ſupervenient to them, both by reaſon of *the diſeaſe of the head* and of *the Fever accompanying*, to which we ought to have reſpect.

Watchings by reaſon of the exceſſive heat of the brain, are common and hurtful to them, which in general are corrected with the ſame *Remedies* that reſiſt the diſeaſe, as hath been ſaid, ſeeing they cool and moiſten, eſpecially the external ones, to which upon that account are added *things ſoporiferous*, and privately for their ſake *ſopoxiferous medicines* are given *mix with Cordials* as ſhal be ſaid in its place.

Inordinate motions do ſo diſturb them by reaſon of their depraved imagination that they endeavor by all force to riſe out of the bed, and to cloath themſelves, and if they be not reſtrained, to make an eſcape, whence oftentimes being void of reaſon, they fall from a high place, and kil themſelves; which unquietneſs is likewiſe amended by *things* given to *cauſe ſleep* ſeeing the mind being at reſt the body muſt needs reſt alſo: and that they may be reſtrained, which is very hard, ſeeing madneſs makes them ſtrong, they are oftentimes bound in *bonds*, the which notwithſtanding ſomtimes when they are angry upon that account, and more fierce, we ought to looſe them, and give them way a little, yet uſing

great

great caution that they hurt not themſelves nor others.

A Suppreſſion of the Urin is a Symptom peculiar to them, whenas being ſo intent upon their imaginations, they feel not the provocation of the Urin, and therefore care not to make it, by the retaining of which the Bladder being too much filled and diſtended afterwards voids the water with a great deal of difficulty; the which we muſt cure, *by ſeaſonably admoniſhing them, and ſhewing the Chamber-pot* and by applying *external Remedies*, of which we wil treat of in the revention of Urine.

The drineſs, blackneſs of the Tongue which denote the higheſt burning of *a Feaver* is corrected, as ſhal be explained in its place.

Thirſt doth very much torment them by reaſon of their heat, it is corrected by *altering things cold and moiſt*, eſpecially given in their *Drink*, as hath been alreády ſaid, and ſhall be ſaid in thirſt in general.

Their weakneſs and overthrow of ſtrength known by the Pulſe, ſeeing their unquietneſs otherwiſe ſtirring them up, doth ſeem to add ſtrength to them, as hath been ſaid, is repaired *by a courſe of Diet and cordiall medicines*, uſed *inwardly and outwardly*, as alſo with them already mentioned.

The Cure of Folly from an evil conformation and diſtemper.

To undertake to Cure *Folly bred* in a man *from his birth* by *an evil conformation*, ſeeing it is impoſſible to faſhion otherwiſe the parts once formed, were to attempt to waſh and make a Blackmore white; as alſo it is impoſſible to change any thing, if this happen from *a perverſe temperament* the which notwithſtanding is ſomtimes amended, by *the change of age*, by *Gelding*, as hath been ſaid in *madneſs*, where alſo *cuſtom* may do much, by which it came to paſs that *Cimon* for love of *Iphigenia*, when he knew his fooliſh behaviour did diſpleaſe her, by little and little changing of them, *from a Fool* became *a wiſe man*, as this whether true or fabulous is agreeable to reaſon.

The Cure of madneſs from putifaction, a ſpeck, Worms in the brain.

If *madneſs* be ſprung from *Putrefaction*, or *a Speck*, or *Worms* as they would have it, by reaſon of vapors ſent from thence to the brain, we can ſcarcely fit a Cure for theſe, which are almoſt hid from us, yet if that Cure which was deſcribed in *madneſs* ariſing from *a melancholly humor* be alſo applied here, it wil be no fault; but if the malady be grievous 'tis incurable.

CHAP. IV:

Of a Defatigation of the mind.

The Kinds.

VVE call that *a Defatigation of the mind* when the *internal ſenſes* are exerciſed *more*, or *longer* than 'tis convenient; or when they reſt *not at the time preſcribed them*, by *ſleep*, which is the reſt of the mind, or *not ſufficiently* as it comes to paſs *when they ſleep not, in too much Watchings*, or *when they ſleep* but *unquietly, by reaſon of grievous dreams*: the which both in the ſound and ſick do ſomtimes cauſe weakneſs, create trouble, and increaſe diſeaſes.

Watchings.

Too much and preternatural Watchings are, when they *ſleep not at all* for ſome daies, months, or *not ſufficiently* fill up the term of ſeven or eight hours or more according to the cuſtom of natures, ſeeing Children ſleep more than they wa'te. Theſe whether they *be ſymptoms of Diſeaſes* or happen *without them*, do at laſt bring hurt, ſeeing they heat the ſpirits by their too much uſe and exagitation, whence it happens that the humors alſo are ſet on fire, eſpecially the hot ones, and the ſame are at length conſumed.

And hence muſt needs follow at laſt, *a weakneſs of ſome functions* of the body, as the *animal ſpirits* being waſted, there is ſome defect of *the internal ſenſes*, and by conſequence of *the external* alſo, chiefly of *the ſight*, ſeeing for the exerciſe of that there is need of ſo great a quantity of ſpirits; and then by a certain conſecution there being a diſſipation made of *the vital ſpirits* alſo, there follows *a languiſhing* of the whol *body*, and *the natural* ſpirits being offended too, *the natural actions* are hurt, and chiefly *concoction*, not becauſe ſleep as they think doth digeſt, but becauſe *concoction* that it may be rightly performed, wanting more plentiful ſpirits and heat, for want of them is for the moſt part offended ſooner then the other actions.

And alſo *immoderate watchings* do bring *troubles and pains to certain parts*; and that becauſe not only *the ſpirits* are heated, but *the humors* alſo by infection from them, whence *the ſpirits and blood* by too much *watching* growing hot firſt of all in *the Head, a pain of the Head, redneſs of the Eyes*, and *hot tears* flowing thither, an *itching* doth befall *the watchful* that they are often forced to rub their Eyes; and if they laſt *long* and the maſs of blood be inflamed, *diary Feavers* are cauſed; and if this Symptom urge in other *Feavers* the heat being increaſed, the ſymptoms of *the Feavers* grow ſtronger *Choler*. Alſo in the cholerick growing hot for this reaſon through too much *watching* and poured *into the Stomach* and boyling there, breeds *gnawings of the Stomach*, and *other accidents* of it, and *by conſent* with that, *pains of the Head, and Megrims*.

Dreams.

Preternatural Dreams are, when *in ſleep* the *external ſenſes* only do ſeem to reſt, but the *internal* do not only lightly exerciſe themſelves, as is in natural Dreams, but *immoderatly* and with *vehemency and labor* as if they were waking, although exerciſe themſelves depravedly, and do alſo exagitate and diſſipate the ſpirits, that *being rouzed up* they ſeem to be rather *wearied* than *refreſhed*.

Immoderate Dreams that make the body *weary and weak*, are thoſe which beſides the cuſtom do laſt longer, almoſt all night; but this happens *to ſome naturally* that Dreams do then begin firſt, when the vapors which cauſed a ſound ſleep, are now diſcuſt, after the firſt ſleep as they call it, *but on others* as labouring men tired with labor, and ſleping preſently after meat, *ſleep* ſo ſteals on them *by reaſon of the plenty of vapors* that they have no *dreams* at all, or if they have ſome wandring, they no waies remember them; the which alſo though it be natural too, yet that *Country fellow* not thinking it convenient, that he could rehearſe no *Dreams* to his Companions amidſt their Cups, for this reaſon takes counſel of the Phyſitian, and receiving from him *a ſtrong purging medicine* ſleeping upon it dreamt that he ſhit a bed, afterwards awaking he found in very deed, that he had dreamed, and that a true and fatal one.

Grievous dreams are which do not only lightly exerciſe the mind, as natural ones (which therefore ſeeing they are not very much imprinted on the Brain) they do eaſily ſlip out of the memory either wholly or

in part, that being wakend they can recite little of them) but do very much exagitate it, and do no leſs affect the ſenſes then if thoſe things did truely fal out, which appear to them in their ſleep, in ſo much that oftentimes being ſtrucken with fear they ſuddainly ſtart up, or if nevertheleſs they continve in their ſleep, they are altogether unquiet, and toſs their Body variouſly in their ſleep, Sweat, and ſomtimes Talk, Prate much, Cry, Laugh, call out, Nay and ſleeping ſtill, nevertheleſs riſe out of their Bed, and as *Galen* writes it hath befallen himſelf. they walk and ſurvey many places, concerning which the common people perſwade themſelves many ſuperſtitious and old wives tales, how they can climbe without danger, if they be not hindred, nor wakend being called by their own name, thoſe difficult places, otherwiſe impoſſible for the wakening to do: many grievous dreams of which nature, tis well known to all, are dayly objected, both to the ſick and otherwiſe ſound.

But they are ſuch, if horrible things are preſented to their minds whiles they are a ſleep, with which they are either vehemently frighted, as when they dream that they are in danger by ſome violence offered, a fal from on high, of Fire, Water, or by reaſon of ſome great offence, or for the loſs of ſome grateful thing repreſented to them, they are Angry, Sad, and Greive.

Alſo Portentous Prognoſticating Dreams, eſpecially thoſe that portend any evil do very much aſtoniſh, and though they preſage ſome good, nevertheleſs they move a little, the which ſo many ſacred and prophane Hiſtories do teſtefie, are ſent to men, from a good and evil Spirit,

The Cauſes.

The Cauſe both of watchings and dreams, one is ſupernatural depending on God or the Devil, another natural, from cuſtome, which is a ſecond nature, or it lies in the Head and it is a too great Commotion or Perturbation of the Animal Spirits, or a hot diſtemper of the Brain.

The great and good God as he makes known his wil to us watching, and puts it into our minds, ſo alſo he will ſomtimes admoniſh us by Dreams of things to come or things preſent or paſt; ſomtimes by ſending of viſions unknown by themſelves. Yet the interpretation of which he graunted to ſome, as to *Joſeph*, *Daniel*: but at other times he hath ſet before our Eyes as it were in Dreams the thing it ſelf as it is, *as to* Pharaoh *the Dearneſs of proviſion to come, to* Daniel *the Monarchies to come*, Julius Cæſars *preſent danger to his Wife, the paſt Death of* Ceyres *the Husband, to his Wife* Alcyone.

The preternatural cauſe of Dreams.

And the Devil alſo by Gods permiſſion as he doth often dilude the ſleeping with falſe Images and Apparitions of things, ſo alſo he troubles men in their Dreams with true ones ſometimes, that ſignifies ſomething certain, if he can hurt them, ſeeing otherwiſe he is a lyar.

Cuſtome is the cauſe of watchings and Dreams.

Cuſtome oftentimes makes men to be raiſed at a certain hour of the Night and to watch a long while, as we have oftentimes alteady taught that Nature being accuſtomed, doth obſerve her times in excretions alſo, and others of her Natural Operations; which is very familiar with old folks in watchings, who though they be Prone to Sleep, and preſently betake themſelves to Bed; yet being rouſed either about midnight or ſooner or later, can Sleep no more. And after this is wont to be accuſtomary to them, care and thought in the interim joyning themſelves, by which whiles they ſearch into, and diſpoſe of divers things, they are awakend more. Alſo ſome dreams come to a habit from a certain Cuſtome that afterwards for a long time they dream dreams of the ſame kind, and do not only conceive them in their minde, but by words and deeds expreſs them in their ſleep.

The too much commotion or perturbation of the Animal Spirits, are the cauſe of preternatural watchings and dreams, which come to paſs the internal ſenſes being too much affected, for then the Spirits being ſtirred. becauſe they can not reſt, they can no waies ſleep but watch, or if they do ſleep, either they are vexed nevertheleſs with too much Dreams or thoſe more grievous; which impulſion of the internal ſenſes either befals them by accident by reaſon of the external ſenſes, or by it ſelf. For the external ſenſes being very much moved by their proper objects, do move alſo the internal and ſuffer them not to be quiet, or if they be quiet, nevertheleſs they diſturb and force them: as the ſight moved by too much light, the hearing by a great noiſe turnes away ſleep, and makes the ſleepers unquiet, or rouzeth them up, becauſe ſilence and darkneſs are rather required to ſleep: the touch eſpecially affected with pain and trouble doth cauſe watchings. Upon which account in Diſeaſes that torment with pain they are alſo troubled with watchings, and in dreams they repreſent the pain to them aſleep; and thoſe that are troubled with a pain at the Heart the ſtomach being to ful, they ſleep unquietly; the which happens alſo to them who ſuffer any other trouble in Diſeaſes, as to thoſe that are very thirſty, who watch by reaſon of the thirſt, or if theſe kind of people do ſleep, they are tormented alſo in their dreams with a deſire to drink; as it betides them alſo who are vext with a difficulty of breathing, in divers Diſeaſes of the Breaſt, and in a Dropſie, that they cannot ſleep, or if they do ſleep being ſtraitend with danger of ſuffocation, they have alſo ſuch Dreams.

A commotion of the Animal Spirits is the cauſe of watchings.

The ſenſes alſo being too much moved by themſelves, by a vehement intention of the minde upon ſome things, the ſpirits being ſtirred, at it comes to paſs in vehement and laſting paſſions of the Minde, *viz.* in Joy, Anger, Fear, Sadneſs, Love, they are afflicted with too much watchings, or if they do ſleep, nevertheleſs they are exagitated in Dreams with their affections; and alſo ſo many Species and Images of things, ariſing from the ſtudies of divers Sciences, Arts, and human actions, being apprehended and imprinted on the Brain, do not only exerciſe the Memory of the waking ſo that they ſleep leſs, but being obverſant to them ſleeping and moving the Spirits, they ſpring forth again in their dreams. And thoſe things which we met withal either the ſame day, or the precedent daies or a long while before, do repreſent themſelves either in the ſame form that they were in or from a mixture of them diverſe forms ſpringing up wonderful apparitions ofter themſelves to us, which either have not happend, or are not to be found in Nature. And hence it comes to paſs that oftentimes ſuch Dreams by reaſon of their enormity, are thought portentous, the Cauſe of which notwithſtanding is Natural, *viz.* this commixture of formes (as if one hath ſeen in the day time a fine Horſe, and a Man, he may Dream that he ſees a Centaure) and the common People by Reaſon of the diverſity of dreams, which tis no wonder that they vary ſo according

ding to ſo many conceptions of the Mind, do perſwade themſelves by a great error that every one doth portend ſomthing.

Alſo the manner of lying by which the Animal ſpirits being moved, are leſs quiet in their ſeats, but do eaſier change their place, make much for the cauſing of more Turbulent Dreams, (as we ſee this may be done in Members retained a long while in a non natural Scituation, that ſuffer a numneſs by reaſon of the Spirits hindred, and in a Vertigo from a wheeling of the Body by reaſon of the Spirits running up and down,) as we ſee it happens by lying one the Back eſpecially the Head bending downwards, the Spirits then from the Head penetrating more the Spinal Marrow, and ſo cauſing motion and ſenſe, that though they be not wakend, yet nevertheleſs they are more exagitated in their Dreams.

A Perturbation of the Animal Spirits, a Cauſe of Dreams.

Alſo *a Perturbation of the Spirits of the Brain*, from *Impure, Filthy, Melancholick Vapors* or *Humors*, cauſeth *Grievous and Turbulent Dreams, and the like apparitions appearing in Sleep*; and as *pleaſant and merry Dreams* do ſhew forth *a healthful Conſtitution*, ſo theſe *ſad and horrid Dreams* for the moſt part ſhew *a Melancholick Conſtitution* and oftentimes *Diſeaſes to come*; and in Diſeaſes of this Nature, generated of Melancholly, and a Malignat matter, together with other accidents of the Brain and Dotages they do vehemently Exagitate a man, and alſo cauſe watchings, but *Dioſcorides* alſo writes that terrible Dreams are cauſed from certain things taken, as if *Beans, Lentils, Fitches* be eaten, and alſo if the ſeeds of Bind weed, and Venemous Tree Trefoile be taken, doubtleſs the Spirits being wont to be troubled by their ſtrength, they are cauſe Dreams.

A hot Diſtemper of the Brain is the cauſe of watchings and Dreams.

A hot Diſtemper of the Brain, alſo *heating the Spirits* becauſe it makes them unquiet, may be *the Cauſe both of Watchings and Preternatural Dreams*, which ſomtimes happens from hot Vapors proceeding from things taken, as *hot Meats* and eſpecially *Wine* which though it cauſe ſleep by its Narcotickneſs, yet it breeds unquiet Dreams; a hot Evaporation from Humors or Excrements, or the Bloody Humor it ſelf inflaming the Brain as they do produce a pain of the Head, ſo alſo Raving, Watchings, and Grievous Turbulent Dreams, and ſuch as reſemble the Nature of the Humor, oftentimes in Feavers, in a Phrenſie, and other hot Diſeaſes.

The Cure.

The Cure of Dreams from a preternatural Cauſe.

In the Cure we muſt reſpect the Cauſe and the Symptome, but we have ſaid the Cauſe of watchings and Dreams was from God, the Devil, Cuſtome, an Agitation and Perturbation of the Spirits and heat of the Brain.

The Dreams ſent by God becauſe they are good, and nothing proceeds from God but what is good, or tends to a good end, we cannot, nor ought not to change; the tricks of the Devil are turnd away by Prayers, Faſting, amendment of life and a ſtedfaſt Faith.

The Cure of watchings and Dreams from Cuſtome.

Cuſtome as a ſecond Nature is not eaſily changed, but by a contrary Cuſtome; wherefore they that are wont to be raiſed at a certain hour of night, let them go to bed later or ſome other way let them change this Cuſtome, and in time of ſleep, as much as they can let them abſtain from deep thoughts, alſo if Dreams do ſo accuſtomarily vex man, that they are unquiet, Skip, Talk, Walk, then they are ſomtimes to be wakend by frighting, for hence it comes to paſs, that that fear repeated, at length offering it ſelf to them in their Dreams, doth rouſe them up of their own accord, and by degrees turnes them from this evil Cuſtome. As one that was wont to walk in the night, being ſomtimes beaten with rods at length left off this Cuſtome; and that Cobler who becauſe he thought in his Dreams that he was ſowing, and with opening his Arms, as they are wont to do drawing their thred, he ſmote his companion by him, being oftentimes ſoundly kickt again by the ſame man feigning himſelf to Dream that he was riding, at laſt he was freed from this Error.

But if they be compeld to watch, or grieved with Dreams from the too great plenty of Spirits, the Cauſes which exagitate them, muſt firſt be turned away as if ſleep be hindered by too much light or noiſe, or they ſleep unquietly, theſe things muſt be declined, by inducing of darkneſs and reſt: if affects of the Minde do cauſe it, as hath been ſaid in that Species of Alienation of Minde, they muſt be corrected, and thoſe things be given, which can bring gladneſs, and alſo procure reſt, as Wine; but eſpecially if too great an intention upon ſome thing and Ratiocination made on it, do hinder ſleep, and the minde cannot be drawn from it to take reſt, ſleep is the eaſier procured after this manner. The minde being called away from the former by the Meditation of another thing, as we do obſerve thoſe that watch a nights, if they be devoutly very intent on their Prayers to God, forgetting other cares, they do ſooner fall a ſleep: but if ſome trouble make men watchful or diſturbe them in their ſleep, as thirſt, then ſalt things which do cauſe that, muſt be omitted eſpecially at Supper, and Sleep muſt be expected, which ſupervenient is wont to quench thirſt, if it perſevere, it muſt be amended as ſhall be ſaid in its place ſo alſo if they ſleep unquietly by reaſon of fulneſs, a ſparing and ſober Supper is wont to correct this fault, and that chiefly if they ſleep not preſently after the taking of meat; if a difficulty of breathing contracted by their lying down do ſo vex them that they cannot ſleep, they muſt be ſo placed upright that they may breath free. And yet the Body may reſt, as ſhall be explained in a *Dyſpnœa* as alſo if by lying on the Back they are troubled with grievous Dreams if they ſleep on their ſide with their Head more lift up, they ſhall be leſs oppreſſed. If alſo a great pain in ſome Diſeaſe do hinder ſleep, as this is moſt frequent, and that cannot be mitigated by any other means, by ſoporiferous medicines we ſhall with the ſame labor procure ſleep and mitigate pain, becauſe they induce a Stupidity: rather giving them inwardly, if great neceſſity do urge, becauſe ſo they do work more powerfully; as with *Wine*, or if we muſt uſe ſtronger, *Syrup of Poppy* and other *Opiates*, or we muſt uſe *Vnguents* applied to the Temples and Forehead ſuch as *Populeum*, and *Lotions of the Feet* which for the procuring of ſleep alſo can do much, as in *Hypnoticks* divers of that ſort ſhall be explained.

The Cure of Dreams from a Perturbation of the Spirits.

If watchings or Dreams proceed from a perturbation of the Spirits, the Cauſe alſo muſt be taken away, which if it proceed from Meat or Medicine, we muſt have a care of making uſe of any Pulſe, and other things that Evaporate upwards; if this happen from *Vapors* or *Humors* by diligently ſearching out, what Excrement

ſends forth its vapors upwards, what humor offends, and being intent upon the emptying of theſe, if there be a plenitude, by Bleeding, if a Cacochymie Purging, by giving thoſe things alſo which do repreſs vapors, eſpecially after ſupper, and chiefly by the Diet at Supper being moderate, taking care that the like be not ingendred, nor aſcend, we ſhall compleat the ſcope of Curing.

If a diſtemper of the brain cauſe *Watchings and Dreams*, and there is a certain *hot evaporation* from *meat* or chiefly from *Wine* as we have ſaid, *cold things* being taken *at the end of meals* as was ſaid of *Vinegar* and other things which do actually refrigerate, will correct it, upon which account, ſome if they drink *cold Water* when they go to ſleep, their reſt is the ſweeter: but if this happen *in diſeaſes*, then thoſe things which are convenient *for curing the diſeaſe*, ſeeing they *are cold* wil alſo do good here, eſpecially if ſoporiferous and narcotick be mixt with thoſe things which are applied inwardly and outwardly as hath been explained in *Ravings* and *hot Headaches*.

CHAP. V.

Of the hurt of Feeling.

The Kinds,

Stupidity. THe Senſe *of Feeling* is firſt hurt, when it is aboliſht, and it is called *a Stupidity* or *Narce*, not for that reaſon, as when the functions of the mind are aboliſht, we call it *a Stupidity* or *ſtupidneſs of mind*; or when from *the immoderate paſſion of the mind* we ſay they are aſtoniſht, ſo that oftentimes though they be wounded yet they feel it not, till they come to themſelves again, but here it is properly called *Stupidity*, when a part is ſo deprived of the ſenſe of feeling, with which it was endued, that it can no longer perceive the qualities of the thing objected, and that either *altogether not* perceiving as if it were dead, or otherwiſe very *impairedly* as if, as it is commonly ſaid, it were aſleep.

Otherwiſe *a ſtupidity is general*, at once happenning to many parts of the body, which moſt commonly happens in *a Palſey motion being aboliſht* together with *ſenſe*, in which the *palſied member*, either is wholly ſtupid or only in part; ſomtimes *a ſtupidity* ſeizeth firſt before motion is aboliſht, and goes before *a Palſey* and at laſt ends it; that *general ſtupidity* is ſeldom found *alone* yet *Fernelius* teſtifies that he ſaw the like happen from Drunkenneſs, in which the body was all over ſtupid.

A particular ſtupidity happens only to certain parts, not only to thoſe affected with *a particular Palſey* but that ſomtimes is wont to happen *to parts that are not palſied*, ſomeimes *in the Hands, Feet, Face*, as I had after an Epidemical diſeaſe *a ſtupidity* left me in part of my Hip for many years; and perhaps that may happen *intrinſecally in the Bladder and Fundament* not only when they are palſied, but alſo only the ſenſe of feeling being aboliſht, they loſe their goad, and are not ſolicited to excretion to perform it rightly, and it may be the cauſe why ſome are ſometimes ſo ſlow to ſtool and piſs, as ſhal be ſaid there: but alſo in thoſe *parts endued with ſenſe of feeling, which are no waies moved with voluntary motion*, and therefore cannot be palſied, as *the Skin, Membranes, inward bowels, Stomach, Guts*, this ſolitary Stupidity may happen, as wel as in others which are moved.

The ſenſe of Feeling is depraved, not when it is ſo affected by its object, that there is a ſad ſenſation, which they call *pain* and refer it to the ſenſe of feeling depraved, but we becauſe it then percieves its object ſuch as it is, and as it offers it ſelf, do think that *pain* is not to be refer'd to the depraved ſenſe, but rather to the ſimple accidents amongſt the ſymptoms, as we ſhal ſay in its place; but when it perceives falſly, and errs as it were, as the other ſenſes do, when they think they See, Hear, Taſt, thoſe things which are no waies ſuch as are repreſented; the feeling we ſay if it be thus affected, doth perceive depravedly.

Such is that ſenſe which from the touch of any thing feels it not rightly but the part feels in it ſelf ſomwhat elſe, as when they feel a certain *running up and done* through a part as it were of *Ants* whence the Modern have called this affect a *Formication*. | *A Formication.*

Alſo *that other ſence* when a member touched with Air or Water they depravedly feel it to be affected and perfuſed, as if they were *exceſſively cold* or *burning hot*. | *A falſe ſenſe of heat & cold without and within.*

To which alſo is added a new Species more rare, firſt of all ſomtimes obſerved by me that is *a troubleſome ſenſe of the Air or Water*, Hot or Cold, about the Gullet and Stomach chiefly manifeſting it ſelf in ſwallowing; a ſymptom ſomtimes befalling the *Paralitical* or *Convulſed* with difficulty of Swallowing, Speaking, Laughing, Coughing, as ſhall be ſhewed in them; or alſo without the reſolution of thoſe parts very much tormenting men, only with this troubleſom ſenſe.

Hither alſo is refer'd the Senſe of vehement and intollerable heat, with which we have ſeen a Man troubled in his Jawes and Cheeks, and a Woman alſo on the ſides of her Tongue, without any appearance, even to the laſt, very long for many years.

Which *Senſation* we may refer to the depraved ſenſe of Feeling, or if this happen the member being half ſtupid, and nevertheleſs perceiving this trouble (whence *Archigenes* called it *a ſtupid pain* not ſo unhanſomly, as he is reprehended for it by *Galen*) we may at leaſt refer it to *the ſenſe of Feeling impaired*, or hold it an Affect compounded of theſe.

Whither alſo we refer that troubleſome ſenſe which ſomtimes is wont to befall the Teeth in chewing, which they call *Hæmodia*, and count it a ſtupidity of the Teeth. | *Hæmodia.*

To which alſo ſeems due to be aſcribed that ſenſe of the higheſt pain, which the Fingers being cooled even to a ſtupidity, and ſuddenly again Heated, reaching even to the roots of the Nails, by reaſon of the præceding ſtupidity, yet becauſe here happens a high and laſting Pain by reaſon of the ſudden change and alteration we ſhal refer it to pains and there explain it.

The Cauſes.

The Cauſe almoſt of every true Stupidity lies in a Nerve, which may be in every Nerve, ſeeing every Nerve is endued with the ſenſe of feeling, and doth communicate the ſame to the part into which it is inſerted, with an influx of the animal ſpirit and communication of its own ſubſtance, as we have taught in our *Anatomical work*; the which being thus affected, *that communication is intercepted*, or wholly, or in part, impeded

impeded; if this come to paſs in a Nerve, which being inſerted into a Muſcle, together with the ſenſe of feeling doth give it motion too, it muſt needs be that both a Reſolution and Stupidity do happen together, as ſhall be ſaid in a Palſey; which when it comes to paſs in a general Nerve affected and communicated to many parts, there muſt needs follow alſo a more general hurt common to many Muſcles, and yet not only to them, but alſo to the Skin and Membranes, ſeeing from the Nerves of the Muſcles, branches carried to theſe parts alſo do beſtow on them the ſenſe of feeling; but if it happen in ſome private Nerve carried to one part only, then it muſt needs be that that only is hurt; as this ſhal be more fully explained, in the Reſolution of Voluntary motion or a Palſey, ſeeing this Function which is aboliſht, is the more excellent.

An affect of the motary Nerve is the Cauſe of a ſtupidty hapning with a Palſie Reſolution or without it.

But from the forementioned affect of the ſame Nerve, whether it be a general or particular one it may come to paſs, that Motion may languiſh or ceaſe, the ſenſe of feeling remaining nevertheleſs, either entire, or at leaſtwiſe obtuſely, ſeeing for the exerciſe of motion, there is, required a greater ſtrength of ſpirits, than to feeling, as alſo ſhal be explained in a Palſey.

An affect of the ſenſitive Nerve is the Cauſe of ſtupidity without a reſolution.

Yet it may alſo come to paſs, that a Nerve being affected, there may only be a Stupidity, motion ſtill remaining in the part, *viz.* if only a ſenſitive Nerve be affected, which ends not in the Muſcles, but in the Skin or a Membrane, or only in their other immovable bowels; which eminent cutaneous Nerves, we have ſhewed in the diviſions of the great Nerves, are only implicated in the Skin and Membranes, and carried to the natural parts, Nerves of the ſixth and ſeventh conjugation do only communicate the ſenſe of feeling to many of thoſe parts which are not moved; and other ſenſitive Nerves are carried from the motary Nerves inſerted in the Muſcles, to thoſe parts alſo which are not moved, which ſenſitive Nerves or motary Nerves alſo being hurt, but carried out of the Muſcle, then it happens that that part only becomes ſtupid into which they are inſerted, either altogether, or in part, according to the greatneſs of the hurt; yet the cauſe of all which may be the ſame as that of a Reſolution, only differing in the diverſe ſeat.

The affects both of the motary and ſenſitive Nerves cauſe Formication

Alſo that Depraved ſenſe of Formication ſo called, with trouble in the parts may happen by reaſon of any Nerve whatſoever, both Senſitive and Motary, to wit then, when the Animal ſpirit being retained a while in the ſtupid or palſied Member doth run back again into it, with a certain force and violence, the impediment being taken away, for then about the extremity of the Member eſpecially, as about the Fingers whether the ſpirit is carried at the firſt violence, or elſewhere alſo where it reacheth, an itching and ſenſe of pricking doth trouble them up and down, the ſpirit every where pricking as it were and tickling the member, ſo long, til they being ſufficiently flowed to it, the part return to its ancient abſolute ſenſe of feeling; the which alſo ſomtimes happens upon the ſtrong percuſſion or ſmting of ſome ſenſible Nerve, as on that which wound about the gibbous part of the elbow runs forth to the little and ring-finger, which being violently forced by a fall, theſe two fingers, ſuffer that ſenſe of Formication for a while til the Nerve which was compreſt by the blow be dilated again, and the ſpirit being ſufficiently tranſmitted, the which alſo may happen in other places in cutaneous Nerves.

The affect of a Nerve both motary and ſenſitive induceth a depraved ſenſe of heat or cold.

As alſo a Nerve being filled with the Afflux of a cold humor, the members which are affected do perceive a Senſe of that Air, or of Cold Water (as we find with our Tongue, the like cold air comes forth out of a hollow Tooth that is troubled with a cold defluxion) The which *hot Air* or *Water* from the plenty and violence of a hot ſpirit, which cannot paſs a Nerve obſtructed, being there plentifully gathered together, by its heat giving ſuch a ſenſe, in like manner as was ſaid of the Cold, moleſts the member which it affects; which as it may happen in all the Nerves that bring reſolution alſo or ſtupidity ſo alſo it happens in them which, from the ſixth and ſeventh conjugation give motion and ſenſe to the vital and natural parts, it produceth about the Stomach and Gullet that heat we meet with as hath been ſaid: the Cauſes of which we ſhal more rightly explain in a Palſey, ſeeing that doth either go before, or accompany, or follow theſe affects.

An affect of the membranes & skin producing ſtupidity without palſying.

That the Cauſe of Stupidity may be in the Inſtrument of the ſenſe of feeling, to wit in the skin and Membranes, ſeems very likely, ſeeing their ſubſtance is made up of a Nerve dilated, not when the native heat being wholly extinguiſhed, theſe parts die by a Gangrene, but when they are ſtupid only, ſo that theſe inſtruments of ſenſe either feel nothing or obtuſely; the which *Fernelius* hath writ hath ſomtimes hapned in the skin of the whol body, as hath bin already ſaid, from Drunkenneſs; in which caſe if Wine did not do this by its Narcotick vertue, becauſe it cauſed a general ſtupidity as hath been ſaid in a Conſternation of mind, certainly its *Narcotick faculty* did manifeſt it ſelf only in aboliſhing the ſenſe of the Skin; the which notwithſtanding could ſcarce be done by Wine or other Narcoticks, but alſo the vertue of the brain and Nerves muſt be dulled too; and therefore after the Drunkenneſs was over, perhaps by reaſon of the external coldneſs of the Air, in which Drunkards oftentimes lie aſtoniſht, it might befall this Drunkard alſo his skin being thus ſtupified: ſeeing the cold from without being a long while received perhaps may ſometimes cauſe ſuch a ſtupidity in ſome part of the skin which endured this cold: for otherwiſe this can ſcarce happen from an internal cauſe; bur how it hath hitherto been beleeved that the inſenſible and ſtupid skin of the Elephantiacal is rendred ſo from ſome internal cauſe and Diſeaſe of the skin, that being prickt it feels not, and upon what account that is true, we ſhal declare in the Elephantiaſis.

Neither could I ever find, that by an external Narcotick applied to the skin, that could be rendred ſtupid or free from pain, that I might know ſomwhat certain, I have applied a Maſs of Opium mollified to a Gouty part full of pain, but without any profit; but what they write for truth that this may be done from the touch of a Torpedo not only taken in the hand, but alſo if it be toucht with a Fiſhers Rod, it wil ſtupifie his hand; I ſeeing I obſerved no ſuch thing at *Montpelior* where they handle and eat Torpedoes dare not affirm it for truth; wherefore we ſay this diſeaſe is rare, and which can ſcarce happen, that the skin only became inſenſible, the member which it covers not being ſtupid too by reaſon of the Nerve affected; unleſs perhaps occaſion

be

be given, when by reaſon of an impediment, that the Skin being more thick and hard, then that it can perceive the true feeling of any thing exactly, we would call it the cauſe of that Stupidity the which notwithſtanding is no waies a true Stupidity.

The Membranes alſo being Intrinſecally affected, and Nerves not hurt too, a Stupidity can ſcarce happen for their ſake only.

An affect of the Nerves about the Teeth, cauſeth a Hæmodia.

And neither is that *Stupidity* which befals the Teeth or rather that trouble when the teeth are an edge from the Teeth alone, becauſe they are diſtitnte of the ſenſe of feeling as other Bones, but that the Teeth are too much exaſperated and refrigerated by the eating of acid and cold things, which both by their thinneſs and coldneſs are enemies to the Teeth and Nerves, that happens from the continuation of the Nerves and the ſenſible Membrane with their roots, by which it comes to paſs that the Tooth it ſelf ſeems to feel. The like Diſtemper may be impreſt by contact on that part where the Teeth touch, and ſo their feeling being changed, as when the Teeth being preſt in chewing, they preſs them as ſwelling up, thence ariſeth that trouble ſome ſenſe which they call *the Teeth an edge.*

The Cure.

The Cure of a Stupidity from what cauſe ſoever.

The Cure of a *Stupidity* becauſe it hath joyned with it other, and for the moſt part grievous Symptomes, which proceed from the ſame cauſe, it ſhall rather be explained in them, that we need not repeat the ſame cure twice: as if it be by fault of the Nerves as we have ſaid that all *Stupidity* happens by reaſon of them, and there be a reſolution alſo, the ſame cure is due to them both, as ſhall be explained in a Palſie, or though that be not yet preſent, but only a *Stupidity* poſſeſſeth the part, yet becauſe it proceeds from the ſame cauſe as a Palſie doth, whence they call *Stupidity, a Diminute or imperfect Palſey* with the ſame labor, the Cure of it alſo will be deſcribed there.

The ſum of which Cure is this, That *if it be from a Humor it be emptied, if from blood by the taking away of Blood by Revulſion and Derivation, if from flegm or other Excrementitious Humors, by purging it out with general and particular Purgers, if from any other external cauſe by removing of that* in the firſt place, *alſo by refreſhing and ſtrengthning the Nerves with things that alter.* Then that we Allure and Attract the Animal Spirit to the ſtupid part which is deſtitute of it, by things that do it actually and potentially, the which ſhall be explained in a Palſie and Atrophy, becauſe they attract the blood alſo, amongſt which theſe are chiefly uſed in the Cure of a *Stupid Member.*

By Friction of the Stupid part with the Hand, applying alſo warm clothes, by Application of Cupping-glaſſes with much Flame, by Pication alſo often repeated, and by other things that cauſe pain, we allure the Spirits.

Alſo rubefying Sinapiſmes are uſed, applyed to the affected part, anointings with divers *hot Oyls*, amongſt which that is chiefly commended, in which *Nettle-ſeed* hath been boyled; alſo *Time, Rue, and other things appropriate to the Nerves* are commended, and other *Oyntments* which we are wont to uſe in an *Atrophy*, we uſe here alſo.

Fomentations and Baths of warm water, firſt a little warm, by and by hotter are convenient, increaſing the heat by degrees, to which we add ſomtimes *Wine* and *Lie*, and oftentimes we boyle in it, *Time, Rue, Sage, Chamomel, and hot Seeds.*

A Cataplaſm of Pigeons dung, Gooſe dung, adding *Bayberries*, is approved of, alſo with *Oyls* and *Fats* and *hot Herbs*,

The treading of Grapes, if the Feet be ſtupid, or if the ſtupid Member be thruſt into a heap of freſh Grapes whiles they are hot, or be dipt in new Wine are accounted for ſingular remedies in turning away the Stupidity.

Alſo the which forementioned *Topick Remedies* applied to the whol Body may do good, if the Stupidity come from a too great refrigeration of the Skin and the Nerves lying under it.

The Cure of Formication and the falſe ſenſe of heat and cold.

And if a depraved or impaired ſenſe of feeling ariſe in the ſaid Formication or with a ſenſe of that Air or Water, becauſe here alſo is ſome Stupidity, it ſhall be cured after the ſame manner.

The Cure of a Hæmodia Tobe *explained in the pain of the Teeth, as alſo of the pain about the Nailes.*

But if in the ſame ſenſe depraved the pain doth exceed the Stupidity as in the Stupidity of the Teeth, which they call Hæmodia, or in the pain of the fingers reaching unto the Nailes as hath been ſaid, the Cure ſhall be more rightly explained in the pains of thoſe parts which are afflicted.

CHAP. VI.

Of the hurt of Taſting.

The Kinds.

The defect of Taſting.

THe Taſting faileth, becauſe the Guſtatory inſtrument doth not perceive at all or impairedly, the ſavours of things; the which becauſe it is endued alſo with the ſenſe of Feeling, either it looſes the ſame alſo with the Taſte, or the Taſte only is weakend, he ſenſe of Feeling remaning.

A Depraved or falſe Taſting.

A Depravation of the ſenſe of Taſting, is when it perceives the ſavors of things not ſuch as they are, but conceives them as if they were of another relliſh, then indeed they are, as when thoſe things which it taſteth, whether they be Inſipid, Alimental or Medicamental, it thinks them to be dry, Sweet, Salt, Bitter, Sharp, Sour, when yet their relliſh indeed is nothing ſuch.

The Cauſes.

The Cauſe of the hurt of Taſting ſeldom lies in a Nerve, unleſs the Brain being hurt too as was ſaid in an Apoplexy doth produce an Abolition of all the ſenſes, of which we have already treated; but more commonly in the Inſtrument of the ſenſe of Taſting, *viz.* in the common coat encompaſſing the mouth. chiefly there where it inveſts the Tongue and Gi ts the Palate, if it be either too much dryed, or covered with filth, or beſmeared with a ſtrange Humor or Vapo r.

I

The drineſs of the coat compaſſing the Mouth, is the cauſe of the defect of Taſting.

If it be too much dried and hardned in that called a Roughneſs and Ruggedneſs, then the taſt is hindered, or loſt, or impaired ſo that all things ſeem unto them to be taſtleſs and woodden, as they are wont to complain, becauſe for the ſenſe to perceive aright, a decent ſoftneſs and moiſture are required.

But this proceeds from the Inſpiration or drawing in of the Air not by the Noſtrils (becauſe ſo the Air naturally paſſing through the largneſs of the Noſtrils preſently into the rough Artery, and not touching the inward parts of the Mouth, it can no waies dry them) but when tis drawn with an open Mouth, then ſucking up the moiſture of the Tongue and Jawes, and by ſo much the more, if it be both hot and dry, it dries up thoſe parts, and makes them hard and rough, and unfed and uſeleſs to taſt aright, the which as it is wont to happen to the waking, ſo eſpecially to thoſe that ſleep with their Mouth open, both ſound and ſick, either from an evil cuſtome or becauſe the Noſtrils being obſtructed when the Natural way of reſpiration is ſtopt up, either wholly or in part, they are compeld to draw in the Aire through the Mouth either all of it or the greateſt part, if it come not ſufficiently through the Noſe.

The drineſs of the Coate compaſſing the Mouth with blackneſs is the cauſe of the want of Taſting.

The which alſo comes to paſs, if the Body being too much heated they have need of a greater inſpiration of the Air, then the Noſtrils alone can admit, that then they draw it both with ful Noſtrils, which upon that account are at that time wont to ſpred themſelves for drawing in of Breath. and with an open and dilated mouth, as it befals them in their ſleep who have filled themſelves with hot Meats; and in hot Diſeaſes, internal Inflammations and Feavers the drineſs of the Tongue is a frequent Symptome, in which the neceſſity of Inſpiration doth not ſo vehemently dry thoſe parts, as the hot Expiration kindled from thoſe hot Diſeaſes not only paſſing through the Noſtrils but the Jawes alſo and dies them with a Black, or Green, or Yellow collour.

Which drineſs of the Tongue, Jawes and Noſtrils is felt by the Patients themſelves, becauſe they very much complain of them, and the Chyrurgeon may eaſily know it, by the touch, and ſight; the which alſo oftentimes grows ſo ſtrong, that the Tongue appears cleft, not only long waies, but cut croſſe waies alſo, and when for theſe cauſes they utter their words ill, the Patients oftentimes ſtutter, whence the Phyſitian ſomtimes gueſſeth at theſe affects of the Tongue, before he looks upon it.

The ſlime of the Coat compaſſing the Mouth, the cauſe of the defect of Taſting.

If the Tongue or Jawes be covered with that called Slime that they cannot by contact exactly perceive the ſavors of things, they are ſo hindered by interpoſition of this inſenſible matter, that thoſe things which they taſt ſeem to have no reliſh. But this Slime is generated of the Spittle, otherwiſe naturally moiſting the Jawes, but then eſpecially in thoſe places where it adheres to the Jawes, either by reaſon of its drineſs obtaining a Tenacity, or by the mixture of ſome other humor, having gotten a thickneſs. For it is dried for the ſame cauſe, from which we have ſaid the Succingent Coate was arefied, whence a dryneſs of the Jawes and plenty of this ſlime, eſpecially on the Tongue do often concure in the ſame cauſes and Diſeaſes, and then alſo they do more prejudice the Taſt the Cauſe being doubled; but the ſpittle grows thick there by mixture, by reaſon of a Vapor continually evaporating upwards from the firſt concoction, cleaving to the Tongue, Jawes and Teeth (to which this ſlimy matter grows, and at length is turned into that which is Tophous) and mixt with the ſpittle ſomtimes with various colors and ſtinkingneſs fouling thoſe parts: the which alſo is wont to happen in ſound Bodies, eſpecially if they ſleep at night with their mouth wholly ſhut, ſo that the Vapor aſcending cannot evaporate, and they do not waſh their mouth in the morning; whence the forementioned parts for the moſt part are ſucceſſively infected with this white ſlime, and in ſick people reſembling the condition of the putrid and malignant humors, being ſomtimes white like pulſe, ſomtimes yelloviſh, ſomtimes black it affects and beſpots the Tongue, Jawes and Teeth, but the ſpittle being made more Tenatious by the mixture of Flegm, ſticks to theſe parts, as if it were glewed; the which alſo oftentimes befals the ſound from defluxions, or the ſick, and ſomtimes for that reaſon acquires ſo great a Viſcoſity, that it can ſcarce be waſhed or ſcraped off: and alſo it takes from Tenacious Viſcous Nouriſhments, a certain viſcoſity, by which it grows to the ſaid parts.

And this ſlime is eaſily known by its color and ſubſtance, and by this the affect, whence it proceeds.

A ſeaſoning of the Tongue the cauſe of a depraved taſte.

The Coate alſo encompaſſing the mouth deſtined for taſting is ſeaſoned with a Humor and Vapor endued with a ſtrange ſavor, the which as long as it perceives, it cannot rightly apprehend other things offered to the taſt, and judg what they are, but thinks them alſo to be of the ſame ſavor, with that which it is already affected with.

This ſomtimes comes to paſs from ſome things taken whoſe ſavor is ſo imprinted on the taſt, that it cannot ſo quickly yeild and give place to other ſavors, or being mixt with them, it doth alſo preſent a falſe ſavor of the thing unto the taſt; the which ingrateful things do, if they be taken often, or thoſe things which do very much affect the taſt with a ſtrong ſavor. As when meats endued with an Alimental ſavor are offered to the ſick, which for the moſt part, they are wont to loath, and are thruſt in as it were by force, then whatſoever they take afterwards though of another ſavor they perſwade themſelves, hath the ſame Alimental reliſh, or ſmels of it: and when ſweet things are given to thoſe that are feaveriſh, being for the moſt part ingrateful to them, they judg all things afterwards to be ſweet; and alſo in the ſound, things being taſted that are very Bitter, Salt, Auſtere, and adhearing long, they do chang the reliſh of thoſe things that follow: and hence it comes to paſs that after taking of rotten cheeſe after Vinegar in ſauces, if they drink Wine, it appears not ſuch as it is, but either bitter, or to others more ſweet, according to the diverſity of Natures.

A ſtrange ſavor proceeding from an internal Cauſe doth alſo deprave the Taſte if ſuch a Vapor or Humor do inſinuate it ſelf into the Coat which perceives the the Taſte. And hence it comes to paſs, that ſometimes they think all things which they taſt to be ſweet, if ſweet Flegm, or a ſweet and alimental Vapor aſcending from the Nouriſhment out of the Stomach, doth ſeaſon the ſaid Coat.

Or if an acid Vapor belcht up from the Chyle which

be given, when by reaſon of an impediment, that the Skin being more thick and hard, then that it can perceive the true feeling of any thing exactly, we would call it the cauſe of that Stupidity the which notwithſtanding is no waies a true Stupidity.

The Membranes alſo being Intrinſecally affected, and Nerves not hurt too, a Stupidity can ſcarce happen for their ſake only.

An affect of the Nerves about the Teeth, cauſeth a Hæmodia.

And neither is that *Stupidity* which befals the Teeth or rather that trouble when the teeth are an edge from the Teeth alone, becauſe they are diſtitnte of the ſenſe of feeling as other Bones, but that the Teeth are too much exaſperated and refrigerated by the eating of acid and cold things, which both by their thinneſs and coldneſs are enemies to the Teeth and Nerves, that happens from the continuation of the Nerves and the ſenſible Membrane with their roots, by which it comes to paſs that the Tooth it ſelf ſeems to feel. The like Diſtemper may be impreſt by contact on that part where the Teeth touch, and ſo their feeling being changed, as when the Teeth being preſt in chewing, they preſs them as ſwelling up, thence ariſeth that trouble ſome ſenſe which they call *the Teeth an edge.*

The Cure.

The Cure of a Stupidity from what cauſe ſoever.

The Cure of a *Stupidity* becauſe it hath joyned with it other, and for the moſt part grievous Symptomes, which proceed from the ſame cauſe, it ſhall rather be explained in them, that we need not repeat the ſame cure twice: as if it be by fault of the Nerves as we have ſaid that all *Stupidity* happens by reaſon of them, and there be a reſolution alſo, the ſame cure is due to them both, as ſhall be explained in a Palſie, or though that be not yet preſent, but only a *Stupidity* poſſeſſeth the part, yet becauſe it proceeds from the ſame cauſe as a Palſie doth, whence they call *Stupidity, a Diminute or imperfect Palſey* with the ſame labor, the Cure of it alſo will be deſcribed there.

The ſum of which Cure is this, That *if it be from a Humor it be emptied, if from blood by the taking away of Blood by Revulſion and Derivation, if from flegm or other Excrementitious Humors, by purging it out with general and particular Purgers, if from any other external cauſe by removing of that* in the firſt place, *alſo by refreſhing and ſtrengthning the Nerves with things that alter.* Then that we Allure and Attract the Animal Spirit to the ſtupid part which is deſtitute of it, by things that do it actually and potentially, the which ſhall be explained in a Palſie and Atrophy, becauſe they attract the blood alſo, amongſt which theſe are chiefly uſed in the Cure of a *Stupid Member.*

By Friction of the Stupid part with the Hand, applying alſo warm clothes, by Application of Cupping-glaſſes with much Flame, by Pication alſo often repeated, and by other things that cauſe pain, we allure the Spirits.

Alſo rubefying Sinapiſmes are uſed, applyed to the affected part, anointings with divers *hot Oyls*, amongſt which that is chiefly commended, in which *Nettle-ſeed* hath been boyled; alſo *Time, Rue, and other things appropriate to the Nerves* are commended, and other *Oyntments* which we are wont to uſe in an *Atrophy*, we uſe here alſo.

Fomentations and Baths of warm water, firſt a little warm, by and by hotter are convenient, increaſing the heat by degrees, to which we add ſomtimes *Wine* and *Lie*, and oftentimes we boyle in it, *Time, Rue, Sage, Chamomel, and hot Seeds.*

A Cataplaſm of Pigeons dung, Gooſe dung, adding *Bayberries,* is approved of, alſo with *Oyls* and *Fats* and *hot Herbs,*

The treading of Grapes, if the Feet be ſtupid, or if the ſtupid Member be thruſt into a heap of freſh Grapes whiles they are hot, or be dipt in new Wine are accounted for ſingular remedies in turning away the Stupidity.

Alſo the which forementioned *Topick Remedies* applied to the whol Body may do good, if the Stupidity come from a too great refrigeration of the Skin and the Nerves lying under it.

The Cure of Formication and the falſe ſenſe of heat and cold.

And if a depraved or impaired ſenſe of feeling ariſe in the ſaid Formication or with a ſenſe of that Air or Water, becauſe here alſo is ſome Stupidity, it ſhall be cured after the ſame manner.

The Cure of a Hæmodia Tobe *explained in the pain of the Teeth, as alſo of the pain about the Nailes.*

But if in the ſame ſenſe depraved the pain doth exceed the Stupidity as in the Stupidity of the Teeth, which they call Hæmodia, or in the pain of the fingers reaching unto the Nailes as hath been ſaid, the Cure ſhall be more rightly explained in the pains of thoſe parts which are afflicted.

CHAP. VI.

Of the hurt of Taſting.

The Kinds.

The defect of Taſting.

THe Taſting faileth, becauſe the Guſtatory inſtrument doth not perceive at all or impairedly, the ſavours of things; the which becauſe it is endued alſo with the ſenſe of Feeling, either it looſes the ſame alſo with the Taſte, or the Taſte only is weakend, he ſenſe of Feeling remaning.

A Depraved or falſe Taſting.

A Depravation of the ſenſe of Taſting, is when it perceives the ſavors of things not ſuch as they are, but conceives them as if they were of another reliſh, then indeed they are, as when thoſe things which it taſteth, whether they be Inſipid, Alimental or Medicamental, it thinks them to be dry, Sweet, Salt, Bitter, Sharp, Sour, when yet their reliſh indeed is nothing ſuch.

The Cauſes.

The Cauſe of the hurt of Taſting ſeldom lies in a Nerve, unleſs the Brain being hurt too as was ſaid in an Apoplexy doth produce an Abolition of all the ſenſes, of which we have already treated; but more commonly in the Inſtrument of the ſenſe of Taſting, *viz.* in the common coat encompaſſing the mouth. chiefly there where it inveſts the Tongue and Gums the Palate, if it be either too much dryed, or covered with filth, or beſmeared with a ſtrange Humor or Vapor.

I.

The drineſs of the coat compaſſing the Mouth, is the cauſe of the defect of Taſting.

If it be too much dried and hardned in that called a Roughneſs and Ruggedneſs, then the taſt is hindered, or loſt, or impaired ſo that all things ſeem unto them to be taſtleſs and woodden, as they are wont to complain, becauſe for the ſenſe to perceive aright, a decent ſoftneſs and moiſture are required.

But this proceeds from the Inſpiration or drawing in of the Air not by the Noſtrils (becauſe ſo the Air naturally paſſing through the largneſs of the Noſtrils preſently into the rough Artery, and not touching the inward parts of the Mouth, it can no waies dry them) but when tis drawn with an open Mouth, then ſucking up the moiſture of the Tongue and Jawes, and by ſo much the more, if it be both hot and dry, it dries up thoſe parts, and makes them hard and rough, and unfed and uſeleſs to taſt aright, the which as it is wont to happen to the waking, ſo eſpecially to thoſe that ſleep with their Mouth open, both ſound and ſick, either from an evil cuſtome or becauſe the Noſtrils being obſtructed when the Natural way of reſpiration is ſtopt up, either wholly or in part, they are compeld to draw in the Aire through the Mouth either all of it or the greateſt part, if it come not ſufficiently through the Noſe.

The drineſs of the Coate compaſſing the Mouth with blackneſs is the cauſe of the want of Taſting.

The which alſo comes to paſs, if the Body being too much heated they have need of a greater inſpiration of the Air, then the Noſtrils alone can admit, that then they draw it both with ful Noſtrils, which upon that account are at that time wont to ſpred themſelves for drawing in of Breath. and with an open and dilated mouth, as it befals them in their ſleep who have filled themſelves with hot Meats; and in hot Diſeaſes, internal Inflammations and Feavers the drineſs of the Tongue is a frequent Symptome, in which the neceſſity of Inſpiration doth not ſo vehemently dry thoſe parts, as the hot Expiration kindled from thoſe hot Diſeaſes not only paſſing through the Noſtrils but the Jawes alſo and dies them with a Black, or Green, or Yellow collour.

Which drineſs of the Tongue, Jawes and Noſtrils is felt by the Patients themſelves, becauſe they very much complain of them, and the Chyrurgeon may eaſily know it, by the touch, and ſight; the which alſo oftentimes grows ſo ſtrong, that the Tongue appears cleft, not only long waies, but cut croſſe waies alſo, and when for theſe cauſes they utter their words ill, the Patients oftentimes ſtutter, whence the Phyſitian ſomtimes gueſſeth at theſe affects of the Tongue, before he looks upon it.

The ſlime of the Coat compaſſing the Mouth, the cauſe of the defect of Taſting.

If the Tongue or Jawes be covered with that called Slime that they cannot by contact exactly perceive the ſavors of things, they are ſo hindered by interpoſition of this inſenſible matter, that thoſe things which they taſt ſeem to have no relliſh. But this Slime is generated of the Spittle, otherwiſe naturally moiſting the Jawes, but then eſpecially in thoſe places where it adheres to the Jawes, either by reaſon of its drineſs obtaining a Tenacity, or by the mixture of ſome other humor, having gotten a thickneſs. For it is dried for the ſame cauſe, from which we have ſaid the Succingent Coate was arefied, whence a dryneſs of the Jawes and plenty of this ſlime, eſpecially on the Tongue do often concure in the ſame cauſes and Diſeaſes, and then alſo they do more prejudice the Taſt the Cauſe being doubled; but the ſpittle grows thick there by mixture, by reaſon of a Vapor continually evaporating upwards from the firſt concoction, cleaving to the Tongue, Jawes and Teeth (to which thisſlimy matter grows, and at length is turned into that which is Tophous) and mixt with the ſpittle ſomtimes with various colors and ſtinkingneſs fouling thoſe parts: the which alſo is wont to happen in ſound Bodies, eſpecially if they ſleep at night with their mouth wholly ſhut, ſo that the Vapor aſcending cannot evaporate, and they do not waſh their mouth in the morning; whence the forementioned parts for the moſt part are ſucceſſively infected with this white ſlime, and in ſick people reſembling the condition of the putrid and malignant humors, being ſomtimes white like pulſe, ſomtimes yellowiſh, ſomtimes black it affects and beſpots the Tongue, Jawes and Teeth, but the ſpittle being made more Tenatious by the mixture of Flegm, ſticks to theſe parts, as if it were glewed; the which alſo oftentimes befals the ſound from defluxions, or the ſick, and ſomtimes for that reaſon acquires ſo great a Viſcoſity, that it can ſcarce be waſhed or ſcraped off: and alſo it takes from Tenacious Viſcous Nouriſhments, a certain viſcoſity, by which it grows to the ſaid parts.

And this ſlime is eaſily known by its color and ſubſtance, and by this the affect, whence it proceeds.

A ſeaſoning of the Tongue the cauſe of a depraved taſte.

The Coate alſo encompaſſing the mouth deſtined for taſting is ſeaſoned with a Humor and Vapor endued with a ſtrange ſavor, the which as long as it perceives, it cannot rightly apprehend other things offered to the taſt, and judg what they are, but thinks them alſo to be of the ſame ſavor, with that which it is already affected with.

This ſomtimes comes to paſs from ſome things taken whoſe ſavor is ſo imprinted on the taſt, that it cannot ſo quickly yeild and give place to other ſavors, or being mixt with them, it doth alſo preſent a falſe ſavor of the thing unto the taſt; the which ingrateful things do, if they be taken often, or thoſe things which do very much affect the taſt with a ſtrong ſavor. As when meats endued with an Alimental ſavor are offered to the ſick, which for the moſt part, they are wont to loath, and are thruſt in as it were by force, then whatſoever they take afterwards though of another ſavor they perſwade themſelves, hath the ſame Alimental relliſh, or ſmels of it: and when ſweet things are given to thoſe that are feaveriſh, being for the moſt part ingrateful to them, they judg all things afterwards to be ſweet; and alſo in the ſound, things being taſted that are very Bitter, Salt, Auſtere, and adhearing long, they do chang the relliſh of thoſe things that follow; and hence it comes to paſs that after taking of rotten cheeſe after Vinegar in ſauces, if they drink Wine, it appears not ſuch as it is, but either bitter, or to others more ſweet, according to the diverſity of Natures.

A ſtrange ſavor proceeding from an internal Cauſe doth alſo deprave the Taſte if ſuch a Vapor or Humor do inſinuate it ſelf into the Coat which perceives the the Taſte. And hence it comes to paſs, that ſometimes they think all things which they taſt to be ſweet, if ſweet Flegm, or a ſweet and alimental Vapor aſcending from the Nouriſhment out of the Stomach, doth ſeaſon the ſaid Coat.

Or if an acid Vapor belcht up from the Chyle which

we have elſewhere ſhewn is alwaies acid, or from meat half digeſted, or ſour Wine taken, or by vomiting raiſed up even to the mouth, they do infect the mouth with an acid ſavor. Or a ſalt ſavor alſo may be imprinted on the ſaid parts from the Serum or ſalt Flegm falling thither; or when the Mouth is ſo bitter that it judgeth all things which it taſteth to be bitter too, which oftentimes happens by reaſon of Choler if it be collected in the Stomach, by a certain communion with the Coat incompaſſing the mouth, which doth alſo inveſt the Stomach; and alſo in cholerick ſound bodies if by long faſting it be carried thither, or being moved with Anger it be poured thither; or in other cholerick Diſeaſes and Feavers, either abounding in quantity, or boyling with heat it empty it ſelf into the Stomach, or be generated there from things taken that produce Choller, or that do end in Choler by Corruption.

The Cure.

This diſeaſe if it proceed by conſent from the Nerves or the Brain, its Cure wil be common with that of an Apoplexy and other reſolutions of the Nerves which then are alſo preſent: but if the guſtatory inſtrument the Coat of the Tongue and Jaws be affected by *Idiopathie*, and that either grow dry or be coverd with ſlime, or be ſeaſoned with a ſtrange ſavor, to theſe the Indication of Cure ſhal be applied.

The Cure of the want of Taſting from the drineſs of the coat of the mouth.

In a Drineſs the Cauſe muſt firſt be turned away, which if it ariſe from an evil cuſtom that they ſleep with their Mouth open, it muſt be changed by forbearing to uſe it; eſpecially if they are compel'd to breath ſo, their Noſtrils being obſtructed, then if they ſleep with their head placed higher, and the pillow under it be raiſed up, experience teacheth that they may thus attract the Air more freely, becauſe the largeneſs of the Noſtrils is then the more dilated; and if ſnivel or flegm obſtruct the Noſtrils, they muſt be purged by Errhines and if a hotter courſe of living doth bring this drineſs, let them abſtain from hot and ſalt meats, let them dilute their Wine wel, let them uſe Sallets at Supper eſpecially, of Lettice, Succory, and the like, and let them not heat their body too much no other waies; then that the Air may not often enter the mouth and dry it, they ought to ſpeak little, and ſpit ſeldom, ſeeing the ſpittle retained a long time, becauſe it is glutinous, doth chiefly moiſten the Tongue, and if it be dried, doth lenifie it again.

If this happen in ſome Internal hot diſeaſe eſpecially as in burning and Continual Feavers the Cure muſt chiefly be directed, *to extinguiſh the heat of the Feaver*, & chiefly then, cold Epithems muſt often be applied, to the Heart, Liver, and parts from whence the heat chiefly ariſeth. Afterwards Remedies ſhall be fitted to the coat of the mouth by lenifying and moiſtning this roughneſs with things ſoft, glutinous, and fat, which either they may keep in their mouth, chew, lick, or waſh the mouth with them, or if they cannot, let their Tongue be anointed with the Finger or a Stick applied to them.

Prunes, Tamarinds, Sebeſtens, ſuch as are kept dried, if being mollified again, with a gentle heat, they be kept in the mouth, lenifying with their grateful reliſh, they correct this fault.

Freſh Apples ſliced, chewed and held a little in the mouth, do perform the ſame, as alſo *the fleſh and juyce of Melons, Guords* and eſpecially of *Citruls, freſh Purſlane* as being eaten it doth preſently correct the roughneſs of the Teeth, ſo alſo it doth very much lenifie the jaws, the which alſo *Lettice* held in the Mouth and chewed, doth.

If thoſe things be conteined in the Mouth, which do actually Refrigerate, by extinguiſhing the heat they correct the drineſs, as Cold water, and Stones amongſt which the Chryſtal is beleeved to bring ſomewhat peculiar.

The following Remedies alſo muſt be licked, or put into their Mouth which do correct the drineſs of the Tongue and Jaws, by their mucilaginiouſneſs.

As, Take *the white of one Egg, beat it wel with Sugar til it grow white*, uſe it.

Or thus, Take *of the Mucilage of the ſeeds of Quinces and Fleawort extracted with Roſe-water, of each half an ounce; Syrup of Violets one ounce*, mix them wel.

Or, Take *of the aforeſaid Compoſition one ounce, to which alſo* you may add *of the Mucilage of Apple kernels and ſeeds of Mallows half an ounce, the Infuſion of Gum Tragacanth in Roſe-water half an ounce, Sugar candy* (eſpecially if the Tongue be foul too) *Honey of Roſes of each two drams*, mix them.

Theſe Compoſitions made a little thicker being received in broad baggs, and often moiſtned with Roſe-water, he may lay on his Tongue, and ſo keep them a while; or let Cloaths be moiſtened in theſe Liquors and be applied in like manner.

Which alſo may be done in this Decoction. Take *of Sweet Prunes ſix, Violet flowers one pugil* (becauſe they have a glutinouſneſs) *Barley clenſed one ounce, Quince ſeeds two drams, Fleawort one dram, Gum Tragacanth half a dram*, boyl them in *Water* for the ſaid uſe, adding a little *Honey or Sugar*.

Things ſomwhat Unctuous, but made of thoſe which are moſt pleaſing, being adminiſtred after the ſame manner, do egregiouſly contemperate this drineſs.

Of which ſort this is, Take *of Freſh Butter*, or inſtead of that, *Oyl of ſweet Almonds newly drawn, as much as is ſufficient, White Sugar, or Candy, or Sugar of Roſes*, beat them together, and let him lick it.

Or thus, Take *the white of one Egg, Starch Corn one dram, Milk as much as wil ſuffice*, beat them wel, boyl them a little till it becomes a Frumenty, add *of freſh Butter the like quantity, the whiteſt Sugar as much as is ſufficient*, make a *Haſty pudding*, which let him uſe.

The Fat of a Hen or Capon boyled a little that it may be the more grateful, may perform the ſame.

Syrups of Violets, Jujubes, or others, may be licked ſo, or held in the Mouth.

Lotions for the Mouth may be made of the ſame things, diſſolved for this uſe.

Or after this manner, Take *of Syrup of Violets, Jujubes, of each one ounce and an half; the Decoction of Barley clenſed four ounces*, let him uſe it.

Or thus, Take *of the freſh Leaves of Purſlane and Lettice of each one handful; the flowers of Autumn Mallows, Dogſbhead, Barley clenſed, of each one pugil; the Roots of Liquoriſh one ounce, the ſeeds of Fleawort two drams, the ſeeds of Poppy one dram*, boyl them in *Water*, and *in one pound* diſſolve *the white of one Egg beaten, Honey of Roſes clenſed, Syrup of Violets, of each one ounce*; let him uſe it.

It is very convenient to waſh the Mouth often with cold Milk, eſpecially with Butter-milk.

The Cure of the want of Taſting from a drineſs of the Tongue with blackneſs joyned to it.

But if that Blackneſs, Greenneſs, Yellowneſs, joyned with the Drineſs, doth ſignifie that the Tongue alſo is infected by Malignant vapors it is an ill ſign, and ſo much the worſe,

worſe, if heat be added to it. Then thoſe things being firſt adminiſtred which are due to a burning, malignant or peſtilent Feaver, we muſt uſe things more cold and repreſſing malignity, eſpecially acid things, adding alwaies ſome things Lenitive, that they do not too much exaſperate, of which alſo we wil treat in the Inflammations of the Jaws, to which alſo we add theſe following.

Let them keep in their mouth ſharp Fruits and chew them, as *of Phyſick fruits, Orenges, Lemmons, Citrons or Pomegranats, or other Apples, Prunes, Cherries, Currans, and bunches of Barberries*, and of *herbs, Sorrel, Lettice, Purſlane*, but firſt *ſteeped in Vinegar* or *acid juyces*; or in *Sallets*, as *flowers of Succory, Violets, with Vinegar*, and *the like*.

Then let them waſh their Mouth often with Roſe-vinegar diluted with Water; or with Sorrel-water.

Or with the Acid Broth of that ſeaſoning of Colewort and Rapes, and uſe that Acid Liquor either crude, or diſtilled firſt, which is Chirurgeons moſt excellent Remedy for theſe things approved on by experience.

If a little Camphire be added to pure Water 'tis alſo a fit Remedy.

Or let it be made after this manner, Take *of Roſe-water three ounces, Nightſhade water two ounces, the white of one Eg beaten, Camphire diſſolved in Vinegar half a ſcruple*, mix them.

Or ſuch a Julep, Take *of ſimple Syrup of Vinegar two ounces, of ſimple Oxymel one ounce, the waters of Roſes, Violets, Water-lillies, of each three ounces*; mix them.

Some commend this very much, Take *of the Water of the greater Houſleek, to which* add a little *Salt Ammoniack*.

Yet after the uſe uſe of theſe, we muſt alwaies come to thoſe things which Lenifie alſo, the which have been already ſpoken of.

Amongſt which this alſo is commended above the reſt. Take *of the pulp of Guoard ſeeds, choice Manna, Sugar candy, of each one dram; with ſimple Oxymel* make *Forms*, which he may keep in his mouth.

The other Remedies, eſpecially if there be a great heat joyned and as it were an Inflammation, are explained in the Inflammations of the Jawes.

If ſlime growing to the Tongue and Jaws, do prejudice the Taſt, and do alſo bring trouble, by its tenacity and ſtinking, the cauſe muſt firſt be removed.

The Cure of the want of Taſting from ſlime of the coat compaſſing the mouth.

Which if it proceed only from the taking glutinous things 'tis eaſily prevented by waſhing the mouth alwaies after meat taken, till the reliques of theſe meats, or thick juyce, which do adhere, be waſht of.

The ſame muſt be done alſo in the morning alwaies after they are up, if ſuch filth be collected, either by reaſon of this Cauſe or from Vapors raiſed from the Meats at night, and the Teeth muſt be diligently clenſed and rubbed, as alſo ſhal be explained in their faults.

And that Fewer and leſs thick Vapors may ariſe, we muſt take Care the Supper be ſober.

And leſt that theſe exhalations being retained in the mouth, in progreſs of time may grow to the ſaid parts, they muſt accuſtome to ſleep with the mouth a little open, which when ſome are not uſed to do, by interpoſing a cloath, or holding a little cane in their mouth, they ought to make a way for the vapor.

If flegm breed this Tenacity in the Spittle, the afflux of that muſt be diverted, and that muſt be forced and ſpit forth by hawking, premiſing if it come hard, the Lotions that ſhall preſently be named, to cut and clenſe it.

But if the Cauſe or a hot Diſeaſe, an acute, malignant Feaver, by drying or ſending up filthy vapors and ſo incraſſating the Spittle, do produce this thick filthy ſlime; firſt having reſpect to the Diſeaſe and the Cauſe as hath already been ſaid formerly, Topick means as well in this as in another perſevering cauſe, muſt be apdlied to the part affected as followeth.

We take then out of the Mouth chiefly from the Tongue, Teeth, Gums and Jaws, this ſlime if it abound very much, with thoſe things which have an abſterſive power, and if it be very tenacious, inciſive alſo, with which are mixed things lenitive, that they may not exaſperate the Tongue, eſpecially if that be dry too, applying alſo things that work actually, in the interim ever and anon waſhing it, and if it yeild not eaſily, ſcraping it.

The mouth is waſht with things abſterſive, as with the Decoction of whol Barley. Alſo with Whey, with Milk and Sugar.

Or with this following, Take *of whol Barley, Red Peaſe or Vetches of each one pugil; roots of Liquoriſh one ounce, Figs tweney, flowers of Autumn Mallows one pugil*, make *a Decoction* and in *one pound* diſſolve of *Honey* or *Sugar two ounces*.

After waſhing let him hold Sugar candy in his mouth, or Lozenges of Sugar, Roſes, or *Manus Chriſti*, or let him lick a little Honey of Roſes.

If there be need of a greater Abſterſion and Cutting, certain hotter things and acid things are added too, if the flegm be very tenacious.

As, Take *of Barley, Vetches, of each one pugil; Liquoriſh one ounce and an half, Leaves of Sage, Marjoram, Hyſop, of each two drams*; *Quince ſeed one dram*, make *a Decoction in Water and white Wine*, add *Honey of Roſes two ounces, Sugar Candy one ounce, wine of Pomegranates or Vinegar a little*, mix them, make *a Lotion for the Mouth*; if you add *as much Allum* or *a good quantity of it*, when it is very tough, it is moſt powerfully abſterſive.

Or, Take *of the waters of Roſes, Plantane, Nightſhade, of each two ounces; the waters of Sage, Marjoram, of each one ounce; ſimple Oxymel two ounces, white Wine Vinegar a little*.

Let him take often one ſpoonful of Oxyſaccharum, or Hydromel, or of ſimple Oxymel, or of Squils, if it be very tenacious, and after ſome time let him waſh his mouth, and again repeat the Syrups, to which if it give not way, ſome portion of Allum muſt be mixed with them.

Or Vinegar of Squils diluted muſt be held in the mouth, with which I have ſomtimes obſerved, that the moſt tenacious matter, which formely could be taken away by no means, hath at length departed from the mouth.

This matter alſo muſt be ſcraped off, if it ſtick pertinaciouſly, yet ſo that we do not too much exaſperate the Tongue, and ſo give occaſion to a greater Inflammation, eſpecially if it be very dry and cleft, in which thing Chirurgeons offend often.

But this is done by rubbing the Tongue, as alſo the Teeth, Palate, with the finger or an Inſtrument fitted for it, coverred with a Linnen cloth, and dipt in the Lotions above-mentioned: which alſo is commodiouſly done with the Leaves of Sage, Mint, moiſtened after the like manner: alſo that filthineſs is ſcraped off with a round uſual Inſtrument made of Sallow or ſilver, ſuch as Chirurgeons have, drawing it leaſurely over the Tongue, in the interim oftentimes waſhing the mouth and by & by again lenifying the Toung with an Oyntment; but oftentimes the flegm is ſo tenacious and the ſlime thick like Frumenty it may be laid hold on by the hands,

hands and ſo taken forth, or drawn, and by that means forced to yeild.

The Cure of a depraved taſt from the ſeaſoning of the Tongue.

If a Vapor or Humor ſeaſon and fill up the Tongue with a ſtrange ſavour, that it perceives not other things at all, or amiſs, the cauſe alſo muſt firſt of all be declined.

Which if it proceed from things taken, ſeeing it doth no waies induce a long laſting affect, and ceaſeth of its own accord, 'tis neglected; or will eaſily be amended with the contraries, as ſhall be ſaid by and by.

But if this ariſe from an internal diſeaſe, a filthy vapor or a cholerick alimentary humor heaped up there, the intention of curing is directed, to the evacuation of theſe humors, and healing the Diſeaſes.

But if that adverſe ſavor doth no waies ceaſe the cauſe being taken away, but perſevering a long time, be troubleſom to thoſe otherwiſe ſound and to the ſick, the contrary ſavor being procured by things given, we either take away or amend the former which did trouble.

So the Sweet ſavor as wel the Alimental as that which is ſweet indeed being very adverſe for the moſt part to the Feaveriſh & other ſick folks, the which notwithſtanding was otherwiſe moſt grateful to them in health, is corrected chiefly with acid or tart things, which do not only mend that, but alſo bting an appetite too, which ſweet things take away, and aſſwage the thirſt, which ſweet things increaſe; which acid things let them keep in their mouth, and lick, amongſt which acid Cherries ſuch as are wont to be kept dried and ſoftened again, and many others of that nature, which ſhal be explained in thirſt do very much and this nauſeous unſweetneſs of the mouth.

The which bitter things alſo do likewiſe correct, being more acceptable to ſome natures, eſpecially if they conſiſt of a ſweet ſmel as principally Wormwood in Wine which adds a greater gratfulneſs to it.

As the bitter ſavour again too long ſticking on the Taſt is corrected with Sweet or Acid things, and with thoſe that are inſipid, which alſo do dull the vertues of them which otherwiſe would inflame the Jaws.

With which alſo the ſalt ſavor is contemperated, as again the ſalt ſavor is dulled with things inſipid.

CHAP. VII:

Of the hurt of Seeing.

The Kinds.

Blindneſs. THe Sight is wholly aboliſht in ſome, that at all times and alwaies they ſee nothing, and it is called Blindneſs; in which Species if no fault appear in the Eyes which may hinder ſeeing,

Amauroſis a kind of blindneſs.

& they are blind with open and cleer Eyes, it is called *Amauroſis*; for if either a Speck or a Coat, or a Humor appearing about the black of the Eye, makes them Blind it obtains a private name from the Cauſe as ſhall be ſaid in the Cauſe.

But otherwiſe they loſe their ſight only, at a certain time, the which nevertheleſs by and by returns again, no impediment then alſo being conſpicuous in the Eyes; as when from an external cauſe by reaſon of brightneſs or darkneſs, objected too much or too ſuddenly to the Eyes. Tthey are ſo darkened, that the ſeeing being hindred firſt as it were with a Cloud or Fume impeding, through which there ſeem to run, certain ſmal bodies ſomtimes dyed wirh a red, yellow, or black color, by and by is for a while wholly taken away, in the affect which is called *Scotoma.*

Scotoma *an Obtenebration a kind of blindneſs.*

Somtimes the Sight is only impaired in ſome, when thoſe ſpecies of things which the ſight otherwiſe ought naturally to attain to, whereſoever and whenſoever, they behold not wel, or obſcurely; and that for the moſt part, no cauſe alſo ſhewing it ſelf in the Eyes and they call it *Amblyopia* that is an obſcurity, dulneſs or darkneſs of the ſight. Although ſome think if the Eyes by ſome manifeſt fault do ſee impairedly as with a miſt before them, it might more properly be called a dulneſs, and in old folks they call this fault a darkneſs.

Amblyopia *a weakneſs of the Sight.*

Darkneſs a kind of weakneſs of Sight.

Hither alſo is refer'd that weakneſs of ſight, when the ſight perceives things neer no better than thoſe remote as naturally it ought to do, but thoſe neer the Eyes it apprehends leſs than things diſtant, and therefore when they would ſee ſmall things, or read them, they are forced to remove them far from their Eyes; a fault familiar to thoſe that grow old, which when it may be amended by a fit pair of Spectacles, let them continually uſe them in apprehending of ſmaller things, for which cauſe I am wont to call it The old folks ſight.

The ſight perceiving things diſtant more rightly than neer.

But it happens alſo on the contrary manner that ſome can no waies judg rightly of things remote, yet not ſo remote that ſound men alſo cannot ſufficiently ſee them by reaſon of the too great diſtance, but only removed for a little ſpace, although they be very great; whence oftentimes not knowing their Neighbours, they paſs them by unſaluted; Pictures, Writings, unleſs they draw neer with their Eyes, they can neither ſee nor read handſomly, unleſs they uſe ſpectacles appropriate to correct this fault, imbred for the moſt part with yong folks from their birth and remaining even unto extream old age, which approaching, ſometimes it comes to paſs, that then they ſee better thoſe things diſtant which they ſaw leſs in youth, and how much the elder they grow, ſo much the farther ſighted, which ſpecies therefore I am wont to call, The young mans ſight.

Sight not rightly diſcerning things a little diſtant.

But of thoſe alſo who do leſs behold things ſomwhat remote, there are ſome who unleſs they apply cloſe to their Eyes things ſomewhat ſmal or writings as it is commonly ſaid, touch them with their Noſe, they cannot rightly diſcern or read them, beholding them with askew and cloſed eyes who from their cradle even unto old age for the moſt part, ſeeing after this manner are called *Myopes*, ſome of which are helped by the benefit of Spectacles, others not.

Sight not rightly judging of things unleſs cloſe to the Eyes is Myopia.

We meet alſo with another weakneſs of Seeing, when at night by the light of a Candle, they ſee little or nothing almoſt, but in day time by day-light they perceive no impediment in their

Nyctalopes.

their sight which they call *Nyctalopes*, the Latines call *Luscivos*.

The Evening Eye-sight. But it happens also in some, that they see in the Night in the dark without light more acutely than in the day time, as Owls, a rare disposition which they call the Evening Eye-sight, for we would rather retain those names which are usual and rightly design the things, then confound them amongst themselves as commonly they do, signifying many things by one name.

Hallucination. The Seeing is depraved first of all when things are represented unto it otherwise than they are indeed, as if they see those things which are single for double, as somtimes it fares with Drunkards, who behold streight things for crooked, or some other way things under a false shape, which fault is called Hallucination.

Imagination Secondly if they think and Imagine with themselves that they see things that are not whence they call this affect Imagination; as it happens when in an Alienation of mind and Ravings, as hath been said there, they think that they see divers apparitions whiles they are waking, such as otherwise they are wont to meet with in

Nubecula a species of Raving. Dreams, or that Flies, or Gnats, fly up and down, Straws, Locks of Wool adhere to things, the which also sometimes is wont to happen to those no waies besides themselves nor otherwise sick; that the same insects or locks of Wool, and filaments, Spiders webs and the like small things and Atomes, seem to appear to one Eye or to both together, in which because for the most part they think that they see also a little Cloud, this fault is called *Nubecula*.

Colors a Species of Imagination Thirdly hither belongs that false vision when also without any hurt of the mind other colors then are, are offerd to the sight, now red, then yellow, or green or some other way representing themselves with a ful light; the same appear coloured like a Rainbow in the compass and as it were the circle of the flame of a Candle, or of some other thing lighted: or Brightnes like lightning, or other shining bodies obscure the sight.

Brightneß a kind of Imagination.

Fourthly to the depravation of sight these also must be referd, when the things which they behold, although they be firm and stable yet they think that they are carried about, driven round, and wheeled about, so that though they know this is a false imagination, yet when from that turning round of things, the sight doth no more perceive a firm seat where the body may subsist, that also stumbles & staggers; somtimes also if the pavement on which he stands seems to him to be inverted, as if he also were inverted with it, unless he be sustained or kept up, he falls and suddenly rusheth down, and bears the Earth with his Feet, whiles he endeavors to stay himself; all the other senses being nevertheless entire, by which sign this fault called *Dinos*, or *Vertigo*, is easily distinguished, from an Epilepsie, Apoplexy, Syncope, with which those that are strucken, do presently also fall on the ground.

A Vertigo with Imaginations. But besides this unquiet Vision those troubled with a Vertigo there comes also sometimes another depravation of it, which we have called Imagination and a little Cloud (and upon this account, they have named these imaginations, A beginning or smal Vertigo) a Cloud or other bodies, or Colours also with them offering themselves to the sight; the which notwithstanding if it doth happen, for the most part it is wont to go before a Vertigo.

A Vertigo with darkneß is Scotodinos. Somtimes also a darkness of the sight which we have formerly called *Scotoma* doth accompany a Vertigo, when also the Eyes being shut nevertheless al things are objected to the Internal sense as if they were turned round, and then the Disease compounded of them both is called *Scotodinos*.

All which Depravations of the sight for the most part happen, no fault being conspicuous in the Eyes (unless it be offerred in that, when a strange color doth somtimes appear with which the Eye is indeed extrinsecally coloured) whether this be in the Sound or Sick.

The Causes.

The part affected. The Cause of all the declared Accidents of the Sight is either in the part communicating the visive power, *viz.* the Brain, or consists in the Instrument receiving that power and also the species of external things, to wit the Eye; which whenas it consists of many more parts, then the other Organs of the senses, and humors also, in every one of them some causes prejudicing the sight may arise.

First of all in the visory or net-like Nerve implanted into the Eye, and the principal Instrument of Seeing; then in the three humors that fil up the Eye and serve the visory Nerve, last of all in the Membranes themselves that constitute the Globe of the Eye and intrinsecally distinguish the humors. If the Cause lie in those places where they are pervious to the sight as about the Black of the Eye, and where only if the impediment of seeing do consist, it may be seen and known, for if it be elsewhere it is so hidden that it doth no waies appear to those that behold the Eye.

The Cause of the Hurt of seeing in the Brain. As all Senses may be hurt by reason of the Brain so also Seeing is weakned; both if it suffer a Disease General or Special and especially in that part where the optick Nerves come forth, or those Nerves themselves produced from the Brain and carried unto the Eyes, are affected; which affects may be various.

A cold Distemper of the Brain, is the Cause of Blindneß, or weakneß of sight. A Cold Distemper sometimes breeds Blindness the other senses being somtimes unhurt; if the Forehead and Eyes being much and a long time refrigerated by cold wind, which being less cover'd, are the more exposed to the injuries, and the cold penetrating even to that part, where the optick Nerves have their original, the said parts are so hurt, that they become Blind; or there remains afterwards a certain weakness of sight, which I have seen befall a noble Matron in the Head-ach from the too much application of Oxyrrhodines actually most cold, who all her life time could no waies recover her sight any more; that this also doth happen, if the whol brain be hurt by the same distemper hath been shewed in a stupidity, but then the rest of the senses are abolisht too, and its easily known by that, whence the cause proceeds, as if it be from externals 'tis plain of it self.

A hot distemper of the brain is the cauſe of error of the ſight and of Imagination. That a Hot Distemper of the Brain doth bring together with a Depravation of the Mind also a Hallu-

hands and so taken forth, or drawn, and by that means forced to yeild.

The Cure of a depraved taſt from the ſeaſoning of the Tongue.

If a Vapor or Humor ſeaſon and fill up the Tongue with a ſtrange ſavour, that it perceives not other things at all, or amiſs, the cauſe alſo muſt firſt of all be declined.

Which if it proceed from things taken, ſeeing it doth no waies induce a long laſting affect, and ceaſeth of its own accord, 'tis neglected; or will eaſily be amended with the contraries, as ſhall be ſaid by and by.

But if this ariſe from an internal diſeaſe, a filthy vapor or a cholerick alimentary humor heaped up there, the intention of curing is directed, to the evacuation of theſe humors, and healing the Diſeaſes.

But if that adverſe ſavor doth no waies ceaſe the cauſe being taken away, but perſevering a long time, be troubleſom to thoſe otherwiſe ſound and to the ſick, the contrary ſavor being procured by things given, we either take away or amend the former which did trouble.

So the Sweet ſavor as wel the Alimental as that which is ſweet indeed being very adverſe for the moſt part to the Feaveriſh & other ſick folks, the which notwithſtanding was otherwiſe moſt grateful to them in health, is corrected chiefly with acid or tart things, which do not only mend that, but alſo bring an appetite too, which ſweet things take away, and aſſwage the thirſt, which ſweet things increaſe; which acid things let them keep in their mouth, and lick, amongſt which acid Cherries ſuch as are wont to be kept dried and ſoftened again, and many others of that nature, which ſhal be explained in thirſt do very much and this nauſeous unſweetneſs of the mouth.

The which bitter things alſo do likewiſe correct, being more acceptable to ſome natures, eſpecially if they conſiſt of a ſweet ſmel as principally Wormwood in Wine which adds a greater gratfulneſs to it.

As the bitter ſavour again too long ſticking on the Taſt is corrected with Sweet or Acid things, and with thoſe that are inſipid, which alſo do dull the vertues of them which otherwiſe would inflame the Jaws.

With which alſo the ſalt ſavor is contemperated, as again the ſalt ſavor is dulled with things inſipid.

CHAP. VII:

Of the hurt of Seeing.

The Kinds.

Blindneſs. THe Sight is wholly aboliſht in ſome, that at all times and alwaies they ſee nothing, and it is called Blindneſs; in which Species if no fault appear in the Eyes which may hinder ſeeing,

Amauroſis a kind of blindneſs.

& they are blind with open and cleer Eyes, it is called *Amauroſis*; for if either a Speck or a Coat, or a Humor appearing about the black of the Eye, makes them Blind it obtains a private name from the Cauſe as ſhall be ſaid in the Cauſe.

But otherwiſe they loſe their ſight only, at a certain time, the which nevertheleſs by and by returns again, no impediment then alſo being conſpicuous in the Eyes; as when from an external cauſe by reaſon of brightneſs or darkneſs, objected too much or too ſuddenly to the Eyes. They are ſo darkened, that the ſeeing being hindred firſt as it were with a Cloud or Fume impeding, through which there ſeem to run, certain ſmal bodies ſomtimes dyed with a red, yellow, or black color, by and by is for a while wholly taken away, in the affect which is called *Scotoma*.

Scotoma *an Obtenebration a kind of blindneſs.*

Somtimes the Sight is only impaired in ſome, when thoſe ſpecies of things which the ſight otherwiſe ought naturally to attain to, whereſoever and whenſoever, they behold not wel, or obſcurely; and that for the moſt part, no cauſe alſo ſhewing it ſelf in the Eyes and they call it *Amblyopia* that is an obſcurity, dulneſs or darkneſs of the ſight. Although ſome think if the Eyes by ſome manifeſt fault do ſee impairedly as with a miſt before them, it might more properly be called a dulneſs, and in old folks they call this fault a darkneſs.

Amblyopia *a weakneſs of the Sight.*

Darkneſs a kind of weakneſs of Sight.

Hither alſo is refer'd that weakneſs of ſight, when the ſight perceives things neer no better than thoſe remote as naturally it ought to do, but thoſe neer the Eyes it apprehends leſs than things diſtant, and therefore when they would ſee ſmall things, or read them, they are forced to remove them far from their Eyes; a fault familiar to thoſe that grow old, which when it may be amended by a fit pair of Spectacles, let them continually uſe them in apprehending of ſmaller things, for which cauſe I am wont to call it The old folks ſight.

The ſight perceiving things diſtant more rightly than neer.

But it happens alſo on the contrary manner that ſome can no waies judg rightly of things remote, yet not ſo remote that ſound men alſo cannot ſufficiently ſee them by reaſon of the too great diſtance, but only removed for a little ſpace, although they be very great; whence oftentimes not knowing their Neighbours, they paſs them by unſaluted; Pictures, Writings, unleſs they draw neer with their Eyes, they can neither ſee nor read handſomly, unleſs they uſe ſpectacles appropriate to correct this fault, imbred for the moſt part with yong folks from their birth and remaining even unto extream old age, which approaching, ſometimes it comes to paſs, that then they ſee better thoſe things diſtant which they ſaw leſs in youth, and how much the elder they grow, ſo much the farther ſighted, which ſpecies therefore I am wont to call, The young mans ſight.

Sight not rightly diſcerning things a little diſtant.

But of thoſe alſo who do leſs behold things ſomwhat remote, there are ſome who unleſs they apply cloſe to their Eyes things ſomewhat ſmal or writings as it is commonly ſaid, touch them with their Noſe, they cannot rightly diſcern or read them, beholding them with askew and cloſed eyes who from their cradle even unto old age for the moſt part, ſeeing after this manner are called *Myopes*, ſome of which are helped by the benefit of Spectacles, others not.

Sight not rightly judging of things unleſs cloſe to the Eyes is Myopia.

We meet alſo with another weakneſs of Seeing, when at night by the light of a Candle, they ſee little or nothing almoſt, but in day time by day-light they perceive no impediment in their

Nyctalopes.

their sight which they call *Nyctalopes*, the Latines call *Luscios*.

The Evening Eye-sight. But it happens also in some, that they see in the Night in the dark without light more acutely than in the day time, as Owls, a rare disposition which they call the Evening Eye-sight, for we would rather retain those names which are usual and rightly design the things, then confound them amongst themselves as commonly they do, signifying many things by one name.

Hallucination. The Seeing is depraved first of all when things are represented unto it otherwise than they are indeed, as if they see those things which are single for double, as somtimes it fares with Drunkards, who behold streight things for crooked, or some other way things under a false shape, which fault is called Hallucination.

Imagination Secondly if they think and Imagine with themselves that they see things that are not whence they call this affect Imagination; as it happens when in an Alienation of mind and Ravings, as hath been said there, they think that they see divers apparitions whiles they are waking, such as otherwise they are wont to meet with in

Nubecula a Species of Raving. Dreams, or that Flies, or Gnats, fly up and down, Straws, Locks of Wool adhere to things, the which also sometimes is wont to happen to those no waies besides themselves nor otherwise sick; that the same insects or locks of Wool, and filaments, Spiders webs and the like small things and Atomes, seem to appear to one Eye or to both together, in which because for the most part they think that they see also a little Cloud, this fault is called *Nubecula*.

Colors a Species of Imagination Thirdly hither belongs that false vision when also without any hurt of the mind other colors then are, are offerd to the sight, now red, then yellow, or green or some other way representing themselves with a ful light;

Brightness a kind of Imagination. the same appear coloured like a Rainbow in the compass and as it were the circle of the flame of a Candle, or of some other thing lighted: or Brightness like lightning, or other shining bodies obscure the sight.

Fourthly to the depravation of sight these also must be referd, when the things which they behold, although they be firm and stable yet they think that they are carried about, driven round, and wheeled about, so that though they know this is a false imagination, yet when from that turning round of things, the sight doth no more perceive a firm seat where the body may subsist, that also stumbles & staggers; somtimes also if the pavement on which he stands seems to him to be inverted, as if he also were inverted with it, unless he be sustained or kept up, he falls and suddenly rusheth down, and beats the Earth with his Feet, whiles he endeavors to stay himself, all the other senses being nevertheless entire, by which sign this fault called *Dinos*, or *Vertigo*, is easily distinguished, from an Epilepsie, Apoplexy, Syncope, with which those that are strucken, do presently also fall on the ground.

A Vertigo with Imaginations. But besides this unquiet Vision those troubled with a Vertigo there comes also sometimes another depravation of it, which we have called Imagination and a little Cloud (and upon this account, they have named these imaginations, A beginning or smal Vertigo) a Cloud or other bodies, or Colours also with them offering themselves to the sight; the which notwithstanding if it doth happen, for the most part it is wont to go before a Vertigo.

A Vertigo with darkness is Scotodinos. Somtimes also a darkness of the sight which we have formerly called *Scotoma* doth accompany a Vertigo, when also the Eyes being shut nevertheless al things are objected to the Internal sense as if they were turned round, and then the Disease compounded of them both is called *Scotodinos*.

All which Depravations of the sight for the most part happen, no fault being conspicuous in the Eyes (unless it be offerred in that, when a strange color doth somtimes appear with which the Eye is indeed extrinsecally coloured) whether this be in the Sound or Sick.

The Causes.

The part affected. The Cause of all the declared Accidents of the Sight is either in the part communicating the visive power, *viz.* the Brain, or consists in the Instrument receiving that power and also the species of external things, to wit the Eye; which whenas it consists of many more parts, then the other Organs of the senses, and humors also, in every one of them some causes prejudicing the sight may arise.

First of all in the visory or net-like Nerve implanted into the Eye, and the principal Instrument of Seeing; then in the three humors that fil up the Eye and serve the visory Nerve, last of all in the Membranes themselves that constitute the Globe of the Eye and intrinsecally distinguish the humors. If the Cause lie in those places where they are pervious to the sight as about the Black of the Eye, and where only if the impediment of seeing do consist, it may be seen and known, for if it be elsewhere it is so hidden that it doth no waies appear to those that behold the Eye.

The Cause of the Hurt of seeing in the Brain. As all Senses may be hurt by reason of the Brain so also Seeing is weakned; both if it suffer a Disease General or Special and especially in that part where the optick Nerves come forth, or those Nerves themselves produced from the Brain and carried unto the Eyes, are affected; which affects may be various.

A cold Distemper of the Brain, is the Cause of Blindness, or weakness of sight A Cold Distemper sometimes breeds Blindness the other senses being somtimes unhurt; if the Forehead and Eyes being much and a long time refrigerated by cold wind, which being less cover'd, are the more exposed to the injuries, and the cold penetrating even to that part, where the optick Nerves have their original, the said parts are so hurt, that they become Blind; or there remains afterwards a certain weakness of sight, which I have seen befall a noble Matron in the Head-ach from the too much application of Oxyrrhodines actually most cold, who all her life time could no waies recover her sight any more; that this also doth happen, if the whol brain be hurt by the same distemper hath been shewed in a stupidity, but then the rest of the senses are abolisht too, and its easily known by that, whence the cause proceeds, as if it be from externals 'tis plain of it self.

A hot distemper of the brain is the cause of error of the sight and of Imagination. That a Hot Distemper of the Brain doth bring together with a Depravation of the Mind also a Hallu-

a Hallucination of the ſight, and the ſaid Imagination in which various falſe Images of things are offerred to the ſight, hath been ſaid in a Phrenſie.

A malignant diſtemper in the brain is the cauſe of error in the ſight.

As alſo it hath been explained there, that that diſtemper which ariſeth from the Perturbation of the ſpirits in the Brain from Malignant humors, together with Madneſs and Melancholly, doth likewiſe repreſent falſe Apparitions to the ſight.

A dry diſtemper of the Brain is the cauſe of blindneſs.

Too much Drineſs of the Optick Nerve induced by burning Feavers the eaſier into that Nerve, ſeeing it is thick, doth produce a Blindneſs remaining after theſe Feavers.

The beginning of the Nerves being compreſt or bedewed as we have ſhewed that an Apoplexy is cauſed, in which all the Senſes are taken away at once, ſo alſo if this be only about the riſe or meeting of the Optick Nerves, or in the other carriage of them out of the Eye, which then muſt needs be from an afflux either of a bloody or flegmatick humor, it is ſomtimes wont to happen, that a Blindneſs doth ſuddenly follow, if the humor preſently fall down thither.

But more commonly the Optick Nerves being irrigated or too much moiſtened by the watry flegmatick excrements of the Brain, which in this middle ſeat of the Baſis of the Brain, where the optick Nerves break forth, alwaies flow down to the Infundibulum which is next to theſe Nerves; and together with the Nerves, and neer them break forth into the Chamber of the Eye and amplitude of the Noſtrils, a darkneſs of ſight is wont to happen in old folks and flegmatick; or if they be refrigerated by the ſame humor or be compreſt in thoſe ſtreights rather then obſtructed as they would have it, a blindneſs alſo is wont to follow; which abolition or weakneſs of the ſight, together with the hurt of the reſt of the ſenſes happens, if this fault be extended to their riſe or progreſs in the Baſis of the Brain, or the ſight only is abolisht, if that ſeat chiefly be affected, and that commonly in both Eyes by reaſon of the meeting of the Optick Nerves and their ſhort paſſage to the Eye, that is rare that one Nerve only can be ſo affected; the which doth proceed from flegm or a wateriſh humor as is ſufficiently manifeſt, by the ſigns of that humor abounding in the brain; and it is eaſily known alſo that a Nerve is affected, when nothing appears in the Eye, which can bring ſuch loſs or Obſcurity of the ſight, neither have we found this ſign to be true, which they have thought moſt certain, to wit, if the unſound Eye being compreſt the Apple is not dilated, this comes to paſs by default of the Nerve, becauſe the influx of the Spirit into the ſame is impeded, ſeeing the animal ſpirit doth not diſtend the Eye like wind, neither fils it up but perſiſts in the netlike Nerve.

The Contuſion of the viſory Nerve in the brain is the cauſe of blindneſs.

Hither alſo ſhal be referred that not unuſual Cauſe, but by no man as I know rightly deſcribed, of that blindneſs which is ſomtimes left, after grievous and frequent Convulſions; the which is not from an afflux of humor as they would have it, but becauſe in thoſe great Convulſions by the Convulſion fits of all the parts and the Eyes alſo, in which they alſo oftentimes appear convulſive and very much ſtretcht out and bowed down, the Optick Nerve growing to them being thus attracted and too much diſtended, and that being wreathed too, and hurt, and the paſſage or viſory ſpirit being hindred it happens that the Eyes are deprived of Seeing, and that it proceeds herefrom we have found out by diligent examination, and conſideration.

The ſolution of continuity in the viſory Nerve of the Brain is the cauſe of Blindneſs.

The Subſtance of the Brain being hurt as by an Apoplexy there is a privation of all the ſenſes, ſo a Nerve being contuſed or wounded there which ſome do teſtifie hath ſomtimes happened from a puncture made by the Forehead a manifeſt Blindneſs by reaſon of the Solution of Continuity or a Callus left hath ſuddenly happened, and ſo from a blow.

A Weakneſs of the Brain the Cauſe of weak Sight.

A Weak Conſtitution of the Brain, the ſpirits being diſſipated and waſted by reaſon of old Age, or by ſome grievous and long continued diſeaſe, too much evacuations, eſpecially of Blood and Seed whence is a great effuſion of ſpirits and immoderate Venery for that reaſon doth very much prejudice the ſight; alſo by reaſon of too much Watchings as hath been ſaid there, it induceth an Amblyopy or weakeneſs of ſight and alſo of the other ſenſenſes eſpecialy of thoſe that have a more ſubtile object as of Hearing, often familiar to old folk, as appears in theſe external cauſes of them, remaining in thoſe that are recovering, and accuſtomary to thoſe that live intemperately.

Beſides this cauſe which proceeds from a defect of ſpirits which there can be no doubt, we can by no means be induced, to feign another here in the thickneſs or thinneſs or ſubtilty of the Spirits as many indeed do propoſe theſe things with more ſubtilty than truth, but we are moved by many things to diſſent from them; ſeeing the animal ſpirit being wel nigh æthereal, doth no waies ſuffer ſuch changes, but is moſt eaſily diſſipated, as no man neither hath ever dared ſo much as to fanſie the Vital Spirits to grow thick or be attenuated; as alſo we ſee, unleſs now the defect of ſeeing happen from the Spirits its other diſcommodities, whence things far diſtant or neer, are leſs truly diſcerned, do happen rather from the fault of the Inſtrument as by and by ſhall be explained, not by reaſon of a certain thickneſs or ſubtilty of the ſpirits, as they have thought, ſeeing they are ſo ſubtile, that they cannot be more ſubtile.

A preturbation of the ſpirits of the brain by vapors is the cauſe of error and Imagination with an alienation of mind.

Divers ſorts of hurt of the ſight are wont to proceed, by reaſon of the perturbation or agitation of the ſpirits of the Brain and the brain, alſo being affected by conſent with them; as if being mixt with a hot, ſubtile vapor, either turbid, or malignant, they do not only pervert the mind, but corrupt alſo the ſight ſo that they think they ſee many things which are not; as if from the like vapors the ſpirits and brain grow hot, then together with the Raving, falſe Apparitions alſo are objected to the Eyes, as hath been ſaid in a baſtard Phrenſie, and as if a certain Narcotick vertue be joyned with the heat, as hath been ſhewed to be from the evaporation of Wine then together with the Drunkenneſs of the mind, that there is alſo an error in the ſight in which they think they ſee divers things which are not, or thoſe things which are they judg of falſly, hath been declared in Drunkenneſs (as the ſtory of him who being drunk alwaies thought things to be double, being decived by his Wife, burned his hands, gives credit to this buſineſs) furthermore when other filthy and malignant vapors from the Region of the Hypochondries do aſſail the Brain & diſturb it and its ſpirits they do

do not only pervert the Mind but alſo ſometimes propoſe the ſight being cauſed by conſent ſeeing they trouble the Mind too they belong to the Alienation of the mind where it hath been largely treated of them.

The too much agitation of the ſpirits of the Brain the cauſe of a Vertigo.

But alſo it oftentimes comes to paſs that the ſeeing is hurt by the too much agitation of the ſpirits, not by that which in the affects of the mind, the ſpirits being not only agitated, but rather confounded together with the humors conteined in the Head, Heart, and whol body, doth only diſturb the mind, and ſcarce hurts the ſight: but by that in which the ſpirits in the Brain being moved either themſelves or with the mixture of a vapor, without any perturbation of the mind, thoſe called a Vertigo, Imagination and Scotomie are wont to be raiſed.

For the ſpirit contained in the Brain and its Arteries and Ventricles, being moved and ſtirred more vehemently, even without the mixture of a vapor, repreſenting to the Imagination the like commotion in things without it breeds the ſaid Vertigo of which commotion there may be divers cauſes; for a vehement moving of the head after the ſame manner continued long doth cauſe that the ſpirits for the ſame reaſon being ſtirred and following the Head afterwards reſting, yet nevertheleſs they ſtil for a while run up and down after the ſame manner as the motion of the head was made, till they reſt again; as it comes to paſes if the Head together with the body be turned long Round, for then a Vertigo follows, ſo that if this be done longer a ſtrong one comes, that they cannot ſtand on their Feet, but ſomtimes neceſſarily ſtagger and fall, as it oft happens we ſee theſe things both in men and beaſts; ſo the head being bowed a long while downwards, the ſpirits then tending from that upwards to the beginning of the Nerves, when that it is erected again, the ſame ſpirits with violence going back again to their proper ſeat, from that motion ſomtimes a Vertigo is perceived.

But if it happens not from this motion of the body only, but alſo from a perſevering or vehement commotion of the mind the ſpirits being often and ſtrongly exagitated, in profound and dayly cogitations, and other paſſions of the mind, as alſo in Watchings, that thoſe thus accuſtomed, moved from ſome light internal cauſe, fall into a Vertigo; as we do obſerve Vertigoes do ſomtimes trouble them that do very much labor at their Studies when they are faſting, for the cauſes by and by to be mentioned.

But from the long beholding of a thing whirled round or otherwiſe moved ſwiftly whether this be ſo, or ſeem to be ſo, as the Earth ſeems to be moved and rnn, to them that ſail, which happens to ſome from their Imagination when their Eyes are ſhut, ſome are ſeazed with a Vertigo, the ſpirits alſo by that agitation of the ſight which follows at the ſudden commotion of the object, being ſtirred after the ſame manner, and as it were following the ſwiftneſs of the ſight; which as it happens to thoſe whoſe ſpirits are eaſily ſtirred, ſo in thoſe diſpoſed to the Vertigo it gives occaſion for the fit to ſeaze, although the cauſe be but light. Alſo looking downwards from a high, ſteep, and dangerous place breeds a Vertigo in thoſe that are not uſed to it, the ſpirits being too much diffuſed, and drawn back again with fear, and ſo moved unequally; and therefore this no waies happens to thoſe that are not afraid, nnleſs they be otherwiſe diſpoſed or ſome other cauſe joyned, as if from ſuch a high place they behold things which are wheeled about, or Whirle-pools of Waters.

But as this Vertigo doth happen from external cauſes by reaſon of the too great impulſe of the ſpirits, ſo alſo the ſpirits of themſelves collected in the Arteries of the Brain, eſpecially being more hot and plentifull becauſe they are unquiet do cauſe a Vertigo and are eaſily agitated of themſelves, or from a light occaſion joyning; the which doth long and much torment men from a light cauſe either alone or alſo with a pain accompanying it, whoſe Arteries do beat vehemently in their Head and Ears, with a tingling of them ſometimes and often in the reſt of the body, and they are ſcarcely cured unleſs by opening of them, as ſhall be ſaid; but this may come to paſs by it ſelf, the blood being ſo heated and attenuated in the Arteries, or by the mixture of a thin Vapor, as ſhal be ſaid by and by.

But we have found out another cauſe of a Vertigo proceeding from the ſpirits in the Arteries and Veſſels of the Head, by diſſecting a certain Merchant our Country-man, who many yeers being ſick of a Vertigo was neither able to walk nor to riſe out of the bed, but he fel down, to wit, the veins of the Brain and all its Arteries from their riſe and ingreſs within the Skul, in their whol paſſage through the Brain, grown together, and hard, and diſtinguiſht with little Glandules in their whol progreſs; from which obſtruction of them, the ſpirits being impeded and retained in the Brain, being wheeled about by a light motion, bred an incurable Vertigo.

But by reaſon of vapors mixt with the now declared ſpirits of the Brain, there are wont to be produced not only a Vertigo, but alſo the ſaid Imagination and Scotomie, either ſeazing at once, or apart; and they according to the diverſity of the nature of the Vapors and place from which they ariſe, and to which they are carried in the Brain; for if they being plentifully confounded with the ſpirits of the brain in its Veſſels, filling up thoſe places and ſeeking paſſage out, together with them they be brought to the ſides, by offering to the ſight, ſuch a ſenſe and motion in things externall they breed a Vertigo as hath been ſaid formerly; lighter or more grievous according as their agitation is greater or leſs

The which alſo doth affect a man alone, if the Vapor be ſubtile and no otherwiſe polluted, or if it be too hot there is joyned alſo a pain of the Head: if it be turbid or ſome other way polluted, coloured, ſhining, as it may diverſly exhale from divers humors and Choler as ſhal be ſaid by and by, then there are cauſed Imaginations alſo with a Vertigo by which there falſly repreſented to the ſight divers ſmall bodies, Inſects, Atoms, Colours, Shinings; or if by their obſcurity rather than thickneſs, as they would have it, they darken the ſight, they caſt Clouds, Fumes, or Darkneſs before the Eyes together with the Vertigo in the ſaid Scotodinos affect for though they ſee nothing, (as formerly hath been ſaid of their Eyes cloſed) yet they may feel a Vertigo.

The which Imaginations notwithſtanding and Obtenebrations or Darkneſſes do oftentimes alſo happen apart without a Vertigo, if that Circumaction of the ſpirits in the Head be not made, but only a mixture of the Vapors with them; the which for what reaſon it can befall the ſight, in ſo great a variety of Opinions concerning this thing, we muſt a little more diligently ſearch out.

Many have beleeved theſe Vapors aſcending and breaking forth of the Chamber of the Eyes which are before the Eyes like a Fume, do either deceive, or hinder the ſight being moved with this reaſon, becauſe they ſaw tears provoked, and the Eyes look red from

Vapors

Vapors which in like manner did penetrate to the Eyes and prick them; yet this ſeeing it rather comes to paſs, from the pricking of the ſenſible coat of the Noſtrils, by reaſon of its communication with the adnate coat of the Eyes, this compariſon will no waies take place; and ſeeing the vapor, if it did ſo come under the orbite of the Eyes, and creep about them, it would preſently fly forth before it could touch them, we reject this Opinion as weak.

But others have thought that theſe Vapors do wholly go under the Eyes aud penetrate even to their innermoſt parts ſo that intrinſecally they are ſeen by the Eyes, but whenas after this manner there is no paſſage to the Globe of the Eye, and that is ſo thick by reaſon of the horny coat on every ſide whol, that the Vapors can no waies paſs through it, into which a Needle can hardly be thruſt, when a Suffuſion is to be taken off, this Opinion of ſome is vain, and by ſo much the more fooliſh, becauſe they would palliate and cover their errors with the perſpirability of our body.

But others that they might explain after what manner theſe vapors might enter into the Eye, ſeeing they knew that there was no other entrance into the chamber of the Eye, then of the Optick Nerve, Vein and Artery; they have writ that theſe Vapors indeed did firſt aſſault the Brain, but from thence deſcended by the Veins and Arteries to the Eye; not underſtanding what we have deliverd in our Anatomy, that theſe veſſels only run through the adnate coat of the Eye and do no where come neither into the horny coat of the Eye, nor the inner part of the Eye, ſeeing if blood ſhould enter the Eye, by its colour it would repreſent all things red unto the ſight (as it comes to paſs when being poured out of the Veſſels it falls upon the Horny coat) for this reaſon it hath been proved by this demonſtration that the Vapors are not carried neither afthis manner to the Eyes.

Others more conſiderately teach that it comes to paſs, by reaſon of the optick Nerve, which they hold to be the chief inſtrument of ſight, the which we alſo do admit of, yet we grant not that this is done for that reaſon, as they who have thought that the vapors can enter the optick Nerve and through that as through a pipe are carried from within the Scul even to the Eye; ſeeing turbid vapors can no waies be carried through the Nerves ful of animal ſpirit, and ſeeing this is againſt the nature of vapors to be carried downwards unleſs they be driven by ſome violence (which here is not at all.)

But we rather probably think that it happens thus, to wit, that theſe vapors aſſaulting the fore parts of the Brain eſpecially, and being confounded with the animal ſpirits, there with the brightneſs of the Images which are offered to the Brain by the optick Nerve, where all ſenſation and diſtinction is made, by the mixture of ſome ſparks, by which their light is rendred unequall, or darkned in certain places, they repreſent to the Brain theſe like falſe apparitions confounded with the true Images, in this hurt of Seeing which is called a little Cloud; for that this is done in the Brain and not in the Eyes, the Vertigo which for the moſt part doth accompany theſe imaginations as hath been formerly demonſtrated, doth ſufficiently ſhew, the ſpirits then in the Brain being affected and agitated too, whence they that then labor of a Vertigo have not theſe imaginations, but ſeem to themſelves wholly to be turned abour, and a Scotomie or Obtenebration of the ſight, that they become almoſt blind ſometimes following theſe little Clouds, the ſpirits being then wholly obſcured by a multitude of vapors, doth evidently declare it; all which hath been ſufficiently demonſtrated to happen in that part of the Brain which gives the Original to the optick Nerves, and is higher than the reſt, and therfore ſeems chiefly to prejudice Seeing, but not in the Eyes if it proceed from vapors.

As in an internal fault of the Eyes ariſing from a Coat growing there, we ſhal by and by ſhew, that that theſe Clouds alſo, and the other aforeſaid may be offered to the ſight, and the ſight alſo be wholly obſcured, in that called *A Suffuſion of the Black of the Eye*; wherefore theſe little Clouds generated from vapors they have falſly called by the name of a Suffuſion becauſe they thought that then alſo vapors were ſpred over the Eyes, and did there generate a little skin, which we have more rightly indigitated to be little Clouds, & Imaginations; which alſo are diſtinguiſht from a true Suffuſion by theſe ſigns, becauſe in a Cloud & imagination there is no Speck in the Eyes of the affected, theſe accidents of the ſight being objected to both Eyes at once, which do ſomtimes abate and ceaſe and return again at a certain time, ſeeing in a true ſuffuſion the fault appearing in one Eye, but ſcarce perfectly in both at once, it hinders the ſight without intermiſſion, as ſhal be ſaid there.

But the Cauſe of theſe Evaporations whence a Vertigo imagination and Scotomie proceed, may conſiſt in divers parts of the body, ſeeing ſomtimes vapors raiſed from the lower parts are ſent into the Head, moſt commonly they proceed from the Stomach; in which a cholerick humor eſpecially, bringing a hot ſubtile evaporation, and ſending it not only into the Noſe (as the vapor riſing from Onions Radiſhes, Muſtard, is wont only to vellicate the Noſtrils and preſently again is diſſipated) but alſo into the head it ſelf, ſometimes cauſeth a Vertigo, ſomtimes Imaginations: which for the moſt part imitating the nature of Choler, ſomtimes are yellowiſh, ſomtimes green, or blackiſh: and ſeeing Choler in the Stomach is moſt fierce and boyling hot whiles it is empty, and the vapors then being hindred, are the more freely carried upwards, it happens that the ſaid accidents are troubleſome to the cholerick whiles they are yet faſting, and that upon the taking of meat, becauſe the vehemency of Choler is abated and the vapors repreſt, they grow milder, and at laſt ceaſe; the which happens alſo the vapors in the head being diſcuſt of their own accord, and ſo much the ſooner by how much they are more ſubtile, till new evaporations being made, theſe evils do return; but it is known that this proceeds from Choler, by the bitterneſs of the mouth and gnawing at the mouth of the ſtomach, which they call the heart, and by other ſigns of this humor; which alſo ſomtimes brings with the ſame labor a pain of the Head too, with a Vertigo.

The ſame vapors proceeding from the Meſaraick Veins in which the cholerick juyces are wont oftentimes to abound, as hath been ſhewed elſewhere (as by thoſe vapors raiſed from the ſame place, and carried upwards by the Veins and Arteries, intermitting Feavers, hypochondriacal Melancholies do invade a man by intervals) ſo alſo they oftentimes raiſe the ſaid ſymptoms, which is done the vapors being carried upwards from thence through the Veins, and ſomtimes through the Arteries which are annext to the Meſaraick Veins; then eſpecially when thoſe vapors are ſubtile, that they induce rather theſe accidents than Perturbations of the mind which hath been ſhewed do rather proceed from their malignity the which therefore do ſomtimes produce Vertigoes only or as they are qualified, Images and Scotomies together with them, or without them; which we had rather alleadg as the truer cauſe than pretend

Pretend Crudities, from which Wind rather than theſe like Vapors are generated.

But alſo from ſome other ſeat of the body theſe like vapors raiſed from a thinner blood through the Veins and Arteries may cauſe the ſame: as from that part which is about the Womb, as the Courſes being ſtopt this ſymptom alſo doth happen; as other alſo oftentimes upon this account: and from ſome part of the Foot or of another member a vapor proceeding like to ſome Air being carried upwards, as we have obſerved it hath been the Cauſe of an Epilepſie, ſo alſo of a Vertigo, whence ſomtimes Vertigoes go before an Epilepſie and preſage that wil preſently follow, when from the like vapors vellicating the Brain, Epilepſies alſo may be cauſed, as ſhal be ſaid in its place.

But the cauſe of theſe diſeaſes ſometimes conſiſts in the Head it ſelf, in which not only ſpirituous, hot and plentiful blood collected, may cauſe the ſame (as hath been ſaid formerly) but alſo from humors contained there, the like Vapors raiſed and mixt with the ſpirits may produce theſe accidents; which we do beleeve doth ariſe rather from the Blood of the Veſſels and Ventricles of the Brain, and the humors mixt with it than from flegm, the which alſo we do not deny to be a cauſe of the Vertigo, but not becauſe it ſends forth vapors, but after this manner now to be explained.

The Fluctuation of a watry flegmatick humor in the Brain is the cauſe of a Vertigo.

'Tis certain that a Repletion of the Brain cauſed by a watry humor, as well that Serous as Flegmatick doth cauſe that Vertigo which is wont to precede and threaten an Apoplexy or Carus; which being frequent and of long continuance unleſs it be prevented, is wont to terminate in theſe Diſeaſes with great danger of life; but it doth not this by cooling and moiſtning the brain, ſeeing this agitation of the ſpirits which is in a Vertigo would ſo rather be hindred than promoted; but this comes to paſs, when filling up the windings and ſpaces of the Brain by its great plenty filling the Skul, and alſo generating plenty of Wind (which are oftener ingendred from wateriſh humors than Vapors) it waves in it; for then as in the cover of the heart, water abounding doth cauſe a Palpitation of the heart, when it is ſtirred; ſo here alſo, it every where filling the Brain when the Head is moved, the humor being ſtirred and following the motion of the Head, as we have ſaid of the ſpirits, it gives ſuch a ſenſe to the head; which doth ſufficiently appear by their relation, who complain of ſuch a fluctuation, and the Skul being opened, we have often found an immenſe plenty of this humor, as hath been ſaid in an Apoplexy, and in him in whom even now we ſaid that the Arteries too were grown hard, we have found ſo great plenty of it, that the Skul being opened it hath come forth by floods, the which together with that obſtruction of the Arteries, producing a double cauſe of the Vertigo, made it ſo laſting and incurable, in which that humor for continuance watring the Brain, had bred that Carus of which he died. But it is known that this is the cauſe of a Vertigo not only from that ſenſe of fluctuation, but alſo from other ſigns of flegm abounding, explained in a Carus and Apoplexy, to which thoſe that are prone become at once ſleepy and more ſtupid, and at laſt fall into theſe Diſeaſes unleſs prevented.

The Viſory or Net-like Nerve in the Eye is the cauſe of the hurt of ſeeing.

By occaſion of the Viſory Nerve implanted into the Eye and dilated like the form of a Net, moſt diſcommodities of the ſight do happen, ſeeing that is the principal Organ of ſeeing; and that for the moſt part by conſent of other parts, when by reaſon of them it is diſappointed of thoſe things which are required to Seeing, viz. the ſpirit and the proper object, or elſe it cannot rightly enjoy them, for otherwiſe being immerſed in the Eye 'tis ſo grounded, that 'tis ſcarcely troubled with any diſeaſe, unleſs by conſent of the Brain.

A Privation of the animal ſpirit in the Net-like Nerve is cauſe of Blindneſs or darkneſs of ſight.

It is diſappointed of the Animal ſpirit either altogether in blindneſs, or in part in a weakneſs of the ſight, by reaſon of the Optick Nerve, ſuch as are Diſtemper, Compreſſion, Hurts, and Weakneſ proceeding rather from the defect of ſpirits, than that fanſied thickneſs and ſubtilty of them.

The ſame happens alſo, the ſpirits flying from the viſory Nerve towards their beginning: in the Eye preſt a long time, and by conſequence the Net-like Nerve by reaſon of humors filling up the Eye, it ſometimes happens that they are afterwards ſo long blind til the ſpirits return again.

And alſo the ſpirits being too much idle in the viſory Nerve and as it were laid aſleep, or being retreated when there is no uſe of them, the Nerve it ſelf being made dull, in thoſe who being kept in darkneſs for a long time, as in Priſon or other dark places, have ſeen nothing for a long time, when they return into the light, they ſcarce recover their ſight, or ſlowly, or never any more.

And ſeeing the Animal ſpirit hath a conſtant need of the vital, this by ſwooning being for a while diſſipared, and the Animal ſpirit being hindred by conſent, amongſt the ceſſations of functions, the Seeing firſt of all is darkned in thoſe that ſwound, and by and by it is taken away with all the reſt ſo long till they come to themſelves.

A Privation of the Object in the Net-like Nerve is the cauſe blindneſs or dark ſight.

By reaſon of the proper Object, viz. the Images of things entring the Eye by light and brightneſs; the Net-like Nerve ſuffers a hurt of ſeeing if it be offered to it too violently and it be ſo affected with it, that afterwards it perceives no more, or not rightly.

As when one very much ſtrucken with the brightneſs of the Sun, Lightening, Fire, afterwards thinks that he ſees ſparks for a while, and either their Eyes are altogether blinded for ſome time, or as it often happens, they afterwards continue blind.

Or if the Eye be deſtitute of light by which the things ought extrinſecally to be illuminated, and the Eye intrinſecally that it may ſee; by reaſon of the external darkneſs, it cannot know the ſpecies of things.

Which alſo how they happen by reaſon of the ſtoppage of the black of the Eye, we ſhall explain in the faults of the Membranes of the Eye, as alſo when it happens by reaſon of humors, it ſhall be ſaid there.

The humors of the Eye the cauſe of hurt of ſight.

Likewiſe an Impediment in the ſight may happen, by reaſon of humors contained in the Eye, eſpecially of the Chryſtalline, through which as through a Spectacle, the Net-like Nerve doth firſt collect the Images of external things, and again receives in its cavity, thoſe diſperſed, dilated, & made bigger, to which Chryſtalline humor the other humors are ſervants only, and this comes to paſs, when either they fail becauſe either they have flown forth, or are waſted; or when they change their natural ſcituati-

on, or their ſubſtance is changed, or they are infected with a ſtrange color, which how it may be done we ſhal explain in the particulars.

A flowing forth of the humors of the Eye, is the cauſe of blindneſs.

And ſomtimes the humors flow forth of the Eyes more commonly the watry one ſeeing it is placed in the fore part, and is more fluid, the others ſeldom unleſs the cauſe be great, and then Blindeſs is cauſed; for the watry humor being flowed forth, the Globe of the Eye is ſomwhat fallen together and wrinkled; whence the hole of the black which ought to let in the light, is ſhut up; and the reſt of the humors falling forwards out of the cavity of the Net-like Nerve, do cauſe that that doth ſomwhat fall together, whence it muſt needs be that ſeeing doth ceaſe; and by much the more if the Chryſtalline humor doth fall forth with the glaſſie, in which it inheres, ſeeing that (as hath been ſaid) is altogether requiſite to ſeeing and then the Net-like Nerve being wholly fallen together, can no longer comprehend the ſpecies of things in its cavities.

Of all which the apparent Cauſe is wont to be a Wound or Ulcer of the Eye; if a large wound being made 'tis open'd through the horny coat ſo thick and hard; for by a light puncture with which they are wont to perforate the Globe of the Eye in takeing off a Cataract, the watry humor which hath its tenacity alſo, cannot flow forth,: and I have ſomtimes ſeen that an abſceſs of the Eye hath been generated from an Inflammation alſo, in which part of the horny coat is converted into matter, which being broke, it ſomtimes pours forth the humors of the Eyes with the matter; and I have obſerved in a peſtilent Feaver that it hath hapend in both Eyes, the Cryſtalline humor flowing down to the Beard, and ſticking there.

A Conſumption of the watry humor is the cauſe of Blindneſs or Darkneſs.

The Humors of the Eye alſo are waſted eſpecially the glaſſie ſeeing it is thinner; and then the Eye not being ſufficiently diſtended (which is required that the black may remain exactly open) but ſomewhat fallen together, the hole of the apple of the Eye although not wholly ſhut up, yet looſing its largeneſs or roundneſs, and the ſituation of the reſt of the humors being troubled by the way there follows a weakneſs of the ſight, or if the confuſion be greater, Blindneſs: as in long acute Diſeaſes waſting the body with a high and long continued pining it happens to ſome more rarely, but more frequently in extream old age, in which both the glaſſie and cryſtalline humor may be dried up, as ſhall be ſaid by and by; whoſe Eyes appear ſomwhat wrinkled, which the vulgar therfore are wont to call Crackt, eſpecially when in the Agony of Death being now deſtitute of heat and ſpirits they flag.

A Perverting of the natural ſituation of humors, the Chryſtalline and glaſſie (which ſeeing they are more ſolid, being reſtrained by their proper membranes they ought to ſtick fixt in their proper place) doth alſo bring hurt to the ſight whoſe places being changed, the watry humor filling up the ſpace left by them eaſily gives place.

The perverſion of the ſituation of the glaſſie humor is the cauſe of error.

The which ſomtimes happens in the glaſſie humor (to which the cryſtalline humor is ſet over, and a little way immerſt in its former part) if the ſame part of it carried forward be ſet before the cryſtalline humor; where alſo being oftentimes contained, it may be ſeen lie a white Speck under the apple of the Eye, for then it is not neceſſary that blindneſs do yet happen, ſeeing the humor is bright as Glaſs, but ſome Error; ſeeing it is thicker than the watry humor, as it is wont to come to paſs in a Suffuſion beginning, as ſhall be ſaid: unleſs perhaps ſo great a quantity of it be fallen thither, that it wholly obliterates the cryſtalline humor, and preſſes it backwards, or very much inverts it, for then both humors being troubled, more grievous accidents of the ſight are wont to follow, as ſhal be ſaid in the cryſtalline humor; but the cauſe of this may be a blow, or Contuſion, or more frequently a puncture in couching a Catarract, being forced too deep to theſe humors, and breaking their thin membranes to which they cohere: for otherwiſe ſcarce as they would have it, can a great ſtraining by holding of the breath in going to ſtool, in Labor, or Convulſions in which the Eyes appear as if they were thruſt forth, cauſe that intrinſecally in the Eye.

The Cryſtalline humor being eſpecially hanged like a Sun in the middle of the Cavity of the glaſſie humor, ſomwhat diſtant from the hole of the apple of the Eye looking directly on that with its bulk, and receiving the light through that equally diſperſt into it, and diffuſing it to the cavity of the viſory Nerve, or the Net-like ſemiglobular, placed in the hinder part of it, ſo that it fils it every where with its brightneſs, if it doth very much change this natural ſituation, it cannot be done without hurt of the ſight; which faults of it, ſeeing the humor it ſelf cannot be ſeen in the Eye, are no waies conſpicuous in it, unleſs it wholly fall into the apple of the Eye, as hath been ſaid of the glaſſie humor.

The ſituation of the cryſtalline humor inverted or departing from the middle to the ſides is the cauſe of error and ſtrabiſm.

But this comes to paſs, if being in ſome manner inverted by its broader part which is flat like a great Lentil, it is not rightly oppoſed to the hole of the apple but declining a little to the ſide it looks on it obliquely or tranſverſly; or when being carried upwards or downwards or to the ſides from the middle ſeat of the Eye, it doth ſomwhat decline from the aſpect of the hole of the Apple; the which happening either from the birth in ſome, in others from ſome violent cauſe, as was ſaid even now in the glaſſie humor, it happens that either blindneſs is cauſed, if the receſs be great from the natural ſituation, or if it be leſs an obſcurity of the ſight or rather ſome Error in which things ſeem to be either double, or crooked, or bent: moreover ſome light declination only of the cryſtalline humor from the center of the apple although yet it doth little hurt the Sight may be the cauſe of Squinting; for as in Seeing if the cryſtalline humor be rightly oppoſite to the hole of the Apple, the Apple alſo doth directly look upon the external things which it beholdeth, ſo if the cryſtalline humor be a little turned from the center of it, that they ſee with the apple not rightly but obliquely oppoſite to the things, thoſe troubled with a Squinting do ſo invert the Eye, that they are judged to look upon ſomwhat elſe, than the thing objected; the which notwithſtanding may happen alſo by reaſon of the contorted ſituation of the apple as ſhal be ſaid by and by, which things do thus befall men for the moſt part from their birth.

The ſituation of the cryſtalline humor drawn backwards or forwards is the cauſe of that ſight, in which they ſee not things unleſs very near or things diſtant better than near.

But eſpecially if the cryſtalline humor have its ſeat a little in the hinder part of the Eye towards the Netlike nerve it is the cauſe of this ſight

ſight in which they cannot rightly diſcern things more diſtant, the which happens to many from *their Birth*, that the Cryſtalline Humor doth not reſide more towards the fore parts at the Apple, as it is naturally wont to do, but hath its Scituation exactly in the middle of the Eye, and it is ſo common, that Anatomiſts for the moſt part have deſcribed its Natural Scituation in the midſt of the Center of the Eye; whence it is no wonder that this ſight which we have called *the youthful*, doth befal many from their *Birth*, that they can diſcern things neere rightly and acutely, but not things diſtant, and that when *the Spectacle* is too much inclined backwards from the things which we behold, which therefore will be ſufficiently illuſtrated only with thoſe neerer, but from thoſe Images objected at a diſtance, unleſs being collected by the Mediation *of a thick Spectacle made of Cryſtal* they be ſo offered to the Eye more effectually, they cannot ſufficiently illuſtrate that: And hence it happens that ſeeing *the Scituation* of it doth ſo continue, this *ſeeing* is no waies altered the whol courſe of life, unleſs this be from ſome other Cauſes.

And alſo if it *be yet more removed from the middle of the Eye towards the hinder parts*, they are forced yet to apply *far neerer to their Eyes, the things* which they would ſee, and uſe *a thicker Spectacle*: the which yet is not very common, and happens only in them, which we have ſaid are called *Myopes* or Purblind.

Which *truer Cauſes*, which happen by reaſon *of the Inſtrument vitiated*, and therefore may be corrected by another Inſtrument to wit *a Spectacle*, he had rather alledg then to refer them *to the Spirits*, which in thoſe young Folkes, with whom this fault is familiar, and who ſee moſt acutely things neer, are neither defective nor changed, becauſe they may be mended by a Spectacle.

And alſo *for the contrary Cauſe, after a different manner*, there ariſeth *an Impediment of the ſight*, to wit when *the cryſtalline Humor from the ſaid Natural Seat doth more* incline *forwards, towards the Apple*: for then *with a greater diſcommodity* they *leſs* ſee *things neer* but the ſame *removed* far *from the Eye*, they behold *more rightly*, unleſs they correct this defect, by applying *a thin Glaſs Spectacle*, which as it performing the place of *the Cryſtalline Humor* and receaving and differing the Images of things, and through the Cryſtalline repreſenting them greater to the Eye, and therefore they have alwaies need of *a Spectacle* to read and ſee acutely; the which happens to moſt people *growing old*, to ſome *ſooner*, to others *later*, not by reaſon of the defect of *Spirits* as they have thought, ſeeing ſo there would follow rather a weakneſs of the ſight, as alſo of the other Senſes, which a Spectacle could no waies mend, nor ſuggeſt new Spirits; but becauſe by that *bowing down of the Head* which the whol time of our age we muſt needs caſt down our Eyes, in reading, and in what Buſineſs ſoever propoſed to our Eyes, and acted by our Hands, *the Cryſtal Humor by proceſs of age together with the glaſſy* is carried *by degrees to the fore parts*, and at length ſubſiſting there, brings this *defect to the ſight*, eſpecially if in them alſo, *the watry Humor* being ſomwhat *waſted* nothing do reſiſt it, and *the glaſſy Humor lying upon it*, do more ſtrongly depreſs it; which *defect* and a far more *grievous*, *Blindneſs* or *Weakneſs of the ſight* do follow, if *the cryſtalline Humor* wholly *falling down to the Apple*, be manifeſtly ſeen to ſtick there, and to ſtop up the Eye: which is wont to be more frequently the Cauſe of the hurt of ſeeing, in Horſes and other Creatures, which go with their faces downwards: the which as it happens by degrees *by reaſon of age*, ſo ſomtimes *ſuddenly after a Blow*.

The hardning of the cryſtalline Humor is the cauſe of defect of ſight.

The ſubſtance of the Humors of the Eye changed doth alſo bring *a fault in the ſight*, as it comes to paſs, if *the Cryſtalline Humor* be too much hardened, as it may happen either by reaſon *of age* or *other Cauſes*, but with which, not unleſs the Body be vehemently & a long time dryed; and then becauſe it looſeth its *Tranſparentneſs* either *in part* or *wholly* (as it appears being boyled) *it is the Cauſe of Blindneſs or Dulneſs of ſight*, which as in *that* ſo alſo it may happen after the ſame manner in *the glaſſy Humor*.

The Obſcurity of the cryſtalline humor is the cauſe of a Nyctalopy.

But if yet by its *Natural Conſtitution* or *progreſs of age*, it become *more ſolid* or *obſcure*, becauſe then it hath need of a greater light that it may be illuminated, it comes to paſs that they cannot ſee perfectly but by a ful light, and when that fails, though it doth a little clear, with the ſplendor of light, yet they ſee not rightly, and thence follows the ſaid *Nyctalopy*.

A Tenacity of the watry humor is the cauſe of want of ſight in a ſuffuſion

But that is the *watriſh Humor* whoſe ſubſtance is more eaſily changed, ſeeing it is wont oftentimes to acquire *a Tenacity* by which *by degrees growing to the hole of the Apple, and at length drawn out and turned into a skin* by breeding *Clouds* firſt, and afterwards *a Suffuſion*, it makes blind: which fault being very common, and to be ſeen outwards alſo, ſhall be explained in the *grapy Coat*.

A diſcolouring of the cryſtalline Humor breeding error.

The Humors are ſcarce infected with *a ſtrange Colour*, ſeeing no veins or other veſſels carrying the humors do enter into the inward parts of the Eye, or touch its Humors: the which notwithſtanding they have delivered doth ſometimes come to paſs from the moiſtures of the Eye, in *the Cryſtalline Humor*, and that as alſo *the glaſſie humor* is dyed with *a grayiſh colour*, and therefore they have called it *Glaucoma*, and they have writ that the ſight is then vitiated, as if they ſaw thorough a Cloud; when notwithſtanding the Ancients made *a Glaucoma* the ſame diſeaſe, with *a Suffuſion*, then eſpecially calling that ſo, when the Skin being not yet well confirmed, it appeared to the Beholders like a thick Glaſs, of a greeniſh, or azure Colour, and was not yet white.

The Membranes or Globe of the eye are the cauſe of the hurt of ſight.

The ſight is hurt *by reaſon of the Membranes conſtituting the Globe of the Eye*, if *that* do conſiſt *in that part* which appears *darkiſh* or *black by reaſon of the Apple* or *Hole* opening the inward Chamber of the Eye *which is black* and *opacous*, which *Hole* ſeeing it doth tranſmit the outward light into the inward part of the Eye thorough *a tranſparent* Horn ſpread over it, if it *be ſo obliterated in any part that the Paſſage of the light into the Eye* is hindered, it muſt needs hinder *the ſight*; the which happens either *by reaſon of the outward thick Membrane*, beſtowing a Horn on the Eye, or of the *grapy Coat* under it, *that makes the Hole, thoſe* giving occaſion for this thing either *ſeverally* or *joyntly*.

The ſhutting the eye is the cauſe of the ſight taken away.

This happens by reaſon *of both Membranes*, if an *Impediment* be objected *out of the Eye*, which may interrupt the light, that it cannot come to the ſeat of the Eye to which it ought, as it is wont to come to paſs the Eye-brows being ſhut, with the Hands and other things.

A Perverſion of the Apple or black appearing in the Eye is the Cauſe of ſquinting.

But from this *following fault* alſo that may happen, if the *ſeat of the Eye which is pervious and tranſparent* is hindered *by the Neighbouring parts* that *ſeeing* cannot rightly be performed; as it comes to paſs if *the Apple* be not placed in every fore part of the Globe of the Eye, bare and in that middle, but *declining* from it, is more to *the ſides of the Eye*, which befalls ſome from their *Birth* in *a ſquinting* in one ſide of thoſe Eyes, for that rea-

ſon

ſon there appears more white; ſo that every one by that may know that they look a ſquint; and becauſe when they would look upon things, wreathing the Eye that they may oppoſe the apple right to the things, they make ſuch a ſtern aſpect.

Although this may happen alſo, the apple conſiſting in its natural place, by Convulſion of the Muſcles of the Eye, the Eye drawn ſomwhat to one ſide and ſo inverted that the apple do rather look that way; whence it comes to paſs, that when they would look upon any thing would direct the apple to it, either they bend their head aſide, or draw back their Eyes by the oppoſite ſound Muſcles, that the apple may be reduced again ſome way to the fore parts: as they alſo whoſe eyes have a natural ſituation after this manner drawing them aſide purpoſely, can expreſs the eyes and looks of Squinting, which Convulſion unleſs it befalls the eyes in a true Convulſion of the whole body, to wit, an Epilepſie, in which they ſhew the like aſpect, for the moſt part it befalls the Squinters from their birth; the Muſcles being ſomewhat contracted rather, then convelled and continuing in that ſituation. And that hath been explained by others to be the only cauſe of Squinting, when notwithſtanding that very thing as hath been ſaid may come to paſs, the apple being impreſt on one ſide and the cryſtalline humor being removed out of its natural place that they behold things by diſtorting their eyes after the like manner: all which notwithſtanding do hurt the ſight only on this account, that the Eye being left in its ſeat, they ſee thoſe things rather which they meet with ſidewaies, then thoſe which are placed before their face, til the Eye being reduced ſo far, that 'tis oppoſed to the things placed right before the eyes, they behold them alſo.

A perverſion of the apple, the cauſe of a wonderful affect in the ſight.

But this rare and memorable thing befell one from a wound made neer the inner Angle of the Eye by which the Globe of the eye was ſo inverted, that the apple being brought even to the great corner, and covered with the Skin of the wound healed, he was forced to ſee throngh the cavity of his Noſe, and he could ſee, nothing any more, unleſs through the hollow of his Noſe as through a pipe, whence he muſt needs direct his Noſe to that, which he would ſee, which by the relation of men worthy to be beleeved, is apparent was done in our time.

The private faults of the horny coat, do then prejudice the ſight, when they poſſeſs that part of it which is ſet over the apple like glaſs or a tranſparent horn and either only ſtick there or are diſperſed further through the white of the eye; which then may be manifeſtly ſeen and known when it is ſpotted or covered.

This diaphanous ſeat of the horny coat being ſteined with a ſtrange color, ſo that it is not any more bright and cleer, but obſcure and colored, it either ſtops the brightneſs which in ſeeing ought to enter into the Eye, like a foul glaſs which lets in the light, or offers ſomething falſe to the ſight.

An obſcurity of that tranſparent ſeat of the horny coat, ariſing from an obſcure color or white Speck of it in darkneſs, Albugo, a Skar, is the cauſe of want of ſight.

And this chiefly comes to paſs, if it be infected with an obſcure or white color with which ſomtimes the whol ſeat of the horny coat appears changed, and brings the ſaid darkneſs eſpecially in old men, to whom this chiefly happens; but if that only in ſome part of it ſuch a white ſpeck do grow it is called *Albugo*; in which fault if the ſpeck be perfectly white and ſpred over the whol region of the apple, there ariſeth blindneſs; but if it firſt begin to grow white, it darkens the ſight as if it were hindred with a Cloud drawn over it, or if it comprehend a little ſpace of the apple, or from that incline more to the Circle, it breeds a certain error in the ſight.

But ſuch an Obfuſcation or whiteneſs of the horny coat ariſeth either from the drineſs and hardneſs of the whol horny coat: or if there be only a ſpeck from the drineſs and and in duration of that part only which is ſeen white. For as we ſee other things which are tranſparent as the white of an Egg and the cryſtalline humor in the Eyes of creatures being dried by boyling do become white and loſe their tranſparency, ſo it happens here to the horney coat that by old age in which the membranes are wont to be dried, or by a diſeaſe of the eyes after Ophthalmies, Epiphories either it being wholly dried up, or drineſs being left only in certain places of it, it doth allor in part become white; the which alſo we may ſee ſomtimes come to paſs from the thicker part of the nouriſhment with which it is nouriſhed, being carried thither, and remaining there, and leaving a white Speck, as in the Nails, which in the like manner are marked with white ſpecks ſomtimes are ſuperficial, and other times being more deeply imperinted they penetare the whol horny coat.

And alſo from a Wound or Ulcers of the eyes eſpecially after the ſmal pox in Infants, a Skar or Callus being left, higher ſomtimes deeper and thick for the moſt part cauſeth ſuch a white Speck in the white of the Eye, ſomtimes large ſomtimes oblong which is called a Skar, which doth obliterate the ſight either wholly or in part, or if it be long and narrow, it cats it in two as it were and divides it.

A red or yellow diſcoloring of the bright part of the horny coat is the cauſe of error.

Beſides theſe diſcoloring of the horny coat we meet with red ſpecks or ſomtimes yellow, from blood ruſhing from a blow of the Eye, or from an infuſion of choler in thoſe troubled with the Jaundiſe, but for the moſt part appearing only in the white part of this coat, which the adnate coat carrying the veſſels doth only inveſt, and then they do not prejudice the ſight. But if they reach ſo far as to the bright part of the horny coat (where oftentimes a red ſpeck is conſpicuous a long while, the blood perſiſting in the ſubſtance of the horny coat without corrupting, as it were an inſect in Amber) they repreſent to the ſight the ſame color, either red, or yellow in all the Images the Eye ſeeth.

The horny coat being coverd by a little Skin or Ungula is the cauſe of blindneſs.

The ſame tranſparent part of the horny coat is extrinſecally inveſted with a new coat growing to it; which ſomtimes wholly growing to it grows in one, or adheres to it without any connexion, unleſs where it ariſeth, and in the compaſs, on the other part 'tis only ſpred over; ſomtimes proceeding from the greater corner of the Eye, and ſomtimes from the leſs, and being firſt ſpread over the white of the Eye by and by it covers the black of it, either in part or all: and it is at firſt thinner then growing thicker it becomes fleſhy interweaved with many bloody veins and 'tis called a Pannicle. And oftentimes it is ſo augmented that it may be laid hold on by the fingers, and a little way be elevated from the Eye; and ſomtimes a part of it hath been cut off, that hath weighed two ounces. But at other times being hardened it grows white and then it is called *Ungula, Unguis, Pterygium, Zebel*, putting out the

ſight

ſight wholy or in part, as it occupies the Black of it more or leſs.

The which growing out either from a Spontaneous afflux of Blood, or after Exulcerations tis called a *Hyperſarcoſis* or *Chymoſis*: otherwiſe from a private fault offenſive eſpecially to the Membranes, it very often befals the Elephantiacal as ſhall be explained there, otherwiſe ſeldom betiding man: as I have often ſeen it befal Fiſhes if they be kept a long time in Fiſh ponds in foul water, the mud growing to them and blinding them. Somtimes the ſaid *Unguis* grows from the Superficies of the horny coat corroded, when part of that nouriſhment then breathing forth, doth concrete into a matter like unto that which reſembles a Horne or Nail, only tis not tranſparent: as the Perioſtia of the Bones being corroded we have ſaid elſewhere that Knobs are generated, and from the Skin wounded, Skars, from the Juyce that was wont to nouriſh them.

The faults of the grapy Membrane hurt the ſight, when its hole, which they call the Apple, being pervious in that part of the Grapy coat which lies under the horny coate, yet no waies grows to it, and letting in that light into the Eye, is either ſtopt up with ſome humor, or filth, or is Contracted, or Dilated; all which may be ſeen and known, Extrinſecally alſo in the Back of the Eye and its compaſs, whenas the horny coat which is ſeated over it, is tranſparent, although the hurt lie under it.

An obſtruction of the hole of the Grapy coat or the Apple from the proper Humors of the Eye is the cauſe of Error in ſight.

Somtimes this hole is ſtopt by a Humor and the Paſſage for the ſight is intercepted; and this come to paſs ſomtimes from the proper humors of the Eye the Cryſtalline and glaſſy falling into it; as from the change of the Scituation of the Humors as hath been ſaid, and from the too great largneſs of the Apple as ſhall be ſaid, it may come to paſs, and the ſight may be ſo hindred; which is ſeen then alſo when it appears lik an Albugo, in that ſeat of the Eye.

An obſtruction of the Apple from Blood and matter in a Hypoſphagma and Hypopion is the Cauſe of Error or defect in the ſight.

The ſame may come to paſs from blood infuſed by a blow not only into the horny coat as hath been ſaid before, but alſo penetrating even unto this empty ſpace, between the Horny and Grapy coat, and filling up that either wholy or in part, and ſtopping up the Apple, which being red at the firſt, but then growing livid, by and by blackiſh, it appears that it lies there (becauſe blood infuſed into the ſpaces of the Body is preſently corrupted, otherwiſe then when the horny coat drinks it up, where without any change it perſiſts red oftentimes for a long while, as hath been ſaid) and then it either depraves or darkens the ſight: more or leſs, as it Poſſeſſes a little or the whol ſpace and tis properly called *Hypoſphagma*, a ſugillation of the Eye.

The ſight alſo may be hindered by matter collected in that ſeat, and then that Diſeaſe is called *Pyoſis*, in which if the matter collected plentifully do ſeem to poſſeſs all the black of the Eye, or to fill up the whole ſpace of the Circle, and to ſhine thorough the Horny Coat, it is called *Hypopios*; but if a ſmall portion of that ſaid ſeat do ſeem onely to ſhine through like the pairing of a Nail, it is called *Onyx* or *Unguis*, the Nail.

The Cauſe of the collection of which Matter for the moſt part is wont to be, Blood fallen into the Eye, as hath been ſaid, and at length converted into Matter; or an Inflammation of the Eye going before, and leaving an abſceſs behind it, not that, in which the horny Coat is corrupted too, and being broke it pours forth the humors of the Eyes, as hath been ſaid formerly, but in which the Blood being diſcuſt after an Inflamation, or External cauſe: this collection of matter alſo is ſomtimes cauſed after pains of the Head; which when it comes to paſs, tis probable this was done, by the watry humor ſo ſuppurated and ripend, as we have elſe where ſhown, that matter may be generated by the like humors; becauſe the Blood otherwiſe can ſcarce be brought hither, unleſs the horny coat be contuſed by violence, the Veins as hath been ſaid, no waies reaching thither.

A Tenacious ſnivel ſticking in the compaſs of this hole, or on the brink of the Apple, and ſpred over it, and by degrees thickening, for the moſt part only in one Eye although the other ſomtimes alſo doth preſently begin to be affected in like manner, the ſeeing doth moſt commonly ſuffer a Blemiſh; and, becauſe it is ſuffuſed or poured out on the Apple, it is called Suffuſion, Hypochyma: which at the beginning ſeeing it is yet a tranſparent ſnivel and doth tranſmit the Light, yet by reaſon of its thickneſs it breeds an Impediment and Error in the Sight, as if it were darkned with a Cloud ſpread over it, and things were ſeen with many Atomes flying as hath been ſaid, whence then it is called Imagination and a little Cloud, as hath been ſhewn: and this is not yet wel conſpicuous in the Eye, but that the black of it, which they cal the Star, doth not appear exactly black as it ought to be wholly black, but ſomwhat troubled; by which alſo, if this be ſeen only in the Eye, the other being yet pure, it is diſtinguiſhed from that Imagination and Clouds which by reaſon of Vapors offer themſelves to the Eye almoſt in the like manner, except that they do affect both Eyes equally.

An obſtruction of the Apple by ſnivel at length concreting into a Skin, called a ſuffuſion is the cauſe of want of Sight.

But at laſt that Snivel by degrees being more and more thickned and looſing its perſpicuity, is eaſier known by the ſight, and doth commonly manifeſt it ſelf, by a grey or aſh Colour, as the Oculiſts call it, and ſomwhat blotting out the black of the Eye, then alſo it doth more offend the ſight: becauſe when it is yet more ſoft and watriſh, it cannot yet be depreſt with a Needle, as ſhall be ſaid; which the ancients have named *Glaucoma*, from the grey colour which is a fault of the Cryſtalline Humor, and becauſe the Cryſtalline Humor being dyed with this Color doth carry before it a ſhew of an immature Suffuſion, ſome not knowing that, have made a Glaucoma properly called, the ſame with a Suffuſion.

But laſt of all, the forementioned Snivel, being wholly incraſſated and made white as we have formerly ſaid that bright things by drying do becom white, and looſe all their perſpecuity, ſo it happens here alſo, and then the ſight being wholly taken away, a perfect Blindneſs follows: unleſs by chance as I have often ſeen, a very little of the black do ſtill appear pointing or circularly in ſome part of it, or in its Compaſs, thorough which the Sparks of a little Light, do ſtill illuſtrate the Eye with an obſcure Light, by which notwithſtanding they can judg rightly of nothing; and this is called a confirmed Suffuſion, which they are wont to call ripe, if ſo be it can be exactly ſeen, becauſe then firſt of all the Chyrurgion may take it in hand; and they commonly call it a ſmall Skin and Web, becauſe being ſpread before the Apple like a Coat it intercepts the Light: not unlike in Colour and Tenacity to the skin grow-

ing to the white of an Egg that is boyled; and though of it ſelf it ſeems to be of no moment, yet it is wont to bring ſo great calamity to many men in the loſs of their ſight.

They refer the cauſe of this ſnivel growing to the apple to the riſing of a Vapor, or influxion of a humor, but it hath been ſhewed formerly that from a Vapor this Suffuſion is not cauſed, but thoſe ſimply called Imaginations, and how that comes to paſs, and truly it were the work of a man too much at leiſure, to confute with many words ſo vain an opinion.

But all the reſt do think thatit is cauſed by an influx of humor, and do vainly apply all their care to turn away this, as ſhal be explained, and therefore they fooliſhly call this affect a Catarhact, others a diſcent of waters into the Eyes; the which notwithſtanding can be proved by no reaſon, nor ſhown by demonſtration. For firſt of all if it were cauſed from an afflux of water or humor into the globe of the Eye, not only this ſmall matter would grow, and ſcarce as big as a Lentil, but the whol Globe of the Eye would be diſtended, and ſwell as it were Hydropical; beſides that there is found no empty ſpace in the Eye which can admit this water, ſeeing it is all every where ſo filled and diſtended with its proper humors bred there from the birth, that there is not room for one ſtrange drop, or can the horny coat by any means be diſtended or dilated more: and then by what way I pray, ſhal this water flow into the Eye, when that cannot be through Veins and Arteries which as hath been declared formerly, do no waies enter the inward parts of the Eye: but they ſay this comes to paſs through the Optick Nerve, an excellent ſhift indeed, to hold ſo noble a part fit to conveigh theſe excrements, through which nothing can paſs beſides the æthereal animal ſpirit. But grant that humor doth deſcend through this Nerve, How I pray can it be the hole of the Apple? when neither the Net-like Nerve can come to admit it into its cavity, which is wholly filled with the glaſſie humor, neither can it paſs through the Grapy Coat which every where about grows tranſverſly to the horny Coat with browy proceſſes: the which certainly, they who do patronize ſuch like opinions, conteſting with ſenſe and reaſon, if that the fabrick of the Eye were throughly known and perceived by them, with that dilgence as is meet, they ought firſt to conſider and rather to ſearch out the true waies through which the humors may be carried, than being ignorant of the proper cauſes of Diſeaſes alwaies to fly to that common refuge of Ignorance, Defluxions, and I know not what tranſpirability of the body.

But we having throughly ſearcht into theſe things a long time and much, and by long obſervation having more neerly contemplated innumerable ſuffuſions and their beginning, encreaſe, and pricking, we have found that the cauſe of this ſnivel doth proceed, from the watry humor acquiring ſome tenacity: for that as hath been ſaid formerly in the explication of that and other humors) ſeeing from the birth it is more tenacious (for we have ſeen alſo oftentimes that thoſe new born have brought this fault with them into the world, or it hath preſently followed upon them) either being dried by proceſs of age, in old age, in which it often happens; or ariſing from very hot Diſeaſes after Burning Feavers or Inflammations of the Eyes or from a vehement external heat in thoſe who perform moſt buſineſs ſitting by the fire and looking upon it; or the watry humor being thickened by the uſe of Collyries too hot & drying, and being made more viſcous as hath been ſaid, by degrees it grows to the brink of the membran: of this hole which it continually waſhes, and by little and little thickening in that part where it ſtops up the hole, as we ſee the ſaid Skin grows on Frumenty, for that reaſon as it hath been ſhewed being hardened it looſeth its brightneſs, and ſucceſſively but in a long time being converted into a Skin it takes away the ſight: which if it be depreſt, as ſhal be afterwards explained, the remaining portion of the watry humor, on whoſe ſuperficies it grew, being yet tranſparent, the Sight preſently returns, but if that alſo by much drying hath already loſt its brightneſs, as moſt commonly it happens, although the ſuperficies of it be taken off, nevertheleſs they remain blind, and by reaſon of that the Oculiſts labor wil be in vain.

The narrowneſs of the Apple is the cauſe of a Nyctalopy.

The too much narrowing or Imminution, as they call it, of that hole in the Grapy Coat wich is called the Apple, doth ſcarce take away the Sight, when even thorugh the narroweſt hole the light may enter the Eye, and illuminate it, as much as is ſufficient for ſeeing; whence we have obſerved that thoſe, who from their birth have happened to have a very ſmall Apple, nevertheleſs do ſee as acutely, as thoſe that have it large, may ſometimes more acutely, and things more diſtant: and as we can behold the Sun through a little hole with leſs offence to the Eye, ſo they are leſs offended than others, by an external brightneſs and great light; of which ſeeing they have a more abundant need to ſee wel, beyond others; it comes to paſs that a little before night, or darkneſs ſomwhat growing on, they ſee leſs, than by a ful light, & this is the chief cauſe of that Nyctalopie in which they ſee not ſufficiently, by a ſleight brightneſs of the Moon, Stars, or light ſet up: although this alſo as hath been formerly explained, may happen by reaſon of an obſcuration of the horny coat or humors, becauſe then alſo they have need of a greater light, that they may be illuminated, neither is a ſmal Apple obſerved in all thoſe that are Nyctalopous or cannot ſee in the Night.

Which as it is born with ſome, ſo it can ſcarce come to paſs, as ſome teach, that by reaſon of the ſpirits diſtending the Eye, or ſo great drineſs of the Globe of the Eye, that by that means the Apple may wholly fall together; as ſomtimes it happens from a wound of the Eye, the humors flowing forth, and the coats falling together, they become wholly blind, as hath been declared formerly.

A Dilatation of the Apple or a Mydriaſis *is the cauſe of an evening ſight.*

A Dilatation of the Apple called *Mydriaſis* by ſhedding plenty of light into the Eye, hinders the cleerneſs of the ſight, darkening it with too much brightneſs; and if the enlarging of it be great, in a light ſomwhat more obſcure and darkiſh they ſee more rightly than in that too much ſhining, and that by reaſon of the internal brightneſs of the Eye, ſufficiently illuminating the Air for ſeeing: as we have had an example of this rare diſeaſe, in a certain Foundling living in our Hoſpital the year 1625. who by day time, and in preſence of light was blind, but by night and in the dark, did ſee the ſmalleſt things; hence we have obſerved that amongſt Birds, the Owls; and amongſt Animals the Cat which alſo do ſee by night, can by twinckling contract the hole of the Apple, and of their own accord dilate it again, and ſo ſtreighten it at the brightneſs of the Light, or a Candle, that only an oblong black cleft doth appear, but by night and in the dark, dilate it ſo, that the whol former region of the Circle ſeems black, and for that cauſe Owls alſo receive obſcure Images, with a very

open

open Eye, and in the day time, that they may not be hurt by them too much appearing, they joyn them again, and covet darkneſs. For otherwiſe this largeneſs or narrowneſs of the Apple, makes little for the ſeeing things diſtant, better, or leſs, as ſome have thought; ſeeing theſe defects of ſeeing which we have called the yong & old mens Sights, may happen as we have often obſerved, both to thoſe endued with a long and a narrow Apple, and what I have obſerved in many, and in my ſelf, that though the Apple of one Eye be far larger in the ſame man, than that of the other Eye, yet the ſeeing is alike in both Eyes; neither could we obſerve yet, that though ſuch a dilatation of the Apple do happen, the things which are ſeen ſhould be repreſented leſs than they are, as ſome have been opinionated.

But for the moſt part this dilatation of the Apple befalls certain living Creatures from the birth, as thoſe for which it was convenient to ſee by night; and unleſs it altogether exceed a mean, otherwiſe than hath been ſaid, it doth no waies prejudice the ſeeing, but rather ſeems to bring ſome benefit, as one hath declared unto me; who ſeeing he had a moſt large Eye-ball, he could comprehend and know by his ſight without moving his head, not only thoſe things which were before his face, but thoſe things which were far apart on one ſide, which could not be ſeen by others, unleſs by bending the head that waies; the which I did ſo much the eaſier beleeve him telling me, ſeeing this hath happened to me my ſelf in my youth, and at one look at the Table I was able to ſee at once many ſitting round about, and to take notice of their geſtures; but if that by a wound or ſome other hurt, the apple of the eye be rather dilacerated than dilated, than upon that account, becauſe the humors are too much carried to the foreparts, as hath been formerly expounded, it ſooner offends the ſight than it can bring a change after that manner as hath been ſaid; from influx of humors as they have thought, it hath already been declared that it cannot come to paſs; but from a vehement impulſe of of the ſpirits by ſtraining, if the eye being dilated, the apple alſo were inlarged, yet the ſame ceaſing it would by and by return to its natural largeneſs.

The Cure.

The Cure of all theſe hurts of ſight, viz. of Blindneſs, an Amblyopy, of that which we have called the old and young mans ſight of a *Myopie*, *Nyctalopie*, evening ſight, of Error, Images, a *Scotoma*, *Vertigo* and the reſt, is ordered in relation to the cauſe, which is, as hath been ſaid either in the Brain, the affects of that bringing hurt not only to the ſight, but alſo to other Senſes; or privately and chiefly prejudicing the ſight, to wit, a Hurt, Contuſion, Drineſs, Refrigeration, Agitation and trouble of the ſpirits, or a repletion from a watery humor; or it is an affect of the Net-like Nerve cauſed by conſent; or Diſeaſes eſpecially organical in the humors & membranes of the eye, to wit, a defect of the humors of the Eye, the ſituation of the hole of the Grapy Coat or Apple, or a perverſion of the humors of the Eye, and a change of their ſubſtance, the ſmalneſs or too great largeneſs of the Apple: a white ſpeck appearing from a Suffuſion, *Albugo* or Skar, and a pannicle ſpred over the Eye, or a humor as Choler, Blood, matter collected in the Eye, concerning which we ſhal explain in order what is to be done and foretold in every one of them.

The Cure of the hurts of the ſight with the other ſenſes if they be by faule of the Brain.

If the hurt of Seeing be by fault of the Brain, and that be general not only vitiating the ſight, but alſo taking away, impairing, or depraving the other ſenſes alſo, both internal and external and by conſequence prejudicing alſo the ſight, the Cure, as alſo the whole handling of them hath been explained in theſe general hurts. As in an Apoplexy, Blindneſs hapening together with the other abolitions of the ſenſes; in a madneſs and Raving, Aparitions, Images, and Vertigoes which are ſupervenient to them alſo with other accidents; and in a weakneſs of the mind, the weakneſs of ſight which accompanies the defect of the internal ſenſes.

The Cure of the proper defects of the ſight if they be by reaſon of the optick Nerve yet lying in the Brain.

But if theſe diſeaſes conſiſting yet out of the Eye in the Brain or Optick Nerve do chiefly hurt the ſight, they ſhal be handled here, and according to the nature of the Cauſe the Cure or prediction muſt be ordered.

If therefore the ſight be taken away, by ſome eminent hurt, or by a Wound about the Eye, forced even to the Optick Nerve as we have ſaid hath ſometimes hapned no other hurt following it, that Blindneſs wil be incurable.

And if alſo blindneſs be induced, the Optick Nerve being contorted by Convulſions as hath been ſaid, unleſs the ſight return of its own accord within ſome few daies as I have ſeen it come to paſs, the Recovery is deſperate; as afterwards I have obſerved them to remain Blind the whole time of their life.

Neither wil there be any hopes of Cure if Blindneſs be left by too much drineſs of the Optick Nerve after moſt Burning Feavers, being thoſe things which we have ſaid ought to be applied outwardly to the Forehead and Head for to moiſten, in the weakneſs of the memory contracted by drineſs, although they be convenient here alſo, yet for the moſt part they profit little, and can hardly put forth their ſtrength unto the Nerve.

And alſo if Blindneſs be cauſed by external cold from Wind, or by the application of cold Oxyrrhodines, ſeeing cold is wholly an enemy to the Nerves, that hurt is almoſt incurable, yet the Forehead and Head muſt be fomented and anointed with things actually and potentially hot; and chiefly ſweet things muſt be applied to the Noſtrils which are hot, and do reach neerer even to the Nerve, the forms of which Remedies we have already explained, in a Stupidity cauſed by cold.

The Cure of a rare Vertigo happenning from the Arteries of the Brain being hardned.

Neither is there any health to be hoped for if that long continued Vertigo be cauſed by fault of the Arteries hardned, as we have ſaid hath ſomtimes been found; the which notwithſtanding ſeeing it can ſcarcely be gueſt at while the man liveth, to foretel any thing certainly of it, were raſhneſs, till after death diſſection being made, the cauſe of the evil being diſcovered, may excuſe the Phyſitian.

The Cure of a Vertigo cauſed by an agitation of the ſpirits of the Brain.

But if a Vertigo be cauſed by an Agitation of the ſpirits in the brain only, from an external cauſe by reaſon of a motion of the Body or only of the Mind, no other cauſe intrinſecally concurring, the cauſe ceaſing, that alſo ceaſeth of its own accord, and the ſooner if by a contrary motion made, the ſpirits be reduced and ſtopt; as if a Vertigo be cauſed by turning round of the body to the right or

left

left ſide, by an oppoſite motion to the left or right ſide, it ceaſeth the ſooner. In whom alſo lying on the Back doth good, the which notwithſtanding, if the Vertigo proceed from an internal cauſe or from drunkenneſs, it doth rather provoke it; if it ceaſe not ſo, Frictions of the extream parts do help, and Sleep comming upon it, takes it away.

The cure of a Vertigo, Scotoma and Imagination cauſed by Vapors.

But if this Agitation and Perturbation of the Spirits ariſe from Vapors carried upwards, whence are cauſed Vertigoes, and Scotomies and Imaginations, either ſeverally or together; then the Humors which are contained either in the Stomach, or the Meſaraick Veins about the Womb, or elſe where in the Habit of the Body, and ſomtimes in the Head it ſelf, from which theſe Vapors riſe, which we have ſaid were cholerick, ſanguine, impure rather then flegmatick (ſeeing we have ſhewed that Flegm doth cauſe a Vertigo and Amblyopy for another reaſon) muſt be purged forth, and diverted together with the Vapors, by letting of Blood, Scarifications, Frictions, Cauteries, Vomits, and Purges; and that with things given inwardly and applied outwardly: and by Courſe of life theſe Vapors muſt be inhibited, as followeth.

Letting of Blood by opening the Shoulder-vein of the Arm is good in the Plethorick not only if the fewel of the evil lie elſe where in the Blood, but alſo if either plenty or ſpirituous Blood abound in the head and be a Cauſe of the Vertigo; for ſeeing in the Cavities of the Brain, both the blood of the Arteries and Veins is confounded, by opening a Vein the ſpirituous blood alſo may be drawn forth, in which if the whol evil almoſt do lie, the principal ſcope of the Cure is in bleeding; and for that cauſe they commend alſo to open the jugulars in the Neck: T[illegible] which notwithſtanding cannot be done without danger, and fear of a great flux of Blood and Barrenneſs, if we beleeve *Hippocrates*; Nay, ſpirituous blood cauſing a Vertigo; moſt men do teach, that it cannot be cured, unleſs the Arteries behind the Eares be opened, and tis proved by experience, that after divers remedies a long time tryed in Vain, this kind of remedy hath helped at laſt, the which nevertheleſs ought not to be done, unleſs all things elſe have been firſt tried, and when we are certain of the cauſe, and we know that it doth proceed from that ſpirituous blood by the continual beating of the Arteries, as hath been ſaid, yet uſing the greateſt diligence, becauſe the Wound doth hardly grow together, the Arteries being firſt laid bare, that afterwards it may be tryed. Alſo a Vein may be opend in the Fore-head in a Vertigo ariſing from this cauſe, and in the Foot, if Vapors aſcend from thence; and if the Courſes were ſuppreſt, the Ankle Vein, eſpecially if the cauſe ſending up the Vapors lurke about the Veins of the Womb; upon which account the Hæmrhoids alſo are moſt profitablly provoked if the Fewel of the Evil be contained in the Meſaraicks. Scarifications for the ſame reaſon do good, being made inſtead of bleeding and after it, for Derivation, on the ſides of the Neck, Shoulders, Cupping-glaſſes being applied to, although the cauſe be in the Head, or from elſewhere be carried upwards by Vapors and Scarification in the Region of the Wriſt, or that outward part of the Hand which is betwixt the Thumb and the fore Finger is thought a peculiar remedy in the Vertigo the which alſo made in the extream parts is good, if an Air be felt to aſcend from thence, in that place from whence it is known firſt of all to ariſe.

Frictions ought to be made from the Neck by the Back-bone to the lower parts by degrees comming to the extream parts and rubbing them. For ſo the Vapors and Spirits are recalled; after which, that that collected in the Head may be diſcuſt, let the Head be rubbed with a new cloth (not hearing it, as otherwiſe they are wont to do, that there be no attraction of Vapors to the Head.)

And alſo if a Vapor proceed from ſome part, binding it with Ligatures, the Vapor may be hindered that it aſcend not.

A Cautery in a perſevering evil, or a Veſicatory which empties more humor, muſt be applied for greater diverſion ſake, upon the ſame account in the middle of the conuext part of the Head or behind the Eares, whether it be Actual or Potential; and ſomtimes alſo in the Feet or other places, if a Vapor be felt to riſe from thence.

A Vomit will help very much, if the matter in the Stomach or Meſaraick Veins eſpecially the Cholerick as hath been ſaid, doth ptoduce Vapors; in imaginations, Scotomies and Vertigoes proceeding thence; which muſt be cauſed firſt with the gentler, by and by with ſtronger, if the matter lurke in the Meſaraick Veins, many times repeated, if they are able to bear it.

Purges muſt be uſed in all thoſe Species, if the matter ſending forth Vapors conſiſt in the ſame firſt paſſages, or elſe where in ſome other ſeat of the body, and if ſuch an Evaporation ariſe in the Head from impure blood, that filth muſt be purged forth, fitting them rather for the drawing forth, of Cholerick, And impure humors from which theſe Vapors rather, which are ſubtile, are elevated, then for the purging of Flegm: of the Evacuation of which, if it be the cauſe of a Vertigo or weakneſs of ſight, we ſhall treat hereafter, having reſpect alſo in the interim to the conſtitution of the the Body, in the choice of them. But this will be performed by giving firſt of all ſome gentle Stomach Pills made of Aloes and the Hieræ, or a Bole.

Then we muſt firſt prepare the matter if it want preparation, and chiefly open Obſtructions, after this manner.

If the matter lie in the Stomach, and Choler, or crudity be the cauſe there, Take *of ſimple Oxymel, Honey of Roſes, of each one ounce; Syrup of wormwood Wine, Pomegranates, of each half an ounce; the waters of Wormwood, Marjoram, as much as is ſufficient.* Make a Julep.

Or if it lurke chiefly in the Meſaraick Veins, Take *of the Syrup of Succory, of the juyce of Endive, of each one ounce; of the two opening Roots half an ounce; the waters of Wormwood, Succory, as much as is ſufficient.* Make a Julep.

Or, give *Wormwood Wine* which eſpecially in thoſe, Species of a *Vertigo* is very much commended; and that either *ſimple* or in which the *opening Roots* and *Marjoram* and other *opening things* have been firſt infuſed.

Then he ſhall be purged with a ſtronger Medicine. As, Take *of Pills of Hiera or Maſtick half a dram, Cochiæ half a ſcruple, Oyl of Fennel, or Aniſe, or Caraways* (by reaſon of the Vapors) *one grain, Piony ſeeds four grains with white Wine.* Make Pills.

Or uſual ones may be made thus, of which let him take ſomtimes *two ſcruples*: Take *of Pills of Hieræ Compound, Aggregative, of each two drams, Agarick Trochiſcate, Rhubarb, of each one dram; ſeeds of Cummin, Piony, of each one ſcruple, with Syrup of Roſes ſolutive.* Make a Maſs for your uſe.

Or let him take this Bole; Take *of Caſſia three drams, the Hiera of Hermes two drams.* Mix them.

Or make a good quantity, of which let him take by intervals a *Bole of half an ounce*: Take *of Caſſia one ounce and*

and an half, the Hiera of Hermes one ounce, of the five kinds of Myrobolans of each two drams: Dodder of Time one dram, pouder of Peony root half a dram, Cummin seed one ſcruple, Syrup of Roſes ſolutive as much as ſufficient: make an *Electuary*.

Or give this Potion or Infuſion. Take *of Rhubarb one dram, Agarick two ſcruples, Citrine Myrobolans two drams, Wormwood one dram, Cinnamon half a dram, Ginger one ſcruple*, infuſe them in *thin white Wine*, ſtrain them and diſſolve *Syrup of Roſes ſolutive one ounce*, Give it.

Or thus, Take *of Agarick trochiſcate infuſed in Oxymel and ſtrained one dram, of Rhubarb infuſed in wine diluted with Wormwood and Bettony water, two drams*; *Cinnamon infuſed with Rhubarb half a dram, Syrup of Roſes ſolutive two ounces*: make a *Potion*.

In the Interim the Vapors muſt alwaies be repreſt, which in the Vertigo, Scotoma, and Imaginations do aſſail the Head, the place in the mean while being conſidered from whence they ariſe.

For if this be from the Stomach and Meſaraick Veins the following Electuary is convenient, which ſhal be given after Dinner and Supper, and ſometimes in the morning the quantity of a Cheſnut, as, Take *Conſerve of Roſes two ounces, Marjoram one ounce, Flowers of Peony half an ounce, Quinces candid one ounce, Citron pil half an ounce, one Emblick Myrobolan, the Rob of Currans* (in Cholerick bodies) *half an ounce, the pouder of Diacitonites without the ſpecies one dram, Coriander ſeed prepared one dram, Fennel, Peony root of each half a dram*; *Coral one dram, Maſtick half a ſcruple, with the Syrup of the Conſerve of Citron pill* make an *Electuary*.

Or let him uſe one ſpoonful of this pouder called *Poſt paſtum*, Take *of Coriander ſeed half covered with Sugar one ounce, Aniſe ſeed condite in like manner half an ounce, the pouder of Diacytonites without the ſpecies one dram, Diarrhodon Abbatis, Red Saunders, dry Citron pil, of each half a dram*; *Leaves of the greater Eyebright one ſcruple, Maſtich half a ſcruple, Lozenges of Sugar of Roſes two ounces*, make *Pouder*.

Lozenges may be made of *the pouder of Diacytonites without the ſpecies one dram, Red Coral half a dram, Shavings of Ivory one ſcruple, with Sugar diſſolved in Roſe water to two ounces*: make *Lozenges*.

A moſt excellent Remedy alſo to hinder Vapors is, if the Paroxyſm befall them faſting as it is wont to be, to give them meat, the which being taken it preſently grows mild, or the Vertigo, Imagination, Scotoma ceaſeth, and by this only ſome have been reſtored, ſhunning Faſting.

Sleep becauſe it diſcuſſeth Vapors doth help very much in theſe caſes,

Plaiſters, Cerecloaths are applied outwardly to the Region of the Stomach if the Vapors proceed from thence and the Meſaraick Veins, that they may hinder them; which they wear in the night.

As a Plaſter of Maſtick or ſome other made for the Stomach, malaxed with ſome aſtringent Oyl, or *Galens* Cerecloath for the Stomach.

Or ſuch a one, Take *of red Roſes, Leaves of Wormwood of each two drams*; *dried Citron pil, Labdanum of each half an ounce*; *Maſtich two drams*, Pouder them and with *Oyl of Quinces* or *Maſtich*, adding *Wax*, make *a Cerecloath*.

If theſe Vapors riſe from about the region of the Womb, let the ſame Plaſters of Maſtich or *pro matrice* be applied to that part, and let the Woman wear it for ſome time, unleſs the ſtoppage of the Courſes forbid it, for when they flow, they muſt be omitted.

If a Vapor aſcend like an Air from ſome other part of the Body as the Feet, or others, doth create a Vertigo, as hath been ſaid; then the waſhing of thoſe parts doth very much divert it, as alſo if it be done in other cauſes.

The which may be done thus, Take *of the Leaves of Sage, Roſemary, Celtick Spike, Groundpine, St. Johns wort, flowers of Chamomel, Roſes, Lavender, as much as wil ſuffice*, boyl them *in Wine* and *Lye*.

Afterwards let him anoint his Feet with the following Oyntment, Take *Oyl of Bays, Worms, Wall-flower, of each one ounce*; *Aqua Vitæ half an ounce, a little Salt*: boyl them for your uſe.

If neceſſity urge very much, Oxyrrhodines muſt be applied to the Head which may repel vapors, and if it continue, we muſt add things more ſtrongly aſtringent, as Juyce of Plantane,

And ſucceſſively ſuch a Cap may be worn, as, Take *of the roots of Galangal, the true Acorus, Citron pill, of each one dram*; *Coriander ſeed, two drams, Myrtles one dram, flowers of Roſes, Roſemary, of each half a dram*; *Cloves half a dram*, make *a Pouder for a Cap*.

Some have put Remedies upon the Eyes in Imaginations and Scotomaes, which we think ſuperfluous, ſeeing the Vapor doth no waies reach unto the Eyes.

In courſe of Diet let all things be moderate, the meat ſimple, not too much; alſo let them drink Wine ſparingly or diluted; let too much motion of the body be avoided and chiefly too much agitation or bowing down of the Head, and let them beware of looking on things wheeling about, or very bright; and let them abſtain from too much agitation of the mind by ſtudy and watching.

They think that Cryſtal worn is of very great force in a Vertigo, and for the ſame benefits ſake they drink out of a Cup made of it, or they put cryſtal into their Cups.

The Cure of a weakneſs of the ſight and Vertigo proceeding from a watry and flegmatick humor of the Brain.

It hath been ſaid that a Repletion of the Brain from a watry, ſerous, and flegmatick humor doth cauſe a Vertigo by its fluctuation and wind, and by an afflux of the ſame humor to the optick Nerve, Blindneſs doth ſometimes ariſe, or by an irrigation of it an Amblyopie, and beſides theſe hurts of the ſight which are by reaſon of the Brain, it hath been demonſtrated, that no other faults of the Eye prejudicing the ſight can be cauſed from flegm or any afflux of ſuch a humor which can neither enter the Net-like Nerve nor the Eye; and therefore we apply this Method of Cure only to theſe Diſeaſes which is due only to this cauſe, neither do we refer it as others have done, to Suffuſions or other affects of the Eye which alſo they beleeved did proceed from an afflux of flegm.

But here although ſuch a Cure be convenient, as is due to a Carus, Apoplexy, and other flegmatick Diſeaſes of the Brain, and therefore perhaps ought not any more to be repeated in this place, yet that we may underſtand after what manner they are to be applied to the ſight in theſe Diſeaſes, we wil here explain.

But a Vertigo ſpringing from thence is dangerous, if there be a great Repletion of the Head, ſuch as hath been demonſtrated, we have often found, which ſeeing it can hardly be taken away, ſomtimes it ends in a Carus and Apoplexy, the which it preſageth: as alſo an Amblyopie, if it happen from thence in ſpace of time is converted into blindneſs which ſometimes is wont to be at the firſt preſently from the beginning, the humor flowing abundantly: the prevention of which therefore in a Vertigo and Amblyopie ſpringing from thence we ſhal ſtudy to Remedy this following manner.

First we wil endeavor to take away thoſe excrementitious, ſerous and flegmatick humors of the Head, by Emptying, Revelling, and driving them from the brain; then by heating the brain which doth generate them, and again is moiſtned and cooled by them, and by ſtrengthening it, by thoſe things which are appropriate to it, the Nerves, and the Eyes; and alſo the hindring that the cauſe be not generated anew, or fomented: which ſhal be performed by Remedies applied inwardly and outwardly, by Purging by the ſtool by the Mouth, and Noſe, or by drawing away of Blood: Or by things applied to the Head, or other parts conſenting with it; or by giving things that alter, and by courſe of diet, not neglecting Amulets.

Purgations by the ſtool for drawing away of flegm from the Head, and for hindering that the cauſe be not generated anew, are thus methodically ordered.

A Goading and ſharp Clyſter is premiſed, the which alſo is profitably injected by intervals or weekly.

And in theſe hurts of the ſight it wil be thus more applicable. Take *of the freſh roots of Orrice, Peony, each two ounces; the herbs Centory the leſs, Betony, Rue, Eyebright, Fennel, of each one handful; flowers of Camomel, Lavender or french Lavender of each one pugil; Fennel ſeed two drams, Carawaies one dram, Senna* (which by a propriety is good for the Eyes) *half an ounce, Agarick tied in a rag three drams, Bran one pugil,* make a *Decoction,* diſſolve *of common Honey or Honey of Roſemary flowers one ounce, Hiera of Logadius or Hermes half an ounce, Oyl of Rue, Lillies, of each one ounce, Niter a little*; make a *Clyſter.*

The humor is prepared before Purging for ſome daies, by a Julep, or Decoction, or Wine.

A Julep ſhal be made thus, Take *of Honey of Roſemary flowers (inſtead of Honey of Roſes* or *Oxymel,* which by reaſon of the *Vinegar,* wil not be ſo profitable for the Nerves) *Syrup of French Lavender, of Betony, each one ounce and an half; the waters of Eyebright, Peony flowers, Fennel, Marjoram, each three ounces*; mix them, aromatize it with *Nutmeg* and *Cinnamon.*

Thus may be the Decoction for ſome Doſes, Take *of the roots of Orrice, Peony, each one ounce; the herbs Speedwel, Eyebright, Fennel, Roſemary, Mint, each one handful; flowers of Roſemary, French Lavender, Peony, each one pugil; ſeed of Fennel, Aniſe, each two drams; Carawaies one dram, Damask Prunes ten, Raiſons twenty,* boyl them and *in one pound and an half* infuſe *of the pouder of Galangal, Ginger, each one dram; Cinnamon two drams,* afterwards ſtrain them, adding *of the beſt Honey or Sugar as much as is ſufficient,* or *of the forementioned Syrups,* till it grow ſweet.

Or make a Wine when bitter things are added as Centory which here is very profitable, Take *of the Leaves of Eyebright, Speedwel, Centory, all dried, Fennel ſeed each half an ounce; Carawaies two drams, Nutmeg one dram,* bruiſe them, for one meaſure *of white Wine* for your uſe.

Afterwards Catharticks that purge flegm muſt be given, but ſuch as are appropriate to the ſight, as thoſe which have in them Senna and Fumitory, and of compounded ones thoſe which admit the juyce of Fennel.

Such as are the greater and leſſer *Pilulæ lucis,* ſo called beauſe they bring light to the Eyes, and thoſe alſo called *Arabicæ* and *ſine quibus*; and of Electuaries the greater and leſſer *Indum,* we may uſe theſe that follow.

Firſt of all Pils which he ought to take at midnight, if he be not unfit for ſwallowing of them, Take *of pils* ſine quibus *half a dram, Lucis the greater, the Arabick pils, pouder of Hiera of Coloquintida, each half a ſcruple; with Water of Eyebright, or juyce of Fennel,* make *Pills.*

Or let him take this Bole, Take *of Electuary Indum, the Hiera of Hermes, each two drams and an half, with Sugar* make a *Bole.*

Or Decoction, Take *of Fumitory, Eyebright each one handful; Senna half an ounce,* make *a Decoction in Water and Wine and Honey* (inſtead *of Hydromel* or *Oxymel*) infuſe *Agarick, Turbith, each one dram; Ginger one ſcruple, Sal-Gem half a ſcruple,* ſtrain it and diſſolve *Syrup of Fumitory compound one ounce,* make *a Potion.*

Or we may take one doſe of the following compoſitions and give it inſtead of theſe, for ſeeing in theſe diſeaſes of long continuance, we ought to uſe once in a month or week by courſe, Phlegmagoges, and in the interim Purgers appropriate to the ſight, ſometimes the Preparatives being repeated again, the following forms may be prepared for this uſe.

The Form of Pils is wont commonly to be more fit and uſual than the reſt, by which they may more commodiouſly ſwallow things that are ingrateful, which here are very neceſſary; by making a maſs for your uſe, the quantity of whoſe doſe ſhal be from two ſcruples to a dram, Take *of Aloes two drams, Turbith, Agarick, Rhubarb, Senna, each one dram; Myrrh, Maſtich, each half a ſcruple; Tartar, Salt Gem, each half a ſcruple; Ginger one ſcruple, ſeeds of Fennel, Rue, each one ſcruple; Caſtor ſix grains, with the juyce of Fennel and Rue,* make a maſs and if you add *Hiera of Coloquintida and a little Scammony* they wil work more ſtrongly.

Or make them thus of the uſual ones, Take *of the Pills* ſine quibus, *Aureæ, each one dram; Lucis the greater, Arabicarum, each half a dram; Pouder of Hiera of Coloquintida one ſcruple, Oyl of Fennel two drops, juyce of Fennel as much as is ſufficient,* make *a maſs.*

If he had rather have an Electuary make ſuch a one, of which let him take from three drams to half an ounce, at once by it ſelf or diſſolving it with Eyebright and Fennel water. Take *of Electuary Indum the greater, Diaphœnicon each half an ounce; Hiera of Hermes five drams, Fennel ſeed one dram, Cinnamon, Cloves, each half a dram; with french Lavendar,* make *an Electuary.*

If he delight more in a Pouder, let the third part of this following be given with a Julep made of Syrup of French Layender, and Eyebright water, Take *of Turbith, two drams, Senna half an ounce, Tartar two drams, Ginger half a dram, Fennel ſeed one dram, Scammony one ſcruple, Sugar one ounce,* mix them, make *a Pouder.*

A uſual Syrup wil do it, prepared after the following manner, from which firſt of all a Decoction being made may be given for three daies together, and afterwards out of all the ſame in double quantity a Syrup may be boyled to be kept for uſe, Take *of the roots of Fennel one ounce, Orrice half an ounce, Acorus, Galangal, Elecampane each two drams; Liquoriſh ſix drams, the herbs Fennel, Vervain, Eyebright, Betony Fumitory, each one handful; Time, Hyſop, each one handful and an half; flowers of French Lavender, Roſemary, Borrage, each one pugil; ſeeds of Fennel two drams, Carawaies, Aniſe, Hartwort, Mountain Seſeli of Marſelles, Rue, each one dram; Raiſons twenty, Senna two ounces, Oak-fern, wild Saffron, each one ounce and an half; Agarick trochiſcate half an ounce, Turbith two drams* (for the rich you may add *Rhubarb*) *Ginger one dram, Cinnamon two drams,* make a Decoction, add *Sugar two ounces, for three doſes,* or all things being doubled as hath been ſaid, let it be reduced into the form of *a Syrup.*

A purging Wine is more pleaſing to ſome, and more effectual, ſeeing it is made only by maceration, or with a light boyling, and bitter things given after this manner, are not ſo ungrateful, which after the ſame

manner

manner as the Syrup may be drunk three daies together, and afterwards the Pouder being divided into three parts, and one alwaies being infused in the Wine for one dose may so be given by course without corruption.

Which Pouder for to steep may be made thus: Take *of Wormwood two drams, Centory one dram, Eybright, Verveine, Rue, of each three drams; Seeds of Fennel two drams, of Rue one dram, Senna one ounce, Turbith two drams, Agarick half an ounce, Barke of black Hellebore two drams, Tartar two drams, Ginger one dram*: Make a Pouder for the Wine.

After the Body hath been purged, we must derive it from the Brain, by the Mouth and Nostrils as through a way destained for the purging forth of Flegm; which purging is so much the more convenient because it presently purgeth from the very seat affected it self, those Excrements of the Brain collected there, to which seat this way leads strait; and this is done by Head purgers or those called *Apophlegmatisms* used in the morning fasting, in the form of an *Errhine*, *Masticatory* or *Gargil*; of which the following may be here used.

Errhines which are attracted with the Nostrils, shall be made thus: Take *of the iuyces of red Pimpernel, of the roots of Beets* or *Mercury, Marioram, of each one ounce; Fennel, Rue, of each one ounce; white Wine half an ounce*; Mix them: *if the juyce of Sowbread* can be had, and be added it would be more effectual, as also *Gauls*, but if they be attracted into the Jaws they offend them with too great bitterness.

When they do not willingly use Errhines, anointing of the Nostrils is good, by daubbing them even to the very bottom, with some of the stronger forementiond juyces especially of Sowbread.

Or with this Liniment: Take *of the juyces of Marjoram, Sowbread, the roots of Beets or Mercury, of each two drams; Elaterium six grains, Oyl of Orrice three drams, Honey and Turpentine a little*, that you may make it like *Nutritum*.

Let him chew the following Masticatory spitting often; Take *of the Roots of Pellitory of Spain, the seeds of Staves-acre, of each one dram, Cubebs, Pepper, Fennel seed, of each half a dram; Marjoram one scruple, Mastick two drams*, receive them in the *Pulp of Raysons* adding a little *Wax* if they stick not, to make *final Balls*.

Such a Gargle will be convenient, with which he may wash his mouth and Gargle his Throat, Take *of the Roots of Pellitory of Spain, Orrice, Angelico or Masterwort, of each half an ounce; the Herbs Marjoram, Sage, Hyssop, Rue, Ey-bright, of each one handful; flowers of Lavender, Rosemary, of each one pugil; seeds of Fennel, Rue, of each two drams; Nutmegs two dram*; Let them boyl in *Wine* and *Water*, adding *Honey as much as is sufficient*: And make a Gargel.

By drawing of blood by a Vein opend we cannot turne forth the Flegm from the Head, unless it be Flegmatick in the Brain, and so by drawing it out we do by this means in some manner substract the matter that did generate these Flegmatick Excrements, which notwithstanding is not to be done except in the Plethorick and to whom it is accustomary and whose blood appears very impure, unless some other Disease joyned with it as a pain of the Head, do perswade it.

And also that revulsion of the blood to another part, which is done by Scarification will do good upon no other account, but as by the attraction of Cupping-glasses applied, the serous humors also are emptied too, as shall by and by be explained.

Remedies are applied to the Head that these Excrementitious humors, which are the conjunct or Antecedent cause of the Disease, may be altered, discust and called forth, and the part it self may be strengthend too, and that after divers manners.

Lotions of the Head being somtimes made, are thus convenient, which being very appropriate do consume the Humor. Take *of the root of Orrice, Bay* or *Galangal, of each one ounce; the leaves of Marjoram, Rue, Sage, the tops of Fennel, and Rosemary, Verveine, Celandine, Eybright, Betony, Ground-pine, of each one handful; Flowers of Chamomel, Lavender, French Lavender, of each one pugil; Berries of Bayes, Juniper, of each one pugil; Fennel seed half an ounce, Rue one dram, Senna one ounce, Agarick three drams*: Make a Decoction in a Lye, made *of the Ashes of Juniper, Roses, Bayes*, adding a fourth part of *white Wine* for a Lye.

A Cap performeth the same but successively, being worn, especially by night, stuffed with these things following, which also breaths forth a pleasant smel: Take *of the Roots of Orrice, Angelica, of each two drams, the true Acorus, Galangal, of each one dram; the Leaves of Marjoram, Rosemary, flowers of Roses, Lavender, of each half a dram; Nutmeg, Cloves, of each one dram; Coriander seed prepared one dram and an half, Gith half a dram*. Make a Pouder for a Cap, the which also if it be strained on the Hairs somtimes doth work more powerfully.

Suffumigations do the same, whose vertue enters the Head and dries the better, whose closets, and Caps tis better to suffumigate, then their Nostrils, for thus they would move a Vertigo and hurt the sight.

Which prepared after divers manners, and being made of Juniper berries, they are also appropriate to the sight. *Dioscorides* writes that smelling to Galbanum doth take away the fits of the *Vertiginous*.

Lotions of the Feet being somtimes used, by a certain communion with the Head, do very much divert the Excrements from it, and strengthen the Head; which may be prepared of the same things, with which we have said the Head ought to be washt, or also with other lyes hot, sweet, especially Cephalick things being first first boyled in them.

Vesicatories and Cauteries do more strongly call forth serous Humors, and the Excrements of the Brain, applied to the upper part of the Head, or behind the Ears or in the Neck.

A Puncture made in the Skin of the Neck and a string run through it, which they call *a seton* or *Setaceum* doth the same.

And *Hollerius* writes that Scarification made in the hinder part of the Head with Cupping-glasses applied, hath somtimes suddainly restored the sight lost by reason of the Optick Nerve, even whiles the Cupping-glass hath yet stuck on.

The same things given inwardly in a Vertigo and weakness of sight proceeding from flegm, do agree with both, the which ought to be appropriate to the Head and Eyes, and to heat and strengthen them and to hinder the production of flegm by helping the first and third Concoction, and especially to repress Vapors which by oppressing the head do hinder the fit and hurt the sight and to discuss those as also wind; which are used in divers forms and manners.

Some things given in Bread do good, as if seeds of Carawaies, Fennel and Mace be mixt with it in working, or if Ginger, Cloves bruised, with *Aqua vitæ* poured to it, be added to it in like manner, which *Paracelsus* did very much approve off.

And also the other meats may be season'd with these, or such a Pouder be prepared for the Meat: Take *of Annis, Fennel seed; of each two drams, Carawaies, Mace, of each one dram; Cinnamon three drams, Sugar two*

ounces,

ounces, make *a Pouder*, to be ſtrewed on *Rice* or other *Meats*.

But ſuch a one may be made, which is uſed with Meats, or with a potched Egg. Take *of Salt one ounce, Nutmeg, Mace, Caraway ſeed, Leaves of Eyebright, Marjoram, each half a dram*; mix them.

Other moſt effectual Pouders are divers waies made thus, to be given themſelves in the morning, or with ſome particular water as of Eyebright mixt with Wine (ſeeing Waters given alone, are not ſo grateful or fit for the Stomach) of which this ſingular one hath oftentimes been happily uſed, as Take *of Mace two drams, Cinnamon one dram, Leaves of Eyebright one ounce, Sugar the weight of them all*, give *two drams*.

Another very profitable if the Vertigo doth threaten an Epilepſie, Take *of the aſhes of Swallows, a Mans Skul each two drams*; *Viper half a dram, Fennel ſeed two drams, Caraways one dram, Peony, Mace, each half a dram, Cubebs one ſcruple, Leaves of Eyebright, Marjoram, each two ſcruples*; *Lozenges or Sugar of Roſes the weight of them all*, make *a Pouder*.

Of thoſe mentioned Lozenges, may be made, as alſo of the uſual ſpecies, eſpecially of Diatrion Piperion, Diacuminum, Dianiſum, Arromaticum Roſatum, Diagalanga, Roſata Novella, Diambra, Diamoſchum, adding of thoſe that are more temperate, Diarrhodon, Trionſantalon, the Cordial ſpecies and of Gems.

After meals Pouders are uſed eſpecially to drive away Vapors and to order a good concoction, after this manner, Take *of the following ſeeds half coverd with Sugar, Coriander one ounce, Aniſe half an ounce, Fennel two drams, Caraways, Cubebs condited alſo each one dram and an half*; *Leaves of Eybright, Marjoram, red Roſes each one dram and an half*; *Cinnamon three drams*; *Mace half a dram, the ſpecies Diacitonites cum ſpecibus one dram, Sugar the weight of them all*, make *a Pouder*, let him take one ſpoonful.

Some add to the pouders after Meals, Senna two ſcruples, and ſo they think the Vapors are more ſtrongly repreſt.

Others prepare them thus of Rhubarb in manner following, to repreſs Vapors yet more powerfully, Take *of Rhubarb two drams, Cammels hey, Origany each one dram*; *Tables of Sugar of Roſes two ounces with ſyrup of Mint* make *a mixture*, let him take one ſpoonful one hour before Dinner.

If he going to bed doth ſwallow two or three grains of Maſtich, the Vapors are very much repreſſed.

In like manner dry Sugard Confections are taken after meat, made of ſeeds of Coriander, Senna, Aniſe, Carawaies, Cummin and Cubebs covered with Sugar, Citron pil and others.

But alſo the bare ſeed of Fennel or Carawaies, or Juniper berries eaten in the morning do good in a Vertigo and weakneſs of the ſight, eſpecially if afterwards they ſo receive their breath with their hands before their mouth, that thence it aſcend upwards to the Eyes.

The uſual Electuaries are approved of to be taken in the morning, as Treacle, Mithridate, Aſyncritum, if they be very old. Alſo the Tryphera of King *Sabor*, and *Hollerius* his Electuarium Regium, by themſelves or mixt and taken with other things.

Of the other Conſerves and Conditures that are kept and are convenient here, we may make ſuch an Electuary, Take *of the Conſerves of Sage, of Roſemary flowers, Marjoram, French Lavender, Lavender, Betony, flowers of Clove Gilly-flowers, Groundpine, each half an ounce*; *of Roſes, Borrage, Diacorus, each one ounce*; *Emblick Myrobolans condited one, Citron pill one ounce, Leaves of Eybright, Organe, each one dram*; *Fennel ſeed one dram and an half, with the Syrup of Green Ginger* make an *Electuary*, let him take in the morning the quantity of a Cheſnut.

Or the following Confection which is moſt effectual may be made thus. Take *of the roots of Peony Miſſleto of the Oak, each one dram*; *the leaves of Eyebright, three drams, Marjoram, Roſemary flowers, each two drams*; *Organy one dram, Fennel ſeed two drams, Aniſe, Carawaies, each one dram*; *Cummin, Hartwort, Baſil, Peony, each half a dram, Cubebs, Mace, Cloves, Cinnamon each half a dram*; *Corral two ſcruples, Pearl half a ſcruple, the Skul of a Man one dram, Ivory half a dram*, make *a Pouder*, mix it with *Honey of Roſemary flowers* or with *the juyce* boyled, let him take in the morning, the quantity of a Nutmeg.

Stilled Waters are commended which may be taken by themſelves or after other things, as Cinnamon Water ſomtimes taken.

And ſuch a one may be provided, Take *of Vervain, Eyebright, Rue, Marjoram, Groundpine, each half an ounce*; *ſeeds of Fennel two drams, Cinnamon half an ounce*, ſteep them *in Mallago Wine* and diſtil them, let him take ſomtimes one ſpoonful, to which you may add Sugar, that it may be the more grateful; the reſt you ſhal find in the cold Diſeaſes of the Head.

The Chymiſts magnifie the Salts, Eſſences, and Oyls of the forementioned things.

As concerning the Courſe of life that is neceſſary to the conſervation of life, it ſhal be ſo ordered, that the cauſe of theſe affects be not augmented by it, but rather diminiſhed, and the ſymptoms themſelves be mitigated, which wil be done by temperance and mediocrity in all things, of which we have ſpoken already, as alſo of the Amulets which are agreeable to the Sight alſo, in the former Cure, of the Cauſe of a Vertigo the other Remedies of it we ſhal deſcribe by and by in explaining the Oxydorcical or ſight-cleering Medicaments.

The Cure of the want of ſight by reaſon of the Net-like Nerve in the Eye affected by conſent.

The Net-like Nerve being affected by conſent, which is made for the ſpirits ſake with which it ought to abound; if this come to paſs by reaſon of the influx of the ſpirit hindred, by occaſion of the Brain and the Optick Nerve growing to it, what muſt be foretold and acted, hath been already explained in their diſeaſes.

And if Blindneſs be cauſed by preſſing of the Eye the ſpirits flying back and ſtaying for a while, by and by that ceaſeth of its own accord, the ſpirits returning back again, unleſs there have been ſome eminent hurt cauſed.

But if they being laid aſleep in the Nerve by reaſon of long continued darkneſs cannot for a while enjoy the light which is at length offerd to them, and they are Blind or dark-ſighted, then the ſpirits muſt be raiſed again and brought into act with Light, by degrees not by too bright an one at firſt, by and by offering a greater light, that ſo by little and little they may accuſtome to endure, until they come again unto the perfect cuſtome of ſeeing.

But the contrary muſt be done in thoſe whoſe ſight is darkned by too much brightneſs, that they may the ſooner and truer receive the uſe of it, to wit, by offering them Darkneſs by degrees, firſt placing them in the ſhade then in a more obſcure place, at laſt for a while in the dark it ſelf.

Which cuſtom of Light and darkneſs in them both being reduced by degrees, unleſs it do good, there is danger of a perſevering blindneſs or dulneſs of ſight the which we ought to foretel, not neglecting in the mean time ſight-clearing Remedies.

But

But if the Net-like Nerve be affected by consent, because it is destitute of the external light, and that ceaseth by reason of darkness induced in the air, by and by, by the brightness of the Sun or fire (besides which nothing hitherto hath been found out, which can sufficiently do it) that being illuminated again, the light returns, and the Eye sees again.

But if the light be withdrawn from it, by the impediment of the humors or Membranes of the Eye, the Cure shal be declared in their faults.

The Cure of Blindness from a defect of the humors of the Eye.

If a defect of humors of the Eye cause Blindness, all the humors falling forth together, through a Wound or Ulcer, nothing must be attempted here besides the Cure of the Wound and Ulcer, which shal be explained in the pains of the Eyes, and the evil must be foretold to be incurable.

The which also is to be done and said, if only the watry humor be poured forth, seeing it cannot be repaired; unless by chance, if a narrow puncture being made in the eye, either by chance or purposely, by reason of taking away a Suffusion, the watry humor threaten a flowing forth (the which notwithstanding scarce comes to pass, if the Needle be thin and drawn forth gently) then shutting close the Eye-lids and afterwards pressing the Eye and laying astringent things upon it, and a Roul applying (as we shal declare by and by in pricking a Suffusion) we repress the flowing forth of the humor, til the hole grow together again.

But some part only of the watry humor being poured forth out of a Wound, or being wasted by Diseases or Age, so that it hurt the sight if it be little, and there is yet no other fault in the Eye adjoyned. In young folks in whom that humor may be repaired by the nourishment of the Eye, we may yet Hope wel, and commit it to nature, but in other there is no Good to be judged.

The Cure of some impediments of the sight and of squinting by reason of the situation of the Apple contorted.

If the Perversion of the natural situation of the structure of the Eye do hurt the sight, and the whol Eye be so contorted, that the apple stand not forth in the middle seat of the forepart of the Eye, but be hidden in either side, as we have said hath sometimes come to pass by a Wound, that being thrust to the inner part of the Nose, it could not see but through it; or otherwise from the Birth, the Eye being inverted it is so coverd with the Eye-brows that the Sight is hindered, these faults can by no means be amended; as neither that, if from the first Nativity the Apple being not altogether hid, but yet enclining too much to one side, the Eye being as it were neer Convulsed, or otherwise drawn thither doth give occasion for a squinting as hath been said; the which also are let alone seeing they little or nothing prejudice the sight.

The Cure of some hurts of the sight & of squinting from the bowing of the crystalline humor or motion of it to the side.

But if that the Crystalline humor by some means bowed or a little way drawn from the Circumference of it, doth breed a weakness or Error of the sight, or be one of the causes of a Squinting; then if this were suddenly done by some violent cause, unless by and by of its own accord it recover its natural situation, it is now impossible to effect by art; and by so much the less, if this fault be contracted from the Birth.

But if that the same crystalline humor otherwise placed right, except that a little going backwards from the forepart which it ought naturally to occupy, possessing the exact middle or more hinder region of the Eye, doth induce that sight in which they do not rightly see things a little more distant, and for that cause they are compelled to apply things neerer or close to their Eyes; seeing this for the most part happens from the birth, and we cannot reduce the humor into its natural state, it is impossible to alter this seeing, unless it be changed by course of Age, by that long continued bowing down of the head towards the fore parts the whol life time, the crystalline humor alwaies bearing forwards and by degrees being brought thither: as I have often found by experience, both in others and my self, that this seeing, is changed when they grow old, so that then they can see things better at a distance, than when they are yonger; and then this benefit accrews in the correction of this fault (if so be it be a fault, seeing what is lost in the sight for knowing of things more distant, is gained by it in more rightly discerning of things neer) that when necessity requires to know things far distant, we can by applying a most bright prospective made of a thicker Crystal Glass which represents things to the Eye lesser than they are, correct this defect of the inner prospective, to wit, the crystalline humor, because it is too neer to the net-like Nerve and so obtain in Seeing that which we desire: the which Prospective notwithstanding, it is not requisite should be alwaies of one kind, but as the crystalline humor is more or less gone backwards, it ought to be applied more or less neer to the Eye, and to be less, or much more thick; as we see in those that are called *Myopes* some are convenient for some, not others, and yet not much different, as experience shews us this, that what Glass ought to be chosen, is rather to be done by trying it by the Eye than by any explicable description, unless they that make them, know how to do it.

The Cure of those sights by which they see not things unless very neer; or by which they see things distant better than those neer, by the carrying of the crystalline humor forwards or backwards.

But as this sight springing from the Birth can no waies be changed, but only be corrected by another Instrument applied, that more grievous impediment of the sight by process of again which they cannot rightly see things neer hand, but better if they be far removed from the Eye, which we have said doth come to pass by the crystalline humor carried too much forward, cannot be amended any other way than by a thin Glass spectacle representing things to the Eye greater than they are; the which they having continual use of, that they may see handle and read the lesser things, they alwaies carry about them; and two Glasses are so formed in a frame, that fastning such an Instrument to the ridg of the Nose, by the great mercy of God they can use it to the right discerning of things.

The Cure of Nyctalopy *proceeding from an obscure crystalline humor.*

The Crystalline humor being made more solid or obscure if it induce that weakness of sight in which, darkness growing a little on they see obscurely or nothing, or somtimes that being wholly hardned they become blind it cannot be corrected by Remedies nor Spectacles seeing they cannot bring brightness unto it.

The Cure of a Nyctalopy *from the narrowness of the Apple.*

A too small and narrow hole of the Grapy Coat called the *Pupilla* if a too large hole effect that the sight be easily darkened with too much light, and it discern

more rightly in a darker place; because this fault is Original also it cannot be mended neither by Medicines nor Spectacles; because the cause is in the Membrane and not the humor unless in as much as they whose sight is offended with brightness, may be prevented from too much light by partly shutting up their dwellings, places, or from the brightness of a candle by interposing some glassy Obstacle, at night while they read, or earnestly behold some other thing, that they may not molest the sight.

The Cure of the evening sight from the largness of the Apple,

Although many do attempt to Cure these and other faults formerly mention'd, no waies appearing in the Eye (being ignorant of the true cause of them, and referring all things to the thickness of the Spirits and Defluxions) and for gains sake, do rashly promise that they will do it; in Vain tormenting the sick with purges and other things and applying Eye clearers: The which notwithstanding we may use, if we are minded to try, let the event be what it will: those things which can no waies hurt, but may be used without trouble: of which sort you will find many in the remedies which are proposed almost the same, both in a weakness of the sight and *Nyctalopy* and evening sight and *Myopsie*; of which we will add these few examples of our own.

Oxydorcical remedies which are convenient to restore the sight in its various hurts are here explained in general

If at any time it be needful to administer purges either because the Body otherwise hath need of Evacuation or by reason of the Stomach from whence Vapors carried upwards do also prejudice the Sight or for some other causes rather then by reason of the Disease in the Eye which of it self doth no waies require Pugers; they must be made according to the Cacochymy abounding in the Body.

Yet they are chiefly to be made choice off, which amongst Purgers are appropriate to the Eye, as Senna, which we have formerly said both taken and applied, doth by its whol property refresh the sight; Fumitory also, which as is reported doth clarifie the sight.

Of which we may prepare such a Composition, as this following; adding also other things appropriate to the sight: Take *of the leaves of Senna one ounce, dried Fumitory half an ounce, Dodder of Time two drams, Eybright, Germander, of each one dram and an half; Fennel seed two drams, Mountain Heartwort one dram, flowers of Rosemary, French Lavender, of each one dram and an half*: Make a Decoction in Goats Whey, infuse *Rhubarb two drams, Cinnamon, Spike, long Pepper, of each half a dram*; Or for the Flegmatiek, *Agarick, Turbith, of each one dram and an half; Ginger half a dram, Salt Ammoniack half a scruple*, strain it; add *Syrup of Fumitory and Roses solutive, of each one ounce and an half*: Make a Potion for two Doses.

Let the younger sort drink for some daies only *Senna* and *fiesh Fumitory* with *Fennel seed* diluted in *Goats Whey*.

They use also stonger Compositions, and those flegm purgers for the most part, because they thought all those affects did proceed from a defluxion of flegm, the which may be used if otherwise it abound in the Head, and also prejudice the Nerves, as we have said formerly in a Weakness of the Sight and Vertigo, from Flegm of the Brain.

We must make choice off, *Pilulæ Lucii, Arabicæ, Electuary Indum*, and others especially fitted for the Sight.

Of things taken inwardly which are appropriate to the sight and do help the Head and Stomach, we may make forms thus.

The which if we would use amongst nourishments let the Meats be often season'd with the following Pouders and Salts.

A profitable Aromatick Pouder with which the meats are season'd instead of other Spices: fitted for the sight: Take *of Cinnamon three drams, Cloves one dram, Nutmeg or Mace half a dram, long and black Pepper, Ginger, of each one scruple; Salt one ounce and an half*: Mix them.

Neither are Radish *or* Mustard so to be feared amongst Junkets; because as hath been shewed in the Remedies they help the Sight by a propriety, and being taken upon that account, they do good rather then harm.

The use of rapes boyled, especially with Caraway seed, as our Country men are wont to prepare them, is very convenient, because they are appropriate.

Eybright Wine, is wonderfully commended by all; which either is made simple by infusing the dried leaves of it in Wine or new Wine whiles it is hot; or that it may be more effectual and pleasing by mixing Wormwood and Fennel roots, because our Country men are rather delighted with Wormwood Wine, and *Dioscorides* reckons up Wormwood amongst the Sight-quickners.

Distilled waters must somtimes be taken, which may be prepared thus, profitable for that purpose: Take *of the waters of Rosemary flowers, the Herbs Fennel, Eybright, of each two drams; Cinnamon water half an ounce, Aqua vitæ two ounces, Lozenges of Sugar, of Roses as much as you please*, if you will; Mix them: let him take from *half an ounce to one ounce*.

More Compound waters: Take *of the fresh roots of Radish one ounce and an half, of Fennel one ounce, of Celandine, Avens of each half an ounce, the Herbs Eybright, Vervain, Rue, Celandine, Germander, Fennel, of each three drams; Time, Sage, Marjoram, Savory, of each two drams; Rosemary flowers three drams, of French Lavender, St. Johnswort, of each one dram; Fennel seed three drams, Mountain Hart-wort two drams, Caraways one dram, the Liver of a Goat sliced with the filth and Gall sticking to it half a pound, Cinnamon half an ounce, Cloves two drams, Nutmeg one dram, long Pepper one dram*: Bruise those things that are to be bruised and sprinkle them with white Wine, distil them, and let him take part of it by it self or diluted with other Water, if it inflame too much.

The Pouders which are taken in the morning by themselves or with a crust of bread dipe in Wine, or going to bed also, are made thus: Take *of Leaves of Eybright two drams, of Marjoram one dram, Rue half a dram, Rosemary flowers one dram, the seed of Fennel two drams, of Rapes one dram and an half, mountain Hartwart one dram, Caraways, Bay-berries, of each half a dram, Cinnamon one dram and an half, Nutmeg, Cloves, of each half a dram, long and black Pepper, Ginger, of each one scruple, Curral one dram, the Ashes of the Heads of Swallowes or Serpents half a dram, Sugar the double weight of them all*: Make a Pouder.

Lozenges may be made of this *Pouder* if you form *one dram* of that, with *one ounce of Sugar*, Dissolved *in Fennel Water*, adding *some drops of Oyl of Fennel*.

Which also being made *only with Oyl of Fennel mixt with Sugar*, are convenient here.

An Electuary shall be made of the same *Pouder* if you receive it in *Skim'd Honey*; Boyled *with Wine or convenient waters, or Sugar into the form of a Syrup*, with the same *Waters* in the same measure or more plentiful (if any one desire to have it so more grateful to the Palate.)

Or,

Or after this manner prepared of the Juyces, which are more effectual then the Leaves of the Plants: Take *of the clarified juyces of Fennel, Eybright, Vervain, of each one ounce and an half*; *Marjoram, Rue, of each one ounce*; *Honey boyled off with Wine six ounces*, or *so much Sugar*: Boyl them with the Juyces to a consistence; adding, *of the Conserve of flowers of Rosemary, Eybright, of each half an ounce*; *the flowers of Sage, and French Lavender, of each two drams*; *Nutmegs condite two, Cinamon three drams, Cloves, Nutmeg, Mace, of each one dram*; *long Pepper, Cubebs, of each half a dram*; *seeds of Fennel one dram and an half*; *Mountain Hart-wort one dram, the dried root of Celandine or its Leaves one dram, Species Diambræ, Rosatæ Novellæ, of each half a dram*: Mix them, make an Electuary.

Pouders or Confections to be taken after feeding or meat are allowed off, especially if Vapors also be troublesome; As, Take *the sugar'd confections of Fennel seed one ounce, Coriander, Annis, Carawaies, the seeds of Rapes or Turneps cover'd with Sugar, of each half an ounce*; *Rocket seed two drams*: Mix them, let him take one spoonful after meals.

Or, Let there be added *of Liquoriss roots scraped half an ounce, Galangal sliced and Citron pill alsomost thinly sliced, of each one dram*; *Cinnamon one dram and an half, leaves of Eybright one dram, red Roses, Marjoram, of each half a dram*; *Curral one dram, shavings of Ivory half a dram, Species Diacytontes sine speciebus one dram, Sugar the equal weight with those things are not cover'd with Sugar*: Make a dry Confection.

The Remedies to be applied to the Eyes, if they do not too much affect them, are put into them, but if they be very strong especially when they are used upon a hazard, without any respect to the cause, they are more rightly applied outwardly to the Eylids least some new affect may be caused by them; and if they strain them, wash them again in the morning with Fennel and Eybright waters, which are made as followeth.

Of the Waters alone after this manner: Take *of the Waters of Eybright, Vervain, Celandine; Fennel, Rue,* Mix together, or Dilstilled together, equal parts, let him put it often into the Eyes, or let him wash them in the morning with these waters, adding sometimes a little Rose-Water,

If a darkness be from the thickness of the Coats the water of Honey is very convenient.

Or thus: Take *of the fresh Herbs of Fennel, Rue, Eybright, Vervain, Celandine, wild Lettice, of each one handful*; *flowers of Rosemary, Sage, Roses, of each one pugil*; *Fennel seed two drams, Mountain Hart-wort one dram, Juniper berries two drams, Cloves, long Pepper, of each half a dram*; *Sarcocol, Aloes Socotorine, of each two drams*; *Camphyre, white Vitriol, of each half a dram*; Bruise them and sprinkle them with a *Boys Urine and white Wine*; Till they are reduced into the form of a past; adding, (especially for a *Nyctilopy*) *the Liver of a He or She Goat sliced half a pound, leaving out the Gall, Hens Galls one dram, Honey of Rosemary flowers one dram*: Mix them and distil them for your use.

Waters or Liquors are made thus by long infusion without distillation: Take *of the juyces of Fennel, Rue, Vervain, Celandine, sour Pomgranates, wild Lettice, of each one ounce*; *of the filth which flowes from the Liver of a she Goat, while it is roasted with the Gall half an onnce, the Gall of Hens or Partridg one dram, Sarcocol steeped in the juyce of Fennel, Socotorine Aloes, of each one dram*; *Honey, Sugar-candy, of each half an ounce*; *Camphyre half a scruple, white Vitriol one scruple, Tutty one dram and an half, Pearl half a dram, Golden dazes two, long Pepper, Cloves, Ligum Aloes, of each one dram*; add, *of a Boys Urine and white Wine, of each three drams*: Let them steep a long time in a glazed Vessel stopped, either in the Sun, or in a furnace, afterwads set them a part for your use.

Somtimes we anoynt the Eylids with juyces, or we drop them into the Eyes, after this manner: Take *of the juyces of Fennel, wilde Lettice, sour Pomgranates a little thickend, and afterwards wrought with Honey*, adding somtimes *a little of the Gall of Fishes* or *Birds*.

Or which is good in a *Nyctalopy*: Take *of the filth which flowes from the Liver of a she Goat two drams, the blood of a Partridg one dram, a little Honey*: Mix them.

We use other liquors as followeth, let him chew Fennel seed and Juniper berries and afterward anoynt his Eylids with his spittle, and carry his breath upwards to his Eyes by holding his Hands before it.

Divers mixtures which they call *Collyries* are prepared thus: Take *of Tutty prepared two drams*; *Antimony often washt with Fennel water one dram, Curral one dram, Pearl half a dram, the Cacochymy of Gold half a dram, Sarcocol steept in Fennel water one dram, Mirrh, Socotorine Aloes, of each half a dram, the apples of the Eyes of Fishes hardend by boyling one scruple, Swallows heads burnt half a dram, Lizards dung one scruple, Salt Ammoniack, white Vitriol, of each one scruple, Camphyre half a scruple, long Pepper half a dram, Saffron half a scruple, Sugar Candy two drams*: Make a Pouder like an Alcohol, receive it in the mucilage of Fenugreek seed, made with Rose Water: Make a Trochiske for your use; Dissolve one when we would use it, in the Waters of Fennel, Rue, adding the juyces, and somtimes the Gaules.

An Oyntment for the Eylids may be made after this manner: Take *of a Serpents fat, which is collected while it boyles, or of the Fish Thymallus, or of them both, the juyce of Germander, Honey, of each equal parts*; *for an Oyntment*; *and there may be some of the aforementioned Trochisks* be mixed with it.

The Pouders which are strewed on the Eyes are used rather in specks of the Eyes, then here; yet they may be made of the Trochiskes described.

Or after this manner: Take *of the leaves of Germander, Eybright, of each one dram*; *Pearl, Tutty, of each half a dram*; *leaves of Gold three, Sugar-candy half a dram*: Make a most fine Pouder.

Somtimes the Eyes are fomented that the *Oxydorcical*, or Sight-quickning Medicines applied, may work the better: after the same manner as shall be said in the Specks.

Or after this manner: Take *of Fenugreek seeds half an ounce, Fennel two drams, mountain Hart-wort one dram, leaves of Eybright, Celandine, of each three drams*; *Radish roots half an ounce, Oate chaff one ounce*: Boyl them in *Wine* and *Water*, for a Fomentation in a Spunge, or in Bags.

Also the Vapor of this Decoction receive'd into the Eyes do prepare the Eye, or others also do good to the Eyes, as the steem of a Goats Liver boyled received by the Eyes in a *Nyctalopy*.

Barly Bread baked with Fennel and Caraway seed and cut in two while it is hot, and the Exhalation from it received by the Eyes.

Looking upon green things doth refresh the Eyes, and things polisht, as a bright Glass of Steel, upon which account the beholding of Jewels and Gold, rather then the Application of them, doth recreate the sight, and strengthen the vital spirit.

They cry up many Amulets that do good being hung about the Neck and worn in Rings which we purposely omit.

Mathiolus doth very much commend a stone of the Gaul put into the Nostrils.

Rhazes

Rhazes writes that burnt Ivory the quantity of a Lentil put into the Noſtrils with Oyl of Violets, doth quickly cure Nyctalopies.

The Cure of the defect of Seeing cauſed by the obſcurity of the horny coate by white ſpecks and by the obſtruction of the Grapy coate by white ſpecks.

A white ſpeck appearing more or leſs in the Eye, if ſpringing from the fall of the Glaſſy Humor or Cryſtalline in to the hole of the apple, it doth put out the ſight; which we have ſaid was ſomtimes wont to happen from a contuſion of that Eye, the hole of the apple being cleft, or the Coats containing theſe Humors in their place, being broken, or by too deep forcing the needle in curing a ſuffuſion, then all hopes of recovering the ſight being taken away, we will only fit the Cure to the external hurt if there be any. But if this white ſpeck preſenting it ſelf about the Region of the apple, be a ſuffuſion from the watry Humor by degrees and in a long time, converted into a ſnivel and at length into the ſaid Skin bringing firſt of all an error of the ſight but afterwards when it is hardned, a perfect blindneſs: or if from too much drineſs of the Horny coat, and induration of it, an Albugo doth proceed, or from a Wound or Puncture cloſed up there be a Skar left, which two laſt, as they are broad or narrow, they do more or leſs hurt the ſight, then what muſt be foretold and done in them all three, becauſe they do not much differ amongſt themſelves, we will explain altogether.

But ſeeing a Suffuſion, Albugo, and Skar, are difficultly cured, we muſt not raſhly promiſe any thing, ſeeing if the Skar be ſuperficial only, poſſeſſing the thin lap of the horny coat, it may perhaps be taken off in the younger ſort, and yet ſcarcely then, but if it be a little deeper it cannot be taken away, unleſs that being ſhaven, we would make a new ſolution of continuity, which were to make a Wound afreſh.

The ſame alſo we may affirm of an Albugo if it hath taken deep root; eſpecially if the horny coat being wholly hardened hath bred the ſaid darkneſs in old folks, or being dryed in ſome bright part of it only it doth cauſe an Albugo; the which how difficult it is to correct, we may ſee in the thin lap of ſome horn, Pecten, or Nail, affected in like manner, how it can hardly be wiped off: Yet if ſome portion of the groſer nouriſhment being left under the Horny coat do cauſe this, becauſe that doth ſomtimes change its place, and is carried from the region of the apple into the white of the Eye, then it no longer hurts the ſight, which for the moſt part happens rather of its own accord, then by the uſe of Medicines.

A Suffuſion alſo is a Pertinatious diſeaſe, which when it is confirmed and harden'd, makes blind, and can be taken away by no further Remedies, unleſs by a needle the which notwithſtanding when it is done, doth not help or ſucceed in all, but only in certain ſuffuſions as ſhall be ſaid by and by, and is often attempted with ill ſucceſs: that beginning which doth only caſt clouds before the ſight, can ſcarcely be prevented, but that it wil increaſe in time.

Nevertheleſs in theſe caſes Remedies muſt not be neglected, and in a Skar, Albugo, and Suffuſion, the Cure muſt be order'd thus, to wit that we diſpoſe the Body in general that we may rightly make the better Cure, and that we apply Topick means to the Eye, which may waiſt the Suffuſion by diſcuſſing it, the which alſo are convenient in an Albugo, the which notwithſtanding that we may be able to wipe away alſo from the thin lap of the horny coate, we muſt try to take away with ſtronger Deterſiues, and the more ſtill, if there be a Skar in which the Deterſives wont to be applied in a confirmed Suffuſion muſt be uſed mixt with diſcuſſives; ſo that the ſame Remedies almoſt are convenient for them all, yet ſo diſtributed, that we uſe the thinner Remedies in a Suffuſion beginning, the thicker and ſtronger in an Albugo, Skar, and confirmed ſuffuſion, as you ſhall hear by and by, the external Pannicle doth require ſtronger yet, the which notwithſtanding muſt be ſo temper'd, that the Eye be not wholly dried up, or inflamed by the uſe of them, if all theſe things help not, we muſt come to cutting.

That the Body be clean and free from Excrements, we muſt procure by ordering a good courſe of Diet, and Emptiers, according to the Nature of a Plenitude or Cacochymy if there be any, for ſo the whol cure proceeds the righter: and though here many Practitioners do wonderfully macerate the Body with many Evacuations, in a Suffuſion eſpecially, which they thought was a deſcent of water into the Eyes, and therefore was to be called by the name of a *Catharrhact*, by making Purgations was well by the Stool as by ſweats and by the Mouth and Noſtrils, alſo making Revulſions and Derivations, by Scarifications, Application of Cupping-glaſſes, and by Frictions, and then by Cauteries, Setons, as we have taught in a Flegmatick Vertigo, how theſe things ought to be done, yet we who have demonſtrated that the cauſe of theſe doth conſiſt in the Eye, and that a Defluxion of water can no waies be carried into the Capacity of the Eye, have many times ſeen and found by experience that theſe are adminiſtred to Bodies without any benefit, unleſs in as much as they may keep the Body pure, as we have ſaid; let therefore this preparation of the Body by a fit Diet and decent Evacuations ſuffice, being made of the ſame Remedies which have been explained in a Flegmatick Vertigo, chooſing the gentler or ſtronger as there is need, and fitting them to the conſtitution of the Body.

But neither can the Oxydorcical Remedies which are ſo much commended in this caſe being taken by the Mouth, or hung about the Neck, or otherwiſe applied do any thing ſingular here, unleſs they have that vertue of cleanſing away and diſcuſſing the ſpeck, as many of them are endued with it, becauſe the ſight is here no other waies hurt, then that the Eye by reaſon of an Impediment ſpred over it, is deprived of the external light; that if we would mend the ſight with ſharpning Remedies; they ought to bring to the Eyes the brightneſs ruſhing from without, which certainly no man is able to do, or to take away the vail drawn over the Eyes.

We will propound therefore the more choice Topick Remedies that are convenient in theſe caſes, in this order, that the gentleſt be firſt deſcribed, then ſtronger, at laſt the ſtrongeſt of all which alſo are convenient in a Pannicle; the which are either put into the Eyes, if they can endure them, or are applied to the Eylids, where they retain them longer with leſs hindrance and hurt, eſpecially in the night whiles they keep them ſhut, and though their vertue doth not ſo quickly exert it ſelf, as when they are put into the Eye, yet by continual uſe, becauſe their faculty doth eaſily penetrate through the thin Eylid, they do work at length being thus applied, becauſe thoſe things which are put into the Eye, do by and by flow forth again with the Tears, or do irritate the Eyes, and create ſome trouble.

The Diſtilled water of Honey, is very profitable and accuſtomary, which is oftentimes dropt into the Eye.

Alſo

Alſo that called the Water of Wine, or Aqua vitæ, doth diſcuſs Egregiouſly, but it muſt be tempered with Water of Honey and Fennel, added to it in equal portions.

A more effectual one will be made thus: Take *of a Boyes Urin four ounces, white Wine one ounce, Honey one ounce, Gaul half an ounce*: Extract a Water.

Or yet a ſtronger: Take *of a Boyes Urin four ounces, the juyces of Fennel, Celandine, of each two ounces, white Wine one ounce, the Gaul of Fiſhes* (as *Salmon* or *Carpe*) *or of Birds or of other creatures two drams, Honey two ounces, Turpentine half an ounce, live Sulphur two drams*: Diſtill them, if the Urin before it be added to this compoſition, ſtand for ſome daies in a braſs Veſſel, afterwards waſhing the Veſſel ſoundly with it, the preparation wil be yet more effectual, which if it bite, being temper'd and thicken'd with the white of an Egg, anoint the Eylids with it. Somtimes ſuch a Pouder is blowed in, but it ought to be very fine as an Alcohol, that it do not exaſperate the Eye: Take *of the Bone of the Fiſh Sepia of the Fungous matter of a Pummyſtone, of each two drams*; *white Pompholix*, (which is the ſoot from Braſs) *half a dram, Sugar candy two drams, Bean flower half a dram*: Make a Pouder.

The juyce ſweating forth from Willows, being dropt in the Eye, is very much commended.

Of Acid juyces theſe are very convenient: Take *of the thick juyces of unripe Grapes, alſo of the juyce of four Pomgranates thicken'd*, receive them in the *Mucilage of Fenugreek ſeed*, apply them to the Eylids.

Or thus, one more diſgeſting: Take *of the juyces of the leſſer centory, Fennel, Celandine, of each two drams*; *the Gaul of Fiſhes one dram, Aloes, Sarcocol, Mirrh, of each half a dram*; *Sugar candy one dram, Honey as much as is ſufficient*: Make an Oyntment.

Or thus, one Egregiouſly abſterſive: Take *of Lizards dung one dram, the bone of the Fiſh Sepia burnt, Hart-horn, Maſſacumia, of each half a dram*; *Honey as much as is ſufficient*: Make an Oyntment.

Or without Pouders but very effectual: Take *of the juyces of Fennel, Celandine, ſoure Pomegranates, of each half an ounce, of Onions, Radiſh of each two drams, Gaul one dram and an half*; *Lizards dunge half a dram, Honey as much as is ſufficient*: Mix them.

Or make ſuch an Unctuous Oyntment: Take *of the fat of the Fiſh Thymallus two drams, of Gaul one dram, Lizards dung one ſcruple, Gum Ammoniack diſſolved in Aqua vitæ one dram, Sarcocol half a dram*: Make an Unction.

Acrid Liquors that work vehemently are made thus, which if the Eye cannot endure, they are temper'd with Milk or Waters til they can bear them, or being mixed with the Mucilage of Fenugreek ſeed or the white of an Egg they are applied to the Eylids: Take *of Antimony one dram, Marchaſite half a dram*: Pouder and infuſe them in *Roſe and Fennel Water, of each four ounces*; often paſſing it through a Filter; for your uſe.

Out of Urin thus: Take *a Boyes Urin, let it ſtand in a Braſs Veſſel*, for ſome daies; ſcraping or rubbing the Veſſel often, for your uſe.

Or a linnen cloath is ſet one fire in a diſh or on a Tin or Iron plate, and the juyce which ſticks to the diſh is taken for uſe; this juyce will be more effectual, or rather that Oyly ſubſtance ſweating forth, if the cloth be firſt wet with the ſpirit of Wine and be dried again, but afterwards be lighted and burnt on a Plate of Steel.

Of thoſe ſtronger yet tis made thus: Take *of white vitriol one dram, ruſt of Braſs ſix grains*, being pouder'd; Mix them with the white of one Egg, beat them well, and pouring them upon a Paper, the greeniſh water collected by inclination is taken for your uſe ſo far as it can be endured, it is temper'd with Roſe water or Milk,

A moſt effectual Oyntment is made thus: Take *of white Vitriol one ſcruple, ruſt of Braſs half a ſcruple, Antimony half a dram, Marchaſite half a ſcruple, Lizards dung half a ſcruple, the Bone of the Fiſh Sepia half a dram, Camphire two grains, Fiſh Gauls half a dram, Honey two drams, Sugar one dram, with the mucilage of Fenugreek ſeed*: Make an injection.

Somtimes a Fomentation of the Eye being made, before the uſe of theſe, it cauſeth that they work more rightly, and doth the better diſpoſe the Eye to receive them, and it diſcuſſeth alſo by it ſelf.

Which may ſimply be made thus: Take *of the ſeeds of Fenugreek one ounce, of Fennel two drams, Chamomel flowers, Oate chaff, of each one handful*; *Marſh-mallow roots one ounce*: Boyl them in Water and Wine for a Fomentation.

A Suffumigation from this Decoction if it be received in the Eyes, will be inſtead of a Fomentation.

To breath into the Eyes after the chawing of Fennel ſeed doth the ſame; and in Infants if the Nurſe do that it wipes away their Suffuſions if they firſt chew Gum Ammoniack and the like.

Amongſt Amulets the roots of Garlick, and Snake-weed, hung about the Neck, is in high eſteem with Chyrurgions.

By Manual operation or Chyrurgery, in a Suffuſion when it is grown to a Skin or Web as they call it, to free and divide it from the compaſs of the apple, to which it is grown, by putting in a Needle through the horny Coate, and by degrees forcing it to this part, is the laſt remedy: which if it ſucceed, and the ſight as yet be in the Eye, as the Chyrurgeons ſpeak, that is, if by reaſon of that long continued blindneſs which hath laſted ſo many years, the Viſory ſpirits as hath been ſaid formerly being idle, be not extinguiſht, or the Optick Nerves become ſluggiſh: then this way being open'd, and its obſtacle taken away, the light again entring and Illuminating the Eye, it cauſeth that in that very moment, in which the Web is taken off, they recover their ſight again.

But before the operation be began, theſe things muſt firſt be conſider'd, firſt of all that if both Eyes being cover'd with a Web they are render'd wholly blinde, by ſo much the rather let it be attempted, becauſe worſe cannot befal them, although the operation do not ſucceed they then remaining blind as they were before; but if that one Eye only be affected, the other being ſound, becauſe that is ſufficient for ſeeing, and no greater neceſſety urgeth, the buſineſs is not to be attempted with ſuch raſhneſs.

Next of all that we do not attempt it before the Skin be wholly concrete and perfect, and as they call, it be ripe. Which ſomtimes is ſcarce compleated in the ſpace of three years, ſomtimes five, or more, and it is known by the color of it, which then is exactly white like to the thin Skin compaſſing the white of a boyled Egg, although ſomtimes it repreſent ſomwhat an aſh color, and then becauſe it doth ſomwhat deceive the judgment, it makes us more uncertain as concerning its Maturity, the which notwithſtanding is known by this to be now perfect, becauſe it is not changed, but perſiſts ſo for a long time. And although many do not require its abſolute, but moderate concretion, yet we have found by experience, that there is leſs error, and tis more eaſily handled when it is perfectly concreted: for that which is unripe, becauſe it is yet ſoft and ſnivelly, it doth not reſiſt the point of the Needle, and therefore cannot wholly be removed, but being cut and divided grows together again, and then being made thicker and more Callous and Sprinkled over the watry

humor, it cauſeth that then they do not only ſee nothing, but all hope of Cure by a new operation is taken away, becauſe if it be done twice, for the moſt part it is done in vaine,

The which happens alſo, if the Needle being forced too deep, the Cryſtalline or Glaſſie Humor be hurt, or their Coats, or alſo the Grapy Coate it ſelf be toren in the compaſs of the hole, for then the humors being confounded, they remain blind and a whiteneſs with a Tumor appears in the black of the Eye.

Therefore it is a very doubtful kind of Remedy in doing of which they eaſily err, or if it ſucceed rightly, yet by reaſon of a long continued blindneſs, as hath been already ſaid, ſomtimes the ſight doth not return, wherefore we muſt promiſe nothing raſhly as *Mountebank Oculiſts* do, who are nothing moved with ſhame, although they perform not their promiſes, if there be any hopes of gain.

Yet neceſſity urging, if they be altogether blind, imploring Gods aide, and applying all diligence rather then promiſing ſafety, the operation ſhall be thus perfected as I have oftentimes ſeen it, and in part have my ſelf put a hand unto it, ſeeing the thing otherwiſe hard, if you conſider the Induſtry and Art, is not ſo very difficult as they make it.

Let therefore the Patient ſit in a ſeat, and over againſt his Face, the Chyrurgion ſo neer that he may receive the Patient with his ſeat between his Thighs ſpred abroad, and let him bear up his hands leaning on both his Thighs, but let a Servant ſtand at the back of the Patient and hold his head raiſed up, faſt with both his hands and if one Eye be ſound and ſee, let him binde it with aſwath, that he ſee not.

Which being done, firſt of all let the unſound Eye be rubbed, the Eylids being ſtretcht above the Eye, the Chyrurgion for a while drawing it up and down with his Thumb.

And let him often breath into the Eye being open'd, having firſt chewed Fennel ſeed.

Then take the Needle which they will have of Silver for brightneſs ſake more then for profit, and ſo much the more if the point of it be guilt, the which ought to be long and with a wreathed handle that it may be held the faſter, and towards the point, ſharp and thinner by degrees: But alſo a common Iron Needle of a mean ſize faſten'd in a handle that it may be held faſt, is as commodious for doing this, neither is there any ruſt to be feared in this ſhort ſtay as they imagine.

This therefore being taken in the right hand if the left Eye be affected, or in the left hand if the right Eye and leaning the hand by the ſeat of the Eye, in the outward ſide of the Eye, looking towards the middle ſeat of the Apple, in the white of the Eye ſomwhat diſtant from the circle, it ought to be impreſt into the Horny Coat, and not violently thruſt in, but wreathing it by degrees, til it penetrate that coat. The which becauſe it is done without any pain, they eaſily ſuffer and remain quiet, and becauſe the Eye is faſtend to the Needle it is kept firme by it, and it is prevented from rowling.

The Needle being thruſt in, by and by is directed towards the Apple, and is forced ſo far, that comming forth in the brink where the Skin grew to it, tis ſet before the fore part in the mid'ſt of the Skin, the which is done by ſo much the more commodiouſly, becauſe the Needle may be ſeen there, through the horny Coate, and therefore may be directed right. Being carried thither; 'tis ſo ofttimes preſt gently backwards, that it may break off the Skin from the compaſs of the hole of the Grapy Coate, if it ſucceed not at the firſt time, and if it be any where freed, 'tis wholly ſeperated by the Needle from the hole where it yet ſticks, and is depreſt downwards from the Region of the Apple, into the loweſt obſcure part of the Eye. But others endeavoring to free it with the Needle, firſt of all from its upper part, and by degrees proceeding downwards, do after this manner force it to the lower parts. Which both waies may be rightly done, and as the Skin follows they muſt be order'd, or as they are eaſier done after this or that manner. Taking care chiefly that the Web peirced through be not cut in many parts, for ſo thoſe portions of it, though preſt down being eaſily again carried upwards before the Apple, by floating there would darken the ſight; the which if the whol Skin thruſt down doth do it, it muſt be depreſt again, leaſt if that ſhould come to paſs when the Needle is drawn forth, the Puncture muſt be repeated again, which would be inconveniently done, and for the moſt part with out ſucceſs.

Which being rightly performed if it ſucceed well, the Apple appears black again, and they ſee preſently, but otherwiſe there will be little hope, but howſoever it be, the Needle muſt by degrees be drawn forth again, the Eylid being firſt depreſt and the Eye ſhut. Neither is there any fear of the watry Humor flowing forth, becauſe the hole in this thick Coate doth by and by cloſe again, after the drawing forth of the Needle.

Then thoſe things which do repreſs an Inflammation of the Eye muſt be applied with a four doubled cloth dipt in the white of an Egg, being firſt beaten with Roſe water, and other things to be mention'd in an Inflammation; and they muſt alwaies be renewed three times a day for the ſpace of five or ſix daies, and the firſt Application if it ſtick faſt, when it hath been firſt mollefied in the ſame humor, it muſt be taken off, and a new one applied, to which if you add milk it will ſtick the leſs.

At which time, that the Eye not yet accuſtomed be not overwhelmed with ſuddain and much light, they ought to ſtay in darkneſs, and by degrees to accuſtome the light. And leaſt that the ſpirits may be forced to the Eyes by violence, they ought to have a care off all vehement motion of the Body, as Coughing, Sneezing, Crying out, and off vehement ſtraining in caſting forth their Excrements and the like other things.

The Cure of the defect of ſight from the horny Coate cover'd with a Pannicle and Ungula.

A Pannicle beginning, ſomtimes may be hinder'd that it increaſe not being increaſed it ſcarce yeilds to Medicines though moſt ſtrong; it may be cut off if it grow not to the horny Coate; if it be harden'd like to a Nail, it yeilds to no Remedies. In the Elephantiacal, as neither the Diſeaſe, ſo neither can this part of that Diſeaſe reſiding in the Membranes of their Eyes be taken away. Yet ſomtimes it may be hinder'd that they be not wholly made blinde, which of all things which otherwiſe they ſuffer is to them moſt miſerable.

The Cauſe which is an afflux of blood we will endeavor preſently at the beginning to draw forth, Revel, Derive, by Bleeding, Scarification, Setons, Cauſticks, that the evil do not encreaſe, alſo by a ſlender courſe of Diet, and many Sweats and Purges, fit for a foul body.

The Topick Remedies ought to be vehemently drying, and unleſs they help, they muſt at laſt be corrodeing.

We muſt make choice of the ſtrongeſt of them which we ſaid did cleanſe away white ſpecks, and thoſe which we commanded to be applied to the Eyelids here muſt be laid on the pannicle it ſelf, and Pouders ſeeing they dry

dry more ſtrongly, muſt be laid on the Pannicle it ſelf, not neglecting the more liquid mixtures which we drop into the Eyes; in the interim applying certain things to the Eyelids that they may do good by turns, and ſomtimes alſo applying a Fomentation to prepare the Eye, as hath been ſaid there.

We may uſe at the beginning the pouder above mentioned in the white Specks, then we muſt proceed to a ſtronger; the which yet muſt dry without biting, and therefore it ought often to be repeated; which ſhal be made thus, Take *of Curall, Tutty, each one dram; Pumny ſtone, Egg-ſhels, each half a dram; the ſtone of Dates and Myrobolans, each two ſcruples;* make *a moſt fine Pouder* if it be ſprinkled with *Vinegar*, or *Urine*, and dried, it will be *more effectual.*

Or thus a ſtronger, Take *of the pouder of Diarrhodon Abbatis one dram, the bone of the Fiſh Sepia burnt, Lizards dung, each half a dram; the Bloodſtone two ſcruples, Sugar Candy* make *a Pouder.*

A ſtronger yet, Take *of burnt Lead, Antimony, the ſtone Calaminaris, each two drams; Tutty, white Lead, each one dram and an half; the aſhes of Horſtail, the bone of the Fiſh Sepia burnt, each one dram;* make *a pouder* waſh it with *Smiths aſtringent water*, and dry it for your uſe.

Mixtures are made thus, Take *of the compound water* deſcribed in *the white Specks* diſtilled with *Urin ſteeped in a Braſs veſſel*, and to *ſix ounces* add *the pouder of Nabath Lizards dung, the bone of the fiſh Sepia, each half a dram;* being poudered mix them firſt in *Mucilage of Fenugreek ſeed made in the foreſaid water* and uſe it.

Or a thicker after this manner, Take *of the juyce of unripe Grapes, and Lees of Oyl, and of ſour Pomegranates dried each two drams;* add of *the pouder of the bone of the fiſh Sepia, and Lizards dung, each half a dram;* mix them.

Or thus, Take *of the pouder of Nabath two drams, Tutty prepared, White Lead waſhed, each one dram; the bone of the fiſh Sepia burnt and waſht half a dram, Sarcocol, Myrrh, Aloes, Lycium, each one ſcruple; the Gaul of Birds or fiſhes two ſcruples,* mix it with *Honey and the white of an Egg*, for an *Oyntment.*

Of corroding Compoſitions, that is convenient which in the white Specks is prepared of Vitriol, the ruſt of Braſs, Antimony, the Marchaſite.

Or a Colliry of Coppras, but applied warily, becauſe it is ſtrongeſt of all, and 'tis made thus. Take *of burnt Braſs, Coppras, each half a dram; Ruſt of Braſs two drams, Salt Ammoniack, Niter, Arſnick, Sublimate, each one dram;* make *a moſt fine pouder* poudring it much and long; mix it *in the mucilage of Gum Tragacanth* make *Trochiſks*, one of which diſſolve with *the Mucilage*, and apply it warily.

Rondoletius commends *the pouder of Precipitate*, I have often uſed my *Cauſtick* which at firſt time burns, but preſently abates.

Manual operation is made two waies, by Ligature, and by Cutting.

If the Veins which nouriſh the Panuicle be bound about the root, then the growth of that fleſh muſt needs be hindred, or if it be already grown, it muſt needs wither, which may be done with a crooked Needle thruſt under the Vein drawing the thred under it and tying it; this if it be made of Silk, or of a Briſtle, or of a Womans hair wil be more commodious, becauſe then it ſcarce putrifies.

Alſo if thoſe veins be opened that the blood flow forth, and it be often repeated, the ſame will be effected:

The Pannicle is cut off after this manner, as I have ſeen it done, the Patient is placed in a chaire, and the Eye is firſt prepared, as hath been ſaid in the cutting a ſuffuſion, then a Needle containing a ſtrong thrid is thruſt through under the *Panicle*, yet ſo that it hurt not the Horny Coate, and laying hold on both the ends of the thrid drawn under it, drawing it a little way upwards, tis raiſed from the horny Coate and afterwards is cut from it with a ſharp Razor, or Knife, by degrees and warily, that the horny Coate be not hurt; the which being done if the black of the Eye appear clear, the ſight returnes: But if otherwiſe, or that the Pannicle hath ſo grown to the horny Coat, that it cannot wholly be taken from it, the operation wil be in vain.

Section being made, the pain will be allaid in the ſame manner, as hath been ſaid, in the cutting of a Suffuſion, and that it be not generated again anew, it will be prevented by cutting of the Veins of the adnate coat if they ſwel again, and laying on drying things, and leſt the Eye, if by chance it were ulcerated ſhould grow to the Eye-lid we ought to hinder it by often moving the eye.

If the bright part of the horny coat be poſſeſt with a ſtrange humor ſo that either a depravation or darkneſs of the ſight doth follow, than if choller which in thoſe troubled with the Jaundies is wont to dye the white of the Eye, and what is more rare doth make a yellow aſpect of all things be carried thither; that vaniſhing of its own accord this fault ceaſeth, or it is taken away by ſome abſterſive Lotion, as ſhal be ſaid in the Jaundies.

The Cure of the darkneſs or depravation of the ſight from Choler, Blood, or matter, in a hypoſphagma and hypopyon.

But Blood being poured forth into the Diaphanous part of the horny coat if that Depravation of the ſight doth happen, in which all things appear Red, or Livid in the ſaid Hypophagma, or if it penetrate the horny coat alſo, and under that concrete by the hole of the Apple, or being converted into matter in the ſaid Hypopyon it darkens the ſight, then the cure muſt be ordered thus.

If there be Pain and an Inflammation be feared by reaſon of a blow from which commonly theſe proceed, then preſently at the beginning we muſt uſe, bleeding, and Repellers, and things that allay pain; and if that it being long retained do ſuppurate, and whiles the matter is generated there ariſe pain, the horny coat being affected, and then alſo the adnate coat by conſent, the ſame muſt be done for fear of an Inflammation, otherwiſe if there be no pain we muſt abſtein from Repellers ſeeing they condenſe the blood more; and by and by we ought to apply our care to digeſt and diſſolve that blood, which although it be converted into matter muſt be done nevertheleſs, if part of it can be conſumed, ſeeing the greater part of the matter being reſolved, that which remains ſinking downwards from the hole of the Apple can then no longer prejudice the ſight, and at length 'tis waſted either of its own accord, or by uſe of Medicines.

But 'tis diſcuſt after this manner, you muſt take the blood of Pidgeons, Turtles or other Birds, and that while it is yet hot muſt be caſt into the Eye, or if a young Pidgeon be at hand, we muſt pul a feather out of his wing whoſe ſwelling root becauſe it is newly grown is filled with blood which is contained there in its proper Vein as in an Inteſtine, and the blood muſt be preſt out of that, and dropt into the Eye, for how much power blood hath in diſcuſſing of Blood we have taught elſewhere, in Hæmorrhages that are to be ſtopt by blood of this nature.

Stronger diſcuſſives may be put into the Eye if it yeild not to theſe, ſuch as are explained in diſcuſſing a

Suffuſion

Suffuſion, made of Waters, Juyces, Gums, Gauls.

To whice alſo we add theſe approved by their effects. Take *Aqua vitæ* (which alſo doth wonderfully diſcuſs *Black* and *Bleerneſs* elſwhere) *Rhadiſh water, each half an ounce*; diſſolve *of Camphire* (which doth the ſame in diſcuſſing as *Aqua vitæ*) *five grains*, drop it in.

Or thus, Take *of Radiſh water one ounce*, ſteep *in it Saffron half a ſcruple*, til it looks yellow, ſtrain it and diſſolve in it *Frankincenſe one ſcruple, Fiſh gaule half a dram*, uſe it *by it ſelf* or apply it with *a Mucilage*.

Or a thicker to anoint the Eyelids may be made thus, the which alſo may be put into the Eyes, Take *of the juyce of Radiſh two drams, Fiſh gaule half a dram, Myrrh, Frankincenſe, each one dram*; *Saffron half a ſcruple*, mix them with *a ſufficient quantity of Honey*.

Or thus, chiefly in the declination, Take *of four Grapes, Lees of Oyl, each two drams*; *Myrrh half a dram, Saffron half a ſcruple*, mix them with *Honey*.

Or wholly to diſcuſs it, the Compound waters explained in Suffuſions are convenient, by themſelves, or applied with a Mucilage.

Fomentations alſo ſhal be applied which do very much diſcuſs, ſuch as we have preſcribed in Suffuſions.

Or this which is very powerful, Take *of Radiſh roots half an ounce, Fenugreek ſeed one ounce, Fennel, Hartwort, each two drams*; *the herbs Fennel, Celondine, Eyebright, each one handful*; *Flowers of Chamomel, Melilot, Elder, Lillies, Oat chaff cut, each one pugil*; make *a Decoction in Wine and Water* for *a Fomentation*.

Plaſters laid upon the Eye to diſcuſs are of force, amongſt which this is the beſt; If the Lungs or Liver of a Pidgeon being yet bloody and warm be placed and bound on the Eye, which if Pain and Inflammation alſo were preſent, upon that account alſo they would do very much good, as ſhal be ſaid in an Opthalmy.

A Plaſter alſo is made of a Rotten Apple profitable for diſcuſſion.

Or Compounded after this manner, Take *of Radiſh ſliced one ounce, the pulp of a rotten Apple half an ounce, Pulp of Raiſons one ounce, Pidgeons Dung half a dram*, bruiſe them with *the Mucilage of Fenugreek ſeed*, mix them with *Milk*, and apply them.

A Suffumigation from the Decoction of the Fomentation preſcribed, wil alſo diſcuſs very much.

Manual Operation alſo takes place here, if the matter that is generated do not yeild to Diſcuſſives, and there be great plenty of it, which blots out the Apple, which may be attempted by Puncture as hath been ſaid in a Suffuſion, but with a greater Needle ſeeing otherwiſe nothing would flow forth; and if it ſucceed not, by thruſting in a bigger yet, but in the ſame hole of the Puncture, or by putting in a hollow pipe ſo ſharp that it may enter the ſame hole and ſo by ſucking out the matter, ſo long til the Apple be in ſome ſort freed from it, for if we would draw forth all the matter 'tis to be feared that the watry humor may follow. For that ſucking, the Inſtrument or Pipe muſt conſiſt of a large Belly that the matter ſuckt up may be carried into that and not into the mouth of him that ſucks, ſuch as Chymiſts are wont to uſe, for the ſucking of Waters or Oyls in ſeperating them one from another.

CHAP. VIII.

Of the hurts of Hearing.

The Kinds,

Deafneſs. SOmtimes the Hearing is wholly aboliſht, ſo that either they hear not outward ſound at all, or if they receive any ſound at their Ears, yet they cannot diſcern the differences of it, and therefore cannot judg what it ſignifies and this is called Deafneſs, *Cophoſis*; and theſe are oftentimes Dumb, if they be born Deaf, and then it is an Origihal Deafneſs. Yet of Deaf folks, ſome of them can after a ſort, hear themſelves ſpeaking, but others not all: and there have been alſo found, thoſe who otherwiſe being Deaf preſſing a Muſical Inſtrument while it ſoundeth with their Teeth, and biting ſome part of it, or only ſome other part contiguous to it, could apprehend that ſound. Which may happen not only to thoſe that hold a Pipe in their Mouth, and Piping, but to thoſe alſo who hold faſt with their Teeth, part of another Inſtrument which conſiſts of ſtrings, whiles it is plaid upon. And in like manner it happens alſo to thoſe that are ſound, if ſtopping their Ears diligently, that they can hear nothing that way, they do the ſame thing, as every one may make tryal of it.

Thick hearing Barycoia.

But it is impaired only when they can hardly perceive or diſcern a ſound, in thick hearing called *Barycoia*, becauſe they do not hear or underſtand a ſound unleſs it be very high and lofty, whence they that talke with them, are forced to lift up their voice, and ſomtimes call aloud, but others cannot thus perceive their voice, unleſs thoſe that talke with them, ſpeak and cry aloud into their Eares.

Obaudition, that is, a ſound in the Ears.

A Depraved hearing, or *Obauditi-on*, is when it perceives the external ſound falſely, and that by reaſon of an internal ſound preternaturally raiſed in the Ears, outnoiſing this external ſound, or mixing it ſelf with it, and confounding it, and that either continually, or only by fits, beſides which Impediment it breeds no ſmal trouble to a man, and makes him unquiet.

But this ſound raiſed in the hollow of the Ears varies very much, and as the outward ſound is various, ſo is this alſo, the diverſities of which, as of that cannot otherwiſe be rightly explained, unleſs by compariſon, and names are given to them almoſt by an *Onomatopæia*.

A tinkling of the Ears is a ſpecies of Obaudition.

And one Species of it, is more frequent, which is called a tinkling of the Ears, when that ſound doth expreſs in the Ears the noiſe of a little Bell, for the moſt part gives a ſhril ſound when it is ſtruck upon, and as the Names ſounds, it tinkleth.

Hiſſing a ſort of Obauditi-on.

Another is a Hiſſing of the Ears, a ſound which is heard, and yet not rightly reſounding, as (*ſi*) the firſt ſyllable of the word ſounds, and as wind when it paſſeth forcedly through a narrow hole.

A Pulſation in the Ears is a ſort of Obaudition.

A third Species is a Pulſe, or Pulſation in the Ears, a ſound ſuch as offers it ſelf, whiles a thing is lightly beaten upon by a blow or fall of a drop of

water

water by courſe, and the firſt ſyllable of the Name *(Pul)* doth ſeem alſo ſomwhat to ſignifie it.

A Fluctuation in the Ears is a ſort of Obaudition.

A fourth is a Wave, or Fluctuation in the Ears, a ſound not unlike to that which is from Waves ſtriking one againſt another, or againſt other things, cauſed by intermitting courſes, which alſo the beginning of that word *(Fluc.)* doth Elegantly expreſs.

Beſids theſe ſounds, thoſe which offer themſelves after another manner, or are made by a mixture of theſe, they are called by a general name, a noiſe in the Eare.

The Cauſes.

The part affected.

Every cauſe of the defect and depravation of hearing is either in the part ſending as the Brain, or in the Inſtrument receiving as the hollow of the Eare.

The hurt of hearing, from a fault of the Brain.

A general fault of the Brain as it brings hurt to the reſt of the ſenſes, ſo alſo to the hearing, and if it ariſe in particular, about the beginning of the Auditory Nerve or its progreſs into the Chamber of hearing it doth prejudice the hearing rather then the reſt: and this befals it either by proper fault, ſome Diſeaſe, or weakneſs of it, or by conſent, by reaſon of Vapors, or its proper object.

A grievous and vehement Diſeaſe of the Brain, proceeding from a cold Diſtemper, Repletion, Eminent hurt, as it doth either aboliſh or debilitate the reſt of the ſenſes, ſo alſo the hearing. The which alſo oftentimes happens from a weakneſs of the Brain, the ſpirits being waſted and diſſipated by reaſon of old age, or of a great Evacuation, or ſome grievous and long continued Diſeaſe, that even as the ſight is hurt upon this occaſion, ſo alſo the Hearing is weaken'd. All which how they come to paſs, hath been ſaid in a Weakneſs and Conſternation of Minde; alſo a hot diſtemper of it as it is wont to deprave the Minde and the Sight, ſo alſo in raving it doth not only offer various apparitions to the Eyes; but alſo it repreſents ſounds to the hearing which they think they do hear; eſpecially as ſhall be ſaid by and by, the Arteries then beating vehemently in the Ears.

From a Vapor, not yet breaking into the Chamber of the hearing (as ſhall be ſignificd by and by) But affecting the Brain, as the Minde is depraved, and falſe imaginations are offer'd to the ſight, ſo alſo if it trouble that part where the Auditory Nerve comes forth, it may repreſent falſe ſounds to the hearing for the ſame reaſon as hath been ſaid in the error of Sight.

As we have ſaid the ſight is affected with its proper object, ſo alſo the Nerve being offended and the ſpirits diſſipated by a violent and too great ſound, penetrating ſuddainly and abundantly through the Eare, even to the Brain, ſomtimes Deafneſs hath enſued, or the Spirits returning, but not ſufficiently, a tinkling in the Ears hath been left: which ſound alſo if it be cauſed with a greater violence, may bring dammage alſo by hurting the Organ of hearing as ſhall be ſaid by and by.

The hurt of Hearing, from default of the Eare.

By default of the Auditory Inſtrument, that receiveth that outward ſound, the Hearing is hurt divers waies, becauſe this Organ alſo which we cal by the Name of the Eare, is compoſed of many parts, as Membranes, little bones and the Auditory Nerve, all whoſe ſeveral faults may prejudice the Hearing. Which we will explain, not as we have done in the Eye, beginning with Particular parts and a ſcribing their faults to them, but diſtinguiſhing the whol paſſage of the Eare into two Cavities, *viz.* the outward and the inward, we will ſet forth what Diſeaſes occurring in them both, do hurt the Hearing.

The outward Cavity of the Eare, which they call the Auditory paſſage, being Extrinſecally open wide and Conſpicuous, ending even at the Membrane of the drum, with which it is ſtopt, containing nothing otherwiſe in it ſelf beſides Aire, and admitting the outward ſound, if it be ſtopt up or obſtructed by divers external Cauſes occurring, or by internal Humors, or Tumors, whether wholly or only in part, or it be otherwiſe hurt, then it happens that the Hearing is hurt; which cauſes alſo occurring here, can only be perceived by our ſenſes, or if they lurke more inwardly, they may be ſearcht out by putting in a Probe, and if any thing come forth from thence, they may be known by that voided forth.

A ſtopping of the Eare, is the Cauſe of the hurt of Hearing.

If the outward Cavity of the Eare be wholly ſhut up by external Cauſes (which otherwiſe naturally can no waies be ſhut as the Eye) as it comes to paſs the hindermoſt Cartilage of the Eare being preſt, either by Application of the Hands, or of other Bodies, or by the water whiles in ſwimming the Head is cover'd in it; or the Eares being obſtructed by ſome groſs matter thruſt in, or fallen in, as by a Kernel, or by ſome living creature which do wholly ſtop up their Cavities; or by water which fallen in, doth wholly fil them up; the Hearing is ſo hinder'd, that they do not perceive the outward ſounds either at all, or not rightly, as one Eare or both, are more or leſs ſtopt. Unleſs perhaps that ſound be ſomwhat perceived another way, and by another Artifice, as by the Mouth, we have ſaid may be done, holding an Inſtrument in their Teeth, that gives a ſound. Which we think happens upon a double account, both by reaſon of the Similitude and Conſent of the ſubſtance of the Teeth, in hardneſs, which is almoſt ſtony, and in ſmoothneſs, with the Bones of the Chamber of Hearing (which bones are very like to the ſubſtance of the Teeth, and that the ſound might be the better cauſed in them they are moſt hard and ſtony) and ſo with the little bones of the Hearing it ſelf, endued with the ſame ſubſtance; and by Reaſon of the Nerves lying under the Teeth, which are carried thither from the Nerves of the Tongue, and the Nerves of the Tongue are mutually conjoyned with the Auditory Nerve in their branches (as we ſhall explain hereafter for what reaſon the Deaf are alſo born Dumi) by which conſent it comes to paſs, that becauſe the ſound through the Aire doth beat upon the Teeth by contract, this continuation being made through the inner parts, it is perceived by the Ears: as alſo the Mouth being exactly ſhut, and the Teeth ſet one againſt another, or the Tongue forced to ſome part of the Mouth, although the Eare hear not extrinſecally, yet we perceive the ſound through the inner parts; and alſo by reaſon of that conſent of the Teeth with the ſubſtance of the Organ of Hearing, we ſee that by a harſh noiſe, made by the rubbing together of rough things the Teeth are offended even without contact. Hither perhaps it makes ſomwhat, that as the ſtrings of one Inſtrument being play'd upon, we ſee the ſtrings ſcrewed up to the ſame tune in another Inſtrument, are moved though it be far diſtant, ſo that if any thing be

laid upon them, either it trembles, or if it be light, as Chaff, it fals off, ſo alſo the Drum being retcht to receive all impulſes of ſounds, being ſtruck by a continuation made through the intermediate teeth and Nerves doth repreſent the ſound to the hearing; of which many things might be diſputed, but to our buſineſs.

But though the Ear being wholly ſtopt, the outward ſound be no waies perceived, yet ſome ſound nevertheleſs is ſomtimes felt in the Ear; which firſt of all is wont to happen by reaſon of the Air which hath remained in this Cavity of the Ear and doth more or leſs force and beat upon the Drum; and it is by ſo much the greater, by how much the Ear, though it be ſtopt, yet being leſs filled with ſtrange matter, doth contain in it ſelf more plenty of Air, whence is perceived a waving ſound, the air rouling it ſelf and as it were fluctuating in the Ear, hence we ſee, that if that which is hollow be applied to the ear and therefore contains Air in it, this ſound in the ear is felt more vehement, which we experience by applying the hollow part of the hand to the ear, whence Children are wont to relate that preſſing a Sea ſhel to their ears they hear in it the waves of the Sea, the air then making a greater noiſe by reaſon of the winding in the Skul: the which alſo happens the head being plunged in the water, ſo that the ears be wholly ſtopt up by it, the air then temaining, which offers a ſenſe of fluctuation; and I have oftentimes obſerved, when being a Boy I was delighted with ſwimming, that if a noiſe were made under the water by moving of the Stones, that that alſo was perceived like the tinkling of a Bel, although the greateſt ſound made out of the water even from a Gun ſhot off, could by no means be heard; and alſo by reaſon of the Pulſation of the Arteries in the ears, a beating ſound is ſomwhat felt in them when the ear is ſtopt, which is not taken notice of when the ear is open, by reaſon of the outward ſound, ſeeing it is greater, and doth obſcure and drown this leſſer, the which alſo many relate that they hear in the night, if they bind their ears too ſtreight with a Cap and wrap them up in a pillow, eſpecially if their head being ſomwhat hot, doth cauſe a vehement pulſe, and that in Diſeaſes it doth preternaturally cauſe trouble, we ſhal by and by explain.

Ill hearing from things fallen into the Ears.

But if the Cavity of the Ear be not wholly ſhut up, by the forementioned external Canſes ſo that the outward ſound entring them nevertheleſs be heard, and yet there is a hurt of the hearing not only becauſe it is impaired but depraved, ſeeing the Ear doth hear that ſound made in the Ear keeping a Noiſe, from every inward Contact, not only of the Drum, but alſo of the reſt of its Cavity, which according as the Contact is becomes various; for that which is the paſſage of the drum, reſembles a certain waving or Noiſe: but if ſome Inſect creeping in, as a Flea or others, be carried to the Drum and touch that, whiles it moveth, there is heard a ſound in the Ear making a Noiſe like the flying of a Butterfly, very troubleſome: alſo if one drop of Water or more flow ſo far, 'tis perceived as if the head were hollow, and ſuch a ſound ariſeth in it, as alſo theſe or other ſounds are perceived if a Worm with many legs or ſome other thing, that doth not wholly ſtop up the Ear, but nevertheleſs is troubleſom to be contained in it.

A Repletion of the outward Cavity of the Ear with internal humors is the cauſe of hurting the hearing.

If the Ear be filled up with internal humors the ſame comes to paſs, that the Hearing is either taken away or impeded, or depraved; as if the Ear be obſtructed with the cholerick filth of the Ears, which they call *Cerumen*, being long retained, grown thick and hard, eſpecially if they be forced even to the Drum with an Ear-picker which ſomtimes happens by neglect, whiles they endeavor to take them forth, which afterwards ſticking there, ſeeing they do not afterwards eaſily give way, they bring a great impediment to the Hearing; the which alſo may happen from blood congealed after a hurt of the Ear, and from matter after an Impoſthumation being ſome time retained, the which notwithſtanding ſeeing they do not ſtick long, but flow forth of their own accord, they do not ſo much hurt the Hearing, as they prejudice the Ears upon another account as we ſhal ſhew in pains of the Ears.

A Tumor in the inner cavity of the Ear is the cauſe of the Hearing hurt.

The Hearing may be hurt by a Preternatural Tumor obſtructing the Ears rather than by a diſtemper hurting them, and that laſtingly if a piece of Fleſh or Callus be left after ſome exulceration of the Ear, which is very rare.

A hurt of this outward paſſage unleſs it hurt the Drum (as ſhal be ſaid) can ſcarce prejudice the hearing, unleſs it leave an excreſcency behind it, as hath been ſaid, and *Fernelius* writes that ſomtimes a Pulſe doth remain in the Ears from an Ulcer not wel conſolidated, the which becauſe the Artery is no more well covered with the Skin, but bare, and for that reaſon doth more ſtrongly beat upon the neighboring parts, muſt needs happen in the cutaneous Artery of this outer chamber, which is carried thither, as ſhal be explained in the Ulcers of the Ears.

A ſpirit, vapor, wind, is the inner chamber of the Ear are the cauſe of the ſounding in the Ears.

The inward Cavity of the Ear diſtinguiſht from that called the Outward, by intervention of the Drum, being ful of winding, containing ſmall Bones, and a Nerve and Artery, being affected by a ſpirit, Vapor, Wind, or humor contained there, or if that and its parts be ill conformed or labour of a Diſtemper, they may alſo damnifie the Hearing; which faults becauſe they are hidden we cannot attain to them by our ſenſes, but know them only by their ſigns.

If the Artery which goes under this part be filled with a plentifull or hot ſpirit, or it be too much agitated in it, then a ſtrong pulſe being made in the Ears, there is a beating ſound in the Ears, the which notwithſtanding is more manifeſtly felt when the Ear is ſhut, as hath been ſaid formerly, and if it be more vehement when it is open, it alſo depraves that ſound which comes from without; the which as it comes to paſs that the pulſe is more intenſe by the vehement heat of the body in the reſt of the Arteries, ſo here alſo in the Artery of the Ear; as it is felt after ſtrong exerciſe ſometimes in Baths; and alſo in acute Diſeaſes, pains of the Head, this pulſation creates trouble in the Ears: the ſame alſo happens by motion and violent agitation of the ſpirits, as we ſee in a ſwooning beginning, the ſpirits flying away, and the ſame ending, thoſe returning again, there is felt a pulſe and tingling in the Ears, by which from the relation of the Patient, we know that ſwooning is at hand, the which alſo happens in many affections of the mind, by reaſon of the ſame commotion of the ſpirits.

A thin and ſubtil vapor, as it can enter the ſmalleſt paſſages, ſo doubtleſs it doth ſometimes penetrate hither through the narrow holes (of which ſort we have ſhewed in our Anatomical work that there are ſix that do end in this inner chamber of hearing and tranſmit their veſſels) and ſo they may not only deprave the

Brain

Brain by affecting it, as hath been ſaid formerly (as alſo we have ſhewed formerly that the ſight is depraved by Vapors only aſſaulting the Brain, and not entring the Eye, ſeeing there is no way for them) but alſo by reaſon of the ſaid holes, ſome of which end hither from the inward parts of the Skul, others meeting without the Skul do not reach hither alſo, ſeeing there are many waies, 'tis certain they may come even to the Organ of Hearing, which when it comes to paſs, it muſt needs be that a Hiſſing, Tingling, and noiſe is offered to the Hearing: and this is more commonly the cauſe of preternatural Sound than an influx of humor, as ſhal be ſaid by and by, ſeeing it is often wont to come to paſs in Drunkards or others, and in many Diſeaſes from Vapors ſomtimes thinner and cholerick as they call them, and ſomtimes thicker, that their Ears for that cauſe do tingle and make ſome other noiſe, which doth laſt long, the vapors perſiſting for a time, or they being preſently diſſipated, it doth vaniſh: And this is the chief cauſe why after a Criſis in acute Diſeaſes which accompanied with a pain in the head amongſt other ſymptomes, the Hearing in thoſe that recover health doth ſuffer ſome hurt oftentimes of long continuance; the matter, which was then the conjunct cauſe of the Diſeaſe of being reſolved out of the Veins into Vapors, and emptied by ſweats and inſenſible tranſpirations, and part of it breaking out of the head through the aforeſaid waies into the capacity of the Hearing and ſtaying there awhile.

Wind or Air may cauſe the ſame, which if it break into this inner chamber of the Hearing and be carried through a narrow way, as it were by force, it makes a hiſſing: if through another hole ſo framed as it is wont to be faſhioned in a pipe it cauſeth a tingling; but if it run through larger paſſages and through the windings of that place, it makes ſome other noiſe, this often happens, if it be driven thither by force, as when the Noſtrils being preſt, and the Spirit or the Air being vehemently impulſed, we would blow our Noſe. Somtimes it comes to paſs that part of it doth break through the hole from the largeneſs of the Noſtrils, to the double channel of the Organ of Hearing (as we have ſhewed in our Anatomical work) and doth raiſe a Hiſſing or Tinglingt that oftentimes laſts long. Somtimes the Air breaking forth again the ſame way preſently, it ceaſeth, which comes to paſs the ſooner by ſwallowing often, as I my ſelf have often experienced; this Wind alſo in the chamber of Hearing may be raiſed from an internal cauſe, if from excrementitious moiſtures collected about the *Perioſtia* of the Skul, and converted into Wind, they be heaped there, whence in ancient Headakes and Pains of the Head and about the Bones in the French Pox, a Tingling of the Ears is very troubleſome.

A humor in the inner chamber of hearing is the cauſe of the defect of hearing.

A humor falling down or purged from the Head into this inner Cavity of the Ear through the hole which admits the Auditory Nerve; as if it be plentiful it cauſeth Deafneſs or thick hearing, ſo if it be ſubtile and little it depraves the Hearing; and if this happen from a deſluxion of it, it comes ſuddenly if it be heaped up there by degrees, this hurt alſo grows by degrees, all which for the moſt part do beget a Diſeaſe of long continuance and perſevering, ſeeing the humor is hardly diſcuſt here; but this proceeds from a Catarrh which falls down alſo to other parts, and ſomtimes from the head to this part; and it is known by the ſigns of that, not only in that hurt, but alſo by other appearances; the which is familiar to the aged, by reaſon of their plenty of excrements and accuſtomary to ſome natures from their Infancy that it moleſt the Organ of Hearing, as it may come to paſs by reaſon of the Country, as in the *Alpine Regions* we ſee that many for this reaſon have difficult hearing from their Birth, or preſently in proceſs of their age, together with the *Kings-evil* familiar with them for the like cauſe: and alſo in acute Diſeaſes by a Criſis chiefly, as hath been ſaid formerly, not only the cauſe of the Diſeaſe converted into a Vapor doth enter this chamber, but alſo oftentimes part of the excrementitious or cholerick humor doth fall into it, ſomtimes pure, ſomtimes mixt with Blood ſtil as ſome would have it, and breeds a more pertinacious hurt, than if it were cauſed by a Vapor.

The fault of conformation in the inner chamber of Hearing and its parts is the cauſe of the defect of Hearing.

Default of the Confomation and ſtructure of the Organ of Hearing is alſo hurt which ſeeing in this inner chamber 'tis made up of the auditory nerve, the Drum and three Bones, and Labyrinths of this chamber, in which ſoever that happens, it may hurt the hearing.

By reaſon of the Auditory Nerve not rightly formed, or carried from the Birth, it ſomtimes falls out that they are born deaf; and we know that it happens by reaſon of the Nerve, becauſe moſt of them are alſo dumb, ſeeing the Tongue which wanted many Nerves for the ſenſe of Taſting, Touching, and the exerciſe of vehement motion, hath obtained not only its proper Nerves, but alſo hath received another from the auditory Nerve, for that cauſe breaking forth of the chamber of hearing, by whoſe means the Tongue is continuous with that, the which being hurt, it comes to paſs that the Tongue, although the ſenſes remain, yet is not ſufficiently moved to utter ſpeech, ſeeing a greater force is required for motion, than to perfect the ſenſe; neither doth it hinder, that that is only a ſenſory Nerve of which the Tongue is here deprived, ſeeing we have often proved already, that every Nerve hath in it a power of moving and Feeling, the which it doth alſo exerciſe, being carried to a convenient Inſtrument.

By reaſon of the Drum the Hearing is more commonly weakned, if as we ſee in a Souldiers Drum covered with skin, if it be not whole, or not ſufficiently retcht, or too much.

The Drum wounded, ſeeing it can no more reſound, breeds Deafneſs, the which ſeeing it lies hid, it ſeldom comes to paſs, unleſs an Ear-picker be thruſt in perforce; the vulgar think it may happen from the Inſect *Scolopendra* (which they cal in the German language *Orenmettel*, as it were the Worm of the Ear, which may eaſily creep in in Gardens) but ſeeing if either that, or any thing elſe which may hurt ſhould creep in, it is eaſily remedied, this can ſcarce yet be done; as neither from matter retained, ſeeing that is wont preſently to flow forth, and I have often ſeen very much flow forth without any hurt, unleſs by chance the Ulcer of the Ears be ſo deep that an abſceſs being made, the Drum alſo is hurt.

If the Drum be ſlackly and conveniently retcht, it can no more give a Sound, which as it ſomtimes happens by force from a violent ſound, a Clamor made in the Ears, or from the blow of a Gun ſhot off by the Ear, ſo alſo by continuance of time, long uſe and much hearing, eſpecially of great ſounds, being ſo often beaten upon, and rendred ſlacker it makes difficult hearing in old folks (which ſeems to be the frequent cauſe of their thick hearing) The which alſo may happen from much moiſture or Unctuoſity if Oyl or other Liquors

be often poured into the Ears, the which is wont to be done, ſomtimes for a long while, to reſtore the Hearing loſt for ſome other Cauſe.

Alſo being too much retcht, and ſo tied up that being beaten upon by the external Aire it cannot yeild at all, it becomes unprofitable. And this happens, when either by reaſon of Age, or after acute Diſeaſes it is too much dryed and harden'd. The which as it may befal all other Membranes, ſo this alſo, and by ſo much the eaſier and more frequently; becauſe it hath no moiſt Bodies neer it, nor is not anointed with fat, as many other Membranes are, but is free, unleſs in its compaſs where it grows to them. And perhaps this is not the leaſt cauſe, of difficult Hearing, which oftentimes is wont to grow upon the aged, and is left in people recovering after Diſeaſes. Which Exiccation of the Drum, *Rhazes* writes may happen after watchings and faſtings.

The mutual Conſtruction and Coarticulation or Conformation of the three ſmal Bones being Vitiated, brings hurt to the Hearing: which may happen from the Birth, from implanted Cauſes; or from violent Adventitious Cauſes, as a blow, fall, and vehement ſound, the Drum to which they adhere, being moſt commonly affected too.

In the divers Paſſages, Cavities, and Meanders meeting there, if any thing be not right from the Birth, doubtleſs it alſo offendeth the Hearing.

A cold Diſtemper is the Cauſe of the defect of Hearing.

A cold Deſtemper, as it is an enemy to the Nerves, Membranes, and Bones, ſo it is very hurtful to the ſtructure of the Organ of Hearing, which is compoſed of them, and ſo much the more, becauſe the Eares alwaies lye naked and open to the external cold Aire, and ſo are the eaſier hurt by external things, as the cold winde; eſpecially penetrating through the Auditory paſſage, even to the Drum, and there cooling the hidden parts, and the Nerve it ſelf. Whence ſomtimes Deafneſs, and frequently an impediment in the Hearing, have followed; the which alſo is one of the principal cauſes, why in cold places, as the Alps, and windy places, they commonly are ſooner ſenſible of a defect of Hearing, the which alſo may happen from moſt cold water falling into the Eares by chance, or in ſwimming.

The uſe of Narcoticks, the cauſe of the defect of Hearing.

And the too much uſe of Narcoticks, ſomtimes to the Eares doth ſo affect the Nerve not by cooling, but by too much ſtupefying it, that it can no more return to it ſelf; which laſt cauſe is to be refer'd to weakneſs.

The Cure.

The Cure of all the hurts of Hearing, which are, as Deafneſs, thick Hearing, Tingling, Hiſſing, Pulſation, Fluctuation, Noiſe; is firſt to be fitted to the Cauſe. Which we have ſaid, was either in the Brain affected, either by it ſelf or by conſent from a Vapor, or the object, or in the outward Cavity of the Eare, a Stoppage, obſtructions from external Cauſes, or things fallen in, or internal Humors, Tumors; or in the inner Chamber of the Hearing repletion or trouble from a Spirit, Vapor, Winde, Humor; or a fault of Conformation, or Conſtruction, or a Diſtemper; of all which we ſhall ſpeak, what is to be hoped and what to be done.

By reaſon of an affect of the Brain, if the Hearing be hurt together with other ſenſes, and the cauſe lye there and not yet in the Inſtrument, we muſt proceed after the ſame manner, as hath been ſaid in the hurts of the ſight from the like cauſe: as if this come to paſs from a Vapor affecting the Brain by conſent, no other Remedies muſt be applied then thoſe in a Vertigo which we ſaid were convenient in a Depravation of the ſight.

The Cure of the hurt of Hearing from a violent ſound.

If the Hearing ſuffer a defect from ſome Impetuous external ſound, ſomtimes they return to themſelves of their own accord, otherwiſe hardly or never, *viz.* when the Spirits are ſo diſſipated, that they can no more return back, or not ſufficiently. Whence there is left a Perpetual tingling. Or if the drum impulſed by the force of the Aire, be too much hurt and laxt, a Deafneſs or thick Hearing, is ever after troubleſome to the man.

Yet nevertheleſs by applying Cupping-glaſſes about the Ears, and by Frictions and other hot things outwardly and inwardly appropriate to the Ears; we muſt endeavor to draw back the ſpirit, having reſpect to the conſtitution of the Body, of which we will treat by and by.

The Cure of the defect of Hearing, from the ſtoppage of the Eares.

If the Hearing be intercepted by the ſtopping of the Ears extrinſecally, it is eaſily corrected by removing thoſe things which hinder it, whether they be only applied extrinſecally, or they be thruſt in a little way.

The Cure for things fallen into the Ears.

But Bodies fallen in, or thruſt in, that do wholly enter into the Cavity; or if living creatures have crept in, they do not ſo eaſily yeild, therefore there is need of greater art to take them away, either by waſhing them out, or ſhaking them out, or drawing them out, or enticeing them out, or killing them.

Somtimes they give way by waſhing, if they ſtick not very faſt. Which is done by pouring in thoſe things which make this way flippery, and moiſten and dilate it, as the common Oyl of ſweet Almonds, Butter, Milk; or ſome relaxing and ſmoothing Decoction.

We ſhake them out by a certain violence, cauſing Sneezing. For ſo thoſe parts being ſhaken with the impulſe of Spirit, that which is fallen in, oftimes leaps forth, or at leaſt is forced forward, which will the ſooner be done, if the way be firſt dilated, as hath been ſaid, by Dancing and bearing the Foot of that ſide, as the Eare affected is, againſt the ground, in the interim holding the Head with the Hands, and bending it towards that part. Things are alſo ſhaked out of the Ears; which way Water and other Liquid things that are flown into the Ears are commodiouſly caſt forth, as Boyes are wont to ſhake it out after bathing in the River, if any thing hath flowed into their Ears,

If theſe ſucceed not we draw it out with an Inſtrument fit for for this purpoſe. Yet we muſt Studiouſly take Care, that whiles we put it in, that which ſticks be not forced in farther, whence afterwards it is taken forth with greater difficulty. This is done with an Ear-picker, with which the filth is wont to be taken out, whoſe hollow part muſt be very thin, that being there put behinde the things contained, they may the more commodiouſly be drawn forth. Or they muſt be laid hold on and puld out with a pair of Tongs fitted for that purpoſe, ſharp on both ſides and rough, or if this ſucced not neither, laying hold of them with another Inſtrument, if they be hard Bodies, as a Kernel or Stone, we break them, and then as hath been ſaid, with liquor poured in, we waſh them forth.

Somtimes

Somtimes we Allure living Creatures, with certain things which are pleaſing to them, that they may creep outward, and ſo then they may be laid hold on; as if we apply Milk with Sugar in a Spunge to the Eare, or thruſt it in gently, or the inſide of a Fig, or a cruſt of Bread, or an Apple, or the like, or Bacon Greaſe, with which Worms are ſooner enticed, and that eſpecially, if whiles they hold theſe things in their Ears, they turn them up to the Sun. By pouring Blood into the Ears, Leeches that are got in by chance are drawn forth.

We kill living Creatures, if they ſtick in the Ears, and give no way, and then being dead they do no more outnoiſe the Hearing, and they are the eaſier waſht out, or ſhaked out; and that is done by choaking of them, if Liquors be poured in, ſo they are wont, taking on their Finger ſpittle, which is ready at hand in the night, to drop it into the Ears, if Fleas have crept into them, which by its Tenaciouſneſs doth preſently ſtop up their Pores, the ſame is done by pouring in their own water. If thoſe things poured in be bitter, they ſooner kill inſects, as the Juyce, or the Decoction, or the Wine of Centory, Wormwood, the juyce of Rue, alſo killeth inſects; Alſo Gauls and Aloes, Acrid things do the ſame; Vinegar, the juyce of an Apple, and of Onions; And the reſt which ſhall be explained in the Woms of the Ears.

The Cure of the Hearing, from a Repletion of the Eares.

If the Ears be ſtopt by filth or choler, clotted blood, Matter, they muſt be extracted with an Ear-picker, or by ſome other Art, as hath been ſaid. And if they be ſo thick, or Tenacious that they do not eaſily give way, then they muſt be clenſed, diſſolved, and waſht out, by caſting in liquors often, and flowing forth again, ſuch as in clenſing of matter ſhall be expreſt in the Ulcers of the Ears. And Honey and Water, or Hydromel is chiefly good; or if we muſt clenſe more powerfully, that muſt be done with the Decoction, or bitter juyce a fore mention'd, of Wormwood, Centaury, Lupines, adding Honey or Gall which above all other things, as hath been often ſaid, doth make fluid thoſe things which are viſcous, and hath great ſtrength in diſſolving Eare Wax, into which it doth egregiouſly inſinuate it ſelf, by reaſon of a ſimilitude of Nature with it.

If a fleſhy Tumor ſtop up the Ears, it is ſcarce taken away, ſeeing it cannot be cut, and Cauſticks or Septicks are put in with danger to the Drum, the Callus left is hardly mollefied, Yet Emollient remedies may be tryed.

If a Pulſation be left in the Ears after an Ulcer. *Fernelius* writes that it is perpetual, which Impediment nevertheleſs, is diminiſht or ceaſeth, perhaps the Skin being drawn over the Wound, and in ſpace of time growing thicker.

The Cure of a Pulſation in the Eares, by reaſon of the Arteries.

If a ſound be felt in the Ears by reaſon of the more vehement Pulſation of the Arteries in the Ears, that remitting, as it is not wont to be of long continuance that ſound alſo ceaſes; if that come to paſs from too exquiſite a ſence, then it feels it either alwaies, or from a light intenſion of the Pulſe, and in proceeſs of age, the ſenſes remitting, it is mitigated, or it is corrected by putting in Narcoticks if it be very troubleſome, as if the juyce of Henbane be dropt in with Oyl or Vinegar.

The Cure of the hurt of Hearing, from the repletion of the inner Cavity of hearing.

If the Hearing be hurt by a Humor, or Winde, or alſo a Vapor contained in the Cavity of hearing; then if the matter be very thin and Vaporous, tis at length diſſipated of its own acccord. Or if it be thicker and ſtick there, it often produceth an evil of long continuance.

In the Cure of which, whether Deafneſs, or thick Hearing, or miſhearing be cauſed from thence; Emptiers are chiefly uſed after the ſame manner, as they are deſcribed in a Vertigo, and weakneſs of the ſight, cauſed by watriſh Serous, and flegmatick Humor, and the altering means, which are deſcribed in the *Oxydorcical*, or Eye-clearers are convenient for them alſo. And Topick remedies muſt be applied too, and into the Eares; which may waſte, Diſſipate, and Diſcuſs the matter contained there, and which by a propriety do reſtore the Hearing, all which ſhall be Methodically appointed in the following order.

The filth of the Guts muſt firſt of all be waſht out, by Suppoſitories, or Glyſters, or giving a Minorative purge; as hath been ſaid in the places forementioned, and ſhall be ſaid in the Excrementitious Diſeaſes of the Brain.

Bleeding if there be a Plenitude, or if Cholerick matter together with blood flowing to the Ears, hath cauſed Deafneſs in the criſes of Diſeaſes, will be convenient as hath been ſaid.

The Humors are prepared, if Flegm abound in the Brain, after the ſame manner: or thus, giving the things following for ſome mornings, and at night when he is going to bed, if there be need of great preparation; as, Take *of the ſyrups of Betony, French Lavender, of each half an ounce; Oxymel of Squils two drams, the waters of Sage, Roſemary, Marjoram, of each one ounce*: Make a Julep for once, Aromatize it; or let him take Lozenges after, it muſt be repeated as hath been ſaid.

Or let this Decoction be prepared, which is more effectual: Take *of the roots of the true Acorus, Orrice, of each half an ounce; Elecampane two drams, Liquoriſh one ounce, the Herbs Sage, Roſemary, Marjoram, of each one handful; Time, Rue, Balm, of each half a handful; flowers of Betony, Lavender, French Lavender, of each one pugil; Fennel ſeeds two drams, ſeeds of Caraway, Rue, of each one dram; Bay-berries, two drams*: Make a Decoction, and and in *one pound and an half* of that ſtrained, Diſſolve *of the beſt Honey eight ounces*: Boyl them to half the conſiſtence of a Syrup, and hang in it a rag tied up with *Cinnamon two drams, Cubebs, Spicknard, of each two ſcruples; long Pepper, Ginger, of each one ſcruple*: Let him take four ounces at a time.

An infuſion made in Wine of the ſame things, and Plants and Spices may be uſed; adding, if he be delighted with bitter things, Wormwood, Ground-pine, and Hore-hound, that it may be drank like wormwood Wine.

If a Cholerick humor abound in the Body, that is rather to be prepared, as it ought.

Then let him be purged after the ſame manner as hath been ſaid in the hurt of the ſight from Flegm of the Brain, chiefly with *Cochiæ pills, ſine Quibus, Lucis*, or with Electuaries, as *Indum* or others, or if the matter be Cholerick, with things appropriate to Purge that Humor.

And taking by courſe gentler Pills, and ſomtimes ſtronger, or in other forms, as theſe things have been explained in the Remedies.

Sweats are very convenient here, becauſe they call forth the thinner Excrements from all parts, even thoſe that are hid, and do diſcuſs Wind and Vapors; wherefore they are to be procured, the Body being firſt purged, by the heat of a dry Bath, or moiſt, Artificial, or Natural, amongſt which it is vulgarly beleeved, that Baths do good to the Hearing, and ſome chiefly commend the Suphur Baths, and think them ſo effectual in curing of Deafneſs, that if the Patient while he ſets

in the Bath, receive the hot water flowing through the Conduit cock, in a large ſpunge which doth compaſs the whol Head, and that twice a day, it is the moſt excellent Remedy for it, and alſo they may be ſomtimes moved, by giving of Sweaters and applying if need be, the ſaid Diet in ful bodies, which in Deafneſs is oftentimes the laſt Remedy, *viz.* by making a Diet as they are wont to cal it.

The Excrements of the brain muſt be called forth by the Noſtrils and mouth, and enticed thither, whence oftentimes there is great Revulſion from the Ears, and ſomtimes ſome purgation: for by Maſticatories, whiles the excrements of the Brain are drawn forth, they are not only revel'd, that they flow not ſo to the Ears, but alſo by frequent ſpitting, an expurgation by this impulſe, both of humors and wind being ſomtimes made through the ſaid holes that in the baſis of the Skul do enter the Organ of Hearing, it frees this part from Obſtruction; as experience ſhews, that by ſtrong ſwallowing often repeated ſometimes the Vapors and Air which hath broke into the Cavity of Hearing when the Noſe was blowed with violence, there cauſing a Sound, is as it were drawn forth again, the ſame way it entred, and as it was ſuddenly cauſed, ſo that ſound of the Ears doth ſuddenly ceaſe; wherefore ſwallowing alſo, in the interim preſſing the Eears outwardly, is a Remedy for bringing forth of the Wind, not to be deſpiſed.

Errhines alſo may do the ſame, and a ſtrong excuſſion of the Air by blowing of the Noſe, where nevertheleſs, if the Noſe whiles it is blowed, be ſo preſt, that the Air cannot conveniently go forth, but oftentimes recurring breaks into the chamber of the Ears through the ſaid holes as hath been ſhewed, and ſo depraves the hearing; for which cauſe it muſt be ſo blowed, whether with the hands or with a handkerchief, that there may be free paſſage for the Air through the Noſtrils.

Sneezing doth this far more vehemently which often ſhakes forth of the Ears Wind or Humor ſpeedily by the ſame way; but being ſo cauſed, that the force of the Air be not ſtopt, with the ſame caution as we declared even now in blowing of the Noſe.

Scarification made in the Wriſt is beleeved to derive much from the Ears: but it wil do more good, if it be done in the Neck about the Jugular Veins, whence they have preſent eaſe. Cupping-glaſſes alſo applied to theſe places, or to the ſhoulders are profitable. And laſt of all a Cauſtick.

The Remedies formerly mentioned are applied to the Head, whether outwardly adminiſtred or received by the Noſtrils in a ſuffumigation, amongſt which Remedies that are various, this is a ſingular help, which is done by Embrocation of Sulphureous water, as hath been ſaid formerly.

The ſame Remedies taken inwardly which have been explained in the ſaid places, and ſtrengthen the Head, Alter, waſt, and diſcuſs humors, Wind, Vapors, are convenient here alſo both in a decent courſe of diet, in which old ſtrong Wine is commended by *Rhazes*, and in other Medicines and Confections, to be taken faſtingand after meat.

Topick Remedies for the hearing.

The Remedies which are put into the Ears in the ſaid cauſes, called *Acoſtica*, are various; the more ſelect and corrected forms of which, we wil here explain.

Simple *Aqua vitæ* ſo called is good.

A more appropriate one made thus. Take *of the water of Organy ſtilled from the dry herb ſteeped in white Wine*, let him uſe it.

A more Compound Water. Take *of the roots of Radiſh, Leeks, Onions, each one ounce; Sowbread half an ounce, white Hellebore one dram, the dried herbs of Organy, three drams, Rue, Marjoram, each two drams; Lavender flowers one dram, Fennel, Cummin ſeeds, each one dram; Bayberries fifteen*, bruiſe them all, and add of *a Cows gaul one dram, White Wine* as much as is ſufficient, that they may be reduced as it were into *a Pultiſe*, and diſtil them.

Another eaſie to be prepared, uſed a long time with no ſmal ſucceſs. Take *of an Ox gaul two pound, freſh Onions ſliced, freſh Radiſh ſliced, each four ounces; freſh Caſtor ſliced one dram*, let them ſtand all night, then diſtil them, let *that Water* be kept for uſe.

A Decoction may be made thus. Take *of the roots of white Hellebore, Sowsbread, each one dram; the herb Organy two drams, Cummin ſeeds one dram*, boyl them in *white Wine*, ſtrein them for your uſe: if you take *Vinegar of Squils*, it wil be more effectual.

Another Decoction yet more excellent and very much commended. Take *of the roots of White Hellebore half a dram, Saffron, Caſtor, Niter, each one ſcruple*; bruiſe them together, let them boyl in *Vinegar half an ounce, Aqua vitæ two ounces*, ſtrein them for your uſe.

Many Juyces are uſed, as of Onions, Leeks, Radiſh, Rue, alſo the Tears of Aſh and Vines when they are pruned, eſpecially in a hot cauſe.

Oyls are often uſed for the Ears otherwiſe then for the Eyes, the more common are Oyl of Bitter Almonds and Spike.

Oyls drawn by diſtillation are moſt effectual above all other Remedies, extracted from hot odorous Plants and Seeds chiefly, as of Roſemary, Marjoram, Sage, Rue, of the Seed of Cummin, Carawaies, Fennel, and Bay berries, and what is every where to be had, Oyl of Spike, or Oyls of Spices, chiefly of Cloves, all which are ſcarce given alone, by reaſon of their too great vehemency, but diſſolved in ſome Liquor, or mixt with other things, they are moſt happily dropt in, as ſhal be ſaid.

Compound Oyls are thus made, amongſt which this is excellent. Take *Oyl of Bitter Almonds half an ounce, the juyce of Organy purified one ounce, White Wine Vinegar two drams*, let them boyl til they are waſted fit for uſe.

Or thus, Take *Oyl of Bitter Almonds, Spike each half an ounce, the juyces of Leeks, Radiſh, Vinegar, each two drams*; boyl them to the conſumption of *the juyces*, and let him uſe it, if you add *Caſtor one ſcruple, Euphorbium half a ſcruple*, it wil be more effectual.

Or many things added it wil be moſt effectual after this manner. Take *Oyl of Spike, Bitter Almonds, each one ounce & an half; the juyces of Radiſh, Leeks, Onions, and Rue, Vinegar, each half an ounce; Aqua vitæ two drams, add of the pouders of the roots of white Hellebore, Sowsbread, each one dram; the pulp of Coloquintida one ſcruple, the Leaves of Organy Cummin ſeeds, each one dram; Long Pepper half a dram, Caſtor one dram, Euphorbium one ſcruple, Niter two ſcruples*, boyl them to a fit conſumption for your uſe.

Or make a hole in a great Onion or a Squil, or great Radiſh, and fil it it with one or more of the aforeſaid Oyls, adding alſo other things and boyl it under the Aſhes and uſe it; the which done in an Apple of Coloquintida, wil be more powerful.

Mixtures are made of the aforementioned, ſuch as this is very proper. Take *of Aqua vitæ two drams*, in which diſſolve *Camphire two grains, Oyl of Spike one or two grains, or ſo many drops of other Chymical Oyls*, and if it be too ſtrong, dilute it a little with Water of Organy.

Another mixture of Oyls and Juyces. Take *of the mixture of the Oyls of Spike and Organy made after the ſame manner each half a dram; Oyl of Lavender two grains, a lit-*

tle

tle of the white of an Egg, beat them very wel, that they may be all mixt, and it become like *Milk*, and when you would uſe them beat them again.

Or thus, that it may be made like an Oyntment. Take *of Oyl of Caſtor, Gooſe-fat, each one dram; Cows gaul half a dram, Caſtor half a ſcruple, Rozin of the Larix tree a little*, mix them, anoynt *a Tent* and put it in, ſome drops of Chymical Oyls may alſo be mixed with it, as of *Cloves* or *Cumminſeed*, and it will be more effectual.

Trochisks to be kept for uſe may be made thus. Take *of the roots of Hellebore one dram, Sowsbread half a dram, the pulp of Coloquintida one ſcruple, Saffron a dram and an half, Niter two ſcruples, Labdanum one ſcruple, Euphorbium half a ſcruple, Muſk ſix grains*, pouder them and make them up of the juyce of a Leek, dry them; let one of them be diſſolved for your uſe in Vinegar or ſome juyce, of a Leek or a Radiſh.

Suffumigations admitted into the Ears before the uſe of theſe, and afterwards alſo, do very much good, and penetrate to the innermoſt parts.

Such as this may be. Take *of the roots of Hellebore one dram, the Plants Laurel, Marjoram, wild Time, Penny-royal, Calamint, Rue, Balm, Hyſop, Southernwood, each half a handful; Organy one handful, flowers of Lavender, Roſemary, each one pugil; Juniper and Bay berries, each half an ounce; ſeeds of Cummin, Carawaies, Fennel, each two drams*; bruiſe them and add pulp *of Coloquintida half a dram, Niter one dram*, make a Decoction in *Wine and Vinegar*, let him receive the Vapor or Fume, cauſed by quenching Stones in the Decoction, into his Ears by a Syringe.

Or which is more effectual. Take *Oyl of Nuts two ounces, Vinegar one ounce, Aqua vitæ half an ounce, Sulphur one dram*, boyl them and while it boyls, let him receive the Smoak.

The Ear alſo may be fomented with the forementioned Decoction deſcribed for a Suffumigation, or a Spunge dipt in it, may be applyed to the Ears whiles it is hot.

Bread made of Bran or Flour, and wrought with Caraway ſeed before it is baked, then after a little baking, being broken in two and applied to the Ear affected, whiles it is hot, doth help wonderfully in ſounds of the Ears.

A Bag of the ſame things applied to the Ears for the ſame uſes, and a pillow in the night is laid under the Ear affected, and ſuch things may be ſowed into a Cap in that part where it touches the Ear.

Which may be done thus. Take *of the roots of Sowsbread, Orrice, Aſarabacca, each two drams; the herbs Calamint, Baſil, Pennyroyal, each one dram; Organy two drams, French Lavender, Roſemary each one dram; Caraway ſeeds two drams, Grummel ſeed a little bruiſed three drams, Spikenard half a dram, Lignum Aloes one ſcruple, Storax two drams, Salt three drams*, mix them, fil a *Bag* or *Pillow*.

A Board of Cypreſs or Juniper, heated and applied doth good, eſpecially if firſt of all it be ſtrewed with pouder of Organy, and it is a ſecret Remedy for many things.

The Cure of the hurt of hearing from the fault of conformation.

If the hurt of hearing hath proceeded from the fault of conformation from the Birth, whether it be in the Nerve whence for the moſt part they are born Deaf and Dumb, or in the Drum or ſmall bone placed there, or in the Cavities and Mæanders there variouſly carried, being ill formed or built, then all Cure being in vain, though divers acouſtical Remedies be tried.

An eminent hurt of the Drum from an external cauſe, as a Wound, is incurable, and if by reaſon of the ſame cauſe it be too ſlack or retcht, 'tis hardly reduced to its natural ſtate; yet when it is too much laxed, thoſe Remedies which reſtore the hearing are convenient alſo, but when it is retcht by reaſon of old age or after a Diſeaſe then things laxative; upon which account, as we do otherwiſe command a Reſtorative and Moiſtening courſe of Diet in old folks and thoſe recovering, ſo even upon this account it is profitable, and we infuſe warm into the Ears things lenitive and moiſtening ſuch as are warm Milk, eſpecially a Womans, and temperate Oyls, of ſweet Almonds, Butter and the like.

The Cure of defect of Hearing from a cold Diſtemper.

If there be a weakneſs of the Hearing from a cold diſtempet extrinſecially, the Air or Water bringing hurt to the Ears, the Remedies which we ſaid were convenient in a cold internal cauſe, here alſo either laid on the Ears, or let in by Suffumigation, wil do good.

The Cure from the cauſe of Narcoticks.

The which alſo wil take places, if this happen from the uſe of Narcoticks put into the Ears, making choice chiefly of thoſe which have Vinegar in them, which we have often ſaid doth above other things infringe the force of Narcoticks.

CHAP. IX.

Of the hurt of Smelling.

The Kinds,

The defect of Smelling.

THe Smelling is wholly aboliſht, when it perceives no Scent at all not only of things diſtant, but of thoſe applied to the Noſe and taken inwardly.

But it is impaired only ſeeing the Smelling perceiveth not things unleſs very neer to the Noſe, and thoſe which breath forth a ſtrong ſmel, whether alſo may be referd that caſe, when they ſmel not things unleſs they be thruſt into their mouth, which one writes hath ſomtimes happened, when notwithſtanding otherwiſe the Scent of things put into the mouth, is in no wiſe naturally perceived this way.

A Depravation of the Smelling.

The Smelling is depraved ſeeing it judgeth the Scents of things not ſuch as indeed they are, but falſly, to be otherwiſe Scented, as when it perceives thoſe things which are otherwiſe indued with a grateful ſmel to ſend forth an ingrateful Scent, or when it thinks thoſe that ſmel wel, do ſtink, which for the moſt part happens the Taſt being depraved too, ſeeing the Judgment of things taken inwardly, doth partly belong to the Smelling, or when Nouriſhments of themſelves grateful both in Sent and Taſt, are often judged in Diſeaſes, to Savour and Smell ingratefully, but either we do in no wiſe refer thoſe things which are truely ſtinking, though they offend the Smell, as neither do we refer Grief to the depraved Touch, ſeeing it doth rightly perceive that which indeed is ſo.

The Cauſes.

Defect of Smelling by fault of the Brain.

In the part ſending, *viz.* the Brain the ſame which the Senſes of Taſting and Feeling, may be the cauſe of this hurt,

as

as hath been explained there, the which also is known by this, because these senses are hurt too.

If the cause of the hurt of Smelling consist in the part receiving the sent; because it consists of many that is either out of the Skul in the Cavity of the Nose, together with the prominency and patency of the Nose, or tis profound and hidden, or within the the Skul, in the holes of smelling and its Organ.

A stoppage of the Nostrils, is the Cause of the defect of smelling.

Unless the two prominent Chanels, which they call the Nostrils, Extrinsecally drawing in the sent, by pressing on both side the Pins of the Nostrils, or by applying other things be stopt, and for a while do take away the sense of smelling, which how it comes to pass by chance: because the hurt, which then it brings to breathing is greater then that which takes away the smelling, it shall be explained there, and when this is done on purpose and voluntarily; and that, that we may not smel external stinks: Because it is then no waies counted a fault, we need explain it: As also if against our will they be stuft with Snivel, or Tumor, unless this be at once in both Nostrils, and they be wholly stopt, whence the smelling would be hindred, (the which yet can scarce be done, that so great quantity of Snivel should long stick there, and a *Polypus* is wont to possess one Nostril only) becaus that doth rather prejudice the drawing in of the breath the smelling this cause also must be refered thither.

An obstruction of the deeper Cavity of the Nostrils, is the Cause of the defect of smelling.

In the profound largeness of the Nostrils, not that which is carried transversly from the Nostrils to the palate (because through that only the scent, which we meet with outwardly doth no way ascend, but that also which breaths from those things, which are put into the Mouth, as hath been said, is kept off by reason of this transverse Scituation, and is not perceived, unless some other cause be joyned) but that which is next to the Skul, the five like Bone, and the spung Bones of the Nose. If there be so great a Repletion, or such an obstruction, about the holes of the said fivelike Bone, which may hinder the sent of things that it cannot Penetrate, a defect of smelling oftimes happens.

Which oftentimes happens from thick Flegm distilling thither from the Brain, and being long retained, and somtimes becomming mucous, and highly viscid, and upon that occount the smelling is hindred, and when putrifying it begins to stink, or strainge matter endued with a strong sent is mixt with it, it is depraved, till that matter being cast off, which is done by vehement blowing of the Nose, or by Sneezing, they are freed from that Disease.

That this hath somtimes happen'd from a *Gypseous* and *Tophaceous* matter, or from a Stone bred in those narrow passages, the voiding of these things hath at last made manifest.

And what is rare, that a Worm bred there and a long time retained, and after many years voided all hairy, from a Woman of *Berna*, hath given occasion of this fault, the Physitian of that place hath signified to me, and sent me the draught of that Worm.

They teach also that it may be done by matter retained, but unless somwhat else be joyned, as a Callus from an Ulcer, or an Excrescency, matter cannot be so long retained, nor in no wise grow so thick.

And also this defect somtimes betides those whose bones of the Nose are fallen down in that place, either by a Disease the bones being eaten, as in the Elephantiacal, or those troubled with an *Ozena*, or by a fall, or blow made upon that part, and the bones being broken which also happens to some from their Birth, that their Nose being depress about the root, they do not smel well.

A stoppage of the holes of the Organ of smelling, is the cause of the defect of smelling.

The smal holes of smelling in part of the thick Membrane of the Brain, which is spred over the fivelikeBone perforated in like manner, if they be filled with any Humor, because nothing ought to be carried through them naturally, but the sent, do cause a defect in the Smelling.

As it comes to pass, when a thin Rheum, or the serous Excrements of the Brain falling down to this higher part within the Skul, and passing through the narrow holes, and distilling from the Nostrils do produce the said *Coryza*. Then some portion of this matter remaining in the said holes, and obstructing them, it brings a defect of smelling, which is wont to accompany, or follow a *Coryza*, the which also may happen from other matter heaped there.

And also it happens by fault of conformation from the Birth, that these holes being absent, both in the Membrane and the bone, and omitted by the defect of Nature, or being but blind ones, this becomes an original fault with man, that he smels nothing, as on the contrary it is credible, those who have these holes larger, as they seem to to be in Dogs which are quick of sent, that they smel more acutely, and truely.

A Repletion of the Organ of smelling with Flegm, is the Cause of the defect of smelling.

That also may happen by default of the Organ of Smelling or Nerve, if it be too much moisten'd, as hath been already said, by a thin Humor flowing down to these holes, on on which the Organ of Smelling lies; or be prest with an afflux of of another Humor, as hath been said of the rest of the Sensory Organs, or Nerves, which also may befal them from the Birth, by the fault of Conformation, if either they be wanting, or if they offend in Scituation and Figure.

The Cure.

The Cure of the defect of Smelling by fault of the Brain.

The Cure must be prepared according to the Diversity of the place, chiefly where the Disease, or its cause lies, which we have taught doth consist in the Brain, or the Cavities of the Nose, or in the holes of Smelling, or in the Instrument.

If it be by reason of the Brain, then we must oppose it here, as hath been explained in the rest of the senses, in like manner hurt together with the Smelling.

The Cure of the defect of Smelling, from obstruction of the Nostrils.

If the Patent, or hidden Cavity of the Nostrils be stopt, or obstructed with Snivel, or thick Viscous Flegm, then we must try by purging it, if it can be so removed, or by blowing it to take it away by degrees. And we must endeavor to shake it off by Sneezing, chiefly by irritating the expulsive faculty, if it be already prepared for excretion.

Putting into the Nostrils, if they yeild not easily, or lie deep, those things which may mollefie them if they be hard, or attenuate them if they be thick, or clense them if they stick Pertinatiously, and may stimulate also the expulsive faculty, whence they may afterwards

more

more eaſily, as hath been ſaid, either be taken out, or blowed out, or forced out by Sneezing, which we ſhall moſt commodiouſly do, by drawing up of Errhines or pouring them into the Noſtrils.

Emollient Errines and abſterſive are made of Whey, Hydromel, and the like.

Inciſive and clenſing are made of Wine, Vinegar, a Lie, and ſuch like.

Abſterſive and Stimulating, are made of Niterous Herbs, and acrid things, and others, amongſt which Gaul doth chiefly diſſipate things viſcous, ſeveral forms of all which are every where expreſt.

By receiving in at the Noſtrils the Vapors of ſome hot Decoction that doth cut and prepare Flegm; we prepare it for an eaſier expulſion. Such as we have formerly taught, were admitted into the Ears in the defect of Hearing, are here alſo convenient, and their like.

That matter is in ſome ſort attenuated, and ſtirred up to excretion, only by the ſmel of Acrid things; as of Muſtard, Radiſh, and if we adviſe them often to ſmel to thoſe things endued with a ſtrong ſent; either grateful, as Musk, Amber, or ſtinking as Caſtor, *Aſſa-fœtida*; we ſhall not only devide and provoke Flegm, but alſo we ſhall ſtir up, and recal into act again the the faculty of Smelling, which was laid a ſleep by the intermiſſion of Smelling.

And if ſome other Tophaceous Body, or Stony, or living Creature, as hath been ſaid of a Worm lurke in thoſe Caveties, which is very rare, then becauſe we can ſcarce gueſs at it, we can ſcarce apply remedies for it; and if they be there, and can give place, by the ſame means, as we have ſaid a thick Humor was provoked, theſe alſo are ſomtimes caſt forth by Sneezing with admiration.

But we may gueſs that a Worm is there, by this: Becauſe there hath been one caſt forth before, and now the ſame Symptoms appear again, which were then before it came forth; and we muſt mix bitter things, Gauls, the juyces of Wormwood, and Aloes, with the Errhines and Vinegar alſo, that we may kill it.

The Cure of the defect of Smelling, from flegm in the Organ of Hearing.

If the holes and Organ of Smelling being molleſted with thin flegm, do produce a *Coryza* with defect of Semlling, the Cure ſhall be explained in that Symptom which is moſt grievous, *viz.* how the body is to be purged, and reſpect is to be had to the Head, and thoſe Fluxes are to be ſtopt, or to be derived another way.

The Cure of the defect of Smelling, from the fault of Conformation.

But if the evil be organical from the birth, then it can no waies be mended, and it muſt be wholly committed to nature, which ſomtimes of it ſelf in its great changes doth ſomwhat, as alſo if it be by reaſon of the Noſe depreſt from the Birth, or from Diſeaſes or a blow, this Figure being vitiated, can never be corrected.

The End of the firſt Book.

Ce THE

THE SECOND BOOK OF THE Hurts of Functions.

HANDLING the HURTS of MOTION.

THe Motions whose Operations are discovered by our ſences (for we do not treat only of thoſe Functions) are ſome of them voluntary which are done, or regulated by our will, others involuntary which are perfected of their own accord by ſtrength of Nature, not by our Will.

All voluntary Motions fall under the ſenſes, ſome of which are performed, while a part is moved from a place into a place, the which do depend ſoly on our wil, which we call ſimply Voluntary, others are made by drawing in, and ſending forth the Air, and that partly by a Voluntary, partly by an involuntary Motion, and it is called the Motion of Breathing; but others are perfected by taking to them ſome matter, but chiefly by voiding it, and ſome both waies, which we cal Motions of Excretions, from whence there will ariſe three chief kinds of the hurts of Motions, of the Voluntary, of Breathings, and Excretions. Which hurts of them ſomtimes come to paſs by accident, and that either by reaſan of that hurt of the internal ſenſes, by which theſe motions are alſo offended, of which we have already ſpoke in the hurts of the internal ſenſes, or by reaſon of a Ceſſation of the vital Motion, whence it muſt needs be that theſe do reſt, or are weakend when they are impaired, the which we will handle in the defect of vital Motion; but otherwiſe theſe Motions are hurt not by reaſon of the ſaid hurts, but by themſelves, as now we ſhall ſhew in theſe three kinds.

The Motions called ſimply Voluntary, are of the external Members of the Body, and thoſe either moſt ſtronge in thoſe parts, which being ſtrengthned with Bones, are moſt able to endure them, ſuch as are, to bend or raiſe up the Body, and with that the Head, by benefit of the Back, to lay hold on and handle things with the Arms, Hands and Fingers, to ſtand or go with the Thighs and Legs, with the mandible (which alone of all the Bones in the Head is firm to exerciſe moſt ſtronge Motions) firmly to take things and devide them with the Teeth; the Motions weaker then theſe are, thoſe which are perfected only in the fleſhy and membranous Members placed in the Face. As to open and ſhut the Mouth and Lips, the Ey-browes, or Eyes, alſo to move the Eyes, the hurts of which Motions have two differences chiefly, that either they are defective or depraved.

Voluntary Motions are defective, becauſe they are weakend by themſelves or Aboliſht, for by accident alſo when by reaſon of pain in a part, its Motion is omitted, becauſe it would increaſe the pain; yet, it is improperly ſaid that it cannot be moved, which caſe is to be refer'd to pains, where alſo it ſhal be explained.

But Voluntary Motions are debilitated, eſpecially the ſtronger, when they are done with a certain weakneſs in its divers Kinds, which are Sluggiſhneſs, Wearineſs after labor, a Spontanious Wearineſs, which we will explain together in the firſt Chapter of the Weakneſs of Motion. | A Weakneſs of Motion.

Voluntary Motions are aboliſht, both the ſtrong and the weaker, when they are not perfected at all, or at leaſt wiſe not ſo much as was needful, as it is wont to come to paſs in its diverſe kinds, the chief of which are, a Palſy, Spaſme, Contraction, and their diverſe Species, as a Flatulent Spaſme, a Triſme, a wreathing of the Mouth, a Doglike Spaſme, a Gibbus, Strabiſme, &c. of which we will treat together under the title of Impotency of Motion, in the ſecond Chapter. | Impotency of Motion.

Voluntary Motions are depraved, chiefly the ſtrong, but with them the weaker alſo, when they proceed not rightly, or more then was fitting, as it happens in ſome of its kinds which are chiefly, Reſtleſneſs, Trembling, Palpitation, Rigor, Horror, Retching, Gaping, Tinckling of the Eyes, which ſhall be handled in Depraved Motion, Chap. III. | The Depravation of Motion.

All motions of Breathing, alſo are apparent to the ſenſes, and are perfected by divers Organs of the Breaſt, Neck and Jawes, and that two waies by drawing in and breathing out the Air, which Motion we cannot intermit at our will, when nature doth attempt it; whence it ſhall be called Natural Reſpiration, the other is performed only by breathing out the Air with a ſound, which with our will we can omit: and it may be called a Voluntary Expiration, or becauſe it utters a Voice, Vocal expiration, which alſo is twofold, as it brings forth a Voice ſimply, tis called a Voice; but as it makes an Articulate voice, tis called Speech; the which three, Reſpiration, Voice, and Speech do vary in that, that either they are Defective, or Depraved.

They are defective, when they are not done or not ſufficiently in many kinds of it, which are, Strangling, Suffocation, difficulty of breathing, Aſthma, Suffocation of the Womb, Night-Mare, defect of Voice and Speech, Stammering, which we will deſcribe together, in the Defect of Reſpiration, Chap. IV. | The defect of Reſpiration.

They are Depraved, when they are done, either not Naturally, or Violently, in divers kinds; as are, quick Breathing, Sighing, Yawning, | Evil Reſpiration.

Yawning, Hiccups, Sneezing Cough, Hoarſneſs, *which ſhal be explained in* Evil Reſpiration, Chap. V.

The motions of Excretions (under which we may comprehend not only thoſe, when ſome things is caſt forth of the body) which are naturally perfected by the paſſages of the body deſtined for it, that fall under the ſenſe, and are done by our Will, or at leaſtwiſe are regulated by it, are the paſſage through the Gullet, going to ſtool, Piſſing, Bringing forth, which motions in as much as they are functions of the body, are ſomtimes defective, when they are not done, or not as much as was convenient, ſomtimes they are depraved, when they are not retained to the deſtined time, which come to paſs, when the excretion is unſeaſonable, or too much; but becauſe ſomthing is rejected in all of them, we wil deſcribe in the Rejections all ſuch like natural excretions with thoſe Preternatural, but here we wil handle them, in as much as theſe functions are Defective or are not performed.

The defect of paſſage through the Gullet. — *One paſſage through the Gullet or Æſophagus is, which is naturally inwards, in ſwallowing; but the other by compulſion outwards by vomiting, of the kinds of both defects,* viz. the difficulty of Swallowing and Vomiting, *we wil treat in the* Defect of paſſage through the Gullet, Chap. VI.

The defect of Stools. — *The one kind of defect of dejections, which is performed partly by nature, partly by the wil,* viz. Coſtiveneſs of the Body *ſhall be explained in* Defect of Stools, Chap. VII.

The defect of Piſſing. — *The Defects of Piſſing, which the Will effecteth partly and chiefly, yet Nature helping, which are an* Iſchury, Dyſury *are deſcribed in the* Defect of Piſſing, Chap. VIII.

The two kinds of Defect of bringing forth, which motion is made by the force of Nature, our Will aſſiſting which are a Difficulty of bringing forth, *and an* Imperfect Birth *ſhal be explained in* the Defect of bringing forth, Chap. IX.

Involuntary motions are not all of them, but ſome only are conſpicuous to the ſenſes; which Nature alone doth attempt, either for preſervation of life, called Vital Motions, or for Nouriſhment and are called Nutritive Motions, or for Propagation of the kind, and and they are named Motions of Generation, from whence alſo proceed three kinds of hurts of Involuntary motions, viz. *of the Vital, of Nutrition, and Generation.*

The Vital motions do manifeſt themſelves in our ſtrength and in the motion of the Heart and Pulſe of the Arteries, which are hurt in this, that either they are Defective or Depraved.

The defect of vital motion. — *They are defective when they are aboliſht or impaired, in the following kinds,* a failing of the ſtrength, a defect of Courage, *in* the Agony of Death, *which we ſhal explain together in* The Defect of Vital motion, Chap. X.

Vital motion depraved. — *They are depraved when the motion of the Heart and Pulſes are too much or amiſs, in theſe two kinds,* the Motion and Pulſe of the Heart Depraved, the Palpitation of the Heart. *of which we ſhal treat in* the defect of Vital Motion Depraved, Chap. XI.

The Motions of Nutrition or which are made for Nouriſhments ſake being four, to wit, *Attractive, Retentive, Concoctive, and Expulſive, cannot all of them be perceived by the Senſes, neither do we perceive how the Retentive or Concoctive works, or when they are hurt, by the proper hurt of that motion, but we know it by other things which follow from thence. But in Attraction we manifeſtly find that Motion when Nature deſires Meat and Drink; and in Excretion when Nature expels ſomwhat out of the Body by its proper force, we plainly obſerve its motion, as in other Excretions in which our Will is Auxilary to it; whence we meet with only two kinds of the Hurts of the Motions of Nutrion that fall under the Senſe, of Apetency, and Excretions.*

The Motions of Apetency are hurt in the deſire of Meat and Drink when they are defective or depraved.

Defect of Appetite. — *The Appetency is Defective when there is little or no Appetite to them, of which faults, which are chiefly, an* Anorexy, *Want of Stomach, or Nauſeouſneſs,* Apoſitiâ *Want of thirſt, or a loathing of certain meats, we will treat in* the Defect of Appetite, Chap. XII.

The Appetite Depraved. — *The Appetite is depraved when it deſires either too much, or that which is not convenient, of whoſe kinds which are,* a Boulimy, Dog-like Appetite, immoderate Thirſt, a Pica, *we wil treat in* The Appetite Depraved, Chap. XIII.

Of the manifeſt Motions of Excretions which Nature alone doth perfect, as neceſſary, ſerving to Nutrition, one is of the Blood, another of the Serum, another of Milk, the hurt of which three Humors Kinds of Excretions do conſiſt in this, ſufficiently, or they are Depraved when they are made immo- that either they are Defective when they are not made or not derately or out of ſeaſon, *in which two ſeeing alwaies ſomwhat flowes forth, in that voided, we wil explain ſuch like depraved Excretions together with all the reſt, as wel natural as preternatural things, which do not offend in defect, but becauſe they are made, what way ſoever that comes to paſs, in the hurts of Excretions, but here we wil treat of them, in as much as theſe Functions are defective.*

The Defect of natural Hæmorrage. — *The Ceſſation and Diminution of a natural afflux of Blood, whoſe kinds are, a* Suppreſſion of the Courſes, *aand* Hæmorrhoids, a Defect of Purgation after bringing forth, *as alſo of* other Hæmorrages, *ſhal be handled in the* Defect of a natural Hæmorrhage, Chap. XIV.

Want of Sweat. — *One Kind of defect of Sweating out the Serum ſhal be explained in the* Defect of Sweating, Chap. XV.

Want of Milk. — *One kind of Deficiency of Milk ſhal explained in the* Defect of giving Milk, Chap. XVI.

The Involuntary motions which are made for Generation or Procreation ſake, whoſe hurts are conſpicuous, are converſant only about the act of Venery and Conception. For of Bringing forth *we have formerly ſpoken, becauſe the Will doth help that.*

The act of Venery which is perfected by the appetive motion of Nature, rendring the Members fit to exerciſe that Act, and by voiding of Seed in both as wel the Male as Female, ſomtimes is Defective, ſomtimes Depraved.

Defect of the act of Venery. — *Somtimes it is ſo Defective that it cannot be performed, in an* Impotency, Languidneſs Imperfect Venery, *or* Hindred, *or* Extinct' *of which we wil treat in the* Defect of the Act of Venery, Chap. XVII.

Salaciouſneſs. — *It is Depraved when they Covet it too muchin,* Laſciviouſneſs, Venereal madneſs, *a* Priapiſm, *of which we wil handle in* Salaciouſneſs, Chap. XVIII.

Defect of Conception. — *Conception which is performed by the motion of Nature, Attracting, Retaining, and Forming the Seed in a Woman only is Deficient or Depraved.*

It is Defective when it is not, as in Barreneſs, *or not as we we would have it, in Defect of Procreating Males or Females, of which we wil treat in* Defect of Conception, Chap. XIX.

It is Depraved when it is done ill, which Diſeaſe ſeeing it

can

can ſcarce be known, and fals not under the Senſes, til that which was ill conceived, be caſt forth; we ſhall rather treat of that in things rejected together with Abortion and the reſt of Excretions.

CHAP. I.

Of the Weakneſs of Motion.

The Kinds.

VVE call that a Weakneſs of Motion, when they exerciſe ſluggiſhly, or ſlowly, or hard- and with ſome trouble, the Voluntary motions of the body, and amongſt theſe eſpecially the ſtronger which have need of ſtrength that they may be accompliſhed, for if upon another account a defect befall them that they are not ſufficiently performed, ſeeing they happen from the ſame cauſe alſo, from whence we ſhal ſhew an Immobility doth proceed, they ſhall be explained there. But this of which we here treat, either is an accuſtomary Sloath, or a Wearineſs ſupervenient after labour, or a Spontaneous Wearineſs foregoing Diſeaſes.

Sluggiſhneſs. Sluggiſhneſs, Sloath, Slowneſs, Idleneſs, loathneſs to do any thing, is accuſtomary to the weaker ſort either by Nature all their life time; or to Infants, and old Folks by reaſon of their age, or thoſe recovering after a Diſeaſe, for ſome time or alwaies after, and other while it is familiar to the ſtronger ſort alſo by reaſon of Lazineſs with which they are more delighted, and do accuſtome themſelves to Sloath, all which can hardly endure heavy labour, nor perſevere long in undertaking it, being rather intent on Reſt and Sleep.

A Wearineſs or Detatigation after Labour, makes that they are not only unfit for the ſame labours which they have formerly undergone, and for undertaking of others, but they feel alſo a troubleſomneſs ſtil remaining for a while, not only when they do ſomwhat, but when they reſt alſo, to wit, that ſenſe of ſtupidity in their Limbs too much agitated, which they call Formication, Tingling, and a certain Diſtenſion as if they were dry or bound up, and therefore they are hardly and with trouble, bent or extended, whence *Galen* hath elſewere called it, a Squallid Wearineſs. Or if they be Cacochymical they perceive that painful ſenſe of which we ſhal ſpeak by and by in a Spontaneous Wearineſs; this doth more or leſs ſhow it ſelf, according as the whol body or its parts have been ſtrongly exerciſed, ſeeing the whol body is ſomtimes ſo caſt down by wearineſs, that even in reſt or lying down the wearineſs doth not wholly ceaſe, feeing in that too there is ſome attraction or extenſion of the Members by the Muſcles; whence they are forced by night variouſly to toſs their body, that they may find a fit ſituation for their body, in which they may commodiouſly reſt and ſleep: but ſometimes certain parts which endure the labour do only feel it, as the Feet after a long Journey, the Arms after long continued blows, the Hands not only after Stronger motions, but alſo as I have often experienced, by long and much writing, as alſo I have obſerved that the Mandible may be wearied by much ſpeaking; and that the weaker motions alſo, of the Eyelids, Lips, Eyes may be tired, even this doth manifeſt, becauſe thoſe that are Weary can ſcarce lift up their Eyelids, a ſure ſign of Sleepineſs and Wearineſs.

A Spontaneous Wearineſs, that is, not proceeding from Labor, but hapning of its own accord, ſuch as *Hippocrates* teacheth doth threaten or forego Diſeaſes, doth manifeſt it ſelf in the Limbs, with a certain ſenſe of pain, which either offering it ſelf in the ſuperficies of the Skin, and the Fleſh under it grows worſe by touching, expreſſing ſome ſenſe in the parts, and that is, either of an Ulcer, and it is called an *Ulcerous, Elcodis wearineſs*, or of an Inflammation, and it is called an *Inflamatory Phlegmonodis wearineſs*; others feel that painful ſenſe deeper, and that either about the Joynts, as if they were retcht, becauſe they are hardly moved, and it is called a *Tenſive, Tonodis wearineſs*. Or about the bones themſelves, as if they were bruiſed, and tis a contunding wearineſs which *Galen* hath named *Oſtocopum*. And alſo more Species of theſe troubleſome ſenſes meeting together, are joyned with this wearineſs.

The Cauſes.

The Cauſe of every weakneſs of Moving is, either feebleneſs of Strength, or too much intermiſſion of Motion or Exerciſe, or Idleneſs; or exerciſe or Labour, or plenty of Humors.

Feebleneſs, the Cauſe of weakneſs of Motion

In Feebleneſs, as all Functions are weakend, ſo eſpecially voluntary Motion, becauſe a greater ſtrength is required to exerciſe that; but this happens by reaſon of the defect of Native heat, either ſucceeding in old folkes by reaſon of Age, who are therefore ſluggiſh and preſently tired, or proceeding from a Morbifick cauſe, as after too great Evacuations; or iſſuing from the Diſeaſe by reaſon of the continuance of it, or Acuteneſs, or Malignity, overthrowing the ſtrength, that weakneſs ſtill remaining for ſome time even in thoſe recover'd of the Diſeaſe, or alwaies, when they have contracted, as they call it, old Age by the Diſeaſe.

Idleneſs, the Cauſe of Sluggiſhneſs.

Thoſe that Indulge too much to Idleneſs, either from a perverſe Cuſtome, or being hindred by the bulk or fulneſs of Body, are leſs exerciſed, are Sluggiſh to undergo even the lighteſt labors and are quickly wearied.

Labor, the Cauſe of weakneſs.

By Labor or exerciſe both of longer continuance, and ſtronger then is convenient for every Nature, the Body becomes Sluggiſh and Weary. For, becauſe nothing can laſt long that wants its reſt by courſe, it comes to paſs, that thoſe who are exerciſed longer then tis fitting, or who take a long journey, and Labor all day, become wearied: ſo alſo they are tired, if they be long about a ſtrong and vehement work in doing of which, there is need of ſtrength or quickneſs. And that becauſe the Muſcles Nerves and Tendons are retcht when the Limbs are bent, the joynts extended and brought about, and then alſo when they reſt, the like ſenſe and diſpoſition remaines, as was wont to be in the Motion, and there is felt a Tenſve or Stretching wearineſs. And then becauſe the Members grow hot by Motion, they become weary, for ſo there is a certain Conſumption of the viſcid Humor, with which the Joynts are beſmeared to exerciſe their Motion the eaſier, not a Colliquation of fat, as ſome would have it, (of which the joynts are wholly deſtitute) which Humor being waſted, the Members as being made dry do bend more hardly, and they ſeem as it were to be retcht. Alſo by reaſon of that heat raiſed in the Members by Motion, the blood provoked to the outward

Fleſh

Fleſh and Skin, doth cauſe there a ſenſe of Inflamation, or if it be acrid and thin it ſhews ſome ſenſe of an Ulcer, or if it be Cruder, it only oppreſſeth and diſtendeth.

A Plenitude and Cachochymy, are the Cauſe of Spontanious wearineſs.

If the body be loaden with plenty of Humors, tis preſently wearied, not only when it Labors, but alſo without exerciſe tis troubled with the ſaid Spontaneous wearineſs, which alſo doth foretel that Diſeaſes, by and by will follow, from that Redundancy of Humors: thus in a Plenitude of blood, there is felt a Tenſive and Inflamamtory wearineſs; and in a Cacochymy of Cholerick, Sharp, Salt Humors, an Ulcerous wearineſs, in that of crude cold Humors, a contunding and gravative wearineſs.

The Cure.

The Cure of Sloath and Wearineſs, cauſed after labor; and of that Spontaneous, from what cauſe ſoever.

In the Cure of Defatigation, cauſed after Labors; we need not take much pains, ſeeing they return to themſelves of their own accord; but in that which comes of it ſelf: becauſe it is a foreteller of Diſeaſes, we ought to provide, not ſo much to correct the Wearineſs, as that Diſeaſes do not follow. Sluggiſhneſs, becauſe it doth weaken the body, and makes it languid, is not to be ſuffered; that which ariſeth from the want of native heat, is ſcarce or never taken away: yet for the mending of all which, we do uſe, either Reſtauration of ſtrength, by Reſt, Exerciſes, courſe of Diet, Baths, or other Applications, or Evacuations.

Reſt Cures Wearineſs after labors, the labor then ceaſing, but chiefly being cauſed by ſleep; becauſe in that the Members do reſt better and that eſpecially if they be placed in that Scituation and form, which is called a *Meane*, all the Muſcles being relaxt, ſo that they ſuffer no violence whether crooked or ſtraight, yet let every Member have its competent Figure, and alſo becauſe by Sleep, the Humors too much provoked by Motion, are diſcuſt, therefore weary Bodies are better refreſht by this means.

Exerciſe, doth correct Sluggiſhneſs, ſprung from Idleneſs; if they accuſtom to exerciſe their Body with that, which is moſt delightful to them, or is neceſſary for the ſuſtaining of life, the weaker ſort, or thoſe who by reaſon of a greater bulk of Body, cannot undergo buiſneſs or exerciſe; by gentle means which they may perform themſelves, or with which they may be exerciſed by others, as by Frictions, become fitter to undergo labors; it corrects alſo wearineſs contracted by vehement labor, if it be more gentle then the former, for ſo it doth better reduce weary bodies to reſt, then altogether reſt, ſeeing every ſuddain change is hurtful, as it is done by going, walking, after running, and other ſtronger works, rather then by ſetting ſtill. And thus *Galen* ſaith one wearineſs takes away another, if to that of yeſterday, the like be applied the next day; alſo a motion contrary to the former Motion, doth refreſh wearied Bodies, as if one be wearied with climbing up a hil, by going down again, he will ſooner be eaſed: and again becauſe gentler exerciſe doth diſcuſs the Humors called forth by that which was more vehement, upon that account, alſo it cureth painful wearineſs; for which reaſon the Ancients did not only diſpoſe their Bodies by Friction before Labors, which for the moſt part they underwent for healths ſake, to relax the parts, and make the Excrements fluid, which they called *Præparatory*, but alſo after Labors they applied it at laſt, to relax the parts more, and to purge away the Excremants attracted, and they called it *Apotherapia*. And they made a gentle Friction by which the Body was lightly heated, to looſen and relax, which they called ſoft and little, or a ſtronger Friction in which the part was more heated and dilated, which they called, hard and much; and they maintained that this did diminiſh, that did bind: or a mean Friction which in quality and quantity and ſtrength, was the middle between theſe: to which operation of the Hands, they applied alſo anointing with common Oyl, or Oyl of Savin, that it might be the better accompliſht inſtead of which we may take Oyl of Chamomel or ſweet Almonds.

A moiſt and hot Bath may make good the uſe of Friction, and in our Age tis more uſual, whether the greater part of the Body, or only the wearied parts be dipt in it, as the Feet after running, which doth wonderfully refreſh weary Bodies, reſolving as Friction doth, by an actual moderate heat, either more or leſs increaſed, and provoking the humors, and relaxing the bound parts: which is prepared of ſimple water in which ſomtimes are boyled Mallows, Chamomel, Betony, Hyſſope, Organy, Pennyroyal, Sage, Ground-pine, Mugwort, and other things to encreaſe ſtrength, after the uſe of which, anointing is convenient, as in Friction.

Other applications, as anointing of it ſelf, adminiſtred without a Bath made eſpecially along the Backbone or the wearied parts may alone mitigate wearineſs as alſo Friction, and a Bath, yet more lightly, when the leſſer Friction is made with anointing, and the actual heat in the Unguent is leſs: *Dioſcorides* teacheth that Mugwort applied to the Feet with greaſe, doth take away wearineſs after a journey, and if a Traveller carry Mugwort with him, ſome teach he ſhall not be wearied in his journey; ſome relate for certain, that the ſame comes to paſs if the Feet be anointed with Gooſe Greaſe.

Reſtaurative meat and drink doth Egregiouſly refreſh weary Bodies, and that eſpecially by giving of Wine, which recreates the weary and makes them active, and the weaker ſort alſo that are more ſluggiſh to all operations by theſe things do aſſume ſome ſtrength.

Evacuation in a Spontaneous wearineſs proceeding from plenty of Humors, doth take it away, by carrying the Humors away; and doth prevent, that the Bodies fall not into Diſeaſes, which ſhall be done by drawing of blood in a Plenitude, and in Cachochymical Bodies, by Purges appropriate to the Redundancy of Excrements.

CHAP. I.

Of the Impotency of Motion.

The Kinds.

WE call that an Impotency of Motion, which alſo we may call an immobility, when either we cannot at all, or not ſufficiently perform thoſe motions which are made by our will only, the which ſeeing they are many and various in the Body, ſo many & divers kinds alſo of Immobility do offer themſelves; of which ſort are, in the defect of ſtronger Motions, not to be able, or hardly able, to raiſe one ſelf up, or

bend; to ſtand or go, to lay hold on, and handle things, to take things firmly and break them with the Teeth; but in the defect of weaker motions, not to be able to open or ſhut the mouth or the Lips, the Eyes or Eyelids, or caſt about the Eyes.

Which firſt of all do chiefly differ in this, that in ſuch like Immobilities, ſometimes the member which ought to be moved, is Relaxed and Languid, and it is called a Palſie, a Reſolution, which is as it were a particular Apoplexy, when that is done without an apparent hurt, but if it be with a hurt it is called according as that is, ſomtimes a Fracture, ſometimes a Luxation, ſomtimes a Wound: but at other times the member is attracted or for a time Convulſed aud then it is called either a Spaſm, or particular Convulſion to diſtinguiſh it from a general Convulſion which we have called an Epilepſie and Catalepſie, of which the Spaſm here properly called is a part, ſeeing it is improperly alſo called a Spaſm which the Germans call *Krampf*, the Arabians *Alcuzez*, of which notwithſtanding the cauſe is far otherwiſe, than of a true Spaſm, whence this alſo is called Flatulent; but at other times, when the member is attracted 'tis only named a Contraction, a certain perſevering ſtiffneſs of ſome member, which particularly if it be in the back is called a *Gibbus*; which names afterwards we ſhal uſe in this ſignification; but in theſe kinds of Immobility ſomtimes more motions together do fail, ſomtimes particularly only ſome.

The immobility of many parts together, or a general Palſie or reſolution is a ſpecies of general immobility.

Somtime more of the forementioned Motions are taken away together, in a Palſie therefore called General, the Members which ought to exerciſe motions, being Palſied, Languid, and impotent, without pain, as how this comes to paſs in every motion, we ſhall ſhew in particular Palſies: which ſometimes happens in the Members of both ſides, and in their motions, which Species of a Palſie is called *Paraplegia*; but ſomtimes this happens in one ſide only the right or the left, which Species they cal *Hemiphlegia*, in which nevertheleſs this moſt commonly falls out, that either ſide of the trunk of the body being palſied, and its motions aboliſht, the motions of the reſt of the parts placed in the Face, remain ſound and whol, ſomtimes ſome only receive dammage, as the motion of the Lips, but alſo to the forementioned Immobilities of voluntary motions ſomtimes are joyned ſome other Defects of the motions of Reſpiration and Excretions, as ſhal be explained in their places: amongſt which Speech often faileth. And it happens alſo that both the Voice and Breathing do ſuffer hurt together that when they would ſpeak out any thing clearly, or fetch breath ſtrongly, they are vehemently troubled with crying out, Laughing, Weeping, Coughing, and in danger of Suffocation. To theſe ſomtimes is added, that they cannot retain their water, and they caſt forth other Excrements.

But alſo beſides theſe Defects of Motions, the ſenſe of Feeling is aboliſht in the palſied Members; yet ſomtimes that alſo remains, ſeeing a Palſie is a ſymptom of Motion rather than of Senſe.

But in others there is diſcovered rather a Stupidity with ſenſe of Formication or of Heat or Cold, as hath been ſaid in a Stupidity. In a peculiar Palſie but very frequent in our times which follows the Collick pains, beſides a reſolution of certain parts, which oftentimes is wont to begin and continue with a trembling of the Member, a grievous and cruel pain doth moreover poſſeſs the palſied Members: which Palſie is wont for the moſt part to turn to Convulſions, and kill the Patient.

A Spaſm or particular Convulſion is a Species of general immobility.

Some would have it, that all the Voluntary Motions may be aboliſht together, and all the Members may be convelled, or rather be rigid, and as it were congealed, in the ſaid Spaſm, as it is in an Epilepſie and Catalepſie, ſo that it ſhal differ from them, eſpecially from a Catalepſie, no otherwiſe, than that here, becauſe the ſenſes remain otherwiſe than in them, they feel cruel pains in their Members; which Diſeaſe *Celſus* hath called a *Tetanos* or Rigor, and *Galen* hath reckoned it amongſt the peracure Diſeaſes, becauſe it kils a man in four daies ſpace, and he hath declared that it is very rare, ſeeing the cauſe which cauſeth it muſt needs be great as he ſaith, which can breed ſuch grievous pains, that it doth rather cauſe a true Epilepſie, or Catalepſie.

A Tetanus or Rigor is a ſpecies of Spaſm

Yet it comes to paſs more frequently that a Spaſm doth not invade at once all parts, but only ſome, which otherwiſe as ſhal be ſaid, it is wont to poſſeſs ſingly, and it is perceived in the Back and Joynts, and ſome parts of the Face, ſomtimes alſo for the ſame reaſon as a Palſie, doth by ſlackning, ſo this by contraction, doth prejudice, the Speech, and Voice; which particular Convulſion, certainly manifeſting themſelves in many places, are the Foretellers, and as it were the Preface, and ſomtimes the beginnings of a general Convulſion or Epilepſie by and by to follow, but ſometimes are the relicks remaining after a Paroxyſm of an Epilepſie that went before, which is now caſt off, as hath been ſaid in an Epilepſie. And we have ſeen alſo in a certain man a certain Spaſm of the Members that hath laſted twenty yeers, ſomtimes abating a little, ſomtimes contracting the Back, Feet, Arms, and moreover with a pain running up and down, wonderfully afflicting him; ſo that at the leaſt touch of any thing he would cry out, and the pain beginning in that place, & diſcovering it ſelf by a yellow ſpeck which preſently grew, now it runs like an Air into the ends of his fingers, by and by into the tip of his Noſe, and other outward parts, at the touch of the which he cryed out: and alſo that Spaſm which they call Flatulent is oftentimes wont to moleſt many parts at once, and to be troubleſom to certain men by Fits; which doth not ſo much differ from a true Spaſm, both in the cauſe, and danger.

A flatulent Spaſm.

Somtimes alſo Voluntary motions may fail apart, their parts being ſlackned, or convulſed, or contracted, or otherwiſe hurt, as being now about to explain theſe in particulars: by what means it may come to paſs, we ſhal reckon up divers particular kinds of impotency of motion.

An immobility of private parts or a particular Palſie, Spaſm, Contraction, is an impotency to exert or bend the body.

Somtimes a Raiſing up or Bending of the body cannot be performed, the back being palſied which ſcarce happens to theſe motions of the back apart, but alſo with other motions taken away too, as hath been ſaid in a general Palſie: from this Spaſm in the back it ſomtimes happens that tis convulſed, as the ſenſes being entire, we have ſometimes ſeen that by this means it hath a long time bent one upwards from the bed, and again relaxing him ſmite the bed: the which alſo may happen from a Contraction without a Spaſm, firſt of all in general, that it cannot be bent, and the body remain rigid

A Tetanus Epiſtotonos Opiſthothonos *are a ſpecies of contraction.*

gid & ſtretched in that called a *Tetanus* or Rigor (which name although they apply it only to the Back Convulſed, yet we alſo may apply it to that, if it proceed from a Contraction) or that it cannot be erected, and they go with a crooked body, and it inclines either to the foreparts in that called an *Epiſtotonos* or to the hinder parts in an *Opiſthotonos*, or to either ſide. Alſo ſome part only of the Back being contracted its motion is ſomwhere ſtopt, either ſome part of the Back bunching forth backwards in that called a *Gibbus*, or towards the ſides, or which ſeldomer happens it being bent forwards, and that in every one more or leſs, and a greater or leſſer portion of it being carried thither; whence they cannot erect the Body and they ſhew it ſhort, crooked, with an uncomly figure of the breaſt, the breaſt eſpecially hanging out very much, and the Back preſt in, and the Head inclining backwards if the Back be crookt to the foreparts, but the Back appears immoveable alſo by another means, it looſing its motion by a Contuſion or Wound.

A Gibbus *is a Species of Contraction.*

Going and Standing, Holding things, and Handling them, ſomtimes cannot be deformed; and that oftentimes, the Thighes, Arms being palſied, but chiefly the Hands, Feet, and their Fingers and Toes their motions being taken away apart, or many together, as hath been ſhewed in a general Palſie; and then one part, or more ſo affected do languiſh, and hang, and cannot be moved but by the benefit of a ſound part, and becauſe they are idle, they are found cold and moiſt by the touch; and ſomtimes are inſenſible or ſtupid, after divers manners as hath been ſaid formerly; alſo ſome motions of them are ſometimes hindred by a Spaſm and certain parts cauſing them, either more or fewer are troubled with it, not only with that which is called Flatulent which doth ſo often cramp with the higheſt torment the Toes of the Feet and ſomtimes alſo other parts, but alſo certain rudiments of a true Spaſm do create trouble in theſe places, for the ſame reaſon as a Flatulent one doth, ſuch a one as we have ſaid in the cauſes of an Epilepſie hath ſometimes manifeſted it ſelf upon the taking of a violent Medicine; and alſo the motions that are performby the Joynts do ceaſe, if theſe parts are contracted, which if it be done ſingly is wont to happen to ſome one only: whence they appear Crooked, Bowed, or Stiff; which is a permanent and frequent evil in the Feet and Hands and their Fingers and Toes, in thoſe whom the common people call cramped, although when theſe parts are palſied and pendulous about the Wriſt, they are bound up and contracted in the Fingers, and Atrophy moreover of the Hands ſupervening eſpecially betwixt the Thumb and Fore-

The Contraction of thoſe which the Germans call Contrakt *is a Species of impotency to go or lay hold of a thing.*

finger, the fleſh being waſted there, and a conſpicuous hollowneſs appearing, an evil moſt commonly remaining after Collick pains: this happens alſo with another fault of the forementioned parts in form and ſituation, that they cannot be moved, when either being abreviated, or otherwiſe crooked, bent or hurt in their length, or about the Joynts, they are found to have changed their ſcituation, and that with pain of the place eſpecially whiles they endeavour to move their Limbs, there being joyned ſomtimes a heat with a tumor and ſomtimes a hollowneſs appearing in one part, eſpecially about the Joynts, they and a certain protuberancy in the oppoſite place to it, as we ſhal ſhew in the cauſes doth befall broken and luxated bones, where alſo we ſhal explain how an Immobility of theſe parts doth happen with a Wound and other manifeſt Hurts.

An Impotency to Bite and Eat.

Somtimes they cannot take things firmly and divide them with their Teeth when the inward Cavity of the mouth can no waies be ſhut, but remains open with the Teeth drawn aſunder and the Mandible hanging down; and that comes to paſs without pain that being palſied which ſeldom happens particularly to that, much leſs in a general Palſie; or with pain and trouble that being palſied, the mouth ſtanding right or crooked if this come to paſs only in one ſide, ſomtimes there is ſome other eminent hurt, or a ſolution of Continuity. But at other times the Mandible cannot be opend, and 'tis exactly bound up, or only in one ſide, with the Teeth joynd together, neither doth it ſuffer them to take in meat, or any thing elſe, and it is either a Spaſm called by a peculiar name *Triſmos* if it befal this part, or ſome other Contraction: ſomtimes the Teeth being ſet on edg by this trouble, they are hindred in chewing of meats.

Triſmos a Species of Spaſm.

An Impotency to open and ſhut the mouth.

Somtimes they cannot ſhut or open their Mouth, or decently joyn and disjoyn their Lips, which chiefly prejudiceth Sucking and Supping; and then the Lips either are wanting or they hang down being palſied chiefly in a general Palſie, ſeldom in a particular Palſie only of this part, but moſt commonly it happens in the Palſie only of one ſide that this motion might not altogether periſh, ſeeing both the right and left part of the mouth joyned together, makes one month, one ſide of which being hurt, the other remaining moveable doth draw the immoveable ſide, & then the Lips with the Cheeks hang down on one ſide only. As alſo if they be convelled or contracted on one ſide, they alſo are drawn thither upwards.

A wreathing of the mouth, is a ſpecies of Spaſm.

And becauſe then in both ſorts, one part of the mouth hanging downwards or drawn upwards, the mouth is rendred Oblique & Wreathed as it is wont to appear in thoſe that cry, whether it be from a Reſolution or Convulſion or Contraction, they have called it, *a wreathing of the mouth*. But if the Lips with the Cheeks are drawn together on both ſides in a Spaſm, then the Mouth is wont to be ſeen drawn tranſverſe, as in men Laughing, or in Dogs when they gape being angered, and they call it a *Dog-like Spaſm*; as indeed Laughing alſo and Crying are kinds of a certain particular Spaſm or Cramp, ſeeing they do involuntarily ſo diſtort the mouth, as by and by ſhal be ſaid in the Cauſes.

The Dog-like Spaſm, a ſpecies of Spaſm.

An Impotency to open and ſhut the Eyes.

Somtimes alſo they cannot cover and hide their Eyes with their Eyelids, and the Eye remains bare and open, and is more expoſed to external injuries, which evil ſome call *Geſſa* and whom this befalls, they reſt not commodiouſly in ſleep, which is beſt acted with the Eyes ſhut, Seeing being ſo hindred; which diſcommodity may alſo come to paſs by a Palſie, for although it were palſied, nevertheleſs it would remain collected in the upper part of the Eye (for ſo the Eyelid ought naturally to be when it is not drawn, whence alſo in the dead their Eyes remain open) but this

this yet ſcarce happens, unleſs the Palſie be altogether general, as in the Apoplectical their Eyes continue open: but as this ſometimes happens from a Tumor which then alſo appears too, ſo frequently that the Eyebrow and Eyelids, when the Cheeks palſied do hang downwards, do ſomwhat appear depending on the outer ſide alſo. But if the Eye cannot at all be opend, then the Eyelids drawn over the Eye and gathered together do hinder the ſight, but if they be only lightly drawn aſunder then they are ſaid to wink with their Eyes, the which notwithſtanding in ſome doth more rightly direct their ſight than hinder it; this alſo ſcarce happens from a Spaſm that the Eye is wholly covered (unleſs this fall out with an impediment of the motion of the Eye, as ſhal be ſaid by and by) as it is that the Eyebrow is ſomwhat drawn down with the Cheeks; yet ſomtimes that alſo comes to paſs from ſome private hurt or Tumor of it, which ſometimes meeting in the Eyelid, or Eye, bring ſuch an Impediment, as ſhall be ſaid there: in ſleep they wink naturally.

An Impotency to rowl the Eyes.

The rowling or moving of the Eye is ſcarce aboliſhed, unleſs in an Apoplexy, with which thoſe that are taken have their Eyes fixt, and alwaies with the ſame aſpect, as hath been ſaid there, and in Convulſions alſo they appear Convelled, Contorted, and as they call it Broken.

Yet ſomtimes alſo a certain ſhort Spaſm or Cramp as it doth convell the other Members, ſo the Eyes alſo with a certain pain, not ſuffering them ſo long to be rowled, as neither the Eyelids to be opened.

The which befals ſome rouzed out of a deep ſleep, that whiles they endeavor to open and move their Eyes, ſeeing they are bound up as it were with a Spaſm, yet they cannot do it laſt, but with Labour and Pain.

Squinting a ſort of Contraction.

Somtimes alſo Squinting is cauſed, rather by a Contraction from the birth than by a Convulſion, the Eye being ſomwhat perverted, and the Eye a little turned hither and thither, looking upon one not ſtreight but obliquely, it rather gives a ſtern Aſpect than hinders the Sight, ſeeing the apple is ſcarce carried ſo far as to be hid by the Eyelids.

The Cauſes.

Every Cauſe of the kinds of voluntary motions hurt, both of the ſtronger and weaker (which we call impotencies) is either in the Organ ſending, or communicating the power of moving not in the principal the brain; for then alſo the internal ſenſes ſhould ceaſe together with motion, as hath been ſaid in their hurts, which comes not to paſs here, but 'tis in a Nerve or the Inſtrument which moveth, a Muſcle, or in the part which is moved, as we ſhal now explain.

The cauſe of a Palſie in the Nerves.

The Nerves (under which name we comprehend both the Spinal marrow and Nerves) ſeeing they are portions of the brain, every where ful of animal ſpirit, which by conferring their proper ſubſtance on the parts with the ſpirit, do communicate the power of moving & feeling; if they be ſo hurt, that they can no more do that, than one or more Muſcles into which they are inſerted, looſing that power of moving, and no more attracting the member which it ought to move, there follows a reſolution of it, or Palſie, that is, it becomes languid and unfit for motion. the ſound part then, as they ſay drawing the ſick: and if the hurt be vehement the ſenſe of Feeling alſo is taken away too, not only in the Muſcle, but in the Skin drawn over it, which receives ſenſory Nerves from the ſame Nerve that is hurt. Or if the hurt be not ſo great, becauſe greater force is required to exerciſe Motion, then to confer the ſenſe of Feeling, this ſenſe may ſubſiſt either whol, or impaired, yet the Motion being taken away: as alſo if another cauſe moreover be joyned there may alſo be felt a pain or trouble too, in the part (although it be immoveable or hardly moved) as we ſhall now deſcribe, both what Nerve, and by what Diſeaſe affected, doth produce the diverſe Species of Palſies.

This hurt of the ſpinal marrow often happens, ſeeing it is very much expoſed to external injuries, and becauſe it lies under the Brain, fit to receive its excrements; which if it be affected in the beginning of its paſſage made by the Brain through the Back-bone, next to the Brain, by depriving all the Nerves, which ſpring from that, of the Animal ſpirit, it makes a general Palſie, in which all Voluntary Motions ceaſe, as well the ſtronger of the Body, as the weaker of the parts of the Face. And beſides theſe, Breathing, the Voice, and Speech, Swallowing alſo, and ſome Motions of Excretions do ſuffer ſome hurt, as hath been ſaid, if the hurt be neer to the Brain and great: becauſe the Conjugations of the Nerves do iſſue forth there from the beginning of the ſpinal Marrow, and then alſo are hurt, as ſhall be ſaid by and by; but if in the reſt of the progreſs of it, there happen any ſuch hurt to the Back, then by taking away that faculty from thoſe Nerves only, which are under it, it makes thoſe Members Palſied, into which they are inſerted; by whoſe hurts it is eaſily known, where the cauſe lurkes in the ſpinal Marrow; which in what place ſoever it is, if the hurt be in both ſides, the cauſe is in both, if only in one (as the ſpinal Marrow is perceived to be truely diſtinguiſht) the Cauſe only in that ſide makes a Palſie, and by ſo much the more general, by how much that is affected more towards the Original.

If paires of Nerves proceeding from the Spinal marrow be hurt, then according as a general Nerve communicating Nerves to many parts, or a ſpecial one communicating to ſome only, is ſeazed with the Diſeaſe, more, or one part ſuffers a reſolution; by which alſo we ſhall eaſily find out, what Nerves are affected, if we know which are communicated to every part: and hence many Particular reſolutions may be made in the Members, which have received Nerves from the paires of the ſpinal marrow, yet not in all, becauſe the Muſcles moving the Breaſt eſpecially the Midriſe, and thoſe of the Belly alſo being compeld by a neceſſity of breathing, eſpecially ſeeing breathing is cauſed alſo by the help of natural Motion do nevertheleſs perform their office in the palſied, in reſpiration and caſting forth of Excrements; hither alſo makes ſomwhat, that the Midriſe both receive Nerves not only from the ſpinal marrow, but alſo from the conjugations of Nerves as ſhall be ſaid, as we ſhall declare things further in the defect of Reſpiration; beſides which parts, the reſt which are moved by the Muſcles, may ſuffer a reſolution.

The Contractions of Nerves derived from the Brain that do communicate Motion, if they ſuffer a Diſeaſe, then that part is hurt, to which the Nerve hurt is peculiar, and by the Palſie of the part, the Nerve affected is known; as if that called the ſecond Conjugation of Nerves derived to the Muſcles of the Eye be affected, there is a Palſie of the Eye, the which nevertheleſs can

ſcarce

ſcarce be done in this Nerve unleſs the neighbouring Brain be hurt, as it comes to paſs in an Apoplexy, but as more commonly the Conjugation of Nerves carried to the Face, Lips, Ey-lids and temporal Muſcle, being affected, there is a reſolution of the Lips and Ey-lids, but ſeldom of the lower Jaw; ſeeing the Temporal Muſcle doth receive more Nerves: and if the Nerve of the Tongue, called the third Conjugation doth ſuffer, the Tongue being Palſied, the Speech ſuffers a blemiſh and then commonly by reaſon of its communication with the Auditory Nerve, if the hurt be ſo great that they become wholly mute, they are Deaf alſo: The ſame may happen in that conjugation of Nerves, which they call the ſixth and ſeventh, which falling from the Brain, and joyned into one deſcending Nerve, and communicating the ſenſe of Feeling to many Interiour parts, and giving alſo Motion to the Muſcles of the Laryux, Tongue, Jaws, Midrife; alſo to the Muſcles of the Bladder, Fundament, if it be hurt about the original or ſomwhere alſo in its Progreſs, it breeds Palſies of the parts into which it is inſerted, if they be moveable, in others a certain ſenſe of Stupidity, and hence if the recurrent Nerve be affected, there is a defect of the Voice and Speech, if the Nerves which go to the Muſcles of the Jaws be hurt, ſeeing ſwollowing is cauſed by them, and not by the Fibres of the Oeſophagus, as they have thought, there follows a difficulty of ſwallowing, and alſo there comes ſome Impediment in Breathing, if the Nerves which go to the Midrife be hurt, and that eſpecially in violent ſending forth the Breath, when they would utter a great Voice, or are compeld to Cough, for then not being able to expreſs it, they come into ſome danger of Suffocation; becauſe otherwiſe for the perfecting of moderate breathing, the Midrife which cauſes it, ſeeing it doth receive alſo from the Spinal marrow, as hath been ſaid, it can nevertheleſs in ſome ſort perform its office, although theſe Nerves be hurt; in which hurts of Motions, an offence of the ſenſe of Feeling being joyned, that ſenſe of heat and tingling doth ſo much moleſt the ſick about the Stomach, eſpecially where the Nerves are greater, and about other internal parts, as hath been ſaid; but if there be a certain general hurt of the ſame Conjugation; becauſe then both the Sphincters of the bladder and Anus, and the reſt of its Muſcles are Palſied, an involuntary Piſſing moreover, and a relaxation of the Fundament, is coupled with the other Species of a Palſie, as we ſhall explain all theſe more at large in the defect of breathing, and of Excretions, and in the difficulty of ſwallowing.

The Diſeaſes of the Nerves, from whence a Palſie is.

But the Diſeaſe with which the ſpinal Marrow or Nerve is poſſeſt, is that, which deprives it of the Animal ſpirit, which it hath need of to exerciſe its Function; for being ſo affected, it can neither any more communicate to a Muſcle the power of moving, nor to the ſenſible parts the power of Feeling, if the Nerve be wholly deſtitute of that, and the remaining part of it from the place affected even to the part, into which it is inſerted, becomes unprofitable. As it comes to paſs, if its continuity with the part be broken, for then this paſſage is interrupted: or if the Nerves be ſo ſtraiten'd, that the Animal ſpirit, which requires a free paſſage through them, can no longer paſs through them, or fil them up, or not ſufficiently; ſeeing, though it be moſt thin and ſubtile, and doth Illuſtrate the Nerves like the rayes of the Sun, yet nevertheleſs it may be hinderd, as the Sun Beams alſo may: as this happens if it be ſo preſt in any part of it, that its ſubſtance doth wholly ſink down, or if its ſubſtance be ſo condenſed that alſo by this means the paſſage for the ſpirit is intercepted. And alſo the ſame may fal out, if ſome part of the Nerve do ſo labor of a diſtemper, that it can no waies perform its Fuuction; as how theſe Diſeaſes, *viz.* A Solution of Continuity, a Straitneſs of the Nerves, a Condenſation and ſimple diſtemper, or with an Afflux of Humor, and Repletion, or with a preternatural Tumor, or ſome fault of the Organ do proceed from Internal or External Cauſes, to wit a Flegmatick humor, or Bloody. or from a diſtemper, or ſome hurt by Compreſſion, Ligatures, or from a wound, or ſome other blow, we will now expain.

As it hath been explained in the Cauſes of an Apoplexy, that an Apoplexy which is a Palſie of the whol Body, is generated from Flegm or a Watery, Serous, Cold, moiſt Excrement of the Brain, bedewing the brain or preſſing the original of all the Nerves, ſo if this happen in the Nerves a Palſie is generated; for ſuch a humor, heaped up plentifully in the Head, for the cauſes there aſſigned, and caſt off from the Brain in an Apoplexy which it hath firſt produced, or without that, falling down from the Head, not though the ſubſtance of the Spinal Marrow, or Nerves, but either diſcending throngh the Cavity of the Vertebraes of the Back, which doth contain the Spinal Marrow, and there ſtopping about the beginning or progreſs of it, or ſliding down further through the paſſages, which the paires of Nerves proceeding from the Spinal Marrow do every where run through in the Body without any Connexion, or falling from the Head and following the like paſſages of the Conjugations or pares of Nerves and ſomwhere ſticking about the Nerves, in what place ſoever this happen, whether about the Spinal Marrow, or about the paires or Conjugations of Nerves, by compreſſing or bedewing them, as if this come to paſs in the Brain it procreates an Apoplexy, ſo if it happen in the foreſaid places it produceth a Palſie, of more or fewer parts, according as a general or particular Nerve is affected: whenas if plenty of Humor flow thither, in thoſe narrow places compreſſiug the Nerves with its weight, it may alſo intercept the paſſage of the Animal ſpirit, as hath been ſaid formerly, and by ſo much the longer, if being detained there by a long ſtop, it become thicker and Mucous; but principally becauſe by its moiſture it continually bedewing, filling, and cooling the ſubſtance of the Nerves, it deſtroies their proper temper in that place, and hinders that they cannot be filled with the Animal ſpirit, nor enjoy it: whence alſo by reaſon of the interpoſition of this unprofitable part of the Nerve affected, the other part of the Nerve which is carried to the parts, being alſo made unfit to exerciſe its Function, there muſt needs follow, if the hurt be great, a perfect reſolution of the parts unto which theſe Nerves are communicated, and that by ſo much the more laſting and pertinatious, by how much the hurt of the Nerve is greater, which we have found by diſſection to be the true cauſe of a Flegmatick Palſie, the ſpinal Marrow being ſwelled up with a watry Humor, that there is no need to phanſie here any obſtruction in the Nerves which are ſolid, or made up of Filaments; nor any Cavity which may admit that thick humor, as ſome do write. Or if indeed they do grant this moiſtning of the Nerves: yet to aſſert that that comes to paſs by this means, becauſe the Nerves being made longer an ſlacker, they become unfit for motion; becauſe as hath been formerly ſaid, the Nerves do no waies attract the part; and far leſs to contend, that a Palſie is from the ſame Flegm as obſtructing the Nerves, for filling of them, ſo it muſt needs be that Convulſions

do ensue, which we call Contractions, and for that cause to assign the same Cure to them both.

Other humors possessing the Nerves are the cause of a Palsie and Spasm.

But also such an excrementitious humor from elsewhere than from the Brain, being carried to the Nerves of certain parts, or heaped up there, doth induce a Palsie proper to certain parts; which oftentimes also mixt with other acrid and cholerick humors, or otherwise putrifying, not only by bedewing but also by irritating the Nerves doth cause pains offering themselves with the resolution of the part and sometimes ending in Convulsions as this hath been said in Convulsions; such a kind of Palsie as hath be en explained in the kinds, as is wont also to happen in Colick pains, with torments of the Limbs, Heat, Tingling, and other troubles.

The same might come to pass from Blood out of the Vessels falling into these Cavities of the Nerves and retained there a long time; but seeing that doth presently putrifie it doth sooner breed an Inflammation, as also if it insinuate it self into the substance of the Nerves, whence other accidents do follow rather than those of a Palsie: but in the Veins if from a fulness, or non-natural situation of a Member (as if the Arm be held a long while lift up on high) the blood be carried into one place more plentifully, because then in some sort it presseth a neighboring Nerve, seeing the Nerves are alwaies wont to follow the course of the Veins, it rather causeth a light Numness or Tingling, than any Disease or long continued Palsie; the blood easily going back again, and not so stopping, but as in the brain it is abundantly powred forth into its ventricles, it may may cause an Apoplexy as hath been said there.

A Tumor of a Nerve is the cause of a Palsie.

Also a streightening may be caused from a hard Tumor of a Nerve, as from a Callus or a Skar after a Wound, or bruise growing in the Nerve, or from a bunching out arising from the proper clammy Nutriment of a Nerve which doth stop its animal spirit; but from an Oedema, which also they hold to be the cause of it, that cannot be done, unless some one would call it Irrigation and swellings of the Nerves, as hath been formerly said, an Oedema; the same also may happen from the Tumors of other parts pressing a Neigbooring Nerve.

The fault of conformation in a Nerve is the cause of a Palsie.

By the fault of conformation or shaping from the birth, the Nerves being not rightly formed or otherwise carried, the same also may come to pass, which often happens in the Nerve of the Tongue as we shal by and by explain in the defect of Speech, that they are born Dumb and Deaf, as hath been said in the hurt of Hearing.

A cold distemper of a Nerve is the cause of a Palsie.

From a Cold Distemper, or too much cooling (as we shall by and by explain in the Muscles) if not only the Muscles but also the Nerves themselves with the Muscle into which they are inserted, or without that, in their course out of the Muscle, seeing Cold is a very great enemy to them, be so affected, that they are either bound up and condensed by Cold, whence the animal spirit hath no longer a free passage, or be so hurt, that their function perisheth, then also there follows a Palsie of those parts whose Nerves are affected.

The Driness of a Nerve the cause of a Palsie.

Trallian teacheth that there is a Palsie caused from driness and heat, which certainly must needs fall out so, if it be such as may harden the Nerve that the spirit can pass through it; as the same may come to pass from the Causes to be explained in the exiccation of the Muscles.

The Compression of a Nerve is the cause of a Palsie.

A vehement and lasting pression of a Member, caused by a heavy burden, or some other force, especially in that place where the Nerves are greater or lie bare under the skin, first of all the spirits being repulsed, hindred, and running up and down, induceth the sense of Tingling in a stupidity, by and by an abolition of motion, and at length a perfect stupidity in the part, into which the compressed Nerve is inserted; this often comes to pass when at rest, especially in the time of sleep one part lying long upon another, as the body on the Arm, one Foot on the other, and pressing the same it renders the part immoveable and insensible and as they call it asleep: but if that this compression be suddenly caused with a strong blow of a Nerve, then there is only felt some stupidity yet mixt with pain and a sense of Tingling; as this is often wont to fall out by chance in the stricking of the Elbow there where the Nerve lies almost bare; and in the Ring-finger and little finger.

In vehement Ligatures of the Members, chiefly if a Nerve be contained in the bandage, the motion and sense of Feeling of the part do cease, as also the recurrent Nerves being bound we shal shew that the Voice doth perish, by and by in the defect of Speech.

The Vertebraes being luxated and the Bones of other Joynts, if the neighboring Nerves be there prest, a Palsie followeth; the which yet can scarce be done, because they easily give way, as also other discommodities do ensue, as in the luxations of the Vertebræ of the Neck, Impediments of Breathing and Swallowing, as we shal explain in their hurts; but in the other Vertebræ of the back, unless there be so great a luxation as doth vehemently press the spinal Marrow, there is no Palsie caused; as we see some Gibbus in whom many Vertebræ luxated do cause a crookedness of the Back, which the marrow that is within it doth follow without a compression, that they are yet no waies Palsied; unless by chance one or two Vertebræ being vehemently forced forth, making an acute Angle in the Back, do press it, the which scarce can be, by reason of the firmness of the Back.

The hurt of a Nerve is the cause of a Palsie.

A Nerve being cut off by a Wound; because then this continuation with the part is wholly taken away, the Member becomes Palsied and Insensible also, unless it receive sense from other Nerves that are yet unhurt; the which also a Contusion of it doth often cause, the Nerve being so hurt and filled with blood, that it becomes unprofitable; whence the spinal Marrow being so affected by a fall there oftentimes follows a general Palsie, but at other times the Nerves being Contused elsewhere, a particular Resolution, oftentimes also after a Contusion, a Callus being left being left behind it, that happens as hath been said.

The cause of a particular Spasm is in the Nerves.

Also from the Nerves affected, Convulsions, or particular Crampings of the Members may be caused, not being filled with flegm (as they would have it, and have written that from the same humor sliding into the Nerves divers Diseases may be produced, and that both a Palsie and Spasm may be caused) but being irritated and molested from the same causes as hath been explained in an Epilepsie, yet not being so grievously hurt, as to draw

the

the Brain into consent, for a general Convulsion or Epilepsie would be caused, as this somtimes follows this particular Spasm, especially if the greater Nerves be affected, and the hurt be grievous: in which particular Spasm also, as in a Palsie according as more general or private Nerves are affected, as there happens a Palsie so here a Convulsion of more or fewer parts; and the parts of the Back being affected, it manifests its self here in the inordinate Motions of the Back, Arms and Hands; which doth either very much Convel and Attract these Members, in that called a true Spasm of them, or only slightly draweth the Fingers, Hands, Armes, or other Members and relaxeth them again, in a Convulsive Palpitation, therefore so called because it threatens true Convulsions. Also the Conjugations or pares of Nerves being molested, it often causeth that diseased crookedness and distorsion of the Mouth which they call a Dog-like Spasm, or also that light Species of a Spasm, which happens unvoluntarily to those that Cry and Laugh, and that from a too great affection of the Mind, the Spirits being poured forth thither with the Tears and forcing the Nerves; as how this comes to pass, and that from this cause, only more grievous Convulsions do arise, hath been explained in the causes of an Epilepsie, and Catalepsie; although these also generated from other things do produce not only that Spasm raised in the Mouth by the affections of the Mind, and ceasing by and by, as they remit, but also a lasting and dangerous one; such as that *Sardonius Laughter* was, described by *Cicero*, that killed folkes; the which also being Supervenient in a general Convulsion together with other things, is accounted for the worst sign, and oftentimes when the Paroxysm is off, it remaines stil, by reason of an Alienation of the Mind as was said in an Epilepsie: and also this Particular Convulsion presents it self not only in the forementiond hurts of Motions, but also in others, and in the Motions of Breathing and Excrements, if the Nerves destined for them, be affected; amongst which that difficulty of swallowing which the Chyrurgions cal the Stomach Spasm, and which they so much fear in wounded People, is wont to be very frequent: as these shal be explained more rightly in their proper places.

In the Muscles or their Tendons, is the cause of a Palsie, a windy Spasm and other Species of Immobility.

A Muscle, seeing it is the instrument of voluntary Motion, which moves the Member, if it be so affected, that it can no more attract the Member, then there is a resolution or Palsie or if its Disease be such, that the Member be drawn against our will, then there follows not a Convulsion of it properly called, which we have said was only caused by reason of the Nerves, but either a Convulsion improperly called, *viz.* a Flatulent Cramp, or that called by us a lasting and strong contraction of the Member, which certainly a Nerve, so smal a chord, if it be compared with so heavy a Member, cannot effect, but so may a Tendon of a Muscle that is so strong. But after this manner the Muscles almost proper to every part are hurt, whence also only Particular resolutions or contractions of those parts do ensue, or of one part only, if its Particular Muscle be hurt, or of more, if one Muscle send Tendons to many parts, yet somtimes also many Muscles being affected together, also these more general hurts of the parts which they move, do follow; the which may come to pass by reason of the neerness of the Muscles, and because many being collected together, in certain places they are as it were included in one Membrane, as shall be said; which hurts, whether of one or more Muscles they depend on these causes; to wit, if they be possest with a Humor or Wind, or suffer a Preternatural Tumor, or are wasted being dried up, or suffer a cold distemper, or are hurt some other way, or have contracted an Organical fault.

A Flegmatick humor possessing the Tendons, is the cause of a Palsie.

From a Humor filling up the Muscles, or Besmearing them, or Insinuating it self into their spaces, a Palsie is seldom ingendred, as it is frequently if it possess the Nerves, as hath been said formerly. For if a Flegmatick, serous, or Excrementitious Humor flow down to the Bodies of the Muscles, or be heaped up there, then it breeds pains, and for that causeth that the Member can scearcely be moved, rather then a languishing or insensibility of it, as we shall explain in pains arising from Desluxions; the which also if Blood be there poured out of the Vessels, happens together with an Inflammation of the part; yet somtimes it comes to pass, that a watry humor, a long time washing and bedewing the Tendons of the Muscles, they being too much relaxt, and lengthend, there followes a Palsie of that part, which they ought to attract. Which for the most part happens only in those places, where many Tendons are carried in a fleshless and narrow place, about the bending of the Joynts, being bound and joyned together with Ligaments as it were with Rings, as in the Region of the Wrist and instep, where somtimes a Humor retained by reason of the narrowness of the place, and many spaces of many smal bones, combined together in the Wrist and afterwrist, Ankle and Instep, and moisting and relaxing the Tendons it causeth that the Hands or Feet do continne Palsied in some all their life time: and it ceasing in other parts, only a Palsie is left in these, even when the Humor is wasted, the Tendons remaining longer then is fit; whence all their life time, they carry their Hands and Feet hanging, and when they endeavour to lift up, or lay holdon any thing because nevertheless they can move their Fingers or go, yet because they cannot do that by benefit of the Muscles, they are wont to cast them up on high, by the impulse of the Arm or Thigh; in whom also for the most part appears an eminency as it were a certain Tumor in the superficies of the Wrist, arising by reason of Extenuation which is wont to be its companion, the bones bunching forth there, or by reason of a Callus or Node, which often grows here, for the causes afterwards to be mentioned; the which our Germans call *Contracted*, when notwithstanding they are Palsied; and that perhaps because, as hath been said formerly, with a Resolution of them caused about the Wrist, there is somtimes also joyned a Contraction of the Fingers: which comes to pass, because in the Hands laboring also of an Atrophy by reason of the compression of the Veins, which about the streits of the Wrist are prest by a Tumor, and are cooled in those bloodless parts, so that for those causes there is not sufficient passage for the Blood the Ligaments and Tendons also being wasted and dried do cause, that those Joynts of the Fingers be at length stopt, but not the Joynts by which the Hand is moved, which were already Palsied before: and thus in the same seat are found, parts Palsied, Contracted, and wasted.

From the same Flegmatick or Watry, or Excrementitious Humor, so filling up the Body of the Muscle or Tendons, that being distended and made shorter, it attracts the part into which it is inserted, it seems that a Contraction also may be caused. But when an Humor fallen down to the Muscles possesses their spaces, by which they are joyned together; a pain rather doth follow, and upon that account that difficulty of moving

ving the Member than Contraction of the part, and if it bedew the Tendons or Nerves, a Palsie rather ensues.

Wind in the spaces the Muscles is the cause of a flatulent Spasm.

After the same manner from Wind breathing in, not into the bodies of the Muscles, but those Spaces which the Muscles make being joyned together, or knit together by neighboring parts, and by its plenty distending one Muscle or more, so that being made shorter, they attract the part for a while, violently to themselves, doth that Cramp which therefore they call Flatulent, arise: as many have delivered which most strong extension of the member yet can scarce be caused from Wind only, as we shal shew that called a Flatulent Palpitation doth frequently arise from thence, unless some other cause over and above be joyned, of which we shal speak by and by in the too great attraction of the Muscles which as it happens oftentimes in divers parts of the body, so most commonly in the Toes of the Feet, the fleshy Muscles of the Calfe being then affected with the highest pain by reason of their distention, and protuberancy.

But this Flatulent Spasm is caused by plenty of Winds, the Largeness of the passages, or foresaid Spaces betwixt the Muscles especially helping, being fit for the receiving of Wind; which happens to some either by Nature, the which also are more obnoxious to this evil. Or if it falls out from a vehement motion of the Muscles, for so, being as it were pulled from one another and from the neighboring parts, the Spaces which come between them, by degrees become wider, especially if such motions be often repeated, into which afterwards Wind doth easily slide in and for a light cause, especially whenas the Muscles being very much contracted in motion, doth make way for it, as shall be said by and by; as in Hides Excoriated we easily know that such like Wind doth lie betwixt the Membranes and the Flesh by the Bubbles appearing there.

A Tumor in a Muscle or Tendon is the cause of the said contraction of the Member.

A hard preternatural Tumor growing in a Muscle as sometimes it causeth that they keep the Members attracted to it, so sometimes bound up: as a Schirrus or Node gendred from the excrements in the Muscles, and especially about the Tendons where many meet in the Region of the Joynts, as hath been said formerly of the Wrist, and I have seen somtimes come to pass in the Knee, the Foot being then so drawn upwards, that the Heel was next to the Tail. Also a Callus in a Muscle or a Tendon being left after a Wound, by which they were wounded yet not wholly cut in two, and contracting the Lips of the Wound, because then it shortens the body or tail of the Muscle, it causeth that part into which it is inserted, is more or less bound up; the which also I have seen come to pass in a hurt of the temporal Muscle, and the Mouth then was so drawn up, that it would scarce admit the most liquid meats.

An Exiccation of the Muscles on their Tendons is the cause of the Contraction of the Members.

The Muscles or their Tendons being dryed, and with them somtimes the Nerves inserted into them being so far wrinkled and bound up, they are become as it were Hardned and Callus, that they cannot be extended or bent; then in what situation they remain firm, in the same also they keep the Member which they are implanted, fixt and immoveable, and more or less Contracted; as oftimes we see by reason of Old Age or of too much and long continued labour, some parts to become Stiff and diversly crooked, and those especially which have been much and long exercised with too much working: and that they go with a Crooked Back, and cannot raise themselves up streight, who have a long while carried heavy Burdens, and that they have Crooked Fingers and Hands, who have too much used their Help, or that Old Folks do labour of a Tetanus, or other species of Contractions: the which may come to pass not alwaies by reason of the Joynts as shal be said afterwards, but also from the foresaid Exiccation of the Muscles, their Humor being then Wasted by the forementioned causes, so that being consumed by Leanness (the which appears manifestly in the Muscles of their Limbs, especially in the greater even outwardly) their bodies and Tendons seem to consist rather of Fibres than Flesh, and to represent dry Cords, not soft Nerves: which Driness is helpt by the defect of Fat, which is wont first of all to be wasted by the said causes, whenas it growing both Extrinsecally to their Membranes, and being Intrinsecally inbred with the Fibres of certain greater Muscles especially, anoynting them that they may the easier be extended and contracted in motion, but if they be deprived of it rendring them unfit for motion, also the Consumption of the Glue with which the Tendons upon the same account are wont to be smeared, from the same causes, for which the Humor and Fat do fail; which Exiccation we have demonstrated doth depend on an Atrophy, formerly in a pituitous humor possessing the Tendons of the Wrist: the which also may happen from a vehement Heat from without, through great Heats if either they persevere long, or are so powerful, that they burn almost, the Tendons and Muscles rather the more membranous than fleshy being then bound up from thence: But there can scarce be such an Exiccation of the Muscles from internal heat even in the most burning Feavers, seeing in Hectick Feavers, the body being otherwise almost reduced to a wasting, the members do not appear contracted by reason of that, unless by chance this happen in the Midriff and in the Tongue, the which being dried, as shal by and by be said, its Function also is weakened, as we shal speak of in the Breathing hurt: for that the Convulsions also which follow these Feavers, which we have said do very much differ from Contraction, do not proceed from the Exiccation of the Nerves as they would have it, but from their Irritation, hath been explained in an Epilepsie.

A cooling of the Muscles is the cause of Impotency of motion.

The Muscles being very much Cooled by an external cause, so that the native heat being laid asleep, their Function is weakened, then either they cannot rightly move the member, or scarcely, as it oftentimes happens in the Hands and Feet, parts more exposed to injuries by reason of the Air, Wind, Water, Cold, that then they cannot rightly lay hold on things with their Fingers, they being either numed together, or affected with a great pain, manifesting it self about the roots of the Nails, as hath been said elsewhere, but also they think that Spasm is caused by cold which is wont to betide those that swim in very cold Water, by binding up the Muscles and Tendons, the causes of which nevertheless we have expounded to be other, the which notwithstanding this may help.

The solution of Continuity in the Muscles or Tendons is the cause of a Palsie.

The Muscles or their Tendons being Cut, or only Wounded a little way transversly there follows a Languishing or Palsie of that

that Member which they ought to draw, which as it happens in divers places of the body, it doth breed many ſorts of Palſies; ſo if it come to paſs in the temporal Muſcle, the lower Jaw is Palſied.

The too much lengthening of the Tendons is the cauſe of Impotency of Motion.

Moreover the Tendons of a Muſcle being too much Extended by a violent motion, ſo that being as it were drawn aſunder they become longer than is meet, it comes to paſs that afterwards they cannot ſufficiently elevate the Member, and becauſe then they hardly recollect themſelves again, the Evil becomes laſting, which ſomtimes happens in the Hands by lifting up heavy burdens, in that ſtrong ſtreining: as alſo I have ſeen it happen in the Joynt of the Knee, being ſo forced by violence, that the many Tendons which meet there, being diſſevered by that violent and ſudden motion, and become longer, or freed from their connexion with their Ligaments, they could no more afterwards rightly bend that part, and the Patients have afterwards remained Limping.

Too great attraction of the Muſcles and their Tendons is the cauſe of a Flatulent Spaſm.

And alſo an Attraction with violence oftentimes befals the Muſcles and their Tendons, that they being too much bound up, beyond their term, or otherwiſe diſtorted or bowed, or ſomwhat declining from their natural ſituation, ſo that they cannot be relaxt again preſently, they draw the Member beyond a mean figure, and that Spaſm is cauſed which ſo often ſeazeth on men for a time, when they extend their Members violently or with an inordinate motion: as it more commonly happens in the Feet when they put on their Shoes with pain, or Swimming in the Water, they ſtir them after an unuſual manner, in which Spaſm a Prominency of the Muſcle appearing, and vehement pain, doth ſufficiently ſhew that it is wound up by contraction, and too much ſtreightened in it ſelf, Wind then alſo breaking into that Space, which it cauſeth by its elevation, as hath been ſaid formerly, and helping its diſtenſion; and that ſo long til the Muſcle being relaxt again, the Spaſm doth ceaſe again: which is the ſooner performed by the oppoſite Muſcle drawing the part which the Muſcle faſtened to it doth follow; the which nevertheleſs, if the part be diſpoſed as hath been ſaid formerly in Wind, and there is plenty of Wind, it is wont ſooner and the eaſier to return, and ſomtimes to moleſt men not only in ſome one place, but in many places; which every one, if he rightly conſider the buſineſs, may know to be the true cauſe of the Cramp that doth ſo violently and with pain extend the members: ſeeing the true Spaſm which is cauſed by reaſon of the Nerves ſometimes in theſe or other parts, cannot extend the members ſo violently, or cauſe ſo great pain, as when it ariſeth by reaſon of the Muſcles.

An Organical fault of the Muſcle is the cauſe of the Impotency of motion.

But alſo if this Organical Diſeaſe from inbred cauſes befall the Muſcles or their Tendons from the Birth, that in more or fewer places, they are longer or ſhorter, there follows either a Languiſhing, or Aſtriction of thoſe Members: as we have ſeen ſome Born with a Rigid or Bowed back, or contracted in other parts, or alſo palſied.

The parts which are moved in voluntary motions, are the external Members ſtrengthened with Bones, which do perform ſtrong motions, as hath been ſaid; in which if the cauſe of immobility conſiſt, it is for the moſt part in their Bones or Ligaments and Cartilages, and the parts of the Face that exercíſe the weaker motions, as the Lips, Eyelids, the Eye; whoſe faults which are prjudicial to their motions, now we wil explain in particular.

The Cauſe of Impotency of motion in the Bones.

If the Bones be ſo affected, that they cannot be moved out of their place, then neither can the part which is compoſed of them and ſtrengthened by them, follow; which comes to paſs from an eminent hurt of them, they being broken or cut off, or Contuſed, or otherwiſe preſt by ſome weight; or if they be diſlocated in the Joynts, in which they are joyned together for the exerciſing of motion.

A Fracture of a bone is the cauſe of Impotency of motion or ſome other hurt of them.

The Bones then of the moveable parts being broken or cut off, or contuſed, or preſt (for concerning other hurts of them we ſhall treat elſwhere) it comes to paſs, that firſt of all if they be broken and wholly broke off, then though part of the broken Bone, into which the Muſcles and Tendons are implanted, be attracted (the which cannot be, by reaſon of the pain which is preſent, and is encreaſed by the leaſt motion of it) ſeeing the part broken off doth not follow, the part can no waies be rightly moved: the which ſooneſt comes to paſs in the long and round bones of the parts which are moved, the which are the eaſier broken, if they conſiſt only of one bone, and then if the Fracture be ſo great, that the ends of the bones broken off do part from one another, that portion of the Bone which grows to the Tendons, which are alwaies retcht, being drawn upwards, ſeeing nothing doth reſiſt, there follows an abbreviation of the part, as it often comes to paſs in the Bones of the Thigh, Arm, and Fingers, but in thoſe parts which are ſtrengthened with two Bones, that this may come to paſs, they muſt both be broken and diſſevered after this manner, whenas if one only be broke, the other doth yet ſuſtain the part, and therefore there follows no ſhortneſs of it, neither would the motion of it then be taken away, unleſs pain did hinder it; as in the two Bones of the Leg and Elbow this ſomtimes happens; and in the diſtinct broad Bones of the lower Jaw, it may fall out on both ſides, or only on one ſide: but if the part be compounded of many long Bones, as in the Inſtep and Afterwriſt, ſeeing all of them are ſcarce broken together, pain (as long as it laſts) rather than an Organical fault, wil then hinder the motion: alſo if ſhort and thick bones be broken, then alſo by reaſon of pain, the motion is ſo long hindred: as when the Vertebræ of the Back have been broke off, as I have once obſerved it, ſeeing the bodies of them can ſcarce be throughly broken, as neither no other ſmall Bones. Yet the Ankle being broken (which I have ſeen by chance wholly pul'd in two in the middle) the motion alſo is taken away of it ſelf, and not only by reaſon of the pain: and if this come to paſs in the Knee-bone, which in ſome I have oftentimes noted to be broken into two parts very much ſeparated and diſtant, then ſeeing the Knee doth no way conſtitute the Joynt, but becauſe the Knee-pan only doth retain the wandring Tendons, that they turn not aſide, the motion of the Joynt ſuffers an Imperfection.

All which forementioned Bones both long and ſhort cut aſunder in like manner by a Wound do produce the like Impotency in Motion for the ſame reaſon.

As from a Contuſion of them, as long as the Pain moleſts, the motion is hindred by reaſon of that rather

than any thing elſe, unleſs there be a Fracture, the which is wont ſomtimes to happen in the Vertebræ of the Back, and in the leſſer bones of the Wriſt and other ſmal ones of the Feet.

All which, as well Fractures, as Wounds and Contuſions, do befal them from a violent cauſe comming from without, as from a blow or fall: alſo from corruption of the Bones, by a Sphacel, not only of the leſſer, but alſo of the greater. We have ſeen ſome parts of them ſo eaten and corrupted, that the bones have fallen, as if they were broken, and have been rendred unfit for Motion, and that both by reaſon of the French Pox, and other cauſes; as alſo we have obſerved from the Cancer of the Gums, that part of the lower Jaw together with the Teeth, hath been taken out on one ſide, and the Maiden which ſuffered this, could nevertheleſs chew her Meat.

And alſo the bones being burthened by a weight, Fleſh, or Fat, they follow more ſlowly to move.

A Diſlocation of the Bones of the joynts, is the cauſe of Immobility.

Two Bones being Diſlocated which mutually joyned and bound together with Ligaments, do form a Joynt for Motion: if this happen in the Joynts which are moved by an apparent Motion by a Diarthroſis, then this Immobility will be more manifeſt, and more prejudicial, eſpecially if the Luxation be great; which comes to paſs, if the Head of the Bone do wholly fal, forth of its ſocket, and then they call it an Exarthrema for if it be only carried to the Brow of it, then the Luxtion is lighter, and tis called a Parathrema, which ſome call only a Separation, both which if they happen in the joynts, joyned by an Enarthroſis as of the Thigh with the Hip, and the Head falling out of its receiver and thruſt to the upper parts do ſtop there, retained by a Lax Ligment, the Thigh alſo is ſhorted, and there is an apparent prominency in that part; the which alſo happens if it be carried to the hinder or utter parts; for if it be led to the inner or fore parts, becauſe it ſubſiſts about the brows then the Foot rather becomes longer. And if this come to paſs in the Joynt of the Arme with the Shoulder, as it may the ſooner be by reaſon of its plain ſocket, the Arm for the moſt part fals down to the lower parts under the Shoulder, and then the eminency of the top of the Shoulder is loſt, and in the place of it a hollowneſs doth manifeſt it ſelf; and if the Jaw be Luxated after this manner, it makes that mouth open, fixt, and crooked, if the Luxation be only in one ſide: the ſame may happen in the Joynts, compoſed by a *Gynglymus*, their Heads and Sockets going a part, to to this or that ſide, as in the Leg with the Thigh and Feet, in the Luxations of the Elbow with the Shoulder and lower part, and of the Joynts of the bones of the Fingers, for which reaſon alſo the Knee-bone if it fall out of its Socket, it doth prejudice Motion by diverting the Tendons, as hath been ſaid in the Fracture of it, and upon no other account. But in the Trochoidal ſpecies of Articulation, by which the Head is moved upon the Vertebræ, ſeeing that hinge, which the firſt Vertebræ makes with the ſecond, can ſcarce be lift up ſo high, that it ſhould fal out of its Socket, & tis ſo firmly bound up with Ligaments it can ſcarce come to paſs, that the Head ſhould looſe its Motion, by reaſon of a Luxation. But if a Luxation happen in the Joynts which are moved by an obſcure Motion, by a *Synarthroſis*, and this be in that Species, which we have called the moveable Joyning, or Coaleſſency, by which the Vertebræ of the Back are joyned together, then the Cartilage which doth alſo Conglutinate the Verbebræ together being relaxt, it ſlacking ſomwhat in many Spaces of them, eſpacially about the middle part of the Back, and the upper part of the loins, ſeeing it is found there more plentiful, it comes to paſs, that many Vertebræ (becauſe one alone can ſcearce be carried ſo outwardly, and the Cartilage with which it is knitted be ſo Relaxt) more or leſs parting from one another, do produce a crookedneſs in the Back, and when it cannot erect it ſelf, alſo a ſhortneſs of it, and with that of the whol Body, in thoſe called *Gibbous*, and then the Prominency ariſing from thence bunches forth to the outer parts, rather then to the inner, becauſe the bones of the Vertebræ do not ſuffer them to be ſo wreſted thither, and according to the various manner of ſevering the Vertebræ it cauſeth ſomtimes an Acute, ſomtimes an Obtuſe bunch, and greater or leſs. Somtimes the Vertebræ bowed towards the ſides, do fram the Body wreathed and ſhort after another manner: and in all thoſe crookedneſſes of the Back, becauſe the Ribs annext to the Back do follow, the breaſt alſo appears either lift up or depreſt, or otherwiſe deformed; whence follows difficulty of breathing if the ſtructure of the Breaſt be very much vitiated; or alſo danger of Suffocation if the Vertebræ of the Neck be Luxated, the which notwithſtanding cannot be unleſs by great violence, becauſe there intercedes a little Cartilage, but as ſomtimes the firſt Vertebra which is looſely joyned by an Arthrody, if it be Luxated, it cauſeth the ſixth ſpecies of a quinſie ſo called by *Hippocrates*.

But in the other Structures of ſmal bones mutually joyned, as of the bones of the Wriſt, Foot, Inſtep, this ſeldom comes to paſs, becauſe they are ſtrongly bound together; and if it do happen, becauſe all of them are moved very obſcurely, they cannot bring any great impediment in Motion.

But this great perverſion of the natural Scituation of the Joynts, that the joynts looſeth its moveableneſs, and that hinge, as is ſaid cannot be turned, proceeds from divers cauſes; ſomtimes from a violence offered to the bones and deviding theſe Conjuctions of the bones, as if either bone which frames the joynt, be forced or thruſt by a blow, or fal from its Conjunction with the other, which as we ſee in many joynts, ſo in that of the Shoulder, otherwiſe naturally prominent there, it eaſely and often happens by a fall; the ſame alſo may come to paſs from the Attraction of a bone made beyond meaſure, or to a place, whether it ought in no wiſe to be drawn, as in Yawning the mouth being too much or crookedly diſtended, a Luxation of the Jaw, or a Contorſion of other bones by Geſtures or ſeriouſly by a rack. But alſo this happens by degrees, if a moveable part be often inclined to the ſame part, and be kept a long while in that Scituation, whence at length by continuall uſe the joynts being relaxt, they are drawn aſunder, and becauſe they cannot be reduced to their natural Scituation, they cauſe an Immobility of the Member, whoſe Figure, alſo they corrupt, for which reaſon a bunch is wont to grow in the Vertebra of the Back of Maides. becauſe by cuſtom they ſit crooked a ſpinning, and of Infants, becauſe they lie in an uncomly poſture of Body; by which means alſo they increaſe the beginning of the crookedneſs of the Back, whether cauſed from the birth or by chance by inclining themſelves that way, both in their going and lying down, and not reſiſting by a contrary Motion. A Luxation alſo may happen of its own accord, not by the fault of a bone, but of the Ligaments as we ſhall now explain.

In the Ligaments of the Bones of the joynts, is the cauſe of the Impotency of Motion.

By reaſon of the Ligaments that do incloſe and retain the Joynt, the Joynt may be Luxated, and ſo its Motion may ceaſe, or otherwiſe it may be ſtopt and hindred without a Luxation.

By

The Continuity of the Ligaments diſſolved, is the cauſe of Immobility.

By reaſon of the continuity of the Ligaments diſſolved, which ought to retain both bones in the Joynt, that they ſhould not be diſlocated, a Luxation of them alſo, or at leaſt wiſe an Elongation of the Member, ſo called by ſome, may be cauſed, the which yet can ſcarce happen from the breaking of them, ſeeing theſe are moſt ſtrong bound, unleſs this befal the round Ligament, which knits the Head of the Thigh to the receiver, being broken off from the bones by violence. But the ſame may come to paſs from a wound penetrating to the Membranous Ligaments which do outwardly compaſs the joynt, and cutting them in two, but this ſeldom comes to paſs, becauſe theſe lie in hidden places. The Ligaments alſo may be eaten through by matter Suppuration being made there, the which is wont ſomtimes to fal out in the joynt of the Thigh with the Hip by reaſon of Sinuous Ulcers, which ariſing there about the Membranous parts, do continually pour forth a white Viſcous matter, by the Buttocks and Hip, and Intrinſecally corrupt theſe Ligaments; of which ſort we have ſeen many ſo affected, with a Luxated and ſhortend Thigh to have remained perpetually lame, or at leaſtwiſe that not being Luxated, to have limped with one Foot longer then was meet. Somtimes alſo the Ligaments that compaſs the joynts, being too much drawn aſunder and as it were torne in part from the bones, to which they grow, by ſome violent forcing of the joynt on the rack, or by ſome chance, the Motion of the Joynt is left ſomwhat hindred, with a pain at firſt, oftentimes a long while troubleſome: as I have ſomtimes obſerved, hath happend in the joynt of the Knee, and Shoulder and in others; and *Caſparus Wolphius*, an eminent Phyſitian, my true friend, hath told me, that by violent drawing on of Bootes, when they were put on, his Hip joynt hath been thus hurt.

A ſlackneſs of the Ligaments, is the cauſe of the impotency of Motion.

But alſo by reaſon of a ſlackneſs of theſe Ligaments, as in the joynts which are moved by a manifeſt Motion, this naturally befals them, that they are more Lax, neither do they hinder the joynt, which ought to be moved freely, by ſtrict binding it, it comes to paſs that theſe joynts are more eaſily diſlocated then others, ſo alſo if theſe which are more Lax then others, and others alſo if they be broad, be yet more amplified, and thoſe which are round, be lengthned, then the Member ſtands forth, further then is meet, and gives a helping cauſe, that a Luxation be the eaſier made, and from a leſs force. Which things befal ſome from their birth, whence they can both bend and extend their limbs, ſomwhat beyond their natural bounds; or they have one limb longer then another, or as ſome would have it, they preſently grow with diſlocated Members; or it happens by reaſon of the Age, becauſe of the ſoftneſs of the Ligaments, and appendixes of the Bones, that from the joynt which remain for ſome time Cartilaginous; and moſt have thought that might come to paſs from a watry, Flegmatick, Serous humors ſo bedewing theſe parts, the which yet is not very likely, as appers from hence, becauſe in the *Leucophlegmatia* and other Species of the Gout, the Humor ſtaying there a long time, yet there follows no Luxation of the part.

A drineſs of the Ligaments, is the cauſe of the impotency of Motion.

The Ligaments alſo being dried, and hardend, and being bound up and Callous, or hindred with knobs in the Gout, or with Nodes, the Motion of thoſe joynts remains fixt and immoveable, or otherwiſe they are hardly moved, and ſomtimes they make a noiſe and crackling, as if they were broken, if they be urged with greater force. The cauſe of which ſound alſo is, if it be driven by force further then the joynt ought to be moved by a moderate Motion; but ſuch an Exication of the Ligaments, ſomtimes proceeds from old age, and a moſt acute feaver drying up alſo the Bones and Nails, as hath been ſaid elſewhere: or from ſome other hurt, whence a Callus or Node grows there, or from a Humor turned into a knob about the joynts, as ſhall be explained in its place.

In the Cartilages of the Bones of the joynts, is the cauſe of immobility.

The Cartilage, which cruſts over the Heads of the moveable bones, if it looſe its ſlipperineſs, and clammineſs, and be dried up, or Exaſperated from the ſaid cauſes, it doth alſo hinder Motion, as a hinge tainted with ruſt.

In the Lips, is the cauſe of their immobility.

By Reaſon of an affect of the Lips opening the Mouth it happens, that their Motion is weakend, and the largeneſs of the Mouth depraved; if they be ſo cut off, or diſſected, that they cannot follow Motion, or otherwiſe, as we have ſeen it fall out in the French Pox, if they be eaten with Ulcers and corrupted; but their other faults do prejudice rather by pain, as we ſhall ſhew in their places.

In the Ey-lids, is the cauſe of their immobility.

It ſcarce happens that by fault of the Ey-lide the Eye cannot be ſhut, unleſs a Tumor or ſome excreſcence growing there do hinder it; but it fals out that the Eye cannot be opend, only the upper Ey-lide being cut in two, and ſcarce for any other cauſes.

By Reaſon of a Diſeaſe of the Eye, its Motion ſcarce fails, unleſs this proceed from a Tumor of it, that it cannot be rowled about freely, pain then chiefly hindring the Motion; but a ſquinting though it be from the Birth, doth rather ariſe by reaſon of the Muſcles of the Eye, as hath been ſaid, and if this comes to paſs, the Eye being wounded or digd out, the Eye doth not only looſe it Motion, but alſo becomes unprofitable.

The Cure.

The Cure of all theſe kinds of Immobility, whether it be a general Palſie of many parts, or proper to particular moveable parts, or a Spaſm, or Contraction, or Bunch, Luxation, Fracture, Wound, or other hurt, is ordered according to the Nature of the cauſe; which we have ſaid, was a humor poſſeſſing the Nerves or the Tendons of the Muſcles, a cold diſtemper of the Muſcles and Nerves, a diſtenſion of the Muſcles from Wind; a drineſs or emptineſs of the Muſcles, Tendons, Ligaments; a hard Tumor in the Tendons Ligaments; the compreſſion of a Nerve, a Wound or Contuſion in a Nerve, Muſcle or its Tendon, Ligament, or Member; a Fracture of the bones, a Luxation of the joynts, and laſt of all an Organical fault in all the Inſtruments ſerving for motion, in every one of which what muſt be foretold, or done, we will now propound.

The Cure of a Palſie ingendred by Flegm, which they apply alſo to a perticular Spaſm which they ſay proceeds from the ſame Humor.

If a Palſie be from Watry, Excrementitious, or Flegmatick, or ſerous humors, ſimple or mixt together, Bedewing or preſſing the Nerves, or cooling them, whether it be general to many parts, or only particular to ſome, the following way of Cure muſt

Be

be ordered; the which alſo they think likewiſe convenient, and preſcribe it for the Cure of a Convulſion or particular Spaſm or Cramp, which they have thought was cauſed from the ſame Humor: but we who do hold the ſame to be the Cauſes of particular Convulſions which we ſaid were of a General Convulſion; as concerning general Remedies, we think the ſame alſo which have been explained in an Epilepſie, are rather to be uſed. But the Topick which are deſcribed here to be convenient in a Flegmatick Palſie applied to the place affected in a Spaſm we judg may do good, if ſo be that a Convulſion cauſed from thence or Pain do urge it, ſubſcribing to common conſent of Phyſitians, yet the Attraction which is in the Spaſm of the Members for the moſt part doth not ſo much require Topick Remdies, as the danger of an Epilepſie by and by to follow, doth admoniſh us to apply the uſe of thoſe things which do prevent it, as both thoſe things which are Intrinſecally taken and Extrinſecally applied upon that account, have been explained: as alſo if a Flegmamatick Humor falling down upon the Muſcles, doth breed theſe diſtenſions with Pain, the Cure ſhal be explained in Defluxions.

A Prediction in a flegmatick Palſie.

In a Flegmatick Palſie therefore, as they call it, whether general to both ſides, or only in one ſide, whether this follow an Apolepſie, or begin of it ſelf, becauſe it is a Cronical Diſeaſe, and the ſick do ſcarce continue ſo long in the uſe of Medicines, and good government, the Cure goes on very hardly, eſpecially if it it befall Old Folks or otherwiſe thoſe whoſe Strength is exhauſted; or if it ceaſe in ſome places, it ſometimes leaves a laſting fault, in the Speech or Hands or elſwhere: nor doth a particular Palſie leſs require a long Cure, which alſo ſometimes ends in a General one, whoſe foreteller it often is. Somtimes alſo a Palſie is Dangerous becauſe it threatens an Apoplexy, in which unleſs it be cured, it is wont often to terminate and kil the Patient: yet in the Interim if we proceed rightly in the Cure of a Palſie and deſiſt not in a Diſeaſe of long continuance, and the ſick be obedient, and nothing more grievous doth hinder, that ſomtimes ſucceeds happily or from a more General one, the humor not ſubſiſting about the Original, but in the proceſs it is changed into a Particular one.

The Method of Curing in a flegmatick Palſie.

Which Cure we wil ſo order, that in relation to the Cauſe, we wil revell another way from them, derive, or purge out of the body the humor that poſſeſſes the Nerves, or otherwiſe diſcuſs or conſume it in the part, and prevent that new Excrements be not generated, from which theſe humors are either increaſed or fomeneed, but in Reſpect to the Diſeaſe we muſt correct the Cold and Moiſt diſtemper in the Nerves. Laſt of all by occaſion of the Symptoms we muſt ſtrengthen the weak parts, and allure the Spirits again and Vertue to the Muſcles, and muſt provide for the ſtrength of the whol body.

Which ought to be done in this order, firſt of all we turn our ſelves to thoſe things which purge by the Stool, and before we uſe the Stronger we waſh out the common Excrements of the Guts and their dregs, by things taken and Injected, for ſo this filth being firſt caſt off, the ſtrength of Purgers being not broken by them, doth the better diſperſe it ſelf, afterwards we muſt prepare the Flegmatick Humor with hot inciſive things that are appropriate; which being done, we muſt adminiſter Purges which do egregiouſly ſolicite nature, for the calling forth of humors from the depth, and for the caſting of them forth by this natural way deſtin'd for the purging of Excrements, and ſo may revell them from the part affected; all which if they help not preſently in this Diſeaſe of long continuance, they muſt be often repeated, that we may continually accuſtome nature, that ſhe rather empty her ſelf that way; we muſt alſo attempt evacuations by other parts, yet that which is made by ſtool going firſt: as by the Mouth and Noſtrils, which are done, either to prevent a new Colection of Excrements, which ſeeing they are wont to be heaped up in the firſt concoction not rightly performed, Vomiting upon that account muſt be cauſed both by things taken and actually, or chiefly, that excrements of the Brain, which the brain is wont naturaly to expel by theſe paſſages, may be allured hither, and ſo may be diverted, that they follow not the courſe of the Nerves. Which is done by putting things into the Mouth and Noſtrils; alſo we draw forth the humors through the habit of the body by inſenſible tranſpiration, manifeſt Sweats, by giving thoſe things which can move them, or by outwardly applying them, or by motions of the body; or we aſſay it with manifeſt openings; alſo we heat and ſtrengthen the parts, giving and applying divers Remedies, which by drying may waſt the humor; in the interim, we muſt preſerve the Strength both by Nouriſhments taken, and other things rightly adminiſtred, by which the body is preſerved.

But theſe things which are adminiſtred both by reaſon of the Cauſe, the Diſeaſe and Accidents, we do perform, either by things taken or ſwollowed into the ſtomach, or by thing thruſts up into the Guts, or into the capacity of the Mouth and Noſtrils; or by things outwardly applied to the body, the palſied Members, the Back-bone, the Head or by encompaſſing Air, or Motions of the Body and Mine, or by manifeſt Openings, of which we wil treat in this order.

The Remedies which we give to the Sick to be taken and ſwallowed, although oftentimes they perform many things together, yet they are chiefly given to cauſe Expurgations by the ſtool, by Vomit, by Sweats, or other waies; or they are given for Nouriſhment for Strength ſake, with which alſo we mix things Medicinal; or for the preparation of the Humors before Purging, or to Heat and Strengthen the Nerves.

The Remedies given to purge the Humors and Excrements by Stool, which with the ſame labour ſometimes alſo do alter too, are ſome of them Gentler which are uſed before other Purgers and their Preparations; and are uſed by courſe, to keep the belly open, which by long lying and ſluggiſhneſs is wont eaſily to be bound, & they are chiefly given in the form of Pills. Of uſual Pils Aſſaireth are convenient, becauſe they have French Lavender in them, Alephanginæ, becauſe thep contain many Spices, which adding of Agarick wil be more effectual, and whiles the matter flows Rhubarb may be added, Maſtich, and Caſtor that they may heat more powerfully.

After this manner. Take *of Pills Aſſaireth two drams, Alpehanginæ one dram and an half, Agarick, Rhubarb, each one dram; Maſtich half a dram, Salt gem one ſcruple, Caſtor half a ſcruple,* with ſyrup of *French Lavender* make a *Maß*, let him take *one ſcruple* for a Doſe by courſe.

Or they are prepared of other things. Take *of Turpentine half an ounce*, let him take it by it ſelf or diluted with *Honey* and *water of Groundpine*; and 'tis an appropriate *purging* and ſingular Remedy for the Palſie, to which ſome add the *Species of Hiera*, and give it often.

Of

Of convenient Liquids taken after the ſame manner, alſo a Minoration, as they cal it, or gentle purge, may be made.

Then ſtronger purgers muſt be given, yet ſcarce before the fourteenth day, after the invaſion of the Diſeaſe, which times is to be ſpent in the preparation of the Humors, leaſt that as it often comes to paſs in Diſeaſes from Defluxions, whiles it yet flows, it be ſtirred more by the uſe of theſe things, eſpecially if Gums which diffuſe the matter, do enter into theſe compoſitions, as it often happens in Pils, which are therefore to be omitted, if we muſt purge ſooner, and certain aſtringent things are rather to be mixt.

The moſt convenient form of Pills, will be this. Take *of Pills, Fœtidæ, Cochiæ, of each one ſcruple; Opopanax half a ſcruple, with ſyrup of French Lavender,* Make Pills. If they work not enough they may be quickend with *five grains of Trochiſks of Alhandal.*

One dram of Pills of Ground-pine given, will do the ſame with great ſucceſs: of which afterwards.

Such a Potion may be taken inſtead of the Pills. Take *of the Electuary, Diaphœnicon, the greater Indum, of each two drams; ſyrup of Diacnicum ſix drams, Cinnamon water two drams, Ground-pine water,* as much as is ſufficient; make a Potion.

Or, Take *of the tables of Diacarthamum of thy deſcription one dram and an half, Lozenges of Citron ſolutive two drams*: Diſſolve them with Sage water, for one draught.

A Decoction may be made inſtead of theſe. Take *of the ſeeds of wild Saffron, the leaves of Senna, of each three drams, Hermodactils one dram, Liquoriſh root half an ounce, Raiſons forty, Figs twenty, Annis ſeed two drams, Roſemary flowers one pugil*: Make a Decoction. Infuſe in it, *of Agarick trochiſcate one dram and an half, Turbith one dram, Ginger half a dram, Cinnamon one dram*: Strain it, Diſſolve in it *Honey of Roſes laxative half an ounce*: Make a Potion.

The Purgers muſt be repeated by courſe, if the Diſeaſe continue, eſpecially if there be great plenty of the Humor flowed down, as in a more general Palſie, and the Body be full, which ſhall be done, the Humor being prepared a new, and purged again, or giving for ſome time, things made of thoſe following, for three daies together, then interpoſing a day or two and reſting the while, or every Month, or at the ſeaſons of Spring and Autum.

The form of Pills is moſt convenient to receive any thing, and eſpecially thoſe Pills of Ground-pine, or *Ivæ* ſo called, are commended, which *Mathiolus* holds for a preſent remedy, and *Bened. Victor* cals a glorious help: if one ſcruple be taken before ſleep at night, every day, or at leaſt twice a week, the deſcription of which produced by them both in the ſame manner, we make thus more commodious: Take *of Coloquintida prepared half a dram, Scammony prepared one dram, Turbith one dram and an half, Agarick two drams, Rhubarb one dram and an half, the Pouder of ſimple Hiera half an ounce, Ginger one ſcruple, Spicknard, Foſſil Salt, of each half a ſcruple; Lavender, French Lavender flowers, of each one dram; Opopanax half a dram, Maſtick one ſcruple, Caſtor half a ſcruple, the Diſtilled Oyl of Marjoram and Roſemary, of each five grains; the juyces of Ground-pine newly drawn, and boyled like to an extract,* as much as is ſufficient; Make a Maſs.

A uſual Syrup ſhall be prepared thus, with leſs labor and coſt; Take *of the roots of the true Acorus half a pound, dry Sage one ounce, Ground-pine, ſix drams, flowers of French Lavender and Lavender, of each half an ounce; Caraway ſeed two drams*, Make a Decoction, and in that ſtrained infuſe, *Agarick one ounce and an half, the leaves of Senna four ounces*: Let them boyl gently, Aromatize it with *Cinnamon two drams, Ginger one dram*, add *of Honey a ſufficient quantity*: Make a Syrup, boyled to a conſiſtence for your uſe, making trial of at the firſt, giving of an ounce and an half.

Or one very much compounded, ſhall be made thus, Take *of the roots of the true Acorus, Ortice, of each one ounce, the roots of Angelica or Maſter-wort, Elecampane, Pellitory of Spain, Hog Fennel, round Birth-wort, of each half an ounce; Galengal, Cyperus, Valerian, Dyers Madder, of each two drams; the Herbs Sage, Marjoram, Betony, Balm, Penny-royal, Poley, Hyſſop, Time, wild Time, of each one handful; Ground-pine one handful and an half, flowers of French Lavender, Lavender, Roſe-mary, Prim-roſe, of each one pugil; ſeeds of Caraways, Fennel, mountain Hartwart, Piony, of each two drams; Rocket, Rue, Chaſt Tree, Angelica, of each one dram; Bay and Juniper-berries, of each half an ounce; Liquoriſh root one ounce, Figs twenty four, Raiſons forty, wild Saffron ſeed two ounces, leaves of Senna three ounces Turbith half an ounce, Agarick ſix drams, Hermodactils three drams, the roots of Graſs Plantane two drams, Mechoacan three drams*: Make a Decoction according to Art, Aromatize that ſtrained, with *Cinnamon half an ounce, Ginger one dram and an half, Salt Gem half a dram*; add *of Sugar half a pound*: Boyl them to the conſiſtance of a Syrup, Let him take for one Doſe *two ounces*, or more.

An uſual Electuary wil do the ſame: Take *of the Electuary, Diaphœnicon the greater, Indum, tables of Citron ſolutive, of each one ounce; tables of Diacarthamum of thy Deſcription ſix drams, the Pouder of Hiera of Coloquintida three drams, Maſtick, Opopanax, Sagapen, of each half a dram; Nutmeg, Ginger, Cinnamon, Cloves, of each one dram; with ſyrup of Ground-pine or French Lavender*: Make an Electuary, let him take from two drams to four.

Some alſo attempt Purgations by Vomit, giving the very ſtrongeſt, as Stibium, by the uſe of which I have indeed obſerved twice or thrice, that they have become preſently Palſied, who formerly were not ſo; therefore it ought to be moved rather by giving the gentler, (unleſs it ſucceed of its own accord, or be actually provoked) in thoſe that are ſooner accuſtomed.

By ſweats often repeated, by giving of the Decoction of Guaicum, China, or others, becauſe it cannot be removed by any other way, this long continued Diſeaſe is often cured; which will be made proper, if Sage and Ground-pine be boyled in the ſame, and it be Aromatized with Galangal and Nutmeg, as thus: Take *of Sarſaparilla two ounces, Guaicum three ounces, Orrice root one ounce, roots of Elecampane half an ounce, Roots of Acorus half an ounce*: Make a Decoction in Water, according to Art, for a ſweating and ordinary drink.

But alſo it will be very convenient to move ſweat, ſomtimes by giving of other things, as the *Rob or Quiddeny of Dwarf-Elder two drams*: Diſſolve it with the water of Ground-pine and Sage, and let him drink it.

The Courſes, Hemmorrhoids, if they be ſtopt, are profitably moved, by taking of remedies that provoke them.

Thoſe things which are graunted them to be neceſſarily taken for the nouriſhment and ſuſtinance of the Body ought to be adminiſtred ſparingly and ſeldom; for to uſe a ſparing Dyet, and ſomtimes to ſuffer hunger, doth very much hinder the product of Humors; which will be done, if they take meat moderately only twice a day, or ſomtimes forbare their Supper. Of their Sweats being continued for ſome time, and other Evacuations, in making of their Dyet, as they call it, they

joyn a Detraction of their meat, or if otherwiſe, meat be adminiſtred to them ſparingly.

The which alſo if it be of good juyce it will be ſufficient, and produce fewer Excrements, as if he eat Egs, and of Birds, Threſhes, Mearles, Larks, Chaffinches, birds like Nightingales, Sparows, or thoſe which moſt do write, do by a peculiar vertue reſiſt this Diſeaſe, as chiefly wild Pidgeons, Turtles, Swallows, the brain of a Hare, which therefore they put alſo into Compoſitions: which are convenient roſted rather then boyled, and moreover they become Medicinal, if they be ſtuck and ſtuft, with Sage, Marjoram, Time, wilde Time, and other ſweet things, and Spices, eſpecially with Nutmeg.

If the ſeeds of Carawaies, or Fennel, or Annis, or Gith, be mixt with the bread when it is baked it will be more convenient, and if he ſomtimes uſe Aromatical Dyet or ginger bread, Sugar'd, as they are wont neatly to prepare it, or honied, which they call the Bread of Life, Pine-nuts, Piſtachoes, are very much commended here, and are beleeved to ſtrengthen the Nerves.

Junkets of Maſtard ſeed adminiſtered at table inſtead or ſauce are very much approved, as alſo pickeld Capers.

The Salt with which meats are ſalted is approved, and that made of Treacle and Vipers, as this following: Take *of Salt one ounce and an half, Nutmegs one dram, the rtots of Pellitory of Spain half a dram, the leaves of Sage, Marjoram, of each one ſcruple*: Mix them.

It will do good if they drink but little, and wholly abſtain from the uſe of Wine, or of clear Wine, and inſtead of that, drink Water and Honey, which ſhall be prepared of ten parts of Water, and one of Honey, boyled to the Conſumption of a third part, and Aromatized in the end; Or if he drink it more Compounded, as ſhall be declared by and by.

Thoſe things which are given to prepare the Humors are uſed before purging Medicines in the beginning of the Diſeaſe, and are repeated, when in the progreſs of the Diſeaſe, the purging ought to be reiterated; but alſo otherwiſe given they do help, becauſe they at once waſte and alter the Humors, as ſhall beſaid.

This is done by Syrups after this manner: Take *of the Syrups of French Lavender, Hyſſop, of each two ounces; Honey of Roſemary flowers half an ounce, the waters of Sage, Ground-pine, Hyſſop, of each one ounce and an half*: Make a Julep, Aromatize it with the Pouder of *Roſata Novella*, for four or five times.

Alſo *Nicolaus* his Syrups of Ground-pine, are convenient, of the Conſerve of Acorus Honey of Squils, although they approve of Oxymels, we omit them, the waters of Marjoram, Betony, Prim-roſe, Balm, are allowed.

In place of theſe, Water and Honey, boyled with Acorus, French Lavender, Lavender flowers, or with Sage, is very convenient.

Alſo the following Decoction may be given to drink inſtead of theſe. Take *of the roots of the true Acorus, Orrice, of each ſix drams; Cyperus, Elecampane, of each three drams; the Herbs, Sage, Marjoram, Ground-pine, the tops of Time, of each one handful; Hyſſop, Betony, Penny-royal, Calamint, of each half a handful; the flowers of Roſe-mary, French Lavender, or Lavender, Elder, Prim-roſes, of each one pugil; ſeeds of Annis, Fennel, of each two drams; Rue one dram, Liquoriſh root one ounce, Raiſons three ounces*: Make a Decoction, adding Honey or Sugar, as much as is ſufficient, Aromarize it with Cinnamon, or with ſome Aromatical Pouder, let her uſe it inſtead of a Julep.

The Remedies which are given to Drink, to heat the ſluggiſh and cold Nerves, and alſo to waſte the Humors ought to heat very much, ſo that they may kindle a feaver, becauſe if that ſupervene, the whol Body then grows hot, aud the moiſtures of it are Egregiouſly conſumed: with which alſo are mixed thoſe things which are appropriate to the Neres and do reſiſt Diſeaſe by a peculiar vertue.

But theſe are uſed preſently after purging, and in the whol progreſs of the Diſeaſe, being given in the morning to them faſting, or once or twice towards night, in the form either of a Decoction, Infuſion, Waters, Pouders, Electuaries, Pills, the choyceſt of all which we will propound.

Somtimes the more grateful Decoctions are given upon that account, becauſe they loath ingrateful things in that form: of which ſort Compound Hydromel or Mead is very effectual, if it be drank ſomtimes before Meat, or otherwiſe, which is thus made: Take *of Water twenty pound, Honey one pound and an half, the roots of Acorus, dried Sage, of each one ounce; the roots of Orrice half an ounce*: Boyl them to the Conſumption of a third part, Aromatize it in the end with *Cinnamon, Nut-meg, of each two drams; Pepper half a dram*: Make a Melicrate, the which alſo may be done after the ſame manner with Sugar.

Other Medicinal Decoctions may be reduced into the form of a Syrup and uſed, which may be boyled, as hath been ſaid there, with the formentioned preparatives and purgers, or taking away thoſe things which purge and ſo be given.

Or of juyces after this manner: Take *of the juyces of Sage, and Ground-pine, of each one ounce and an half; the juyce of Marjoram one ounce, Lavender water two ounces, the moſt generous Wine two ounces, Sugar or Honey two ounces*: Boyl them to the conſiſtence of a Syrup, Aromatize it with *Nut-meg, and the roos of Galangal, of each one dram*: Let him take often one ſpoonful.

Infuſions, eſpecially thoſe made in Wine do good, for though Wine, eſpecially if it be ſtronge, is no waies convenient, yet acquiring the ſtrength of other things to it ſelf, and being to them as it were a Vehicle to the Nerves, it becomes profitable, being ſomtimes taken by way of Medicine, but it is prepared of the ſimple Infuſion of Sage, or of ſome convenient Plant.

Or a Compound one, as followeth: Take *of the roots of Acorus two ounces, the leaves of dried Sage one ounce and an half, Ground-pine, Cow-ſlips, of each one ounce; Wormwood half an ounce, Nutmeg one ounce, Zedoary half an ounce, white Wine, or new Wine, or Wine a little boyled twenty pound*: If you add of the *ſhavings of Guaycum one pound, the wine will be more effectual*. Diſtilled waters or thoſe made by infuſion, are highly magnified by ſome, which are given by themſelves in the morning, or are mixt with others, as the more ſimple ones of Roſemary, Sage, Marjoram, Time, Lavender, eſpecially, if the Liquor be extracted out of them dry, being firſt ſteeped in Wine; Cinnamon water, as it is grateful, ſo alſo tis effectual, the water of Ground-pine and Prim-roſes are chiefly appropriate.

Many Compound ones are made for theſe uſes, ſuch as we have deſcribed alſo in an Apoplexy, this alſo will be rightly fitted for the work. Take *of the roots of the true Acorus, Angelica or Maſterwort, Elecampane, of each ſix drams; the leaves of Sage, Marjoram, Roſe-mary, Ground-pine, Rue, the flowers of Lavender, Prim-roſes, of each half an ounce; Galangal, Nutmeg, Zedoary, Cinnamon, Cloves, of each three ounces*; Being thus pouderd ſteep them in ſtrong-wine, or in that firſt liſtilled, till it be thick as Frumenty, afterwards draw forth the Liquor, give one ſpoonful often in the morning; it will be

be more effectual if you infuse a little Castor in part of it and give it, or if you fear the strong smel of that, let a few grains of Musk be added.

Divers commodious pouders are prepared, which are either drank by themselves from one dram to one dram and an half, being dissolved in the waters of Sage, Marjoram, Lavender, Cinnamon, Groundpine, and also with Honey and Rosemary flowers, or Anacardine, or of Squils, or with other Syrups. Or eight parts of Sugar being added to one of Pouder, they are so taken, Or the Sugar being first dissolved with the said Waters, Lozenges are made, and then they are given in greater quantity. Or they are mixt with Conserves and Electuaries.

Of the usual ones the most excellent are, the Pouder of *Diamoschum Dulce*, and *Amarum, Diathamaron, Pleres* with *Musk*, *Rosata Novella*; and other Aromatical Pouders, are convenient.

Instead of which these following also may be prepared, that called *A more simple one of Nutmeg* after this manner. Take *of Nutmegs three drams, root of Pellitory of Spain two drams*, make a *Pouder*, of which if one dram be given for some mornings with *Sage water and Honey of Rosemary flowers*, it wil be a singular Remedy.

Another of Nutmeg being more compounded, wil be thus made, Take *Nutmegs not rosted*, as they would have it, *in number three or half an ounce, the root of Pellitory of Spain one dram, the Leaves of Marjoram, Sage, Flowers of Lavender, Rosemary, each half a dram; Gith seed one scruple, Cinnamon one dram and an half, Cloves, Galangal, each half a dram*; make a *Pouder*, of which, if adding nine ounces of *Sugar* dissolved in *Sage water* you make *Lozenges* they wil supply the stead of the *Lozenges* called *de nuce Moschata*.

A third called Aromatical wil be made thus. Take *of Cinnamon two drams, Nutmeg, Galangal each one dram and an half; Cloves one dram, Pepper, Ginger, Zedoary, seeds of Fennel, Anise, Mountain Hartwort, Peony, Leaves of Marjoram, each half a dram*; mix them, and make a *Pouder*.

The fourth compounded one shall be made thus. Take *of the roots of Pellitory of Spain one dram, Asarabacca half a dram, Angelica one dram an half, Seeds of Bishops weed Caraways, each two drams*; *Nutmeg, Galangal, Cinnamon, Cloves, each half a dram*; *the three Peppers, both Cardamons, Cubebs, Ginger, Spikenard, Wood of Aloes, each Mastich half a dram, one scruple, the Ashes of Swallows, and a Mans Skul each half a dram*; *Coral half a dram*, make a *pouder*.

Of Conserves and Condites, the Conserve of Groundpine made with Sugar, if it be given to the Paralitick at night going to bed, by a continued course it is said to be a certain help. Also the Conserve of Sage prepared with Honey boyled and clarified, brings great benfit. Likewise the Conditure or Conserve of Acorus, is approved by many.

By mixture of many things, such a Conserve shal be prepared. Take *of the Conserve of Sage, Groundpine, each two ounces*; *of the true Acorus and Nutmeg condite, each one ounce and an half*; *the Conserve of Primrose one ounce, Conserve of Marjoram, Rosemary flowers, French Lavender or Lavender flowers, Ginger condite each half an ounce*; mix them, let him take morning and evening *one dram and an half*.

Adding the pouders the following Electuary wil be convenient. Take *thin Confection made of Conserves and Conditures*, and ad of *Confection Anacardine half an ounce*, and of the *former pouder prescribed*, which begins, Take *of the roots of Pellitory &c. half an ounce, of Honey Anacardine* as much as is sufficient, make an *Electuary*, let him use it by it, self drinking afterwards, *the waters of Sage, Marjoram, or Groundpine*, or dissolve it with them, and let him drink it.

One dram of the Confection Anacardine being taken doth good, especially if it be taken every day twice, by the use of which if a Feaver be kindled, as hath been said formerly it wil do good upon a double account.

Opiates also are very much commended by Practitioners, which though they be old, are suspected by me by reason of the Opium, in a stupidity and weakness of the Nerves.

But they give Treacle, Methridate, Aurea Alexandrina, to one dram with Sage water.

Or these some are mixt with other Remdies after this manner. Take *of Acorus condite one ounce, Conserve of Rosemary flowers, French Lavender, Sage, each half an ounce*; *Methridate, Aurea Alexandrina, each two drams*; *Pleres with Musk one dram, Syrup of French Lavender* as much as is sufficient, mix them.

Pills too prepared of things ungrateful, and which are hardly taken in other forms shall be made thus. Take *of the root of Pellitory of Spain, Pepper, each one dram; Mummy or Bitumen half a dram, Euphorbium, Castor, each one scruple*; *Oyl of Amber and Turpentine, each four grains*; receive them in *Honey of Rosemary flowers*, or of *Squils* and make a *Mass*, of half a dram make *ten Pils*, let him often take five at night going to bed.

The Chymical Oyls of Sage, Marjoram, Cinnamon, and other Spices being mixt with Sugar, and used, or made into Lozenges are very profitable.

Suppositories are put up, and Clysters injected, both to sollicite and loosen the Belly, and also to heat; the which as the custom is, are used both before the use of other Purgers and in the progress of the Disease, being prepared in like manner, as we have prescribed in an Apoplexy, amongst which the Gentler wil work more than in them, seeing the sense of excretion is not taken away here, as in an Apoplectical, as also the Stronger wil work yet much more.

Such Suppositories may be made. Take *of Honey, the juyce of Mercury or Beets*, in the winter time *each two ounces*; boyl them a little, afterwards add of an *Ox Gaul two drams*, boyl them again sufficiently, and add *the root of Pellitory of Spain half a dram, Salt Gem one dram*, make *Suppositories*.

Clysters which provoke excretion, and alter too, are very convenient, bewaring of those too emollient, by which the Back-bone being more relaxt, would rather be hurt, that the Vulgar do not rashly beleeve, that Clysters in those troubled with the Colick have given an occasion of a Palsie, the which yet rightly prepared doth do good, and if the cause lie about the lower parts of the back, they are as it were Topick Remedies.

A less laborious Clyster wil be prepared thus. Take *of the roots of Lillies two ounces, Mallows, Beets or Mercury, Sage, Rue, Hyssop, Organy, Groundpine, each one handful*; *Flowers of Chamomel, Lavender each one pugil*; *Caraway seed two drams, Bayberries one ounce, Bran one pugil*, make *a Decoction* adding a little *Lye*, dissolve *Honey one ounce and an half, Butter half an ounce*, Galens *Hiera two drams, Salt* a little, make a Clyster.

If it be made of Juyces it wil work more strongly. Take *of the juyce of Beets or Mercury two ounces, the juyce of Rue, Hyssop, each one ounce, Honey two ounces, Oyl of Nuts or Butter two ounces*, dissolve them in *salt Broth*, or in the *Decoction of Sage*, or a *Boys urin*, make a *Clyster*.

Of those things which are principally convenient in this case, such a one may be composed the which also if you take out some things, wil nevertheless be effectual.

al. Take *of the root of the true Acorus* (for the *Marſhy one*, as *Rondoletius* wil have it, wil not pleaſe) *Orrice each one ounce, the herbs Beets or Mercury, Mallows, Sage, Marjoram, Rue, Betony, Groundpine, Cowſlip, Hyſſop, Organy, Penny royal, Calamint, Centory the leſs each one ſmal handful; or a greater,* if you take *fewer herbs, the flowers of Chamomel, French Lavender, Roſemary, Primroſe, each one pugil; the ſeeds of Carawaies, Fennel, Nettle, each two drams; Wild Saffron ſeed one ounce, Agarick half an ounce,* make a *Decoction,* diſſolve in a ſufficient quantity, *Honey of Roſemary flowers, or common Honey one ounce and an half, the Hiera of* Galen, *or* Hermes, *or* Logadius, *or of Electuary Indum, Benedicta Laxativa, each one dram;* or take fewer of them in a greater dote, *Oyl of Rue, Spike, or Coſtus each one ounce and an half; Foſſile Salt one dram,* make a *Clyſter.*

Thoſe things which ought to be put into the Mouth are theſe, either there is made an actual Irritation of the Jaws to procure Vomiting, which proceeds in thoſe accuſtomed to it, or that have firſt devoured ſomwhat, as hath been ſaid in giving of Vomits.

Or they are Maſticatories that draw forth the flegm, both drying and altering alſo, which are very convenient, and in a Palſie they empty from the Head, and revel from the beginning of the Nerves. In a Diſtortion of the Mouth they derive alſo, if they be often uſed in the morning,

Nutmeg often chewed is held by all for an excellent Remedy,

A Junket made of Muſtard ſeed, being held in the Mouth, doth work powerfully.

A profitable Compoſitiou may be made thus. Take *of Nutmegs two drams, the root of Pellitory of Spain, Muſtard ſeed, each one dram and an half; Cubebs, Pepper, Galangal, Angelico root, each half a dram; Maſtich one dram, Wax a little,* make *Maſticatories,* if a little *Caſtor* be added, and they refuſe not the ſmel of it, it wil be moſt effectual.

Gargariſms perform the ſame. Take *of the roots of Angelica, Pellitory of Spain, the true Acorus each half a dram; the herbs Sage, Marjoram, Time, Hyſſop, Organy, each one handful; Muſtard ſeed two drams, Staves acre, Long Pepper, each one dram; Nutmeg half an ounce,* make a *Decoction* in *Water* add *Honey of Squils* or of *Roſemary flowers one ounce and an half;* mix them, let him waſh or gargle his mouth; there may be added of *Wild Saffron ſeed ſix drams, Turbith half an ounce, or Spurge two drams,* but if there be danger that they may ſwallow them, they muſt be omitted.

Liquid Errhines drawn up into the Noſtrils, or the Sick lying on his back, they being diſtilled by drops into the Noſtrils, they do alſo provoke flegm by their paſſages. Take *of the juyces of Pimpernel with purple flower, of the roots of Beets each one ounce; the juyce of Marjoram, Rue, each half an ounce; the ſeeds of Gith, the root of Pellitory of Spain, each half a dram; Caſtor half a ſcruple, Honey of Squils half an ounce, Wine one ounce,* make an *Errhine.*

Or anoynt the Noſtrils with this following. Take *of the juyce of Sowsbread, Pimpernel, each two drams; the juyce of Marjoram one dram, Trochisks of Alhandal one ſcruple, Pellitory of Spain, ſeeds of Gith, each half a dram; Caſtor half a ſcruple, Honey Anacardine* as much as is ſufficient, make a *Liniment.*

Or ſomtimes let a pouder be blowed into the Noſtrils. Take *of the root of Pellitory of Spain, the ſeed of Gith each half a dram; Caſtor half a ſcruple, Euphorbium ſix grains,* make a moſt fine *Pouder.*

Suffumigations alſo are received by the Noſtrils as are thoſe Fumes which are prepared in a Dry Bath, of which hereafter, and thoſe things principally applied, which by drying the brain do prevent new Deſluxions and ſtrengthen the Nerves.

Outwardly are applied to the Body in the Palſie, both to the parts palſied and to the Back-bone and Head, thoſe things alſo which can heat very much, that they may recall the Heat of the Nerves and Members, and thoſe things which ought to be exhauſt and dry up the humors, and refreſh the Nerves and Brain. The which alſo are convenient for a Humoral Spaſm, and theſe things are then adminiſtred by dawbings of Oyntments, Waters, or by Plaſters, Garments, Caps applied, or by Baths and Fomentations.

But anoynting are chiefly uſed, which ought to be applied about the Region of the Nerves, there where the Diſeaſe lies in them, as in a general Palſie about the hinder Region of the Neck called the Nape, where if the evil do lurk within the Skul, they may alſo thruſt forth their ſtrength ſo far; or in other particular Palſies of the parts in the ſeat affected of the Back or other Members. Somtimes alſo they are not unprofitably applied to the parts Palſied, becauſe they allure the ſpirits into them, and ſend by communication their vertues even to their affected Nerves, upon which account alſo the Hands and Feet, and their parts if they be Palſied are anointed with them, and the Cheeks in a diſtortion of the Mouth; the which anoynting of every part or of the Back-bone will work the better, if the anoynting be actually hot, if there be joyned ſtrong Friction with the Hands, and the Hands with which we rub, be firſt wet with Aqua vitæ, or the part which ſhall be rubbed; here alſo we muſt obſerve that we proceed from gentler to ſtronger by degrees, in this long continued Diſeaſe; but theſe remedies are adminiſtred in the form of an Uuguent or Water.

The Unguents are made of divers Oyls, made by Infuſion, Expreſſion, Diſtillation, which are reſerved for theſe uſes, chiefly the Oyl of the ſeed of Aſphaltites Triſoil, which is called *de Andacoca,* is accounted for a ſingular remedy.

But by the mixture of Oyls ſuch an Oyntment may be made: Take *of the Oyls of Rue, Coſtus, of each one ounce, of Bricks, Foxes, Wormes, of each half an ounce:* Mix them, make an Oyntment.

This excellent remedy may be made of Gooſe greaſe: Take *a Gooſe Pickt, unboweld, waſht with white Wine,* And let it be ſtuck every where with Cloves and Nutmeg, being cut firſt that they may be thruſt in, and let it be ſtuft with Sage leaves, adding to the ſame *leaves the Fat of a Fox, or wild Cat one ounce, Pouder of Myrrh, Frankincenſe, of each half an ounce; Caſtor, Euphorbium, of each half a dram, Worms ſtifled in Vinegar, twenty:* Let them be all ſowed in, and the Gooſe roſted on a Spit, white Wine Vineger being put in the pan, into which the juyce and fat ſweating forth may diſtil, and afterwards the liquor being cooled, let the fat that ſwims a top be gathered, moſt excellent for theſe uſes.

Another Oyntment, more effectual is made thus: Take *Oyl of Bricks, Spickenard, of each one ounce; of Turpentine ſix drams, of Euphorbium half an ounce, Frankincenſe three drams, of the ſeeds of Gith one dram and an half; of Caſtor one dram, Saffron half a dram, Wax a little;* Make a Liniment.

Or if it ought to work more powerfully: Take *Oyl of Bates, Muſtard ſeed by expreſſion, of each one ounce and an half; of the following Gums diſſolved in Aqua vitæ,* to wit, *Opopanax, Galbanum, Ammoniacum, Serapinum, of each half an ounce; Euphorbium two drams;* Mix them, add *Oyl of Turpentine half an ounce, Oyl of Bay-berries, and Spike, of each one ſcruple; Oyl of Agath or Amber by diſtil-*

lation

lation half a ſcruple, the roots of white Hellebore, Pellitory of Spain, Muſtard ſeed, Pepper, of each half a dram; Salt Ammoniack two ſcruples, Caſtor one ſcruple, Wax as much as is ſufficient: Make an Unguent.

This will be a moſt excellent Oyl: Take *of expreſt Oyl, old Oyl of Olives, or Lamp Oyl, or that in which Bricks have been quenched four ounces, old Oyl of Nuts two ounces, Oyl of Baies, Muſtard ſeed, of each one ounce; Oyl of Juniper-berries half an ounce, Spike one dram, diſtilled Oyl of Turpentine ſix drams, of Peeter three drams, the juyces of Sage, Rue, Ground-pine, Orrice, of each one ounce; Aqua vitæ two ounces, the fat of a Fox and Gooſe, of each one ounce and an half: Earth-warms firſt waſht in wine twenty, Gum Opopanax, Galbanum, Ammoniacum, Serapinum, diſſolved in Vinegar of Squils, of each ſix drams; Storax, Myrrh, Maſtick, Frankincenſe, of each half an ounce; Euphorbium, one dram and an half, the roots of Pellitory of Spain, Hellebor, Coſtus, Galangal, Nutmeg, Pepper, Muſtard ſeed, the Bituminous Trifoil, Gith, Lavender flowers, Caſtor, of each one dram; Anacardium, ſalt Ammoniack, live Sulphur, Bitumen, of each two drams; Saffron half a dram*: All being rightly prepared, pouder'd and mixt, let them be boyled by a ſlow fire to the Conſumption of the juyces. Let the Oyl be reſerved for uſe, either uſed by it ſelf or mixt with other things.

The other Oyls diſtilled out of Plants, beſides that already ſpoken of, of Spike and Juniper, which are extant every where, and are prepared in great quantities, are convenient, as of Sage, Rue, alſo of Spices, which being added to theſe Liniments do very much increaſe their vertues.

The uſual Unguents convenient here, are of Bdellium, Agrippa, Aregon, Martiatum and the like, uſed by themſelves, or mixt with the reſt.

Waters made by a long Infuſion in a hot place, or extracted by heat, do Egregiouſly penetrate, eſpecially if Oyl alſo doth diſtil forth more plentifully with them, and being laid on inſtead of Unguents, they profit very much.

The more Simple are, if Sage, Roſe-mary, Time, French Lavender, and other things Appropriate, and ſweet ſmelling, being ſteeped in Aqua vita, be applied.

Of thoſe Compounded, many called Compound Aqua vitæ's are made for theſe uſes, of which this will be very convenient: Take *of the roots of Orrice, Hogs-Fennel, Angelica, the true Acorus, both Galangals, Coſtus, Pellitory of Spain, white Hellebore, of each one ounce; Cyperus, Zedoary, Ginger, of each half an ounce; the leaves of Sage, Time, Roſe-mary, Rue, Marjoram, Ground-pine, of each ſix drams, the flowers of both Lavenders, French Lavender, St. Johns-wort, Prim-roſe, of each half an ounce; the ſeeds of Muſtard, Gith, of each two drams; Juniper and Bay-berries, of each one ounce; Nutmeg half an ounce, Cloves, Mace, of each two drams; long and round Pepper, Cubebs, Spikenard, wood of Aloes, Yellow Saunders, of each one dram, Saffron half a dram, Frankincenſe, Myrrh, of each half an ounce, Liquid Storax three drams, Euphorbium, Caſtor, of each two drams; Earth-worms waſht in Wine twenty, Salt-Niter half a pound*: Being prepared and pouder'd, let them be bedewed with the moſt generous Wine, till they are made like to Frumenty, then diſtil them according to art.

Thoſe called Artificial Balſomes which yeild more Oyl, are prepared divers waies.

One more ſingle is thus prepared: Take *of Danewort, the leaves and root, Sage, Lavender, Rue, all with their leaves and flowers, freſh, bruiſed, bedewed with Aqua vitæ, of each one handful; Caſtor two drams, Turpentine half an ounce, Salt Ammoniack two drams, Worms waſht in white Wine twelve*: Draw forth a water with the Fire of aſhes, fitted for theſe uſes.

A Compound Balſom, ſhall be made thus: Take *of Frankincenſe, Maſtick, of each one ounce; Storax, Benjamin, Myrrh, Gum Opopanax, Bdellium, Elemi, Serapinum, Ammoniacum, Sarcocol, of each half an ounce; Euphorbium three drams, Aloes, Ladanum, of each two drams; Caſtor one dram, the root of Galangal, Coſtus, Nutmeg, of each half an ounce; the leaves of Sage, flowers of Lavender, Ground-pine, of each three drams; Juniper-berries half an ounce, ſeeds of Gith one dram, Turpentine or Roſin of the Larix tree the weight of them all*, viz. *ten ounces*: Let them be diſtilled according to Art, and there will flow forth a Water and Oyl, the which may be anointed together or a part.

Alſo if the Back-bone be anointed with Confection Anacardine. and Aurea Alexandrina, diſſolved in Aqua vitæ, in which Sage hath been infuſed, it will be an effectual Remedy.

Plaſters made of the ſame Unguents, adding Pitch and Roſin, which are good of themſelves, or Cere-cloths made by increaſing the quantity of Wax, do perform the ſame, and becauſe they may ſtick long, they work powerfully; the which are worn applied to the Back-bone alſo, or to the part affected.

Of the uſual ones are commended, that of Bay-berries, de Betonica, Ceroneum; as, Take *of the Plaſter Ceroneum, of Bay-berries, of each one ounce; Frankincenſe half an ounce, Caſtor, Euphorbium, of each one dram, the ſeed of Gith, Creſſes, Muſtard, the root of Pellitory of Spain, Saffron, ſalt Niter, of each half a dram, with Oyl of Bricks or Turpentine*: Make a Plaſter.

The Pouder of Worms, applied Plaſter wiſe to the Nape of the Neck, with Pepper and Honey, doth wonderfully profit.

Coverings and Garments of Skins and Feathers, do good not only by retaining and cheriſhing the heat in the parts, but ſome of them, alſo are beleeved to help by a propriety, if the Palſied Member be wrapped, cloathed or coverd with them, as Fox and Hares skins, Gooſe Feathers, and thoſe of Doves, Cranes, and wild birds; the which alſo, as other things which ought to come about the Body, if they be ſmoaked with Frankincenſe, Maſtick, Storax, Benjamin, with Spices, and other ſweet things caſt upon the Coales, they will do it more effectually.

To the Head and Neck theſe things may be applied in a dry forme: Take *of the rootes of Acorus, Galangal, Orrice, the leaves of Sage, Marjoram, Balm, flowers of Lavender, French Lavender, Roſemary, of each one dram; ſeeds of Coriander, Gith, of each half a dram; Nutmeg two drams, Cubebs half a dram, Frankincenſe, Maſtick, Storax calamite, of each one dram and an half*: Make a Pouder for a a Pillow, or a Bag which may be laid under the Head and Neck, or for a Cap to be worn.

To Plunge or bury the Members for a while in Sand, or hot Aſhes, or boyling Wine preſſes, or hot Dung, doth very much help.

It is counted a ſingular Remedy, by ſome for reſolved Members to thruſt them oftentimes into a Tub in which Aqua vitæ, or the Spirit of Wine hath been kept, one end being taken out, and it being heated with lighting of Juniper wood, to provoke ſweat out of them.

Sage is thought to do good, being only carried in the Hand, perhaps rather by its ſent then touch.

If they Plunge their Body, in a heating and drying Bath, ſo that it contain the Palſied Members and the greater part of the Back, by altering & calling forth the Humors, ſomtimes they may help upon that account, the which hotwithſtanding ought to be effectual, leaſt that they moiſten more by their actual Humidity, then they potentially dry.

For which reaſon they are ſent to Natural Baths, if other Remedies help not, and the Diſeaſe be now a longtime prolonged, and the Patient otherwiſe labor of no other fault, and nothing hinders, as to the laſt refuge, the which they are commanded to uſe for a Month and further, till their Skin be florid, and whol again: But the Alum and Nitrous Baths are chiefly convenient, becauſe they dry, they likewiſe commend the Sulphureous ones but they mollifie very much; the Atramental, Acid, cannot do ſo much good. Becauſe acid things are enemies to the Nerves: the Salt ones Sea-water, or Spring-water heated, becauſe they dry, without doubt will be profitable.

Artificial Baths will do the ſame; if you mix with the Waters Salt, Alum, Tartar of Wine to make them drying, and often quench Iron or Steel in it, ſuch as Smiths-water is, or adding the Aſhes of pruning of Vines, of Bones, and Lime. You may make like a Lie and that the Bath may be more appropriate, and heating, you may boyl the Plants by and by to be reckoned up, in a dry Bath, in ſome Water prepared of thoſe things even now ſpoken of, adding a Lye or Smiths water. Or if you boyl the ſame Plants in the Decoction of a whol Fox.

But if particular parts palſied be plunged in theſe, or be fomented, or waſhed with them, as the Hands or Feet, they wil do good.

For which this is alſo convenient. Take *of Sage, Juniper berries and Leaves, the greater Spurge, each* as much as is ſufficient, boyl them in a *Lye*, with which foment or waſh the part.

If the Palſied parts as the Hands or others may be plunged in the like Liquid Oyls or Liniments, it wil be convenient to foment them awhile with them, for the performance of which ſeeing a good eſtate is required, this ought rather to be done in rich folks.

By the encompaſſing Air, the ſtrength is not only preſerved, but alſo if it be pure, the body is made leſs foul, and as the cold Air is chiefly hurtful, ſeeing the Members of the Paralitical are otherwiſe cold, & Cold is an Enemy to the Nerves, ſo that which is Hot and Dry doth very much good, becauſe it corrects the Diſtemper; but ſuch is either by reaſon of the Heavens, and muſt be let in from thence, whence it may be had, or is made ſuch by Art, by Fires, by Suffumigations; and alſo if Pidgeons be conversant with the Patient in the ſame Air of the Chamber, they ſay that it doth by a propriety reſiſt the Palſie.

If alſo it be applied ſo Medicinal, *viz.* made Hot, Vaporous, or Smoaking, that it draw forth the Humors, by inſenſible Tranſpiration, or manifeſt Sweats, the body being firſt fitly purged, it is a Remedy which doth waſt from the part affected, but the conjunct and Antecedent cauſe, and oftentimes is the prime Remedy in curing this long continued Diſeaſe.

But let the Air be thus heated in his Chamber ſhut up or under his bed, and that either with Fire alone or alſo with the Vapor of ſome Decoction, which exhales of its own accord whiles it is hot, or if red hot flints or mettals be quencht in it, it ſends forth a Vapor and Smoak, in which let the Patient faſting, ſit Naked, and repeat it often according as he can wel endure.

But the Decoction for this Evaporation, may be prepared of things following which do together powerfully heat and ſtrengthen. Take *the root of Danewort three ounces, of Acorus, for the rich, one ounce, Hogs Fennel of* Dioſcorides *two ounces, the herb Sage, Groundpine, Primroſe, each two handfuls; Organy, Pennyroyal, Wild Time, Calaynint, Hyſſop, Marjoram, Roſemary, Time, Bays, flowers of Chamomel, Elder, Juniper berries, of every one of them or ſome of them a greater or leſs handful,* according as they are taken boyl them in *Water*, adding a *Lye* and *Wine*, for a *Stove* or *Dry Bath* as they call it.

In a great and almoſt deſperate Palſie or Roſolution of the Limbs, much may be done if Sweat be provoked oftentimes with intermitting reſt, in a Cheſt made convenient to lie in, being every where cloſe ſhut, the Patient being placed with Pillows under him, with his Head out, and the hole of the Cheſt about the neck of the Patient, being very wel ſtopt, the Vapor entring the Cheſt through the beak of an Alembick ful of many holes, by another hole in the bottom of the Cheſt, in the bottom of which Alembick put under, the following things have boyled by *Balneum Mariæ*.

Take *of the Alcohol of ſpirits of Wine four pound, the Eſſences of Sage, Roſemary, Lavender, Marjoram, Time and Organy each two ounces*; let the *Vapor* be ſo long admitted into the *Cheſt* as the Patient can well endure it, but when the Patient is now ſufficiently moiſt, and the heat being too much increaſed, *the beak of the Alembick* is drawn forth, let that which drops forth, till the matter contained in *the bottom* be cool, be received in a *Receiver* large enough and well cloſed up, that it may be kept for further uſe, which ſhal be with the ſame *Liquor* or *Spirit heated* to moiſten and rub the *palſied Member and parts of the Patient*, after that being taken out of *the Cheſt* and the *Sweat* wiped off, being placed in his bed he hath ſweat again; but firſt wiping off the *Sweat*.

If the Palſied Member be ſuffumigated before the fire, with Frankincenſe, Maſtich, and other ſweet things, it wil very much ſtrengthen and ſtir up the heat in it.

We ſhal help by motions of the body by decent exerciſe which doth egregiouſly waſt the humors and ſtirs up the parts laid aſleep, and recals the animal ſpirit into them, heats the Cold and ſtregthens the Soft.

The which if they cannot eerform of their own accord that onght to be accompliſht in them by the help of Servants, by raiſing and bearing them up, that they may be able in ſome ſort to walk, and the Patient himſelf muſt endeavor to uſe his languid Members, and being idle, continuallyſtir and exerciſe them.

Friction is chiefly convenient, being made both for Diverſion ſake in the ſound parts, and performeth the ſame benefit being applied to Sick, ſeeing nothing doth more powerfully allure the ſpirits, which is done only by the hands of the ſtanders by or alſo by applying a rough hot Cloth, or the Patient himſelf may do it by rubbing the ſick parts with the ſound.

All which wil be adminiſtred with better ſucceſs in a fitting time, the Patient being faſting, and the body firſt purged.

By motions of the mind alſo we diſcuſs the humors, in Watchings longer than uſual, for a good while continued, and we prevent that they be not heaped up by immoderate ſleep.

They feel benefit by ſome Affections of the mind that inflame the body, if ſo be that they do not too much weaken, as by Anger, ſeeing a Feaver alſo as hath been ſaid, doth not hurt,

Amongſt manifeſt Openings, only Bleeding takes place in the Plethorick, ſeeing we know that the abundance of this Flegmatick humor is produced from the plenty of crude blood or fomented by it, but then alſo it muſt be done ſparingly in the Arm, of the ſound part, neither muſt we credit the Arabians who teach us to draw ſo great a quantity of blood, ſeeing by that their languid heat is extinguiſht.

Scarification alſo brings ſome help, not by reaſon of the drawing forth of Blood, but by reaſon of the Cupping-Glaſſes applied upon it: the which yet are more profitably

profitably faſtned to the ſick parts, but without Scarification that they may more ſtrongly attract the ſpirit thither; and that they may divert the humor from the Nerves poſſeſſed with it, diligently obſerving the place where the cauſe of the evil lies, eſpecially if this be about the Marrow of the Back, the Cupping-Glaſſes being faſtned a little below deſcending by degrees to the palſied member, they oftentimes free the Nerves from it.

Inſtead of which Rubefiers and bliſtering Remedies, ſtronger than theſe do effect the ſame more ſtrongly. Of which they are wont to apply the ſtronger Veſicatories, or inſtead of them Cauſticks and Setons, to the hinder part of the Neck, which they call the Nape, which wil be then moſt convenient, if in a general Palſie the cauſe be neer to the Brain, although alſo it doth good, if the cauſe lurk there about the beginng of the ſpinal Marrow in a Hemiplegia, becauſe it calls it forth, and moves it from its place, and alſo Cauſticks applied to the Arm, do revell the humors.

The Cure of Palſie or Spaſm from other humors.

If a Palſie be cauſed from a Watry Flegmatick or Serous humor, mixt with acrid cholerick humors, not only bedewing the Nerves but alſo irritating them, as after Colick pains we have ſaid it doth moſt frequently happen in our age, with Pain and ſenſe of tingling; then the Cure as long as the Colick pain laſts ſhall rather be applied to that, and thoſe evil humors muſt be purged forth, as hath been ſaid there, and thoſe things ought rather to be applied and given, which by lenifying the Nerves may hinder Convulſions into which it is wont eaſily to terminate, as hath been ſaid in Convulſions; in the interim not raſhly foretelling any good event: becauſe if Convulſions be ſupervenient, it is wont eaſily to kill; but if that other Diſeaſe ceaſing, that do accompany theſe Palſies, they do remain in many or particular parts, then the ſame cure muſt be adminiſtred, which hath been explained in a Flegmatick Palſie.

It hath been ſhewed, that from Blood a Palſie cannot be cauſed, eſpecially a laſting one which if it be as Practitioners have writ, becauſe then the Blood conſiſting yet in the Veins, eaſily goes back by its part inverted, if it be cauſed by the perverſe Scituation of it, and by and by ceaſeth: or if it be from a Plenitude, it will be Cured by bleeding, and by other things that revel and derive.

The Cure of a Palſie from cooling.

If from too much Refrigeration of a Muſcle and Nerve by the external cold (for concerning that which is cauſed by a flegmatick Humor hath been ſpoken already) not only a Stupidity as that happens, but alſo a Reſolution of the Member be cauſed, then as hath been ſhewed in a Stupidity, it is corrected by things actually hot, applied by degrees and by Frictions, by which unleſs it ceaſe, thoſe Topick Remedies which have been explained in a Flegmatick Palſie, *viz.* anoynting, Fomentations and Baths according as their form is appliable to the part affected, will here alſo take place.

The Cure of a Flatulent Spaſm from Wind.

If a Flatulent Palſie be cauſed from Wind, therefore ſo called, whether they be the cauſe of it, or if it be cauſed from the too much aſtriction of the Muſcles, by increaſing of it, they render it more vehement and laſting. Then if this happen but ſeldom, it can ſignifie no evil, becauſe it proceeds from a manifeſt cauſe, too much Motion, or Refrigeration, and therefore it is neglected, but if it return often, becauſe it breeds great trouble, and weakneſs, the Limbs becauſe it hath an internal cauſe accompanying it, plenty of Wind, and an undecent Connexion of the Muſcles, as hath been ſaid, it muſt not be neglected, becauſe ſomtimes it can ſcarce be wholly taken away.

Which if it moleſt not only in the Feet and Joynts but alſo elſewhere, as in the Back or lower Jaw or Mouth, it wants not its danger of falling to an Epilepſie, and therefore as hath been ſaid there, we muſt provide againſt it betimes.

But in other Cauſes, the following Remedies ſhal be uſed both for prevention out of the fit, if it return often, or in the fit if it continue; which diſpel Wind and Relax the bound up Muſcles.

There are given to hinder the Product of Wind and to diſcuſs it, as well in courſe of Dyet, as in purging Medicines, heating, and ſtrengthning, ſuch as in windy caſes, eſpecially of the Stomach, we ſhal explain in their proper places.

There are applied to the Muſcle affected, which we know by the bunching forth of the place, and pain) thoſe things in the fit which are Actually or Potentially heating, and diſcuſſing Wind do help by Lenifiing and Relaxing the part. But out of the fit, thoſe things which do alſo by ſtrengthning the part with a light aſtriction provent the often returning Diſeaſe by uſing almoſt the ſame, which in a Flegmatick Palſie and true Contractions we have ſhewed to be the gentler, and have there deſcribed them.

Anointings are made with Oyls of Chamomel, Lillics, Dill, or after this manner, if the part muſt be ſtrengthend too: Take *of Oyl of Chamomel or another of thoſe three, one ounce, of Foxes or Worms, Maſtick, of each half an ounce*: Mix them, anoint the part hot, your Hands or the part being firſt moiſtend with Aqua vitæ.

Oyl of Guaicum anoynted with Aqua vitæ and Sage helps ſpeedily.

Or make Plaſters amongſt which Martiatum is convenient.

The Warers and Balſom Oyls explained in a Palſie are convenient, amongſt which ſimple Aqua vitæ applied alone, gives preſent help, if it be hot.

Treacle diſſolved in Aqua vitæ, rather then in Oyls as they teach, and anointed, will profit very much.

Fomentations, Inceſſions, Baths, reckond up in a Palſie and Contraction will do good, being actually or potentially hot. Amongſt which a Lie may be applied, as ſhall be ſaid in the Gout, for prevention ſake, becauſe it confirmes the Lax parts and thoſe which receive the Humors or Wind, adding ſome things that ſtrengthen.

This Plaſter is very much approved: Take *of Wormwood, Penny-royal, of each one handful; Bay-berries one pugil, Cummin half an ounce*: Bruiſe them, boyl them in ſtrong Wine and Honey: Make a Cataplaſm.

The Bags preſcribed in a Palſie being firſt bedewed with Wine will do good alſo, or thus when by ſtrengthning we would prevent the evil: Take *of the flowers of Chamomel, Melilot, Roſes, Bran, Juniper or Bay-berries, of each one pugil; Myrtles half a pugil, Orrice roots half an ounce, ſeeds of Fœnigreek, Caravaies, Cummin, of each three drams, Salt one pugil*, for a Bag.

A Bag may quickly be prepared for uſe, only of Millet, Bran, and Salt.

Hot Skins, and other the like things are convenient.

Alſo gentle Friction, with the Hands or hot Cloths.

By drawing back the part affected, we ſhall make the fit ſhorter, or that it preſently ceaſe, if the Muſcles that are involuntarily violently extended, or bent, and by that drawing the Member, we do voluntarily endeavor by

by a contrary motion and ſtraining, of the Muſcles which are oppoſed to the diſeaſed ones, to draw them back together with the Member: for ſo being bound up or out of the way, they are Relaxt again with the Members, and recover their natural Scituation, and the Wind, which did poſſeſs the ſpaces of them contracted, when the Muſcles return into their place, is repeld from thoſe places and forced to give way, which in the Muſcles that conſtitute the Calf and Feet and move the Toes, being contracted we dayly find by experience, is done by a contrary extenſion and the pain preſently ceaſes.

The Cure of Contraction from drineſs.

From drineſs or Inanition, as they would have it, of the Muſcles, or their Tendons that draw the Member, and ſomtimes of the Nerves or Ligaments that compaſs the joynts, if there be a Contraction of that part to which theſe ſerve for Motion, whether it happen in the Back or other places, if their drineſs be great, the evil is incurable; as when this comes to paſs, by reaſon of Age and labor. But alſo it is hardly cured, if cauſed for other reaſons, it hath been of long continuance, as we ſee for the moſt part, thoſe Contracted in the Hands, Feet, and laboring of a *Tetanus*, do remain contracted in thoſe places all their life time, or are only changed a little for the beter.

Yet nevertheleſs the Cure is oftimes profitably applied at the beginning with ſucceſs, and by this Method, by applying outwardly to the part affected, Moiſtning and Laxating Medicines, of which becauſe ſome of them do cool, the cheif part of the Cure is performed by mixing hot things with them, and thoſe that ſtrengthen the Nerves, to wit if they be applied to the Muſcle and its Tendon and to the Body which ſomtimes is neighboring to the Member that draws, but at other times far diſtant, and is extended to it by a long, ſomtimes a very long Tendon; alſo to the joynt if the Ligaments are bound up.

The Back therefore with the Bone is anointed in a *Tetannus*, or the Members in other Species of contraction after this manner: Take *of Oyl of ſweet Almonds freſh one ounce and an half, of Violets, Lillies, Chamomel, Flax made by expreſſion that is new, Worms, of each one ounce; Oyl of St. Johns-wort, the Mucilage of the ſeeds of Flea-wort, Flax, the fat of a Duck, the Marrow of Calves legs of each half an ounce; Turpentine two drams, Sulphur two drams and an half, pouder of Worms one dram, flowers of St. Johns-wort, of each half a dram; Saffron one ſcruple, Wax* as much as is ſufficient: Make a Plaſter.

They magnifie the fat of a man in this caſe, as alſo of Eeles, perhaps becauſe that is counted appropriate, and this more moiſt, becauſe it is taken from Fiſhes.

A Bath in a *Tetanus*, or *Irrigation* in others, or a Fomentation of the place affected, may be made of theſe things, applied Warm, of ſweet Water, Milke, fat broth of the Head and entrals of a Weather or Calfe; Water and Oyl, or Oyl alone, eſpecially of Violets.

Or of the following Decoction: Take *of the roots of Marſh-mallows, Bryony, Lillies, of each one pound; freſh Orrice root half a pound, the Herbs Mallows, Violets, Lettice, Arach, Cole-worts, of each one handful; Sage, Gromd-pine of each half a handful; Flax ſeed, clean Barley, of each one pugil*: Boyl them in Water for a Bath to which alſo the other things may be mixt.

Sulphur Baths have a great vertue to Mollefie, becauſe nothing is fatter then Sulphur, as hath been demonſtrated elſewhere.

Palſters applied to the part becauſe they remain there, do highly profit, as Melilot, de Mucilaginibus, Reſumptiaum, and the like, prepared of the forementiond Unguents.

Or Cataplaſms alſo are made of the foreſaid Plants in the Bath, which do help more then the reſt being worn a long while and often renewed.

This alſo is moſt commendable: Take *of the freſh roots of Marſh-mallows, Briony, of each two ounces; of Mandrake one ounce, freſh leaves of Henbane* (which I have known by experience, as alſo Mandrake do wonderfully Mollifie) *Mallows, of each one handful*: Boyl them in Milk, bruiſe them, adding *the floure of Flax ſeed two ounces, Flea-wort, Quinces, of each half an ounce; Hogs and Gooſe greaſe, of each one ounce; Oyl of ſweet Almonds, freſh Butter, of each half an ounce; Bay-berries two drams, Saffron half a dram*: Make a Cataplaſm.

The Caule, Meſentery, Kidneys, with the fat, being made warm, are laid on the ſick part.

Skins of themſelves or firſt anointed with Oyl, being newly puld off, eſpecially Fox Skins do good, and a Gooſe Skin with the Feathers.

We can ſcarce do any thing ſingular, by things taken inwardly, or injected here, unleſs by accident in relation to that Diſeaſe but in a Convulſion or particular Spaſm, they help very much.

If the contracted Members can be ſeparated by manual operation, then though they be not made moveable again, the which yet ſomtimes comes to paſs, nevertheleſs another form may be fitted for them, which brings a leſs impediment in Motion: as if the Fingers being extended be ſtopt, then if they be contracted, they are leſs prejudicial in laying hold of things; if the Foot ſtick drawn upwards, being drawn back to the ground, although the joynt of the Knee remain fixt, yet it reſtores the going which before was taken away.

But this we may ſomtimes do in ſome places with our Hands, or application of Inſtruments forcing it ſomwhat down dayly, not with a great force, but by little and little, in proceſs of time more and more relaxing the bound up Tendons and Ligaments, and that according to the Nature of the Member contracted, divers waies; as if by reaſon of the joynt of the Knee fixt, as it often comes to paſs, the Foot be drawn upwards, putting on the Shoe and tying it elſe where, by continually drawing it down, whiles they ſit and do any thing: or by hanging a weight to it ofttimes depreſſing it; the which alſo is neatly performed, if two oblong plates hollow in the middle, fitted to the Leg and hinder part of the Hips and joyned about the joynt, by interpoſition of an Engin and turning it as long as he is able to endure, the Foot be forced by degrees from the upper parts downwards, and alſo it is commodiouſly performed in other places after the ſame manner by an Engin having caannelling, becauſe if it be turened, by degrees preſſing thoſe parts into which it is inſerted, it forceth the fixt Member, and becauſe the Engine ſo turn'd remaines immoveable, the ſame doth ſubſtain and return the Member as far as it hath thruſt it. Which I have made tryal of in many with ſucceſs, the Inſtruments being Ingeniouſly made. As alſo if a Finger remain extended, a Ring being put upon it, which muſt be Contiguous and faſtend to another Ring applied on the next Finger; whiles this Finger is moved, the other which is fixt being continually forced, is at length compeld ſomwhat to yeld and bow.

The Cure of a Contraction, or Spaſm from a Tumor.

If the Member be ſtopt by a hard Tumor, Callus, or Skar growing in the Tendons, and Ligaments, or if by poſſeſſing or preſſing a Nerve they cauſe a Palſie, there is no other manner of

Cure

Cure ordered then by Emollient things, which is due to theſe alſo ariſing in other places, as ſhall be explained there: in the interim the firſt Members, if they be very prejudicial in that Scituation, they muſt be continually drawn into a righter and leſs incongruous form, by actual labor, as was ſaid even now.

The Cure of a Palſie from compreſſion.

If a Palſie be cauſed from a violent compreſſion of a Nerve by a burthen or bound, then theſe Impediments muſt be removed, and the bands looſed; the which being taken away, if a Stupidity or Palſie do continue, the ſpirits muſt be recalled by Frictions and other hot things applied, ſpoken of in a Flegmatick Palſie; ſeeing a Nerve is ſcarce preſt by a Bone Luxated, but rather other diſcommodities follow from thence, they ſhall be explained in them.

The Cure of a Palſie from a ſolution of continuity.

If a Palſie be from a Wound, a Tendon, Nerve, or Ligament being cut in two, it is incurable, yet there are Chyrurgions that are wont to ſow together Tendons cut in two. If this come to paſs from a Muſcle wounded tranſverſly, the ſame cure muſt be made as in other Wounds, the which alſo oftentimes helps; but if it be wholly cut off, becauſe then it is drawn back both waies, and is hardly joyned together again or retained, nevertheleſs there remains an immobility of that part, when the Wound is cured.

If a Palſie be cauſed by a Contuſion, Blow, or Fall, if there follow an Inflamation in a Nerve a Convulſion eaſily enſues, which is deadly; that this therefore may not be, the Blood muſt preſently be revelled by opening a Vein and otherwayes; but upon the part contuſed, cold, aſtringent things muſt not be applied, but thoſe which digeſt too.

Such a Plaiſter as this. Take *of Maſtick, Frankencenſe, Gum of Ivy, each half an ounce; Mummy two drams, Pouder of Worms one dram, flowers of Chamomel, Roſes, of each half a dram; Oyl of Roſes, Chamomel, Wall flower, of each one ounce; Turpentine and Wax* as much as is ſufficient: Make a Plaſter.

At the end, when there is no more fear of an Inflamation, let it be anoynted with the Unguents mention'd in a Flegmatick Palſie; if the Palſie continue ſtil, to recal the heat of the Nerve, and the Palſied parts, this will be moſt excellent: Take *the roots of Pellitory of Spain four drams, Pipper three drams, Sulphur five drams, Pouder of Worms two drams, Caſtor two ſcruples, Euphorbium one ſcruple*: Let them boyl in ten ounces of Oyl to the Conſumption of half; anoint the Vertebræ of the Neck and Back, the Emunctories alſo, and places affected.

If a Callus be left in a Nerve, how we muſt proceed, hath been already ſaid in a hard Tumor.

The Contuſion of a Muſcle or part which is moved, requires no other Cure then a general Contuſion, of which we ſhall treat in its place.

The Cure of Immobility from the Fracture of Bones

If the Fracture of a Bone be the cauſe, that a Member cannot be moved, then by manual operation chiefly we ſhall endeavor to ſet the broken Bone. If it decline from the other, and ſhorten the Member; then we muſt retain thoſe now joyned, or thoſe which though they be broken, yet do ſtill hang together, that they part not a ſunder: afterwards we muſt apply Medicines to the place affected, that aſſwage pain, and keep off an Inflammation, if need be, and thoſe things which help alſo the Bones that they may be Conglutinated, and grow together, or Conſolidated. Which they do by accident, chiefly by taking away the Impediments, and by ſomwhat binding the Fracture, and as it were obliterating it by an Emplaſtick vertue, becauſe otherwiſe the Concretion it ſelf of the Bones is perfected only by the labor of Nature, by the benefit of the juyce that nouriſheth the Bones, as of Glue, as hath been ſaid concerning Wounds.

We ſet and joyn again the broken Bone (if nothing elſe hinder, as the Splints of Bones broken, which muſt be firſt taken away, as ſhall be ſaid in its place) either by our Hands only, or moveover applying Inſtruments, as ſhall be ſaid in a Luxation, drawing it by degrees ſo far, till it come to the end of the Fracture of its Bone to which it was joyned, and then thruſting it with the Hands it muſt be decently joyned again with it, and that as much as may be moſt evenly, for ſo both ſuddainly and eaſily it grows together with it again, but if it do not joyn it ſelf with it, nor rightly as before, then it muſt needs be that they grow together again, by a Callus intermediating, ſo large, as that diſtance remained. From whence, becauſe that cannot be done ſo ſuddainly, the Cure is prolonged, and the Member oftimes remains crooked, or otherwiſe ill ſhaped.

We retain the broken Bones together, if firſt of all we wrap them decently in Swaths, then putting about them thin boards or Bark, or the like Inſtrument on the part affected being firſt ſwathed up, which may comply with their hollowneſs, we muſt bind them ſo, and that the bound up Bones may not eaſily move out of their place, we muſt tie them ſtraight, and ſo afterwards they keep the part quiet.

Somtimes we Foment the place affected, before it be ſwathed, according as we would allay pain, or bind, for fear of an Inflamation, either with red Stiptick Wine, or with the Decoction of Elm and Mirtle leaves, or with Oyl, Wine and Vinegar mixt together, with unwaſht Wooll: or the Swath it ſelf is moiſten'd with Oyl of Roſes, or Oxycrate before it is applied.

Or the place affected is anoynted firſt with Oyl of Roſes, Mirtles and the like, by reaſon of the pain, for when we would binde, the following form is more profitable.

The part being already bound, as hath been ſaid, tis encompaſſed with Plaſters the which alſo are ſomtimes applied to the naked part, if neceſſity require it, and afterwards the part is bound, but then they muſt be often changed.

The more ſimple ones are: Take *of Comfry, the roots of Cranes bill*, as much as is ſufficient, bruiſe them, and being mixt with *Hogs greaſe*, let them be applied.

Another, Take *of Maſtick, Frankincenſe, of each half an ounce; Bole one ounce, Aloes, Dragons blood, or the binding Bean-tree, of each two drams; Gum Tragacanth, Arabick, of each one dram; the Volatile Flowers of a handmeil two ounces.* With the *white of an Egg*, Make a Plaſter.

Or thus; Take *of the Volatile flour of a Handmil half a pound, the flour of Barley and Beans, of each three ounces, Bole two ounces, Parget one ounce, the Blood ſtone half an ounce, Frankincenſe three ounces, Comfry root half an ounce, the Aſhes of Crabs ſhels two drams*: Make a Pouder, which the Chyrurgeons may keep for they uſe, that then when there is need, they may mix it with the white of an Egg to the form of a Plaſter, adding *Oyl of Roſes* that it dry not too much, and may ſtick.

Certain things given to drink, are thought to help very much the Conſolidation of the Bones, as we ſhall ſay concerning Vulnerary Potions. Thus *Dioſcorides*

approves the Decoction of Mullein: *Matthiolus* the juyce of Prim-rose; the more modern give of the *sandy Stone of Osteocolla one dram pouderd* with *Wine*, in the morning three times at the least, whose efficacy they wonderfully commend, and I have made tryal off.

As concerning a course of Dyet and other general help, we must take care that the Body be kept clean and pure, and be not Constipated by its lying down: and Blood must be taken away, if an Inflamation be feared.

If a Luxation of a joynt caused by force, or by reason of the Laxness of the Ligaments doth stop Motion, and the Separation of it be only slight, somtimes it returns again into its place, of its own accord, by the proper Motion of the Member. But if there be a total Dislocation, there will need greater force to reduce the Bone, by drawing, forcing, pressing it, and that it fall nowout again, by retaining and confirming the joynt, that it slip not again, and by taking away the Impediments. which is performed in some joynts easier in others with greater difficulty, in some not at all, if it hath been of long continuance: and the Bone hath made it self a socket elsewhere.

We draw the Bone which in an *Exarthrema* from another Bone, being carried upwards by it, doth shorten the part, till it be reduced again under the Cavity of the other Bone. Which is performed either by the Hands alone, if it give way easily, but if otherwise, by applying a Swath also by the help of others, or by the succour of Instruments. As in the Thigh Luxated, there is need of great endeavor to reduce it, but the Jaw being Luxated we reduce it divers waies laying hold of it by the grinders and drawing it: but we draw back the Vertebræ in a bunch of the Back crookt outwardly, inwardly, or to the sides, and removed out of their place by a contrary straining, by standing or setting so bowing the Back, that its crookedness is raised up by degrees, because this cannot be done by any force used. Wherefore that is done most rightly in such a posture of lying in which they continue longest, chiefly by the help of an Instrument, by which the part in the Interim is prest, as shall be said.

We force it by violently thrusting the Bone, which in an *Exarthrema* is attracted, or in a *Paraarthrema* is departed from the middle to the Circumference. As also in *Arthrodies*, if many Bones have parted a sunder, by pressing the Bone there, where its top stands forth, towards the opposite seat which is hollow, so far till it fal again into its socket, or be put again into its place, which we somtimes know by the Noise that it makes. But this is commonly done easily by the Hands alone, if so be it be forced to the right place, but at other times there is need of greater strength to do it, when the Shoulder is faln downwards under the Arm-pit: for then when the Arm is extended, it is raised up by a Chyrurgions Shoulder put under it, or by some other Artifice it is prest upwards with great force, which is not performed without great pain, as it were of a rack.

By pressing the Vertebræ of the back by degrees, dislocated in their moveable Connexion the bunch of the back bunching forth backwards somtimes we correct its crookedness whiles it is yet in making and not confirmed, commonly in the younger sort only. Which seeing it is not compleated, but in a long time, there will be need of an Instrument fit for it which continually cleaving to the part, may successively press it. Such as is a breast-plate put on of Paper, or pitcht Leather, or made of a Plate of Iron, pressing the Gibbous part the same is effected by a Cloth breast-plate, in which a Plate of Iron, or Lead is sowed, or by some other Art.

We keep the Joynt being joyned again, inquiet, that it be not again separated or dislocated, if we keep it immoveable, and that until the parts which were relaxt, being confirmed, the Joynt afterwards, can subsist in its own place, when it is moved again: which wil be more rightly done by underpropping the Member putting Pillows and Cushions under it; or also hanging it in a string cast about the Neck, in which putting in the arm, we keep up the the Shoulder that it fal not down again. But also in danger of a Luxation, a part being lengthned and relaxt, seeing we cannot alwaies abstain from Motion, we must take care at least that it be not too vehement; as also they who do easily suffer a Luxation of the Jaw, they must abstain from that strong opening of the Mouth by yawning. And they that have a bunch growing, they must be moved, so that they do not very much incline or bend their Body, but as much as may be, they must keep it upright, and that by the Instrument even now mentioned, not only the bunch be prest, but also the Back be kept upright.

Also Ligatures are applied, if the Bone reduced do hardly stay, and the part can be bound a little.

Moreover Remedies are somtimes applied extrinsecally, if pain urge, the which presently ceaseth, if the Member be rightly reduced. Or if any thing else be joyned, as an Inflammation, Fractures, or sinvous Ulcer, which somtimes pours forth its Matter by the Hip, as hath been said, whose Cure shall be explained in their places.

To confirm the Joynt when there is fear of a Luxation, or if there have been one, and being reduced again, that it may not easily return, astringent Remedies are applied to it, which by drying may waste the Moistures of the place, especially also if they be the cause of it.

The Joynt is to this intent most profitably wrapped up in a Cere-cloth that doth allay pain, and strengthen the Juncture. Take *of Rams fat, white Wax, of each half a pound:* Dissolve them, mix of *Volatile flour of a Mill two ounces, Frankincense, Mastich, Bole, Dragons blood, of each one ounce; Comfry roots half an ounce*; and while they are hot, stir them together, and dip the cloth, till this matter grow to it, apply it.

Such Plasters also as we have described in Fractures are here convenient, or this following: Take *of Frankincense, Mastick, Colophony, Rosin, Pitch, each one ounce; Wax and Oyl of Roses*, as much as is sufficient: Make a Plaster, let him wear it.

A Cataplasm if necessity require, may be made thus, especially when pain urgeth: Take *of the roots of great Burr* (which *Dioscorides* teacheth doth very much asswage pain in the Luxated) *of Daffodil, of each half a pound; leaves of Plantane, Nettle, of each two handfuls*: Boyl them in red Wine, add *of the Mucilage of Comfry roots two ounces, the flower of Fænugreek fied one ounce, Honey two onnces, Salt two drams, Oyl of Myrtles or Mastick two ounces*: Bruise them for a Cataplasm.

A Cautery also or Vesicatory applied on the part doth powerfully dissolve, and calls forth the moisture with which the Joynts being possest, are easily Luxated.

Some write that the juyce of Prim-roses given by the Mouth, doth help in Luxations.

The Cure of Immobility by fault of the Organ.

If an Organical fault do cause Immobility, and it be from the Birth, it is incurable, because we cannot fashion the parts otherwise; but if it be from an adventitious

titious cauſe, the Tendons being too much Relaxt, and Lengthened, by ſome force or humor, the ſame Topick means wil do good, as in the ſaid Palſie, eſpecially the flegmatick one. But if they being too much bound, that a flatulent Spaſm be cauſed, the Cure hath been explained in Winds: but if there be a true Contraction and laſting, the ſame Cure as that for Drineſs wil be convenient as hath been ſaid.

CHAP. III.

Concerning Depraved Motion.

The Kinds,

WE call that Depraved motion, when Voluntary Motions eſpecially, are exerciſed either Immoderately, or unſeaſonably, or otherwiſe undecently: as it comes to paſs when the Members that perform thoſe Motions are Reſtleſs or Cramped, or Tremble, or Beat, or are Shaken by a Rigor, or are Extended by reaching aud yawning, or otherwiſe moved by twinkling.

Reſtleſſneſs The Members are ſaid to be Reſtleſs when they are acted too much, and reſt not, as when men beſides themſelves, mad men, and phrenitical, do exerciſe ſuch various and violent motions, and angry, furious folks do things ſo headlongly, but chiefly thoſe who labor of that diſeaſe called *Vitus* his Dance, do tire their Feet with Running and Jumping beyond meaſure, of whom we have ſpoken in an Alienation of the mind. Thoſe alſo that lie by it, in other Diſeaſes both Waking and Sleeping are ſomtimes very unquiet, and it is properly called Inquietude, and he that is ſick of it, is called *Aſſodis*, it is a Symptom of many Diſeaſes, that overthrows the ſtrength, with which they that are affected, ſomtimes toſs their body variouſly hither and thither, whence they have called it jactation, and ſome Jectigation, ſometimes they often raiſe themſelves up, ſometimes continually exerciſe their hands and feet, retract them, change them. Somtimes they rowl to the Feet, which in acute Diſeaſes (with which this is a familiar accident) *Hippocrates* reckons it amongſt the deadly ſigns; in the healthful alſo ſuch like reſtleſſneſs is wont to be troubleſome both to them Waking and Sleeping whether alſo may be referd that unſeaſonable Night-walking in Dreams of which hath been ſpoken in Watching.

A Convulſion. The Members are ſaid to be convelled, when they exerciſe thoſe inordinate Motions, as hath been ſaid in a general Convulſion or Epilepſie, and it happens alſo in a particular Spaſm, eſpecially in that Species, in which the Members are yet agitated, and their motion is not yet ſtopt, they being attracted by a Convulſion, as in that called a Convulſive Palpitation, hath been ſhown in a particular Cramp.

A Trembling. The Members are ſaid to tremble, when they are ſtirred upwards or downwards with an inequal motion, and it is called Trembling, which then is cauſed chiefly, when we would uſe them, which ſometimes tremble more ſomtimes leſs, which often happens in the Hands when ſomwhat is to be laid hold on: and ſometimes in the Feet which tremble as they ſtand: and ſometimes in the Head, which continually is moved hither and thither: ſomtimes the lower Jaw becomes tremulous, the which often happens before Vomiting which it preſageth, we have ſeen a Citizen of ours Tremble in all the parts together even from his birth unto his old age, with his Arms, Hands, Fingers, Feet, with which he danced as it were while he went, with his head alſo which he ſhaked, and with his Jaw with which he chewed as it were.

A Palpitation. The Members are ſaid to beat or pant, not when they are ſhaken, being about to do ſomthing, as in a trembling, but when they are ſomwhat attracted involuntarily, and are again relaxt as in Convulſive Palpitation, we have formerly ſaid, it doth come to paſs after the ſame manner, which Palpitation may be referred to that Species which they call the flatulent Spaſm, having almoſt the ſame cauſe, as ſhal be ſaid, and therefore it may be called a flatulent Palpitation, yet more gently exerciſing the Members rather than ſtrongly drawing them, as the other doth; ſeeing the Members are properly ſaid to palpitate, when the Muſcles and the Skin over them are ſomwhat lifted up, and ſink again, and that with pain for the moſt Part and trouble, the Members in the interim not being attracted or very little.

A Rigor We ſay the Members are ſhaken by a Rigor, when there is a certain Convulſion of the whol body, or of its parts, almoſt as it befalls thoſe that tremble, but with a certain ſenſe of cold and involuntarily, whence it is called a Rigor, as in the beginning of the Fits of intermitting Feavers, the whole body by this means is extended, bowed, ſhaken, oftentimes ſo ſtrongly, that the Teeth knocking together make a Noiſe, which they call the Gnaſhing of the Teeth and continual Feavers alſo do invade with the like Rigor, and ſomtimes when a Criſis is at hand, it is a foreteller of it: at other times the Agitation is lighter and then it is called *Horror.* Horror or ſhivering in which a greater ſenſe of cold runs through the body, and the hairs ſtand upright and the pores bound up make the Skin rough: and ſomtimes Cold only doth moleſt a man as hath been ſaid in Feavers: but alſo out of Diſeaſes a Rigor or Horror, like unto theſe doth ſomwhat ſhake the Body from External cold, Fear, and ſometimes a Rigor ariſeth from external Cauſes without Cold.

Reaching. *Gaping.* In that called Reaching, the Arms eſpecially with the back are very much extended, and bowed with a vehement opening or drawing aſunder of the Mouth which they call Gaping, the which alſo may be cauſed apart; theſe two if they trouble often without occaſion, do preſage Diſeaſes or are Prefaces to the Fits of Feavers beginning: but otherwiſe out of Diſeaſes they are ſigns of ſloth, or they ariſe from ſome Imagination as ſhal be ſaid.

Nyctation We call that Nyctation when the Eyes are forced to twinkle, that is the Eyelids fall down, and they are coverd with them and can hardly be kept open, as it happens in the ſlothful when they are full and heavy to ſleep, ſomtimes alſo it happens in Diſeaſes.

The Cauſes.

The Cauſes of theſe Kinds of Depraved motion, may be various, in the Brain, Nerves, Muſcles, and Mem-

Members: either an agitation of the Spirits, a Perturbation, or Irritation, Diſtenſion, Weakneſs.

A perturbation of the Mind, is the cauſe of reſtleſneſs.

The Spirits ſtirred by the affections of the Mind do cauſe a heat in the Brain, or being troubled by a Mixture of Humors, Vapors, by Alienating the Mind, and offering divers imaginations, do cauſe that they are ſo unquier, and do attempt and perform divers things, as hath been explained in an Alienation of the Mind.

An Irritation of the Nerves, is the Cauſe of a Convulſion.

An Irritation made in the Nerves, which way it cauſeth that the Body is convelled, or Exagitated with inordinate motions, hath been ſaid in a convulſion. But from Irritation and trouble alſo, other Motions are diverſly forced according to the diverſity of the cauſe, that they are made too much, or not righly. For the ſaid reſtleſneſs is oft cauſed from heat, not only becauſe it promotes actions, and brings them into act, or cauſes a raving in the Brain heated, but when the whol Body boyles with it in Feavers, and becauſe it makes a great trouble, it makes the Body unquiet, and it is a Symptom of the feaveriſh, eſpecially of the continual, continent, burning; and then alſo of the intermitting when in the fit an exceeding heat doth chiefly afflict, as ſhall be ſhown in Feavers. The Body offended with ſome other grievous pain, and afflicted with it as with an enemy, can ſubſiſt or reſt in no place, and in driving away and mitigating it, it doth reinforce all its actions: from Acrid, Cholerick or Salt, or Putrid humors, paſſing through the ſenſible parts, and the fleſh of the Muſcles, and as it were pricking and Irritating them, becauſe their Expulſive faculty endeavors to repel the trouble, that concuſſion of the Body is cauſed in the ſaid rigor or ſhaking fit as this doth happen in the begining of Feavers from the like matter exhaling and paſſing through the Body. And upon that account firſt of all, Retchings and Gapings do follow, and by and by horrors or rigors. Somtimes alſo that they do manifeſt themſelves before a Criſis, hath been ſaid in Feavers, in other Evacuations in which the like acrid Excrements are caſt forth, as in making water, ſtooling, ſweating, a rigor or horror, doth ſomwhat ſhake either the whol Body, or certain parts, whiles they are a doing; the which alſo is wont oftimes to fall out, before theſe Evacuations are made, and to preſage them at hand, Nature being now ſtirred up to attempt them. As ſome horror in a Criſis and out of it, ſomtimes is a foreteller of ſweats at hand: and the lower Jaw for the moſt part is wont to tremble before vomiting, and as it were to ſollicite the Mouth to a voluntary opening, the natural faculty ſo forcing it.

Heat the cauſe of reſtleſneſs.

Pain the cauſe

Breathy Vapors the cauſe of reching.

From Breathy Vapors, as they call them, collected in the Spaces of the Muſcles, ſolliciting nature to Excretion, rather by their plenty then by a vehement Acrimony, that Motion of diſtenſion of the Limbs or Pandiculation alſo doth proceed; becauſe in that, the Muſcles which are chiefly poſſeſt with them, being bound up to drive them forth, do ſo draw the Members; and that eſpecially, becauſe then a wearineſs being joyned to, either Spontaneous, which ariſeth from the plenty of theſe Excrements collected about the Muſcles, or that proceeding from labor, from which alſo there is a congeſtion of Halituous vapors about the Muſcles, by this conſtriction of the Muſcles in Pandiculation, not only becauſe then the Vapors are driven forth they are ſomwhat refreſht from their Wearineſs, but alſo becauſe the Muſcles being relaxt by too much and long continued motion, and when they reſt feeling that Wearineſs, when they are bound up again, they do leſs feel the Wearineſs, as hath been formerly ſaid that one Wearineſs is cured by another, they acquire ſome eaſe of their labors by reaching and therefore in wearineſs they are invited to exerciſe it, and being invited are forced. And this is the cauſe, that commonly reaching doth accompany the natural wearineſs and ſluggiſhneſs before ſleep, till the Body afterwards rightly reſting by ſleep, be freed from the wearineſs, and after ſleep alſo ſo long, til that which remains of the Halituous Vapor, be expelled, by yet extending the Body. And becauſe in a Spontaneous wearineſs going before Diſeaſes, both by reaſon of the plenty of Vapors, and this wearineſs of the Body that alſo doth manifeſt it ſelf; as the ſame wearineſs and plenty of Vapors doth cauſe that drawing a ſunder of the Mouth and blowing forth, in the ſaid gaping, the Muſcles of the Breaſt, and lower Jaw, and Cheeks working together and as it were conſenting to the endeavor of the reſt of the Muſcles, if gaping be joyned with reaching, or theſe Muſcles acting ſeverally, to mitigate their wearineſs and diſcuſs the Vapors, gaping ariſeth. The which alſo ariſeth from the Immagination, if one ſee another gaping, or think of it, being ſo invited as it were to do the like; yet more eaſily in the ſloathful, and drowſie, or thoſe diſpoſed, then in others. And the ſame cauſe alſo depending on the wearineſs of the Muſcles that move the Eyes and Eylids, and on the Vapors collected about them, doth breed the ſame twinkling of the Eyes, which is not only coupled ſomtimes with reaching and gaping in the ſloathful, but alſo ariſeth by it ſelf alwaies, when ſleep invites. And that becauſe by reaſon of the continual Motion of the Eyes they are alwaies made weary, and becauſe the ſhutting of the Eyes, which this heavineſs of the Eyes doth ſo much force, that they remain ſhut alſo in thoſe that ſleep, is neceſſary for the righter taking of Sleep.

The Immagination, is the cauſe of gaping.

From the ſaid Halituous vapors, but thicker and more plentiful, collected in the habit of the Body and running up and down to ſeek a paſſage out, the ſaid Palpitation is cauſed; which if they break forth under the Skin, and wander between that and the Membranes of the Muſcles under it, here and there lifting up the Skin in ſome one or more places, and variouſly changing their place, they cauſe there an apparent Palpitation, ſomtimes with a ſenſe of pain. But if they run under the Muſcles and their ſpaces, and be unquiet they cauſe that the Members be alſo ſomwhat attracted, yet not ſtrongly or laſtingly as we have ſaid it was done in that called a *Flatulent Spaſm*, but only by intervals then when the wind gathering it ſelf as it were into one place doth force the Muſcles alluring the part, but by and by letting it alone, the wind flying back again and giving place. So that if this Agitation of the Members be from this cauſe, as hath been ſaid, it may deſervedly be called *a milder Species of a Flatulent Convulſion*, or *a Flatulent Palpitation*, as that which is cauſed by the Irritation of the Nerves, as hath been declared in a Convulſive Palpitation. The cauſes of which Flatulent Palpitation alſo whether they be Wind or Vapors, have no other original, then that which hath been propounded in a Flatulent Spaſm.

Halituous vapors, the Cauſe of Palpitation.

That

That weakneſs of the Muſcles by reaſon of which, their action doth not wholly ceaſe, but only cannot be ſufficiently performed, doth not cauſe a total Impotency to move, but only an impaired one, manifeſting it ſelf deptavedly and with trembling, and that becauſe whiles the Muſcle doth endeavor to lift up the Member, and it cannot keep it ſo long, by reaſon of its weakneſs, that ſliding back indeed by a natural Motion by reaſon of gravity, but the Muſcle drawing it back again upwards by a voluntary Motion, by this intercourſe, and as it were contention of Motion amongſt themſelves, the Member ſtirred upward and downwards, ariſeth that called a trembling: which will be ſo much the greater if the Member which it ought to move, be heavy, or do not follow, and the Muſcle alſo be in ſome ſort involuntarily ſtirred up to move; where we obſerve in ſome, although their Member reſt, yet they tremble.

The defect of the Animal ſpirit is the cauſe of trembling.

But this their weakneſs happens ſomtimes by reaſon of the defect of the Animal ſpirit, not abſolute, as in a Palſie, but only ſuch a one, by which the ſenſe of Feeling is yet indeed communicated but there is not ſufficient force miniſtred to the Muſcles to move, becauſe a greater portion of it is required to Motion then to the ſenſe of Feeling: which ſomtimes happens when they are ſpent, whence ariſeth a laſting trembling; and that either by reaſon of Age, whence old Folks become Tremulous, or by reaſon of a grievous and long continued Diſeaſe, after which they oftentimes tremble a long while; or of immoderate Evacuation eſpecially by Venery, ſhedding of blood, purging and great labors; but otherwiſe the ſpirits being only diſſipated they tremble til they return; as by a vehement affect of the Mind, or ſuddain, in Fear, Anger, Joy, they tremble for a while: and in ſtrong or ſwift Motion, as when they carry heavy burthens, or do ſomwhat elſe which is above ſtrength they tremble: and when having ſuffered grievous labors, they reſt, the Members being too much wearied do tremble for a time; alſo the Spirits being hinderd, yet not wholly intercepted, as in a Palſie, whence a perfect reſolution of the Muſcle follows, but only in part, the weakneſs which ariſeth in the Muſcle cauſing a trembling, which even then is, as it were a certain Diminute Palſie, ſprung from the ſame cauſes affecting the Nerve, as in a Palſie, yet not ſo powerfully, and eſpecially proceeding from Excrementitious humors, poſſeſſing the Nerves: but other affects

A hurt of the Nerve, is the cauſe of trembling.

of the Nerves alſo do induce a trembling, not by intercepting, the ſpirits, but by weakning or hurting the Nerves another way; as if from Excrementitious humors, as hath been ſaid, this weakneſs in the Muſcle doth cauſe a trembling, not only by intercepting the Spirits, but alſo by irritating the Nerve doth ſomtimes force it to the motion which is made in trembling, whence alſo the cauſe being increaſed, or laſting, the trembling oftimes ends in a convulſion. And if the Nerves alſo, by Narcoticks too much or often taken, do at length contract that weakneſs from that Stupidity, that alſo the Muſcles by reaſon of them be weakend, a trembling alſo is bred from this affect of them; as it hath befallen ſome, not only by the uſe of Opium or of other ſtrong ones, but from a Suffumigation of Henbane, and we obſerve that by the Narcotick vertue of Wine, they who are given to drunkenneſs, do at length become Tremulous, the which notwithſtanding they perſwade themſelves doth proceed from the drinking of cold Water, which drunkards drink in the morning to quench their thirſt cauſed by Wine, that they may not be compelled to abſtain from Wine. Which ſuſpition of theirs is augmented alſo by this, that whiles they are yet faſting and ſober, they tremble, and after they are heated again with Wine, the trembling ceaſeth, or at leaſt waies ſhews it ſelf leſs, the which yet doth not happen, as if Wine were not the cauſe of this trembling, but becauſe whiles the Wine increaſing the heat of the Body renders its actions lively, that as long as it is hot with Wine, and as it were refreſht, it doth leſs feel the weakneſs which otherwiſe alwaies remains, for that reaſon, as thoſe refreſht with meat and Wine, being made ſtronger, is the cauſe that they tremble leſs.

After the ſame manner trembling is ſomtimes bread from other Poyſonous things being taken and applied, chiefly beſetting the Nerves, as it is ſomtimes wont to happen from the Suffumigation of quick-ſilver (not from the touch, as ſome would have it) to Gold-ſmiths in gilding their Veſſels, if they have not a care of themſelves, but draw it in; for which cauſe alſo in the French Pox thoſe ſuffumigated with Cinnabar, eſpecially if then alſo they drink Wine, by which the Nerves being already made feeble, are eaſily hurt, do oftentimes fall into a trembling, the which alſo oftimes befals them, who in the ſame Diſeaſe being anointed with quick-ſilver do thence get a trembling, which hurts of the Nerves proceeding from quick-ſilver, either proceed from its Antipathy with the Nerves, or from ſome other propriety of it, almoſt proper to it, by which it moving the Humors driving them to the Jawes it moves plentiful ſpitting, and driving them to the ſuperficies and extremities of the Body, it alſo affects the Nerves, and ſo much the worſe, if the Humors which are moved be evil, and be not decently purged by ſweats, by which alſo if the Nerves ſuffer more vehemently, after tremblings they ſuffer Convulſions which often follow theſe cures made by the uſe of quick-ſilver. There may be ſome fault in the Nerves from the Birth, whence ſome are born trembling, as hath been formerly ſhewed by the example of one; but what trembling that was, can hardly be explained becauſe though trembling, he nevertheleſs performed his Duties for a long courſe of life, and married a Wife.

The Cure.

We will divide the Cure according to the diverſity of the Kinds, and we will explain in every one what is to be done.

The Cure of a Convulſion.

What muſt be done both in a general and particular Convulſion, hath been taught in Convulſions; in that alſo called a Convulſive Palpitation, in as much as this threatens true Convulſions we muſt ſtudy to prevent it by Application of the ſame Remedies, but by reaſon of its motion, ſeeing it is not very urgent, nothing peculiar is applied to the members.

The Cure of reſtleſſneſs from trouble of mind.

In Reſtleſſneſs, if that ſpring from a perturbation of the mind, what then muſt be done in reſpect of the Diſeaſe and alſo of this Symptom, by reaſon of which, how it ought to be quieted with Dormitives and be reſtrained by uſing of force, hath been explained in an Alienation of the Mind.

The Cure of reſtleſſneſs by reaſon of Pain.

If they be reſtleſs by reaſon of Pain, then ſmoothing the pain with Anodines and things enducing ſleep, and if it urge more vehemently cauſing a Stupidity, together with the Pain, we correct the Reſtleſſneſs.

But if the Reſtleſſnes ariſe by reaſon of the Heat, not only of the Heart and Brain, but alſo of the whol Body in Feavers, then this Symptom becauſe it dejects the ſtrength, draws the Cure to it ſelf; the which yet is uſed no otherwiſe, than that which is wont to be applied to Feavers in quenching that burning, except that here the ſtrength of the Remedies muſt be increaſed and upon that account when the Curę urgeth, we attempt a more plentiful Evacuation and diverſion of the Blood, unleſs ſomwhat hinder, or we reiterate it: alſo we increaſe the quality of Coolers both with Internal and Exter-

The Cure of Reſtleſneſs by reaſon of by reaſon of heat.

nal Remedies, and thoſe things which may augment the Heat we take away, as too much cloathing, and the roomes being ſhut up, we open them, and chiefly in reſpect of the Symptom, by rubbing the body diverting from the Nerves the vapors which do cauſe or increaſe the the reſtleſſneſs, and afterward lenifying it with anoynting the Back-bone, with Oyl of Violets, ſweet Almonds &c. we correct that toſſing of the body: the which alſo is done if we admoniſh the ſick, that they weaken not themſelves with too much motion, or hinder Sweats by making themſelves bare, and that we may ſomwhat quiet them, we may procure Sleep.

In Trembling we muſt proceed according to the Nature of the Cauſe, and if they tremble from ſome Paſſion of the Mind, or by reaſon of Labor above their ſtrength, thoſe ceaſing, the Trembling alſo ceaſeth.

The Cure of Trembling from defect of Spirits.

But if the Spirits being diſſipated or waſted by reaſon of old Age or Venery and other profuſe Evacuations, or it follow after grievous diſeaſes, 'tis eaſie to repair the ſtrength diſſipated, but very hard that which is loſt: the which yet muſt be tried by that called a Reſtorative Cure, which is chiefly accompliſht, by a fit and moderate ſleep, by moderate and ſeaſonable exerciſe, the which wil profit more, if the Trembling were induced by vehement labor, if it be gently undertaken, than altogether idleneſs; by a cheerful Mind, or if the Trembling remaineth, from ſome paſſion of Mind, it is corrected by the contrary paſſion of the Mind, by a cleer temperate Air, pure and ſweet, by nouriſhments of good juyce and wel nouriſhing, alſo by things that repair the ſpirits and increaſe the heat, as Wine, which moderately taken doth ſo refreſh, that it doth correct the Trembling cauſed by Wine, by its refreſhing, if it be taken as hath been ſaid.

The Cure of Trembling from an affect of the Nerves.

But if it proceed from a Diſeaſe of the Nerves and is as it were an imperfect or dimunite Palſie and it be from the Birth, or otherwiſe from a grievous diſeaſe, it ſomtimes is incurable. But if it proceed from an Excrementitious humor poſſeſſing the Nerves, no other method of Cure is applied for the curing of this diſeaſe, then what was ſpoken of in a Palſie, and is applied to other diſeaſes of the Brain and Nerves, ingendred from excrements, amongſt which alſo is a Convulſion, which if they would uſe timely, and continue in it, doubtleſs they would be ſooner cured than the paralytick, but becauſe they neglect it, unleſs the trembling be very much, or are content with a few things, it comes to paſs that the Trembling doth not only not ceaſe, but old age comming on, it is increaſed.

As therefore it hath been ſaid in a Palſie, ſo here alſo we muſt proceed, and the body firſt of all muſt be generally purged, and that, if the evil perſiſt, muſt be repeated at certain times, and particular Evacuations and Diverſions muſt be ordered, & the ſame altering things muſt be drank, and the like muſt be outwardly applied, and Baths muſt be ordered, if it yeild not to other things; and we muſt chiefly take heed, that the trembling hands be not expoſed to the cold, or waſhed with cold water, inſtead of which they may be waſhed with Decoction of Sage, Lavender flowers, and the like, amongſt which Lotions they teach that if the parts be waſht in the morning with Piſs, it doth very much, help.

If the Trembling have its original from Poyſon thoſe *Alexipharmaca* which reſiſt this muſt be uſed; and if this be from the uſe of Quick-ſilver, which more frequently comes to paſs, they give Treacle or Cordial Medicines, with which they mix the filings of Gold, ſeeing they ſay that Gold hath ſuch an affinity with Quick-ſilver, that if it be in the body, and Gold be drank, that ſo draws it with it that afterwards voided by the ſtool, it is found pure in the Excrements ſticking to the Gold, which affinity of theirs they have taken from that, that in gilding, Gold can be faſtned to no Mettal but by the intervention of Quick-ſilver.

At this day the Electuary of *Orvietanus* is chiefly commended for a ſingular Remedy in this caſe of which kind if this following be not, yet it may ſupply its room. As, Take *of the roots of Gentian, Biſtort, Carline, Tormentil, white Dittander, Aromatick cane, round Birthwort, Wolfsbane, the herb bleſſed Thiſtle, the ſeeds of Vipers Bugloſs, Alkanet, Citron each one ounce; make them* all into a *fine Pouder*, to which add *the roots of Vipers graſs pouderd the weight of them all, of Honey clarified*, with a ſufficient quantity *of generous Wine three times as much*, and towards the latter end of boyling, mix of the beſt *Treacle one pound and an half*, keep it for uſe, the Doſe is from *half a dram* to *a dram*.

There are ſome who have taught that they can draw Quick-ſilver out of the body by Sweats, that it ſhall ſtick plainly to the Skin like Sand, and afterwards being waſht with water ſhal appear ſhining, by this means, if every other day in a Stove ſuffumigating the body one day with the Wine of the Decoction of Sage and Wormwood poured forth on red Bricks, but the other day with Frankincenſe caſt upon the Coles, they draw forth Sweat, and as often as they go out of the Bath they muſt rub their body with *Aqua vitæ* diſtilled with Balm, and continue it for twelve or fourteen daies: afterwards let them anoynt themſelves ſix daies with Oyl of Turky, Millet and Foxes til as they ſay, the aforeſaid Sand doth ſtick to the Skin, but we who profeſs that Quick-ſilver in ſubſtance, cannot paſs the body neither by its Suffumigations nor anoyntings, as no other Medicines alſo, but that they attempt what they perform, by their vertues only carried thither we do judg this opinion of the Vulgar and of ſome Phyſitians to be falſe, although it be very much imprinted in the minds of men, and Deceivers privately conveighing quick-ſilver in a Plaſter, confirm it in the vulgar: and in the like caſe, we adviſe that Gold-ſmiths whiles they gild, do ſit out of the houſe in the open Air, as for the moſt part they are wont to do, that the Wind may drive the ſmoak from them; and if there be need of quick-ſilver in the Cure, we give order that it be fitly and moderately adminiſtred; yet if a trembling ariſe from thence, we adviſe the ſame Remedies eſpecially the Topical mentioned in a Palſie, which help the Nerves rather by ſtrengthening and ſomwhat binding as *Rondoletius* wil have it, than by affecting them with an eminent heat. And we waſh the trembling parts with the Decoctions before quoted.

If the trembling ariſe from Narcoticks, and their force

force cauſes it; how it muſt be broken hath been ſaid in a Numneſs: but if the Trembling remain, the ſame Topicks ſhal be tried which by ſtrengthening do heat alſo, not becauſe the Nerves are cooled by Narcoticks, as they think, but becauſe when they are ſtupid, they are ſtirred up by heat. But if Drunkeneſs with Wine hath cauſed a trembling, either it ceaſeth of its own accord, if it be not accuſtomary, but if Drunkenneſs hath been already a long while continued, the Trembling ariſing thence is hardly any more taken away, eſpecially when Drunkards have contracted ſo perverſe a habit, that unleſs they fil themſelves again with Wine and are heated by it, as hath been ſaid in the Cauſes, they are troubled more with the Trembling, yet in the interim they may mend this perverſe kind by Temperance and Sobriety of life, alſo the Remedies that ſtrengthen the Nerve wil do good both given and applied.

The Cure of a Rigor from acrid Humors.

In that called a Rigor if it be gentle, or only a Horror, ſeeing it doth not much trouble, or continue long, we need not take pains to correct it, and alſo if it be vehement ſeeing Nature by that in the beginning of Feavers, doth endeavor to expel the hurtful matter, neither is it then eaſily to be curbed, or Natures Motion to be hindred, as neither if it go before a Criſis, ſeeing *Hippocrates* ſaith, a Rigor coming upon a Burning Feaver, its diſſolved.

But if it ſo trouble the body, together with a troubleſome ſenſe of Cold, that the ſick ſuffers it with a great deal of trouble, and are weakned by it, then 'tis rather to be mitigated, then wholly to be hindered, ſeeing this cannot be done without dammage, and the Rigor being wholly taken away, the courſe of the whol Feaver is ſtopt, or is cauſed, that it is not decently, ſo that though thoſe Remedies which ſuffer not the Rigor to break forth, are beleeved to cure a Feaver, yet by retarding it they do rather cauſe, that afterwards it follows worſe, or is changed into more grievous accidents; unleſs perhaps that unprofitable Rigor perſiſt rather from cuſtom than the Morbifick cauſe which is already taken away, for then alſo it muſt be wholly prevented, as theſe things have been largely explained in Feavers.

Alſo by what means the Fit of the whol Feaver may be hindred with the Rigor hath been likewiſe taught in Feavers, but for Mitigation of it the things following wil ſuffice,

If the body be ſomwhat actually heated, for whiles we provide againſt cold, alſo the Rigor is appeaſed; which is with leſs hurt done in the Feet, heating them with Cloaths or other waies, as with warm water in a Braſs Veſſel, or with Stones or Tiles heated and wrapt in a cloth.

Diverting the matter by Frictions and Ligatures of the extream parts, we amend the Rigor.

That is chiefly performed by anoynting the Backbone with any heating Oyls and proper to the Nerves. As, Take *of Oyl of Chamomel, Dill, St. Johns wort, each half an ounce*; *anoynt it*, firſt beſprinkling the hands with *Aqua vitæ*.

Or after this manner. Take *of the flowers of Chamomel, St. Johns wort, the Leaves of Southernwood dried, poudered, each two drams; Pellitory of Spain one dram*, pour as much *Oyl of Nuts* as to cover them, *Aqua vitæ two drams*; boyl them, ſtrain it, and anoynt the Backbone.

Or of Juyces and Oyls. Take *the juyce of Mugwort, Southernwood, each half an ounce*; *Oyl of Dill, Rue, each one ounce*; *Aqua vitæ two drams, Saffron half a ſcruple*, boyl them a little, make an Oyntment.

Many mix Treacle with *Aqua vitæ* and Oyls and anoynt the Back-bone, others if the Cold be great mix Spices.

The Oyntment of Spiders explained in Feavers, as alſo other things expreſt there do the ſame alſo, with which alſo the ſoals of the feet are rubbed.

There are ſome who approve of Baths, if the Feaveriſh heat hinder not, and the Rigor lie highly hurtful, of the Decoction of Pennyroyal, Calamint, Rue, Southernwood, Mugwort, and the flowers of Chamomel, and Melilot.

The Cure of reaching & yawning from halituous Vapors.

In Reaching and Yawning, ſeeing theſe can bring no dammage, but rather do good, there wil be no need of any Cure there, unleſs in as much as, if theſe together with a Spontaneous wearineſs do as ſigns foretel Diſeaſes, they do admoniſh us to apply Remedies that we may prevent them.

If from Yawning the lower Jaw be eaſily luxated, we adviſe that they do ſomwhat repreſs it, and gape not with ſuch a wide mouth, as alſo in reaching, becauſe it is uncivil too much to extend the Members, we teach them ſomwhat to reſtrain their limbs, for Civilities ſake, rather than any benefit.

CHAP. IV.

Of the Defect of Breathing.

The Kinds.

IT is called a Defect of Breathing, when it is either aboliſht, or is done with difficulty, which may happen both to natural Breathing and to voluntary or vocal breathing forth in utterring the Voice and Speech.

Breathing aboliſht in a Syncope.

The Breathing which is continually performed by vertue of the Heart, naturally by drawing in and ſending out of the Breath, can no waies perſeveringly be wholly aboliſht, while the man lives, but for a time it may altogether ceaſe, in a true Syncope, and in that which accompanies that which we call ſtrangling of the Womb, in which caſes as long as, the mind faileth in them, as they call it, or the Life, or rather the vital motion, ſo long no breath at all is perceived in them, or it is ſo obſcure that we can obſerve no breathing forth of the Air even with a Feathers laid to the Noſtrils, or ſhaddow of motion in a Cup ful of Water laid on their Breaſt, but they lie like dead folks without all motion and ſenſe.

But Breathing oftentimes proceeds difficultly, when they fetch it with great labour and impediment; and if this be with high ſtreining, ſo that they are in the beginning of Suffocation, it is called Suffocation and ſtrangling, the which alſo wil follow, if it did not ceaſe: In which danger becauſe they are more converſant when they lie down, to turn that away they are forced to breath upright with their Breaſt raiſed up and their Neck ſtraight, and then they are called *Orthopneumatical*, and becauſe if they move their body they, they are more grieved, their Breathing being made ſwifter, they are compeld to be quiet: but otherwiſe they Breath with leſs anguiſh, yet difficultly alſo, and it is ſimply called a *Diſpnœa*. Somtimes labouring more do ſend forth the Breath, ſomtimes to draw it in, at other times both being hindred together.

But

A strangling from things external. But a *Dyspnœa* or *Strangling*, do diversly offer themselves, for somtimes it is bred and shews it self, some manifest cause concuring, from which also it is, as shall be said in the causes.

A Suffocating Catarrh. Somtimes difficulty of Breathing hath a Catarrh its companion, in which also somtimes they are suffocated, all Breathing being suddainly intercepted, and this evil is called a *Præfocating*, or *Suffocating Catarrhe*.

Oftimes it is coupled with affects of the Breast, with a Cough, Wheezing, in that called an *Asthma*, in which they fetch their breath often with difficulty, as if they were wearied with too much Motion, whence they are called *Shortbreathed* and *Suspirious*, and they Cough, but spit forth nothing mattery, and somtimes in their Lungs there is heard a certain Piping, or Wheezing, and this evil assails them either continually, or upon a slight cause, and it returnes and hath its Exacerbations, and it is of long continuance, and stubborn.

A Quinsie. A *Dyspnœa* is somtimes joyned with a difficulty of swallowing, and there is a pain or trouble both in the Jaws and Neck, especially in that called a *Quinsie* or *Cynanche*, because by reason of their breathing hinderd, they gape like Dogs with their Mouth open, which affect somtimes a Feaver doth accompany.

Suffocation and a Dyspnœa in an Apoplexy, Palsie, Spasm. At other times also the breathing labors highly, with a resolution of the whol Body in the Apoplectical, and the sick are choaked, as hath been said there: and then a *Dyspnœa* is somtimes joyned with a Palsie or some Species of Spasm, as hath been said there, that then when they would breath forth strongly, which is required to the uttering a great voice, and being forced to Laugh, Weep, call out, or to Cough they are compeld to breath forth powerfully, the which because they cannot do for the causes there expreſt, they fall into danger of Suffocation.

The cause of the defect of Speech and Voice. Affects of the Womb, somtimes go before that Species called the *Suffocation*, or *Strangulation*, or *Præfocation of the Womb*, with which being suddainly seazed, somtimes the breathing being wholly taken away, at other times very much hinderd, they are so tormented, as if their Jawes were tyed with a bond, and those thus affected, then they call *Hysterical*.

A Dyspnœa in the faults of the natural Parts. A swelling, distension of the Belly, are also with a *Dyspnœa* in the faults of the natural parts. But especially in the *Hydropical*, to whom it is very troublesome, so that they are forced to breath upright, like to the *Orthropneumatical*, and lying down they are in danger of Choaking.

The Night Mare. There is also a certain Nocturnal suffocation, that befals those that Sleep, called *Pnigalion*, or the *Night-Mare*, because they think and Dream that they are suffocated by some thing lying upon them and pressing them, and afterwards waking, they think that they have sufferd that from an Enemy, or Witch, or Devil, and that they were invaded and oppreſt by them, whence they call it *Ephialtes*, and Doating, for a time they do somwhat persuade themselves so.

The Voice, or Vocal breating, which at our pleasure we can wholly omit, yet not make, unless there be a breathing forth, can no waies be long abolisht by reason of Respiration, because that cannot long cease; Yet it happens that it is utterd obscurely by reason of that, if the breathing be very smal; but more commonly it happens in a *Dyspnœa*, that the Voice cannot be utterd very clear and loud: but sending forth of the breath not being hinderd, the Voice nevertheless cannot somtimes be expreſt by us, or at other times also can only be brought forth silently and lowly; both which somtimes happen in a Palsie, other Motions also being then hurt together, as hath been explained there; but at other times without this the Voice is loſt for a time, and returnes again, as I remember an excellent Physitian *Theodorus Zuingerus*, my God-father and Colleague, when we were in the School of my Father *Thomas Platerus*, that was Master to us both, hath oftimes been so Stupified, that he could not answer one word, though asked with threatning, and hath so returned home mute and astonisht, his sences otherwise entire, which Species they call *Apoleptic* and *Hippocrates* an *Aphony*, some would refer it to the Species of a Catalepsie, somtimes also when the Voice is loſt, or weak, there is felt a pain in the Jawes, a Tumor, or some other fault, and somtimes it is apparent.

The defect of the Voice in a Dyspnœa. *In a Palsie.* *An Aphony.* *A defect of the Voice with a pain of the jawes.*

A defect of Speech the Voice failing. Speech, or an Articulate voice may be intermitted at our desire or will, but we cannot speak, unless there be a vocal Respiration, and therefore by reason of the defect of the voice, as hath been already said, the Speech is either abolisht, or not sufficiently utterd, but also somtime they cannot speak without an Impediment of the Voice, and they are called *Dumb*, in a Palsie either peculiar to the Tongue, or common also to other parts; somtimes they are both Dumb and Deaf from their Birth; but oftentimes when they cannot exactly expreſs certain Syllables or letters, those especially which that they may be pronounced, do require a various doubling of the Tongue, as in R. and S. to be pronounced with a noise or hissing, they Stutter and are called *Blæsi*, or *Lispers*, the which also happens with some faults of the Lips, or Teeth, or Jawes.

Dumb. *Deaf and Dumb, Stuttering.*

The Causes.

A Suffocation by reason of the Brain in an Apoplexy. Every cause of breathing taken away or diminisht, of the Voice and Speech how these do fail in an Apoplexy, all the sences being taken away, by reason of the Brain affected, and in an Epilepsie also, hath been explained in the Consternation of the Mind.

Breathing abolisht in a Syncope by reason of the heart. For which reason as long as the Motion of the Heart ceaseth, so long also Respiration may cease, seeing then there will be no need of it, but if that be hinderd, the Motion of the Heart not first ceasing, that a man must needs die, we will shew in a Syncope.

But if these fail without a Disease of the principal parts, of the Brain and Heart, this comes to pass by reason of the Nerves that carry the vertue, or of the moving Muscles, or of other Instruments that effect and help Motion..

By

An affect of the Nerves of the Toung is the cauſe that ſomtimes they are Deaf and Dumb.

By occaſion of the Nerves affected, that the Speech, Voice, and Breathing may be weakened, hath been formerly explained in the Impotency of motion, their Muſcle being then palſied, or contracted, by the cauſes declared there, that the Speech ſomtimes may be particularly aboliſht, the third conjugation being affected, which makes the Nerve of the Tongue, and if the hurt be great, eſpecially a fault of conformation from the Birth, that then the Hearing is commonly taken away too by reaſon of its Communication with the ſaid branch.

An affect of the recurrent Nerves is the cauſe of the defect of of Speech and Voice.

And that the ſame alſo comes to paſs, if the branches of the Nerves of the ſixth and ſeventh conjugation called the Recurrent Nerves, folding with the Muſcles of the Tongue do ſuffer. And if this be in the branches of the ſame Recurrent Nerves that infold the Larynx that the Voice doth then alſo ceaſe, the diſſections of Anatomiſts do manifeſtly declare, who for experience ſake, have in a Hog taken the recurent Nerves in a band: which Aphony by reaſon of the recurrent Nerves ariſing from internal cauſes ſeldom happens particularly to the Voyce, and if it be, it proceeds either only from ſome thick vapor, as they would have it, or only from a Defluxion fallen down thither, but this fault more commonly happens to the Voice and Speech in a Palſie, from the cauſes mentioned, together alſo with other Impotencies of motion, to which alſo that Impediment of Breathing which in uttering of a ſtrong voyce we have ſaid did offer it ſelf, as in Crying out, Laughing, Howling, Coughing, Snezing is ſomtimes added, if the other Intercoſtal branches infolding the Muſcle be affected too; for Breathing alone ſeldom ſuffers a Defect, ſingly without other hurts, by reaſon of the Nerves; ſeeing the Midriff whoſe motion is ſufficient for moderate Breathing, hath received Nerves, as hath been explained there, not only from the ſaid Conjugation of Nerves, but alſo from the Spinal Marrow great Nerves on both ſides, proceeding from its firſt pairs joyned together, and deſcending to the Midriff, for which cauſe it doth not fall out that the Breathing ceaſeth, unleſs both the Spinal Marrow, and the Conjugations or paires of the Nerves be hurt together, which can ſcarce be but about their beginning in the Brain, as hath been ſaid in an Apoplexy, as neither can it be hinder'd in a Palſie unleſs the hurt befalling both, the Paires and Conjugations of the Nerves and reaching alſo the Nerves of the Midriff, doth prejudice many motions. yet it alſo comes to paſs, that eſpecially the greater Nerves of the Midriff proceeding from the Spinal Marrow, ſingly and ſoly troubled with defluxions or other Diſeaſes may breed a certain Dyſpnæa, ſuch as we have obſerved in the Aſthmatical continually moleſting the ſick, no other ſigns appearing of the Lungs affected.

An affect of the Nerves of the fixth and ſeventh Conjugation is the cauſe of a Diſpnœa with a Palſie.

The Nerves of the Midriff troubled with a Defluxion do cauſe an occult Aſthma.

By reaſon of the Muſcles, Natural and Vocal breathing faileth, as the Speech if the Muſcles moving the Tongue (for we ſhal treat afterwards of the faults of the Tongue, as it is an Inſtrument that is moved) the Voice if the Muſcle of the Larynx being troubled with Defluxions cannot do their office, they by moving the Tongue, theſe by dilating and ſtraitenning the cleft of the Larynx for diverſly ſhaping the Voyce. Or if this happen from an Inflammation of them, or ſome other Tumor hindering their Function.

An affect of the Muſcles of the Tongue is the cauſe of the Defect of Speech.

Of the Muſcles, of the defect of the Voice.

But the defect of Natural Breathing ſometimes happens by reaſon of a Diſeaſe of the Muſcles that conſtitute and move the Breaſt, neither doth Breathing ſuffer dammage only when we would make a ſtrong breathing forth, which theſe Muſcles do chiefly perform, but alſo if the cauſe be great, Natural drawing in the breath is alſo hindered, and that commonly from a Defluxion falling down upon the Muſcles of the breaſt and the Intercoſtal, whence oftentime ſollows a great ſtreightneſs of the Breaſt with pain, the which alſo comes to paſs, if theſe Muſcles be bruiſed or inflamed, whence Swellings and pains ſhew themſelves outwardly, and if this happens to the Muſcles of the belly, which alſo do move the breaſt and preſs forth the Excrements, they can no longer exerciſe that vehement endeavor, which is required by holding the breath and preſſing theſe Muſcles in the caſting forth of Excrements.

A Diſeaſe of the muſcles of the breaſt is the cauſe of a Diſpnœa.

The Midriff ſince it is the principal Organ of Natural breathing, if it be hurt not only by conſent of its Nerves as hath been formerly declared, but by it ſelf, then it is the chief cauſe of breathing hurt. But this comes to paſs eſpecially, if the Defluxion which falls down on its Nerves, or ſlides into the intercoſtal Muſcles doth reach alſo to the Midriff, whence we have ſeen ſome vehemently tormented. But if it be aſſaulted by other Diſeaſes, the motion of the Midriff is rather depraved, than weakned, as we ſhal explain there: although it may alſo come to paſs, that the Midriff, becauſe it lurks free in the inner parts, expoſed every where to the internal heat, being dried and bound up in a Burning Feaver, upon that account a Dyſpnœa may ariſe, which oftentimes falls out in theſe Feavers: but its motion is more commonly hindred, if it be moleſted, by Vapors, Wind, Humors, or the Neigboring Bowels.

The Midriff affected by it ſelf is the cauſe of a Dyſpnœa.

And by conſent.

Vapors raiſed in the lower Belly of a manifeſt quantity or quality, or malignant and poyſonous, and being gathered about this tranſverſe ſpace or Midriff, and ſtopping there ſome time, until they are carried further, and hindering its free motion, which is required in breathing, by divers waies, eſpecially if they be plentiful, ſometimes induce a Dyſpnœa, ſometimes fear of choaking and other accidents moreover: both becauſe the Midriff hath a great conſent with the heart by reaſon of the Pericardium, and with the Brain, becauſe it is a nervous part and hath eminent Nerves, whence it comes to paſs that if it be troubled, it doth not only hinder breathing, but alſo accidents of the Heart and Brain do follow, and ſo much the more, if furthermore the vapors from it do reach alſo to theſe principal parts, the which if there be a malignant or poyſonous quality in them, may eaſily come to paſs, as alſo theſe are wont at other times to prejudice theſe parts, the Midriff not being offended, as we have ſaid in the hurt of internal ſenſes and ſhal ſhew in the affects of the Heart, the which accidents yet do preſently ceaſe the Vapors being repeld, or otherwiſe diſcuſt and diſſipated, or flying back, by the motion of the Midriff: unleſs by the continual arrival of the cauſe, the Midriff be

ſo moleſted or infected, that either ſome permanent Diſeaſe doth follow, or moſt grievous accidents of the Functions of the mind do enſue, which are wont to be hurt by the fault of the Midrif (as that being inflamed we ſee a Phrenſie doth follow, whence they have called the Midriff, *Phrenas*, that is, the Mind) as the Falling-ſickneſs, Madneſs, and at laſt the Brain being long and much ſmitten, an Apoplexy, which evils theſe Symptoms of Suffocations invading oftentimes by fits, are wont to foregoe and foretel.

But that ſuch like Vapors are for the moſt part raiſed up from the Veins, as from crude, impure, bad, and Malignant blood, yet not putrefied (otherwiſe a Feaver would be cauſed) hath been ſhown in a Madneſs and an Epilepſie, for as there, diverſly here and there in the Body, ſuch vapors being raiſed, from blood collected in the branches of the Vena Porta and Cava moleſting the Brain do produce the forementioned accidents, ſo alſo in the lower Belly cheifly, being collected as in a ſink of Excrementitious blood, and abundantly in great plenty flying upwards to the Midrif and moleſting that, either they create Suffocation only, or other diſcommodities moreover.

Vapors from the Meſaraick Veins affecting the Midrif, the Cauſe of a Night-Mare.

But from the Meſaraick Veins eſpecially the greater diſperſed every where about the Heart to the Bowels, and in which by reaſon of the many Excrements of the firſt Concoction, impure blood is eaſily collected, ſuch like Vapors ſomtimes ariſing, and ſtopping about the Midrif, they produce a Suffocation which they call the night Mare, which invades rather in the night then when Concoction ought to be made, becauſe at that time, the evil Vapors collected, therefore the moſt part are wont, by the acceſſion of Crudities, to be increaſed and moved, and to be carried upwards, and by reaſon of lying down to torment the more. Whence in their Dreams feeling theſe ſtreits they Dream of divers cauſes whence they proceed, and being often raiſed up, if the Mind moreover be ſomwhat affected with them, they remain in the ſame perſwaſion, and though they being raiſed and ſet upright, the Vapors being then diſcuſt the evil ceaſeth, yet often rerurning, if the Fewel of the evil remains, at laſt it threatens and brings more grievous accidents to the Brain, as hath been ſaid. The cauſe of which evil certainly depends upon an ill courſe of Diet and that a long time continued, as in other affects ſprung alſo from Vapors there, eſpecially in Hypochondriacal Melancholly and Intermitting Feavers, as hath been ſhown in them. This is therefore an accuſtomary affect to Children and thoſe of ripe Age, who do ſooner and longer offend in their Dyet.

Vapors from the Veins of the Womb affecting the Midrif, are the cauſe of the Suffocation of the Womb.

In the Female ſex this more commonly proceeds from the Veins of the Womb, in the ſtrangulation of the Womb therefore ſo called; which when being derived from the branches of the *Vena Cava*, and many of them and great ones do creep along the Womb and its Membranes, if the filth of the blood doth ſtop in them, which from the whol Maſs of it, is wont to be purged thither, in impure Bodies, that at the ſet time it may be emptied by the Courſes. Which is wont to come to paſs more commonly in the unmarried by a ſtoppage of the Courſes, not ſo eaſily in the married by reaſon of Copulation, and the Vapors from thence aſſail the Midrif, they produce divers kinds of Suffocations of the Womb as they prejudice the Midrif and the neighboring parts or thoſe that conſent with it, and as the plenty and nature of thoſe Vapors is diverſe. For if it hurt only the Midrif either it breeds only a *Dyſpnœa*, if the plenty or offenſe be leſs, or if it be greater, it breed only an Agony of Suffocation; but if that, it alſo brings hurt to the Stomach, that is continued to the Midrif, then with a *Dyſpnœa* and Compreſſion of the orifice of the Stomach which they call the heart, Nauſeouſneſs, Vomiting, a Vertigo, and pain of the Head being cauſed by conſent, the Hyſterical accidents do ſhew themſelves. Which paſſions are wont to happen in great bellied Women at the firſt Month, the young one being not yet increaſed, nor able to conſume the blood that is retained, eſpecially if it be impure, from which alſo they take a ſign that they are with Child. Hyſterical Women are far more grievouſly affected, if theſe Vapors eſpecially the Poyſenous being communicated to the Heart too, by reaſon of its communion as it hath been ſaid, do alſo bring dammage. In which ſpecies the Motion of the Heart wholly ceaſing, all breathing alſo ceaſeth, and as it were ſeazed on by a Syncope the Virgins fall by degrees to the ground, and are held in that fit, ſome a ſhort time, others the ſpace of an hour, before they come to themſelves. But at other times the Midrif by reaſon of the conſent which it hath with the Brain, as hath been ſaid, or both together affected with theſe Vapors, with the ſaid ſtrangulation of the Womb, that called the Madneſs of the Womb, or Convulſive Motions, and other hurts of the Brain offended, do manifeſt themſelves.

All which alſo may be varied, not only by reaſon of the parts affected, but alſo if a Poyſenous cauſe be joyned, according to the divers Nature of the Poyſon, by which they are wont chiefly to beſet this or that part, as we have expounded in other diſeaſes of the Womb, that vitious blood breathing forth ſuch like Vapors is generated from divers cauſes, and collected about the Womb. Amongſt which they have beleeved that the ſeed retained and corrupted is not the leaſt cauſe in Virgins with whom this affect is familiar, the which yet can ſcarce be, as long as it is contained in its proper Veſſels. and if poured out of them, it be retained, it rather produces an Eroſion of that part, then ſuch accidents, as we ſhall explain elſewhere.

Wind hindering the Midrif, is the cauſe of a Dyſpnæa.

Winds filling the Capacity of the Belly, becauſe they diſtend that, as alſo the Midrif which ſhuts up the upper parts of it, they cauſe a *Dyſpnœa*: which alſo the puffings up with Wind of the Stomach and Cholick Gut that lies under the Stomach do effect, by reaſon of the neerneſs and Adherency with the Midrif, and they know that they proceed from thence, by the murmuring and diſtenſion of that place, but that they write that they would no waies have a Night-Mare to be cauſed by the ſame Winds or thick Vapors, the far more grievous evils which do then fall out, and follow from thence, do ſufficiently declare.

A Humor poſſeſſing the Midrif, is the cauſe of a Dyſpnæa.

A watery Humor alſo diſtending the Belly and drawing a ſunder the lower Ribs of the Breaſt, extending the Midrif doth breed a difficulty of breathing, in an aſcites Dropſie, as ſhall be declared in a Dropſie. But the Humor which is collected in the Cavity of the Breaſt doth cauſe a *Dyſpnœa* rather by hindering the Lungs then the Breaſt, as we ſhall ſhew in the Lungs.

The Bowels hindring the Midrif, are the cauſe of a Dyſpnæa.

The Bowels lying under the Midrif, and growing to it, or hanging by it, if they acquire too great

great a bulk, drawing down the Midrif with their weight, do not ſuffer it to be moved freely, or in thoſe that lie down, lying upon it, they hinder it by preſſing it, as when the Liver, Spleen, being obſtructed, hardned and increaſed into a bulk in the Hydropical do cauſe that high difficulty of breathing, which oftentimes doth diſcover a Dropſie a long time before a Tumor doth appear, with which they are moleſted lying down, and therefore are compelled to ſit upright; the ſwelling of the Belly alſo increaſing it, as hath already been ſaid.

A *Dyſpnœa* alſo may happen from the Stomach too much filled with meat, which vexeth ſo long till the things taken are diſgeſted, or are returned by Vomit, or are eaſed by belching. The which when it ſucceeds not, and the Repletion is great, they may be Suffocated; which as it may happen from the quantity of things heaped in, ſo from the quality of certain meats, as of Muſhrums, which are wont to Suffocate.

The Inſtruments by which breathing, the Voice and Speech are performed or governed, are the Cavities of the Mouth, Noſtrils and Jaws, containing the Air for the performance of all three, the parts placed in the Mouth for the uttering an Articulate Voice or Speech by their Motion are the Tongue, or by tuning, are the Palate and the Teeth, the paſſage or pipe carried from the Jawes to the Lunges, that makes the Voice and ſerves for breathing in drawing down the Air, is the rough Artery, or Wind-pipe, the Bowels, or Bellows receiving and ſending forth the Air by a Natural Motion for breathing, is the Lungs; the Breaſt doing the ſame by a voluntary Motion with the Lungs to which it applies it ſelf.

The ſtoppage of the Mouth and Noſtrils, the Cauſe of Suffocation.

By reaſon of the Largneſs of the Mouth. Noſtrils and Jawes, theſe defects happen, if the Mouth and Noſtrils together be ſtopt up by external Bodies or by water, or otherwiſe the Teeth being bound together, that the Mouth cannot be opened, the Noſtrils in the interim being ſtopt up with Snivel, upon which account ſomtimes the Apoplectical and Epileptical are in danger of Suffocation, eſpecially becauſe otherwiſe breathing is made obſcurely in them, but if that the Noſtrils only be ſtopt with Snivel or other things, becauſe they may draw breath with their open Mouth, then breathing is only ſomwhat hindered, when the Air cannot be ſufficiently let in, or rather becauſe then tis fetcht quick, it is depraved and an uncomely voice is uttered.

The narrowneſs of the jawes ſtopt, is the Cauſe of Suffocation.

The hinder largeneſs of the Jaws being likewiſe ſtopt, the ſame comes to paſs, eſpecially about its narrowneſs in which even the leaſt thing that ſticks, makes work: and that eſpecially if the paſſage into the Wind-pipe and Gullet being poſſeſt by a Tumor ariſing in the incompaſſing coat, or in the Muſcles of the Jaws and Larynx or in the Glandules, or Palate, or by the Palate fallen down, be obſtructed: Or if the Vertebræ of the Neck being Luxated inwardly (which is moſt commonly in the firſt Vertebræ, which is looſly joynted with the Head and by reaſon of the weight of the Head ſuſtains great Motions) Theſe paſſages be ſtraitned, eſpecially if then the Nerves alſo and rough Artery be preſt; from which accidents they can neither ſufficiently breath, or utter a voice, or ſpeak, or ſwallow. Somtimes alſo a pain being joyned, as we ſhall explain theſe things in a quinſie. A Species of which alſo it is ſaid to be, if it be from a Vertebræ Luxated, and in the other painful Diſeaſes of the Jaws.

A drineſs of the Tongue, is the cauſe of Stammering.

By occaſion of the Tongue, the Speech ſuffers a defect, if that as it is a Muſculous Inſtrument (for, of the other hurts of its Muſcles we have already ſpoke) it be too much dried and hardned from the cauſes explained in the hurt of Taſting. For becauſe then in the pronouncing of certain Letters it cannot be ſufficiently rowled, (the which that they may be plainly expreſt do require a more various doubling of it) whiles they ſhape their words they ſtammer. The which alſo happens from a Tumor ariſing under it, or if it ſwel or be inflamed, or otherwiſe if from the birth it have too great a bulk, which oftentimes is ſo great, that they cannot ſpeak at all.

The Tongue too much increaſed is the Cauſe of hindering the Speech.

A little Tongue the cauſe of defect of Speech.

A familiar fault with ſome Fools who from their birth are born Fools and Dumb, as hath been ſaid in an Alienation of the Mind; the which alſo happens if it be framed too ſmal, or if it be cut off, or maimed, by a puniſhment, or ſome other chance, and in Convulſions the Tongue being ſtrongly laid hold on and bit of by the Teeth: the ſame alſo comes to paſs by reaſon of that bond by which it is knit, if that be too ſtrait bound up, and not ſufficiently looſed in Children new born, ſo that it hinders the free Motion of the Tongue.

The bond under the Tongue tied up, the cauſe of the defect of Speech.

The want of the Palate, is the Cauſe of the want of Speech.

The Palate ſeeing it is the quil of the Voice, if that be wanting or mained, it doth prejudice the voice; as alſo when the former Teeth are wanting, becauſe they ought to reſiſt the Motion of the Tongue in the pronuntiation of certain Letters, and that in the want of them cannot be done, they Stammer a little.

The want of Teeth the cauſe of ſtammering.

By reaſon of the Diſeaſes of the rough Artery or Wezand, which is the Pipe through which natural and vocal Reſpiration is uttered, the breathing, Voice, and Speech do fail, for if the chink of the Head of it, called the *Larynx*, be too much bound, which happens by occaſion of the Membrane in which that is cut, when it is dried and wrinkled more then is fit, by the cold Air, or cold Water, or the uſe of aſtringent things, then a ſmal or hoarſe Voice is uttered. Which impediment alſo of the Voice happens from a thick ſlime long ſticking there, for if it be wholly obſtructed with that, or ſome other Body ſlipt in, or drawn in with the breath, and continuing there long, the which yet ſeldom happens, becauſe it is forced to give place, by the Cough, which it ſuddainly moves unleſs by reaſon of its ſharpneſs the thing ſticking there be faſtned into it, it muſt needs be that the Patient be ſuffocated. As Hiſtories teſtifie that *Pope Adrian* died by a Fly flying into his Throat, and we have obſerved a Child ſtrangled by Swallowing a Gold Noble. And what they ſuffer alſo, in whom water by chance flowes down into this Wind-dore of the rough Artery, and what ſtraits it breeds, and how with great violence a Cough doth caſt it thence through the Mouth and largenſs of the Noſtrils, we often ſee in others, and ſomtimes we try it in our ſelves. But the chink of the *Larynx* ſcarce labors of any other Diſeaſe, unleſs when by conſent it is hindered or preſt by the neighboring parts, as from the Vertebræ of the Neck

The binding, or ſtopping of the chink of the Larynx, is the Cauſe of the defect of the Voice.

Luxated.

Luxated, of which hath been ſpoken already: For it can ſcarcely happen that it be relaxt more than is fit, by a Humor, ſeeing it is convenient for it alwaies to be moiſt: that it ſhould be torn, ſeeing it is a thick Membrane, is impoſſible, as alſo it is very hard to be wounded.

The binding of the pipe of the rough Artery is the cauſe of Suffocation.

The paſſage of the rough Artery or Wind-pipe, from the Head even to the Lungs, if it be intercepted by outward force the Neck being bound up as ſhal be laid in the Gullet, it brings ſtrangling, and if it be preſt by the firſt Vertebræ of the Neck luxated, it cauſeth difficulty of breathing, which *Hippocrates* called the ſixth ſort of Squinzy. The rough Artery can ſcarce be filled otherwiſe, with things that fall into it, but as I ſaid breathing may be ſtopped about the ſides thereof. And the[y] that are drowned, are not choaked ſo much by the Influx of Water as by the hinderance of the paſſage of the Air. And if any thing fal into the paſſage and hinder breathing, it is by its ſticking faſt and cauſing a continual Cough.

The Cauſe of Diſpnœa or difficulty of breathing is the connexion of the Lungs with the Breaſt.

The connexion and Obſtruction of the Lungs are the Diſeaſes that cauſe a Dyſpnæa. The connexion of the Lungs with the Convex part of the breaſt being ſtreighter than it ſhould be, ſuffers them not to move freely, and makes them ſhort-winded in motion. This by Anatomies hath been found to have been natural to ſome,

The Obſtruction of the Lungs cauſeth an Aſthma.

and to others from a fall or Pleuriſie. When the Lungs are ſtopped inwardly in the branches of the rough Artery that are diſperſed through them, there is a difficulty of breathing, becauſe the Air cannot freely paſs. This comes often from a watry humor falling from the Head, in time of ſleep and lying down, without ſenſe by degrees, through the rough Artery to the Lungs; which ſtaying in the narrow branches thereof, and growing ſlimy and ſtopping the paſſage, it cauſeth breathing with Snorting and noiſe and a Cough. And if by reaſon of the toughneſs thereof it cannot be hawked forth, it cauſeth a long Diſeaſe called Aſthma: which by a new defluxion, at night time and in moiſt weather, and after a Surfet, is not violent. And if the defluxion be great and ſuddenly fill the paſſages that were formerly ſtopped, it cauſeth the Suffocating Catarrh. The ſame may come from the Excrements of the Lungs there long detained and made thick. For as the Brain by reaſon of the plenty of Blood, which filleth the Cavity of the membranes, being crude, continually gathereth Excrements; ſo the Lungs whoſe veſſels are ful of blood if it be excrementitious or crude, it cauſeth many excrements: ſo that it is not neceſſary that all the flegm which is ſpet up muſt come from the Head to the Lungs. Both theſe Cauſes are diſcovered by the flegmatick conſtitution of the body, and the ſigns of abounding flegm, and rattling, and other hurts mentioned. A white chalky matter, and hard, is made rather of the Lungs, than of flegm which is ſlimy like Bird-lime, but not crumbling. This obſtructing inwardly the branches, cauſeth that long Aſthma wherein there is no ſign of flegm. And the ſame may cauſe the Stone in the Lungs, which is hard, brittle, ſmooth or rough, according as the veſſels are, as we have ſeen Anatomies. And ſuch have been coughed out after a long and otherwiſe incurable Aſthma, which were the cauſe thereof.

The Compreſſion of the Breaſt is the cauſe of difficult breathing.

The Diſeaſes that hinder the Breathing beſides the Muſcles of the Breaſt mentioned in thoſe which hinder the motion both of the Lungs and Breaſt both which are required to breathing. This is when it is outwardly compreſſed, or when aſtringent things are laid thereon, as common Phyſitians ſuppoſe. If the Griſtles of the Ribs, which are about the Breaſt to cauſe the more eaſie motion, be turned into a hard ſubſtance like the other Ribs: which happens in ſome through age, in ſome ſooner, eſpecially in Women, by reaſon of their Breaſts held up thereby; for then the breaſt cannot be ſufficiently dilated: And this makes them ſigh, when they have great breaſts and lie upon their backs.

The hardneſs of the griſtles of the breaſt is the cauſe of Dyſpnœa.

The Ribs thruſt inward cauſeth difficult breath.

When a Rib or two are broken and thruſt inward, becauſe they hinder the dilatation of the Lungs, and the motion of the breaſt they hinder breathing: And ſo do the Ribs diſlocared, and the Vertebræ or ſpondils of the back bent inwards. Theſe two hurts as they may come by an external force to the Ribs: ſo *Fernelius* teſtifieth that a Rib hath been broken by great palpitation of the body: which I rather beleeve might be diſplaced.

The Repletion of the Cavity of the Breaſt is the cauſe of Dyſpnœa.

If the Cavity of the Breaſt be filled with matter in an *Empyema* and Corruption of the Lungs, or Water in a Dropſie; Or Blood from a Vein broken: If theſe be in great quantity, they cauſe a Dyſpnœa by hindering motion of the Lungs, Breaſt and Midriff. Alſo Wind may cauſe the ſame if in the Breaſt: as I gathered from one in a Dyſpnæa who had a noiſe about his breaſt with no rattling.

The Cure.

The Cure of want of breath in Swooning.

If Breath be ſtopped from Fainting of the Heart, when ſtrength returneth, they recover. And what muſt be done in Swooning ſhal be ſhewed in the defect of ſtrength,

The Cure of Defect of breathing from an Apoplexy.

If men in Apoplexies from a diſtemper of the Brain are in danger of Suffocation, we ſhewed what muſt be done in the Conſternation of mind. Alſo when breath is ſtopped by Convulſions.

The Cure of want of Breathing & Speech in a Palſie & Cramp and other Diſeaſes of the Nerves.

If there be Defect of Breath, Voyce, or Speech by reaſon of the Nerves in a particular Palſie or Convulſion, it muſt be cured as a Palſie or Convulſion.

If it come from the Cramp you muſt give things to prevent a general Convulſion, as was there ſhewed.

And if it come from Looſneſs of the Nerves you muſt proceed as in a Palſie, by purging and altering.

When the Speech or Voyce is loſt, things applied to the Mouth and Throat are beſt, becauſe they draw forth flegm by the right way, and being neer the part affected, conſume and alter the humor. Maſticatories and Gargariſms are moſt proper, not ſuch as draw flegm thither, as in the Palſie of other parts, but which dry and draw out the humor that is fallen thither.

This

This Maſticatory is good. Take *Nutmeg two drams, Long Pepper, Cubebs, Galangal, Water-creſſe ſeeds, Muſtard ſeed, each one dram; Salt, Gum Elemi, each half a dram; Maſtick one dram and an half; Turpentine* which is highly commended, and with *Wax* make *Pills*, add *half a ſcruple of Caſtor.*

Theſe Pils are excellent to be held all night under the Tongue. Take *Bayberries one dram, Caſtor and Euphorbium each ſix grains*; with the *Infuſion* of *Gum-traganth* made in *Roſe water*, make *Pils.*

It is admirable to rub the Tongue with Mithridate and Caſtor. And to waſh the mouth with Brine, or a Decoction of red Wine, Sage, and Salt.

Or this. Take *Acorus roots one ounce, Galangal, Cypreſs, Coſtus, Nutmeg, each half an ounce; Sage, Marjoram, each one handful*; boyl them in *Water* and *Wine*, and add *Honey of Roſemary flowers*, make a *Gargariſm.*

Black-Cherry water to waſh the mouth and to drink is vulgarly admired in loſs of Speech, but this is better. Take *Black-Cherry water, Lavender, Sage, and Pennyroyal water, each equal parts*; Anoynt the mouth often.

Some have written it as a ſecret that the juyce of Nettles put into the Ears, reſtoreth the Speech.

The ſame external medicines are to be uſed as in the Palſie. And the Oyntments and things which are applied to the original of the Nerves, are to be applied to the nape of the Neck, and let the Jaws be anoynted therewith.

Sinapiſms, Dropaces, Veſicatories and Cauteries which draw back are to be applied to the hinder part of the Head.

If there be plethory it is good to let blood under the Tongue in the Palſie thereof upon the ſame ſide and to apply Cupping-Glaſſes under the Chin and the hinder part of the Head.

It is good to bid them uſe the Tongue and endeavor to ſpeak.

The Cure of want of Breathing. If Voyce, Speech or Breathing be hindered 'tis a Defluxion upon the Muſcles, which diſtendeth and inflameth them; whether it be in the narrow Muſcles of the Jaws or of the breaſt, or upon the Diaphragma, it ſhal be ſpoken of in Pains and Defluxions.

But if it come from the Diaphragma which is ſo troubled with Vapors that Nocturnal Suffocation or Fits of the Mother follow, then becauſe this Symptom is moſt urgent, The Cure ſhal be as followeth.

The Cure of Incubus *or Night-mare.* If a Vapor ariſe from the *Præcordia* and hinders the Midriff in the Sleep, and brings danger of choaking, as in the *Incubus* it is dangerous, for fat folks and Children. Otherwiſe if it continues, it ſends the Vapors to the Brain, and cauſeth worſe accidents as Hypochondriack Melancholly, or Madneſs, or Falling-ſickneſs, for the cauſe is the ſame only the part affected differreth; and if the brain be much hurt it may turn to an Apoplexy.

Therefore it is good to prevent it betimes, and the Crudity and Cacochymie and Repletion in the firſt paſſages is to be taken away. And the Vapors are to be kept from riſing to hurt the Diaphragma or other parts either in the Fit or out of the Fit, and to be diverted and diſcuſſed, as we ſhewed in the Melancholy, Epilepſie, Catalepſie, and the like Diſeaſes from the ſame cauſe.

This is done firſt by purging the thick Excrements by Clyſters or otherwiſe, and then letting blood if it be much or impure. Then clenſe the Cacochymy by vomit and purge; as the humor is, eſpecially with things againſt Melancholy, and Wind, that are good for the Head and Falling-ſickneſs. Then uſe particular Evacuations, provoke the Hæmrhoids or Courſes if they be ſtopped, and purge the Excrements of the Brain by the Noſe. And in the mean while to make a good Concoction, give & apply things to the Stomach, avoid Crudities and things breeding Excrements and Wind. Look to the Head, for the Imagination is hurt, and to the Heart by reaſon of Fear, and to the Breaſt for it is troubled. All theſe muſt be reſpected out of the Fit. In the Fit uſe Clyſters, and then outward Applications, that draw down vapors, and theſe may be continued after for prevention of the Fit.

If you give no Clyſter, uſe this. Take *Diacatholicon ſix drams, Diaſenna Solutiva one dram*, give them alone or in *Wormwood Water.*

Pils. Take *Species Hiera of* Galen, *half a dram, Aggregative one ſcruple*, with Syrup of *Stœchas* make *Pills.*

The Humor is prepared thus. Take *Syrup of Hyſop* (for the Head and Breaſt) *Stœchas and Lavender, Honey or Roſemary of Bugloſs each one ounce; Oxymel ſimple half an ounce, Wormwood, Mints, Succory, Bugloſs and Peony water, each three ounces*; give it for three or four times with *Nutmeg.*

Or thus. Take *Fennel, Aſparagus and Liquoriſh roots, each one ounce; Peony roots and Capar bark, each half an ounce; Bettony, Hyſop, each one handful; Endive, Succory, Bugloſs, Agrimony, Hops, each half an handful; Bugloſs flowers one pugil, Raiſons ſtoned one ounce, Anniſe and Fennel ſeed each two drams; Dodder one dram, Schœnanth one dram*, boyl them to a pint, ſtrain it, and diſſolve *Oxymel two ounces, Sugar one ounce, Diarrhodon Abbatis one dram, for four Doſes.*

In Crudities, Infuſe in *Wine, Fennel roots two ounces, Capar barks half an ounce, Galangal three drams, Wormwood, Germander, Groundpine, each three drams; Cordial flowers each two drams; Fennel and Parſley ſeed, each one dram.*

Then purge. Take *Liquoriſh half an ounce, Raiſons one ounce, Aniſe ſeed two drams and an half; Cordial flowers one pugil, Epithymum, Senna, each half an ounce*; boyl them and add to the ſtraining *Rhubarb one dram, barks of black Helebore prepared half a dram* (if the Patient be ſtrong, or increaſe the quantity of Senna) *Ginger, Grains of Paradice, each half a ſcruple*; ſtrain it, and give it with half an ounce of *Syrup of Roſes.*

Or give other Potions with Diaſenna, or Pils of Cochy &c.

Evacuate at divers times by the former; or by Magiſtral Syrups, Electuaries, &c. mentioned in Melancholy Diſeaſes.

Let theſe Pils be in readineſs. Take *Species Hieræ Archigenis one dram, Black Hellebore prepared one ſcruple, Agarick, Rhubarb, each half a dram, Epithimum half a dram, Peony ſeeds and roots each half a dram*; with *Honey* of *Squils* make a *Maſs*: let him take three or four or more bigger or leſs as they work. Let him uſe them often faſting ſome hours before Dinner or Supper.

Hiera Archigenis alone wil do the ſame.

Spare Diet, and avoiding Suppers is excellent; eſpecially if it come from Surfets. Let him beware of crude and windy things that ſtretch forth the Belly and increaſeth ſhortneneſs of Breath. Let the Diet be of good juyce, and eaſie Concoction, with warm Spices. For Drink, Wine is forbidden becauſe it diſturbs the mind, and Water becauſe it puffeth up, and Mead is allowed, but in young people by reaſon of the Honey which turneth into choler, it is not ſo good. We allow Wine moderated with Water, as in other melancholly Diſeaſes.

A Honey-water for old men that are flegmatick. Take *Liquoriſh one ounce, Fennel half an ounce, Raiſons ſtoned two ounces, Anniſe ſeed one dram, Bugloſs flowers one*

pugil, boyl them to one pint and an half, and Diſſolve *Sugar, and Honey, of each two ounces*: Boyl them again a little and ſtrain them.

The Wormwood wine mentioned to prepare, is good alſo to ſtrengthen, taken in the mornings.

Pouders after meat to help Concoction, and hinder Vapors.

As, Take *Coriander ſeed prepared half an ounce, Aniſe-ſeed two drams, Pouder of Aromaticum Roſatum one dram, Diamargaritum frigidum one ſcruple, Cinnamon half a dram Mace one ſcruple, Piony ſeeds and Coral, each half a dram; Sugar of Roſes, as much as all the reſt*: give one ſpoonful after Meat.

Or this mixture after Meat. Take *the Marmalad of Quinces, candied Citron peels, Conſerve of Roſes, each half an ounce*; *Conſerve of Marjoram half an ounce, Aromaticum Roſatum, Diamoſchu dulce, Diamargariton, each one ſcruple*; *Piony ſeeds half a dram, red Coral one dram, Sugar of Roſes, as much as is ſufficient*, give one ſpoonful.

The Lozenges of Aromaticum Roſatum, Diarrhodon, or Diamoſchun, are good taken at bed time.

Or this Electuary. Take *Conſerve of Roſes, Borrage, Marjoram, each one ounce and an half*; *Citron peels, Myrobalans, and Ginger candied, each half an ounce*; *Elicampane and Galangal, each half a dram*; *Piony-ſeeds one dram, Coral, Ivory, each one dram and an half*; *Diarrhodon, Dianthos, each half a dram*; *Cordial Spices one ſcruple, with Syrup of Bettony*, make an Electuary. Let him drink after it a little Wine, with the Water of Lillies Convallies.

Old Treacle is good once in a week taken at Midnight.

We give Clyſters before Purging to prepare, and after to expel wind, and looſen the Belly. And in the time of the Fit. Of which you have Examples in the like Diſeaſes.

Purgers of the Head by the Noſe and Mouth after general purging to prevent other Diſeaſes of the Head muſt be uſed.

Apply Caps and Pillows to the Head of theſe. Take *Cypreſs roots, Angelica, each two drams*; *Marjoram, Roſemary, Lavender flowers and Roſes, each one dram*; *Coriander ſeeds one dram and an half, Cloves half a dram*: make a Pouder.

Baggs are applied in the fit to the Heart and Pulſes, ſprinkled with Wine, Balm-water, Roſe and Orange-flower-water. Take *Galangal, Cypreſs, Citron peels, each two drams*; *Citron and Baſil ſeeds, each one dram*; *Balme and Cordial flowers, each half a dram*; *Cloves one ſcruple*: make a Pouder.

Let the Stomach and Breaſt be anointed in the Fit. Take *Oyl of Dill and Chamomil, each one ounce*; *white Wine one ounce, Aqua vitæ two drams*: boyl them till the wine be ſpent.

Often waſhing externally doth revel Vapors from the Head and Midrif.

Alſo Frictions from beneath till they come to the Head, and combing of the Head backwards, are good.

Let Cupping-glaſſes be applied to the Thighs, and then to the Shoulders,

A Dropax made of Pitch and Oyl of Maſtick muſt be applied hot to the Head with a Clout between; if the Head be afflicted.

In Plethorick and Cacochymical Bodies, a vein muſt be opened on that ſide, which is moſt heavy, firſt in the Arm, then in the Foot, and in other parts, for revulſion of Blood from that part, to which the Vapors moſt aſcend.

They muſt be wakened in the Fit, and not diſturbed in Mind.

Let them ſleep with the Head high upon one ſide, and take heed of ſleeping upon the Back, becauſe it doth not onely cauſe Straightneſs, but troubleſome Dreams.

The cure of the Suffocation of the Womb.

If the Vapors be about the Womb, and cauſe Hyſterical accidents, becauſe there are divers kinds thereof, one produceth a pain of the Heart, another Swounding, another raging, another convulſive Motions with Suffocation, of which is ſpoken in thoſe Diſeaſes, yet ſince the Spirits are hindered in all, and they are all called Suffocations of the womb we ſhall ſpeak of them.

They are in moſt danger who fetch no breath, but ly like dead people, becauſe ſometimes they die in the Fit, and ſometimes return to themſelves. Alſo if they have raging madneſs or Convulſion. But often they recover after theſe.

The Method of Cure is, to evacuate the Excrements about the Womb, provoke the Courſes, and to repreſs the Vapors that riſe from the womb, and to revel, diſcuſs and conſume them, divers wayes, among which ſome take away the fit.

We give Evacuations, as in foul Blood and Melancholy according to the Conſtitution, and Humors abounding, which muſt be repeated, if the Diſeaſe ceaſe not, alwayes adding things that provoke the Termes. Theſe are beſt.

To provoke Vomit, give one dram and an half of Agarick, with Oxymel.

Let the Potion following be given every week to purge. Take *Agarick in Pouder, and Trifera magna without Opium, each one dram*; diſſolve them *in white Wine and Water of Mugwort, or Mother-wort*.

Or thus. Take *Agarick, Briony roots, each one dram and an half*; *Ginger and Cinnamon, each half a dram*; infuſe them *in the beſt white Wine*, ſtrain them, and add *Syrup of Mugwort one ounce*.

Turpentine is much commended, and this Purge. Take *Agarick trochſ'd two ſcruples, Ginger, one ſcruple*, infuſe them *in white Wine*, ſtrain them, adding *Turpentine three drams, diſſolved in ſix drams of Honey, and the Yolk of an Egg*.

Uſual Pills. Take *Hiera Colocynthidos one dram, Agarick trochs'd one dram and an half, Carrot, Agnus Caſtus ſeeds, each one ſcruple*; *Myrrh, Caſtor, each half a ſcruple*; *Diagredium half a ſcruple, with Turpentine* make a Maſs for Pills, give from half a dram.

The Food muſt be moderate and good, and becauſe Wine cauſeth the fit, let him drink Aniſe-ſeed boyled in Water or Mead.

Medicines to alter muſt diſcuſs Vapors, and move the Terms, ſtrengthen the womb, and the principal Parts, and reſiſt the venemous Humors. Thus,

A good Water. Take *Balm and Mint-water, each one ounce and an half*; *Cinnamon-water two ounces, with a little Caſtor, or diſtil one of theſe Simples following, with a little Caſtor*.

Or make this Decoction of them. Take *Roots of Solomons Seal, Valerian, each one dram and an half*; *Balme, Penny-royal, Organ, Calamints, Jet, each one dram*; boyl them *in Wine*, adding *Vinegar of Squills*, ſtrain it, and ad *Syrup of Mugwort half an ounce for two Draughts*.

Or this Syrup. Take *Roots of Solomons Seal, Briony, Valerian, Spignel, Coltsfoot, white Wine, Maſter-wort, Angelica, each half an ounce*; *Plantane, Balm, Penny-royal, Mints, Calamints, Fleabane, Nep, Bettony, Mugwort, Thyme, each one handful*; *Roſemary, Lavender flowers, each one pugil*; *Seeds of Cummin, Carrots, wild Parſnips, Sorrel, Piony, Aniſe, each one dram*; *Bay-berries, each two drams*; boyl and ſtrain them, add *Juyce of Plantane one ounce and an half, Sugar ſix ounces*, boyl them thick, and

add

add *Cinnamon and Cloves, each one dram and an half*; give one ounce by it ſelf, or with convenient Liquor.

A Potion. Take *Mithridate one dram and an half, Pouder of Moſchu dulcis half a dram, Syrup of Mugwort half an ounce, Balm-water* as much as is ſufficient, with a little Cinnamon-water, make a Potion.

Pouders to drink with Liquors, with Sugars, or to be taken in Lozenges or Electuaries.

One eaſie made. Take *Cummin ſeeds one dram, Juniper-berries eleven*, pouder them, give it *in Wine or Cinnamon, or Plantane, or Roſe-water.*

Or thus. Take *Cummin ſeed, wild Parſnip and Carrot ſeed, each one ſcruple*; *Cloves half a ſcruple.*

Or, Take *Cummin, wild Carrot ſeed, each one dram*; *Gith, Agnus caſtus, Rue, Piony, Dittany roots, each two ſcruples*; *Amber, Cryſtal, Jet, each one ſcruple*; *Cloves, Cinnamon, Pepper, wood Aloes, each half a ſcruple*; *Musk five grains*: make a Pouder, give *a dram in Liquor, or with four ounces of Sugar* make *a Tragema, or Lozenges, or with Honey, or Syrup of Mugwort an Electuary.*

Pills of ſtinking things are made thus. Take *Caſtor one ſcruple, Aſſa fœtida half a ſcruple, Myrrh, Galbanum, Sagapenum, each one ſcruple, with Honey of Squills*, make *Pills, take half a dram.*

Or of very ſweet things thus. Take *Musk ſix grains, Benzoin half a dram, Sugar one dram, with Cinnamon-water* make *Pills, give half a ſcruple.*

Suppoſitories revel Vapors. Take *Honey one ounce and an half*, boyl it to a conſiſtence, add *Hiera, Cummin, and Nigella ſeeds, each one ſcruple*; *Sal Gem. half a ſcruple*, make Suppoſitories.

A Clyſter doth the ſame. Take *Bay and Juniper-berryes, each one ounce*; *Penny-royal, Calamints, Rue, Savine, each one handful*; *Cummin two drams*: boyl them, and diſſolve *Hiera Coloquintidos two drams, Oyl of Wall-flowers and Rue, each one ounce*; *Salt one dram*, make a Clyſter.

Provoke vomiting with the finger, or a feather in the Throat.

Put pouder of Muſtard into the Noſe in the fit to provoke Neeſing, or a little white Hellebore therewith, ſome blow up Rhubarb with good ſucceſs, if the ſneeſe it is good, by which we perceive life.

Strong Scents are applied to the Noſe that ſtink, in the Fit, which drive down the Womb being ſenſible thereof, as ſome ſuppoſe. But we think they do good by diſperſing vapors, and ſtir up ſtrength in the Heart and Brain, whether they pierced being ſubtile, and becauſe they ſtir up the expulſive Faculty which was a ſleep, that they may come to themſelves; therefore we bid them ſmell ſuch out of the fit. Caſtor becauſe it is ſtrong, is good to ſmell too.

Alſo Aſſa fœtida, Galbanum, Opoponax, Bitumen and the like; Trefoyl that ſtinketh, Petroleum, Rue, and Chimches, both Domeſtick, and in Plants, which ſtink moiſt horridly.

Alſo Onions, and Garlick which have a piercing ſharp Scent.

Alſo ſtrong Vinegar in a ſponge, or mixed with Caſtor and Sulphur to anoint the Noſe.

A ſtinking Fume is better, of burnt Feathers, Leather, horn Hooſes, Candles ends put forth.

Or theſe Troches. Take *Caſtor one ſcruple, Aſſa fœtida half a ſcruple, Pitch half a dram, with Turpentine make Troches*; light one, and take in the vapors at the Noſe with a Funnel, but not too thick, leaſt it ſuffocate.

To the womb pleaſant things are applied to fetch it down by delight: but we ſuppoſe that they do it by piercing being hot, and ſo diſcuſs the vapors ſooner.

A Fume for the womb with a funnel. Take *Storax, Benzoin, of each one dram*; *wood Aloes half a dram, Musk five grains*; with the infuſion of *Gum Traganth*: Make Troches and lay them dry upon the Embers.

Or thus: Take *Troches of Gallia Moſchata, Meſues and Nicolai.*

Theſe ſcent a ſweet ſcent, if they boyl in Roſe-water.

The Privities muſt be anoynted with Civet by the Midwife.

Or this Linament: Take *Gallia Moſchata Meſues one dram, Pouder Diamoſchu, Diambra, of each half a ſcruple*; *Civet three grains, Saffron ſix grains, with Oyl of ſweet Almonds or Been*: Make a Linament.

Or mix Musk, Amber, or Civet, in Cotton: Or this Pouder, Take *Storax, Benzoin, Gallia Moſchata, of each one dram*: *Cloves, Cinnamon, wood of Aloes, of each half a dram*; *Saffron half a ſcruple.* This may be ſprinkled with Roſe-water and put into a bag and uſed like a Peſſary.

Or this, which is not only well ſented, but provokes the Termes. Take *Balm, Marjoram, of each one dram*; *Cloves, Mace, of each a dram*; *Pepper, Saffron, of each one ſcruple*; *Jet, Pitch, of each half a dram*; *Salt Peter one ſcruple, Alipta Moſchata, which hath Camphyre half a dram, with Oyl of Bayes and Lillies, and a little Storax*: Make a Peſſary.

Or others for the Termes which are there mentioned.

They which think it comes from ſtoppage of ſeed apply ſharper and provoke the ſeed by divers Arts. Which we omit becauſe we ſpeak of another cauſe, yet we allow lawful Copulation: which revels and provokes Terms and alters the Nature of Virgins.

Theſe are applied to the Navil and Share.

A Cataplaſm: Take *Fern leaves, Lovadge with the roots, of each one handful*; *Rue half a handful*: Boyl them in Wine, and with Greaſe, make a Cataplaſm.

Or thus: Take *Honey and Figs equal parts*, boyl them in Wine and Water, beat them; and add *Oyl of Spike and Dill.*

Alſo Flax from the Spindle dipt in Oyl of Dill.

Alſo Henbane bruiſed, with Oyl of Spike, applied to the Navil.

An Emplaſter for the Share: Take *Galbanum one ounce, Storax one dram, with Oyl of Spike and Pouder of Cloves.*

Another: Take *Emplaſtrum Ceroneum, or for the Mother one ounce, Troches of Alipta Moſchata one dram*; *Storax half a dram, with Oyl of Spike*: Make a Plaſter.

It is good to waſh the Feet to divert and ſtrengthen the Womb, As; Take *Orris roots, Lovage, Fern, Motherwort, Calamints, Nep, Penny-royal, of each one handful*; *Chamomil flowers one pugil, Juniper and Bay-berries of each half a pugil*; *Carrot, Carway and wild Parſnip ſeeds and Agnus Caſtus ſeeds, of each one dram*; *Coriander two drams.* Boyl them in Water, add a little Wine.

A Bath of the ſame after purging, or to go to the hot Baths is good.

Frictions alſo or rubbings of the Lungs and Soles of the Feet, with Salt Vinegar and Oyl of Bayes, are good in the fit.

Alſo pul the Ears, Noſe, and Hair upon the Privities.

Bind the Hips aboue the Knees, and the Hypochondria with a Girdle.

Apply a great Cupping Glaſs below the Navel and ſmal ones to the Hips.

Apply a Dropax and Sinapiſme to the Loyns and Share.

A Cautery in the Coronel ſuture is good if the Head be

be afflicted. If the Terms be ſtopped, open a Vein in the Foot; and Scarifie under the Ham, and apply Horſleeches to the Ankle.

Let her avoid cold Air, in the lower parts chiefly, and Feet which muſt alwaies be kept warm. Let her exerciſe moderately, and ſleep moderately, and not be diſturbed in mind.

The Cure of ſhort Breathing from wind and humors in the Belly.

And if in other Diſeaſes the Diaphragma or Midriff be hindered by Wind or Humors from other parts. The Cure is by thoſe Diſeaſes: as in the Wind of the Colick, Stomach, Repletion, Tympany, Dropſie, Hardneſs of the Bowels and Schirrhus.

The Cure of Suffocation by Muſhrooms.

It is done by Vomiting with the Decoction of Radiſh, or with dried Hen-dung and Oxymel. Or, Take *Oxymel one ounce and an half, Sal Niter half a dram*, and drink after it *Wine* of the *Infuſion* and *Decoction* of *Wormwood and Balm.*

If the Inſtruments of Breathing, Voyce and Speaking, as the Mouth, Jaws, Palate, Tongue, Rough Artery, Lungs and Breaſt be hurt, you muſt proceed as followeth.

The Cure of Stuttering from drineſs of the Tongue.

The Cure of Short-windedneſs from the hardneſs of the Griſtles of the Ribs.

If too much drineſs and hardneſs of the Tongue hinder the Speech, or of the Jaws, the Voice the Cure is ſhewed in the privation of Taſt. But if the Griſtles of the Ribs are hard, and cauſe old men and women to be Short-winded (being wholl cheſted as they call it) this cannot be cured. Therefore they are conſtrained to be at reſt, and not cauſe the leaſt breathing violently by motion, that they may ſpend the remainder of their daies in quiet.

The want of Speech from the greatneſs of the Tongue.

When the Tongue is growen biggar or leſs or otherwiſe deformed, whereby the Speech is hinder'd, this cannot be cured if it be from the birth. But by Practice ſome that cannot pronounce ſome ſorts of Letters, they learn them as we read of *Demoſthenes*. If the Tongue be ſwollen, ſeek for the Cure in Tumors.

The Cure of the hinderance of ſpeech from the want of Tongue, Palate, or Teeth.

When the want or defect of a part is the Cauſe, there is no Cure. As when the Speech is hinder'd from a disfigured Tongue, or loſs of Palate, or abſence of Fore-Teeth: yet ſome can make Artificial Teeth of Ivory or Bone that will ſtick faſt being placed in the ſpace.

The Cure of the cutting the rough Artery.

A great ſolution of continuity, or when the rough Artery is cut, and the paſſage ſtopt for breath, there is no Cure, becauſe they are commonly choaked, Yet we have read that ſome have been cured by diligence.

The Cure of Dyſpnœa from a wounded or broken Rib.

If a Rib be broken and thruſt inward and hinder the motion of the Lungs it muſt be reduced to its place: and cured as a Fracture. If a Ribbe diſplaced it muſt be reduced firſt, and then held there as a diſlocation.

The Cure of Sighes from the growing of the Lungs to the Breaſt.

If the Lungs be joyned by ſmal fibres to the Breaſt it being an organical Diſeaſe, it is incurable: And they are conſtrained as thoſe whoſe Griſtles are hard, to live with ſtrong motion.

The Cure of defect of Speech from the Contraction of the Tongue or of the Tongue-tied.

If Speech be hinderred from the ſtreightneſs of the Ligament or ſtring of the Tongue, as when Children are Tongue-tied; it is cured with the Finger, or Cutting: But when it is grown hard, it is incurable.

The Cure of Dyſpnœa from Repletion of the Breaſt.

When the Breaſt is filled with matter, Water or Blood, it cauſeth Coughing rather than hinders breathing, which ſendeth it forth, and therefore it is to be treated of in things ſent forth.

The Cure of Suffocation from the ſtoppage of the Mouth, Noſe or Jaws.

If the ſtoppage of the Mouth, Noſe, and Jaws hinder breathing, and come from external injuries as diving under water, or hanging, or from a weight upon the Breaſt, the cauſe taken away the breath wil return. But if there be fear of Suffocation from the fixing of the Teeth, or ſtoppage of the Noſe with filth, in an Apoplexy or Epilepſie, we ſhewed there how the Teeth are to be opened, and what elſe is to be done.

The Cure of Suffocation from the tying of the rough Artery.

If the rough Artery be ſuffocated from a Spondil diſlocated which lieth thereon which is difficult to be: it eaſily killeth. And if crookedneſs of Back cauſe ſhort breathing, becauſe the bones cannot eaſily be reduced, the Diſeaſe is deſperate. If ſtrangulation be from any thing fallen into the rough Artery, it cannot get out but by Coughing: and becauſe a Cough doth come of its own accord, when any thing fals in, we need not provok it. But neeſing doth very much help the expelling of it, and ſtrikeing upon the back as the vulgar ſuppoſe. But that which falls in is either caſt forth after long Coughing, or the matter ſticketh ſo faſt, that the Cough and ſtraitneſs do ſo perplex that they may be choaked, as we ſhewed in the Cauſes.

The Cure of Dyſpnœa from a Tumor in the Jaws.

If a preternatural tumor in the Almonds of the Ears cauſe difficult breathing, we ſhewed the cure in pains and Tumors. And we ſpake in the Muſcles of the Tumor thereof.

The Cure of Aſthma.

If an Obſtruction in the Lungs by a tough flegmatick Excrement produce an Aſthma, and it continue long, in old men it is incurable, in others it is difficult, eſpecially if they ſpit not forth the matter that ſtoppeth; And the Diſeaſe is increaſed with a new Defluxion: which if it be great in a Fit when before they feared Suffocation, it often ſuddenly ſuffocateth. But if the Aſthma came from a Clay or Gravel-like matter, in one part only, it doth not ſuffocate as that from flegm which takes up more room, except a Defluxion comes upon it, and and ſo increaſe the ſtoppage, neither is this eaſily cured except it be caſt forth by the long force of a cough, and then the old Diſeaſe is ſuddenly cured.

The Method of Cure is, to cut the humor ſo fixed, and to cleanſe, and to dilate the breaſt that it may expel it. And this will expell the Gravel by medicines inward and outward. Then if a Catarrh cauſe or feed the Diſeaſe, the Body muſt be cleanſed: the head muſt be dried and the humor that flows from thence muſt be revelled. And if ſtraightneſs come from Wind that ſtretcheth the Stomach or Belly it muſt be diſcuſſed. All theſe are to be done by Fumes, by Attractives, by Burners, cutting and motion of the body, as we ſhal ſhew.

Pruges

Purgers are to be given out of the Fit if Defluxions cauſe or encreaſe an Aſthma, in reſpect of them, for otherwiſe they wil draw nothing from the Breaſt. And in other cauſes that the body being clenſed may be better ordered. But theſe are not to be ſtrong except the body be very foul: but gentle and often, except the Defluxion be very troubleſom, and then you muſt do as ſhal be ſhewed, but for the Aſthma Thus.

Gentle Purgers which expectorate are Caſſia, Manna, Polipody. Take *Liquoriſh half an ounce, Raiſons ſtoned and Figs each one ounce*; *Jujubes half an ounce, Polypody dried ſix drams*, boyl them and diſſolve *three ounces of Manna* or *one ounce and an half of Caſſia*.

Old Cock Broth is commended of all men in which diſſolve Caſſia or Manna as was ſhewed, or other Electuaries that purge flegm.

Or thus, Take *an old Cock, kill him, pluck him, and gut him, then take Raiſons and Figs each four ounces*; *beat them into a paſt: Carthamus ſeed and Polypody each two ounces*; *Senna one ounce, Agarick two drams, Anniſe one dram, Turbith one dram and an half, Ginger half a dram*, beat them with the paſt, with which ſtuff the Cock and boyl him in Water. Take it thrice, and if it work not at firſt, add Caſſia or Manna. Or you may firſt boyl the Cock, and after, the ingredients in his Broth.

Another uſed long is an excellent Remedy, Take *a Cock, and one ounce of Fox Lungs, Raiſons ſtoned and Figs two ounces, Leeks two ounces, Liquoriſh one ounce, Elicampane two drams, Hyſop, Savory, Horehound, Time, Calamints dried, Pennyroyal, each one dram and an half*; *Fennel and Aniſe ſeed each one dram*; *Carthamus ſeeds and Polypody bruiſed each half an ounce*; *white Tartar one dram, two yolks of Eggs, freſh Butter half an ounce*. Pouder and cut them and beat them into a paſt, ſow them into the Cock and boyl him til his fleſh fall off in much Water in a great Veſſel, then ſtrain it, and to ten pints of the Broth add one pound of Honey, that it may not quickly corrupt, give a draught with *Manna* and *Caſſia each half an ounce*; in the morning for many daies. And this wil work better if you give after it one dram of Turpentine with Penedies in the form of a Bolus.

Three drams of the Troches of Violets without Scammony are good for the Breaſt and purge flegm, with a pectoral Decoction or Water.

Stronger are thus made, when the flegm is much. Take *Violet flowers ſix drams, Turbith four drams, Agarick three drams, juyce of Liquoriſh, Manna, each two drams*; *Scammony one ſcruple*, with ſyrup of *Violets* make *Trochiſks* give *two drams*.

This Potion is good. Take *Agarick one dram and an half, Turbith one dram, Ginger half a dram*, pouder them and Infuſe them in *Oxymel or Hydromel one ounce, and as much of white Wine, Hyſop and Fennel water*, ſtrain them, diſſolve *Diaphenicon and Diacarthamum each one dram and an half*; *Manna, Syrup of Violets each one ounce*.

Pils. Take *Pils of Agarick, Cochiæ, each one ſcruple*; *Troches of Alhandal ſix grains, with Oxymel of Squils* make *Pils*.

This Wine is good if there be Wind which ſtraiteneth. Take *Senna two ounces, Agarick half an ounce, Turbith two drams, Squils two drams, Wormwood three drams, Bayberries ten, Aniſe ſeed one ounce, Fennel, Caraway, each two drams*; Infuſe them in *Wine* and *Honey* and let him drink thereof in the morning.

The pulp of Coloquintida infuſed in Wine is excellent.

An uſual Electuary. Take *Manna, Caſſia, each two ounces, Diaphenicon and Diacarthamum, each one ounce*; *Syrup of Violets and Oxymel of Squils, each half an ounce*; make an *Electuary*: give *two drams* and after more at a time.

A day after purging uſe, Mithridate or proper Conſerves to refreſh.

Vomits are given, out of the Fit leaſt, too much ſtraining ſhould bring fear of Suffocation. Tobacco water diſtilled is moſt excellent.

The humors muſt be prepared before Purging, with things to cut flegm, and they muſt alſo be given afterwards,

Thus: Take *of Syrup of Liquoriſh and Hyſop each one ounce and an half*; *Oxymel of Squils one ounce, Hyſop, Fennel and Colts-foot water each three ounces*; make a *Julep* for three daies to be continued, mix Pouder *Diaireos*, or give a *Lozenge* thereof after.

Or with this Apozeme. Take *Liquoriſh one ounce and an half, Elicampane and Orrice each half an ounce*; *Horehound, Maidenhair, Hyſop, Colts-foot, each one handful*; *Scabious and French Lavender flowers, Violets, Mallows, each one pugil*; *Aniſe and Fennel each two drams*; *Raiſons ſtoned, Jujubes, each one ounce and an half*; *Dates three, Figs ten*, boyl them adding to the ſtrained Liquor *Oxymel two ounces*, aromatize it with a little *Cinnamon*, let it be taken like a Julep.

Obſerve the ſame diet, as in the Night-mare, thin, of good juyce, eaſie concoction, not windy, crude, aſtringent.

Among others *Dioſcorides* commends old Cock broth, and Snails.

For Sauce, mix Saffron, for the Breaſt, and Muſtard with Honey doth expectorate wel.

Beans, Barley, Orobus, Almonds, Pine-nuts, with Carua and Fennel to correct the wind and Figs, Raiſons, Dates.

Take *Leeks two ounces*, boyl them in *Water* or *Cock broth til they be ſoft*, add *the Yolk of an Egg and Butter two ounces, Sugar one ounce*, boyl them again a little, let him eat one half at Dinner and another at Supper.

Let him drink Mead or Hydromel with Hyſop boyled therein.

Or this Ptiſan. Take *Barley one pugil, Liquoriſh two long ſticks bruiſed, Raiſons ſtoned tweney, Figs fifteen*, boyl them in eleven meaſures of Water to eight, adding *Jujubies twelve*,

There are divers Medicines which clenſe, lenifie and cut matter in the Lungs that it may be coughed up, and are good in all cauſes.

This Decoction, for morning and evening. Take *Liquoriſh one ounce, Elicampane, Orris, each half an ounce*; *Maidenhair, Hyſop each half a handful*; *Raiſons and Figs, each one ounce*; *Saffron one ſcruple*,, boyl them, and add *Honey*.

Or thus. Take *dried Horehound, Germander, Hyſop, each one handful*; *Stœchas flowers one pugil*, boyl them in *Honey* and *Water*.

Or thus. Take *Orris two drams, Horehound, Rue, Calaminta, each one dram*; *Nettle and Fenugreek ſeeds, each two drams*; *Raiſons ſtoned one ounce*, boyl them, add *Honey* or *Oxymel of Squils*.

Or this. Take *Liquoriſh two ounces, Orris, Elicampane each one ounce*; *Horſtail one ounce and an half, Valerian, Squils, each two drams*; *Maidenhair, Coltsfoot, Bettony, Veronica, Hyſop, Savory, Horehound, Calaminta, Time, each one handful*; *flowers of Stœchas, Roſemary, Scabious, each one pugil*; *Aniſe and Fennel ſeed each half an ounce*; *Nettle, Rocket and Watercreſs ſeed, each one dram*; *Figs, Raiſons each four ounces*; *Jujubes, Sebeſtens, each ten*; boyl them in *Water* and *Honey*, add *Peper* and *Spike each one ſcruple*: let him drink of it often, or with more *Honey* or *Sugar* and *Manna*, make a *Syrup*.

Another Syrup. Take *Radiſh roots four ounces, Leeks three ounces, Orris two ounces, Elicampane, Dragons Green*,

each one ounce; Squils half an ounce, Liquoriſh one ounce and an half, Savory, Penny-royal, Hyſop, Savin, Horehound, Germander, of each one handful; Coleworts, and Coltsfoot, of each two handfuls; flowers of Stœchas one pugil, Fœnugreek and Carthamus ſeeds, of each ſix drams; Bay-berries half an ounce, Spike half a dram, Saffron one ſcruple: Make a Decoction, and with Sugar and Honey and Syrup.

A Wine. Take *Liquoriſh one ounce and an half, Orris one ounce, Elicampane half an ounce, Angelica, Squils, of each two drams; Horehound, Hyſop, of each three drams; Annis, and Fennel, of each two drams; Nettle, and Water-creſſes ſeeds, of each one dram; Honey clarified ſix ounces, white Wine one pottle.*

Sows or Hoglice tied in a clout and ſteeped in Wine and ſtrained, is an excellent Medicine experienced by ſome.

Wine, Vineger, Honey, and Oxymel of Squils, given in the fit are excellent.

Alſo juyce of Scabious and Sowthiſtle, alone or with Honey.

Or, Take *juyce of Elicampane, Hyſop, Horehound, of each one ounce; water of Hyſop, Colts-foot, of each three ounces;* Boyl them with Sugar, give it often.

It is thought good that they drink their own Urine.

A Spoonful of this water often taken is excellent: Take *Squils prepared two drams, Elicampane half an ounce, Leeks one ounce, Muſtard and water Creſs ſeeds, of each one dram; Cinnamon three drams:* beat them, and with ſtrong Wine draw a water, add *Honey of Roſemary, or of Squils.*

Alſo Oyl of ſweet Almonds, or freſh Butter.

Let Figs toaſted and ſteept in wine be eaten.

Alſo roaſted Leeks and Onions, with Honey and Butter, or Dragon roots ſo ordered. Or, Cuckow-pints, but if they inflame the Mouth, beat them up with Oyl, Sugar, and Honey. Or, boyl them and throw off the water. Alſo a roaſted Squil with Honey is good.

Or this: Take *juyce of Leeks two ounces, juyce of Dragons one ounce, juyce of Squils, Radiſh, of each half an ounce, juyce of Hyſop, Elicampane, of each one ounce; with Honey ſix ounces:* Boyl them to an Electuary.

Let him often eat Conſerve of Orris and Elicampane.

And Take *one dram of Turpentine, with the Yolk of an Egg and Honey.*

Let him take every morning Brimſtone prepared, that is waſhed often with Coltsfoot water, with Orris root, and a little Salt in a rear Egg.

Things that are licked are of Syrups of Hyſop, Horehound, Oxymel, Lohoch of Fox Lungs, Coleworts, Coltfoot, Carthamus. Pine-nuts, Mucilages, Lochſanum, and of Squils. And the Species of Diairios, and Salomonis, Pleres Archonticon and Diahyſopi.

Other Eclegma's are thus made. Take *Gum Ammoniake diſſolved in Aqua vitæ two drams, water creſs and Nigella ſeeds, of each one dram; Sal Ammoniak half a dram, Sulphure prepared one dram, Saffron five grains, prepared Fox Lungs one dram and an half, with Honey of Squils and convenient Syrup two ounces:* Make a Lohoch.

Or thus, Take *Althea roots two drams, Orris one dram and an half, Elicampane, Birthwort, Aſarum, Bryony, of each one dram; Gentian, Cuckowpints, of each half a dram; Savin, and Coltsfoot, of each one dram and an half; Fenugreek, Time, and Carthamus ſeed, of each two drams; Bay-berries one dram, water Creſs, and Nettle ſeeds, of each half a dram; Pouder of Fox Lungs and Gum Ammoniack diſſolved in Vinegar of Squils, of each two drams; Sulphur vive, or Quickbrimſtone waſhed in Coltsfoot water, and boyled Turpentine, of each one dram; Storax half a dram, juyce of Liquoriſh one dram with Honey of Squils, or one of the former ſyrup:* Make a Lohoch.

If the Belly be bound: Take *the Mucilage of Marſhmallows, and Lineſeed, of each half an ounce; Manna, Caſſia, of each one ounce; Agarick, Turbith, of each one dram; Oyl of ſweet Almonds, or Butter and Penedies, of each one ounce.*

Alſo this Pouder: Take *Liquoriſh, Polipody, of each two drams; Orrice, Elicampane, of each one dram; Dragon roots half a dram, Water-creſſes ſeeds and Nettle ſeed, of each one dram; Cinnamon one dram and an half, Saffron one ſcruple, Pouder of Fox Lungs two drams, Sugar half as much as all:* Or with Colts-foot water, make Lozenges with more Sugar.

This is commended highly: Take *Saffron one ſcruple, Moſch one grain,* give it in white Wine.

Pills: Take *Gum Ammoniake diſſolved in Vinegar of Squils two drams, Storax, Sagapenum, Myrrh, of each half a dram; Turpentine, boyled one dram, Spike one ſcruple, Saffron half a ſcruple,* with Honey make Pills, the Doſe is half a dram.

If therebe a Catarrh, to ſtop it and ſtupefie the ſenſe of the Breaſt, thickners and Stupefactives muſt be given of which in Catarrhes.

We may uſe this: Take *Barley cleanſed ſteep it ſix houres,* then boyl it well, that it may be diſſolved, then take *ſweet Almonds three ounces blanched, Gourd ſeeds one ounce and an half, Melon ſeeds one ounce, white Poppy and Lettice ſeeds, of each half an ounce:* beat them, and with Barley Water, make a milk, which being mixed with *two pound of the Pulp of Barley,* muſt be boyled and ſweetened with Sugar; let him drink *ten drams* in the morning in his bed, and at evening. This is an uſual Medicine with the French and Italians to ſtop Fluxes.

Alſo Treacle, Mithridate, Philonium, with pouder of Liquoriſh in the fit, or with Diapenidian or Lohoch of Fox Lungs,

Let him hold Diatragacanth in his Mouth: or, Take *the Pouder of Diatragacanth Frigid two drams, Frankincenſe one dram, juyce of Liquoriſh half a dram, Saffron half a ſcruple,* with Syrup of Violets, make Forms.

Let this Fume be taken at the Mouth but not ſuddenly, or much leaſt it Suffocate: Take *dried Colts-foot one dram, Frankincenſe, Maſtick, Storax, of each half a dram; Sulphur one ſcruple,* with Turpentine, Make Troches.

Caps and the Chamber alſo may be ſmoaked with the ſame.

Anoynt the Breaſt with looſners and concocters, As Take *Oyl of ſweet Almonds, Lillies, of each one ounce; juyce of Hyſop one ounce and an half:* Boyl them till the juyce be conſumed, add *freſh Butter, Mucilage of Fœnugreek and roaſted Lillies, of each one ounce and an half; Ducks Greaſe half an ounce, Saffron one ſcruple, white Wax a little.*

Or uſe the reſumptive Oyntment.

Apply things outward to the Stomach, if it be ſtretched with Wind, which increaſeth the Aſthma.

And to the Head to ſtop Catarrhs, dry and ſtrengthen the Head, if the Diſeaſe come from thence.

There are waſhes for the Head alſo, and hot waſhes for the Feet, do revel from the Head and Breaſt very much: Of the Decoction of Sage, Lavender, Chamomil, Elder and other hot ſweet ſcented Herbs.

Alſo Frictions are good.

And Cupping Glaſſes to the Shoulders, Thighs, often uſed to draw the Humor that flows to the Breaſt, backwards and downwards: and if they be applied under

under the Breaſts they diſcurſe the matter.

Alſo Iſſues in the Armes, Legs. And Veſicatories in the Wriſts, and Palms of the Hands, or behind the Eares. And in the middle of the Breaſt, they are excellent in all ſorts of Aſthmaes. *Aetius*, bids that part to be burnt. And others apply a Dropax.

If there be a Plethory, open a Vein.

And if the Belly be bound, uſe Clyſters that expel wind, and looſen, and Suppoſitories.

Belching and Farting are difficult without Art do help, (though ſome can ſuck in the Air and belch it out again, and kneel down with their Arſe lifted up and fart at their pleaſure) It is good to put the Finger, or a Feather into the Throat and provoke Vomiting.

In the fit let him reſt and move not, nor ſpeak much, for ſo breathing is made quicker which will perplex more. And if he lie down let his Head be very high, with divers Pillows.

CHAP. V.

Of Breathing Depraved.

The Kinds,

WE call it a Depraved Reſpiration which is evil, either too much, or diſorderly, not only without the evil, or involuntary. But Voluntary.

Reſpiration is involuntary, when Inſpiration, or Breathing in is too quick or too great, or when Expiration or Breathing out is violent or interrupted, too ſhort or too long, in divers kinds, either with divers noiſes, or with manifeſt voiding. Theſe in ſound men are from ſmal cauſes, and are but light afflictions: but ſomtimes they are greater and fortel Diſeaſes, or are conſtant, and Symptoms of Diſeaſes, and if great Excretions are voided they are referred to that Head.

Quick Breath. Often and quick reſpiration when the Air is ſuddenly drawn in and ſuddenly ſent out, may be in ſome men, and be alſo the Symptom of a Diſeaſe.

Sighing. Great Reſpiration in Sighing in which the Air is attracted with great labor and thrown out again with a lamentable ſound, may be in the ſound, and ſick.

Yawning. There is great Reſpiration in Yawning, or Oſcitation, in which the Mouth is wide opened, and the Air drawn in much, and preſently ſent out with a doleful ſound. With this Pandiculation is commonly joyned, as we ſhewed. They are both in the ſound, and ſick.

Hickets. In the Hicket thereis a ſhort and interrupted Reſpiration, the Air breaking forth with a ſound in a moment. It is in ſound people; and in ſick a dangerous accident, and holds many hours.

Neeſing. In Neeſing, there is a ſudden ſending forth of Air with more force and noiſe and a ſhaking of the whol Body. It is many times together ſomtimes, cauſing Tears and throwing out whatſoever is in the Jawes, or Noſtrils. It foreruns Catarrhs and great Diſeaſes, as the Falling-ſickneſs ſomtimes. Hence come the crying of *God bleſs you*, at that time as we ſhewed in Epilepſie. It ſomtimes follows Diſeaſes, and puts an end to them, and in ſome people it comes upona ſlight occaſion.

Coughing. In a Cough the Air is thrown out with as much force as the other, and with a noiſe but chiefly from the Mouth, it is ſomtimes long ſomtimes ſhort and returns, uſually ſending humors to the Mouth that are ſpit forth afterwards, then it is called a moiſt Cough, as that in which nothing is voided, is called a dry Cough, and it it be ſmal, *Tuſſicula*, or a Kecking. But if it be vehement it cauſeth Vomiting, Weeping, and Hoarſneſs by clamor, or takes away the Voice: And if it continue it cauſeth pain in the Breaſt and Belly by the ſhaking thereof. This Cough may be in ſome Men from outward cauſes, but in old men it is ſo uſual that it ſeems a Natural Excretion. In many Diſeaſes it is troubleſome and the chief Symptome.

Belching. There is a more ſtrong and continued ſending forth of wind in belching, in ſound and ſick, it is ſhaking or otherwiſe.

Vomiting In Vomiting, there is by ſtauing forth with great ſtraining ſomtimes without matter ſent forth, and it is the Symptom of many Diſeaſes, laſting long and much affecting.

Vociferation, Ambelation, Sufflation. There is alſo a Voluntary ſending forth of Air from the Mouth and Noſe in Vociferation or hollowing, and in Anhelation which is hot breathing, and Exſufflation which is cold breathing.

Emunction. Emunction, or blowing of the Noſe is voluntary with force and Noiſe, ſending forth Air, and Humor; with holding of the Noſe that the part being ſtrightned, the ſending forth may be more violent: or elſe the Noſtrils are open and the matter is ſnuffed out.

Spitting. We caſt out Humors voluntarily, alſo by ſpitting with the Mouth contracted that the Wind may be ſtronger. And by Hawking we fetch it out of the Jawes into the Mouth, and ſo ſquirt it forth. Theſe two are ſomtimes Symptomes of Diſeaſes. Somtimes ſound men have them from plenty of Humors in the Jaws; or from cuſtom. As when Oratours ſpet at every ful point.

Hawking.

Hoarſneſs. Hoarſneſs, is when the Voyce is rough and unequal. The Articulate Voyce or Speech is ſent forth badly, when men Stemmer in pronouncing ſome Letters: But when they cannot ſpeak them plainly it is to be referred to Speech diminiſhed, as we ſhewed in the defect of Reſpiration. But when there is no defect but they pronounce ſome Letters with a double ſound, as R. then it belongs to Depraved Speech.

Stammering.

The Cauſes.

All the Cauſes of all the Kinds of Depraved Reſpiration are from the Heart and Organs of breathing. Reſpiration, and eſpecially Inſpiration is from the Heart to get vital Spirits. And it is enlarged if there be not ſufficient Air: or when the Spirits are moved vehemently.

Affection of the mind is the cauſe of ſighs. If the Heart be deprived of Air by reſpiration intermitting, which the heart muſt have for the generation of vital ſpirits: then to recover what was loſt it fetcheth a great Inſpiration or Sigh: by which the Air being largely attracted, the Defect is made up. Reſpiration is intermitted when the mind through affection is ſo in-

tent

tent upon other things, that it forgets breathing til neceſſity conſtrains it and makes it greater.

The Cauſe of ſighing or great Inſpiration, is the too much commotion of the ſpirits of the heart, by reaſon the preturbation of mind with Pain, Oppreſſion and Suffocation, of as we may perceive in paſſions. For thereby the heart is cooled and refreſhed, as we perceive plainly in ſighing. And this is the cauſe rather, than intermiſſion, and forgetfulneſs, in regard in the night when we think of nothing we breath ſufficiently.

Vehement motion is the cauſe of quick breathing.

Vehement motion of the whole body, as Running, Climing up a hil, which diſſipate the ſpirits, is the cauſe of quick reſpiration to reſtore them, not only to cool the heart, for reſpiration may be from motion without heat.

Heat is the cauſe of ſhort breathing.

Reſpiration is quicker if the body grow hot with too much pain whereby the Spirits are more conſumed, eſpecially when the heart is hot alſo, as it may be by hot houſes, as wel as motion, alſo by violent motions of the mind, as Anger, Joy, and Feavers, in which one Symptom is ſhort breathing.

And if the Organs of breathing are burdened or provoked, the expiration is greater.

A Vapor, Idleneſs or Imagination is the cauſe of yawning.

We ſhewed in depraved motion how the Organs of breath, being burdened with vapors, and deſiring to relax themſelves cauſe oſcitation and pandiculation,

The Organs of Reſpiration being moleſted cauſe blowing or exſufflation, when any of them being very ſenſible, as the Membrane in the *Aſpera Arteria*, Lungs, Noſtrils, Mouth, Jaws, Throat, Stomach, Guts and Midriff is offended, whereby they labor to blow forth what hurts them, and then the blowing is more or leſs according to the part affected. And we ſhal now ſhew how it may come from divers cauſes, ſplendor, vapor, air, humors.

The Brightneſs of the Sun is the cauſe of ſneezing.

As a great Light as that of the Sun by diſturbing the Eyes cauſeth tears: ſo it cauſeth ſnezing, by affecting the ſenſible Tunicle of the Noſtrils with which that of the Eyebrows hath conſent, in thoſe that have thin humors or exquiſite ſenſe of thoſe parts.

A ſharp Odour is the cauſe of ſneezing.

A ſharp ſcent or vapor, as that of Garlick, Onions, Muſtard, Radiſh, cauſeth Tears and Neezing by pricking the Membrane of the Eyes and Noſe.

Air and cold Water, is the Cauſe of Coughing and Hoarſneſs.

Much cold Air drawn in, that moleſteth the Tunicle of the Jawes and rough Artery cauſeth a dry Cough with Hoarſneſs, when by binding and drying it exaſperateth and maketh rough the parts that ſhould be ſmooth and ſlippery. And then the Voice is loſt, and by cauſing a Defluxion, it may by accident produce a moiſt Cough.

Cold Water drunk much doth the ſame, and aſtringents much uſed.

Things falling into the rough Artery cauſe a Cough.

If humors or other thick bodies fall into the rough Artery (being it is of exquiſite ſenſe, and cannot ſo much as have a touch of them) a cough is cauſed, and it is greater if the things be rough or ſharp. As it is when in eating or drinking any thing goes the wrong way in at the Larynx or Wind-pipe; as it often happens to them that ſpeak when they are eating, which enlargeth the wind-pipe, Water, Wine, or a crum of bread gets in, or the like which cauſe coughing by which they are ſent out at the mouth or Noſe. Alſo duſt or pouder may be drawn into the Wind-pipe and cauſe the ſame.

Things ſnuffed into the Noſe the cauſe of neezing.

And if the like be ſnuffed or drawn into the Noſe with the breath, being ſharp and pricking they cauſe neeſing, as Pepper, Pellitory, Hellebore, or ſharp juyces. And if they get into the Wind-pipe with the Air, they cauſe coughing.

Things held in the mouth, cauſe ſpitting.

Alſo things that burn the Jaws, and prick the mouth, chewed or held therein provoke ſpittle, as Pellitory, Stavesacre, and the like.

A humor from the Brain cauſeth a Cough.

A watry humor, thin, or thick, ſimple, or mixed with choler, which is ſalt, or is chewed in a Catarrh, if it fall into the Wind-pipe, it cauſeth a Cough which is greater, according to the quantity or ſharpneſs of the humor. And it continues when the Flux continueth, and is rather diſperſed than ſent forth by coughing.

All theſe are milder when the humer is watery, and not ſharp, as when it falls at night only, and is caſily ſpit up the next morning.

A humor from the head is the cauſe of hauking.

Alſo the ſame humor falling from the head into the mouth or Wind-pipe cauſeth a hauking which brings it into the mouth and ſo ſends it forth. If it be tough and ſticketh long, it cauſeth a hoarſneſs, by making an inequality in the part which hinders the voyce, or it lies under the Tunicle and ſwels it. When filth is ſent hither from the whol body, it cauſeth a conſtant ſpitting, as after anoynting with Quick-ſilver; by which means an ulcer may be cauſed, which may cauſe hoarſneſs.

Uſe of Quick-ſilver is the cauſe of ſpitting.

An humor from the head is the cauſe of ſneeſing.

If the humor from from the head be ſharp and thin, and flow to the Noſe, it cauſeth by pricking, neeſing and often ſniffling in the diſeaſe *Coryza*: and if it continue; Inflammation, and ulcers, from the heat of the humor.

Blood falling down is the cauſe of hauking and cough.

When Blood falls into the Jaws it is hauked out: when into the Lungs it is coughed out. And if it be ſharp and about the Noſe it cauſeth neeſing which foregoeth bleeding at the Noſe.

Flegm or Gravel in the Lungs the cauſe of coughing.

Alſo Flegm in the Lungs from their crude nouriſhment cauſeth coughing whlch continues according to the toughneſs as we ſhewed in Aſthma. As alſo ſtones or gravel growing there, eſpecially if they be in the greater branches of the Wind-pipe where the ſenſe is more exquiſite, and laboureth to get forth.

Matter in the Lungs, the cauſe of a cough.

Alſo matter in the Lungs cauſeth coughing: of flegm long conteined and ripened: or of excrementitious blood without an Ulcer; for which cauſe in the Pleuriſie and Peripneumony it is gathered rather from the Inflammation of the Lungs than ſtrained through the Lungs from the breaſt which cauſeth coughing as I ſhal ſhew there: ſomtimes it comes from

from an Ulcer or Impoſthume of the Lungs, and 'tis alwaies ſpit up in Conſumptions. In all which if the matter be white, concocted and temperate, the Cough is milder, but if yellow, green, black, ſharp or ſtinking, it is worſe.

Matter and blood in the Lungs, cauſe a Cough.

Alſo the matter in a Pleuriſie and Peripneumony ſweating through the Lungs at the firſt cauſeth a Cough.

Evil Vapors cauſeth Hickets.

And Blood in the paſſion of Blood-ſpitting.

If the Midriff in malignant Feavers be troubled with evil vapors and ſtir'd to ſend them forth, it is contracted and ſuddenly relaxed, as we ſhewed in Convulſions, and cauſeth the ſame in the Hickets as we ſee in deadly Diſeaſes. And in a burning Feaver when the Midriff is dried, this cannot be, but a difficulty of breathing.

If the Midriff be wounded with the Stomach, it cauſeth depraved motion; for the Midriff lieth upon the ſtomach, and hath the ſame Tunicle with the Stomach and the Nerves, therefore it muſt needs conſent therewith: And when the ſtomach laboureth to expel any, the Midriff moves to reſiſt it, with the other Muſcles of the breaſt, as it doth aſſiſt the Muſcles of the belly to preſs down the Excrements by ſtool.

The pricking of the ſtomach is the cauſe of Hickets.

If any thing offending the inward ſides of the ſtomach only, be to be caſt off, the motion of the Hicket is ſufficient; by which the Midriff ſhakes the ſtomach, and helps the expulſive faculty, that it may caſt the matter ſticking thereto into the hollow of the ſtomach, and mix it with the reſt: And then the pricking ceaſeth, and alſo the motion of the Midriff, except the matter cleave again to the ſtomach, and then the Hickets return. The Stomach is pricked thus by ſharp things, or ſuch as burn, or are enemies unto it, as Pepper, Onions, Purges, Poyſon, ſtinks, or cholerick malignant humors there bred, or ſent thither.

Heart-burning the cauſe of Neſing.

When the ſtomach is offended by conſent of the inward Tunicle, nature ſtrives to disburden it by a ſtronger motion, which is Neeſing, by which they which have pain at the Heart are ſuddenly refreſhed, becauſe the matter is by that means ſhaken into the ſtomach.

The Cauſe of Cough and Sneeſing from ſtomach and Guts.

And by the ſame conſent not only with the ſtomach, but guts and bowels adjacent there is a dry cough: as it appears in Children that have the Worms, which cauſe a dry Cough by their diſturbing of the ſtomach and Colon, and ſomtimes Neeſing: before which the Noſe itched by the conſent of the ſame Tunicle. And in other obſtructions of the bowels, the Midriff being burdened with their weight, there is a dry Cough.

Wind the cauſe of Belching.

Belching is a ſtronger motion than Hickets for the Midriff helps the ſtomach, when it is filled with Wind to throw it out, which ſwels like the matter that cauſed it.

Trouble in the ſtomach the cauſe of Vomiting.

When the matter is more ſolid as meat and Drink and humors, there is a ſtronger motion of the Midriff and Muſcles of the breaſt by Vomiting, by which the ſtomach is not only forced but turned, by which the matter and air is ſent forth with great noiſe by an unaccuſtomed way. This Vomiting is cauſed by things in the ſtomach that offend in quantity or quality, as we ſhal ſhew in Excretion and things caſt out.

Some Diſeaſes cauſe Hickets.

Alſo the Inflammation of the ſtomach and Midriff, and other Diſeaſes that hurt them, cauſe the Hickets; And alſo great Diſeaſes of the parts adjacent.

Diſeaſes are the cauſe of Hoarſneſs.

Preternatural Tumors and Ulcers in the Chaps, cauſe hoarſneſs, as we obſerve in the Leproſie and French Pox.

The Tongue diſordered is the cauſe of ſtammering and Wharling.

It is commonly from the Birth, that the Tongue is ſo diſordered that it cannot pronounce R. but like a double R. the Tongue is bent or otherwiſe. The cauſe of ſtammering is ſhewed in the Defect of Reſpiration.

The Cure.

Some kinds need no Cure, others are mentioned in other places.

The cure of Short-breathing.

If it come from ſtrong motion, there muſt be reſt, or by a contrary motion, as when it comes from aſcending, to deſcend.

If it come from paſſion, when that is paſt, the motion of the heart is paſt.

If from outward heat, cooling abates it, &c. In Feavers.

Sighing.

If it come from diſturbance of the mind and be often, it ceaſeth with it. Sighs ſhew the greatneſs of the Diſeaſe in the Mind, Head, or Madneſs. In other Diſeaſes when the mind is not diſturbed, often ſighing declares Puſillanimity or ſtrength loſt.

Concerning Yawning.

If it come not from wearineſs or want of ſleep which is natural, and be often, it foretels a Feaver or Ague as we ſhewed in Pandiculation which accompanieth it. It is cauſed by Imagination, eaſier in lazy people than in Active.

The cure of Hickets.

If Hickets be in acute Feavers and continue, it threateneth Convulſion, becauſe the Midrif is greatly affected, and death. If it come from the Stomach much offended with Hellebore, Poyſon or corroding things, or a great Diſeaſe, or Inflammation, it foretels the ſame from other cauſes; it is eaſily cured.

In the cure, firſt remove the cauſe as the Inflammation in a malignant or ſharp Feaver, if from the ſtomach being pricked lenifie it. And in all cauſes ſtop the inordinate motion of the Midriſe which comes by the Hicket. They are done by theſe following, as the cauſe is ſharp, hot, cholerick, biting, malignant, or cold and flegmatick.

If the cauſe be in the Stomach, Vomiting is beſt, for the Midriffe in the Hicket helpeth the ſtomach to expel together with the Muſcles of the breaſt.

The Vomit muſt be ſuch as cleanſeth, and allayeth ſharpneſs and heat, thus. Take *ſyrup of Vinegar and Oxymel ſimple, each ſix drams; Oyl of ſweet Almonds two ounces, with Water of Nuts or Decoction of Raddiſhes,* give it.

It muſt be repeated, if the Hicket ceaſe not, and ſtronger given ſuch as are mentioned.

Alſo purge. And if the Humor be tough, prepare it with Cutters and Cleanſers, as Juleps, Wormwood-wine, which is good both in a cholerick and flegmatick Humor.

Stomach Purges are given for this as Hiera &c. in the Diſeaſes of the Stomach. As in a hot Cauſe: Take *Wormwood one dram, Senna three drams, Rhubarb one dram,* Infuſe them in Wine, let them boyl and be ſtrained.

In a cold Cauſe: Take *Agarick, Turbith, of each one dram; Ginger half a dram, Sal Gem ſix grains, Hiera two drams Diagrydium one ſcruple,* with *Oxymel* make a Maſs, give *one dram.*

Theſe may be repeated if the Diſeaſe return.

Theſe following ſtop the Hickets, cleanſe the Humor, and Lenifie the Stomach, and after ſtrengthen.

In a hot cauſe when the humor is ſharp and burning, or in a diſtemper or emptineſs, theſe following are good.

Broath in great quantity and often, Ptiſans, cold or hot, water in great quantity, Oyl of ſweet Almonds.

Or, Take *juyce of Pomegranats half an ounce, Vineger two drams, Maſtick, dried Mints, of each half a dram;* Let him drink it.

Or other ſharp Syrups.

In a cold Flegmatick Cauſe: Take *Galangal, Ginger, of each half a dram, Spaniſh Wine one ounce and an half, Cinnamon water half an ounce:* Or thus, Take *Galangal three drams, dried Wormwood and Mints, of each two drams; Spike, Marjoram, Dill and Carva ſeed, of each one dram; Cinnamon, Cloves, of each half a dram;* Steep them in Wine.

Alſo: Take *Aqua vitæ one ounce,* infuſe *Cinnamon and Galangal, of each one dram;* ſhake it often.

Or this Electuary: Take *Acorus, that is, Calamus Aromaticus and Candied Ginger, of each one ounce; conſerve of Marjoram half an ounce, Powder of Galangal one dram,* with *ſyrup of Mints.*

Or theſe Pills: Take *Caſtor half a dram, Mumie one ſcruple, Maſtick half a ſcruple, with Honey of ſquils:* make a Maſs, for two Doſes.

We alſo allay the ſenſe of the Stomach with Treacle Methridate, powder of Tormentil, and of it come from Poyſon, they do good againſt the Hicket And other Antidotes. You may give other Narcoticks if it hinder Sleep.

And Clyſters to revel downwards, and Suppoſitories, that Nature may rather ſend downwards then upwards.

The ſmel of Dill boyled with Maſtick ſtaies the Hickets.

Neeſing Cures Hickets, becauſe the matter offending is ſent from the Stomach and Midrif by a greater force.

Waſh the Mouth with cold Water and Gargle.

Apply things outwardly to the Stomach, as this Fomentation: Take *roots of Elicampane three drams, Mints, Wormwood, Spike, Dill, Pennyroyal, Calamints, of each one handful; Lavender, Roſemary and Cammomel flowers, each one pugil, Cumin, Carua, Dill ſeeds, of each one dram; Bay and Juniper berries, of each half an ounce; Maſtick two drams;* Boyl them in Wine to foment the Stomach before.

Alſo hot Aſhes with Aqua vitæ and Sack put in a bag or bladder and applied to the Stomach.

A Fomentation with Roſe Vinegar and a Spunge is good in a hot cauſe.

Anoynt the Stomach before and behind with looſning Oyls and after with Aſtringents.

Or apply this Bag: Take *Carva ſeeds half an ounce, Ammi and Dill ſeeds, of each two drams; Galangal, Cloves, of each one dram; dried Mints two drams, Maſtick, Frankincenſe, of each one dram; ſprinkle them with Roſe Vinegar.*

Emplaſters alſo, in a hot cauſe the Cerot of Sanders, Unguent of Roſes, of each one ounce; Maſtich half an ounce, Citron peels and Quince, of each one dram; with juyce of Houſeleek and Turpentine, make two Emplaiſters for the fore and hinder ſide of the Stomach.

It is good to waſh or bath the Hands and Feet in hot water.

And to bind the outward parts.

Apply Cupping-glaſſes firſt to the Shoulders and Navel, and then to the Stomach before and behind.

If you hold your breath, it ſtops the motion of the Midrif and abates the Hicket.

Or, Swallow down ſuddenly water or gulp divers times without it. Or, if you hollow and roar or runn, it cauſeth more breathing and then the Muſcles of the Breaſt with the Midrif help the Stomach to expel what is hurtful.

Alſo ſudden paſſions of the mind by calling in the ſpirits, take it away by frighting or noiſe or the like. And chiefly by daſhing the Face ſuddenly with Water.

Dioſcorides, Teacheth that *Alyſſon* held in the Hand ſtops it.

The cure of Neeſing.

Neeſing is ſomtimes, a good ſign and in ſound people ſends forth that which troubleth, and in the declining of a Diſeaſe ſhews recovery. Sometimes it is a ſign of a diſtillation coming or Epilepſie in thoſe that are addicted to it. None of theſe ought to be ſtopped. But in bleeding at the Noſe, and in Ruptures, becauſe it provoketh the Gut down, and in Diſeaſes of the Eyes becauſe it cauſeth tears, and ſends blood thither and other Diſeaſes, in which it increaſeth pain, it is to be ſtopped. As alſo when it is ſo immoderate and continual that it cauſeth Head-ach, and diſperſeth the ſpirits.

It is then ſtopped by things that purge Excrements from the Head, if it come from the Flux of them into the Noſe as ſhall be ſhewed in *Coryza.*

They ſay the Decoction of Baſilicon ſtops it.

Palliate the Noſtrils, with the Vapor of warm water, and anoynt them with Butter, Milk, Oyl, Oyl of Gourds, Poppies, Henbane, and with the white of an Egg and Mucilages. All freſh.

The ſmel of Narcoticks, as of Opium, Oyl of Roſes or Willows, repreſeth the ſharpneſs of the Humors. As the ſmel of ſharp things raiſeth it.

Oyls, as thoſe of ſweet Almonds, Dill, Chamomil, Roſes, Willows, Gourds, and juyce of Baſilicon, are good to be put into the Ears.

And the Decoction of Baſilicon to waſh the Head. And Chamomel flowers in the Pillow. Foment the Breaſt to ſtrengthen the Muſcles with this: Take *Chamomel flowers two pugils, Melilot and Baſil flowers and Bran, of each one pugil;* put a ſtupe into the Decoction and Foment the Breaſt with it Squeezed.

Uſe Frictions, and Ligatures of the extream parts. preſs and rub the Ears and Eyes, and pul the Noſe, rub the Palate with the Finger and Comb the Head.

Holding of the breath as it Cure the Hickets, ſo doth it Neeſing, if the Noſe and Mouth be ſtopped.

Alſo frighting will Cure Neeſing, as ſoon as Hickets.

Strong drawing in of the breath doth ſtop Neeſing, which when the vulgar ſmel unto Bread, they impute to the ſent thereof.

Sleep

Sleep alſo ſtops it.

And darkneſs, as light increaſeth it. Therefore after a Cataract is couched they are kept a while in the dark, and you may do ſo in other Diſeaſes unto which Neeſing is an enemy.

Let the Head be laid high.

The cure of a Cough. If there be great Diſeaſes with a Cough look for the Cure in them. As in *Dyſpnæa* and Aſthma. When blood or matter is ſpet, ſee in *Hæmoptoica Paſſio*, Pleuriſie, Peripneumony, Phthiſes. And for the Cure of that which comes from the fault of Natural parts, in other places. But that Cough which is alone, is to be judged by the diverſity of the Cauſes, and to be ſo Cured. If it come from things fallen into the wind Pipe, then if they be not choaked as we ſhewed in *Dyſpnæa*, the Cough ceaſeth when they are caſt out. And if there be provocation in the jaws after, uſe the Lenitives following. If it come from cold, only uſe actual and potential heat, and Lenitives, and they will eaſily Cure. If it come from a thin Defluxion ſharp and ſalt, the Cough is troubleſome, provokes much, and it is not voided by coughing but diſperſed only, neither doth it ſtop till the Catarrh is gone, and the matter be thick and concocted, and then it is eaſily voided, and the Cough abates. If it come from thick Flegm fallen down or otherwiſe it is hard to be cured, if new matter ſtil come, after the old is voided.

In the Cure of both Coughs that come from Excrementitious Humors; we keep Humors from flowing, and ſtop them. And we ſtudy to expectorate that which is the conjunct Cauſe and Lyes in the Breaſt; by thickning it if thin; by cutting if it be thick; by concocting both and a little blunting the exquiſite ſenſe. And theſe chiefly correct this Symptom of Cough.

Thus give Juleps to prepare before evacuations, and after to expectorate, if the Humor be thin and ſharp, for three daies: Take *Syrup of Jujubies and Violets, of each one ounce and an half, Honey of Roſes, Syrup of Poppies, of each half an ounce, water of Coltsfoot and Violets, of each four ounces*: Make a Julep.

Or this Decoction: Take *Jujubes, Sebeſtens, of each twenty, Prunes ten, Clean-barley half an ounce, Liquoriſh one ounce, Violets two pugils, Roſes, one pugil*: boyl them, add *Penidyes one ounce for three doſes*.

If the Humor be thick and cold. Take *Syrup of Liquoriſh one ounce and an half, of Hyſop, Oxymel ſimple, each one ounce; Water of Bettony, Horehound, Hyſop, each three ounces*. Make a Julep.

Or this Decoction: Take *Liquoriſh one ounce, Elicampane two drams, Raiſons ſtone, twenty pair, Figs ten, Dates five, Anniſeeds two drams, Fennel ſeed one dram, dried Hyſop two drams, Maiden hair, Coltsfoot, of each one dram*: Boyl them, and add *Honey two ounces*, for three or four Doſes.

If the Cough come from a Deſluxion give Purges, but not too ſtrong leaſt, you increaſe the Deſluxion, therefore mix Aſtringents.

If the Defluxion be thin and hot thus. Take *yellow Myrobalans two drams, Rheubarb four ſcruples, Agarick one dram, Spike ſix grains*: Infuſe them all in white Wine, ſtrain them and diſſolve the Electuaries, of the *juyce of Roſes one dram, ſyrup of Roſes ſolutive one ounce*.

Or give *half a dram of Aggregative Pills, and one ſcruple of Pill Aureæ*, Mixed with Wine.

In a cold thick Humor purge thus: Take *Agarick one dram, Turbith half a dram, Spike half a ſcruple, Ginger one ſcruple*; Infuſe them in Wine and Honey, ſtrain them and diſſolve *Diaphœnicon two drams, Honey of Roſes ſolutive one ounce and an half*.

Or with Pills: Take *Pills of Agarick two ſcruples, Cochy one ſcruple. With Wine, or Cinnamon water*, Make Pills.

If the Body needs more Purging, give this Decoction three or four mornings: Take *Liquoriſh two ounces, Orris one ounce, Elicampane half an ounce, Horehound, Coltsfoot, Hyſop, Betony, of each one handful; Annis, Fennel ſeeds, of each two drams; Raiſons twenty, Figs ten, Dates five, Carthamus and Senna, of each one ounce and an half*: Boyl them in Water and a little Wine, infuſe at the end *Agarick three drams, Turbith two drams*, ſtrain them, add *Honey of Roſes four ounces*; Boyl them a little and ſtrain them, and let him drink it.

Keep the Body looſe and Purge ſomtimes.

This Electuary is the beſt Lenitive: Take *Raiſons one ounce and an half, Currans one ounce, Sebeſtens fifteen, Figs twelve, Dates five, Caſſia new drawn one ounce and an half, Tamarinds one ounce*, Steep them and Boyl them in white Wine, make a Pulp, and add to it *Manna three ounces, ſyrup of Violets and Roſes ſolutive, of each one ounce*; boyl them a little, give a ſpoonful or two before Supper.

When we will gently Purge and ſtop the Catarrh alſo; Take *Agarick two drams, Maſtick and Frankincenſe, of each half a dram, with juyce of Hyſop make a Boly. Take half a dram at night, or take one ſcruple of Maſtick Pills*.

If you will have them ſtronger: Take *Pill Aſiaret, Agarick, Rhubarb of each one dram; Frankincenſe, Maſtick of each one ſcruple, Saffron half a ſcruple, with ſyrup of Poppyes*: make a Maſs, give *half a dram* at Bed time.

It is good in Deſluxions when they continue to ſwear after purging.

Alteratives ſhall be declared which ſtay the Catarrh, if it cauſe a Cough with their healing and drying quality rather then with aſtringing: and which Expectorate, by thickning if the humor be thin, by cutting if it be thick, by cleanſing if it ſtick; alſo to Lenifie the paſſages and ſtupefie; many whereof were mentioned in Aſthma eſpecially to cut and cleanſe.

The ſolid forms for a Cough, are to be held long in the Mouth: and they ſtop the Catarrh from falling to the Wind-pipe, and mix with the ſpittle: or to be chewed, as troches, little things like Lupines, or Tablets, dry, like Pills to be held under the Tongue, at bed time, for in ſleep they are held better, and are not preſently Swallowed down when Melted. Theſe may be alſo held in the Cheeks where they hinder not the Speech and get into the Wind-pipe better when you ſpeak.

The root of Liquoriſh is ſo held and chewed which Lenifieth and cleanſeth, and the juyce thereof; but it is a little unpleaſant alone.

Sugar Candy, eſpecially that ſticks to the Glaſs where ſyrup of Roſes or Violets are kept is alſo good for the ſame.

The white Troches called *Bechici*, are more uſual.

But the red are better by reaſon of the Bole, or theſe. Take *the beſt Bole one dram, Maſtick, Starch, of each half a dram, Spike, Gum Traganth, Arabike, of each one ſcruple; Camphyre two grains, Penidies and Sugar Candy, of each two drams, with Mucilage of Fleabane*, make little Balls.

The black are Compounded of juyce of Liquoriſh, with Storax, &c.

There are yellow Troches alſo, very pleaſant and good. Take *Starch three drams, Liquoriſh two drams, Elicampane, Orris, of each half a dram; Angelica half a ſcruple, Saffron ſix grains, Penidies and Sugar-candy, of each two ounces*, with infuſion of Gum Traganth, make Troches; add *Oyl of Annis ſeeds two drops*.

The

The uſual Lozenges, are Diatragacanth Frigid: Diapenidion without the Species, Sugar of Roſes in a hot cauſe. In a cold, Diaireos ſimple, and Solomonis Diatragacanthum Caliduin, &c.

A Linctus, or Eclegma, is uſual for a Cough, becauſe it goes down by degrees, and comes to the breaſt, it is to be taken with a Liquoriſh ſtick.

In a hot cauſe, Lohoch of Fleabane, Marſh-mallows of Mucilages; in others Lohoch Sanum, of Pine-nuts, of Fox Lungs, Coltsfoot, and Coleworts.

Many are made without Pouders and Lenifie more.

Others are Unctious, and the better for that, to which things of other vertue are added; And this kind is good for Children, becauſe it ſmels like meat, and is ſweet.

Junkets of Butter or *May* butter, are uſual in *Germany* and very good taken by little or licked, Take *Starch one ounce*, diſſolve it in Milk, boyl it to a pultis, add *freſh Butter four ounces, Sugar a good quantity*, when it is cold it grows hard.

An Eclegma of Oyl excellent for a Cough. Take *Oyl of ſweet Almonds new drawn one ounce, Sugar-Candy half an ounce, Mucilage of Fleabane made with Roſe water half an ounce*, lick it often.

This Mucilage is Lenifying: Take *Mucilage of Line-ſeed, Fenugreek, Fleabane, Quinces, all made with Roſe water one ounce and an half, Penidies one ounce: Infuſion of Gum Traganth, in Roſe water, or Cinnamon water, half an ounce, Sugar-candy, or Penidies* as much as will make a Linctus.

This is good to Lenifie and looſen the Mouth and Belly: Take *Caſſia, Manna, of each three drams; Penidies and Sugar-candy, of each two drams; Oyl of ſweet Almonds and freſh Butter, of each as much as will make a Lohoch.* Of which let much be taken if you will Purge much.

Or, Take *Turpentine one dram; one yolk of an Egg, freſh Butter two drams, Honey half an ounce*: Mix them, lick it.

Syrups and Robs are made of Decoctions and juyces for to be licked. Syrup of Myrtles is moſt uſual.

Alſo of Violets, Jujubies, in a hot cauſe, in another, of Liquoriſh, Maiden hair, Hyſop.

The Rob or thick juyce of fruits boyled is uſed inſtead of Honey, which in a thin Defluxion moveth it too much. Or uſe this, Take *Liquoriſh, Peaſe ſhels, of each three ounces; Raiſons, Currants, Figs, of each four ounces; Prunes ten, Jujubies, Sebeſtens, of each twelve pair*: boyl them tel the fruits are diſſolved, ſtrain them and boyl them to a Rob.

Or thus of Juyces: Take *juyce of Coltsfoot, red Cole, Purſlain, of each one ounce; juyce of Horehound, Hyſop, Sage, of each half an ounce; juyce of Liquoriſh two drams, Sugar and Honey, of each three ounces*; Boyl them to a Syrup.

Or of a Decoction in a cold cauſe: Take *Liquoriſh, Marſh-mallows, of each one ounce and an half; Elecampane, Orris, Fennel, of each one ounce; Angelica two drams, Comfrey half an ounce, Maidenhair, Hyſop, Pennyroyal, of each one handful; Horehound half a handful, Annis ſeed one ounce, Fennel ſeed half an ounce, Line ſeed three drams, Fenugreek two drams, Violets and Roſemary flowers, of each one pugil; Peaſe ſhels cleanſed two ounces, Raiſons ſtoned three ounces, Figs twelve, Jujubies and Sebeſtens, of each ten pair*; Boyl them, ſtrain them, and add *Honey and Sugar, of each four ounces, and a little Cinnamon*; Boyl it to a Syrup.

Thoſe that have Pouders, if they be not finely ſifted will cauſe coughing. They are diverſly made.

As of Seeds and Roots thus: Take *Line ſeeds, Fenugreek, of each a dram; Nettle ſeed, Bryony root, Marſh-mallows, Orrice, Elecampane, of each half a dram; Gum Traganth one ſcruple, juyce of Liquoriſh diſſolved in Oxymel one dram*: Make a Lohoch.

Or of Fruits ſtoned: Take *ſweet Almonds, Pinenuts, of each an ounce; Gourd and Meton ſeeds, of each half an ounce; Penides and Sugar-candy, of each an ounce; Manna half an ounce, with ſyrup of Violets, or Liquoriſh*: Make a Lohoch.

This of Sulphur is good: Take *the beſt Sulphur one dram, Orrice half a dram, Sugar-candy one dram and an half*: Make a pouder, let it be licked, or taken with a rear Egg.

For Compound Pouders. In a hot cauſe: Take *pouder of Diatraganth frigid, Diapenidies without ſpecies, of each one dram; Lohoch of Fleabane, Coltsfoot, of each half an ounce; Penides and Sugar-candy, of each ſix drams; Mallows and Cotten ſeed, of each half a dram; Line ſeed one dram, Liquoriſh one dram and an half, with ſyrup of Jujubies*: Make an Eclegma.

It is good to give things with Meat and Drink for a Cough, though they work leſs, becauſe they mix with the ſpittle, and leave their Vertues therewith.

Alſo to Eat Figs, Raiſons, and Prunes.

It is a uſual Medicine for a Cough, to ſteep Figs in Aqua vitæ, and then dry them and after eat them.

Alſo Almonds, Pine and Piſtach nuts alone, or candied, March pane and other ſweet Meats alſo, and the junkats mentioned of Butter.

Alſo Meats of Barley, and Oats, and of Beans, ccording to *Dioſcorides*.

Eſpecially Barley and Almond Milk is excellent to ſtop a Catarrh, as we ſhewed in Aſthma.

Or this, taken ſome ſpoonfuls towards bed: Take *Barley Meal, Starch, of each half a diſhful, two whites of Eggs beaten*: Boyl them with Milk, and add *Sugar*.

Alſo a roaſted Onyon with Butter and Sugar, or filled with Treacle and roaſted and the juyce taken out and mixed with Sugar-candy to be licked. Alſo Leek Pottage are good.

And Radiſhes with much Oyl, a little Vinegar and Honey.

Eggs alſo rear dreſſed with freſh better and but a little Salt, for it provokes coughing.

Spinach and Rocket buttered.

A meat made of Egs boyled Wine and Butter, or Egs, Wine, Sugar, and Butter, which the Dutch call *Beanwarm*, that is *Warm-bones*.

Alſo warm Milk drunk with Penidies or Sugar-candy.

A Medicine wel of ſented, ſharp Apples, is excellent, and for to reſtore the ſtrength alſo in other Diſeaſes: Take *ſound Apples ſliced round*, Lay them upon ſticks in an earthen Veſſel in a Wine-ſeller, ſprinkle *Sugar-candy* thereon: Take *of the juyce that you ſhall find in the Veſſel which fel from the Apples two ounces, Aqua vitæ, Roſewater, of each one ounce; Oyl of Cloves and Cinnamon, of each two drops*: Mix them, and give a ſpoonful or two often.

Another Lenifying Decoction: Take *Raiſons, Peaſe ſhels, Liquoriſh, of each two ounces; Jujubies, Sebeſtens, of each ten pair; Barley clenſed one ounce*: Boyl them, ſtrain them, and Clarifie them, let him often drink a draught, you may add *Sugar* and *Honey*.

Another to Expectorate: Take *Hyſop, Pennyroyal, Maidenhair, Cole worts, of each one handful; Figs ten, with Honey*: Boyl and ſcum and ſtrain them, drink it.

Or thus. Take *Line-ſeed, Fœnugreek bruiſed, each two drams; Aniſe and Nettle ſeed, each one dram; Baſil ſeed half a dram, Liquoriſh, Marſh-mallows, each half an ounce; Pennyroyal, Goldy-locks, each one handful and an half; Mallows, Violets, each one pugil; Figs ten, Dates five,* boyl them and add *Honey* and *Syrup of Liquoriſh.*

This is good againſt a Catarrh. Take *Frankincenſe, Maſtich, each one dram; Liquoriſh one ounce, Raiſons ſtoned ten pair, Figs five pair, Jujubes, Sebeſtens, each ſix pairs* boyl them, add to the ſtraining *Penidies,* for a Drink.

Wine with things infuſed or boyled, eſpecially that of Elicampane is good, boyled thick.

Wine wherein Juniper berries are boyled is good for a Cough in Children, and it is ſtronger with Hyſop and Mother of Time.

Alſo the flowers of Gourd dried and boyled in Wine. And of bitter things, Take *Elicampane half an ounce, Orris, Squils prepared, each two drams; Horehound, Carduus, Germander, Sage, Pennyroyal, Pauls Bettony, each one handful;* ſteep and boyl them in *Wine.*

Some drink pouder of Ginger in Wine, at nights, in Winter. And if the Cough be of Cold it muſt do good: And becauſe it heats the mouth, and the virrue is carried by conſent to the Lungs it expectorateth. And *Dioſcorides* commends Pepper.

Brandewine is good with Sugar-candy, alſo the ſame burnt while it wil flame, and ſo brought to an Oyl.

Some commend the eſſential Oyl of Sugar thus made. Put four ounces of Sugar often waſhed with Sack, and dried, into a Glaſs; lute it wel, ſet it in the Sun or Aſhes over the fire, and ſublime the Sugar, which wil make a noyſe. This take out, and put it in the hard boyled whites of Eggs, and place them in a Wine-celler til you have a cleer Oyl. One ſpoonful of this ſwallowed by degrees is excellent.

The water of Pauls Betony or, Pouder of it with Sugar is good.

Alſo new drawn Oyl of ſweet Almonds.

That which ſtops the Catarrh, expectorateth, and taketh away the provoking to cough by ſtupefaction, is excellent.

As Diacodium at bed-time, or ſyrup of Poppies, or Lohoch of Poppies.

Or thus, Take *Syrup of Poppies or Diacodium one ounce, Syrup of Jujubes one ounce and an half, Mucilage of Fleabane ſeeds half an ounce,* make a *Lambitive* or *Linctus.*

Or this. Take *Garden Poppy heads almoſt ripe three ounces, Peaſe ſhels, Liquoriſh, each one ounce and an half;* boyl them, add *Penidies* and *Sugar-candy, each four ounces;* boyl them to a Conſiſtence, let it be licked at night.

Or, Take *Lohoch of Poppies one ounce, Lohoch of Fleabane half an ounce, Pouder of Diatragacanth frigid. one dram, Henbane ſeed half a dram, Bole one ſcruple, Penidies half an ounce.*

Some write for a ſecret that red Poppy water and Sugar-candy drunk at night is excellent.

Alſo Pils of Hounds-tongue or Storax are taken one or two of ſix grains in weight at bed-time.

If you wil uſe them often; Take *Storax, Myrrh, Frankincenſe, Galbanum, Spike, each one ſcruple; Saffron, Opium, each five grains;* mix them with *Honey* for *Pils:* let him hold one of half a ſcruple in the mouth, and if it doth not help take one ſcruple at bed-time.

Errhines are put into the Noſe, to bring the Catarrh into the Noſe. And clyſters to draw it downwards, of which ſee in Catarrhs. Maſticatories and Gargariſms which draw rheum to the Mouth cannot be good fumes to dry the Brain, taken in at the Mouth and Noſe, do reach the Lungs and Brain, and dry both.

Let him take into his mouth the hot vapor of this Decoction. Take *Maſtich, Frankincenſe, each one dram and an half, Salt two drams, Sulphur one dram, Calamus three drams, Colts-foot, Horehound, each one handful;* boyl them in water and take up the vapor by a Funnel.

A Fume from things burnt is ſtronger, if it be not in great quantity or ſharp. Take *Colts-foot dried half an ounce, Schœnanth, Storax, each two drams; Maſtich, Frankincenſe, Myrrh, each one dram; Henbane ſeeds half a dram,* with *Turpentine,* or *Infuſion of Gum Traganth* in *Roſe-water* make *Troches.*

Some things are applied to dilate the breaſt, and to allay its pain, and to concoct the matter.

In a hot caſe this Oyntment. Take *Oyl of Violets one ounce, Oyl of ſweet Almonds, ſweet Butter waſhed in Violet water, Hens greaſe, Mucilage of Fleabane made with Colts-foot water, each half an ounce.*

In a Cold this. *Oyl of Lillies, wall-flower, each half an ounce; Mucilage of Time and Fœnu-greek ſeed each half an ounce; Orris half a dram, Saffron one ſcruple,* with *Wax* make a *Liniment,* ſee the reſt in *Aſthma.*

Alſo the Reſumptive Oyntment.

An Emplaſter of Lillies and Onions boyled, and butterred.

And this Epithem warm. Take *Oyl of Cammomel, Violets, each one ounce and an half; Milk or cream of Almonds, made with Barley water wel boyled four ounces,* dip *Clouts* ſtrain and apply them.

Keep the Breaſt warm.

Uſe ſpiced Caps or pouders to the Head, waſh the Thighs with warm water to divert Catarrhs, in which Head herbs have been boyled. And when the Cough is hot, or ſleep is wanting, uſe cold herbs.

Apply Garlick and Bears greaſe to the feet, it is accounted an Oyntment that cureth.

Ligatures alſo, Cupping Glaſſes, Cauteries, are good to revel, as we ſhewed in a Catarrh.

Holding of the Breath ſtaies Hickets and Neeſing, and alſo Coughing; not becauſe then a greater heat is raiſed in the breaſt, but for the cauſe mentioned in Hickets.

Warm Air is beſt when the Cough is from Cold.

A hot houſe is good, becauſe Sweating after purging is proper.

Let him take heed of a cold Air and the North-wind, and a moiſt or Night-air or Weſtwind: the Eaſt aſtringeth. Alſo from the Head being inflamed with the Sun.

It is hurtful to lie with the Face upwards, becauſe ſo the humor fals ſooner into the mouth, except it be when you take Pils in the mouth.

Faſt ſometimes or eat little, exerciſe gently, ſleep moderately, and they wil hinder the increaſe of humors.

The Cure of Hoarſneſs.

If Hoarſneſs come from a Tumor or Ulcer of the Jawes, it muſt be cured as I ſhal ſhew in its proper place; for that being cured, the hoarſneſs ceaſeth: but if that be not cured, or ſo cured that there remaineth unevenneſs, the Hoarſneſs is uncurable. As I have known many from Leproſies and the Pox to be ever hoarſe. If it come from cold and drineſs, it is cured by warm, moiſt, and ſuppleing things. If it come from a Defluxion, after ſpitting of the humor up, it ceaſeth. But if the Defluxion return or the humor ſtick faſt, uſe things mentioned for a Catarrh. But for expectoration, it is beſt here to uſe Clenſers and Lenifiers ſuch as are mentioned there, to which I ſhal add theſe following choice things.

Myrrh held in the Mouth til it diſſolves is excellent.

Alſo the Infuſion of Gum Traganth in Violet or Roſe-water.

Hot Milk with the white of an Egg or Mucilage is good for a Gargle.

A raw Egg is experimental; but a rear Egg is better, becauſe there is nothing from beaſts eaten crude, but it is nauſeous, except Milk.

Boyled Snailes alſo by reaſon of their ſlimineſs, but they without Salt, are not eaten pleaſantly, nor Eggs.

Alſo buttered Leeks, Coleworts and Arrach.

Alſo crude Purſlane doth wonderfully take away roughneſs not only of the Teeth, but Jaws: And it is good boyled.

Alſo Cubebs beaten with Raiſons: eſpecially when it is from cold.

Juyce of Liquoriſh held in the Mouth.

Juyce of Coleworts boyled with Honey.

Oyl of ſweet Almonds, Freſh Butter.

Mathiolus commends the water of *Phyllitis*.

Theſe Compounds are alſo good. Take *Myrrh, Frankincenſe, Sugar-candy, each equal parts*; with *Mucilage of Gum Traganth* make ſmal *Troches* like *Lupines* to be held in the mouth.

Or thus. Take *Turpentine two drams*, diſſolve it with the *Yolk of a ſmall Hen-egg*: add *Orris, Myrrh, each half a dram*; *Cubebs one ſcruple, meal of Orrobus and Starch, each two drams*; *Pendies half an ounce, Honey* to make a *Lohoch*.

Rondoletius commends the Pils of *Benzoin*, and *Heli-dæus Avicens* Pils to be held in the Mouth.

Lobel ſaith that with this Syrup he cured Women that had been ten yeers Hoarſe. Take *Eryſimum or wild Muſtard with the roots ſix handful, Elicampane and Colts-foot green, Liquoriſh, each two ounces*; *Borrage, Succory, Maidenhair, each one handful and an half*; *Cordial flowers, French Lavender, or Bettony flowers, each half a handful*; *Aniſeed ſix drams, Raiſons ſtoned two ounces*: boyl them in *Barley water* and *Honey*, add *Juyce of Water-creſſes ſix ounces*: add as much *Sugar* to *two or three pints* of the ſtrained Liquor as wil make a *Syrup*.

Or this. Take *Liquoriſh two ounces, Marſh-mallow roots green three ounces, Orris, Galangal, each half an ounce; Eryſimum three handful, Colts-foot, Coleworts, Arrach, Mallows, Purſlain, Green, each one handful*; *Mallows, Violets, each one pugil*; *Gourd and Melon ſeed, each half an ounce*; *Cotton ſeeds one dram, Barley and Beans, each one pugil*; *Raiſons ſtoned twenty pair, Cubebs one dram*, boyl and ſtrain them, and with *Honey* or *Sugar* make a *Syrup*.

Or this Gargle. Take *Liquoriſh and Marſh-mallows, each two ounce*; *Mallows with the roots one handful, Beans, Orobus beaten, each one pugil*; *Raiſons ſtoned twenty pair, Figs, Jujubes, Sebeſtens, each ſix pair*; *Myrrh, Frankincenſe each three drams*; boyl them and with *Honey* or *Sugar* make a *Gargariſm*.

The Cure of other kinds of Depraved Breathing.

Belching, Vomiting, Snorting, Spitting, Hauking: if they be preternatural ſhal be treated of in Excretion, here they are mentioned only for order ſake.

Whooping, Panting, and Breathing or blowing hot do little hurt of themſelves; ſo that we neither mention further their Cauſes or Cure. We mentioned in the Kinds what was different from natural Reſpiration.

CHAP. VI.

Of the Defect of Swallowing or paſſage by the Throat.

The Kinds,

WE ſay the paſſage through the Throat is wanting or defective, when things cannot go downward or upward as they ought ſomtimes.

Difficuly of Swallowing.

Sometimes they cannot ſwallow or it is with difficulty. And the hinderance is the greater, becauſe the action is natural and uſual. And then there is ſomthing appears in the Jaws, or there is pain; ſometimes there is a defect of ſwallowing without a Palſie or Convulſion, as we ſhewed in Impotent motion.

Somtimes things cannot be ſent upward, or with much difficulty. And though this be not natural or uſual, yet it is ſomtimes neceſſary, and it hinders if it be not. It is either when by nature they can neither Vomit nor Belch.

Hinderance of Belching

Somtimes there is a deſire to Belch and it is troubleſome if it cannot be; but the paſſage is ſtopt, and there is a burning of this in a *Cardialgia*.

Difficulty of Vomiting.

A deſire or endeavor of Vomiting is called *Nauſea* or Loathing, and not only ſome things are loathed, but they feel the ſtomach troubled and provoked to Vomit, and the Rhewm ſent to the mouth, and yet nothing is voided. This is worſt for them that are uſed to vomit at certain times, becauſe it is to them natural and the ſuppreſſion thereof is troubleſom.

The Cauſes.

The Cauſe of the Defect of theſe motions in the paſſage of the Throat, is either in the part that communicates the force of motion, or in the Inſtrument, the Gullet or Stomach.

The diſtemper of the Nerves is the cauſe of difficulty of Swallowing

Difficulty of Swallowing followeth from the Reſolution and Convulſion of the Nerves of the ſixth and ſeventh Conjugation, that come to the Muſcles of the Jawes (which *Fallopius* ſaith cauſe the firſt ſwallowing not the hairs in the Gullet) and comes from the ſame Diſeaſes with Convulſions of other parts; and then it is a kind of ſymptom of the Stomach if it be from a wound, or of a Palſie or Convulſion; as was ſhewed in impotent motion. If it come from a Palſie it is harder to ſwallow down liquid things than ſolid. And from the affliction of the ſame Nerves, in ſome Palſies they cannot ſpeak plain, or cough, or vomit, though Nature force without danger of being choaked.

When the paſſage is ſtopped in the Gullet and ſwallowing hindered: which they ſay comes from the relaxing of the tufts as I ſhewed in the Muſcles thereof: but becauſe the Gullet moves not of its own accord, by its own villi or hairs but by the Muſcles of the Jaws, as we ſhewed this cannot be granted. The Cauſes

that

that hinder ſwallowing are when the gullet is too dry and cannot ſend meat down as in burning feavers: or if it be ſtopped by things ſwallowed either, great or ſticking or rough, or ſharp, or otherwiſe as *Rhaſis* ſpeaks of Horſleeches. From which being great and hard as nuts-ſhels, bones, becauſe they preſs the Membranous ſide of the Wind-pipe which is joyned to the gullet aud ſo ſtraiten it, breathing and ſwallowing are alſo hindered, even as both paſſages ſuffer the ſame when from external injuries, tying or diſlocation of a ſpondil, and are contracted when the Gullet is inwardly ſtraitend by a Tumor of the Neck, or Inflammation or Defluxion, the Patient ſwallows with difficulty. Alſo when it is corroded or pricked, it cannot ſuffer things to paſs for pain with inflamation. And this comes from ſharp things or vapors, or humors; As a Boy that eat fiſh greedily and was choaked with a ſharp bone that fixed in the Gullet after a great Tumor and Inflamation. Of the cauſes mentioned, ſome hinder Vomiting when it ſhould be, but not all, becauſe Vomiting being more forcible, Natural and Voluntary motion will ſooner make way then ſwallowing which is only from our will. Beſides theſe Diſeaſes of the Gullet, if it be in a ſtreight place, it cannot be dilated, and ſo Vomiting is hindered. Hence it is that they that have ſtreight Breaſts, and ſhort Necks, are unfit to vomit.

The dryneſs of the Gullet, is the cauſe of difficulty of Swallowing.

Obſtruction of the Gullet, is the cauſe of difficult ſwallowing.

Obſtruction of the Gullet, is cauſe of Vomiting hindered.

The ſtreightneſs of the Stomach cauſeth difficult Vomiting.

Vomiting is difficult from the fault of the Stomach. If it be not too looſe nor the right Orifice too large, as it is naturally, and therefore men that have good Stomacks concoct well, yet being ſick and ſtirred to Vomit by Medicines or Excrements, yet they cannot vomit but with great pain: And contrarily they who have too much dilated their Stomach by gluttony and drunkneſs, vomit upon the leaſt occaſion.

And the ſtreightneſs of the Neck cauſeth the ſame.

When a ſharp and hot humor boyles in the ſtomach, as we ſhall ſhew in Cardialgia or hartburning, it cauſeth a deſire to belch from the breaking of thoſe bubbles which it raiſeth and which ſend forth, a wind or burning vapor to the Mouth of the ſtomach; but becauſe the wind is diſperſed before it come into the Gullet, there is no belching.

A boyling humor in the Stomach, is the cauſe of difficult belching.

And if a Humor ſtick faſt in the Stomach, and Solicite vomiting, yet it wil not cauſe it, becauſe it cannot come forth, but the things taken may be vomited up. Though often the Humors are vomited and the meat retained, though but lately eaten, by natures choyce to caſt out the worſt, as we ſhall ſhew in immoderate Vomiting.

A tough humor in the Stomach is the cauſe of difficult Vomiting.

The Cure.

That we may know what to do in difficulty of ſwallowing, vomiting, and belching, we ſhall ſpeak of each Particularly.

If difficulty of ſwallowing come from the Nerves affected and the Muſcles of the Jaws looſned, in a general Palſie, it is the worſe; becauſe it ſignifies that, not only the pairs of Nerves in the Back, but alſo thoſe of the ſixth and ſeventh Conjugation, are hurt.

The Cure of the difficulty of ſwallowing, which is a kind of Palſie.

Except it be a Particular Palſie, as of the Tongue and parts adjacent which is alſo bad and threatneth a general; The ſame Cure is to be uſed, as in the Palſie, in reſpect of the cauſes. If it come from a Defluxion of water to the Nerves, it muſt be purged, revelled, and conſumed, and the part confirmed.

Amongs which Muſtard held in the Mouth, is excellent, as I ſhewed. And Pellitory of Spain, it draws water plentifully. And Tablets of Nutmegs, according to my uncles receit, are excellent.

Alſo Gargariſmes that reach the Muſcles of the Jaws. As this: Take *Calamus half an ounce, Sage, Roſemary, each one handful, Lavender flowers one pugil, Cypreſs Nuts four, Nutmegs two, Cloves one dram*: boyl them in Water and the fourth part Wine, and in one pint and an half, diſſolve *Honey of Roſemary, and Squils, of each two ounces; Vinegar of Squils, half an ounce.*

Or thus: Take *Diamoron, Oxymel of ſquils, of each one ounce and an half; Sage, and Lavender water, of each four ounces:* Make a Gargle.

There are many Oyntments for the Neck, mentioned in the Palſies, to which add theſe: Take *Oyl one ounce, Oyl of Spike, Maſtich, of each half an ounce; Labdanum, Frankincenſe, Storax, of each half a dram*; with a little Wax make a Liniment.

If it be a kind of Spaſmus, it muſt be cured, as that is; And the Topicks applied as in the Palſie. It is deadly from a wound, as we ſhewed in Spaſmus.

The Cure of difficulty of ſwallowing, which is a kind of Convulſion.

If it be from heat in Feavers, ſee Feavers and cool with Epithems, to the Liver chiefly, and Gargariſms and Linctus, as in hoarſneſs, that comes from roughneſs of the Chaps, give moiſt meat, Unctions, Broths, Barley, Cream, Emulſions, &c.

The Cure of difficult ſwallowing from the dryneſs of the Gullet.

If the body fallen in be thick, or ſticking, or Membranous, we muſt uſe divers arts, upwards and downwards.

The Cure of difficult ſwallowing from things fallen into the Wind-pipe.

Oftentimes things are driven down by a great draught of water, or waſhed off if they ſtick, or with a piece of Bread; or by neeſing; but chiefly by vomiting, which is eaſier, if they can firſt take a great deal of Water and Oyl, and as *Rhaſis* ſaith, if we ſtrike the Neck of the Patient; If the thing may be ſeen and laid hold upon, we have Inſtruments for to take it out, as the forceps, &c.

And other bending things that may fit themſelves to the paſſage, and ſo we thruſt it down, as a thick ſtick of a birchen broom, or Beets, or any thing they will bend and not break, being green. If it be dry ſoften it in hot Lead, or anoynt it with Oyl, *Rhaſis* uſeth Lead. But a Wax Candle dipp'd in Oyl, is beſt.

They ſay that a peice of a Spunge tied to a ſtring and ſwallowed down, and after much water is drunk to ſwel it, pulled up again will fetch any thing out of the Throat: but this is beſt in thin and ſharp things that trouble the Gullet, for it can do nothing except the Spunge be ſwallowed. This may be done by a great bead, which will be ſwallowed more eaſily, and may be done often.

We

We give Oyl or Butter to make the part ſlippery; and anoynt the Throat to enlarge it.

If a Horſ-leech creep into the mouth, and ſtick to the Gullet, *Rhaſis* ſhews the cure. But we adviſe it to be pul'd out with the Forceps, if it may be laid hold upon, or provoke it to aſcend with drinking hot water, and holding afterwards cold in the mouth: or we drive it downwards as other Worms, with things that diſpleaſe them, as by drinking Vinegar, eating Salt things, Onions, Garlick, Muſtard, and the like, that are contrary to Worms, as ſhal be ſhewed in their places.

The Cure of difficult ſwallowing from a Tumor.

When the Gullet is ſtrieghtened within or ſtopped by a Tumor, Inflammation, or Deſluxion, or hurt by things taken in, if there be pain, the Cure ſhal be mentioned in the pains of the neck.

From Compreſſion of the Gullet.

If it be preſſed by external Injuries or looſning of the Spondil, in regard it hinders breathing which is the greateſt danger, we ſhewed in Reſpiration what ſhould be done.

The Cure of hard Vomiting.

If Vomiting be profitable to prevent Diſeaſes, as *Avicen* commends it once in a month or oftener; or if it be neceſſary in Diſeaſes to expell things that trouble the Stomach: and if it be difficult by reaſon of the unfitneſs of the Conſtitution by reaſon of the ſhort neck and ſtreightneſs of the breaſt, and mouth of the ſtomach; it is often inconvenient to force it. But if in ſuch natures, it is neceſſary, and there be ſtriving without ſucceſs. We have ſhewed in divers Diſeaſes where Vomiting is required, how to provoke it by filling the Belly and ſubverting it as they call it, and tickling the Jaws and Throat.

The Cure of difficult belching.

We ſhal ſhew in *Cardialgia* or Heart-burning, how that imperfect Belching with heat of ſtomach, is to be cured.

CHAP. VII.

Of the Defect of Dejection or going to Stool.

The Kinds,

THere is a Defect of natural Excretion of Excrements from the Belly, and it is called Conſtipation, or Aſtriction, or binding of the Belly. In which either nothing is voided, and the Belly is wholly ſtopped: Or the Excrements are voided ſeldom or leſs than is fit, or with great labor and ſtraining.

Belly-bound

This is ſomtimes in ſound people, whoſe nature is to go ſeldom to ſtool. Or according to *Hippocrates* it comes from the change of age, ſo that they who are in youth looſe-bodied, are bound in old age, and ſo contrarily. In others it is from an evil cuſtom and life, as ſhal be ſhewed, and is the cauſe of diſeaſes.

It is a Symptom in divers Diſeaſes both of the lower belly, joyned with Heart-pain, Colick, Jaundies, Ruptures and other accidents: And of the Head, with pain, giddineſs and the like. And in Feavers this is a familiar ſymptom. And in other diſeaſes it is ſo uſual that it is the firſt and laſt ſymptom of which the Patient complaineth.

The Cauſes.

The Guts containing the Excrements muſt needs be afflicted in every Conſtipation or binding: either primarily when they are ſtopped, or ſecondarily when they have loſt their expulſive faculty.

When the Guts are ſtraitned, ſo that the paſſage of the Excrements is hindered, the Belly is bound. And this ſtraitneſs may come from aſtriction or Convolution.

Drineſs of Excrements a the cauſe of Conſtipation or binding.

We call it Aſtriction when the Guts have loſt their ſlipprineſs, and are dried and wrinkled; or when they are bound and made ſtraiter. Hence is it that Driers, Binders, ſower and ſharp things taken, as they aſtringe the Gullet and wrinkle the Jaws; ſo if they be taken imoderately eſpecially faſting, they ſtop the Guts and their paſſages, and bind the belly. And this may come from long faſting, and too much evacuation. And from heat that drieth the guts, or rather the Excrements, as we ſhal ſhew. Some ſay that the Guts may be preſſed and ſtopped by a Tumor in the Meſentery: but we think it not to be poſſible, becauſe when a Woman is with child, that great Tumor doth not cauſe conſtipation without ſome other accident.

Convolution or rouling together of the Guts the cauſe of Conſtipation, or Coſtiveneſs.

The thin Guts are ſomtimes ſo rouled together in the diſeaſe called *Convolvulus*, ſo that they are cloſed and the Excrements cannot deſcend: but are vomited up, either with pain called *Ileon*, when the Guts are inflamed, or with repletion of excrements without, Inflammation, as we ſhal ſhew in pains.

But this is moſt uſual in Ruptures when the Guts fal into the Cods, from the breaking of the *Peritonæum*; by reaſon of the evil poſition of the Guts.

Obſtruction of the Guts by excrements a the cauſe of Conſtipation.

There is an ordinary Conſtipation from the Obſtruction of the Guts with proper Excrements, not only when they abound, but when they are dry, hard, thick, clammy, and hinder the Excrements that follow. This is uſually in the Orifice where the thin Guts uſe to open themſelves into the thick, by reaſon of the ſtraitneſs there; where they have been ſo fixed, that the conſtipation hath been deadly as we have obſerved in Anatomy. This is often in the Colon, in the great turning thereof before it comes to the *Rectum*, by the hard dung reteined and ſtopping and binding the Belly, with the pain of the Colick. And ſomtimes ſuch hard dung is in the Arſe-gut, and not voided without great ſtraining, or help of Art.

The dung grows hard when the meat is too ſolid and dry; as we ſee in Dogs that eat bones: eſpecially when they drink little. The ſame comes from the uſe of hot and dry meats. And it is in hot natures when the Liver and parts adjacent are too hot; in whom, if they go not every day to ſtool through long ſitting, riding or lying in the bed (becauſe the excrements fall down better when the body is upright or moved) the Excrements grow hard from their internal heat that drieth them. Hence it is that Senators, Riders, and old Men, complain of coſtiveneſs. And as it comes from

from moderate heat, ſo may it come from hot diſeaſes and Feavers. From faſting alſo, the Guts and excrements that remain may be dried, not only in the time of faſting, but after, if they be very hungry. And that becauſe nature being exhauſted draws whatſoever chylus or humor is in the meat, to recruit her by the Meſaraicks, and ſo leaves the Excrements dry and hard. Hence it is that after a long Diſeaſe, when the Patient eats much, he complains of a conſtipation: And though, they who nouriſh wel have rather a dry than moiſt belly, the Guts can ſcarce be ſo ſtopped by any thing but Excrements: for things that are ſwallowed though great and hard if they paſs the Gullet, may alſo paſs the Guts, except they ſtick in the Fundament: And what is written of the ſtone in the Guts it is rare, and can ſcarce be ſo big as to ſtop the Guts, except dung as they ſay, be turned to a ſtone.

Stopping of the Guts by other things beſides excrements is the cauſe of conſtipation.

Loſs or Dulneſs of ſenſe is the cauſe of Coſtiveneſs.

If the Guts loſe their pricking and the expulſive faculty doth not move them, our wil is alſo at reſt being not admoniſhed thereby, and there is no dejection. This is when the Guts either feel not or very little, from the fault of the Nerves of the ſixth or ſeventh conjugation from whence the Nerves of the Guts ariſe. And in a general ſtupefaction they ſuffer with the other Nerves, and there is no dejection, as here in particular. The ſame may be from the Excrements when they are few, wherefore in want of appetite where little is eaten, little is voided, or from great purgings, til more excrements are made, which requireth ſome daies. Alſo if acrimony be wanting in the excrements, which naturally provoketh the Guts to ſtool, which is cauſed of Choller mixed with the excrements for that purpoſe there is alſo coſtiveneſs: as in obſtructions when choler is not carried to the Guts, but to other parts in the Jaundies and the like, as appears by the excrements which are not tinctur'd, but white or aſh-colored.

The Cure.

Every conſtipation of the belly needs not cure, as when ſome go ſeldom to ſtool, from nature and cuſtom, or moderate diet, which cauſeth few excrements and declares that the body is wel nouriſhed; as it doth after ſickneſs or Famine, except the Guts be dried and ſhrunk, which being dangerous requireth cure, which is difficult. But if coſtiveneſs come from dry meats, that bind, and are hot, it is cured by abſtaining from them, and uſing the contrary. And ſo you muſt when the body is bound by natural heat through long ſitting: and alſo when it comes from a hot temper or conſtitution: But in Diſeaſes when conſtipation is a ſymptom, as from heat in Feavers or ſtoppage or convolution of the Guts in the *Convolvulus* and Rupture (in which if the excrements are vomited, death is at hand) or from the loſs of provocation in Stupefaction, Jaundies, or the like Diſeaſes, we ſhal in treating of them ſhew you what you muſt do in reſpect of the cauſe.

Medicines that looſen the belly.

But the Medicines that are uſed chiefly for conſtipation, are to be taken in or injected, or otherwiſe, and here we ſhal mention ſome of them, the reſt are mentioned in the Diſeaſes that cauſe coſtiveneſs.

The gentleſt that moiſten and ſoften the hard excrements and by their ſlipperineſs looſen the paſſages, and provoke nature by pricking, are of things nouriſhing. Young fleſh boyled, eſpecially Veal, alſo that which is fat and mucilaginous or ſlimy.

Butter and Oyl.

Temperate Herbs, boyled or raw, as Spinach, Beets, Arrage, Bugloſs, Coleworts; and ſtronger, as Mallows, Violets, and tops of Hops and Aſparagus.

All moiſt Fruits open the belly that are temperate and ſweet, but ſharp do it rather by troubling than looſning.

Drinking of Water or Milk.

Of Phyſical things, Caſſia and Manna in broath. Juyce or Syrup of Roſes, diſſolved in ſpring water.

Stronger are ſuch as purge, as the Infuſion of Senna with Wormwood and ſeeds, the reſt are mentioned in Purges for divers Diſeaſes.

For the Fundament there are divers Suppoſitories.

And Clyſters which prick and diſſolve the hard Excrements, by waſhing, mollifying, and opening the paſſages. Theſe are beſt in coſtiveneſs, and there are divers of them mentioned in the Colick.

Some things to looſen and ſoften are applied outwardly to the belly, as Oyls and the remainder of the Glyſters.

Alſo Baths of Sweet waters and Decoctions.

Alſo exerciſe makes the Excrements fall down, and medicines that looſen do it ſooner thereby.

And in regard none can go to ſtool without ſtraining, which is done by the will with holding the breath and contracting the Muſcles, not with the Will only with the expulſive faculty moving thereunto; we muſt endeavor ſo to accuſtom nature that it may conſent to the will in the ſame: And this is done by endeavoring morning and evening before and after ſleep to void the excrements. Becauſe nature obſerveth order not only monthly and dayly, but hourly in eating and expulſion of excrements. And if we obſerve this order at a ſet time, and ſolicite nature to dejection, and continue it; it wil be very helpful to evacuation by ſtool.

CHAP. VIII.

Of the Defect of Piſſing.

The Kinds,

THere is a defect alſo in Piſſing, which is a natural excretion, at certain times.

Sometimes it is wholly ſtopped called *Iſchuria*, with a great diſtention in the Pecten and a Tumor by reaſon of the fulneſs of the Bladder: ſometimes without, and there is an empty bladder, and this is called alſo *Iſchuria*, but improperly.

Iſchuria *or not piſſing the Bladder being ful or empty.*

Sometimes there is not a ſufficient Evacuation by Urin, being ſeldom, or in ſmal quantity in reſpect of the drink, which is particular to the *Iſchuria* or Dropſie Aſcites. Sometimes it is with difficulty by Fits before the bladder be emptied called *Dyſuria* with pain; or by Drops called Strangury: Both which are referred to pains, when the pain is more than the difficulty.

Little and ſeldom Piſſing.

Dyſuria *or piſſing by Fits.*

Strangury or by drops.

Theſe come alone ſomtimes in them that were formerly ſound: ſomtimes they are joyned with other Diſeaſes, as the Colick, Stone, Dropſie, Feavers &c.

The Cauſes.

The cauſe of defect of Piſſing, is either the matter, or Serum when it is not plentifully bred, or when it is carried another way, or the paſſage hindered. Or from the inſtruments of Piſſing, the Reyns or Kidnies in which the Urin is ſeperated from the blood, or ureters by which it goeth into the Bladder; or Bladder, which receiveth it, or the Neck thereof which voideth it.

Little Serum, is the cauſe of little and ſeldom Piſſing.

Or when it is carried otherwaies; it is the cauſe of little and ſeldom Piſſing.

If the Serum be produced in ſmal quantity, it is neceſſary that little and ſeldom Piſſing do follow; in people that drink little and are of a dry conſtitution, and uſe a drying Diet. But if part of the Serum, which ſhould be attracted by the Kidneys, be carried to the habit of the Body; And there conſumed with heat, or ſent out by ſweat, it comes to paſs that they which ſweat much Piſs little. And this is alſo from a Diarrhæa, when the Whey, or Serum is voided by ſtool, in abundance, or from purging. And as this is Natural and hurts not, ſo it is preternatural, and a Diſeaſe when it is from obſtruction of the Bowels, eſpecially the Liver which ſtops the Paſſage of the Serum: which being turned another way cauſeth the Dropſie aſcites, in which there is little piſſing. And if the Serum be not thin enough, but is hardly ſtrained from the blood by the Kidneys, it cauſeth the ſame. This comes from things taken which thicken the blood and the Serum alſo; as red wine and the like, by uſe whereof we obſerve the Urin is leſſened, and by the uſe of contraries, as hot Diuretikes, it is enlarged.

The paſſage of the Serum ſtopped, and the thickneſs of the ſerum cauſeth little and ſeldom Piſſing.

Piſſing is ſeldom ſtopped from the cauſe in the Kidneys and Vreters; for the Kidneys being two, the one being hurt, the other will ſupply. But it is ſelſom ſeen that both Kidneys are afflicted with the Ureters which are remote from them, ſo that the Function periſheth: And it cannot be but from a great cauſe. As the Conſumption of the ſubſtance of both, as I ſaw once in an Anatomy; Or an obſtruction in the beginning of the ureters, by matter or a ſtone in both together, which is ſeldom. Or, when in burning feavers both the ureters are dryed up, or when one ureter is wanting, or twiſted and the other ſtopped, as I ſaw in an Anatomy. And if theſe be the Cauſes, and the Bladder empty, there is no pain from diſtention, nor deſire to Piſs.

Conſumption, obſtruction, drying of both Kidneys, or ureters, or the abſence of one ureter, is the cauſe of ſuppreſſion of Urin.

There is ſeldom defect in piſſing from the largneſs of the Bladder except it be wounded, as in a Fiſher that piſſed from a hole in his Groyn and not from the Yard. Piſſing is chiefly hindered from the Neck of the Bladder when it is obſtructed, and this being a narrow paſſage is eaſily ſtopped, or ſtraitned by cold, and then there is pain, or by outward compreſſion, with long ſitting, or the like, in regard of the ſtoppage of that part between the Fundament and the Yard, through which the Urin paſſeth in men. Or by inward compreſſion by the ſtreight Gut filled with Excrements or Wind. The ſame may come from Inflamation of the parts adjacent, or a great Tumor. The Urin is moſt ſtopped when after long retention, the Bladder is ſtretched much, and the Neck thereof ſo contracted that it cannot be opened: This is incident to them that ſit long at banquets and are aſhamed to riſe and make water; or otherwiſe for want of a convenient place, ſtay ſo long that they cannot Piſs. Doting people that are very contemplative forget Piſſing and other Functions which depend upon the will in part. Moreover in the Convulſion or twiſting of the Neck of the Bladder, as we ſhewed in the convolvulus of the Guts, Urin may be wholly ſuppreſſed, as we ſhewed in the Fiſherman whoſe bladder from a Rupture in the Groyn fel into the Cods, and lay ſtretched out and voided no Urin, but by a Catheter: while an ignorant Chyrurgion, let it out by cutting thereof, which gave eaſe to the patient, with great danger: from which being freed, he piſſeth yet through a Fiſtula that remains, by drawing forth a tent wherewith it is ſtopped. If it come from obſtructions of the Neck of the Bladder, it is a ſtone uſually that ſtops it, if it be a great one, or a little one that paſſeth into the Yard in men: As we ſhall ſhew in the pains of the Reines. A *Caruncle* or *Callus*, from an Inflamation not well cured, being in the ſame paſſage cauſeth ſtoppage of Urin, as alſo Warts, and clotted blood and matter, though not of ſo long continuance other humors cannot cauſe it becauſe that they come not to the Bladder, and if they do, they are ſo mixed with the Urin that they can get eaſily forth therewith.

Doting, or Delirium, is the cauſe of Iſchuria.

Alſo the twiſting of the Bladder by a Rupture, is the cauſe of Iſchuria.

A Stone in the Bladder ſtopping it cauſeth Iſchuria and Strangury.

An excreſcence in the Neck of the bladder or humor, is the cauſe of Iſchury or Strangury.

Stupefaction of the bladder, is the cauſe of little and ſeldom Piſſing.

When the Nerves of the Bladder are afflicted, and the ſting is loſt, the expulſive faculty acteth not, as it is the cauſe, as of not going to ſtool, ſo of not piſſing. Alſo when there is no pricking of Urin and the Bladder is not ful, yet we may make water by preſſing the bladder with the Muſcles of the Belly: which cannot be in going to the ſtool, except the expulſive faculty help by our own will: becauſe there is need of more force to ſend forth thick humors then Urin. Therefore though the bladder and its Neck and Sphincter be ſtupefied, yet Urin may be voided: as in the Palſie, and when the Sphincter is looſned there is involuntary piſſing, becauſe it is the office of that Muſcle to retain, not expel the Urin.

But it is true that, if the Bladder be Stupified, we piſs more ſeldom: as when it is of exquiſite ſenſe, more often. Becauſe the expulſive faculty forceth out will to make water, as we ſhall ſhew in often Piſſing.

A wound in the Bladder cauſeth Suppreſſion of urin when it is empty.

The Cure.

If Piſſing be ſeldom, from drinking little, or dry Diet; much ſweat, or purging, or in

What we muſt foretel and do in defect of piſſing, from what cauſe ſoever.

in leſs quantity, it needs no Cure, becauſe it doth no hurt.

But if it come from ſtoppage of the bowels in dropſies: the Serum being ſo retained that they piſs leſs then they drink, which cauſeth a Tumor of the Belly; we ſhall ſhew the Cure therefore in the Dropſie.

If it come from thickneſs of the Serum, through things taken in, there muſt be a contrary Diet and thinner drink.

If from the Kidneys and Vreter on both ſides, which is ſeldom ſeen, if there be no Urin in the Bladder, it is mortal and incurable.

If from a wound of the Bladder, ſo that the Urin fals into the Belly, or comes forth at the Wound, either they die, or, as we ſhewed, there is a Fiſtula through which they piſs; but it is rare, as is alſo the bladder falling into the Cods, which had been deadly without the chance mentioned.

If it come from cold becauſe it cauſeth pain, it ſhall be mentioned there.

If from compreſſion of the Neck of the bladder, it ceaſeth when the Excrements and Wind are voided.

If Urin long held ſtretch the Bladder, and there be Inflamation or Tumor the Cure is to be applied to them. If it come from a Stone, Caruncle, or other Tumors or Humor, which ſtoppeth the paſſage, when theſe impediments are removed, the Urin is voided.

If from the Stupefaction of the bladder the piſſing be ſlower, you muſt not meddle therewith, for when it is ful it will come forth, or by ſtraining at ſtool.

Remedies to provoke Urin and help Piſſing,

We ſhall now ſhew what Medicines are to be uſed internal and external to provoke Urin in divers cauſes, eſpecially when the Serum is thick, and the paſſages about the Bowels, Reigns, Bladder and Vreters are ſtopped.

Theſe are called *Diureticks*, that cauſe it to be more, or quicker either by increaſing of the Serum, or making it thin and fluid; and ſeperated from the blood that it may paſs eaſily from the Kidneys to the bladder, or by making the Serum and Urin hotter and ſharper to ſtir up the expulſive faculty, as we ſhall ſhew.

One dram of the Powders following are to be given in a good quantity of Wine, Ale, or Milk, or other convenient Liquor: and if you will keep them long make them into Troches.

The firſt: Take *Water-creſs ſeeds one dram and an half*, Pouder them.

The ſecond: Take *Acrons and Hazel nuts dryed in an Oven, of each one dram and an half*: give it with Goats Milk, morning and evening.

The third Pouder: Take *Madder roots, Aſarum, Fennel, Parſley, Lovage, Water creſs, Nigella, winter cherry ſeeds, of each one dram; Valerian half a dram*: make a Pouder.

The fourth: Take *roots of Aſarum and Valerian, Spignel, Calamus Aromaticus, Fennel, Smallage, Purſley, Carrot, Seſeli ſeeds, of each one dram: Savin, Schœnanth, Spicknard, Cinnamon, Pepper, of each half a dram: Saffron one ſcruple*: make a Pouder.

The fifth Pouder: Take *Amber, Gum of Plums and Cherries, of each one dram; Turpentine boyled half a dram, the Jews-ſtone, Alkekengi Berries, Parſley ſeeds, Aſarum roots, of each half a dram; with Cinnamon one ſcruple*: make a Pouder.

The ſixth: Take *of Egg-ſhels that are hatched, and the Skin taken out one dram, or nine ſwims of Herrings*: give them in Pouder.

The ſeventh: Take *the Aſhes of earth Worms, or Cray-fiſh, of each one dram; of Hog-lice half a dram, Spaniſh flies, or Graſs hoppers their thin wings taken out, or Scorpions half a ſcruple, Cinnamon one dram, Cloves half a dram, Sugar two drams.*

The eight Pouder, quickly made in time of neceſſity: Take *two Cantharides, and one dram of Sugar-candy*, beat them well, give it with Honey and Water, or the Decoction of Linſeed, or with Milk.

Theſe Decoctions following are good: Take *Radiſh roots two ounces, Aſparagus and Reſt-harrow, of each one ounce; Aſarum half an ounce, Mallows, Pellitory, of each one handful; Berries of winter Cherries two drams, Water-creſs ſeeds two drams, Smallage ſeed half a dram*: boyl them in red Peaſe broath.

Or this: Take *one Onion, and a head of Garlick*: boyl them in broath, and drink it being ſtrained.

A Diuretike Oxymel is given, two ounces; with covenient Water or Wine, to provoke Urine.

Alſo Wormwood Wine, or Malmſey faſting, or white Wine, in which white Flints have been quenched till they turne to Pouder.

Or this Compoſition: Take *roots of Parſley, Fennel, Reſt-harrow, of each one ounce; Aſarum, Elicampane, of each half an ounce; Wormwood, Rue, Strawberry leaves, Savin, Hyſop, of each one handful; Broom, Elder, and Chamomil flowers, of each one pugil; Smallage, Parſley, Lovage, Rocket, Nigella, Water creſs ſeeds, of each one dram; Juniper-berries half an ounce*: Infuſe them in white Wine.

Alſo this Lixivium: Take *Juniper, Bean ſtalks and ſhales dried*; burn them, and mix the Aſhes with *white Wine*, and ſtraining it often, make a Lie or Lixivium: Let him drink a Glaſs: And with the aſhes of Broom, or Bitter-ſweet, it is better.

Other Potions: Take *Oyl of Sulphur two drops, ſpirit of Vitriol one drop, with Wine and Water.*

Or: Take *Oyl of Scorpions half an ounce*; with *Milk* or *Wine.*

Or: Take *Oyl of ſweet Almonds two ounces*, with much Milk.

Two or three drops of Oyl of Wax, given in great Nettle water, provoketh Urin violently. The freſh juyce of Pomegranate, doth the ſame.

Or thus: Take *Horſe Radiſh roots green*, bruiſe them, ſprinkle them with Wine, and take *two ounces of the juyce.*

Or thus: Take *juyce of Pellitory two or three ounces, juyce of Water-creſſes one ounce*, add *Wine, Sugar and Honey.*

Waters pierce moſt, as that of Pellitory, Alkekengi, or Winter-cherries, Lemmons, Nuts, or of Broom flowers, with Cinnamon water, alſo of Horſe-radiſh, Water-creſſes, and Sea-fennel.

Another Water: Take *Horſe-radiſh roots half a pound, Reſt-harrow, Winter-cherries, of each four ounces; Cherries and Peach kernels, of each two ounces; Broom and Elder flowers, of each one ounce; Fennel ſeed two drams, Turpentine half an ounce, with Spaniſh Wine*, a fingers breadth above them being bruiſed, diſtil a Water, give one or two ounces.

The water of Peach kernels, drawn with Spaniſh Wine is alſo good.

The buds of Aſparagus boyled or raw, make the Urin ſtink, and provoke it often.

Make a Sallat of Purſlane, Water-creſſes, Chervil, and Parſley, with young Onions, and Horſe-radiſh ſliced, and Cowcumbers if the ſeaſon afford them, with Vinegar and Oyl: It will provoke Urin if it be eaten for a Supper.

Or

Or this Bole. Take *Turpentine two drams, Winter-cherries one dram, Amber half a dram, with Sugar.*

Make Pils of unpleasant things. Take *Galbanum, Bdellium, Myrrh, each half a dram; Oyl of Sulphur four drops,* with *Turpentine* make *Pils,* give *half a dram* at a *Dose.*

Sometimes we mix Purgers with Diureticks, because the Urin is easier rendered when the Excrements are voided, and because they prick and stir up the expulsive faculty of the Guts, and give the same force to the Bladder.

Or this Bole. Take *Cassia new drawn half an ounce, Benedicta Laxativa, Agarick in Troches, each half a dram; Winter-cherries one scruple with Sugar.*

Turpentine doth both. Take *two drams thereof,* dissolveit with *Honey and the yolk of an Eg,* and drink it with *Wine.*

Or thus, Take *Electuary Indum the great two drams, Catholicon half an ounce, Winter-cherry water as much as will make a Potion.*

If it come from clotted blood you must give things at the mouth, which dissolve such blood, among which Amber is best in this case.

Clysters are good in this case, and Topicks to the bladder. As,

Take *Mallows with the roots, Pellitory, each one handful; Chamæmel flowers one pugil:* boyl them, and dissolve *Cassia, Benedicta Laxativa, each half an ounce; Turpentine dissolved in the yolk of an Egg, and Honey half an ounce, Oyl of Chamæmel and Scorpions, each one ounce; Salt two drams,* make a *Clyster.*

Another more compounded. Take *marsh-mallow roots, and Radishes, each two ounces; Onions, Garlick, Leeks, each one ounce; Pellitory, Water-cresses, Parsley, each one handful; Chamæmel and Melilot flowers, each one one pugil; Smallage and Lovage seeds, each two drams; Juniper berries half an ounce,* boyl them in *Wine* and *Water,* and dissolve the aforesaid things therein.

Or this of Juyces. Take *Juyce of Mallows, Mercury, Pellitory, Rue, each one ounce and an half; of Water-cresses half an ounce, white Wine two ounces, Butter one ounce and an half, Honey one ounce, Salt one dram,* make a *Clyster.*

Divers things are applied outwardly to the Share neer the Bladder, that dilate it and provoke Pissing.

A Fomentation and Bath of these. Take *Valerian roote two ounces, Mallows, Mugwort, Parsley, flowers of Chamæmel, Melilot, Dill, each one pugil; Linseed and Fenugreek each one dram: Smallage seeds two drams,* boyl them, and add *Wine.* These are good when the bladder is so ful they cannot piss. Also you may add things that dissolve the clodded blood, if there be any; And Coolers if there be Inflammation.

Or this Emplaster. Take *roots of Marsh-mallows, Radish and Pellitory,* boyl them, stamp them, and add a little *Butter.*

Or. Take *Radish, Water-cresses, Garlick, Juniper-berries,* stamp them, and fry them with *Wine,* adding *Butter* and *Oyl of Scorpions.*

Hot Cow-dung also with Cummin-seed and Oyl of Scorpions.

It is good in the Strangury to boyl Hempen thred newly spun, in Water and Lie, with Mugwort and Chamæmel, and apply it.

You may use these Oyntments with the former or alone. Take *Oyl of Scorpions and Cunney grease each half an ounce.*

Or, Take *Juyce of Water-cresses, Parsley, Onions, each one ounce; Sea-fennel, Oyl of Scorpions, each two ounces;* boyl them and add *Oyl of Turpentine two drams,* and with *Cunney grease* make a *Liniment.*

Boyl *Wine Vinegar and Honey, thick, with Linseed meal,* and apply them to the *Pecten* to provoke *Urin.*

Inject with a Syringe into the bladder things that loosen the passages; as Oyl of sweet Almonds, or in which Mallows was boyled: or that prick, as Oyl of Scorpions: to cause Urin and the Stone to be voided. Or Whey or other clensers, as Honey and Aloes, if the humor be thick, or things that break the Stone. If there be a Caruncle or hardness, inject Mollifiers, and Clensers as Ægiptiacum, and after Dryers, as that of Litharge, Tutty, Antimony, Cerus and Aloes thrust in at the end of a Wax Candle.

If the Bladder be ful of Urin, put in the Catheter, which is good in all stoppages, for it drives back the Stone, breaks the Caruncle, and dissolves clotted blood or matter, it is made hollow that the Urin may flow through it.

Chimches, Fleas, and Lice may be put into the Yard, or smal Hairs, to provoke Urin.

They say Galbanum applied like a Plaister to the top of the Yard, provokes Urin.

Also a Fume of Hedghogs bristles and Agarick, and of Grass-hoppers doth it in Women.

Sometimes the only pressing of the swollen Bladder with the hand doth it. And when a Stone is gotten into the Yard, it may be pressed out by degrees.

Sometimes they must be cut for the Stone or Caruncle, when other means fail, as we shal shew in the Stone.

CHAP. IX.

Of the Defect of Bringing forth Children, or other things.

The Kinds.

THere is a Defect of natural excretion by which a Woman sends forth, at a fit season, either a Child or a deformed Mole.

The Birth is Defective when it is difficult, as it may be preternaturally, and naturally. Or when it is not at its time appointed by nature, or before it; or when part thereof remains behind.

A natural difficult Birth.

Birth becomes difficult and painful, when it is Natural when the Child is ripe, and the Woman hath foregoing figns, by which she is provoked to hold her breath, and press the Muscles of the belly, as in other digestion: All which are increased when the Child comes forth. Also after birth some pain remains called after-pains: of which seeing they are natural to the bringing forth, we shal speak in the hurt of that Function rather than in pains.

A preternatural difficult Birth.

Sometimes Travail is not preternatural from some impediment and so with more difficulty and slower as is mentioned; in which great pain afflicteth with straining, heat, and sweating, when the Child sticks cross in the passage (where the Midwife may feel it) or when the Hand or Foot hangs out and not the Head (for when that comes first, the birth is easie) Hence it is that either the Mother or the Child often dies.

It

Birth hindered. It is said to be no Birth when the Woman goes beyond the natural time, which is usually the tenth month (though the seventh month be also allowed) and there is nothing brought forth, though the Child be ripe, or there be a mole. And then she falleth to sounding, which kind of fainting is here most deadly, through pain, labor and bleeding. Also shee hath her throws at the time, and seems to be fit for Travail, and is so disposed by the Midwife, and her Urin breaks from her, as is usual in that condition. But all these cease, and no birth followeth. And if they return not, the Child is dead, and putrifies, and breeds Feavers, and Faintings, and so infecteth the body, that the Mother dieth, as many have done (especially one who went five months beyond her time with a dead Child, and a stinking flux, with the Navel-string hanging forth, before she died) which so infected, that the Womb and Child were black and very stinking when shee was opened. And when the Mother lived shee had somtimes cleer bladders about her Navel, which signified putrefaction, through which the Back-bones of the Child were seen, and taken forth after they brake.

This causeth death as we shewed, if it be not speedily voided; and may be before the Child is perfect, and then it must be cast out presently, and it is easily done while it is little; but when it is great, there is, as we said, want of birth. As also if there be a false conception or Mole, which the sooner it is cast out, the less is the danger, therefore when we are certain thereof, if nature be slow, we help her with Medicines.

The Child is known to be dead if the Mother feel no motion, which shee formerly felt, and the belly is stil big (which often deceiveth by the Terms reteined, and these breaking forth it suddenly falleth flat) about the flanks. And if the Womb be cold and the Paps which were swollen, grow lank, At length, if it continue there followeth water, matter and filth, and pieces of the secondine hang out, there is a Feaver, Heart-pain, and Swounding. We shal shew in depravate Conception when there a Mole and no Child, and how you shal know it.

Imperfect Birth. The Birth is imperfect when the Child is voided and the Secondine remaineth whol or torn, growing to the Womb, or stopped; and causeth great danger of a Feaver, or sudden Swounding, or Death.

The Causes.

Sin. The Scripture witnesseth that natural difficulty of Travail was caused by original sin, from *Eves* fall in *Paradise*, for which the Creator was pleased to inflict pain in Travail. Yet let us shew some natural cause of both, why it should be naturally or preternaturally defective or imperfect: which is either from the greatness of the Child, Situation, or weakness, or form of the Womb, having three orifices or from streightness of the Neck thereof.

Greatness of the Child. When a Child ready to be delivered, is great (as when it can no longer be contained in the Womb, but seeks another mansion and Diet) in respect of the passages, the Delivery cannot be without pain, though it be natural. And the rather when the Child being great by the Father, is born by a little Woman which brings forth with great danger alwaies. As also when there is monstrous Conception, or many at once.

Evil position of the Child. There is also either no birth or very hard, when the decent roundness of it is changed, by breaking the coats, and flowing of water, whereby the Child comes not forth with the Head first, but the Feet, or lieth cross, or when the hands or feet which were close to the sides are stretched out.

Weakness of the Mother. And in regard the strong Throws of the Mother are required in Travail, the more couragious the Woman is, the easier is the Delivery, so they that are weak, as very young and old Women, and such as are weak-spirited and fearful, dul and sloathful, are tired out and in great danger.

The Vessels connexion not divided in the Womb. If the Vessels by which the child wrapt in Membranes with a cake of flesh in the middle cleaveth to the Womb be not ripe, they are unfit to be divided, like the stalks of unripe Apples, without tearing and force, and bleeding, (nor doth bleeding after birth, which is ordinary, come from this cause as shal be shewed) And then they growing together, and being forced before the time, the birth is more difficult, with pain, and bleeding, and Inflammation of the Womb, sometimes with a Feaver, and danger of life. The same symptomes follow when the Secundine, remaineth fast, either being whol or rent. And also after a fall, stroak, or taking of a violent medicine, there is untimely birth. Or from the violent usage of the Midwife taking these pains for Throws, they do often provoke with great danger of life. And some I have known die of the same, and some I have cured. These pains of the Womb go before Throws in many, for which they send for the Midwife which increaseth them, but should rather use hysterical means to mitigate them, for these pains do rather hinder the Throws than further them.

The inward orifice of the Womb. Sometimes there is difficulty and impossibility of bringing forth from the Orifices of the Womb within and the neck without, and the cleft of the Privities, through which the Infant must pass. It is also no wonder if there be hard Travail when the inward orifice of the womb is so streight when the Woman is with Child, that nothing can pass in or out, and the orifice of the neck of the womb without, is no larger than to receive the yard, and they both must be so inlarged as to let the Infant pass through.

The outward orifice of the neck straitned. And the more when they are by nature straiter and harder, as in those who have not of a long time had Children, and old women, which all have hard delivery. Or if they be drier, in regard the water which moisten the passages is spent.

The straitness of the Privities. The Infant may stop in the Privities when they are too strait, or short, because they cannot be enlarged as the orifices and swel as they do in Bitches: in Women the Privity is alwaies of the same largeness, as shal be shewed in Conception.

The straitness of the neck of the womb. Also the straitness of the neck of the womb to the Privities is the cause of hard Labor, although it be large yet it must be stretched to let out the Child, and this stretching causeth pain, then (as *Rondeletius* supposeth) the separating of the Secundine from the Matrix: he was mistaken in thinking that Travail was without pain when the Secundine remained fast. For we shewed, that if the time be come, that wil separate without

pine. And I have often obſerved that the pains continued when the Secundine remained. Alſo there follows bleeding from the opening of the Menſtrual Veins in the Neck of the Womb, which is ſtretched, as in the time of the Terms. And that part of the Neck ſuffers not where it lieth under the bones of the Privities, in a ſtrait place, which alſo containeth the ſtrait Gut. Although it be larger in Women then in Men; by reaſon of the looſning and Relaxing of the Griſles which joyns the bones, and the going back of the Rump; except the Woman be ſtrait and ſhort loyned, being of little ſtature, and then the difficulty will be increaſed. And alſo when the ſtrait Gut is ful of Excrements, or the Rump preſſed in by ſitting.

Whether fat can cauſe hard Travail.

They report that fat women eſpecially about the Womb, have hard Travil, though experience teacheth the contrary; neither is there any fat in the Womb, or its Neck. And that fat which is without in the Belly cannot hinder, except it be by making them more heavy, or ſlow in the time.

The Cure.

A Prædiction.

If the Child be too big to be delivered, eſpecially if it come not from the Womb, it will die there, and the Mother will be in danger if it come forth, ſhe uſually dieth of the ſecond or third Child, if ſhe breed them ſo great. Alſo when the Child comes croſs, or the Orifices, or paſſages be ſtrait. Many women that have the Secondine growing to them after Travil, do die. If ſhe hath a mole, we ſhall ſhew in depraved Conception, what is to be foretold and done for that. In all caſes if the ſtrength be abated much, and ſhe faint, bleed, or have a Feaver, it is dangerous.

The forewarning and Cure of difficult Travil.

If theſe dangers, are feared, we muſt prevent in time, before the delivery, by a good Diet. And nothing muſt be given to provok, before the laſt month.

Let her Diet be ſparing, and of little nouriſhment, if ſhe uſe to bear great Children, and be fat: Let her abſtain from Wine, or drink it with water; let her bleed in the middle of her being with Child; and if ſhe be plethorck, let it be done again a while after, and let her not ſleep too much.

Preſently after Conception, let weak people be refreſhed with good Diet. Let the Diet be moiſt and ſlippery, if the Orifices be ſtrait, and let her uſe Baths.

In the laſt month, let things be uſed to make eaſie Deliverance, but not before the throws. Let ſome light things be given then to provoke, eſpecially Baths and Oyntments, to looſen the paſſages. Increaſing their ſtrength by degrees, as the time draws on, and when the throws come proceed to ſtrong expellers of the Child. And at laſt if the Child be certainly dead, or the Secundine not voided, uſe the ſtrongeſt things, ſuch as would have killed the Child, had it been living, and therefore were not to be uſed before. All theſe are to be performed in, and before the Birth, either by the Husband, or the Mother, or the Midwife, or by the Chyrurgion, or by the Phyſitian; by remedies taken, or applied.

Many teach, and it is agreeable to reaſon, that if a man uſe his wife often, a little before, or in time of the Birth, the Labor will be eaſie, and ſhe will be more lightſome.

Travil is quickned by the help of the Mother, if ſhe ſtand up often and walk in the laſt month up a hill, eſpecially at the time of dilivery.

The endeavor of the Mother is very neceſſary, for nature cannot do it alone, therefore ſhe muſt ſtrain and contract the Muſcles, as when ſhe goes to the ſtool. And when ſhe perceives her pains coming, being taught by the Midwife, that her delivery is at hand, (for ſhe muſt not be forced before, leaſt the Child be delivered without the Secnndine, as I ſhewed. She muſt hold her breath, ſtrain and contract the Muſcles of her belly, to expel as much as poſſible, and the Midwife with others, muſt exhort her thereunto. And let her be put upon a ſtool that is hollow, and that will not keep the Rump from going back, and ſo let her lean backwards. Or if more force be required, let her ſtand up and lean, or be held up by the Arms. If fatneſs hinder, let her Face be down towards the ground, to her Knees. And let her take large ſteps when ſhe is wearied with ſtraining, and knock her Feet upon the ground; And if the Secundine be retained, or the Child come not, let her ſtamp ſtrongly, that ſhe may be delivered, as *Hippocrates* ſhews of the Tire-woman. Alſo preſſing of the belly will help the throws, with both Thumbs below the Navil, and the Hands upon the ſides, by a ſtrong woman. And the ſame is good to bring forth the Secundine after delivery.

Alſo Neeſing cauſeth ſtrong, though ſhort ſtraining by attracting of the Muſcles of the Belly, eſpecially if the Mouth be a little ſtopped and the Noſe.

Let the Midwife take half of the Child when it firſt begins to appear, and draw it gently forth by degrees preſſing the upper part of the Belly. But if it lie deep and be turned, let her put in her Fingers or Hand, being anoynted, and place it right with the Head downward, and gather the Limbs together.

If theſe ſucceed not, and the Midwife perceive the Child dead, let a Chyrurgion enlarge the Orifice with a Speculum Matricis: And if ſo it cannot be taken forth, let him pul it out with Inſtruments, or cut it out by pieces.

When all hope is gone, ſome do ſo, and keep the Mother alive. The bladders that appear in the Belly, as I ſhewed, when a Child is rotten, through which the Child may be ſeen, of which I am an Eye witneſs, gave occaſion I ſuppoſe to this way; which none attempt while the Child is alive, except both be deſperate. It is more ſafe and honorable when the Mother is dead, and the Child alive, to cut it out by opening the Belly; by which means many have been preſerved, and *Cæſar* was ſo called, becauſe he was cut out of his Mothers Womb, and thence this birth is called *Cæſarian*. Alſo we dilate the Privities to let out the Child, with an Inciſion Knife. But it is dangerous to open the Orifice of the Neck of the Womb by Inciſion. And it may be unprofitable, becauſe it hath the ſame largneſs with the paſſage.

There are alſo things given to open, and ſtir up the faculties which provoke Terms, and expel the birth; the weakeſt firſt, after ſtronger, and then ſtrongeſt which may hurt the Child; when dead, or when the Secundine is retained.

The ſtilled water of Savin, Mugwort, Mullein, Orris, white Lillies, and Chamomil.

And theſe boyled in Wine, Pennyroyal, Mugwort, Savin, Beans, Wall-flowers.

Or this Decoction: Take *Dittany half an ounce, Birthwort, Madder, Caſſia barks, of each two drams; Mugwort, Pennyroyal, Savin, of each one handful; Lavender, Chamomil, Wall-flowers, of each one pugil; Cinnamon*

three

three drams, Saffron one dram: Boyl them in white Wine.

This is ſtronger: Take *Birthwort, Sowbread, of each one dram; Savin, Tamarisk, of each two drams*: Boyl them in wine, drink it at once or twice.

Theſe juyces are good, of which you may make this Electuary to be given in Travail: Take *roots of Elicampane, Comfrey, Marſh-mallows, of each three ounces; five leaved Graſs, Bittony, Hyſop, of each one handful*; bruiſe them, and clarifie the juyce with *Sugar* and with *Cinnamon*, make an Electuary: Let her take two ſpoonfuls thrice in a day, in the morning, before ſupper, and at bed time.

Or give juyce of Savin, Mugwort, and Leeks, and of Sowbread alone, or with wine.

Let theſe Pouders be given with wine, or waters mentioned, or with Sugar made into Lozenges.

Take *the bark of Caſſia Fiſtula, white Dittany roots, of each one dram; Cinnamon half a dram, Saffron one ſcruple.*

Or thus: Take *Lavender ſeeds half a dram, Plantane and Endive ſeeds, of each two ſcruples; Cinnamon, Pepper, of each one ſcruple: Saffron half a ſcruple,*

The yellow tops of the Chives, of white Lillies, are good to be drunk, the *Italians* ſteep them in Oyl, in the Sun, and drink that.

One dram of Amber, is good when there is a Flux of blood from the retention of the Secundine, to ſtop one and expel the other.

Or this Pouder: Take *Pouder of Date ſtones and Harts-horn, Canes of Caſſia, of each one dram; Peach kernels one ounce, Cinnamon two drams, Sugar one ounce*: Let her take two or three ſpoonfuls, and drink convenient water afterwards.

This is ſtronger: Take *Borax one dram or four ſcruples, Cinnamon, Crocus, of each one ſcruple; Ginger half a ſcruple*, give it with *Cinnamon water, or Sack, or with Confection Alkermes*, in a Bolus; in the greateſt weakneſs.

Another: Take *Borax, Myrrh, Birthwort, of each half a dram; Saffron, Pepper, of each one ſcruple*: Mak a Pouder.

Theſe are good to expel a dead Child and the Secundine, *Chymical Oyl of Amber, Camphur, Savin*, anoynt the Navil with a little, and give four drops in white wine. Some commend a Medicine made of the wrappings of the Child. Let the Midwife dry the Navil ſtring and Vreter in a Oven, and to *two drams of the Pouder*, add *Cinnamon and Pepper, of each half a dram; Saffron half a ſcruple: and with juyce of Savin*; make Troches: give *two drams in Pouder alone, or with other Pouders.*

Rondeletius teacheth, that the Secundine ſo burnt and given, cureth the after pains.

Alſo *one dram, or one and an half of the Troches of Myrrh, or Gallia Moſchata*, are given with *Sage, Wine*, or made into Pills.

Theſe Pills of bitter and ſtinking ingredients are very efficacious: Take *Galbanum and Mirrh, of each one dram; round Birthwort, Dittany and Gentian, of each half a dram; Caſtor and Aſſa Fœtida, and Saffron, of each one ſcruple; with juyce of Savin*: make Pills, give from *half a dram to a dram.*

Caſſia and Tryphera looſen the Belly and cauſe eaſie deliverance thereby: And purges that are ſharp ſtirre up the expulſive faculty of the womb alſo; therefore to avoid Abortion we give no ſtrong purges.

There are divers Reſtauratives to preſerve ſtrength, which are uſeful in the throws, and to refreſh them for Labor: both for Diet and Medicine. Confection Alkermes is Cordial and ſtirs up the faculty. It is given with wine and Borax. Or: Take *the Pouder of Diamargariton Calidum, and Diamoſchu, of each half a dram*; give it with wine or water, or make Lozenges thereof.

Fumigations and ſents below, peirce into the womb and are good if made of very ſtinking things, let them be directed into the womb, by a Funnel.

Of ſweet ſcents: Take *Labdanum one dram, Storax half a dram, Muſk and Amber greaſe, of each half a ſcruple; Sugar a dram*: Make a Pouder, or Troches to be laid upon Embers.

Anoynt the Orifice of the Neck of the womb with Oyl of Spike, or put it in with bread.

Alſo the fume of Amber, or Horſe, or Aſſe hoofs is good.

Or: Take *the Pouder of an Aſſes hoofe*, and mix it with *Horſe greaſe*, and burn it.

Or: Take *Galbanum, Myrrh, Aſphaltum, of each half a dram; Caſtor one ſcruple, and with the Gall of an Ox*: Make Troches, burn them.

Dioſcorides commends the fum of Brim-ſtone, if the Child be dead.

The fume of the Decoction of Dittany and Mugwort doth the ſame.

Sweet ſcents are applied to the Noſe to refreſh, nor may you fear the riſing up of the Womb, becauſe it is otherwiſe, as I ſhewed in the Suffocation of the Womb.

You muſt put into the womb things that relax and make it ſlippery, and that provoke excretion.

Of looſning things, this Decoction is beſt: Take *Marſh-mallow roots one ounce, Linſeed, and Fenugreek, of each half an ounce; Savin three drams*; Boyl and ſtrain, and add *one ounce of common Oyl or Butter, or uſe Oyl of Chamomil, or of ſweet Almonds*, by injection; *or Oyl* wherein Fenugreek hath been boyled, with *Oyl of Flower-de-luce, or Cream.*

Or thruſt greaſie wool into the Womb, dipt in Butter, Honey, Mucilage of Lin-ſeed and Goos-greaſe, with a little Saffron.

Alſo dip wool or Spunge in juyce of Leeks, Saffron, and Myrrh.

Or thus. Take *Galbanum, Opopanax diſſolved in Vinegar each three drams; Myrrh two drams, Saffron half a dram*, with *Oyl of Orris* make a *Peſſary.*

If the Child be dead, uſe juyce of Peny-royal, leſſer Centory, Leeks, Mercury.

Or a Peſſary of Dittany root, or of Madder, or Briony green, and anoynted with Oyl.

Or Take *Mercury bruiſed with Parſley as much as will make a Peſſary, Nigella ſeeds, and Sowbread roots each one dram; fil a little bag therewith.*

A ſtronger. Take *Agarick two drams, Birthwort and Aſarum roots, each one dram; Coloquintida* (which openeth the Veins very much) *one ſcruple, Myrrh three drams, juyce of Mercury boyled with Honey to a Syrup*, make *Peſſaries in Bags.*

We inject things to ſuppurate the Secundine if it come away, that it may come forth like matter, and this may be done without hurt to the Womb, for Nature ſeparates the corrupt parts from the ſound, of her ſelf.

Thus. Take *Starch one ounce, diſſolve it in the Decoction of Mallows and Lin-ſeed, adding two yolks of Eggs, and Turpentine diſſolved two drams*, inject often, adding *Honey*, alſo to cleanſe, *Baſilicon diſſolved in Milk*, or *Common Oyl* is an ordinary ripener.

Alſo Ægyptiacum when we know the Secundine is rotten

rotten by the matter that comes forth, is good with Lie to cleanse and cause nature to expel it.

Suppositories help by loosening the belly. And pricking nature to increase the Throws, because they are neer the Womb; especially Clysters, they work better than any outward applications.

Baths are to be used often in the last month to loosen the passages, when a Woman is used to have hard Travail; made of Wormwood-water, or the Decoction of Loosners, and let the belly be anoynted with Grease, Butter, or Oyl.

If shee sit in such a Bath in the time of her Travail, or foment the Privities therewith, it will dilate and help.

If we desire chiefly to loosen make it thus. Take *Lillies, Briony roots green, each half a pound; Marsh-mallows, Mallows, Pellitory, Coleworts, each one handful; Linseed and Fænugreek, each half an ounce; Chamœmel and Melilot each one pugil*; boyl them for a *Bath* to sit in, or a *Fomentation*. Or take *one pint thereof*, and with *Honey, juyce of Mercury, Hiera*, make a *Clyster*.

If we wil urge forth the Child or Secundine. Take *fresh roots of Briony half a pound, of Dittany and Birthwort, each two ounces; Pennyroyal, Savin, Rue, Mugwort, each one handful; Lupines, Bay and Juniper berries bruised each two ounces; Lavender flowers three pugils*, boyl them in *Water*, add *Wine*, let it be used as the former. Or make a *Clyster* therewith as the former Clyster.

It is good to bring forth the Secundine, if you dip a Cloth in the Decoction of Birthwort, Pennyroyal, Savory, made in Wine and apply it to the belly.

If you use no Baths, wash the Legs and the Thighes with the former.

Anoynt after bathing, the lower part of the belly, and the Privities, and the Loyns, and Rump.

A loosning Liniment. Take *Oyl of Lillies, Wall-flowers, Dil, Butter, Goose and Hens grease, Mucilage of Linseed and Fænugreek each one ounce*; with *Saffron half a dram*.

The Resumptive Oyntment wil do the same.

Provoke the Child with this. Take *Oyl of Wall-flowers and Rue, each two ounces; Juyce of Savin and Mugwort, each one ounce and an half; juyce of Leeks half an ounce*, boyl them till the Juyces are consumed, add *Myrrh and Gabanum dissolved in Vinegar, each half an ounce, liquid Storax one dram, roots of Asarum, Birthwort, Sowbread, each one dram; Cinamon half a dram, Saffron one scruple*, with *Wax* make an *Oyntment*.

Emplasters work stronger, applied to the Navel and Share. This is best, *Green Leeks, and Polipody each half an ounce; Birthwort one ounce, Mugwort, Coleworts, Organ, Tansie, Savory, Orris leaves, each one handful*; stamp them, with *one ounce of meal of Lupines*, apply it like a *Cataplasm*, and renew it when it is dry.

Also Cupping-Glasses, Frictions, Ligatures to the Thighs and Feet, draw down and hasten the Birth.

The Vulgar commend Amulets in difficult Travail, which though they have no strength, yet because they encourage the woman, may help.

A Snakes Skin about her middle is most commended.

And Saffron about her neck, And a Load-stone in her hand.

Also the Eagle-stone, bound to the Thigh or soal of the Foot.

We shall not mention superstitious words and looks, and the giving of some things to be chewed by the Husband before they be applied.

CHAP. X.

Of the Defect of Vital Motion.

The Kinds,

WE call that Operation, by which all the parts of the Body live; the Vital motion or Life: The Defect of which, we cal also the defect of strength, and is known in parts that are moved, not only in respect of a voluntary motion, but when all the Functions Vital and Natural are taken away, or diminished, in parts movable and immovable: This is either general to the whol Body, or special to some parts.

We perceive the want of strength in the whol body not only by the want of all the Functions mentioned, but by the remission of the motion of the Heart and Arteries; which is either weak or ceaseth wholly.

General weakness.

If the strength fail in general, and the motions mentioned are slower, it is called a generall weakness; which is greater or less, sometimes natural from the birth, somtimes going before Diseases, or in the beginning or end of them.

In this the whol body acteth dully and with difficulty, not as in Impotency of motion, when the Members are palsied or their actions hindered, but when the Members are faint and bruised more or less as the weakness is.

Then is the pulse or beating of the Arreries diminished. And either the Artery is not so dilated as it ought to be, which is called the little pulse: Or when it is pressed, it presently stoppeth, and the pulse is less, which is called a faint pulse. Or the Artery extended slowly, and it is called a slow pulse. Or it beats at a great distance, and is called a rare pulse. Or it stoppeth one or two or more stroaks, and is called an intermitting pulse. Or it is obscure of two or three sorts, of which there are many kinds, as the pulse like a Mouse-tail, Grashopper, or Worm called *Murus, Formicans, Vermicularis*.

Likewise the motion of the Heart is weak, and then the pulse is remiss, slow, and Dul. Physitians mention no other in the Heart, for it is sufficient by touching the Arteries to know the vital strength, especially in regard the motion of the pulse is answerable to that of the Heart. Also the Defect of the Heart is known by the breathing.

Extream weakness in the hour of death.

In the pangs of Death there is extream weakness, which is more or less, longer or shorter. In which, although the conflict between life and death, or Convulsions, the Members are moved, yet the strength is gone. And the pulse intermitteth and ceaseth, like the flame of a Candles end, that somtimes blazeth with a little refreshment from the grease, but goeth out again when that is wanting. And the motion of the Heart and Breathing, are much stirred up in the Agony before they cease so that the whol breast is shaken, and the Nostrils moved, the body sweats and farteth (which caused the Poets to say the Soul went out) And death being at hand the heat leaves the external remote parts, as Hands, Feet, Nose by degrees, and the rest

while

while the breast is warm a while; til all the breath ceaseth, the mouth and Eyes remaining open and the body turned like a clay colour, we are certain the Soul hath left the body.

Syncope or Swooning. Sometimes while the man liveth the strength is taken away for a time, and all the Functions of the whol body suddenly, Pulse and Motion ceasing, so that it cannot be felt at least. In the Disease called *Deliquium*, *Lipothymy*, or *Lipopsychy* in Greek; if it be great 'tis called Syncope. And then all breath is gone so that you cannot perceive it by a Feather applied to the Nose, or the like; which may be stopped (in this case only during the Fit, while the motion of the heart is staied, and hath no need of Breathing) without Death. But while the the Heart moveth it cannot want Breath, because it procureth vital spirits. In this Syncope they fall suddenly, only with a noise in the Ears or hissing, the strength being lost as in an Apoplexy, if the Syncope be great: but they differ in this, that in the Apoplexy, the Heart and Arteries beat, and they breath though with difficulty and obscurity. There is also a cold sweat called Snycoptical or Diaphoretick, not from the digested substance of solid things, but from the conflict of nature and the dissipation of the Spirits; which is so great, that not only thin humors, but also the Dung and Urin break forth. And because then heat vanisheth from the outward parts, there is a cold sweat remaining, and a paleness all over, in those places that should be red by nature, shewing it self first in the Lipps.

Particular weakness. Somtimes there is a particular weakness when the internal or external Organs are deprived, and it is called the weakness of that part; not every weakness that comes from a Disease, but as shal be shewed in the causes, that which comes from the loss of the flourishing vertue. Such as is sometimes in the Stomach, Liver, Brain, Eyes, Joynts or Members: which shal be spoken of in those accidents which are produced thereby.

The Causes.

The cause of all want of strength is in the vital spirit in man, when it is not nourished with another spirit or moisture, or consumed. The Cause of all failing of strength, fainting, and weakness of particular parts, dependeth upon the inbred and inhærent spirit of the similary parts, which makes the spiritual substance of parts, as they call it, and giveth living vertue, or life, and strength, and heat, which is natural. This natural spirit or heat being inbred in every substance of parts as in the Heart (which though it abound with other, yet hath this in it as necessary for life) hath need to be continually nourished and renewed by the vital spirit, made in the left ventricle of the Heart, and communicated to all the parts by the Arteries, as to the substance of the Heart by the coronary Arteries called the influent spirit, that it might be the matter that sustains the innate spirit; and because it easily disperseth, it ought to be in great plenty through the body. And hence is it that the heart being the shop where that spirit is made, alwaies stands in need of Air and Blood whereof it is made. Wherefore if they be wanting, or but little, there is one cause why strength faileth. As when for want of breath the heart wants Air, then Death follows except its motion were hindered by other causes, as shal be shewed in the causes of Swooning. Because the Heart being dilated by motion often not filled with matter for vital spirits, dieth: And this cannot befall it while it moveth not, because it may subsist a while with its own spirits, as other parts. So we shewed in a Syncope, wherein they revive after a long stopping of the breath. But seeing Blood mixed with Air in the Lungs affordeth fit matter for animal spirits, if it be consumed by great want of nourishment or Atrophy; or stopped in the Vessels, so that it cometh not to the parts, there must be weakness. But no man living can be so without blood, that the Lungs should be so empty which usual have so much; or the Vessels that are so large by which the Blood is carried with Air from the Heart, should be so obstructed. Only strength fails in this respect, that spirits are not made, or being made, they are suddenly dissipated, which causeth the innate spirits to subsist no longer. And that either when they altogether vanish and leave the body, as in the Agony of Death; or they depart for a time from the Heart and return again, as in swooning: Or when they are fewer then are necessary, as in Weakness. Also strength must needs fail when there is want of substance making moisture, in regard the innate spirit is nourished not only with the influent spirit, but by radical moisture which consumeth dayly. And so it is the occasion of Death, or Weakness, as it is wanting in the Heart (where it is the proper nourishment of the spirit) or in any other parts. But if the innate spirit called the spiritual substance of the parts, or called the natural heat be extinguished or weakened, or any part cold: Then if it be in the Heart (which hath as I shewed, its proper native heat or innate spirit besides the vital, which it aboundeth with, otherwise there had been no coronal Arteries) and be spent, Death follows, but if it be diminished, there is a general faintness of the whol body, as a particular weakness of some other member, if it be in them. But now I shal shew what causeth the dissipation of both the innate spirit called native heat, and of the Influent spirit by which it is susteined. And how the humor that feeds it is consumed by natural and adventitious courses.

The constipation of radical moisture through age is the cause of weakness. They who have more innate spirit, or natural heat, and radical moisture, are more strong and active, and they who have less, are weak, and sooner die. And when that flourishing humor is consumed like Oyl by the heat of the spirit, by degrees, in age men grow more weak and dry.

Diseases that dissipate the influent and fixed spirits are the cause of weakness. Among internal and external causes, all great Diseases dissipate the vital spirits if they continue long, and at length consume the innate spirits with the radical moisture wherewith it is joyned; from whence the weakness is more or less.

Evacuations that dissipate the natural fixed, and also the influent heat cause weakness. Great and often Evacuations either by chance, or willingly, or in Diseases, exhaust and dissipate the spirits, and abate strength, especially if good humors be voided, as Seed in the running of the Reins, or by Venery. Also great bleeding, purging by reason the stirring of the spirits abate strength, as in Diarrhæa's, and great and often sweating, and much pissing. Also the sudden effusion of things besides nature, as of Water in the Dropsie, matter in an Empie-

ma doth weaken. Theſe violent excretions being painful, as in a Dyſentery, weaken more.

Pain moving the ſpirits cauſeth weakneſs.

Great pain which violently ſtirreth the ſpirits, to bring them to the part afflicted with the blood, for help; cauſeth weakneſs, and if it be very great, fainting. Eſpecialy if the part ſuffering, have great affinity with the Heart. Hence it is that they who have the Cardialgia or Heart pain are very weak by reaſon of the conſent of the Stomach with the Heart, and do eaſily faint: this fainting is called *Cardiaca*. And ſo it is in other painful and long Diſeaſes.

Pain of the Mouth of the Stomack cauſe of Cardiaca, or fainting.

Trembling of the Spirit, is the cauſe of weakneſs, fainting.

Great and ſudden Paſſions of the Mind, becauſe then the ſpirits are carried in and out with force, cauſe debility, and ſomtimes fainting and death; Thus we have ſeen ſome ſwoon with joy that hath thrown the ſpirits outward, and have read that others have died ſo. In anger the ſpirits are ſo inraged that they look red in the Face: And when the ſpirits preſently return, as the paleneſs following ſheweth, they are in little danger of life, but they are weakned thereby, as appears by their trembling, and there remains a wearineſs though anger be over. Nor is the cauſe of men not dying with anger as with joy, becauſe angry men are ſtronger, as is ſuppoſed: in regard old men and ſick men that are peeviſh, are eaſily moved to anger. But it often hapens that by great fear, the ſpirits being violently moved, ſome die and many are weakned. And ſhame and baſhfulneſs may cauſe the ſame; by which they ſay *Homer* died. Alſo if the paſſions be of long continuance and ſtrong; as ſadneſs, and fear, and the like, they ſtir the ſpirits with continual Cogitation, and at length conſum them, and as they ſay dry the bones, and this is a Conſumption of the Spirits.

Heat diſſipating the ſpirits and conſuming their nouriſhment, is the cauſe of weakneſs.

A ſtrong and conſtant heat, doth not only diſſipate the ſpirits but conſumes them, and their nouriſhment; as when the body is weakned by heat, fire, labor, there is fainting ſomtimes. And in Feavers, it is ſo eſpecially in a Cauſon, or burning Feaver. And in a Hectick the accidental heat of the heart, though not great, yet continuing, devours the radical moiſture of the heart and ſolid parts, and the ſpirits, and cauſeth weakneſs and Conſumption.

Cold reſtraining the native heat, is the cauſe of weakneſs.

A cold diſtemper quencheth the native heat, or makes it leſs: ſo ſome have been frozen to death. And others have been killed with ſtaying long in cold water. Alſo ſome parts are benumed and blaſted with cold, or ſo weakned that they come not again to themſelves. And this may come to the Stomach, by drinking cold water. And hither may be referred thoſe that for want of excerciſe, bring not the native heat into action, and grow ſtupid. Alſo the parts grow weak, by uſing things inwardly and outwardly, that are Potentially cold a long time, they grow weak, but the native heat is not wholly extinct, as by actual cold. Although hitherto it hath been believed, to come from Narcoticks, that are very cold: which as we ſhewed, do not kil by cooling, but by ſtupefying the brain. Nor do we grant that the Pores being obſtructed, that the heat is Suffocated for want of fanning, or Eventilation; for as we ſhewed, the Skin hath Pores not to let in Air, but to let out other things.

A Maligne quality in the Heart, is the Cauſe of weakneſs.

A Maligne quality affecting the Heart, or mixed with its ſpirits, cauſeth an extinction of native heat thereof, and by conſequence of all the Body: or diminiſheth it, and begets a Syncope, or weakneſs, or Death, according toits divers qualities. So when the Air is infected, men in the Plague, ſuddenly faint, are weak and die: or in ſwouning Feavers, which alwaies beginwith fainting. And when Poyſon is taken, or bred in the Body, it gets to the Heart, and endangers life, and cauſeth weakneſs. And this may happen to other parts, when Poyſon is more contrary to them then to the Heat.

A Wound in the Heart, is the cauſe of weakneſs and Death.

If a Wound peirce the left Ventricle of the Heart, the ſpirits ſuddenly vaniſh, and there is ſudden Death. And if the right, or it peirce the Superficies, or cuts the Coronal Veins, they die ſuddenly from great bleeding. I ſuppoſe non can ſcape, if the ſubſtance only be hurt and divided, becauſe a principal part cannot endure it. *Fornelius* writes that he ſaw one that conſumed, before he died of an Ulcer in the Heart that came from an inward cauſe. The like may be from a Tumor, which is rare, and not known but by diſſection, becauſe the Heart feels not. I ſaw in 1644. in a Woman that I opened of a Dropſie in the Breaſt, ſuch a ſwolen Heart looſe and greater then it ſhould be with the Veſſels, eſpecially the *Arteria Aorta* three times bigger then uſual, and both the Ventricles, eſpecially the left, and the Lungs and Cavity of the breaſt, filled with wateriſh blood. Alſo a great corruption in other parts extinguiſheth the native heat.

The Cure.

The Cure of weakneſs and ſwouning.

We ſhall ſhew how it is to be done in diverſe weakneſſes, and chiefly in general Imbecility and great fainting: which alſo may be for particular weakned parts although in their Symptoms, we ſhall alſo ſpeak thereof. We muſt act and prognoſtick, acctording to the diverſity of the cauſe, of weakneſs; If it come from want of Air and breathing, we ſhewed the Cure in the defect of Breathing. If it be from the birth or old age, we labor in Vain, becauſe natural cauſes cannot be changed, nor radical moiſture renewed. If it be from Evacuation, it is worſt from Venery, or bleeding, which is in a Dropſie. If from ſweat, it muſt be ſtopped, as we ſhall ſhew in its place. If from pain, take away the cauſe, and allay the pain; for pain of the Heart, cauſing ſwouning vomit, purge and ſtrengthen the Stomach, as in *Cardialgia*; ſome die of joy, and that weakneſs which is from other paſſions, if it continue, eſpecially from fear, it is hard to be Cured. If it come from a hot or cold diſtemper, Cure it by contraries. A Maligne quality, Plague or Poyſon often killeth, for which we uſe Evacuations and Antidotes. A Wound in the Heart is deadly, and a corruption of the parts thereof, uncurable.

Theſe things obſerved, though the evil be deſperate, yet with Reſtauratives and Cordials, we may ply them to the laſt breath: that if there be any hope, and the weakneſs not fixed, cure them: And we may be the bolder if it come from Evacuation, Pain, or Paſſion, or after a Diſeaſe. And if there be a Syncope, we may remove it, and prevent it. Examples of all which do follow.

Let

Cordials. Let the Diet be of good juyce, and in little quantity, eaſie concocted, give them little and often. Eſpecially if old men are lately ſick, or ſuch as have had great Evacuation. And if they cannot digeſt thick, give broaths, things ſtrained, or Jellies.

A good Julep: Take *Capon broath, and boyl Riſe therein, with Borrage,* add *the yolk of an Egg, and a little Roſe Vinegar, or a little juyce of ſharp Apples, or Citrons or Wine, Marjoram, Nutmeg, Saffron and Salt.*

Or boyl and ſtrain the fleſh of a Capon in broath, and give it with the reſt.

The German diſh of yolks of Eggs, Wine, Sugar and Butter, doth reſtore excellently.

The Gravie of a roaſted Capon, mixed with the yolk of an Egg, the fat being taken off, and boyled with Nutmeg and Salt, doth the ſame.

There are divers jellies; As, Take a Capon and Mince it with a little Veal ſalted and Spiced with a little Wine, and boyl it in Balneo Mariæ, and take the juyce, and ſtrain it from the fat, and keep it till it congeal in a cold place. This may be given by it ſelf, or with others. Wine doth ſuddenly and greatly refreſh, as experience ſheweth, give it alone, or with Sugar, let it be well ſented and ſweetiſh, or mix Cinnamon therewith.

It is good in ſwouning to give a ſop in Wine, with juyce of Apples, Lemmons, Pomegranats, and Cinnamon.

The Medicines to refreſh the Spirits and preſerve them are theſe.

Take *the julep of Roſes two ounces, Cinnamon water half an ounce*; give it often

Or thus: Take *the juyce of ſweet ſented ſower Apples half an ounce, Sack and Cinamon water, of each two drams.*

Or thus in the Heart pain: Take *of Balm and Lavender flower water, of each half an ounce; Cinnamon water, juyce of Lemons, or of Apples, and Sack, of each two drams.*

Juleps are uſual in Feavers and in thirſt: As, Take *ſyrup of Violets, Bugloſs water, Lillies, of each one ounce; julep of Roſes one ounce and an half, Roſe, Bugloſs, and Balm water, of each two ounces; Cinnamon water half an ounce*: give *two or three ounces.*

A Diſtilled water to reſtore: Take *the broath of a Capon, and Oxes, or Dears Hearts well boyled, four pints; Sack one pint, an Orange, or a Lemon cut in pieces, Galangal, Balm, of each one dram; Cinnamon half an ounce, Cloves two drams, Coriander and Baſil ſeeds, Roſes, Scabious and Bugloſs flowers, of each one dram; Saffron one ſcruple, Harts horn and Ivory ſhavings, of each one dram*; Diſtill a Water.

Or thus: Take *dried Citron peels, Angelica roots, Balm, Borrage flowers, Baſil ſeed, of each half a dram; Cinnamon three drams, Cloves, and ſpecies of Diamargariton Frigidum, of each one dram*: Infuſe them in *ſpirit of Wine*, give *one or two ſpoonfuls with Sugar of Roſes, or white Wine.*

Cordial Potions to be given at the point of Death, to refreſh. Take *Confectio Alchermes one ſcruple, ſpecies Diamargariton Frigidum half a dram, ſyrup of the juyce of Citrons half an ounce, ſyrup of Poppies three drams, with Roſe, Bugloſs, and Cinnamon water*, make a Cordial. This is good in extremity, with more *Poppy water.*

Or thus: which is good againſt Poyſon: Take *Confectio de Hyacyntho half a dram, or Diamargariton Frigidum, Diamoſcum dulce, of each half a dram; Syrup of the juyce of Citrons one ounce, with Scabious and Balm water*: make a Potion.

Treacle is good if fainting come from Poyſon, or an evil Medicine.

Alſo Lozenges of Sugar of Roſes, and Diamargariton Frigidum.

Or theſe: Take *ſpecies of Diamargariton frigidum, of the Electuary of Gems, or Cordial ſpecies, of each half a dram; Oyl of Cinnamon four drops, Sugar diſſolved in Roſe water two ounces*: Make Lozenges.

Or: Take *Coral one dram, Precious ſtones, Pearles, Ivory, of each half a dram: Citron ſeeds, Sorrel and Baſil ſeeds, of each one ſcruple; Cinnamon, Mace, of each one dram; wood Aloes one ſcruple, Muſk two grains, with Sugar*, make a Pouder, or Lozenges.

To theſe you may add the Oyls of Pearls, Coral or the like.

Portable Gold, or ſpirits drawn called *Elixirs*, are commended by Chymiſts, to ſtrengthen and hinder old Age. And they attribute much to their holy Oyl of mans blood: Take *of a ſound mans blood, of thirty, or forty years old three pints, Sperma Ceti, Marrow of Oxe bones, of each one pound*; Diſtill them in a Lembeck well luted, keep the laſt water which is red; and they ſay will change with the Moon; give *three drops in Wine, or Cordial water.*

Sweet ſcented things, refreſh and fetch ſwouning people again, we ſhall mention ſome only to be applied to the Noſe, which are at hand.

Apply Vinegar of Roſes with a Spunge, or Cloth, to the Noſe, or mix it with Penniroyal bruiſed, or Baſil: or let him ſmel to Wine.

They uſe to chew Cloves, and breath into the Mouth and Noſe of the Patient.

Or this: Take *Cloves, yellow Sanders, Roſes, of each one dram; Camphire one ſcruple*, beat them with Vinegar and apply them to the Noſe.

Or: Take *Roſe water one ounce, juyce of Apples, and Vinegar of Roſes, of each half an ounce; Cloves half a dram, Oyl of Spike one drop*: apply it to the Noſe.

Or anoynt it with Civet, or Chymical Oyls of Cloves and Cinnamon, with white Wax.

Apply Epithems to the Heart and Pulſes: As, Take *Roſe water three ounces, Wine that is ſweet ſcented two ounces, Vinegar of Roſes one ounce, juyce of ſweet Apples, or Lemmons half an ounce, Cloves one dram, Saffron one ſcruple.*

Or this: Take *water of Roſes, Balm, Scabious, of each two ounces; Vinegar of Roſes, juyce of Apples, of each one ounce; ſpecies Diamargariton frigidum one dram, Camphire one ſcruple, Saffron half a ſcruple*: Make an Epithem.

You may boyl Pouders, put into Bags, in Wine, and apply them: Take *Cloves two drams, Gallia Moſchata one dram, Saffron half a ſcruple, Baſil ſeed one ſcruple, Camphire half a ſcruple.*

Or anoynt the Pulſes: Take *Oyl of Cloves and Cinnamon, of each three drops*: and mix them with a little Wax.

Anoynt the Heart, with thoſe mentioned in the Palpitation thereof, or Oyl of Jeſemin, or Oyntment of water Lillies, or Citrine Oyntment.

Or: Take *Oyl of water Lillies two ounces, juyce of Citrons, and Vinegar of Roſes, of each half an ounce*: boyl them to a Conſiſtence: add *of all the Saunders, Roſes, and Sorrel ſeed, of each one ſcruple, Coral one dram, Pearl half a dram, Camphire half a ſcruple: with Wax*, make an Oyntment.

Or apply this Emplaiſter: Take *Treacle one dram and an half, the Cerot of Sanders half a dram, the ſpecies of Diamoſchu and Diambra, of each half a ſcruple.*

A Cordial Bag. Take *of all the Saunders each one dram; dryed Citron peels, the four cordial flowers, of Scabious and Leaves of Balm, each half a dram; Ivory or the*

Bone

Bone of a Stags heart two ſcruples, Species Diamoſchum one dram, make a little Bag, ſprinkle it with *Wine and Roſe-water*, or Fume it therewith, apply it to the heart.

It is good to raiſe them, to ſprinkle Water, and Roſe-water, and Vinegar and Wine upon the Face.

Alſo to bind the Limbs and rub them very hard.

Alſo to ſtop the Noſe and pul it, and open the mouth, and rub the Tongue.

They are ſooneſt raiſed with great Noiſe, and Neeſing.

And to place them with the Head down, and the body high.

Let them be quiet after the Fit, for weak people faint upon the leaſt motion.

CHAP. XI.

Of the Depravation of Vital Motion.

The Kinds,

IF the Vital Motion be Depraved which may be ſeen, as I ſhewed in the Voluntary and Involuntary Functions of the parts, Heart, and Arteries: we do not obſerve it as in the defect: for none can live too much, and the body and its parts cannot be too ſtrong: And if any parts that move voluntarily, move too much or wrong, that belongs to the depraved voluntary motion, of which we have ſpoken. We obſerve Depravation of Vital Motion in the pulſe of the Heart and Arteries, when it is oftener or more vehement than it ought to be by nature, or proceeds otherwiſe diſorderly.

The quick beating of the Heart and Arteries, whether great or ſmal.

Oftentimes the pulſe of the Heart and Arteries is more frequent than is fit, both in ſound and ſick, the breathing being alſo quick; and if this pulſe be great alſo, it is with pain in the Breaſt, Neck, Head, Ears. It is to be felt in thoſe parts, and by Phyſitians at the Wriſts.

Heart-beating.

Vehement and immoderate pulſation or beating of the Heart and Arteries, is a ſymptom often by it ſelf, or in cathectick Maids before they have their Terms, or ſuch as have the Hypochondriack Melancholy. This is called palpitation or trembling of the Heart, becauſe the motion is unequal. And being alwaies ſtrong, it is perceived plainly in the left ſide of the Breaſt, often in the Neck, ſomtimes under the Ribs, eſpecially on the left ſide, it is very troubleſom, and weakneth him much if it continue. Sometimes it forceth the Ribs, and as *Fernelius* ſaith puts them out of their place.

Aneuriſma

Sometimes it ſo dilateth the Artery and drives it out that it cauſeth the Tumor called *Aneuriſma*, which is great and beating. This Symptom ſomtimes remitteth and comes again ſooner or later; and it continueth longer or ſhorter time as we ſaid. I obſerved a grievous and wonderful palpitation of the Heart in the yeer 1627. in a noble Virgin of *Narbo* in *France* who was alwaies held in her fit by two ſtrong men that bare down the left ſide of her Breaſt with her hands til it ceaſed, otherwiſe ſhee complained that her Breaſt and Ribs would break.

An uneven Pulſe.

An Inordinate and uneven Pulſe cauſeth trouble, but that which beats low is conſidered not as a Symptom, but only a ſign ſhewing the Diſeaſe and the ſtrength: And therefore Phyſitians feel it.

The Cauſes.

It is moſt certain that the Heart and Arteries cauſe this depraved palpitation by their motion; becauſe no other parts do beat. When theſe beat moderately, ſound people ought not to perceive it, leaſt the noiſe ſhould be a hinderance; as it is when they beat vehemently: eſpecially where the Arteries are great and many, and free, not ſunk into the Muſcles, as in the left ſide, not only by reaſon of the left Ventricle of the Heart, and the Ear that moveth it ſelf there, but by the great Artery that comes from the left ſide of the Heart, and deſcendeth by the left ſide of the Vertebræ. Alſo in both ſides of the Throat, which the great Artery aſcending goeth through being divided and there produceth the ſleeping Arteries, and thoſe of the Arms: Alſo under the Ribs eſpecially of the left ſide, becauſe the great Artery deſcending thither, lieth chiefly on the left ſide: As alſo becauſe it produceth great Arteries which accompany the branches of the Gate-vein on the right ſide, eſpecially thoſe that go to the natural bowels and the Spleen. For which cauſes, when the Arteries beat much, the puteſaction is perceived on that ſide, and is troubleſome. In other places where the Arteries are leſs or hidden, though they beat ſtronger, yet are they not perceived, except it be by the pain of the part adjoyning, which is troubled at the leaſt touch of an Artery. As in pains of the Head, by reaſon of the great Ventricles of the brain beating, and in Inflammations. Or when a little Artery beating too violently in a ſtrait place, and hurts a Nerve, as in the Ears, wherein we may hear the pulſation. But in naked parts without fleſh, you may touch a pulſe and judg whether it be natural or depraved; eſpecially in the Wriſt. The trueſt cauſes of the great beating of the Heart and Arteries is the diſſipation of vital ſpirits, and the repletion and dilatation of the Arteries, among which there are others leſs probable. If the influent vital ſpirits be ſuddenly or too much diſſipated, ſo that the innate ſpirits cannot enjoy them ſufficiently, becauſe it is neceſſary that new be alwaies ſent from the Heart to the whole body, which muſt be done by the pulſation of the Heart and Arteries; It is therefore no wonder if their motion be enlarged and more quick, and if the cauſe be great more vehement with great breathing, which as is ſaid, brings matter to make vital ſpirits. And this may come alſo from the ſpirits ſtirred with the blood, the Heart and Arteries being inflamed.

The too great ſtirring of the ſpirits is the cauſe of quick & great pulſation of the Arteries.

When the ſpirits are ſuddenly toſſed hither and thither, and diſperſed, and not equally communicated to the body, the Heart and Arteries beat quick for new, and the reſpiration is greater, or otherwiſe ſtrength would fail. This comes from the motion of the body and mind as we ſhewed in quick reſpiration which comes from thence. Hence is it that the pulſation increaſeth by the paſſions of the mind, as anger, Joy, Terror, Fear, Shame, the ſpirits being moved: which *Eraſiſtratus* knew when from the ſudden motion of the pulſe from the beholding of the Nurſe that was beloved, he diſcovered a Diſeaſe to be from the mind; that is Love.

This

Stirring of the Spirits cauſeth palpitation of Heart in them that are ſubject thereto.

This Palpitation of the Heart is ſooner in weak people and ſuch as are diſpoſed to it; the leaſt exerciſe wil cauſe it in ſome: One confeſſed to me that he had it preſently in the act of Venery, and was ſo troubled therewith that except he gave over, he ſhould be ſtifled, as it fel out afterwards.

This pulſation alſo is greater when the ſpirits are diſſipated from other cauſes, as at the point of Death, when they are vaniſhed though there be great weakneſs by which nature labors to aſſiſt them in the greateſt danger, by this motion and recollection of Spirits.

Over-heating of the Spirits is the cauſe of quick and great pulſation.

When the Spirits grow hot with the blood, there is great motion of the Heart and Arteries, not ſo much becauſe the ſpirits are hot and unquiet, but becauſe they then are ſooner ſpent, that what is ſuddenly loſt, may be ſuddenly repaired. Whether it come from the external cauſes, as the Fire or Fume, or from internal, and the rather if the Heart grow hot, and continue ſo, as in a Feaver. Or if the heat come from motion of the body: or exerciſe in heat. Or when the mind is ſo affected that not only the Spirits are troubled but ſet on fire thereby as in anger. Or when all theſe concur; As we knew a Noble man that playing at Tennis, was ſo hot and angry, and ſo moved in the Pulſation and Reſpiration, that he could not recollect himſelf, nor could the motion ceaſe, but he died ſuddenly.

When the Arteries are too full of blood, and too much dilated thereby (in regard they ought not to be filled as the Veins are, that there may be room for the Vital ſpirits) the Pulſation which before was not perceived when moderate, is felt by the Patient, and that vehement Diaſtole about the Heart and great Arteries, mentioned in the Palpitation of the Heart, is raiſed. Eſpecially when the blood floweth to the left Ventricle of the Heart and to its Ear, which may be much enlarged, to the great Artery, whereby they are too full and extended. And it ceaſeth when it flows from thoſe parts, and doth not more lift them up and dilate them. Or it moleſteth continually if an Artery be ſo dilated as *Fernelius* obſerved, Yea, that the great Tumor called *Aneuriſma* doth follow. And if this *Aneuriſma* be within, in any part of the great Artery, or in the breaſt, Throat, under the Ribs, or in the Ear of the Heart, which wil be very much ſtretched, it cauſeth a perpetual Pulſation, as an external *Aneuriſm*, and is the cauſe of that Palpitation of Heart which laſteth ſo long and kils ſo many, as ſome have obſerved in Anatomy.

Plenty and beat of Arterial blood, that fils the Arteries cauſeth palpitation of Heart.

It is plain that this Palpitation comes from plenty of Arterial blood, becauſe the Arteries have nothing elſe in them; And *Galen* ſeems to grant it when he ſaies all ſuch are cured or eaſed by bleeding. And this pulſation is greater, by how much the blood and the ſpirits mixed therewith, which fill the Arteries, are the hotter. *Fernelius* witneſſeth that he ſaw ſuch blood in the Arteries burnt like black choller. And we prove that that cholerick hot blood is gathered in the Meſaraick Arteries and and ſent to the great Arteries by theſe Arguments. Becauſe as ſuch juyce as is frequently bred in the meſaraick Veins from meat and drink doth inflame & pollute the blood being carried from the branches of the Gate-vein to the hollow vein: ſo doth it get into the meſaraick Arteries which are joyned to thoſe Veins, and ſo into the greater Arteries, and ſo to the Heart, and ſo filleth them, and doth what is mentioned. And the rather becauſe theſe meſaraick Arteries are branches of the great Artery, but the meſeraick Veins come not from the hollow Vein, nor are joyned to it, but by the ſubſtance of the hinder. Hence is this Diſeaſe ſo uſual in Virgins from the ſtoppage of their Courſes, which begets an evil habit, and in thoſe that have Hypochondriack Melancholy. In which, as the fulneſs and foulneſs of the Venal and Arterial blood cauſeth Cachexy and Melancholy, ſo do they cauſe palpitation of the Heart and Arteries.

Some ſay this may be from Wind filling the Arteries, which we cannot allow, becauſe none hath obſerved that the Veins can be filled therewith. Nor do we grant that vapors gathered about the Midriff, Spleen, or Womb, and ſo ſent into the Arteries and Heart, or a thick vapor ſhut into the Heart, that came from another place, as ſome have written, can ſo fill it that they may cauſe this Pulſation. As for other cauſes of palpitation of which they write, eſpecially wind or water in the *Pericardium*, we count them not the true cauſe of Palpitation, but of ſome fluctuation when the body is moved, as may appear by the noiſe in the breaſt; as we ſhal ſhew in preternatural Swoons in the body.

Other Diſeaſes of the Heart beſides theſe mentioned may cauſe it to move inordinately and quicker, as heat that moves the Spirits and diſperſeth them, and too great Repletion by the blood of the Arteries. Such are thoſe, that ſo offend the Heart it moveth violently to caſt them off, rather by a natural ſenſation than by feeling which the Heart wanteth. A Venemous quality from within or without, doth cauſe palpitation, or any malignity in the arterial blood which fils the Arteries cauſeth the ſame by ſtretching them and by troubling the Heart. I underſtood that one who died of a continual Trembling of the Heart, had a Bone or Griſtle found in his Heart.

A malign quality ſtirs up the Heart to palpitation.

The Cure.

The Cure when it comes from vehement motion.

That Palpitation which comes from vehement motion of mind, or body, or Heat, ceaſeth when they ceaſe, as we ſhewed in Short-breathing which is joyned therewith. But when many cauſes concur, it is dangerous as we ſhewed.

Cure of Palpitation of heart

When it comes from plenty of blood, it is dangerous, and laſting, and troubleſom by continnal motion, but waſting of the Spirits: many have dyed hereof, others have long been troubled therewith, many have been cured by removing the cauſe. And becauſe the Cauſe is commonly about the Meſeraick Veſſels which are diſtributed in the natural parts, and there is the plethory and filth, it is cured as Cachexy Cachochymie and Hypochondriack Melancholly; which are uſualy joyned therewith. By preventing too great increaſe of Blood, Humors, and Wind, and ſuch humors as chiefly abound, by purging of Choler, and ſtrengthening the natural parts, and mixing Cordials with all things. And in regard it is hard to evacuate the conjunct cauſe in the Arteries and Heart, we muſt ſtrengthen them with Cordials. Thus.

Letting of blood except ſome thing hinder, is good according to *Galen*. And beſt from the Arteries, which will either take away the cauſe, or diminiſh it: as we ſhewed a Vertigo, or Giddineſs is cured by opening an Artery, when it comes from ſuch a Repletion. But it will help, if the blood be taken from the Veſſels, both for the diminiſhing of the Anticedent cauſe, and becauſe when the Veins are empty, they often fetch blood from the neighbor Arteries. Therefore the great Vein in the Arm, muſt be opened on the ſide, that beats moſt. And if it doth good, it muſt be repeated. Alſo open the Veins of the Legs, to draw down, eſpecially if Terms be ſtopped.

It is good alſo to provoke the Hæmorrhoids, becauſe we cannot draw blood directly from the Meſeraicks, another way.

In Evacuations of Cacochymy, or burnt Melancholy, alwaies mix Cordials.

Prepare the Humors and open obſtructions firſt with Clyſters, then with Juleps and Decoctions, for three or four daies. Thus, Take *Syrup of the juyce of Citrons or Lemons, or Apples, of Vinegar and Bugloſs, of each one ounce; Fumitory, Bugloſs and Endive water, of each three ounces.*

If obſtructions prevail: Take *ſyrup of Maiden-hair, of the two roots, and Bugloſs, of each one ounce; Balm, Roſemary and Bugloſs water, of each three ounces.*

Or give this Decoction: Take *the opening roots ſteep them in Wine, of each half an ounce; Balm, Sage, Fumitory, Hops, Ceterach, Maiden-hair, of each one handful; Roſemary, Violets and Bugloſs flowers, of each one pugil; Dodder, Sorrel and Anniſeeds, of each one dram:* Boyl them, and add *juyce of Apples two ounces, and with Sugar and Cinnamon:* Give it for three or four Doſes.

Or: Take *opening roots, of each half an ounce; bark of Tamariſk, Wormwood, and Balm, and Fumitory, of each three drams; Cordial flowers, Citron ſeeds, of each one dram,* ſteep them in Wine.

Purge with gentle things: Thus often, Take *Rhubarb four ſcruples, yellow Myrobalans two drams:* bruiſe them, and ſprinkle a little *juyce of Citrons, or Apples* thereon, till they are ſoft, then infuſe them in *Wine or Balm water two drams, and Cinnamon water;* ſtrain it, and add *ſyrup of Roſes or Manna two ounces.*

If he love a bitter Potion: Take *Rhubarb four ſcruples, yellow Myrobalans two drams, Agarick one dram, Senna two drams;* ſteep them in *Wormwood Wine.*

Or: Take *Carbolcon half an ounce, Electuary of Citrons ſolutive two drams, ſyrup of Roſes ſolutive one ounce, juyce of Apples half an ounce, with Balm and Roſe-water.*

Make this Decoction for many Doſes, or a ſyrup thereof: Take *Succory roots, Sorrel roots, of each two ounces; bark of Tamariſk half an ounce, Bugloſs, Fumitory, Hops, Time, Balm, Maiden-hair, of each one handful; flowers Cordial of Scabious, Roſemary, water Lillies, of each one pugil; Annis, Purſlaine and Citron ſeeds, of each one dram; Raiſins, Tamarinds, of each one ounce; Polipody two ounces, Senna one ounce and an half,* boyl them, and add to the ſtrained Liquor being hot, *Citron and Emblick, Myrobalans, of each three drams; Turbith two drams, or Agarick half a dram, Ginger and Spike, of each half a dram,* ſtrain it, add *ſyrup of Bugloſs, and Roſes ſolutive, of each two drams;* for three or four mornings, or with *Sugar* make a Syrup.

If he had rather take Pills, make them of the extract of Myrobalans and Rheubarb: Or, Take *yellow Myrobalans one dram and an half, Agarick and Turbith, of each one dram; Baſil ſeed one ſcruple, Spike half a ſcruple, with juyce of Roſes and Wormwood:* make a Maſs, give *one dram.*

Let the Diet be temperate, by which, and blood-letting many have been cured, as *Galen* ſaith. Avoid things that breed Crudities and wind.

The Hearts of four footed Beaſts, and of Birds often eaten do good, by Propriety. Eſpecially if roaſted with Cloves.

This Cordial water is excellent: Take *the Heart, of an Hart, Ox, or Hogg one pound:* to theſe add *the Hearts of Patridges; cut them ſmal:* add theſe Pouders *of the Cordial flowers, Roſemary, Majoram, Balm, Baſil, Harts-tongue, of each two drams; ſeeds of Baſil, Citrons, of each one dram; Citron peels three drams, Cloves two drams, Cinnamon, Sanders, wood Aloes, of each one dram; Mace, Zedoary, of each half a dram; Saffron one ſcruple, Muſk or Amber greeſe half a ſcruple, ſprinkle them with Sack till they be like a Pultis:* Diſtill a water, give from *half a dram,* to *ſix drams, alone or with Julep of Roſes, or ſyrup of the juyce of Citrons often.*

The Oyl of Coral, or Pearl, given with Sugar is good.

Or this Syrup: Take *of Cordial flowers, each one pugil, Balm, Baſil, of each one handful; Cloves two drams:* Boyl them in *Wine* and *Water.* Clarifie them, and with *Sugar* and *Cinnamon;* Make a Syrup.

Or this of the juyces: Take *juyce of ſweet Apples, Pomegranats, of each four ounces; juyce of Bugloſs, Roſes, of each two ounces; juyce of Citrons, Lemmons and Plantane, of each one ounce; Roſe and Balm water, of each two ounces; Sugar half a pound:* boyl them to a Syrup, and add *Cinnamon and Cloves;* give *one ounce* alone, or with *Wine* or *convenient Waters.*

An excellent Wine: Take *Angelica, Elicampane, Tormentil, white Dittany, of each half an ounce; Zedoary, Galangal, of each two drams; dried Citron peels one ounce, Cloves an ounce, Cinnamon two drams, Cordial flowers, of each one dram; Roſemary and Lavender flowers, of each one dram and an half, Balm, Sage, Baſil, of each two drams; Baſil ſeeds, Marjoram and Citron ſeeds, of each one dram; Mirtle berries two drams,* bruiſe them, and add *twelve or fifteen pints of the beſt Wine,* keep it in a Veſſel, that is firſt ſeaſoned with hot Wine, wherein Cloves were boyled, or with the Pouder of Cloves. Let him drink in the morning when he takes broath, or before Dinner.

Give theſe Pouders with Gilly-flower water, Balm, Baſil, Sorrel, Plantan or Scabious water; or make Lozenges thereof.

The firſt: Take *roots of Angelica, Galangal, Zedoary, Citron peels dryed, Balm, each half a dram; Baſil ſeeds and Cloves, each one dram; Purſlane ſeed, Mace, Cinnamon, Sanders, of each one dram; Saffron, Campbire, of each a ſcruple; Coral one dram,* make a Pouder, give *one dram.*

The third: Take *Coral, Pearl, Criſtal, Ivory or Bone of a Stags Heart, or Vnicorns horn, of each half a dram; Baſil ſeed two ſcruples, Cloves one ſcruple:* make a Pouder.

Or give Tablets of Diamargariton frigid, Diamoſchu or Diambra.

Or thus: Take *ſpecies Diamargariton frigid one dram, Species Diambra, Diamoſchy, of each half a dram; Troches of Camphire half a ſcruple, Sugar diſſolved in Roſe water three ounces, Balm water two ounces, Cinnamon water one ounce:* make Lozenges and guild them.

Make Electuaries of Conſerves, with ſyrup of Bugloſs, Violets, Roſes, Citrons, Sorrel, Apples and the like.

Thus: Take *the Conſerve of the four Cordial flowers, of*

Sorrel

Sorrel and Balm, of each an ounce; candied Citron peels, Myrobalans, of each one ounce, candied Ginger and Nutmegs, of each two drams, of the Pouders aforeſaid two drams, with ſyrup of Apples: Make an Electuary, give *two drams*, and the *Wine* or *Waters* mentioned to be drunk after.

Confectio Alkermes, and *de Hyacintho*, and the like are good, of which we ſpeak in defect of ſtrength: Pills, Take *Amber half a dram, Smaragds, Hyacints, of each two ſcruples; Pearls one ſcruple, Baſil ſeeds one dram, Camphire half a ſcruple, with juyce of* Citrons: make a Maſs, give *half a dram.*

Bags for the Heart of red Silk quilted, ſprinkled with Wine, or Roſe water, or Balm water. Thus: Take *Citron peels, Balm, Spiknard, Baies, red Roſes, Roſemary, Lavender, Borrage, of each one dram; Baſil ſeed two drams, ſeeds of* Citrons, *Mirtle berries, of each one dram; Cuchineel half a dram, Sanders, wood Aloes, Cloves, Mace, of each half a dram; Coral one dram, precious ſtones half a dram, Troches of Camphire, Species Diambra, of each one ſcruple:* Make a Pouder for a Bag.

Anoynt the Heart and Pulſes, morning and evening, with this: Take *juyce of Mother-wort, Oyl of Spike, of each half an ounce:* boyl them a little, add *Oyl of Cloves half a ſcruple, Camphire one ſcruple, Saffron half a ſcruple, with Wax:* Make a Liniment, add a little *Muſk.*

Or this Epithem: Take *Roſe water three ounces, Balm, Lavender water, and Wine, of each one ounce and an half; Camphire one ſcruple.*

Heat Balm upon a hot Tile, and ſprinkle it with Wine and apply it to the Heart.

Perfumes go to the Heart ſpeedily: As this, Take *Balm, Baſil, Gilly flowers dried, of each two drams; Angelica roots, dryed* Citron *peels, of each one dram; Saffron half a ſcruple, Camphire ſix grains, tie them in a clout, and ſprinkle them with Roſe, and Balm, and Wine*, and let it be ſmelled to.

A Fomentation is good to the left ſide, with a Spung wet in this Decoction: Take *Chamomel and Melilot flowers, of each one pugil; Annis and Fennel ſeeds, of each two drams; Fenugreek half an ounce:* Boyl them in *Wine.*

It is good to rub the Limbs, eſpecially the Legs and left ſide.

And to apply Cupping-glaſſes to the left ſide, or Hypochondria.

Reſt doth allay the Palpitation, as motion increaſeth it.

Camphire hung about the Neck, is reported to be excellent.

CHAP. XII.

Of want of Appetite.

The Kinds.

WE call it a Defect, or want of Appetite, when men neither hunger nor thirſt, or when they diſdain certain things, which are to be eaten and drunk.

Anorexia, or Appetite dejected.

Some hunger not at convenient times, that is, when the Stomack is empty, and the Appetite is wholly, or for the moſt part gone, this is called *Anorexia*, and if they diſdain, or loath Meat and ſuppoſe it unpleaſant, which is pleaſant, it is called *Nauſea* and *Apoſitia*, and if all meat be refuſed, *Aſitia*. If this be in ſome men, except the cauſe be manifeſt, it preſageth Diſeaſes, becauſe all men require meat, that are ſound. In ſome it is a uſual Symptom of Diſeaſes; and therefore in Children and Beaſts, though they cannot otherwiſe declare it, we take it for a certain ſign of ſickneſs, if they refuſe to eat.

Nauſea or loathing.

Apoſia, or not drinking.

If they thirſt not, and refuſe all drink, it is called *Oligopoſia*, or *Apoſia*, this is rare, for though ſome ſound men drink little, and live upon moiſt meats, which is ſeldom; yet is it ordinary that they which deſire no meat, deſire drink, and they which Eate deſire drink. In Diſeaſes though the appetite of meat be dejected, yet they are ſo far from being not thirſty, that they are very dry, ſo that they had rather have moiſt things then other.

Loathing of ſome Meats.

It uſually happens that things that are uſually eaten, and are pleaſant to the taſt, as moſt nouriſhments are, and ſower ſweets that are clean and good, are diſdained of ſome; And this is either by an averſneſs of nature, to ſome things which abhors them, and by which they receive hurt, as we have known by many concerning Cheeſe, who though they eate Milke and Butter, they diſdain. Others hate Wine by nature called *Abſtemious* men, from *Abs* which ſignifyeth without, and *Temetum* which ſignifyeth Wine. Others hate other things. This is alſo uſual in Diſeaſes, they hate ſome meats, that nouriſh, and not only for being fleſhy, fat, and unctious, but for the ſcent. Alſo ſweet things, which moſt love, are diſdained by them, and Wine. Others refuſe things offered from a diſtaſte, ſuppoſing their taſt to be otherwiſe, as we ſhewed in Depraved Taſt.

The Cauſes.

In regard the Stomach deſires by its natural ſenſe, Meat and Drink, it is neceſſary that it ſhould be afflicted in all kinds of defect of Appetite, ſo that it either looſeth ſenſe of hunger, or thirſt, wholly, or in part, or is afflicted with a contrary ſenſe, and loathing of all Meats, or of ſome. This may be from the lighteſt afflictions of the Stomach, becauſe the Stomach muſt be well conſtituted, that it may rightly hunger, or thirſt, and therefore this Diſeaſe is ſo frequent, both in ſound and ſick. And it is either from its conſtitution, or Repletion, or Offenſe, or Diſtemper, or Weakneſs.

A certain conſtitution of the Stomack, is the cauſe of loathing of divers Meats.

The Stomach hath originally ſuch a conſtitution, or temperature many times, from innate cauſes, that it diſdaineth ſome things, as Cheeſe, or Wine, which other natures abhor not. Which temperature we cannot deſcribe, but that it delights in ſome meats and refuſeth other, as ſome creatures can digeſt things that a man cannot, as Birds do Stones, and Eſtridges Iron. Yet the Apprehenſion of the Mother being with Child, hath been a cauſe, from her diſlike, and loathing of certain Meats, eſpecially if ſhe were troubled with the *Pica*, or longing which made an impreſſion upon the Child. And we have ſeen Children refuſe the ſame, as ſoon as they were born this loathing they bring with them into the world. Alſo we find that the conſtitution of the Stomach in other cauſes,

Apprehenſion, is the cauſe of loathing of ſome Meats.

causes, is so changed by apprehension that it refuseth those meats that it is wont to take, because they have been taken either immoderately, or indecently, or uncleanly. Or because in Diseases, they have been abhorred; as after a Feaver, we have known some long abstain from Flesh, others never eat any more thereof.

Want of Custom is the cause of Loathing.

Custom is another nature, and therefore we delight in things we have usually eaten from Infancy, and abhor things that are universal, though rare and Savory: And this is the cause why divers kinds of Creatures are not used but in extremity, and that they who use themselves to eat Frogs and Snails, take delight therein, which cause Loathsomness to those that never eat them before. And why? Raw flesh and the like unclean things are nauseous to people that are used to a clean Diet.

Repletion of the Stomach which stupifieth the sense thereof, takes away appetite which is caused by the Chyle which it maketh, and retaineth too long: as when it is cleansed from the Chyle, it desireth more meat to make new; therefore while the old Chyle remaineth, it desireth no more meat; And this comes from the defect of distribution of the Chyle, from the Obstruction of the Meseraick Veins, from abundance of blood in the Meseraicks and the Stomach, therefore when they suck little or not at all, there is little or no Appetite; because the Stomach being full of blood desires no new juyce. As in plethorick men that exercise not (in regard the substance of the body consumeth slowly, they have no such need of other juyce, being it is slowly distributed) these hunger little, except they have gotten preternatural hunger from a custom of gorging.

Slime, Fat, or Humors in the Stomach cause want of Appetite.

The same comes from a stuffing of the Stomach with humors: As when it abounds with Slime, with which the Guts are naturally anointed and the stomach also, and which the Butchers use to scrape away when they wash them; Then the Stomach being covered with this slime waxing hard, loseth sense, and is satisfied therwith being sweet, & not so disagreeing as Chyle. Fat and clammy meats cause this, used immoderately. Also this want of Appetite may come from fat which groweth on the left side of the stomachs bottom, where it is found in Anatomies; or about the orifice thereof as *Fernelius* observeth. Also if any other humor, or crude excrement, unsavory, waterish, or slimy, or flegmtaick, bred of meat or drink, or flowing thither from another part, fill the stomach or stick fast thereto, it destroyeth appetite in the like manner: And if the stomach be continually moistned thereby, they never thirst.

Moistness of Stomach causeth want of Thirst.

Offence of the stomach causeth loathing of some meats.

If the stomach be greatly offended it causeth vomiting, if but a little, an inclination to vomit, which is loathing called *Nausea*, by which it disdaineth things therein, and which ought to be taken. This may come from sharp meats, Medicines and Poysons. Especially from Choler, Yellow, Green, or Black, in many Diseases that come thereof; or other humors, bred in the stomack or brought thither.

Heat of the stomach causeth want of Appetite.

A hot distemper of the stomach taketh away appetite not only by relaxing it, but by causing Thirst; because Thirst and Hunger cannot meet together in the Stomach and when one prevaileth, the other is quiet, as we shewed. Also if the body be so hot from an internal or external cause, so that the stomach be inflamed, which causeth Thirst, they desire drink rather than meat: And if they use hot meats, when the stomach is empty as when strong Wine is drunk at meat, or sweet or spiced things be eaten first, they lose Appetite. And in all hot Diseases in which either the stomach alone or with other bowels adjacent, or the whol body, as in Feavers is inflamed, the appetite is cast down.

Weakness of the Stomach causeth want of Appetite.

Other Weaknesses which hinder Concoction, and distribution, take away appetite which serveth them. And if they be right the appetite is good. These come from the birth, or age, or great Diseases, and the Stomach digesteth slowly, and less desireth meat. And passions of the mind also ceaseth the Cardialgia or Stomach-pain, and they who are grieved in mind, and sad at heart lose appetite. And in regard the Stomach being very sensible, consenteth with so many darts, it cometh to pass that the appetite is gone in divers Diseases of other parts.

Dulness of the Stomach causeth want of Appetite

Also if from stupefaction of the stomach in the sense of touching which is joyned with Tasting, it be decayed, there is no appetite: This may come from the use of Narcoticks, especially from the Decoction of Nightshade in Wine, which *Mathiolus* saith cureth the Glutton. And I suppose the reason why Drunkards eat so little, is not the heat of the Wine, but the stupefactive quality thereof.

The Leaven or Ferment of the Stomach being consumed causeth want of Appetite.

That natural Ferment or sharp juyce which is in the Stomach for Concoction, is the cause of want of Appetite in Man or Beast.

The Cure.

The Cure of Appetite dejected and loathing of Meat and Drink.

When sound men want Appetite and eat not with delight, it must be cured, but in other Diseases which have greater accidents it is not so much regarded, especially when eating wil do hurt: And when the Disease being cured it wil return, though it be last, and that by which we discover health. Want of Thirst, in regard it hurts not of its own self, is cured if it be preternatural, by no other than taking away the cause in the Stomach which breedeth other inconveniences. *Nausea* or Loathing both in the sound and sick if it incline to Vomiting, must be cured as we have shewed in Vomiting. It is hard to cure the loathing of some meats, which is natural from the Birth. In all these kinds of what cause soever, we must use these divers Medicines.

Custom is of great consequence to keep up appetite at a certain time; therefore keeping constant meals accustometh nature to an appetite. And without that there is a confusion as in other operations of nature. And as we shewed in the causes, custom is the cause of loving and loathing of some things, we may alter it to the contrary by degrees, perswasions, and deceits, as we have seen in them that have hated Wine or Cheese. Fasting is good if it come from Repletion of meat, or Chyle, or abundance of Blood, or Fat; or when the stomach is foul with slime, or wet with water; for it wil consume them all, and they wil be taken away by

by the Meſeraicks which are not idle: But it is worſt in Choler abounding.

Moderate execrciſe, and ſtrong in thoſe that can endure it, ſtirreth up all the Functions, and Appetite, by diſtributing the meat, rather then Concoction. This muſt be before meat, hence ſome laboring men eat three or four times in a day: and they who are idle, ſcarſe once; in ſick people that cannot excerciſe, Frictions are good.

They ſay ſleep takes of loathing, but it provoketh not Appetite, but by accident, becauſe diſtribution of the chile is rather in the time of waking, and that done the Apperite preſently returns. Therefore we ſooner hunger being awake, between meals, in the day time, then in the night.

Vomiting is good, if it proceed from Excrements, Humors, or Choller, or the like in the Stomach. And if they ſtick faſt, it muſt be cauſed by ſharp cleanſers, as Oxymel, and Syrup of Vineger, with other Liquors.

If Vomiting doth it not, Purge the Stomach, eſpecially with bitter things, which cleanſe and ſtrengthen it, with Aloes, Pills of *Hiera*, *Alephangine*.

Or thus in any Humor: Take *Rheubarb*, *Citrine Myrobalans*, *of each one dram*; *ſpecies Hiera two drams*, *Maſtick*, *white Sanders*, *of each half a ſcruple*; *with ſyrup of Wormwood*: Make a Maſs, give *one dram*, or ſharpen them with *Diagredium*.

Or give Wormwood Wine, with Rhubarb, Myrobalans and Senna, and if Flegm prevail, with Agarick infuſed.

Other things reſtore Appetite, by cooling, if it be loſt by heat, either actually, or Potentially, eſpecially ſower things, which allay the ſharpneſs of Choller, if that be the cauſe. Others prick and ſtir up the Stomach, by a propriety, as ſhall be ſhewed in Depraved Appetite. As the ſharpneſs of Melancholly juyces, from the Spleen, is ſuppoſed to do; But we impute that rather to the ſharpneſs of the chile, and its natural Fermentation, of which we ſpake formerly, in regatd every Vomiting, if not after Wine, is ſower; eſpecially if ſower things have been taken: which take away the force of ſtupefying Narcoticks. Alſo others do it by cleanſing, as Salt things which purge ſlime, and ſweet juyce, and prick the Stomach. Bitter things do the ſame, by cleanſing Flegm, and Choller, which deject the Appetite. Others do it by an unknown property. Things pleaſant to the taſt, ſtir it up chiefly, and abate loathing. Therefore in Feavers they refuſe ſweet, and deſire ſharp things, and a little Salt. Alſo ſtrengtheners of the Stomack, take away loathing, but theſe are beſt when it is weak; they are hot and aſtringent, and theſe cauſe thirſt.

If Appetite be loſt from heat, let the meat and drink be actually cold.

Cold Water is good before Meat.

And they who drink water have the beſt Stomackes; therefore beaſts that eat crude things, and drink water, eat ſo much.

Let the meat be ſeaſoned, with the juyce of ſower Fruits; as of green Grapes.

Alſo let the bread be well Leavened, and Salted.

And in hot Natures let ſharp wine be given to thoſe that have uſed Wine.

Uſe Vinegar in Broaths, and Salats; or drink it before meat.

If loathing come from drinking Wine, with Nightſhade boyled there in, give Vingar; or if it come from other Narcoticks.

Peaches that are green, are good in a hot cauſe, uſe Oranges, and Lemmons ſliced, with Roſe water, and Sugar.

Alſo the *German* Sallats, of Picklet, Colewarts, and Turneps.

Alſo Sorrel, and Purſlain, with Vinegar.

Alſo Olives, and Cappars for ſallats.

Garlick is good to get an Appetite. Thus, ſtamp Garlick, and mix crums of Bread, and ſweet Almonds therewith, and give it with broath.

Drink Wormwood Wine before Meat, if it come not from heat, it is good in all other caſes.

Alſo give the Eſſence, or Tincture of Wormwood, Zedoary, Maſter-wort, and Saffron before Meat, with Broath or Wine.

Alſo Syrup of Peaches, juyce of Citrons, Pomegranates, Currans, Grapes, Sorrel, Vinegar, and Sugar, of Wormwood boyled with Vinegar are good.

Or thus: Take *juyce of Peaches one pinte*, *of Pomegranates*, *and ſower Apples four ounces*, *juyce of Citrons two ounces*: boyl them with *Vinegar* and *Sugar*: give *one ounce*.

Or this Electuary which cleanſeth: Take *Honey one pound*, ſcum it, add *juyce of Pellitory*, *and Wormwood*, *of each four ounces*: Boyl them, give morning and Evening as much as a Cheſnut.

Or, *Conſerve of Roſes*, *Sorrel*, *Currans*, *of each one ounce*.

Chamomel water drunk provokes Apetite.

Things that ſtrengthen ſhall be after mentioned, among which Pepper is commended, by *Dioſcorides*. Alſo Pouder of Maſterwort, and Hens gizard skins which help Concoction and Apetite, and a Sopp in Sack; ſeaſon the meat, with Mints, Calamints, &c. theſe take away *Apoſia*, or want of thirſt.

Cleanſing Clyſters are good, when the Stomach is foul: as that of the Urin of a Boy, or gentle Lixivium.

Alſo: Take *white Beets*, *with the roots*, *Mercury*, *Colewortz*, *of each one handful*; *Barley one pugil*, *Agarick one dram*, *Senna two drams*, *Carva ſeeds one dram*: Boyl them, and add *the urin of a Boy*, *or Lixivium four ounces*; ſtrain it, and diſſolve *juyce of Mercury*, *or Beets one ounce*; *Honey one ounce and an half*, *Salt one dram*; give it without Oyl that it may cleanſe well.

If it come from heat in a Feaver, give cooling Clyſters: As, Take *Lettice*, *Endive and Violet water*, *of each four ounces*; *juyce of Purſlane*, *Lettice*, *of each one ounce*; *Oyl of Lillies*, *Violet*, *of each half an ounce*.

Sweet ſents correct Loathing, as we ſhall ſhew in ſtopping of Vomiting; as of Vinegar, ſower Fruits, Wormwood.

Apply to ſtrengthen the Stomach, cold or hot aſtringents, as the cauſe is: Take heed of Oyly ſents that are unpleaſant, as we ſhewed in other Symptoms of the Stomach.

Uſe the Epithems that are preſcribed to cool the Liver, if Loathing come from a hot cauſe, as in Feavers.

External cooling of the Body, is good in a hot cauſe, as cool Air, is better then hot; alſo Bath, and waſh the Feet in cold water: Alſo change the Shirts and Linnen often, to get an Appetite.

It is good to let blood, if there be Plethory, and if the Diſeaſe, of which want of Appetite is a Symptom, will permit.

CHAP. XIII.

Of Depraved Appetite.

The Kinds,

WE ſay the Appetite is Depraved, if they deſire Meat or Drink more immoderately than is natural, or when they deſire other things beſides meat and drink.

Boulimos or great Appetite. There is immoderate hunger, when more meat than is fit is deſired, when they are not ſatisfied, or deſire more before the firſt is concocted. This is ſometimes in ſound men, ſometimes the ſymptom of a Diſeaſe called *Boulimos*, or inſatiable hunger; with other accidents ſomtimes, as heavineſs of the ſtomach from great gorging til it is digeſted. *Doggs Appetite.* Others take more than they can bear, and vomit it up again as a Dog doth; ſome-have a Looſneſs after gorging which carrieth it away. Others faint if they eat not preſenly and ſwound and die: this comes to ſome from weakneſs and pain in the Cardialgia, the Appetite being rather abated than increaſed, and if they have been long ſo, they have a weak ſtomach and loathing.

Immoderate Thirſt. They Thirſt immoderately who deſire drink much between meals, or when they cannot quench thirſt. It is uſual with ſick and ſound, and intolleratble, worſe than Hunger, becauſe the want of things that quickly ſatisfie and cauſe ſudden delight doth more afflict than the want of thoſe that do it ſlowly. Therefore in Feavers they complain moſt thereof and in other diſeaſes; They that are thus, ſpet white and froathy and ſpeak with difficulty and ſtammer, becauſe their Tongues (as they ſay) ſtick to their mouthes, and if they want Drink they faint.

Pica. When People deſire other things beſides meat and drink, it is called a vicious Appetite, or *Pica*. Men have it ſeldome, but Women with child often, in the firſt month ſomtimes, *Malacia.* and then it is called *Malacia*, and it is ſometimes in the Green-Sickneſs in Maids.

There are divers kinds hereof according to the diverſity of things deſired, ſome love raw fleſh like Men-eaters, ſome have been like beaſts and bitten peoples Arms by violence. Others deſire and eat Sawcers and Sallets, and Spices in abundance without hurt, as one that eat pounds of Ginger, another that drank Vinegar in abundance, and the like. And another that came to me, being an Hoſteſs that eat abundance of Pepper, without any hurt or heat of the ſtomach. Commonly they love dry things as Meal, Aſhes, Chalk, Clay, Shels, old Rags, and Leather; which they eat with great delight. And *Fernelius* mentions one who eat abundance of unſlaked Lime without hurt.

The Cauſes.

All immoderate Hunger or Thirſt comes from a natural cauſe, that is from the natural Appetite, which if immoderate is preternatural, as from the ſenſe of the ſtomach from want of nouriſhment or moiſture. Somtimes this overgreat and ſtrange appetite is from a preternatural cauſe, as a cold and dry diſtemper of the ſtomach or other quality.

Exquiſite ſenſe of the ſtomach cauſeth too great Appetite. The ſtomach deſireth from ſenſe which is mixed with Touching and Taſting and if it be exquiſite it is eaſily afflicted, and feels a Defect, and deſires more. This is *Or Evil Cuſtom.* from the Birth in ſome who eat more then others from the Cradle; ſome have it from a cuſtom of gorging continually not ſuffering the ſtomach to be empty; and except it be ful alwaies, crave; as Gluttons, who ſerve their bellies night and day not ſo much from pleaſure as from cuſtom, or inbred ravening.

Want of Appetite. Want of nouriſhment which is dayly conſumed as it cauſeth a natural hunger; ſo if it continue long it makes people ravenous. This is from a long want of meat, or becauſe they have eaten things of ſmall nouriſhment and quick digeſtion; or becauſe they have long ſickneſs, and want of Appetite eaten little or nothing: therefore upon recovery they are greedy. And when they have eaten, nature ſuddenly draws away the Chyle, which cauſeth them to be uſually coſtive as I ſhewed in the ſuppreſſion of the Belly; they are preſently hungry again, and if they moderate not themſelves, they get hurt and the accidents of *Boulimos* mentioned, and relapſe into their Diſeaſe.

Diſtribution of the Chyle too ſoon cauſeth quick Appetite. If the Chyle be ſnatched from the ſtomach too ſoon by exerciſe evacuation, ſweats, the ſame happens. Or if the Chyle be waſted too much as *Rondoletius* obſerves with moiſt meats or drinks, and ſtay not in the ſtomach but deſcends preſently. Or if it be ſnatcht away by Worms as they ſay, which muſt needs be very many to cauſe ſuch a Diſeaſe. Some ſuppoſe it comes from the broad Worm, which is longeſt if it be ſo, it is not becauſe the Worm-ſeeds upon Chyle which is not alive as I ſhewed, but becauſe the Chyle breeds it.

Want of moiſture in the ſtomach cauſe of Thirſt. As a natural Thirſt is for want of moiſture, is ſo the preternatural when it is long abſent: And this is like Hunger for want of meat, when drink hath long been wanting or not actually cold which quencheth Thirſt the beſt. This may be alſo from long Spetting which drieth the mouth and ſtomach; Hence they ſay much talking which cauſeth ſpetting cauſeth Thirſt.

Cooling of a hot ſtomach reſtoreth Appetite. Some ſay that a cold diſtemper of the ſtomach cauſeth immoderate Appetite, becauſe they ſaw ſome who lived in a cold Air and drank cold water eat very much. But in regard cold doth not whet the ſenſe but blunt it, we propound another cauſe if the ſtomach be hot, and the Appetite loſt therby, as we ſhewed cold by correcting the Heat, and bringing the ſtomach to its natural temper, provoketh Appetite, rather than cauſing a cold diſtemper. And becauſe in Winter through outward cold in cold countries, the heat is driven in and there contracted as *Hippocrates* ſaith, the ſtomach is more hot, men need more meat, And therefore deſire more meat: ſo, that as the ſame *Hippocrates* ſaith they that grow have more natural heat which increaſeth the Appetite, and Cold diminiſheth it. This being ſo, neither doth a ſharp humor cauſe a Dog-like Appetite, although it may reſtore a dejected Appetite, and raiſe the ſtomach, as we ſhewed in defect of Appetite. Nor can a Melancholick or flegma-

flegmatick Humor as they ſuppoſe, do the ſame by coldneſs or ſharpneſs,

Drineſs of the Stomach cauſeth Thirſt preternatural.

Drineſs of the inward coat thereof, which goeth to the Gullet and Jaws if it be in any part thereof, cauſeth preternatural thirſt, as only the want of natural moiſture cauſeth thirſt. And the greater the drineſs, the more the thirſt. Heat cauſeth it by conſuming the moiſture, and the thirſt is greater, becauſe the ſtomach being hot alſo, deſires cold as wel as moiſture; As when the whol body is inflamed and the ſtomach by the ſame, Bathes, motion of body or mind, and in Feavers, there is great thirſt, And if the heat be great the heat is intollerable: Or if the ſtomach only be inflamed from things taken in, as Wine, ſweet things or Spices, or with ſharp things, Herbs, rotten Cheeſe, or the like, all theſe taken intemperately cauſe a preternatural thirſt. Alſo from the Heat of a Purge there is thirſt. Alſo Choler in the Stomach from meats eaten, or ſent thither in Diſeaſes cauſeth thirſt, and the greater when it is hotter. And this may alſo come from hot vapors ſent thither: And from things which only dry and do not (of their own nature) heat as all Salt things and ſuch as are ſmoak-dryed: Alſo by Air long taken in with an open mouth, becauſe it drieth the Jawes and the ſtomach by conſequence. Some write that thirſt may come from the heat and drineſs of the Wind-pipe and Lungs, to the Stomach. But, in regard the Lungs want ſenſe of feeling, if thirſt come them or from other Diſeaſes of the Breaſt, it is from the conſent of the Tunicle of the Stomach, Gullet, and Wind-pipe, that the ſtomach is affected: Or by reaſon of much ſpitting, or from a Feaver. Neither doth white ſpittle ſignifie that it comes from the Lungs; for the ſame may be made in the mouth from drineſs, and Air.

An occult quality in the Stomach is the cauſe of Dog-like Appetite.

If any quality or propriety alter the ſtomach; ſo as to raiſe the Appetite, it is the cauſe of diſorderly Appetite, as we obſerve by melancholick humors which breed in the meſaraicks and mix with the blood and get into the ſtomach by the Veins of the Spleen and other branches of the Gate-vein: which cauſe it not ſo much from ſharpneſs which is in melancholy, and aſtringeth the ſtomach which cauſeth appetite; as from an hidden quality, which ſtirs up immoderate ſence: which we conjecture to be ſo, becauſe, four things that bind prick, not cold, as we ſhewed, nor other quality manifeſt, can ſo ſtir up the function, as to increaſe, but rather allay appetite; except there be ſome hidden force in the humor. As thoſe humors which Phyſitians cal melancholly, corrupted, and burnt to aſhes can put on divers venemous qualities, and cauſe Dog-like Appetite or *Pica* which is a

An occult quality in the ſtomach is the cauſe of Pica. *Poyſons cauſe* Boulinos *and Thirſt.*

deſire of abominable things. And therefore the cauſe of theſe is a venemous force, which is better known by the effect than deſcribed, in the humors ſent to, or bred in the ſtomach, As *Dioſcorides* ſpeaks of ſome Poyſons that touchedor taken in do the ſame; or cauſe thirſt as the biting of the Serpent *Dipſas*; ſuch humors *Galen* ſaith may breed in the body and be turned into Poyſon. That it is no wonder that women with Child and Virgins that want their Terms ſhould have the *Pica*. Or others a depraved appetite from a Cacochymy or evil juyce.

The Cure.

The Cure of Boulimos *or great Appetite of Thirſt and* Pica.

Of the three kinds of evil Appetite if Hunger or Thirſt cannot be ſatisfied, or if it be they are ſick or pained at heart, or Vomit, or purge; or if they be weak and faint for being ſatisfied; this is to be cured. And it is more eaſily done in Hunger than Thirſt, and great Hunger is eaſier taken away than ſatisfied. When ſtrange things are deſired that muſt not be neglected, becauſe it ſignifieth a preternatural cauſe in the body: as alſo becauſe they delight in ſuch things and think they cannot hurt, which they find otherwiſe.

Firſt be temperate in eating and drinking, not too much nor too little; eſpecially after long faſting and ſickneſs, and then take a little and often, ſuch as is of good juyce and nouriſheth wel and is eaſily concocted. In other cauſes, eat things that fil much and are ſolid, and not ſoon digeſted, yet in ſmall quantity; for as an evil cuſtom maketh Gluttons and Drunkards, that they are not well except ful, ſo a good and decent cuſtom takes away immoderate appetite, and brings it into good order.

Vomiting is good if there be an evil humor that cauſeth it, and if it come not of it ſelf, provoke it. And in Dogs Appetite, at the firſt, before it is too violent, provoke it to take away the cauſe. In other caſes vomiting increaſeth it, except it come from choler; In which alſo thirſt is raiſed, which ceaſeth when that is ſpent.

Purging is good in theſe caſes mentioned both againſt Thirſt and Hunger, not in other, except there be a Diarrhæa, in which you muſt help nature to take away the cauſe, with things that are gentle and aſtringe; Firſt preparing the Humor. All theſe we chooſe, by other obſervations than by the ſharpneſs of flegm or melancholly. And though purging cauſe thirſt, if it come from Choler they may be uſed. If it come from Worms give bitter things to drive them down.

We uſe hot and dry things for the ſtomach when this Diſeaſe comes from humors after they are purged. Which do not alter the coldneſs of the ſtomach, but heat and dry it, cauſing thirſt, which cureth hunger: give meat actually and potentially hot, ſpiced, and ſweetned, which are beſt faſting. And ſweet Wine that is ſtrong and ſpiced, and *Aqua vitæ* which the labouring people drink in the morning, that they may better endure hunger. Alſo hot medicines for the ſtomach, as ſweet, ſharp, burning, and wel ſcented: Or anoynt foment or Plaiſter the ſtomach with hot things. Or uſe exerciſe and Baths.

Things that looſen, or are fat or viſcous, ſubvert the ſtomack, and by greaſing it take away the ſenſe, and Appetite, as Butter, Oyl, Fat, Glutinous, as Calfes, and Sheps Feet, and if they be loathſom they are the better; as they ſpeak of roaſted Dormice.

Things take away Appetite by propriety, by their adverſe force, or loathſomneſs. As Wine in which an Ele hath been drowned, cauſeth men alwaies to loath Wine: But this muſt do it by another quality, if they that are ignorant of it are cured thereby. Antidotes do the like, if it come from venom. Others ſtupifie the ſenſe of the ſtomach, as we ſhewed in the cauſes of dejected Appetite. And Wine or ſpirit thereof taken faſting, doth the ſame, not by heating, but ſtupifying. And the infuſion of nightſhade roots in Wine; Alſo

Treacle

Treacle and Mithridate, with Wine, are ſtupifying by reaſon of the Opium; And other Opiates, though no Antidotes, abate Appetite, but it will return again by taking Vinegar.

Cold and moiſt things, Cure all ſorts of thirſt; And *Rhazis* ſaith, that cold, or cold water hurts the actions of the Stomach, largely taken, and cold Air cures Hunger.

Drink doth this chiefly by wetting the dry Belly, if it be actuallycold and potentially alſo.

Water actually cold (which we ſhewed to be potentially temperate) is beſt, either crude or boyled to take away the windines. Or with ſour Juyces, or Vinegar, or with Spirit of Vitriol-waters cure Thirſt.

Wine may be given to them that are uſed to it, eſpecially if ſmall, or mixed with Water.

Alſo Milk to young Children, and ſuch as uſe it, and Whey: But they are prohibited in Diſeaſes in which they corrupt eaſily.

An Emulſion of ſweet Almonds in water, called Almond-milk, is pleaſant.

Or Decoctions, as that of Barley-water, or beaten Bread, or of cold Seeds, or of Prunes, Cherries, Raiſons, with Cinnamon, Aniſe, Fennel, &c.

Broaths of Fleſh-Capons, let the Fat be taken off, reſtore and quench Thirſt.

Beere or Ptiſan, with Juyces. As, Take *Water two quarts, Juyce of Pomegranates, or Grapes two ounces, Sugar half an ounce*: boyl them a little.

Or of diſtilled Waters. Take *Sorrel, and Endive, water, each two pints, Juyce of Currance, and Grapes, or Pomegranates, each three ounces; Juyce of Lemmons, or Apples*: boyl them, and ſweeten them a little.

Julep Alexandrinum. Take *Roſe-water one pint, Sugar half a pound*: boyl them to a conſiſtance, add Water boyled.

Or thus: Take *Water one pint, Roſe-water four ounces, Juyces of Cherries, or Grapes two ounces, Sugar four ounces*: boyl them.

Sharp Syrups, as of Currance, or Gooſ-berries, Grapes, Medlars, Cherries, Prunes, Pomegranates, Sorrel, or Vinegar, with Water or diſtilled Waters, or Syrup of Violets.

The Juyce of ripe Anguriæ, or Pomegranates, is good.

Other ſolid things to chew, made of Sorrel, or woodſorrel, Lettice, Purſlane, Endive, Succory, Bugloſs-flowers in Sallets.

Coleworts, Rapes, Apples boyled, Bar-berries.

Medlars, Peaches, Apples, Cherries, Prunes, Pomegranates, Bar-berries, Grapes, Raiſons green or dryed, Liquoriſh chewed, quencheth Thirſt: Alſo Sugar candy, with Syrup of Violets held in the Mouth.

Manna, Sugar of Roſes, and Conſerves, with Spirit of Vitriol, Conſerve of Violets, candied Lettice, Coleworts, Guords, Citrons.

Or: Take *Conſerve of Roſes two ounces, of Sorrel one ounce, of Violets, Bugloſs, Water-lillies, of each half an ounce; of Currans*, as much as will make a ſharp Electuary.

Take *the Mucilage of Fleabane, and Quince ſeed, Gum Traganth extracted, with Roſe water, with Sugar, or Syrup convenient*: Make a Linctus.

Take *of the Mucilages mentioned one ounce, Syrup of Grapes half an ounce, with Sugar*: Make a Linctus.

Or put ſeeds of Fleabane, and Quinces, in a clout, and add Sugar, cool it in water, and lay it upon the Tongue.

Take *the four cold ſeeds, of each one dram; Purſlane ſeed, Starch, juyce of Liquoriſh, of each half a dram; with Gum Traganth*: make Troches to hold in the mouth.

Or Troches of Salt-peter, that is, Salprunella, with Sanders, and Suger, and Gum Traganth.

It is good to cool the mouth with water, and Vineger, Candied Coleworts, or with Roſe water, or Sorrel water, &c. or to hold Cryſtal, or a Stone, or Ice in the mouth and chang it often.

Some anoynt the Tongue with Mucilage of ſeeds, and Oyl of Roſes.

Cold air Cures thirſt, by cooling the Lungs, if it come from them: and by correcting the heat of the whol body, in regard the Tunicle of the Mouth, and of the ſtomach, are all one.

Baths for the Feet and Hands of cold water, and change of Linnen doth the ſame.

Alſo Epithems applied to the Liver and Heart.

And anoynting of the Throat and Neck with Oyl of Violets, Water-lillies, Willows, Poppies,

Some anoynt the Head in Feavers, with the ſame, becauſe the Nerves of the Head conſent with the ſtomach: but I ſuppoſe it doth good by provoking ſleep.

Hippocrates ſaith that ſleep ſlaketh thirſt, not becauſe it moiſtneth, as ſome ſay, but becauſe heat is carried outward by ſleep, as appeareth by ſweating, which is then moſt eaſie to be cauſe.

Reſt is good, becauſe it keeps the body cool.

And alſo little talk, for much increaſeth thirſt.

CHAP. XIV.

Of Defect of Bleeding.

The Kinds,

THe wants of bleeding, which is divers waies at ſet times; differ firſt, in reſpect of the place; as they are not, or not ſufficient, either from the womb, Fundament, or Noſtrils, or the like.

Stoppage of Terms. A ſuppreſſion of the Terms, is when the monthly Evacuation of women, by the womb for forty years, in which they are fit to bear Children; is wanting, and they are neither with Child, nor give ſuck. Some women, but it is rare, never have them and without inconvenience, theſe are *Virago'es*, becauſe they are like men. Others have had them, but they ſtopped and never returned. Some have wanted them a whol year, or ſome months; In whom Lazineſs preſageth Diſeaſes: Then follows heart pain, want of Appetite, and loathing, with inclination to Vomite, Palpitation of heart and Arteries, Head-ach, troublſome dreams, palneſs of face, and crudity of urin, diſcovereth it. And as theſe are preternatural in Plethory and Cacochymy, ſo are they Natural in Women with Child, whoſe Terms are ſtopped, they vomit in the firſt month. Alſo ſuppreſſion of Terms, is when they flow too ſlowly for the conſtitution, in leſs quantity, or ſhorter time then is meet. This cauſeth inconveniences.

Want of cleanſing after childbearing. There is another flux of the womb after Child-bearing, that is neceſſary, and continueth ſome dayes, more abundant then the monthly, the blood is called *Lochia*. If theſe flow not, they cauſe great Diſeaſes, Colick, and Convulſion.

Stoppage of Hæmorroids. There is a flux at the Fundament in both ſexes called *Hæmorrhoids*, in ſome Natures, either once in a year, or at a certain

certain time, this is ſaid to be ſtopped, when it hath been, and is called ſuppreſſion of Hemorrhoids. Phyſitians explain this defect chiefly, when there are other accidents from the retention of them; as Cacochymy, Cachexy, Quartan Feaver, Melancholly, and the like. The Patient diſdaining the Flux, Complains not of the want of it, but when he is Pained by the ſwollen Veins, which cannot open, which are called the blind Hemorrhoids.

The want of bleeding at Noſe.

Some have a natural Evacuation at the Noſe, at a ſet time, which are young and Plethorick, and bleed at no other part, as women that want their terms that are with child, or Virgins, before they have them; And hither may be refer'd, the critical evacuations in Diſeaſes. If any of theſe are ſtopped, the Phyſitian muſt endeavor to procure them.

Defect of bleeding by other parts.

If blood flow another way, though ſometimes it doth good, yet in regard it is not ſo according to nature, it belongs to the defect of Natural bleeding if it ſtop.

The Cauſes.

The defect of theſe bleedings, is either from the want, or foulneſs of blood; or from the ſtoppage, or ſtraitneſs of the Veins.

Women fit to conceive, muſt have more blood then is fit to nouriſh the body, to nouriſh the Child, if they do conceive, or to be purged forth, at the end of the month, if they conceive not. If this plenty of blood be wanting, or not ſufficient, there is little, or no Flux of the Terms. And though this want of blood may come from divers cauſes, yet all do not cauſe this ſuppreſſion.

A manly Conſtitution, is the cauſe of ſuppreſſion of Terms.

There are Women, but few, in which as nature before they are ripe to conceive; breeds no more blood then will nouriſh the body, ſo ſhe keeps the ſame courſe, when they are fit to conceive, theſe are barren; and without other inconveniences. Theſe are called *Virago'es* from their manlike conſtitution.

Spare Diet cauſeth the ſame.

From want of juyce, of which blood ſhould be made, the Terms flow leſs, rather then ceaſe: becauſe nature keeps the the ſame order, when blood doth not abound. Yet there may be a defect of Terms from long faſting, or uſe of bad meats, ſo that the body may grow very lean.

Blood ſent another way cauſeth want of Terms and Hemorrhoids.

In ſharp Diſeaſes, the blood being ſpent by violent heat, if it continue long the ſame may be; but being ſhort it rather cauſeth a Flux then ſtops, and often in a Criſis cureth the Diſeaſe. And great Fluxes by provoking the expulſive faculty provoke the Terms; except they be bloody, and then they hinder, as the Terms hinder them and bleeding at the Noſe. So theſe Fluxes are ſtopped by deriving of the blood to another part. And the cheif cauſe of ſuppreſſion of Humorrhoids is, when nature retaines, or ſends it otherwaies.

Thickneſs of blood cauſeth alſo ſuppreſſion of Terms and Hemorrhoids, when it will not flow, being too thick from the juyce of meats eaten, or want of ſerum to carry it. And this is the cauſe that in Cachectickes, and Hydropicks, the Terms are ſtopt, the ſerum, or whey ſweats through the Veins, and when a Vein is opened the blood is thick, and if it ſtand, like red, or white Coral.

Thickneſs of blood, cauſeth ſuppreſſion of Terms.

Crudities and impurity of blood, cauſeth ſuppreſſion of Terms.

Crude and impure blood, if it be thick (as it will be when it is cold, as we have obſerved with a thick skin at the top;) or foul: will not flow by the Terms; for the pureſt blood is ſent to nouriſh the Child, and to breed milk. If therefore it be foul, or there be obſtructions, then the Terms are wanting. Therefore Cachectickes, Leucophlegmaticks, or Virgins in the Green-ſickneſs, while their blood is bad, have not the Terms, but when it is putrified, have. Hence it appears, that this natural flux of the Terms, is not for to diſcharge foul blood according to the vulgar error, which will rather hinder it, if it abound; And it is not from the quality of blood that is evil, but from the quantity abounding. And it is preternatural when it is immoderate, or without order; And we ſhall ſhew that women after they are paſt the Terms, may ſo bleed. And though the impurity of the blood, cauſe the Flux of the Hemorrhoids, it is no argument why the Terms ſhould flow from impurity naturally, for they differ greatly; for though foul blood be uſually purged by the Hemorrhoids, yet it is eaſie in thoſe that are accuſtomed to them.

Obſtruction of the bowels, and elſewhere cauſeth the ſame.

Obſtruction of the Veins, cauſeth defect of natural bleeding, chiefly in the great Veſſels, or thoſe of the part by which blood ſhould flow. Becauſe the natural diſtribution to parts that ſhould void it, is hindered; As we may obſerve that cupping or bleeding, hinders bleeding by revulſion, and bleeding at the foot, provokes Terms. Hence is it that Cachectickes have not the Terms ſo much, becauſe they have impure blood, but becauſe of obſtructions. And when the Meſeraicks are obſtructed the Hemorrhoids flow not, which cauſeth great Diſeaſes by putrefaction, as Feavers, Melancholly, Epilepſies; which are not cured, except the Hemorrhoids return.

Obſtruction of the parts that ſhould bleed.

If the obſtruction be in the part by which they bleed, the flux is ſtopped, as the Veins of the Neck of the Womb ſtopped, hinder the Terms, the Veins of the Womb ſtopped hinder the after flux; if of the Noſe the like. Either by thick blood, or other humor.

Fat, a Callus, or ſcarre, cauſeth ſtoppage of Terms.

Straitneſs of the Veins and of their orifices, ſtoppeth blood: as when fat grows too much in the Womb, or a ſcar remains after an Ulcer, or other hard Tumors; by which laſt the Veins in the Fundament may alſo be ſtopped. Eſpecially if they be ſwollen hard; as ſhall be ſhewed in the blind painful Hemorrhoids. The Womb alſo may be ſo naturally formed, that the Veins may be wanting, or cloſed in ſuch as never had Terms, called *Virago,s*.

A Tumor alſo cauſeth ſuppreſſion of Hemorrhoids.

Evil Conformation.

Or,

Weakneſs, cauſeth want of Terms.

Although it be the common opinion that a cold diſtemper ſtops the Terms, and therefore they take heed of Cold, and cold Meats, and impute it to eating of cold things. Yet theſe parts cannot be ſo cooled that the Orifices of the Veins ſhould be ſtopped; except cold keep the blood from flowing freely. Or comes after the native heat is weakned, which weakneth

eth the expulsive faculty and makes the terms flow less and more seldom.

The Cure.

The Cure of Terms suppressed. In the Defect of terms keep this method (of the rest we shal speak hereafter) If it be when the woman is not fit for Children it is natural and not medled with. You must not attempt til fourteen, and when they are evil colored; And if they stop after forty four they must not be recalled; nor when the woman hath conceived, or giveth suck although there be more blood than is needful, and some have their terms sometimes then. Nor at a time when they use not to flow, except to prepare the Body, but in that week wherin they used to flow, must you give things to provoke them, especially if they be strong: Or when there are signs of them, as pain of the back and the like, or have drops appear.

It is impossible to bring down the Courses in them which are from the Birth of a man-like constitution, or have the Veins closed, when they never had them, and are barren.

If they cease for want of blood, or fault thereof it is in vain to attempt their recovery in lean people, but it is better to repair the blood, by good diet: And then they wil come of themselves. If they have been turned another way, and flow not at the Womb, they must be brought thither again.

If foulness of blood or obstruction of the bowels cause it, we must open them and clense the blood, and give things that provoke the Terms. And these are to be used in the stoppage of the Hæmorrhoids when the foul blood remains in the meseraick Veins.

A hard Scirrhus or Callus in the neck of the womb if it hinder the Courses must be taken away, And then if the Terms flow not, they must be provoked. If the Veins of the womb be so hidden with Fat, that they cannot bleed, it must be consumed by Fasting.

In other causes, as thickness of humors and obstruction of the Veins of the womb, or coldness, we must proceed as followeth, when we intend to move them.

Purges are good if they be stopped by reason of the foulness or impurity of the blood; which, though they provoke the expulsive faculty and cause dejection or going to stool, yet because they also stir up and move the veins of the womb, they so provoke the Terms also: Wherefore when Courses flow, to abate them and prevent them in Women with Child, we dare not give Purges. And in those that are stopt we often do more by purges that are mixed with things that provoke the Terms, than with such things as only provoke them. And these we proportion to the humor abounding whether it be Flegm, Choler, or Melancholy.

We first loosen the belly with Catholicon, Hiera, or the like.

Then we prepare the humor thus. Take *syrup of Mugwort and the five roots, of each one ounce and an half; Oxymel simple one ounce, water of Mugwort, Motherwort, each two ounces and an half; water of Pennyroyal and Nepp, each one ounce*; make a *Julep for three or four doses* sweetned with *Cinnamon*.

Or this Decoction. Take *the five opening roots steept in Wine each half an ounce; roots of Madder and Eringus, each six drams; Valerian roots half an ounce, Mugwort, Pennyroyal, Motherwort, Balm, Nepp, Germander, Chamæpytis or Groundpine, Time, each a handful; Tops of Hops and red Peaſe, each a pugil; Bayberries half an ounce, Anise and Fennel seeds each two drams; Parsley and Dodder seed, each one dram and an half; Flowers of Rosemary, Elder, and of both Bugloſſes, each a pugil; roots of Polypody one ounce*: make a *Decoction*, sweeten it with *Sugar* and *Cinamon*, and give it several daies.

Then purge with this Potion. Take *of Catholicon six drams, Agarick one dram, the species of Benedicta Laxativa half a dram, Saffron five grains*: make a *Bolus* with *Sugar*, or drink it with *Rosemary* or *Wormwood Wine*.

Or thus in cholerick bodies. Take *Tryphera Persica six drams, Rhubarb one dram, Spike one scruple, Electuary of the juyce of Roses one dram, Syrup of Roses solutive one ounce*; with *Bugloss and Fumitory water* make a *Potion*.

Or this Decoction. Take *Liquorish one ounce, Red Peaſe a pugil, Mugwort a handful, Annise and Fennel seed, each two drams; Cordial flowers a pugil, Polypody roots, Carthamus seed, Senna, of each half an ounce; Epithymum two drams*, make a *Decoction*: Infuse *Agarick two drams*, strain it and add *one ounce of syrup of Roses solutive* for a *Potion*.

Or this Pouder. Take *Turbith four scruples, Agarick two scruples, Cinnamon, Ginger, of each half a dram; salt Gem one scruple, Saffron five grains, Sugar two drams*, make a *Pouder*, give it in *white Wine* which hath *Mugwort* infused or the like.

Or these Pills. Take *the species of Hiera and Benedicta Laxativa, each half a dram; Pil Fœtidæ one scruple*, or more, according to the strength, make Pils with *white Wine*.

It is good to purge with things that provoke Terms, at the time we expect them.

To weak people and Virgins we give gentler medicines, and because bitter things are best we give them in Pils, As. Take *Aloes one dram and an half, Agarick and Rhubarb, of each one dram; Myrrh and Gum Amoniack dissolved in Vinegar, roots of Gentian and Asarabacca, each half a dram; Spike, Cinnamon, Mastich, each one scruple; Saffron five grains*, with *Syrup of Mugwort*, make a *Mass*. Give *half a dram or two scruples*, sometimes quickned with *Scammony*.

Or make this Infusion. Take *Succory rooots, Parsley and Fennel roots, each half an ounce; Asarum roots two drams, Wormwood & Mugwort each one dram and an half; Senna one ounce, Rhubarb two drams, Spike a scruple, Agarick two drams, Ginger a dram*, shake them in *Wine* for three or four *Doses*.

We make a stronger like a Syrup thus. Take *of the opening roots one ounce and an half, of Liquorish and Peony root green, each two ounces; roots of Asarum, Madder, Eryngus, white Dittany, each one ounce; roots of Birthwort and Valerian, each half an ounce; Sowsbread two drams, Mugwort, Motherwort, Pennyroyal, Balm, Marjoram, each a handful; Savin, Savory, Horehound, Carduus, Thyme, of each half a handful; Rosemary, Elder, & the Cordial flowers, each a pugil; Wall-flowers one pugil and an half, red Peaſe a pugil, Juniper and Bayberries, each half an ounce; Annise and Fennel seed, each two drams; Dodder, Smallage, Parsley and Lovage seed, each one dram; Raisons one ounce and an half, Figs ten*, boyl them in *Water* and *Wine*: in the strained Liquor add, *infused Polypody and Carthamus seeds, each two ounces and an half; Senna six ounces, dried Briony roots one ounce*, boyl them again, strain them and add *Agarick and Turbith of each half an ounce*; and if you wil purge strongly *Hellebore one dram, Ginger one dram and an half*, boyl them again gently and strain them, add *six ounces of Sugar*, make a *Syrup*, give *one ounce* more or less as it worketh, with *Peaſe broath*, twice or thrice in the time the Courses should come, or in the full of the Moon which is thought a proper time.

An Infusion of dried bitter things in Wine is good As. Take *Asarum roots half an ounce, Sowbread roots two drams, Gentian roots one dram and half, Wormwood, Cen-*

tory

tory tops, Savin, Horehound, Carduus, each two drams; Marjoram, Pennyroyal, each one dram; Roſemary and Wall-flowers, each two drams; Anniſe and Smallage ſeeds, each one dram; Senna two ounces, Agarick, Briony roots each half an ounce; Turbith two drams, Ginger one dram, powder them and infuſe them in *Wine two fingers breadth above them,* give it ſome daies.

Remedies given at the mouth to provoke the terms, Either do it by increaſe of blood in ſuch as want it, as nouriſhing things: Or by heating and extenuating the blood, and opening the mouths of the veins, as Diureticks: Or by ſome property unknown to us. Of theſe we ſhal here ſpeak.

They are diverſly prepared and given at the time the courſes uſed to flow, and that faſting, ſometimes at the going into a Bath, or coming out. For ſo they do beſt, and one helps the other; and alſo before the opening of a vein in the Foot. The examples of which follow.

A Broath. Take *red Peaſe one pugil, Parſley roots two ounces, Borrage flowers one pugil, one Leek or an Onion:* boyl them, give the *Broath* with *Butter* and *Salt, Saffron* and *Cinnamon* every morning.

Strong People may eat Sallats of Watercreſſes, Radiſhes and Onions.

Give Pouders in Wine, Water, Decoctions, and other Liquors, or with Honey, Water or Wine, Syrups, Sugar, or made into Lozenges, or in Electuaries, or Pils, drinking ſome convenient Liquors afterwards.

They are thus made. The firſt, Take *Saffron half a ſcruple, Mace and Cinnamon, each one ſcruple*; and drink it in *Pouder* in the morning for ſome daies.

The ſecond. Take *Nigella ſeeds half a dram, Myrrh one ſcruple, Cinnamon one dram, Saffron half a ſcruple,* make a *Pouder*.

The third. Take *the Troches of Myrrh* without *Aſſa Fœtida half a dram, Nigella ſeed and Borax, each one ſcruple*; make a *Pouder*.

The fourth. Take *Aſarum roots, Leaves of Savin, each half a dram; Smallage and Parſley ſeed, each one dram; Cinnamon half a dram, Saffron a ſcruple, Myrrh and Amber, each half a dram*; make a *Pouder*, give a dram.

The fifth. Take *Aſarum roots, white Dittany, Madder, Flower-de-luce roots, each half a dram; Sowbread roots, Leaves of Savin, Pennyroyal, Rue, Wall-flowers, Nigella ſeed, the cane of Caſſia, and Caſſia Lignea, Date ſtones, each one ſcruple; Cinnamon one dram, Schœnanth half an ounce, Saffron half a ſcruple,* make a *Pouder* for many *Doſes*.

The ſixth. Take *Date ſtones, Borax, Lavender ſeeds, each one ſcruple; Mace half a ſcruple, Saffron five grains,* make a *Pouder* for one *Doſe*.

The ſeventh and the beſt is. Take *the Spleen of an Heifer gelded,* dry it in an Oven, take *a dram* thereof, ad *Cinnamon half a dram, Saffron three grains,* pouder them, give it with *Peaſe broath,* often. *Paracelſus* gives the eſſence. *Crollius* commends and teacheth the extract of the Liver and Spleen of an Ox.

Salts of Mugwort, Balm, and Celondine roots, are commended by Chymiſts.

Theriaca Diateſſaron one dram, is an approved medicine for the terms.

One dram and an half of *Tryphera Magna* without Opium, is the like.

The Electuary called *Hæmagogon* given in one or two drams is alſo good.

The Electuary of *Rhaſis* made of filings of Iron given in the quantitity of a Cheſnut is good eſpecially in Women of evil habit of body. And *Crocus martis* is commended by Chymiſts.

Another thus made. Take *roots of Birthwort Flower-de-luce, Madder, each a dram; Savin, Horehound, each half a dram, Schœnanth, Spike, Wood Aloes, each a ſcruple, Gum lac. half a dram*; make an *Electuary* with *Honey*.

This is beſt. Take *Juyce of Mercury and Honey, each equal parts*; boyl them to a *Syrup* add the *Pouder* of *Nigella ſeed, a little Cinnamon, and half a ſcruple of Saffron,* make a thick *Electuary,* give one ſcruple or make it into *Pills*.

Conſerve of Borrage given in Wine is a ſecret among Women.

The uſualleſt Pills are thoſe of Caſtor.

The Troches of Myrrh are beſt, given in Pills by reaſon of the ſtink of the Aſſa Fœtida.

Thus: Take *Troches of Myrrh one dram, Caſtor half a ſcruple, with Juyce of Mugwort,* make ſmall Pills.

Or thus: Take *Myrrh one dram, Aloes half a dram, Lupines, Nigella ſeed, Madder roots, Gentian, each half a dram; Saffron a ſcruple, Borax half a dram, with Syrup of Mugwort,* make Pills, give *half a dram*.

Or thus of Gums. Take *Myrrh one dram, Galbanum, Aſſa fœtida, each half a dram; Caſtor a ſcruple, Saffron half a ſcruple, Nigella ſeed and Aſarum roots, each two ſcruples*; with *Juyce of Savin* and *Honey* make *Pils*, give *half a dram*.

Or thus. Take *Agarick, Hermodacts, each half a dram, dried wild Goats dung one ſcruple, Gum lac, Myrrh, each two ſcruples*; with *Syrup of Mugwort* make *Pills*, give *a ſcruple*.

In Women of evil habit of body to open obſtructions and provoke the terms. Take *the Troches of Capars and of Rhubarb, each half a dram; Gum Ammoniack diſſolved in Vinegar one ſcruple, Gentian and Aſarum roots, and ſeeds of Smallage and Parſley, each two ſcruples; Troches of Myrrh half a dram,* with *Syrup of Mugwort and of the five roots,* make *Pills*, give *half a dram*, or *two ſcruples* every other or third day.

In liquid form we give to drink, Waters, Juyces, Infuſions alone, or together, with Pouders or Electuaries.

The beſt waters are of Mugwort, Savine, Pennyroyal, Motherwort, Balm, Calamints, Catmints, Nip, Parſley, Fennel, Radiſh, Acorus, and Cinnamon, alone or together mixed we give them.

The Juyces of the ſame plants are good, but the pleaſanteſt are of Radiſh, Eryngus, Leeks. We give alſo the juyce of young red Oſiers and white Wine.

Or thus. Take *the juyce of Radiſh and Eryngus, each two ounces; of Flower-de-luce one ounce,* with *Sugar* as much, give *one ounce and an half* with *Wine*.

Or thus. Take *the juyces mentioned,* add *juyce of Mugwort, Pennyroyal, Parſley, each one ounce*; *Sugar as much as of all,* make a *Syrup,* give *one ounce and an half* or more in *Wine* or by it ſelf.

The Oyl of Savin four drops or five, in water of Savin, Pennyroyal, Mugwort, Balm, or the like, or a ſpoonful of Sack, doth quickly diſſolve the courſes.

Decoctions or infuſions in water, or wine, or other Liquor are made of the Plants aforeſaid, of which we draw waters; and the Decoction of Peaſe is moſt commended. Of Juniper berries alſo, and of Lupins, of Burnet, Chamomil flowers, and Barley; there is a good Decoction to be made.

Compounds of theſe are thus made: Take *Mugwort, Pennyroyal dried, Balm, of each three drams*; *Juniper, and Bay berries, of each half an ounce*; Boyl them in Wine.

Or thus. Take *roots of Smallage, Fennel, each one ounce and half*; *Red Peaſe, Barley, each a pugil*; boyl them add to a pint, *Honey four ounces, Wine two ounces,* boyl them again, and ſtrain it, drink it often.

A bitter Wine moſt excellent. Take *Gentian, Valerian, and Aſarum roots dried, each two drams*; *Madder roots half an ounce, Sea Onions prepared one dram, dried Wormwood, Carduus, Mugwort, Savin, Rue, each three drams*; infuſe them in *Wine*, and boyl them in a double Veſſel, give *three ounces*.

Hippo-

eth the expulsive faculty and makes the terms flow less and more seldom.

The Cure.

The Cure of Terms suppressed. In the Defect of terms keep this method (of the rest we shal speak hereafter) If it be when the woman is not fit for Children it is natural and not medled with. You must not attempt til fourteen, and when they are evil colored; And if they stop after forty four they must not be recalled; nor when the woman hath conceived, or giveth suck although there be more blood than is needful, and some have their terms sometimes then. Nor at a time when they use not to flow, except to prepare the Body, but in that week wherin they used to flow, must you give things to provoke them, especially if they be strong: Or when there are signs of them, as pain of the back and the like, or have drops appear.

It is impossible to bring down the Courses in them which are from the Birth of a man-like constitution, or have the Veins closed, when they never had them, and are barren.

If they cease for want of blood, or fault thereof it is in vain to attempt their recovery in lean people, but it is better to repair the blood, by good diet: And then they wil come of themselves. If they have been turned another way, and flow not at the Womb, they must be brought thither again.

If foulness of blood or obstruction of the bowels cause it, we must open them and clense the blood, and give things that provoke the Terms. And these are to be used in the stoppage of the Hæmorrhoids when the foul blood remains in the meseraick Veins.

A hard Scirrhus or Callus in the neck of the womb if it hinder the Courses must be taken away. And then if the Terms flow not, they must be provoked. If the Veins of the womb be so hidden with Fat, that they cannot bleed, it must be consumed by Fasting.

In other causes, as thickness of humors and obstruction of the Veins of the womb, or coldness, we must proceed as followeth, when we intend to move them.

Purges are good if they be stopped by reason of the foulness or impurity of the blood; which, though they provoke the expulsive faculty and cause dejection or going to stool, yet because they also stir up and move the veins of the womb, they so provoke the Terms also: Wherefore when Courses flow, to abate them and prevent them in Women with Child, we dare not give Purges. And in those that are stopt we often do more by purges that are mixed with things that provoke the Terms, than with such things as only provoke them. And these we proportion to the humor abounding whether it be Flegm, Choler, or Melancholy.

We first loosen the belly with Catholicon, Hiera, or the like.

Then we prepare the humor thus. Take *Syrup of Mugwort and the five roots, of each one ounce and an half; Oxymel simple one ounce, water of Mugwort, Motherwort, each two ounces and an half; water of Pennyroyal and Nepp, each one ounce*; make a *Julep for three or four doses* sweetned with *Cinnamon*.

Or this Decoction. Take *the five opening roots steept in Wine each half an ounce; roots of Madder and Eringus, each six drams; Valerian roots half an ounce, Mugwort, Pennyroyal, Motherwort, Balm, Nepp, Germander, Chamæpytis or Groundpine, Time, each a handful; Tops of Hops and red Peaſe, each a pugil; Bayberries half an ounce, Anise and Fennel seeds each two drams; Parsley and Dodder seed, each one dram and an half; Flowers of Rosemary, Elder, and of both Bugloſſes, each a pugil; roots of Polypody one ounce*: make a *Decoction*, sweeten it with *Sugar* and *Cinnamon*, and give it several daies.

Then purge with this Potion. Take *of Catholicon six drams, Agarick one dram, the species of Benedicta Laxativa half a dram, Saffron five grains*: make a *Bolus* with *Sugar*, or drink it with *Rosemary* or *Wormwood Wine*.

Or thus in cholerick bodies. Take *Tryphera Persica six drams, Rhubarb one dram, Spike one scruple, Electuary of the juyce of Roſes one dram, Syrup of Roſes solutive one ounce*; with *Bugloſs and Fumitory water* make a *Potion*.

Or this Decoction. Take *Liquoriſh one ounce, Red Peaſe a pugil, Mugwort a handful, Anniſe and Fennel seed, each two drams; Cordial flowers a pugil, Polypody roots, Carthamus seed, Senna, of each half an ounce; Epithymum two drams*, make a *Decoction*: Infuse *Agarick two drams*, strain it and add *one ounce of syrup of Roſes solutive* for a *Potion*.

Or this Pouder. Take *Turbith four scruples, Agarick two scruples, Cinnamon, Ginger, of each half a dram; salt Gem one scruple, Saffron five grains, Sugar two drams*, make a *Pouder*, give it in *white Wine* which hath *Mugwort* infused or the like.

Or these Pills. Take *the species of Hiera and Benedicta Laxativa, each half a dram; Pil Fœtidæ one scruple*, or more, according to the strength, make Pils with *white Wine*.

It is good to purge with things that provoke Terms, at the time we expect them.

To weak people and Virgins we give gentler medicines, and because bitter things are best we give them in Pils, As. Take *Aloes one dram and an half, Agarick and Rhubarb, of each one dram; Myrrh and Gum Amoniack dissolved in Vinegar, roots of Gentian and Asarabacca, each half a dram; Spike, Cinnamon, Mastich, each one scruple; Saffron five grains*, with *Syrup of Mugwort*, make a *Mass*. Give *half a dram or two scruples*, sometimes quickned with *Scammony*.

Or make this Infusion. Take *Succory rooots, Parsley and Fennel roots, each half an ounce; Asarum roots two drams, Wormwood & Mugwort each one dram and an half; Senna one ounce, Rhubarb two drams, Spike a scruple, Agarick two drams, Ginger a dram*, shake them in *Wine* for three or four *Doses*.

We make a stronger like a Syrup thus. Take *of the opening roots one ounce and an half, of Liquoriſh and Peony root green, each two ounces; roots of Asarum, Madder, Eryngus, white Dittany, each one ounce; roots of Birthwort and Valerian, each half an ounce; Sowsbread two drams, Mugwort, Motherwort, Pennyroyal, Balm, Marjoram, each a handful; Savin, Savory, Horehound, Carduus, Thyme, of each half a handful; Rosemary, Elder, & the Cordial flowers, each a pugil; Wall-flowers one pugil and an half, red Peaſe a pugil, Juniper and Bay berries, each half an ounce; Anniſe and Fennel seed, each two drams; Dodder, Smallage, Parsley and Lovage seed, each one dram; Raisons one ounce and an half, Figs ten*, boyl them in *Water* and *Wine*: in the strained Liquor add, *infused Polypody and Carthamus seeds, each two ounces and an half; Senna six ounces, dried Briony roots one ounce*, boyl them again, strain them and add *Agarick and Turbith of each half an ounce*; and if you wil purge strongly *Hellebore one dram, Ginger one dram and an half*, boyl them again gently and strain them, add *six ounces of Sugar*, make a *Syrup*, give *one ounce* more or less as it worketh, with *Peaſe broath*, twice or thrice in the time the Courses should come, or in the full of the Moon which is thought a proper time.

An Infusion of dried bitter things in Wine is good As. Take *Asarum roots half an ounce, Sowbread roots two drams, Gentian roots one dram and half, Wormwood, Cen-*

tory

tory tops, Savin, Horehound, Carduus, each two drams; Marjoram, Pennyroyal, each one dram; Rosemary and Wall-flowers, each two drams; Annise and Smallage seeds, each one dram; Senna two ounces, Agarick, Briony roots each half an ounce; Turbith two drams, Ginger one dram, powder them and infuse them in *Wine two fingers breadth above them,* give it some daies.

Remedies given at the mouth to provoke the terms, Either do it by increase of blood in such as want it, as nourishing things: Or by heating and extenuating the blood, and opening the mouths of the veins, as Diureticks: Or by some property unknown to us. Of these we shal here speak.

They are diversly prepared and given at the time the courses used to flow, and that fasting, sometimes at the going into a Bath, or coming out. For so they do best, and one helps the other; and also before the opening of a vein in the Foot. The examples of which follow.

A Broath. Take *Pease one pugil, Parsley roots two ounces, Borrage flowers one pugil, one Leek or an Onion:* boyl them, give the *Broath* with *Butter* and *Salt, Saffron* and *Cinnamon* every morning.

Strong People may eat Sallats of Watercresses, Radishes and Onions.

Give Pouders in Wine, Water, Decoctions, and other Liquors, or with Honey, Water or Wine, Syrups, Sugar, or made into Lozenges, or in Electuaries, or Pils, drinking some convenient Liquors afterwards.

They are thus made. The first, Take *Saffron half a scruple, Mace and Cinnamon, each one scruple;* and drink it in *Pouder* in the morning for some daies.

The second. Take *Nigella seeds half a dram, Myrrh one scruple, Cinnamon one dram, Saffron half a scruple,* make a *Pouder.*

The third. Take *the Troches of Myrrh* without *Assa Fœtida half a dram, Nigella seed and Borax, each one scruple;* make a *Pouder.*

The fourth. Take *Asarum roots, Leaves of Savin, each half a dram; Smallage and Parsley seed, each one dram; Cinnamon half a dram, Saffron a scruple, Myrrh and Amber, each half a dram;* make a *Pouder,* give a dram.

The fifth. Take *Asarum roots, white Dittany, Madder, Flower-de-luce roots, each half a dram; Sowbread roots, Leaves of Savin, Pennyroyal, Rue, Wall-flowers, Nigella seed, the cane of Cassia, and Cassia Lignea, Date stones, each one scruple; Cinnamon one dram, Schœnanth half an ounce, Saffron half a scruple,* make a *Pouder* for many *Doses.*

The sixth. Take *Date stones, Borax, Lavender seeds, each one scruple; Mace half a scruple, Saffron five grains,* make a *Pouder* for one *Dose.*

The seventh and the best is. Take *the Spleen of an Heifer gelded,* dry it in an Oven, take *a dram* thereof, ad *Cinnamon half a dram, Saffron three grains,* pouder them, give it with *Pease broath,* often. *Paracelsus* gives the essence. *Crollius* commends and teacheth the extract of the Liver and Spleen of an Ox.

Salts of Mugwort, Balm, and Celondine roots, are commended by Chymists.

Theriaca Diatessaron one dram, is an approved medicine for the terms.

One dram and an half of *Tryphera Magna* without Opium, is the like.

The Electuary called *Hæmagogon* given in one or two drams is also good.

The Electuary of *Rhasis* made of filings of Iron given in the quantitity of a Chesnut is good especially in Women of evil habit of body. And *Crocus martis* is commended by Chymists.

Another thus made. Take *roots of Birthwort Flower-de-luce, Madder, each a dram; Savin, Horehound, each half a dram; Schœnanth, Spike, Wood Aloes, each a scruple, Gum lac half a dram;* make an *Electuary* with *Honey.*

This is best. Take *Juyce of Mercury and Honey, each equal parts;* boyl them to a *Syrup* add the *Pouder* of *Nigella seed, a little Cinnamon, and half a scruple of Saffron,* make a thick *Electuary,* give one scruple or make it into *Pills.*

Conserve of Borrage given in Wine is a secret among Women.

The usualleſt Pills are those of Castor.

The Troches of Myrrh are best, given in Pills by reason of the stink of the Assa Fœtida.

Thus: Take *Troches of Myrrh one dram, Castor half a scruple, with Juyce of Mugwort,* make small Pills.

Or thus: Take *Myrrh one dram, Aloes half a dram, Lupines, Nigella seed, Madder roots, Gentian, each half a dram; Saffron a scruple, Borax half a dram, with Syrup of Mugwort,* make Pills, give *half a dram.*

Or thus of Gums. Take *Myrrh one dram, Galbanum, Assa fœtida, each half a dram; Castor a scruple, Saffron half a scruple, Nigella seed and Asarum roots, each two scruples;* with *Juyce of Savin* and *Honey* make *Pils,* give *half a dram.*

Or thus. Take *Agarick, Hermodacts, each half a dram, dried wild Goats dung one scruple, Gum lac, Myrrh, each two scruples;* with *Syrup of Mugwort* make *Pills,* give *a scruple.*

In Women of evil habit of body to open obstructions and provoke the terms. Take *the Troches of Capers and of Rhubarb, each half a dram; Gum Ammoniack dissolved in Vinegar one scruple, Gentian and Asarum roots, and seeds of Smallage and Parsley, each two scruples; Troches of Myrrh half a dram,* with *Syrup of Mugwort and of the five roots,* make *Pills,* give *half a dram,* or *two scruples* every other or third day.

In liquid form we give to drink, Waters, Juyces, Infusions alone, or together, with Pouders or Electuaries.

The best waters are of Mugwort, Savine, Pennyroyal, Motherwort, Balm, Calamints, Catmints, Nip, Parsley, Fennel, Radish, Acorus, and Cinnamon, alone or together mixed we give them.

The Juyces of the same plants are good, but the pleasanteſt are of Radish, Eryngus, Leeks. We give also the juyce of young red Oxers and white Wine.

Or thus. Take *the juyce of Radish and Eryngus, each two ounces; of Flower-de-luce one ounce,* with *Sugar* as much, give *one ounce and an half* with *Wine.*

Or thus. Take *the juyces mentioned,* add *juyce of Mugwort, Pennyroyal, Parsley, each one ounce; Sugar as much as of all,* make a *Syrup,* give *one ounce and an half* or more in *Wine* or by it self.

The Oyl of Savin four drops or five, in water of Savin, Pennyroyal, Mugwort, Balm, or the like, or a spoonful of Sack, doth quickly dissolve the courses.

Decoctions or infusions in water, or wine, or other Liquor are made of the Plants aforesaid, of which we draw waters; and the Decoction of Peaſe is most commended. Of Juniper berries also, and of Lupins, of Burnet, Chamomil flowers, and Barley; there is a good Decoction to be made.

Compounds of these are thus made: Take *Mugwort, Pennyroyal dried, Balm, of each three drams; Juniper, and Bay berries, of each half an ounce;* Boyl them in Wine.

Or thus. Take *roots of Smallage, Fennel, each one ounce and half; Red Peaſe, Barley, each a pugil;* boyl them add to a pint, *Honey four ounces, Wine two ounces,* boyl them again, and strain it, drink it often.

A bitter Wine most excellent. Take *Gentian, Valerian, and Asarum roots dried, each two drams; Madder roots half an ounce, Sea Onions prepared one dram, dried Wormwood, Carduus, Mugwort, Savin, Rue, each three drams;* infuse them in *Wine,* and boyl them in a double Vessel, give *three ounces.*

Hippo-

Hippocras alſo or Claret made of Spices and Honey is good.

A Syrup for the ſame is thus made. Take *of the opening roots each two ounces; Eryngus and Madder roots, each one ounce; Aſarum half an ounce, Mugwort, Pennyroyal, wild Thyme, Savin, Balm, Calamints, Nip, Rue, each one handful; flowers of Roſemary, Chamamil, Broom, St. Johns wort, Wallflowers, each one pugil; Smallage, Lovage, and Fennel ſeeds, each two drams; Red Peaſe one pugil, Juniper berries half a pugil,* boyl them in *Wine and Water in three pints of the ſtrained Liquor,* diſſolve *ſix ounces* of *Honey,* boyl it, and ſtrain it, and ſo uſe it, or keep it boyld up to a *Syrup.*

Syrup of Mugwort, Calamints of the opening roots, all the Oxymels are good.

Potions are made of thoſe mixed: As, Take *Syrup of Mugwort one ounce and an half, Pennyroyal and Balm water, of each two ounces; Cinnamon water two drams:* Make a Julep, give it at once.

Or thus: Take *Parſley roots one ounce, red Peaſe a pugil, Pennyroyal one handful, Fennel and Parſley ſeeds, of each a dram:* boyl them in Wine, diſſolve in the ſtraining *Triphera magna without opium or Thereaca Diateſſaron one dram, Syrup of Mugwort one ounce, Saffron half a ſcruple:* Make a Potion for one Doſe.

Of Topicks, make Baths or Fomentations for the womb in the time when the courſes are expected, ſome daies morning and evening for an hour; not to provoke ſweat; but to warm, for that would hinder. Therefore they muſt not dry and aſtringe: but looſen. Hence it is that women find ſo little good by dry Baths. Theſe are made of ſweet and hot Plants boyled in greater quantity for a Bath, then a Fomentation, and with wine and water.

They are eaſily made even in the winter: As, Take *Savin green, Rue, Lavender flowers, of each two handful, or more: Juniper berries two pugils:* boyl them for a Bath to ſit in, or a Fomentation in Summer; add *green Mercury two handfuls.*

Another for the Poor: Take *Onyons, Leeks,* and if the ſcent offend not, *Garlick:* boyl them alone, or with ſome of the aboveſaid.

The third is this: Take *roots of Lillies, Valerian, Mugwort, Savin, Rue, Balm, Lovage, Pennyroyal, Calamints, of each one or two handfuls; Chamomil and Elder flowers, of each one or two pugils; Fenugreek and Lin ſeed, of each one ounce; Carua ſeeds half an ounce, Bay, and Juniper berries, and red Peaſe, of each a pugil:* boyl them.

A Compound of many thus; if you have not all, take more of them you have: Take *roots of Lillies, Marſhmallows, Flower-de-Luce, of each four ounces; roots of Madder, Birthwort, Valerian, of each three ounces; roots of Aſarum one ounce and an half, roots of true Acorus and Elicampane, of each one ounce; Mugwort, Savin, Rue, Southernwood, Motherwort, Balm, Calamints, Nip, Pennyroyal, Organ, Spikenard, Lovage, Savory, ſprigs of red Oſiers bruiſed, of each two handfuls; ſeeds of the leſſer Centaury, Carduus, Marjoram, Bay leaves, of each one handful; Chamomil, Dill, Elder, Lavender and Wall flower, of each one pugil; Fenugreek and Line-ſeed, of each one ounce; Nigella and Watercreſſe ſeeds, of each half an ounce; juniper and Bay-berries, of each one pugil; ſeeds of Smallage and Lovage, of each two drams:* Boyl them for a Bath.

A Fomentation of the ſtrongeſt, is thus made: Take *of Madder, Aſarum, Birth-wort and Sowbred roots, of each one ounce; of wild Cucumbers and Mercury leaves, of each one handful; of Myrrh half an ounce:* boyl them in Wine and Water, add *the juyce of Savin and Mugwort, of each half an ounce; Ox-gal half an ounce:* Make a Fomentation.

If the Thighs to the Feet, are waſhed with the aforeſaid Decoction, or if the Feet be bathed therein often, it is good.

And if you make Clyſters of them, becauſe the Neck of the Womb joyneth to the ſtraight Gut, they do as well, eſpecially if the body be bound; becauſe Clyſters of Mercury, Benedicta Laxativa and Hiera, by ſtirring up and forcing the Belly do work upon the Womb.

Or thus: A Clyſter often repeated, is good: Take *Lilly roots three ounces, green Flower-de-Luce roots one ounce and an half, Valerian roots one ounce, Mugwort, Savin, Rue of each one handful; Centaury tops, Chamomil, Melilot and Lavender flowers, of each one pugil; Fenugreek, and Line ſeed, of each half an ounce; Carua and Nigella ſeed, of each two drams; Bay berries half a pugil, red Peaſe one pugil:* Make a Decoction, add *Benedicta Laxativa Hiera Logadij, each three drams, juyce of Mercury and Flower-de-luce, of each one ounce; Honey of Squils one ounce and an half, Oyl of Wall-flowers two ounces, Ox-gal one dram:* Make a Clyſter, give it without Salt, that ſhe make keep it longer.

To anoynt the Privities and Loynes, after Baths, is good, and otherwiſe, with hot and looſning Oyls and Fats.

Oyl of Wall-flowers and Flower-de-Luce, of each an ounce; is proper.

Or that called *Moſchatum* or *Moſchelinum*: Or this Oyntment: Take *Oyl of bitter Almonds and Lillies, of each one ounce; Oyl of Wall-flowers, Flower-de-luce and Broom-flowers, of each half an ounce; Gooſe greaſe and Marrow of Calves Legs, of each half an ounce; the Mucilage of Fenugreek ſix drams, Aſarum, Birthwort, Sowbread and Flower-de-Luce roots, of each one dram;* Wax enough to make an Oyntment.

Emplaiſters are applied to the Share, and about the Privities; made of the former: As, Take *roots of Lillies and Orris, of each two ounces; Leeks one ounce, Mugwort, Savin, Pennyroyal, of each one handful; Figs ten:* boyl them in wine, ſtamp them, add *wild Goats dung two drams: Oyl of Lillies and Wall flowers, of each one ounce:* Make a Cataplaſm.

Or: Take *Oyl of Wall flowers, Orris, Moſcheline, of each one ounce; Storax and Galbanum, diſſolved in Aqua vitæ, of each half an ounce; Sal Nitre one dram, Roſin of the Larich tree,* as much as is will make a Plaſter.

A Fume taken into the womb by a Funnel, or through a hollow ſtool, provokes the courſes, if made of Aromaticks, and other hot things, as *Hippocrates* ſaith; it is uſed after Baths, or at other times.

They are made of the Vapor of the Decoction of the things aforementioned.

Or thus: Take *white Dittany roots and Madder, of each one ounce; Mugwort, Hops, Pennyroyal, Savin, Bays, of each one handful; Bay and Juniper berries, of each one pugil; roots of Galangal and Ginger, of each two drams; Myrrh and Bdellium, of each half a dram:* boyl them in wine, and let her take in the Fume while it is hot.

Oyl of Spike or Civet put into the womb doth by its ſcent ſtrongly draw down the courſes.

The following ſweet fume doth the ſame: Take *of Storax two drams, Benzoin, Frankincenſe, Gallia or Alipta Moſchata, of each half a dram; Cloves, wood Aloes, Schenanth, Caſſia Lignea, of each one ſcruple; Sugar two drams:* make them up in Troches for a Fume, with Gum traganth infuſed in Cinnamon water.

Or thus: Take *the wood of Berry bearing Savin, and Juniper,* and caſt it upon the Coals, *or Juniper berries.*

This

This is ſtronger but ſtinketh: Take *Mummy two drams, Galbanum, Bdellium, Opopanax, of each one dram; Frankincenſe, Storax, of each one dram and an half; roots of Aſarum, Schenanth, of each one dram; the hoofe of an Aſs, or a Hoſſe, one ſcruple;* Powder them, *with the Roſin of the Larix tree:* Make Troches, uſe them in a cloſe ſtool.

The ſtrongeſt Fume to provoke the courſes quickly, is made of all kinds of dung dried, and poudered, and mixed with Saffron to be burned upon live coales, and ſent into the womb by a funnel.

Peſſaries put into the Womb, or Naſcalia applied thereto, when Virgins, are the laſt remedies, ſuch as may open the mouth of the womb with heat and ſharpneſs, and not exulcerate.

A Radiſh made like a Peſſary, and applied doth it.

Pot Mercury bruiſed, and put into a bag, is good, and better with flowers of Centaury; the true Scordium, Jack of the hedg, or ſawce alone called *Alliaria* doth the ſame.

Or thus: Take *juyce of Mercury, Onyons, Ox-gall, of each one ounce; Honey two ounces:* boyl them to a Suppoſitory conſiſtence.

To which you may add theſe Pouders: Take *roots of Aſarum, Sowbread, of each half a dram; Agarick one dram, Myrrh two drams:* boyl them *with Honey* to a Peſſary.

Or thus: Take *Aloes half an ounce, Myrrh two drams, Gentian roots one dram and an half, Nigella or Gith ſeeds one dram:* Mix them with *Ox-galls*, and make Peſſaries.

Another of Species: Take *of Species of Hiera Picra, and Benedicta Laxativa, and troches of Myrrh, of each one dram and an half:* Make a Peſſary with boyled *Honey.*

Another made of Antidotes: Take *of Triphera Perſica without Opium, and Theriaca, Diateſſeron, of each two drams:* Mix them with Pouder of Nigella, to Peſſaries.

This is moſt excellent: Take *of Myrrh half an ounce, Nigella ſeeds two drams, Agarick one dram, Sal niter half a dram, with juyce of Coletworts or Honey:* make a paſt for Peſſaries, and if you add *Troches of Alhandal half a ſcruple*; it will be ſtronger.

Another of perfumed things: Take *the Troches of Gallia, and Alipta moſchata, of each three drams; of Civet, Muſk and Amber-greeſe,* according to the purſe of the Patient, make them up into a Peſſary with Storax.

Or thus with Oyls: Take *Oyl Moſcheline two drams, Storax liquid one dram, Oyl of juniper berries ſix drops:* Mix them, and dip Wooll therein for a Peſſary.

If you make Injections of the Decoctions aforeſaid into the Womb. they are better then in Baths or Fomentations.

Or this: Take *Madder and Aſarum roots, of each half an ounce; Mugwort and Pennyroyal, of each one handful; Nigella or Gith ſeeds three drams, Lupines one ounce:* boyl them, *and in half a pint,* diſſolve *juyce of Savin two ounces,* inject ſome in.

Letting blood in the Foot, at the time is the uſual remedy; for when the blood above ſtrives to diſcend into the parts beneath, by reaſon of their Emptineſs through blood-letting, that blood which lay idle about the Veins of the Womb, is ſtirred up, and rather gets into the uſual paſſage then another, by which means the Terms are brought again. Wherefore we uſe this remedy of bleeding in the Foot, not only in full bodies where we open a Vein in the Arm alſo firſt; but alſo in lean, except other matters hinder: And we uſually open that under the inward Ancle called the *Saphena* in that Foot where it moſt appears, which we firſt put into hot water, and alſo after it is opened that the Veins may bleed better. But it will be as good in the Ham Vein, and bleed better. If you bleed in both Feet together, or in one in the morning, and in the other afternoon it will be better, at which time if you bind the Hip with a Ligature faſt, that the blood may not diſcend, it will ſooner be carried to the Womb.

Horſleeches if they ſuck well may ſupply the Lancet.

Cupping-glaſſes applied to the Hams, inſide of the Thighs, and Privities draw the blood thither, eſpecially with Scarification.

Ligatures in the Hips and Feet, do the ſame, and ſtrong frictions from the Leg downwards.

Copulation if it may be lawfully done, Cures Virgins of this Diſeaſe: and they which are ſick thereby and pale, are cured the night of their Marriage, by having their Courſes, which is the token of their Virginity, to them which are ſound, and have them then afore the time.

The Cure of the want of Courſes after Child-bearing.

The Purgation after Child-bearing, is a kind of bleeding, which produceth great inconvenience, if it be ſtopped, and therefore is to be provoked, this is done by the ſame Medicines, of which in conſideration of the weakneſs of the woman that lieth in, we chuſe the mildeſt, and cooleſt, eſpecially if there be a Feaver which is often.

And in that caſe we give this Pouder: Take *roots of Piony* (which provokes the Terms, and if there be a convulſion, is alſo good againſt that) *one dram, Mallow ſeeds half a dram, Myrrh, Cinnamon of each a ſcruple; Sugar two drams:* give it at twice in *white Wine, and Piony water,* or the like.

Or this Decoction: Take *Piony roots half an ounce, Maiden hair, Celandine, of each one handful; Mugwort half a handful, Violets a pugil; red Peaſe a pugil, Barley half a pugil:* make a Decoction, add *Sugar and Cinnamon one dram, and Schenanth half a dram,* for two Doſes.

We give ſtronger, if nothing hinder us; As, Take *Mugwort, Vervaine, Celandine, Juniper berries;* boyl them in *Wine,* give it to be drunk.

Or theſe Pills: Take *Birthwort roots one dram, Myrrh half a dram, Pepper one ſcruple, with juyce of Leeks;* make Pills, take *half a dram.*

The reſt are like thoſe former that provoke Courſes, as Inſeſſions of Marſh-mallows, Chamomil, Mugwort and the like: and Oyntments, Fumes, Peſſaries, Frictions, Ligatures, Cupping-glaſſes, Bleeding in the Foot ſomtimes, conſidering the ſtrength and accidents.

The Cure of the ſtopping of the Hæmorrhoids.

If the Hæmorrhoids have been uſual and ſtop; and we perceive manifeſt danger at hand thereby, we muſt ſtudy to move them again. As ſomtimes we do, when they never were before: if the cauſe of the Diſeaſe may be carried that way; as we ought to do when the cauſe of Feavers and Melancholly and the like lies in the Meſeraiks. Alſo when the blood labors for paſſage at Hæmorrhoids, being ſwoln we muſt help nature: Thus,

Sometimes we purge by ſtool, by reaſon of the impurity of the blood, which is retained in the Hæmorrhoids ſuppreſſed, becauſe they have power to ſtir up and provoke the Hæmorrhoids, as well as purge, ſpecially if things proper for that be added, as Aloes Coloquintida, and the like, as we ſhewed in the Terms, the examples of which may be refer'd to this treatiſe.

As the Electuarium Hæmagogon, and the like, which is good to provoke both Courles and Hæmorrhoids.

Topicks are better for moving the Hæmorrhoids than the Terms, becauſe the Veins appear more than in the womb, ſomtimes they are outward and ſwell, though ſomtimes more inward and blind, but alwaies eaſily to be reached by Medicines.

This may be done with Oyntments, this is the mildeſt. Take *roots of Orris, Sowbread, each half an ounce*; *tops of Centory, Motherwort, each two drams*; powder them, add *Oyl of Nuts a fingers breadth above them, juyce of red Onions one ounce*, boyl them a little, and ſtrain them, and anoynt therewith.

Or thus. Take *Bacon, the rind and Membranes taken off, one ounce, Hogs-gall half an ounce, Pigeons dung two drams, Niter half a dram*, make an *Unguent*.

Another. Take *Hiera Picra, Benedicta Laxativa, each two drams*; *roots of Sowbread, Birthwort, Centaury the leſs, each one dram*; make an Oyntment with *Gall* and *Honey*.

Theſe are ſtronger. Take *juyce of Leeks and red Onions, each one ounce*; *Hogs or Ox gall ſix drams, roots of Sowbread, pulp of Coloquintida and Euphorbium, each half a ſcruple*; with *Honey* make a *Liniment*, if you add the *juyce of Eſula* or *Lathyris* it wil be ſtrong, but remove it if it burn.

It is better in form of Suppoſitory if the Hæmorrhoids are inward, and be not ſore, thus. Take *Honey, Juice of Onions, Gall, each one ounce and half*: boyl them, add *Hiera Picra one dram, Myrrh half a dram, Sowbread roots half a dram, Sal Nitre a little*, make a *Suppoſitory*, add a little *Hellebore* it wil be ſtronger.

The root of Orris, made like a Suppoſitory, and dip'd in Gall or in Oyl of Orris is good.

A head of Garlick or Onion doth the ſame if you take off the outward skin, and thruſt it in, and a Sowbread root green.

Baths or outward Fomentations, and Clyſters ſuch as provoke the Terms are good in this caſe.

We uſe Leeches to the Hæmorrhoids to draw the blood, that after they may keep their courſe: We anoynt the Veins with blood to make them faſten, and ſet them on with a reed. This is the ſureſt and moſt certain Remedy.

Friction with a rough cloth, or Figg leaves, or with Borrage, doth open or prepare them.

We may do it alſo with a Lancet if the Veins appear, but we muſt be wary of miſſing the Veins: ſome prick them with Briſtles til they bleed, and open the Veins in the Feet, but not ſo properly, for the Hæmorrhoids proceed from the branches of the Gate-vein, and not from the hollow vein as the menſtrual do, and becauſe none of them come forth to the skin there can be no proper Evacuation.

The Cure of defect of bleeding at the Noſe.

It is not amiſs to provoke bleeding at Noſe, where it hath been uſual, and is ſtopt (eſpecially when any Diſeaſes of the Head, Eyes, or Ears are approaching) to prevent them, and cure them except nature of her own accord open the Veins in the Noſe. And this is no ſmall help to a Cure.

It is a difficult matter by reaſon of their ſmallneſs, and diſtance to open them with a Lancet, but ſome do it with Briſtles.

It is beſt to fil the Noſtrils with a Peſſary made of ſharp and rough plants, and to ſmite them, as with Yarrow, Burrage, Madder, Gooſ-graſs, and the flowers of Reed-graſs, or the like.

An Oyntment of Mints and Honey, or Madder and Oyl doth the ſame.

Diaſcorides ſaith that the Decoction of the root of Crocodilium or ſmal Crocus, being drunk, cauſeth bleeding at the Noſe.

The Cure of want of bleeding in other parts.

In other parts, as under the Tongue, or in the Forehead, Arms, or Feet (as when they itch from the foulneſs of blood, requiring the evacuation which was formerly made in that place, and which nature of her ſelf ſomtimes forceth out, as we often obſerved in Horſes) if it be requiſite to bleed for the prevention or Cure of a Diſeaſe, it is beſt done by a Lancet; and to make the veins appear, you may firſt foment them with Decoction of Sage, or the like. And it is good to heat the body with things given internally and applied outwardly, to make the blood thin that it may be the better evacuated.

CHAP. XV.

Of the Want of Sweating.

The Kinds.

WE call this a Diſeaſe when the Evacuation made by the pores of the skin with moiſture called Sweat, is ſtopped, when it is neceſſary and ought to be: Or when a Vapor comes forth inſtead thereof: Or when the Sweat ought to be general through the whol body, and yet only ſome few parts, as the Head or Feet do ſweat.

The ſuppreſſion of uſual Sweating.

This is ſomtimes in ſound people that are plethorick or full of humors, Cacochymical, or of evil habit, and moiſt-bodied: who uſe to be refreſhed by Sweating, which when they want is called ſuppreſſion of Sweat.

The want of ſuch Sweating as is neceſſary for health.

When men by exerciſe or Baths labor to provoke Sweat for preſervation of health and cannot, then is there a want of Sweating, which is requiſite for health. And this we have obſerved to be in ſome who by no means or bathing could produce the leaſt ſweat.

The want of ſweat which in time of ſickneſs is neceſſary.

It happeneth in many imperfected Criſes of ſharp Diſeaſes, and in ſome lingring diſeaſes, that no ſweat can be procured by Art or Nature, which ſhould expel the cauſe thereof: and this is a defect of Sweat requiſite in the time of Sickneſs.

The Cauſes.

The cauſe of want of Sweat is when the moiſture decaieth or is turn'd another way.

As is the Serum or watry humor ſo is the Sweat, and Urin, for it cauſeth both, and when there is little Urin there is little Sweat. And when the Serum is not carried to the habit of the body but otherwaies as by much Urin, Seege or the like, then there is a defect of Sweat. Wherefore in Diſeaſes when Nature endeavors evacuation by ſweat, it is hindered by other paſſages. Moreover it may happen by obſtructions that the paſſage of the Serum may be ſo hindered that there

may

may be great difficulty in Sweating and Piſſing: wherefore men in Dropſies piſs little, and ſweat with difficulty, though it be neceſſary for them. Alſo the thickneſs and ſliminess of the ſerum may hinder both Piſſing and Swearing, as in phlegmatick perſons; and in ſharp Diſeaſes there is no ſweat til the humor is concocted and made thin; therefore attenuating medicines do provoke Sweat, as we ſhewed in the defect of Piſſing.

The cauſe of want of Sweat is becauſe the ſerum goes not to the habit of the body.

The uſual cauſe of want of Sweating is the not drawing of the Serum to the habit of the body, which is done by external heat, which being abſent, Nature cannot ſweat without great Violence, eſpecially if the pores are aſtringed or ſtopt by cold external; for only cloſing of the pores cannot hinder ſweat except there be external cold,

The Cure.

The Cure of want of Sweat.

If any want ſerum or natural moiſture it is in vain to provoke them to ſweat: alſo when it is plentiful and turned another way, except it be againſt natures intention; for if nature incline to ſweat we muſt not uſe other evacuations, but hinder them. Alſo in Obſtructions and crudities if we intend to evacuate by ſweat, they muſt firſt be opened and the matter prepared. But if there be abundance of excrementitious moiſture in the Veins and habit of the body, we muſt uſe this evacuation for the preventing and curing of Diſeaſes, and it muſt be attenuated and concocted from its thickneſs and crudity: and firſt we muſt remove external cauſes which may hinder ſweat, and then give Sudorificks or medicines to cauſe ſweat ſuch as follow.

Sudorificks or medicines to cauſe Sweat.

Among Sudoriſicks, ſome are ſuch as cauſe ſweat by a great quantity of Liquor taken in when there is external heat to further it; hence it is that when we drink faſting and warm in bed in any quanrity, ſweat wil follow.

And this is cauſed by cold drink as well as by hot, for the entrals being ſuddenly cooled, the heat external ſooner draws the ſerum to it.

And this is ſooneſt done by things that are piercing, and ſharp, and theſe are called Sudorificks.

Among which diſtilled waters by reaſon of their thinneſs are the beſt, as for example, of hot herbs, Cherfoyl and Carduus, of cold plants, Fumitory and Lemmons.

Many Decoctions are made for this purpoſe as of Guajacum, Sarſaparilla, China, and other Woods, Roots and Herbs, boyld in much water. Or Horſtail, or the leſſer Polygonum, or the like, boyled in Wine.

This followiug is commended. Take *Millium or Pannicum hulled, one pugil*, boyl it in *Water*, to four ounces of the *Water* ſtrained, add *two ounces of white Wine* for one Draught, this is called St. *Ambroſe his Syrup.*

Or this. Take *Hyſop and Marjoram, boyl them in Chicken Broath, and ad thereto two drams of the Emulſion of Hemp-ſeed.*

This is excellent. Take *Nep and Citron ſeed each one dram and an half; Water of Carduus and Sorrel each one ounce and an half or two ounces*; make an *Emulſion*, add *Syrup of Carduus or of Sorrel ſix drams, of Roſes two drams*, let it be given at bed-time, ſome give the root of *Aſarabacca two darms in pouder in three ounces of Carduus water* which is a good *Sudorifick.*

Treacle and other ſleeping medicines are given diſſolved to provoke Sweat, for in a deep ſleep Sweat doth eaſily come forth.

Alſo the juyce of Elder or Danewort given with diſtilled waters, or in a Decoction doth the ſame.

Or, Take *Saffron one ſcruple, Ginger half a dram*: give them in *Pouder* with *Almond Milk.*

Or, Take *one dram of Brimſtone with the Yolk of an Egg.*

The Chymiſts give Salts, Oyls, and Spirits, as Spirit of Vitriol with convenient Liquors. Their Bezoardine Mineral, Diaphoretick *Sol* and *Luna*, Diaphoretick Antimony, the Sulphur of Antimony, Spirit of Tartar, and the Treacle water of *Crollius*, the ſecret of Carduus, and the like.

All things that outwardly heat the body, ſo that the blood may be carried thither, and the ſerum with it and open the pores do cauſe Sweat: And they may be, greater or leſs as the humor aboundeth and the Conſtition requireth, as follow.

As many Cloaths and Coverings, Skins, and Feathers, Hot Air cauſed by the Sun, or Fire, which outwardly inflames the body.

Hot Water either natural or Artificial.

Oyntments for the Back and great Veins, which gently heat with Oyl of Lillies, Pellitory, and the like.

Alſo Violent motion.

And the paſſions of the mind which inflame the ſpirits and humors, as Anger, Joy, or ſuch as ſhake the ſpirits, produce Swear, as Terror, Fear.

CHAP. XVI.

Of want of Milk.

The Kinds.

ALthough the natural excretion of Milk or giving Suck, which ought to be from the Birth to the moderate growth of the Child, is not ſo neceſſary, that the defect thereof ſhould prejudice the Woman: for we ſee many Women which for preſerving of their Breaſts neat, give no ſuck and receive no hurt thereby: except it be through plethory, or foulneſs, or Inflammation of their Breaſts for want of giving ſuck: yet becauſe it is an inconveniency to the Mother or Nurſe, and alſo to the Child which muſt be nouriſhed with Milk, it is called, a Defect. And it is divers, either when the ſucking is hindred or cannot be, or when there is want of Milk wholly, or in part; and this is called the want of Milk.

Sucking hindred

Want of Milk.

The Cauſes.

This Defect comes from want of Blood in the Veins of the Breaſts, which is the matter of which Milk is made, And this comes from divers Cauſes as we ſhewed in the want of Courſes, chiefly in Women with Child, who through ſquemiſh-

Want of blood, Foulneſs or thickneſs of blood, is the cauſe of want of Milk.

neſs

neſs eat little, or that which is not nouriſhing, from the Diſeaſe called Pica. Or when they have too many of their courſes after Child-bearing, or when they flow in time of giving ſuck, which they ought not to do; eſpecially violently and beyond their ſtrength. Or when they have immoderate bleeding other waies. Or when they have in time of giving ſuck an acute diſeaſe, which makes them lean, Alſo when the foulneſs of the Blood is ſuch that it is brought to the Breaſts, for Milk is made of the pureſt blood which was the Childs food in the womb. Alſo thickneſs of the blood as it is the cauſe of ſtopping the Courſes, hinders increaſe of the milk wholly, or in part, becauſe it cannot get into the Veins of the Breaſts.

Stoppage of the veins of the Breaſts nipples without paſſage or abſent, or hurt, cauſe the want of giving ſuck.

Milk alſo is wanting, when the Veins of the Breaſts are ſtopped by ſome hard Tumor or otherwiſe. Or when there is no paſſage in the Nipples. Or when Nipples are wanting which comes from ſcratching when young Women have itching Breaſts, being marriageable, this cauſeth Ulcers which either ſtop the paſſage or leave a Callus or hardneſs which doth it.

Alſo the clifts and pains which Women have from their ſtrong-mouth'd Children when they ſuck may hinder giving ſuck while they ceaſe.

The Cure.

The Cure of want of Milk.

If it comes from want of blood ſhee muſt be high fed, if from evil humors purged, if from thickneſs of blood, it muſt be attenuated or made thin, if from hurt of Breaſts or Nipples, they muſt be cured as we ſhewed elſewhere.

Medicines to cauſe or increaſe Milk.

For this we muſt uſe things that by a propriety cauſe Milk, or make the blood ſo thin by heat that it wil paſs into the Breaſts.

Milk, Eggs, Udders of beaſts, and brains are good not only for their nouriſhment, but for the property in them to increaſe milk.

Alſo ſuch Fruits as have a milky juyce, as Almonds, Pine-Nuts, and the like, eaten or drunk in Emulſions.

The Germans uſe a Broath of Eggs, Wine, Butter, and Sugar.

Alſo Riſe-milk.

Broath of Coleworts, Mallows, Rocket, Dill, Fennel, Parſley, is good: and though Lettice is ſaid to increaſe milk, we cannot believe it, becauſe it extinguiſheth ſeed:

Onions boyled or roaſted are alſo good.

And the root of purple-flowr'd Goats-beard boyld in Broath,

As Barly and Peaſe broath.

The beſt Wine nouriſheth, and warmeth, and is good for Nurſes.

Theſe Decoctions alſo. Take *Barley one pugil, Fennel and Parſley each one handful*; boyl them, and add *Sugar*.

Or thus. Take *Eryngus roots, half an ounce, Mallows, Polygala, Fennel, Parſley, Dill, Rocket, Baſil, Mints, each one handful*; *Barley, Peaſe, each a pugil*; *Line-ſeed two drams*, boyl them, drink it with *Sugar* every morning.

Of juyces thus. Take *juyce of Sowthiſtle and of Goats-beard, each half an ounce*; give it with *white Wine* and *Sugar*.

The Decoction of Earth-worms in Fleſh broath with Fennel and Barley is good, but let not the Nurſe know what ſhe taketh.

Dry things are leſs profitable, yet ſome ſeeds are commended whoſe herbs are better.

As, Take *Anniſe ſeed two drams, Fennel ſeed one dram, Rocket and Nigella ſeed, each half a dram*; make a *Pouder*, give *two drams* with any fit Decoction.

Or, Take *Pouder of Earthworms three ounces, Sugar half an ounce, Anniſe ſeed one dram, Ginger and Cinnamon each half a dram*; make a *Pouder*, give *a ſpoonful* with ſome Decoction.

Or, Take *Cryſtal in fine pouder, one dram, or Coral.*

That which comes from the *Alpes* called *Lac lunæ*, given one dram is accounted good.

Divers things are applied to the Breaſts, for the drawing of Milk unto them.

As hot Fomentations which enlarge the Veins.

And bruiſed Mints.

Or make this Plaſter. Take *Parſley, Fennel and green Mints, each one handful*; boyl and ſtamp them, add *Barley meal one pugil, Storax two drams, Nigella ſeed one dram, Oyl of Lillies two ounces*, make a *Cataplaſm*.

Some uſe Sinapiſms and Drepaxes, made of Muſtard or ſtinking Gums, to attract Milk, but they are too violent and inflame.

Friction of the Breaſt is better.

And Cupping-Glaſſes to the Arm-holes upon the great Veins which bring the milk to the Breaſts, and look blew, are good.

Alſo to let them be often ſucked or milked.

Alſo if Nipples be wanting, there may be an Inſtrument made of hollow Glaſs, for the Child to ſuck.

CHAP. XVII.

Of the Defect, or Want of Copulation.

The Kinds,

THere is a Defect of the Venereal act, when the Male and Female cannot perform, or weakly joyn together.

Men are more deficient than Women, for the man doth more in that act than the Woman.

Impotent men.

And they are called Impotent which cannot ingender at all for want of erection; and ſuch as do it faintly with ſmall extenſion are called weak men; and when they ſpend no ſeed in the act whether done ſtrongly or faintly, they are called Imperfect men. Nor is it a Defect when it is done but ſeldome, becauſe that may be ſureſt. And the more moderate, the better.

Weak men.

Imperfect Venuery.

In Women, this defect is rare through fault of the Member, which will alwaies receive while it is ſound, neither doth it wont to recruit, as mans doth; nor are they confin'd to a certain time of luſt, as Bitches: Yet ſomtimes there is a defect in the Womb apparent, or cloſe, ſo that they cannot, or at leaſt with difficulty, they endure a Man, and will not retain

Venery hindered and imperfect women.

retain him long. And ſo Venery is hindered, as it is imperfect, when there is none or ſmal pleaſure in the act, eſpecially if they have not been tired, but alwaies diſlike, as I have known three women who adviſed with me that for many years never perceived any more pleaſure then by an external touch, and this is called Venery extinct.

Venery extinct in women.

The Cauſes.

We muſt ſearch out the cauſe in both ſexes of this defect, whether the members be unfit for the act, or ſeed cannot be ſpent, or whether the ſeminal Veſſels, which contain the Seed and conveigh it, be diſordered.

The cauſe of weakneſs, or impotency in man, is the evil ſhape hurt, or numneſs of the Yard.

This act is defective, from the want of a Yard ſomtimes: as ſome are born Eunuchs: others have loſt it by accident, or by force: ſomtimes by loſs of a part, as a ſtone by gelding; ſomtimes by ſmalneſs of the Yard, as Hermophrodites, which reſemble women, and have but a very ſmal Yard ſomtimes by largneſs or thickneſs, ſo that the Womb cannot receive it without torment: ſomtimes by crookedneſs or windy ſwelling like a pudding, as in Hydropical Perſons; or by an excreſcence, hurt or Ulcer eſpecially in the Glans or Prepuce, by which means it cannot endure any force by unclean Copulation, or violent acting, or when the Prepuce, or Foreskin is ſo ſtraight that it will not come from the Glans; for theſe cauſes, either the action is not performed, or difficultly and imperfectly. And it is cauſed alſo by a cold diſtemper which hinders the flowing of blood to the part, which is requiſite, as I ſhall ſhew, for the diſtenſion, or ſtretching of it. And when it is ſtupified and inſenſible from hurt of the Nerves, as in a Palſey: And alſo by inchantments, when the exquiſite ſenſe of the Yard is ſo loſt that it will not riſe by the tickling, which we ſhall ſhew proceedeth from the ſeed. Hence it is that either there is no act or very faint.

The growing together ſtraightneſs, or hurt of the neck of the Womb, is the cauſe of defect of Venery.

Venery is defective from a fault in the neck of the Womb, when the paſſage is not open: For Children born without an Orifice, cannot live for want of Piſſing, as hath been known; except it be made by Art. And this is ſomtimes by birth, and ſomtimes by an Ulcer after it is heated: but ſeldom; Yet a woman which through difficulty in Child-bearing was hurt in that part, whom I know, was ſo modeſt that ſhe would not reveal it, but committed it to natures Cure; ſo that proud fleſh grew about the Womb, and ſtopped her Courſes from coming forth, and the Oriſice was ſo cloſed, as appeared after her death, though living ſhe would not declare it, that there was a thick Eſcar upon it, and it could not be ſeen, or perceived: This Orifice in Virgins is often cloſed with a Skin called *Hymen*, which cauſeth the firſt Copulation painful, and if it be thick, hinders Copulation till it be removed: Alſo it may be made ſtraighter naturally, or by an excreſcence, a Tumor, or Callus, or hurt of the neck of the Womb, which may cauſe ſuch pain that ſhe cannot admit of a man.

From the affliction of the Seminal Veſſels which bring the blood which begets ſeed, made, contained and ſent forth from them, Venery may be hindered, or weak in both Sexes, if there be either no ſeed, or at leaſt ſuch as will not provoke to the act. For the ſharpneſs of the Seed, cauſeth the Itch (not wind, as hath been thought) and ſtirs up nature by the ſpirits, in the Arteries and fils the Spungy Body of the Yard and Glans therewith, ſo that it is enlarged, ſwollen, hard, red, and hot, and fit for the action; eſpecially when it is in the proper Veſſels hot and labors to get out. But when it is weak wateriſh and crude, or little in quantity or none, then there is no pricking, without which there can be no erection, as in Eunuchs, and ſo there can be no performance, or very little and weak. And if this be in a woman, and the provocation, or pricking be wanting, they grow not warm, nor deſire Venery nor find any pleaſure therein. Theſe diſtempers of the Seminal Veſſels hinder the voiding of ſeed, when it is not wanting, and cauſe imperfect Venery.

The cauſes of hindered, or imperfect Venery in both ſexes of quenched Venery in a Woman, is either no Seed, or that which is naught in the Veſſels.

The affects, by which Seed is wanting, or cannot be ſpent, or grows weak, are either weakneſs of the Seminal Veſſels, by reaſon of old age, or a Diſeaſe eſpecially about thoſe parts, or too much Venery which relaxeth and weakneth them. Or coldneſs of the parts, eſpecially in men when the Yard is refrigerated and cannot be filled and ſtretched forth with blood, for which cauſes little or none, or dul ſeed being produced, they are not ſtird up to Copulation; or their ſeed flows from them without ſenſe. This alſo may come from an evil compoſition of the Veſſels at the firſt; the kind whereof is difficult to be known in people that are alive, except it be conjectured from this, that they having perfect Members for generation, and no cauſe aforegoing to hinder it, cannot uſe Copulation; but when they are dead we may, as I have found, perceive in their opening want of Seminal Veſſels, or diſorderly paſſages, ſomtimes on both ſides of the Reins or the like.

Weakneſs, coldneſs, ill faſhion of the Seminal Veſſels, is the cauſe of defect of Venery in both ſexes and of that which is called coldneſs in man.

It often hapneth to men that by incantation, or witchcraft their Reins or Yard, or both are ſo weakned, that they cannot perform. Theſe they call bound or lockt (becauſe it is cauſed by tying of a Point, a Bulls pizle, or Wolfes pizle, or of ſome other Lecherous beaſt. How this is done being preternatural, doth not concern us to enquire.

Inchantment is the cauſe of impotency in men, from whence they are ſaid to have the point tied.

By the cutting of the Spermatical Veſſels, which bring the matter of the Seed, as when both ſtones are taken off (for one cannot do it) in men, becauſe ſeed cannot be made, they cannot ſpend, nor have they a deſire. Yet ſomtimes from other cauſes blood may ſo flow to the Member, that it may enter into a woman, but to no purpoſe; Wherefore when they will have true Eunuchs, to whom they may commit their women, they take of the Yard at the root: This is too often done to men, for the Cure of the Rupture, but I never knew it done, either for any Diſeaſe, or to take away luſt.

Gelding is the cauſe of impotency in Eunuchs.

The Obſtruction of the ſemmal veſſels is the cauſe of want of Venery.

Stoppage or ſtreightneſs, or Perforation of the paſſage in the Yard, is the cauſe that hinders Copulation or makes it Imperfect.

Alſo the ſtoppage of the veſſels by a thick humor or Tumor, may cauſe a defect, eſpecially in men when the paſſage of the Yard for both Seed and Urin is ſtopt by a Caruncle or Excreſcence, a Callus, a Stone, or the like, that neither can come forth. Or when the member is weak, in the act of Copulation, and the paſſage is not direct, nor ſufficiently enlarged, ſo that the ſeed being little, is not directly conveighed but ſtopped til after it come forth of it ſelf. Or when there is a hole through the Yard, by reaſon of a Fiſtula therein, as I have ſeen, by which means the Seed paſſeth not the right way. And this is not an hinderance to the Act as I ſhal ſhew, but only of Conception.

The Act of Copulation is not wholly hindred from a want of ſufficient Blood to produce Seed, for little is required; wherefore poor men that are in want of Food, and ſuch as have long been ſick, and are in Conſumptions, may do the feat, but they who have more blood do it to better purpoſe. Now that Copulation ſhould not be deſired in ſome Diſeaſes where there is diſturbance of mind and grief, it is no wonder, when pleaſure and delight, which ſtirs up this act, is taken away.

Neither can thickneſs of blood cauſe it, when it is brought and diſperſed for the extenſion of the Yard, for the arterial blood which hath moſt ſpirits is chiefly ſent thither; yet we ſuppoſe them to be moſt luſtful, whoſe blood is hotteſt and thinneſt.

The Cure.

We muſt conſider firſt whether the fault be hid or manifeſt and accordingly foretel and Act.

The Cure of Impotency, Faintneſs, Copulation hindred, or imperfect, or extinct, whether in man or woman.

If men are born without a Yard, or with a miſhapen one not fit for the work; or if it be cut off, or the head cut, or if the ſtones are both taken out, the Cure is impoſſible. And Women that have the womb ſo cloſed that it can be opened by no Art without danger of life they are incurable. Other defects in men and Women, as Tumors, Ulcers, Wounds or Bruiſes, ſtoppage of the paſſage of the Yard, ſhal be ſpoken of in other Treatiſes. But we ſhal here ſhew the Cure of the ſtreightneſs of the paſſage in man, and the largeneſs of the Hymen or Membrane in Women; but if none of theſe appear, and the Yard wil not ſtand nor ſeed be ſpent, or if the Woman without or with little delight perform the act and theſe be in ſound people, there is ſome original fault which we perceive by what they have been from their youth; And this is incurable. Or when it comes from Incantation which is not our part to untie. But when from Weakneſs, Coldneſs, or other Diſeaſes, which hindreth Seed, or makes it unprofitable, though long continuance may make difficulty, yet in theſe caſes chiefly we undertake the Cure.

We give things that cauſe ſeed, and this as we ſaid by its plenty and ſharpneſs ſtirs up a deſire to the Act, and diſpoſeth the members for it. Theſe are ſuch as cauſe much blood, which is the matter of which ſeed is made. To theſe we add hot things which may make the blood hotter, and by conſequence the ſeed, which will more ſtimulate or provoke; and by its heat and thinneſs come ſooner and in greater plenty to the Yard. And when the ſerum is hereby inflamed and carried to the bladder, it being neer to the ſeminal veſſels, & promotes the cauſe, as we have ſeen by the uſe of Spaniſh flies the Bladder hath been ſo inflamed that it hath been ulcerated, and the Urin hath been much and bloody, and the heat ſo ſent to the parts adjacent that they have violently provoked Luſt; this ſharpneſs of ſeed may be cured with Salts mixed with other things, as I ſhal ſhew. And we ſhal ſhew that it is our opinion that ſuch medicines work by a manifeſt quality, rather than by ſtretching the Yard with Wind as ſome ſay (which cannot be) beſides their ſecret hidden quality which was obſerved by the firſt teachers of ſuch things, from the whiteneſs of the fleſh, fruits, and roots, reſembling ſeed: Or becauſe taken from Lecherous Creatures; Or from their ſhape reſembling Stones, as the Satyrions or plants called Dogs-ſtones; or like a rough wrinkled Cod, as Toad-ſtools or Muſhrooms.

Many things are given for this, eſpecially at Supper, or after at Bed-time, if we expect the effect that night, or (if you wil have them ſucceſſively to work) in the morning.

Of meats they are beſt that nouriſh wel, and cauſe much blood, and they are choſen which are white and ful of marrow, as Brains, Stones, eſpecially of the moſt lecherous Beaſts, as of Cocks, Quails, Sparrows, Foxes. Alſo the fleſh of the Caſtor, becauſe his Stones cannot be eaten by reaſon of their ſtink: but they are thought to be Bladders and not Stones. The fleſh of Craw-fiſh, Crabs, Lobſters, Oyſters, and other hard Fiſhes that have Griſtles, Cuttle-fiſh, Polypus, Milk, Eggs, Almonds, Nuts, Pine-nuts, Piſtachaes, Cheſnuts, Beans, Peaſe, Riſe, Barley, Hartichoaks, Parſneps, Rapes, Scirroots and roots of Goats-beard, and ſuch as cauſe Milk, cauſe Seed alſo, alſo Onions, Leeks, Muſhrooms, alſo Rocket, Coleworts, Aſparagus; all theſe diverſly dreſſed and eaten do the ſame, eſpecially if they be prepared and ſalted: for Pepper ſtimulateth and provoketh Venery, and we ſuppoſe that when ſuch things are ſo eaten it comes rather from the Sawce than the Meat.

The uſual meats to provoke Venery is the white Broath called in Dutch, *Beinwarm* made of Wine, Egs, Sugar and Butter, with which the Bride-groom reſtoreth himſelf in the morning. Or that called *Leberſulf* made of Piggs Livers which helps Conception with Wine, Spices, and Saffron, this according to *Dioſcorides* increaſeth Venery; and that which the Germans give at Weddings called *Pfeffer* ſtrong of Pepper, and that congealed ſaffron'd *Galren* made of juyce of Fleſh and Fiſhes wel ſpiced.

Divers Junkets are made of Sugar, Honey, and Spices, given after Supper or at night at the Greeks Collation time called *Epidorpiſmus*.

As dried Confections of Kernels and Seeds with Sugar, among which Rocket ſeed, Pine and Piſtacha Nuts are the chief.

Or March-pane, as this. Take *Almonds, and ſmall Nuts, each four ounces; Pine and Piſtacho Nuts, each one ounce;* beat them, *Cinnamon half an ounce, Pepper one dram, Ginger, Cloves, Nutmegs, Cardamoms the great, each half a dram;* *Rocket ſeed two drams,* and if you wil have it yellow, *Saffron; or red Saunders and Sugar as much as is fit,* mix them and bake them in an Oven like Bread.

The Bread of Life called in High Dutch *Lebſtuchen* wel ſpiced and honeyed was invented with the reſt to provoke Venery.

Rocket

Rocket, Water-creſſes and other ſharp Herbs eaten at ſupper with Botargo or Honey after the Spaniſh faſhion provoke much.

Strong ſweet Wine wel ſpiced with Cinnamon and Pepper, taken moderately heats and refreſheth the body, and makes it fit for the work: but immoderately; ſtupifies and makes unfit and ſluggiſh.

There are divers poulders to be given with Wine, Milk, or the like, or made up with Sugar in Tablets.

The firſt: Take *Pepper ten grains*, only bruiſed that it burn not the mouth, let him drink it in *Wine* or *Milk* at bed-time.

The ſecond: Take *Pepper half a dram, Saffron half a ſcruple*, make a *Poulder*, take it with any convenient *Liquor*.

The third: Take *Pepper one dram, Nutmeg half a dram, Salt one dram*, take it in a rear Egg.,

The fourth: Take *Pepper a dram, Ginger, Rocket ſeed and Leek ſeed, each half a dram; Sugar two drams*, take a *dram*.

The fifth: Take *Rocket ſeed two drams, Aſhen keys, Burdock, Line, and Anniſe ſeed, each a dram; Parſnep, Nepp, Radiſh, Onion, Leek, Muſtard, Nettle, Water-creſſes, and Aſparagus ſeeds, each half a dram; Pepper a dram and half, Ginger, Galangal, Cloves, Mace, each half a dram; Saffron a ſcruple, Ivory ſhavings a dram, pizle of a Deare or Bull, the fleſh of the Scincus each half a dram; Sugar as much as all the reſt, Cinnamon two drams*, make a *Poulder*, give *two drams*.

The ſixth better than the reſt: Take *Rocket ſeed half an ounce, Parſnep Rape and Leek ſeed, each a dram; Watercreſs ſeeds and Pellitory roots each half a dram; Pepper a dram, Ginger, Cinnamon, of each half a dram; Saffron a ſcruple, ſpaniſh Flies without wings nine, Borax a dram, Muſk ſome grains, Sugar an ounce*, make a fine *Poulder*, give *a ſpoonful* at firſt in *Warm Milk*, and more if it fail.

The ſeventh and ſtrongeſt of all: Take *two ſpaniſh Flies the wings being taken off, Cinnamon one ſcruple, Sugar Candy one dram*, give it in *Milk*. if it do not the feat, take *three* the next time.

The Chymiſts highly commend the blood of Satyrion which *Quercetan* teacheth how to prepare.

Among Electuaries the Diaſatyrion of *Nicolas* one dram was invented for the ſame uſe; alſo Confectio Anacardina which inflameth highly.

Another may be made thus. Take *Satyrion and Eryngus roots candied each one ounce; Ginger candied, Conſerve of Acorus each half an ounce; Pine and Piſtacha Nuts each three drams; the Kernels of Indian Nuts one dram, Line ſeed and Aſhen keys each two drams; Rocket ſeed one dram and an half, the Electuary of the three Peppers one dram, the ſpecies of Diambra and Diamoſchu each half a dram; Cinnamon one dram, of Stags or Buls pizle and Scincus of the Sea dried, each half a dram* (for Women add *the dried matrix of a Hare, and an ounce of Sugar*) add *Honey as much as is fit for an Electuary*, give *two drams* or more.

The nauſeous Pils are thus made. Take *of Mouſe-dung half a dram, Rocket ſeed a dram, Pepper half a dram, ſpaniſh Flies the wings taken off five*; mix them with *Turpentine*, give *a dram*.

You may make a Syrup to be kept til you have occaſion thus. Take *the green roots of Eryngus, Satyrion and Parſneps each two ounces; roots of Pellitory and Dracunculus each half an ounce; Rocket two handfuls, Watercreſſes, Hedg-muſtard, each one handful; Rocket ſeed half an ounce, Line ſeed, Aſh-keys, Aſparagus ſeed, each two drams: Aniſe ſeed* (which is thought to cauſe Milk) *half an ounce, Dates five*, boyl them in *white Wine*, and add to the ſtrained Liquor, *Sugar, Cinnamon and Pepper*, boyl them to a conſiſtence or height, give *an ounce* alone or with *white Wine*.

We have obſerved that gentle Purges corrected with hot Spices, whether they work or not, do vehemently provoke Venery: ſo that before they work they cauſe erection, as ſome have confeſſed to me, who thought I had miſtaken in my intention when I gave the Medicine.

Sweet ſcents provoke not only by refreſhing, but by heating and piercing, as Amber-greece, Muſk, Civet.

In men outward applications are beſt for the Yard, and beneath, by the heat whereof the blood may come to erect that part: and that blood may come into the ſeminal veſſels to make ſeed, we anoynt the Stones, Loyns, and Privities, and ſometimes the ſoles of the Feet, theſe are made of hot Attractives.

Of uſual Oyls thus. Take *of Oyl of Pepper, Euphorbium and Caſtor, each equal parts*.

Or thus. Take *Juyce of Rocket, Watercreſſes, Aqua vitæ each an ounce; Pellitory roots two drams, Muſtard ſeed one dram, Euphorbium half a dram, Line ſeed Oyl one ounce and half*, boyl and ſtrain them.

Otherwiſe, Take *Oyl of Nutmegs by expreſſion two drams, Oyl of Spike two drams, Oyl of Cloves half a ſcruple*, mix them for an Oyntment.

Without Oyls thus. Take *the Gall of a Bore or Hogg one dram, Civet half a ſcruple, Honey*, anoynt the Yard and parts adjacent, if you add three or four *ſpaniſh Flies* it wil be better.

Oyl of Ants which have wings; made by boyling of them in Sallet Oyl is excellent.

Alſo the Fat of a Hedg-hog.

A good Oyntment. Take *roots of Pellitory, Pepper, Ginger, Muſtard ſeed, each one dram; Euphorbium half a dram, Caſtor one ſcruple, dried Ants half a dram*, pouder them, add *Oyl of Spike* and a little *Wax* make an *Oyntment*.

They ſay that if the right Toe be anoynted with Oyl of Spaniſh Flies it will provoke Venery: which we cannot deny to be poſſible from the vertue we have declared in them for provoking bloody Urin of which we have experience.

Theſe Oyntments in the Loyns and Privities of Women ſtir them up when dull: But privately before Copulation, let the man anoynt his Yard wit Civet or Gall of a Hen.

The uſe of hot natural Baths is counted the beſt Remedy to reſtore heat in cold and decated perſons.

Alſo other Baths and Fomentations for the Feet and other parts being actually and potentially hot do the ſame, As the Decoction of Flower-de-luce roots, Nep, Calamints, Nettles' Marjoram, Rocket, Hedg-muſtard, Lavender flowers, and of Chamomil, and the like.

It is good to wrap the Feet in ſoft furrs (which by their gentle tickling ſtir up Women and effœminate Perſons) to preſerve the Heat, and prevent Cold.

Somtimes weakneſs is taken away by manual Operation, in a Man when the Fore-ſkin is ſo ſtrait that it will not uncover the Head of the Yard, we ſtretch or divide it by cutting. In women, when the neck of the womb is too ſtrait, or covered with the skin called *Hymen*, or with a Callus, we open it with a thin Groat or Inſtrument made on purpoſe, to cut both ſides.

Other things belong to the Cure of Incantations, as ſhaking of the Pillows, piſſing through the wedding-ring, or the Axle-tree of the Plough, or the changing of ſhifts, before they go to the ſport, ſhiftings of the left Foot, and the like, theſe belong not to us.

Nor

Nor care we for Amulets, to which much is attributed. They ſay the aſhes of a black Lizard carried in the left hand cauſe Erection, and in the right hand hinder it.

Imagination and apprehenſion of former ſport, provoke Venery extreamly; by remembrance beholding or hearing of things paſſed: and much more touching.

Sweet affections, as Joy advance, Sorrow and grief hinder the Act: This joy is brought by recreating the ſenſes, as the Sight, the Hearing, and the reſt, eſpecially by Muſick.

CHAP. XVIII.

Of Luſt, or Lechery.

The Kinds,

A Venerial Itch. WE call that Lechery which is an immoderate inclination to Venery, and it is either continual; or an often itching and luſt, which being unſatisfyed, diſturbeth and provokes people to ſordid, naſty actions, except they have government. This is ſomtimes in Males and Females, but differeth, in that men are ſooner hot: Women are longer cooling.

Luſtful fury. There is another kind which is far worſe and preternatural, called an inſatiable frenſie in luſt, which when it is excerciſed, hath no allay, but grows higher, and is unſatisfied.

This is oftner in Women then Men, as weakneſs is oftner in men then women; As in foul and pocky women, or the like, which have the Priapiſmus or Frenſie of the womb, ſo called. The Hiſtory of impudent *Semiramus* and of other, ſheweth that ſome have been ſo, and unſatisfied with innumerable men, and this Diſeaſe occaſioneth many to try unlawful things, and to fal into great ſins to appeaſe luſt. And ſomtimes when the fury of the womb comes, they deſire Copulation with beaſts, (as ſhe of whom I ſpake in the treatiſe of Madneſs, which deſired the Engliſh Dogs to Lime her.)

Priapiſmus, or immoderate erection. This is more ſeldom in men, though ſome are ſo Laſcivious, that they can do it often in one night, not naturally, but by the pride of appearing ſtrong, and by provocations and forcing: theſe have ſomtimes a venemous Gonorrhæa, or running of the Reins. This is called *Priapiſmus, Tentigo, or Satyriaſis*, from *Satyrs* painted with ſtanding Yards. And there is another Diſeaſe called by that name, which we ſhall after mention.

The Cauſes.

All Cauſes of immoderate luſt come either from much ſeed, ſharpneſs, or motion which ſtir up Venery, or from blood, which ſtretcheth the Member in men, as we ſhewed in defect of Venery.

Plenty of ſeed and heat is the cauſe of a Venereal Itch. If Seed be plentiful, it cauſeth Sanguin men, by reaſon of fulneſs, or heat of the Veſſels, which continually attract blood, which deſires expulſion where it aboundeth, to be Laſcivious.

Sharpneſs of ſeed, is the cauſe of Frenſie of the Womb in Women ſo called. Eſpecially when the Seed is hotter then ordinary and ſharper, this we have ſhewed, may come of eating hot Spices, or Medicines. And of hot humors and ſharp, not in the Womb of ſalt Flegm and Choller, as is uſual, but from the ſeed which is venemous and ſharp, from the heat of which comes the unſatiable Itch, which is uſual in unclean Women, who infect men therewith. Men when they are thus infected, have a running of the Reins, which ſends it forth, but women have it not ſo uſually. Some ſay that the cauſe why Lepers are not Lecherous, is becauſe they are ſeperated from women, and conſtrained to be abſtinent.

Shaking of the Seed, cauſeth a Venereal Itch. Seed raiſed from its Veſſels, and deſiring paſſage cauſeth Itch, and is ſcarſe hindered from flowing: for this is the condition thereof while it is ſound and in its own place, except it abound, that it doth not much prick: But when it is removed, it is very troubleſome to get forth; ſo it is, for by imagination, dreams, and handling, Seed may be ſpent by both Sexes.

The cauſe of Priapiſmus, or Erection preternatural, is the plenty of blood gathered in the Privities. When much Arterial blood fils the Yard and continueth, it cauſeth Priapiſmus, or conſtant ſtanding with a deſire, of which we now ſpeak: But it may hapen that there may be Erection, before the blood come to prick the part, and a deſire afterwards from thence. Alſo it may come from heat of the Reins and parts adjacent, by blood, cauſed from lying upon the back, upon feather beds, or boards, which poſture makes blood come ſooner to the part, and makes Erection and greater Appetite, as experience ſheweth. And heat of the bed makes men riſe at midnight, as the Proverb is. If it come from other cauſes, as Pain, Inflamation, Wind, or Water, it belongs to another treatiſe.

The Cure.

The Cure of the Venereal Itch and Frenſie, and of Priapiſmus. If Men or Women are provoked to Venery, to prevent unlawful acts, the heat is to be allay'd by hindering increaſe of Seed, and heat thereof, as alſo of blood; and preventing the commotion of Seed. Thus,

Purges are chiefly requiſite when foul and ſharp humors corrupt and ſharpen the Seed, and cauſe luſt.

To cool luſt, we give things that quench, or that dry, though hot, if they conſume it, by a propriety: nor do we ſpend time to Cure and expel wind which is not the cauſe, as we ſaid: we give them evening or morning often, for the effect will not quickly be ſeen.

Sallats at ſupper of Lettice, Purſlane, Mints with Vinegar are proper, without Spices.

And this Electuary: Take *Conſerve of Water-lillies, and Mints, of each an ounce; Lettice and Coleworts candied ſix drams, ſeeds of Agnus Caſtus, (ſo called from its vertue) one dram and an half, Rue half a dram, Coral one dram, Cryſtal half a dram, Camphire a ſcruple, with ſyrup of Purſlane*: Make an Electuary.

A convenient Pouder: Take *Snakweed roots one dram, Mints, Rue, Water-lillies dried, of each half a dram; the ſeeds of Vitex one dram and an half, Hemp ſeeds, Grapes, Lettice, of each one dram and an half; Cryſtal one dram, Camphire a ſcruple*; make a Pouder, take a dram in broath,

or

or ſyrup of Purſlane, or with a little Sugar, or made into Tablets with Roſe and Lettice.

A convenient Syrup: Take *juyce of Lettice and Purſlane, of each two ounces; juyce of Mints half an ounce, Violet and Roſe-water, of each an ounce; Vineger of Roſes half an ounce, Sugar three ounces*; Boyl them to a Syrup, give an ounce often.

The Decoction of Lettice, Purſlane, Endive, Mints, is good in broath.

Cold water drunk in great quantity, allaies luſt.

Some affirme that they can take away all deſire and uſe of Venery, with Wine in which the Fiſh called *Mullus* is infuſed, others give forty Piſmires in drink.

Outwardly, cool the Feet, Privities, Loynes, ſo to waſh the Yard in cold water, makes it preſently fall, this remedy my Father told me, a learned man uſed who the firſt year of his Mariage, loſt his Wife and Child at once in Child-bed, that he night die a Widdower without deſire of Women.

Things that Potentially cool, mixed with driers and applied by Fomentation to the Privities extinguiſh luſt, as the Decoction of Lettice, Plantane, Purſlane, Willows, Water-lillies, and the like.

Eſpecially if they be applied to the Feet, with Vinegar.

The juyces of the ſame to foment the Stones, adding a little Vinegar and Camphire is better; and injected into the Womb, doth the ſame for Women.

Vinegar of Roſes, doth the like.

It is good to anoynt the Reins with this: Take *Oyl of water Lillies, two ounces, juyce of Lettice one ounce and an half, Vinegar half an ounce*: boyl them to the conſuming of the juyces; add *ſeeds of Vitex one dram, Camphire half a dram, white Wax a little*: Make an Oyntment.

Unguentum Album, with Camphire, or that cooler of *Galen* for the Reins, with Camphire, doth the ſame.

And alſo Plates of Lead to the Reins.

Sugar and Cryſtal of Lead, with Oyntments, and Correcters, given in a ſmal quantity, are commended by the Chymiſts.

The ſmel of Camphire ſtupifieth luſt, therefore they teach that it is to be worn to preſerve chaſtity, which it doth by touching it, or tying to the Arms; And Vitex and Vervain, they ſay, doth the ſame.

Great faſting doth ſomewhat allay luſt, eſpecially abſtinence from hot Meats, Spices and Wine, which rule they ought to obſerve, which pretend to chaſtity, by abſtaining from certain Meats, as the Friers who pretend to mortifie by eating of Shel-fiſh and Botargo, and the like, in the holy time of Lent.

The ſorrow of mind and grief, take away luſt.

And Diſeaſes with pain, whether hot or cold.

By letting blood, ſomething is abated, but it cannot make the Body lean or weak, without ſome other inconvenience. It is reported that one cured his Wife of her unſatiable deſire, by opening all the uſual Veins. And *Hippocrates* teacheth by the example of the Scythians, that the opening of the Veins behind the Eares maketh Sterility and Impotency.

Gelding is the extream remedy, for extream Lechery, and taking off the Yard, is the ſureſt way, for which cauſe they ſay *Origen* Gelt himſelf; And I know a Prieſt that having been often puniſhed for ſin, in that kind, did the ſame, and Maſters uſually do ſo to their Servants, to whom they commit their Wives: but they deſerve this puniſhment beſt, that ſin in Adultery, and Fornication, and therein perſevere.

The ſureſt remedy is Mariage which is granted by God to all that want the gift of Chaſtity.

CHAP. XIX.

Of Want of Conception.

The Kinds,

Barrenneſs. WHen a Woman is of Age to Conceive and hath her Courſes naturally, and hath the uſe of a Man, and conceiveth not, it is called *Sterility* or Barrenneſs. And if ſhe have conceived and brought forth, and after brings not forth (which is uſual, in the ſpace of three or four years) it is a defect of Generation, which is neceſſary for the propagation of mankind.

Of thoſe which are thus barren: ſome are found of a good habit of Body, and are often fatter then thoſe which have born Children, and look not quickly ſo old. But oftentimes there are defects of the Womb joyned with this defect, either they never had their Courſes, and therefore called *Viragines*, and becauſe they alſo engender not. Or their Courſes which they had, either flow not, or little and diſorderly, with difficulty and diſcolored. This often hapneth to ſuch, as have the whites, a Diſeaſe uſual with barren Women. And they have other inconveniences, which either cauſe barrenneſs, or come from thence.

Viragoes, or manlike Women.

As when ſome bring forth only Females, which may hinder the Progeny of the Name.

The Cauſes.

The Cauſe why a Woman conceiveth not, when there is no defect perceived in the Venerial act, is either becauſe ſhe receives not the Seed into the Womb, or retains it not being received: And this happneth from the Seed, or Genitals of the Man or Woman.

This comes from the occaſion of mans Seed, when it is not ſufficient in quantity, or fit for Generation; and though a Woman receives it, either there is no Procreation, or its in vain, as a Mole, whereof we ſhall ſpeak; for if there be not ſo much as will fill the Cavity of the Womb, which therefore was made little, a Child cannot be conceived. And this is the cauſe, that if the Seed be not enough for Generation, but often by too much Venery or running of the Reins abated, that ſuch Generate not, as they who uſe it ſeldom, and either for Procreation, or health ſake, are very temperate. Hence it is that old men marrying young maids get Children, as my Father after fourſcore, in regard they are leſs hot and eager then young men, and go to it but ſeldom. Alſo if the Seed be not concocted, but crude thin and wateriſh, or too cold, and with ſpirits, or the like, which takes away the vertue, it cannot beget Children. This comes from weakneſs of the Veſſels, or mixture of evil humors, and from the cauſes mentioned in Impotency and Lechery: ſomtimes there is a ſecret fault in the Seed which doth not hinder Procreation, which paſſeth to the Children, and ſhews it ſelf then, and conveighs the like to the Grand-

The Cauſe of Barrenneſs from the Man, is little Seed, or Crudity.

child when it is of the age the Father was when his disease first appeared: Hence it is, that the Gout, Leprosie, and the like, are propagated.

The seed of a Man and Woman is the cause why Males or Females are begotten.

It is probable that this defect is in the seed of the Man when he begets no Males but Females, because it is weaker than the Womans which beareth away the Bell for the sex: It is better to impute the secret causes to the seed, than to the temper or the change of the sex or to the seeds coming from this or that Stone; for a Man with one Stone, of what temper soever may beget Children of both sexes.

When Barrenness is from the Woman it comes from Crudity impurity or want of seed.

It is necessary for Generation that the Womans seed should be mixed with the mans, for the Generation of a Female, as may be seen by the likeness of the Mother in both: now if the seed be defective, or be in less quantity than is fit, Barrenness is by the womans cause, and oftener than by the man, for a Woman without seed may suffer Copulation, but a man without is unfit for it; and this is the cause why Whores which spend their seed for gain so that they are sapless, cannot conceive though they receive. And if if it be impure, crude, or the like, not only Harlots, but other Women are impotent and diseased. But if the temper of the Womans seed be the same with the Mans they say there can be no generation from the equality, but diversity. But we affirming the seed to be hot, do not place the generative vertue in it, but in the seemly temper of them both.

It seldom happens that a man is in fault by reason of the Yard, so it can but act, for though it be not so long as others it hindreth not, but the seed may be sent into the Womb if there be no other obstacle, for the womb being then hot and greedy after seed, easily condescends and takes it in. But if

The opening of the Yard being wrong is cause of defect in Conception.

the hole in the head of the Yard which sends forth seed and Urin, be not in the middle, so that it may directly aim at the inward Orifice of the womb, but in the side or beneath, as I have known in some, who have been born so, or if there be a Fistula beneath so that it is not sent to the mouth of ths womb, it is nothing worth.

If Barreneſs come from the Womb, it is seldom caused by the neck thereof, but by accident, as it hinders Copulation as I said: But this may be often caused from the Orifice of the bottom of the womb or the substance thereof.

The largeness, looseness, closeness, of the orifice internal of the womb, is the cause of Barrenness.

The inward Orifice of the womb, or that clift which is close and narrow, and openeth at the time of Conception, drawing the seed unto it; if it be too large though then it easily receive the seed, yet because it reteineth not it long enough, it is the cause of barrenness. This comes from an evil birth, when the child hath been violently taken away by reason of the bigness or ill posture, when it is so stretched that it cannot return, as in other cases, to its former proportion. And this is the cause why many times Women after difficult Travail never conceive again; some Women also are unfit for Conception by reason of the looseness of the Orifice, by moist excrement, either in the Womb, or the neck thereof, by reason of the Whites. And when the Orificeis shut up so that it cannot be opened, there canbe no Conception, because the seed cannot be admitted; this may be naturally, or by a scar, or excrescence of flesh, after the parts have been ulcerated, or torn in hard Travail, by which means the outward Orifice though larger, hath been closed, as I shewed before. It is seldom stopt from other causes. What they say of Fat in the neck or bottom of the womb, we have shewed cannot cause barrenness, but the cause is the not opening of the womb in conception, for at other times it is naturally closed, and after Conception closeth, and openeth not, but when there is a superfætation or taking too much.

If the substance of the womb be too hard, or want blood, it is a great cause of want of Conception: for a Woman is then fit to conceive, when the womb which is thick and nervous, and unfit for conception while it remaineth so, becomes fleshy and soft by heat and affluxion of blood, and as in salt Bitches we see their privities swollen, so doth the Orifice in a Woman, and the clift is larger to entertain the seed. But if it continue in its natural condition, or grow harder, there can be no Conception, because the Orifice wil not open and receive the seed. And this is from the constitution and temper thereof from the original, the substance thereof is too dry, otherwise it is only in age, and then but natural, because they then cease to breed; but if it be hard before old age, it makes sound Women barren and so they remain. This befalls them who by too much Lechery and the like, have dried the Womb, or them whose wombs are hard by a Tumor, or after an Inflammation. But if

The cause of barrenness is the hardness and dryness of the womb.

blood doth not moisten the womb, which is required for the enlarging & softning thereof, and for the increase of the Infant, either not at all, or by suppression of the Courses, or come not to the bottom of the womb by reason of the hardness thereof, or straightness of the Veins, or Obstructions: it comes to pass that Viragoes or Women that never had Courses, or that have them so much that they cannot be dispersed into the Veins for want of heat are barren. And hence it is that they who have long abstained from the use of man, or not conceived for other causes, and made their womb without blood through want of exercise, causing it to flow rather to the Veins of the neck of the womb to be purged by Courses, by reason of discontinuance or want of practise when they grow old; though they use a man, they conceive not so easily, as they who keep a constant moderate exercise from their youth.

When the substance of the womb is not moistened with blood it is barren.

The weakness of the womb is the cause why it is not fit for Conception, for the functions thereof being hurt the chief whereof is the conceiving of seed, it cannot attract, or retain it. This is from the birth, or from coldness, or other Diseases, these are slow to Venery, and subject to other Diseases of the womb.

Weakness of the Womb is the cause of barrenness.

The Cold and moist distemper besides the cold and dry is a hinderance of conception, and this is usually lookt at in Cure, as being the most usual. This comes from moist excrements in the womb made from evil and crude nourishment, which moisten and loosen the orifice, or from too much Lechery in Whores, which causeth slipperiness in the part. This

A moist distemper of the Womb is the cause of barrenness.

cannot

cannot be from a defluxion into the Womb, beauſe there is no paſſage, beſides the body purgeth the excrements by the uſual veins monthly: But in both when it comes from defect in the blood, the women that conceive not, are of an evil habit and ill-colored.

The Cure.

The Cure of defect of Conception. If a Woman conceive not, which hath no defect of the Venereal act, or in her Husband, we muſt diligently ſearch out the cauſe thus. If it come from want of ſeed which is moſt the mans fault, then let them ſeldom engender, and uſe things to encreaſe ſeed, as we ſhewed. If from the crudeneſs of ſeed or foulneſs we we muſt cauſe good blood, and ſtrengthen the veſſels that breed ſeed. If it come from a fault of the Yard of the man which hath a hole in the wrong place, the Fiſtula muſt be cut, or firſt opened otherwiſe; and after united together and healed up, that the ſeed may come the right way. If this be from the birth it is incurable. If Barrenneſs be cauſed from the Wombs defect, as when it is hatd, or the orifice cloſed with a Tumor, or hurt by Child-bearing, the Cure is deſperate in women otherwiſe ſound, which have either never conceived, or have been hurt at the time of Travail, as in thoſe who never have their Courſes. In others who want Conception from Weakneſs, Moiſtneſs, Coldneſs, or excrements abounding in the womb, which have their Courſes diſorderly, or are troubled with the Whites, or other ſuch like, there may be Cure.

Remedies to procure Conception. Firſt let her be purged, obſerving her conſtitution, and the humor abounding, and whether ſhee have her Courſes duly or the whites.

Generally thus. Take *Catholicon one ounce, Syrup of Roſes ſolutive two ounces,* with *Burrage and Mugwort water,* make a *Potion.*

Then open a Vein if ſhee be plethorick.

Then give this preparative. Take *Syrup of Mugwort and Maidenhair, each one ounce and an half*; *Burrage, Mugwort, and Nep water, each one ounce*; with a little *Cinnamon* make a *Julep,* give it three mornings.

Or this Decoction. Take *the opening roots ſteept in Wine, each half an ounce*; *Eryngus roots one ounce, roots of Elicampane, Valerian and Maſterwort, each half an ounce*; *Mugwort, Motherwort, Nep, Pennyroyal, Germander, Ladies-mantle, Marjoram, of each one handful*; *both Bugloſſes roots and Leaves, Succory, Endive, Fumitory each one handful*; *Wall-flowers, Broom and Roſemary, Burrage and red Peaſe, each a pugil*; *Aniſe and Fennel ſeed each a dram*; *Parſley ſeed, Siler montane and wild Parſnep ſeed each a dram*; beat, boyl, and clarifie, and ſweeten them, with *Cinnamon* and *Sugar* make an *Apozem* for *three doſes, or four, or five,* or make a *Wine* of the *Infuſion* of them.

If we wil have it purge when the body is foul, we add *Liquoriſh two ounces, Aſarum roots two drams, Pot-Mercury one handful, Raiſons twenty pair, Senna and Polypody, each one ounce and an half*; *Carthamus ſeeds bruiſed ſix drams,* give them boyled as formerly with *Wine* and *Water.*

Then purge with this Potion. Take *Rhubarb four ſcruples, Cinamon one ſcruple,* Infuſe them in *Wine* and *Endive-water,* ſtrain and diſſolve therein the *ſolutive Electuary of Citrons and Diaphenicon two drams, Syrup of Roſes ſolutive two ounces,* make a *Potion.*

If Pills be taken. Take *Pills of Cochiæ, Agregative and ſine quibus, each a-ſcruple*; mix them with *white Wine* into *Pills.*

After purging give a dram of *Triphera magna* without *Opium* in the morning.

We alſo keep the body looſe with ordinary Pills or Electuaries before bathing or uſe of outward medicines, as. Take *Catholicon two ounces, Diaphenicon one ounce, Caſſia newly drawn two ounces, Pulp of Sebeſtens one ounce, Syrup of Roſes ſolutive one ounce and an half,* mix them, take it with *Peaſe broath,* or *Wine,* or in a *Bolus.*

Uſual Pills are either the former, Or. Take *the Aromatick pill called Alephangina, and that of Agarick, each one dram and an half*; *Cochie one dram, Troches of Alhandal half a ſcruple,* with *Syrup of Roſes ſolutive* make *Pills,* give *a dram.*

Often ſweating is good for moiſt Women, becauſe it evacuateth from the whol body: as with the Decoction of Lignum vitæ uſing a ſpare diet, a Friend of mine uſed this diet and proved with child before it ended.

Alſo dry or moiſt Baths; Bleeding in the Foot to provoke the Terms as we ſhewed.

The things mentioned to provoke Luſt, increaſe ſeed, are chiefly uſed for Conception: theſe are given to men, for they are moſt ſubject to impotency: but women may uſe them to heat and increaſe ſeed; and ſometimes both together, leſt one prove ſlow in performance. It is good to add for Women things proper for the womb, hot and dry, and ſuch as provoke the terms if wanting, and conſume humidity. Thus

With theſe powders, the firſt is. Take *Nutmeg one ſcruple, Muſk two grains, Salt a little,* in a new Egg every morning.

The ſecond. Take *ſeed of Siler montane one dram, Rocket ſeed half a dram, Ivory ſhavings two drams, Cinnamon, Nutmeg, each a dram*; *Muſk ſix grains, Sugar two drams,* give it in *Sack one dram* for a *Doſe.*

The third, Take *ſpecies of Diamoſchu and Diambra, each half a dram*; *ſhavings of Ivory one dram and an half, ſeeds of montane Siler two drams, Cinnamon one dram, Sugar two ounces,* or diſſolve the *Sugar* in *Cinnamon* and *Mugwort water,* and make *Lozenges,* give *two drams.*

The fourth. Take *Boars ſtones two drams, Bulls pizle one dram, of the Matrix and Runnet of a Hare, each half a dram,* dry them, and pouder them, adding *Cinnamon one dram and an half, Nutmegs, Cloves, each half a dram*; *Pepper, Ginger, each a ſcruple*; *Rocket and Parſnep ſeed, Siler montane and Aſpen keys, each half a dram*; *Watercreſs and Peony ſeeds, each a ſcruple*; *ſhavings of Ivory and Goats-horn, each half a dram*; *Muſk and Ambergreeſe, each ſix grains*; *Sugar ten ounces,* give *a dram* in *Pouder* or *Lozenges.*

It is better to make Confections of Nuts, than Pouders or Electuaries, for they wil decay ſo.

A dry Confection. Take *the preſerved Kernels of Almonds, Hazel Nuts, Pine and Piſtacha Nuts, each an ounce*; *Citron peels, Cinnamon, Cloves and Ginger candied each half an ounce*; *Rocket ſeed candied two drams,* mix them, give *a ſpoonful* at bed-time.

Make Marchpane thus. Take *ſweet Almonds four ounces, Hazel Nuts two ounces, Pine-nuts two ounces, Piſtachoes one ounce,* ſteep them in *Milk*, then bruiſe them, and add *ſpecies Diambræ and Diamoſchu, each half a dram*; *Cinnamon two drams, Ivory ſhavings one dram,* beat them in *round Cakes.*

Theſe Electuaries following are good. Take *Conſerve of Eryngus and Dog ſtones, each one ounce and an half*; *Conſerve of Roſemary flowers, Scabious, Citron rind, Ginger candied, each an ounce*; mix them with *two* or *three drams* of the firſt, ſecond, or third Pouder aforementioned.

The reſt are to be found in the Provokatives.

Or give one dram of *Triphera magna* without *Opium* in *Sack.*

The

The beſt Junkets are thus made; Take *Nutmeg a dram, Ginger, Pepper, of each half an ounce; dried Marjoram a ſcruple, Rocket, ſiler mountain, and Carua ſeed, of each half a dram*: Make a Pouder for the following Receites.

Take *the Brains of a Hog*: boyl them in Sack, then add *the Pouder aforementioned and Salt*, let her eat them often, at ſupper.

Or: Take *the ſtones and Combes of Cocks*, and uſe them as the former.

Or the *ſtones of a Ram*, ſlice them, and wrap them in the Pouder mentioned, and *Sage leaves* the Caule being wrapt about, let them be roaſted for ſupper.

Alſo other nouriſhing meats are good.

This diſh is pleaſant and excellent: Take *Mints, Scabious and Burnet, cut them ſmal*; add *two or three Eggs, Onyons, Nutmegs and Salt*, make a Tanſey thereof; or wrap them in Paſt and bake them, with *Colewort leaves*, in the Embers, let the Man and Woman eat thereof faſting, and go to the work four hours after, eight daies after her Courſes.

This Decoction is infalible: Take *Eryngus roots, Mugwort and Sanamunda*: boyl them in red wine, a glaſsful of it warm morning and evening with *a dram of Triphera Magna*, without *Opium* for nine daies together.

This is a ſecret, and of great force, give *Chymical Oyl of Marjoram and Muſk, of each one or two grains; with the Runnet of a Hare.*

If the Womb be looſe and moiſt, we muſt warm, dry and ſtrengthen it with Baths, Fumes, Oyntments, Peſſaries, and ſomtimes relax it, when hard.

Baths, Inſeſſions are chiefeſt, if uſed for five, ſix, or eight daies after the Courſes, before the Husband be admitted, before bed time, or ſupper, or in the morning, repeating them monthly three or four times, if ſhe conceive not, which we know by a ſtoppage of the Terms.

If we will make a Bath of hot drying and ſtrengthening things: Take of theſe more or leſs, *white Lilly roots, Valerian, Orris, Mother-wort, Mugwort, Pennyroyal Nep, Organ, Calamints, Marjoram, Bates, Savin, Juniper, Chamomil, Roſe, Elder, and Lavender flowers, Bay and juniper berries, of each a pugil; ſeed of Siler Mountane half an ounce, Allum three drams or more, or Salt*: Boyl them in Rain-water, adding *Lixivium, Smiths forge water, and Wine.*

If you will have it more binding, add *Galls, Pomegranat flowers, of each a pugil; Bramble and Oak leaves, of each one handful; Allum half an ounce*: Boyl them as before, with more Forge water.

When we deſire to relax: Take *roots of Lillies, Mallows, and Marſh-mallows, with the leaves of Pellitory of the Wall, of each as much as is ſufficient*, add *Marjoram, Pennyroyal and others that ſtrengthen the Womb, with Lime and Fenugreek ſeed, of each a pugil; flowers of Chamomil and Melilot, of each two pugils*: Make a Bath.

If you will purge the womb from moiſture, add to a hot Bath Bryony roots, Mercury and Arſmart; make a Bath, or Fomentation.

She may be bathed for a month together, every day if her Body require it.

The laſt refuge is the uſe of natural hot Baths for a month, every day for many hours ſweating, as of Allum, Niter and Sulphur, with mollifie exceedingly in the hardneſs of the womb, but they will make ſound women Barren and help over moiſt bodies by drying. Alſo Salt water by its ſelf, or which other proper things is good. A Fume taken into the womb, is alſo good, from a Decoction in the ſweating chaire, or in the Bath.

A hot and ſtrengthening, is thus made of ſweet Plants, as of the Decoction of Motherwort, Pennyroyal, Calamints, Organ, Sage, Hyſop, Baſil, Marjoram, Roſemary, Chamomil, with Fumitory and Burnet, the roots of Maſterwort, Valerian and Acorus: Boyl them in wine and water.

If we will aſtringe more, and dry more: Take *roots of Snakweed, Agrimony, Acorn cups, Cypreſs nuts, with red Wine* and *Water*: Make a Decoction.

Let her take into her body a Fume of Pouders or Troches, upon live Coales, Thus made: Take *Benzoin, Storax, of each two drams; Labdanum one dram, wood Aloes one ſcruple, Muſk half a ſcruple, Sugar three drams*: Make Troches with Gum Traganth, uſe one at a time.

Or thus: Take *Troches of Gallia and Alypta Moſchata; put one upon the Coales.*

Or this not ſo pleaſant: Take *Maſtick, Frankincenſe Storax, Labdanum, of each a dram; Cloves, Cinnamon, Nutmegs, Cypreſs nuts, yellow Sanders, of each half a dram; Caſtor a ſcruple*: Make a Pouder ſprinkle a little upon the Coales.

Things that are put into the womb are called *Naſcals* and if they be far put in, Peſſaries; they are to purge the womb from moiſture, after Purging and the Terms, when the whites flow, before bathing, or at that time; for two or three nights continuance, or to make the Courſes flow kindly, a little before they appear.

Thus: Take *Mercury leaves green*, bruiſe them, and put them in a ſilk bag, anoynted with Butter. If it be too ſharp uſe *Honey* and *yolks of Eggs.*

Or thus: Take *Pulvis Benedictus half an ounce, Agarick three drams, Gith ſeed one dram, Goats-gall one dram and an half, Peaſe flower one ounce, with juyce of Mercury, or Beets*: Make a Peſſaty.

To heat and diſpoſe the womb for Conception, after bathing and Fumes, when ſhe is in bed, let her uſe the following Remedies all night the three laſt nights of bathing.

Thus: Take *Triphera magna without Opium one ounce, Maſtick half an ounce, Storax one dram, the runnet of a Kid or Hare half an ounce, Civet or Muſk half a ſcruple*: make Peſſaries in Bags.

Or thus: Take *Maſtick half an ounce, Frankincenſe three drams, Ivory ſhavings one dram and an half, Cypreſs nuts one dram, Balm, Nep, Cloves, Spicknard, of each half a dram; Civit or Muſk half a ſcruple, or one ſcruple of Caſtor with the Runnet of a Hare or Kid, and three drams of Storax*: Make Peſſaries.

In *Viragoes* whoſe womb is hard, and dry, it muſt be enlarged thus: Take *Gooſe and Hens greaſe, Mucilage of Fænugreek made with Wine, yolks of an Egg, each half an ounce; Roſin of the Larch tree, Runnet of a Kid, of each two drams; Orris roots three drams, Storax two drams, Wax, Muſk and Caſtor*: Make Peſſaries.

You muſt anoynt, after bathing, the Navil and Groins, above the Privities, *Oyl Moſchalinum*, is the beſt.

Or thus: Take *Oyl of Wall flowers, of Nard, Hens and Gooſe greaſe, of each half an ounce; Storax two drams, Cloves, Mutmegs, Mace, of each a dram; wood Aloes, Schænanth, of each half an ounce; Gallia moſchata one dram, Wax as much as will* make a Liniment.

This is beſt: Take *Oyl of Marjoram and Cloves by diſtillation, of each a ſcruple; Oyl of Nutmeg by expreſſion one dram, Civit and Muſk ſome grains; with Wax*, make a Liniment for the Navel and Womb, ſome daies after bathing, before ſhe come to her Husband.

She muſt have a Plaſter alſo to the Reins, and Perinæum, to cauſe the womb to attract Seed, and ſtrengthen,

then, to retain it at the ſame time, or when bathing Fumes, Oyntments, and Peſſaries are over, and ſhe begins again to go to her Husband; uſing it continually, or at leaſt every night, to the laſt week wherein ſhe expects her Courſes.

As this: Take *the Plaſter for the Womb one ounce, Gallia moſchata one dram, Storax one dram and an half, Cloves one dram, Maſtick two drams with Oyl Moſcheline*: Make a Plaſter.

If the Terms be ſtopt a month or two, and we fear ſhe is ſped with Child, you muſt reſt and expect a week or two, and let her be quiet, and except they return, let the Plaſter following be applied to the parts aforeſaid, to keep Conception and prevent Abortion, and ſhe muſt keep it on every night: Take *Emplaſter of Maſtick an ounce, Snakeweed roots three drams, Cypruſs nuts, Hypocyſtis, of each two drams; red Sanders, red Roſes, Cloves, of each a dram; with Oyl of Maſtick*: Make a Plaſter.

Decent Copulation is very neceſſary for Conception, and it muſt be when both Male and Female have a vehement deſire, and it is better when deſired from long want of enjoyments, then from provocatives. And this is the cauſe why men returning from Travail and Women from bathing, or abſtinence from Venery do ſooner procreate. Then it muſt be ordered that both ſeeds may meet at the time, and not be preſently parted. And when the Woman thinks ſhe hath her due let her abſtain til the Child be grown to the Womb and well confirmed. If they go to it a day or two after the Courſes, then there is hopes of Conception: ſom think the beſt time to hit, is when they have their Terms. But we think it may be done at any time, while the Womb is hot, as was ſhewed. There are ſome that teach divers filthy poſtures to cauſe Conception, and which is worſe, paint them forth.

If a man afore Copulation anoynt his Yard with Civet, in regard the Womb is delighted with the ſcent thereof, ſome think the Seed will be ſooner received.

They report that the ſmel of Civet, Amber greeſe, Musk in baths, or Cloves, or Pillows, eſpecially at night, maketh Women apt to Conception.

The Reaſon of getting Males, or Females.

That a Male may be conceived, rather then a Female: ſome think it may be by their uſing both a hotter and dryer Diet then ordinary, that Males are gotten, which are of the hotteſt Nature. Others ſay that if a man before Copulation, eate the Matrix of a Hare. and the woman take the Stones dryed and Poudered, in white wine, a Male will be begotten. Or if the man anoynt his Yard with Gooſe greaſe and Turpentine three daies before Copulation. Some think that of the Seed of the right ſtone, the Males are begotten, and the Females of the Seed of the left: And that by binding this, or that ſtone, at the time of Copulation, a Male or Female, may be begotten. Theſe follow *Ariſtotle*, who adviſeth this to be done to Cattle. But this is falſ, as may be ſeen in thoſe that are Gelt of one ſtone, and yet beget both Sexes, as we ſhewed. Alſo reaſon teacheth, that except the binding be ſo ſtraight, that the Seed Veſſels be intercepted, the paſſage of Seed cannot be hinder'd: And if that be done the man cannot be without great pain, and ſo will have little mind to the ſport, I'le warrant you.

Others thinks that Males are begot in the right ſide, and Females in the left ſide of the womb, and therefore adviſe women to turn on the right ſide after Copulation: Others Superſtitiouſly bind the right Foot with a white rowler of a Boyes, and the left Foot with a black.

THE SECOND TOME IN ONE BOOK; Which is the THIRD OF THE Whole Work.

Of Dolors, or Griefs, or Pains.

BY Dolor we underſtand here every Moleſtation or trouble of the five Senſes: of which ſick people complain more then of the hurt of any Function, which is joyned therewith, we therefore ſhall not ſpeak in this Book of Pain or Dolor, as it is in the ſenſe of Feeling, but as it is in all the Senſes. Theſe Dolors are diſtinguiſhed in reſpect of the ſenſes wherein they are, for all the ſenſes may be offended, but divers waies. For the four ſenſes in the Face, and the fifth which is over all the Body do ſuffer divers waies.

The Senſes in the Face, as Seeing, Hearing, Smelling, Taſting, have not ſuch great pains, as the Senſe of Feeling, and are ſooner allayed. Of theſe we ſhall ſpeak in the firſt Chapter, Page 187.

The ſenſe of Feeling, which is through the whole Body, hath divers greivous and continuing pains; as Heat, Cold, Itching, Tickling, Pricking, Burning, Cutting. And we ſhall ſhew their differences, as they are through the whole Body, or the parts thereof.

All the parts of the Body, that have the ſenſe of Feeling, can ſcarſe be pained at once. Yet many parts together, or ſome outward parts, as the Skin, may have a general pain. And when the Body is weak or looſe, albeit it ſeemeth to be pained all over, yet becauſe the Patient complaineth rather of want of Motion and ſtrength: you may ſeek for the Cure thereof in our Treatiſe of Weakneſs and defect of ſtrength and Motion: when the whole Body hath a diſtemper, if it be great, all ſenſible parts may be offended. And this cannot come of a cold diſtemper, ſo that every part is at the ſame time affected, except it be deadly, but of a hot. So in Feavers all the parts of the Body are inflamed, and all ſenſible parts are offended, of this we ſhall ſpeak in the Feavers, the ſecond Chapter, Page 187.

There are pains of all ſorts of ſome parts of the Body. And theſe are either hidden or more manifeſt in divers parts.

THE SECOND TOME IN ONE BOOK; Which is the THIRD OF THE Whole Work.

Of Dolors, or Griefs, or Pains.

BY *Dolor we underſtand here every Moleſtation or trouble of the five Senſes: of which ſick people complain more then of the hurt of any Function, which is joyned therewith, we therefore ſhall not ſpeak in this Book of Pain or Dolor, as it is in the ſenſe of Feeling, but as it is in all the Senſes. Theſe Dolors are diſtinguiſhed in reſpect of the ſenſes wherein they are, for all the ſenſes may be offended, but divers waies. For the four ſenſes in the Face, and the fifth which is over all the Body do ſuffer divers waies.*

The Senſes in the Face, as Seeing, Hearing, Smelling, Taſting, *have not ſuch great pains, as the Senſe of* Feeling, *and are ſooner allayed. Of theſe we ſhall ſpeak in the* firſt Chapter, Page 187.

The ſenſe of Feeling, *which is through the whole Body, hath divers grievous and continuing pains; as Heat, Cold, Itching, Tickling, Pricking, Burning, Cutting. And we ſhall ſhew their differences, as they are through the whole Body, or the parts thereof.*

All the parts of the Body, that have the ſenſe of Feeling, can ſcarſe be pained at once. Yet many parts together, or ſome outward parts, as the Skin, *may have a general pain. And when the Body is weak or looſe, albeit it ſeemeth to be pained all over, yet becauſe the Patient complaineth rather of want of Motion and ſtrength: you may ſeek for the Cure thereof in our Treatiſe of* Weakneſs and defect of ſtrength and Motion: *when the whole Body hath a diſtemper, if it be great, all ſenſible parts may be offended. And this cannot come of a cold diſtemper, ſo that every part is at the ſame time affected, except it be deadly, but of a hot. So in Feavers all the parts of the Body are inflamed, and all ſenſible parts are offended, of this we ſhall ſpeak in the Feavers,* the ſecond Chapter, Page 187.

There are pains of all ſorts of ſome parts of the Body. And theſe are either hidden or more manifeſt in divers parts.

The hidden pains are inwardly in the four distinct parts of the Body: The Head, Neck, Breast, and Belly, and the Cavities thereof, and are distinguished according to those parts.

The pains which are in the inward part of the Head within the Skull, shall be spoken of in the third Chapter, Page 235. Of the pains of the Head.

The pains that are in the inward Cavities of the Face shall be described, as followeth.

The pains in the Eyes shall be spoken of in the fourth Chapter, Page 241. Of Pain in the Eyes.

Those in the Cavities of the Ears, in the fifth Chapter, Page 251. Of the Pains of the Ears.

Those of the Nose, *in the* sixth Chapter, Page 253.

Those of the Mouth, *in the* seventh Chapter, Page 255.

Those of the Bones of the Mouth, in the eight Chapter, Page 258. Of the Toothach.

The pains which are in the inward parts of the Neck, shall be spoken of in the ninth Chapter, Page 263. Of the Pain of the Jawes.

The pains which are in the Cavity of the Breast, shall be treated of in the tenth Chapter, Page 269. Of the Pain of the Breast.

The pains which are in the Cavity of the Belly or Paunch, shall be thus treated of.

The pains which are in the upper part about the Heart, shall be spoken of in the eleventh Chapter, Page 277. Of pains of the Heart.

Those on the Sides, shall be spoken of in the twelfth Chapter, Page 294. Of Hypochondriak pains.

The other Pains shall be spoken of in the thirteenth Chapter, Page 305. Of pains of the Belly.

Other pains in the parts adjoyning to the Belly, manifest themselves by things voided, as by Stools or Urin, of these we shall speak in the treatise of things cast forth: Other pains which are in certain holes and parts thereof, shall be hear declared.

The pains in the inward parts of the Privities, shall be mentioned in the fourteenth Chapter, Page 391.

Those in the Arse, shall be spoken in the fifteenth Chapter, Page 393.

The pains that are outward in the Body, are more manifest, and are thus distinguished.

Some are more deep and profound, these shall be spoken of in the Pains in the Habit of the Body, sixteenth Chapter, Page 396.

Those which are more outward and higher, and appear more, shall be mentioned in the seventeenth Chapter, Page 408. Of the Pain of Superficies of the Body.

CHAP. I.

CHAP. I.

Of the Griefs of the Sight, Hearing, Smelling and Taſting.

The Kinds,

ALthough that Irkſome ſenſe which the Touching feeleth be properly called Dolor, yet we may call them moleſtations or Troubles, which the other Senſes endure, by that name, when the Function is not loſt but offended. This comes diverſly to the Sight, Hearing, Smelling and Taſting, from whence there are divers kinds, which are eaſie to be perceived, but not to be deſcribed or named. The Dolor of the Sight or Hearing we call The offence of them, and and the Dolor of the Smelling or Taſting we call inſuavity or want of Relliſh.

The Offence of the Sight or Hearing.

The Inſuavity of the Smelling or Taſting.

The Cauſes.

Theſe four mentioned dolors of the Senſes comes from the violent quality of their objects which doth ſtrike upon, or diſturb them: from the object of the ſight, by Brightneſs: of the Hearing, by Grating; of the Smelling by Stink; from the object of the Taſt by its unſavorineſs.

Splendor or Brightneſs cauſeth the offence of Sight.

A Splendor or great Light if it be vehement, as of the Sun, or Flame, or come ſuddenly to the Eye, as of Lightening, moleſteth it. Hence it is that men ſhut their Eyes at the ſight of them. And the ſenſe of Feeling perceiving the moleſtation in the Eyes and Noſe cauſneeſing to ſhake them off, as we ſhewed in Sternutation. Alſo Light when it is diſcolored, and ſhines much and long, and ſtrikes much upon the Sight is an enemy unto it.

Noyſe hurts the Hearing.

A great Noyſe by Crying, Ringing of Bels, Trumpeting or Drumming, or otherwiſe coming ſuddenly, eſpecially neer the Ears, as of a Musket or Cannon, hurts the Hearing.

A Stink hurts the Smelling.

A ſtrong Stink or Smel, as of Soot, or things burnt, or from Excrements moleſteth the ſenſe of Smelling: And ſomtimes by twiching of the Noſtrils, and provoking their ſenſe of Feeling, they cauſe neezing, and by offending the Neighbor Pallate and Taſt, they cauſe Loathing and Vomiting.

An unpleaſant and ungrateful ſavor, as bitterneſs, or extream ſaltneſs, or ſourneſs, or the like, coming externally from things taken in, or from external humors or exhalations, ſent to the ſenſe of Taſting, cauſeth moleſtation, and alſo offendeth its ſenſe of Feeling.

An evil Reliſh is the cauſe of Inſuavity.

The Cure.

Take away the Cauſe and the Effect ceaſeth. If it be external which uſeth to offend all the four Senſes, it either quickly ceaſeth or may be allayed. If internal which only hurteth the Taſt, it is amended by purging of evil humors and repreſſing of ſtinking vapors. If offence remaineth by an impreſſion upon the ſenſes, it is to be cured by evacuations and things that alter and change the impreſſion, as too much Light, by Darkneſs, offenſive Colors, by ſuch as pleaſe the Eye, Stinks, by Sweets, evil Reliſhes, by ſavory meats, as we ſhewed in the depravation of the ſenſes.

CHAP. II.

Of Feavers.

The Kinds.

A Feaver called *Puretos* is a Diſeaſe in which the whol body is inflamed with a preternatural heat which continueth, it begins with cold and ſhivering, and brings forth divers moleſtations and ſymptomes. There are two chief kinds of Feavers that differ, in that they are either conſtant, or ceaſe and return again. Thoſe are called Continual, theſe Intermitting. Continual Feavers are thoſe whoſe heat fr om the firſt to the laſt never wholly ceaſeth, of theſe there are divers kind ſ, the firſt ſort we diſtinguiſh in reſpect of heat into ſharp, and gentle or lingring, we call them ſharp or acute, in which the Patient manifeſtly perceiveth heat and thereby moleſtation. Theſe are two-fold, *Pure*, whoſe pure heat only heats the hand that toucheth it, and *Impure* when the heat doth not only heat but prick the hand. We call them gentle, when the Patient feels little or no heat, and not conſtantly though the Feaver be conſtant, of theſe there are two ſorts, *Hectick* ſo called becauſe the body hath gotten a habit of them, and ſimply gentle or lingring when there is no habit. If any of theſe have a Venom they are called *Malignant*, theſe are threefold from divers cauſes, *Putrid malignant*, or *Peſtilential*, or *Venemous*, but to divide them according to their apparent accidents (for better underſtanding) ſome are called *Solitary* which have only the accidents of Feavers, others *accompanied* or which have the accidents of other Diſeaſes with them.

Continual Feavers.

Continual ſolitary Feavers are ſuch as are not accompanied with other accidents of other Diſeaſes, but with ſuch as belong to Feavers, and theſe accidents come from ſharp lingering, or malignant heat, either ſingle or together from hence ſome Feavers are called *ſimple*, others *compound*.

Simple continual Feavers.

Simple continual and ſolitary Feavers, are when one ſort of Feaver only poſſeſſeth the body: Theſe are ſhorter or longer, or more conſtant and laſting, if they have their Courſes,

The ſhorter reach not to the ſeventh day, or to the weeks end: ſuch are ſome acute and Malignant.

The pure Feaver, is a kind of continual Feaver.

Ephemera, is a kind of pure continual Feaver.

This is that ſort of pure Feavers, of which we did ſpeak, and is called continual, not Putrid Feavers, and Diaria, becauſe it continueth but few daies. This comes of external cauſes and continueth ſomtimes but one day, and laſteth ſcarce twenty four houres, and then is called *Ephemera*: ſomtimes it laſteth two, three, or four daies: And then it is called a *Diary* Feaver of many daies, or *Synochus* pure, or ſimple. Theſe end not ſuddenly with a *Criſis*, but by degrees by hidden tranſpiration, or moiſture, or by manifeſt ſweat: or they turn into impure *Synochus* after three or four daies, and that laſteth longer: or into an Hectick which is longeſt, and we ſhall ſhew by ſigns, into which they will turn.

The accidents or Symptoms of *Diary* Feavers are theſe, ſomtimes they begin with a little ſhivering, eſpecially if they be any thing impure, ſomtimes without ſhivering, from an external heat.

A feaveriſh heat following a ſhivering, or without, is never encreaſed with fits, from the beginning to the end, but either is in an equal degree, as in *Ephemera, Synochus, Acmaſtick or Uniforme, or Seems*, to be increaſed in that, which is called *Epacmaſtick* that encreaſeth, or *Paracmaſtick* that decreaſeth. The heat varieth in them for it is milder, as the Feaver is ſhorter, as in an *Ephemera*, this is called gentle, becauſe the Skin feeleth moiſt; or ſtronger, as it is longer, as in *Synochus* called ſanguin, ſomtimes with ſharpneſs, when it is cholerick and begins to grow putride.

The other accidents which are worſe, or better, as the heat and conſtitution of the body is, are paine and beating of the Head, thirſt more or leſs, and bitter taſt; in cholerick perſons unquietneſs, wearineſs, watching, or deep ſleep, ſhort breathing, quick pulſe, ſtrong and great, yet not uneven, a red face, ſwolen, great Veins, a ſoft Skin, and dry, in cholerick perſons; Urin not much altered, when the Feavers are ſhort, if long; red ſweat not ill ſented, or troubleſom.

The Peſtilent Feaver, is a ſort of the continual Feavers

A Malignant ſhort continual Feaver, is ſomtimes Peſtilential, and is not unlike the formentioned acute Synochus, ſo that it is ſcarce to be diſtinguiſhed from it, but by the generality of it in time of infection, and by the ſudden taking away of ſtrength. And if it have a botch, as is uſual, it is not diſtinguiſhed, hence it is that many infected with the Plague, ſuppoſe they have only a *Synochus* for a Peſtilent Feaver, comes alſo from external cauſes, but they are occult: and ſuddenly and ſecretly ſmite the body, as in a moment, and endeth in a few daies, as a *Synochus* doth, except death or a *Criſis* appear.

As for the accidents of this Feaver. It begins commonly with a little horror or chilneſs, and after followeth heat; which is ſomtime ſo gentle that the patient complains little thereof, And the Urin is little, or nothing different from a ſound. Yet the Pulſe argues weakneſs. But ſomtimes there is vehement heat and ſharp, as in a *Synochus*, and then the accidents are alike, as pain of the Head, doting, watching, and thurſt, and ſudden loſs of ſtrength. And alſo ſweats, which in Peſtilential Feavers come at the firſt, and return in again, and yet do not put a period to the Diſeaſe.

The long continual ſolitary Feavers, are a week or two, or more a coming, ſuch are ſome acute and Malignant.

A Putride Feaver, is a ſhort continual.

An Acute long continual ſolitary Feaver, is one of thoſe called impure, and is called alſo a continual putride Feaver, or a weeks Feaver, diſtinguiſhed from the *Diary*, or daies Feaver. Which beginning of it ſelf, or from a pure *Synochus* turning impure (which is thus known, when the pure endeth not in the fourth day at fartheſt, and the heat increaſeth eſpecially if there be a new chilneſs, as is uſual;) when after the beginning it ſtayeth a little in the increaſe, and ſo comes to the ſtate, or heighth; the Patient is freed from it ſuddenly, by a *Criſis* and it declineth, except death prevent. And if the *Criſis* be imperfect, which comes again, it either kils, or cures: Somtimes, but ſeldom, this Feaver, eſpecially that ſort which is called burning if it fix, ſeems to degenerate into a new ſort, which ſuddenly conſumes the body: And this is called a burning and melting Feaver, which ſome ſay is a ſort of Hectick; And ſomtimes it turns into a true Hectick, as a *Diary* Feaver doth,

There are more and more fierce accidents in theſe Feavers, then in *Diaries*, in ſo much that by reaſon of the violence of ſome accidents, the Feaver ſomtimes gets a new name, as if it were of another ſort. And theſe moleſt the Patient, with horror, or amaſment, heat, thirſt, dryneſs of Tongue, Head-ach, which hurt the functions, diſturbe the mind and weaken the ſtrength, there are other accidents obſervable by the conſumption of the Body, and the Excrements.

Thus; At the firſt coming there is horror and ſhivering, eſpecially when they come of themſelves and not by being changed from others; and then there is little or no ſhivering; this preſently ceaſing. ever after there is no trembling, except ſomtimes when a *Criſis* is at hand; neither will it return although there be fits, or *Paroxyſmes*: And if it ſhould return it comes not from this continual Feaver, but from an intermitting joyned with it, as I ſhall ſhew in Compound Feavers. But from this chilneſs, or horror, the outward and inward parts alſo are cold, and ſomtimes only the inward, and ſomtimes only the outward, when the heat is great within.

An inordinate Synochus, Quotidian, or Quartan, is a kind of continual Putrid Feaver.

The heat which follows this horror, or chilneſs, according to the four times of theſe Feavers, hath divers changes: for at firſt it is vehement and ſharp, and from that to the ſtate or highth it increaſeth. In which time ſomtimes are *Paroxyſmes* or fits, and then they are called *Synochæ* continuated diſtinguiſhed from putride *Synochus*. In which if the fits, or *Paroxyſms* come often in a day, ſo that the feaver is twice or thrice cooled, then it is called inordinate and continual, eſpecially if the day after it come but once or not at all. But if the *Paroxyſme* come the next day and keep the ſame order after, which is rare, then it is called a continual Quotidian. The third day is uſually the fit day in theſe feavers and then it is called a continual Tertian. The Quartan continual, is ſeldom ſeen, becauſe the fits are ſeldom put off ſo long. Somtimes theſe feavers have no diſtinct *Paroxyſms* and then it is called *Synochus putrid*

Synochus, a ſort of putrid continual Feaver.

trid, which is called alſo Epacmaſtick, Paracmaſtick or *Homotonos*, or Equal, as it increaſeth or is diminiſhed. But if there be a great burning in a continual putrid Feaver which continueth, as one fit it is called *Cauſos* or a burning Feaver; in which the inwards burn and the outward parts are cold, it is called *Leipyria*. But when theſe come to their height if there come a good Criſes to abate the heat, they decline, and this is by Sweat, Piſſing, or the like Evacuation: But if the Criſes be for the worſt, Death follows. And if the Criſes be not abſolute, and the heat abate not, then by a new Criſes we judge of Life or Death.

Cauſos is a kind of putrid continual Feaver.

Leipyria is a kind of Cauſos.

Thirſt is very troubleſom in theſe Feavers, wherefore they deſire moiſt, cold, and ſharp drinks. There is total loſs of Appetite, and Loathing of Sweet, Fat, and nouriſning things. And ſomtimes of four meats which in drink is pleaſing.

Somtimes in burning Feavers there is drineſs, blackneſs and Inflammation of the Tongue, by which means the diſeaſe is called by the Germans *Breune* or *Braunchrot*, that is an Inflammation with blackneſs, eſpecially if there be malignity and the Feaver is common with this ſymptom. Alſo there is ſooner or later in the declining Inflammation chopping or exulceration of the Lips.

At the beginning there is great Head-ach, except they be ſenſleſs and perceive it not, for which cauſe in Germany it is called the Head-ach or *Haupture* with beating of the Temples and redneſs of Face. There is alſo Heart-ach. And a beating pain of the Bones, Loyns, Back, and Joynts.

Doting, after ſomtimes, comes upon them, more or leſs, and Madneſs; for which the Germans call them *Daubhaptwe* or mad Head-ach, eſpecially when it is malignant aud vulgar. Sometimes a Convulſion follows theſe Feavers, but watching is the moſt conſtant.

Somtimes by reaſon of the Feavers conſtancy the ſtrength faileth, and in the Fit day there is ſwooning and then it is called a Swooning Feaver, and then the pulſe is great or ſmall according to the ſtrength.

A ſwooning Feaver is a kind of continual putrid.

At length the body pines by a long Feaver and a melting heat, eſpecially in the declining thereof, by much Sweat and Piſſing: Somtimes a ſudden conſuming of the body follows theſe Feavers, eſpecially a Cauſon or burning Feaver, as we ſhewed in a melting Feaver.

A melting burning Feaver is a kind of Cauſon.

As for the Excrements, ſome vomit very much, others have the Hickets, and ſometimes a flux thereupon. There is often much Urin made after a Criſis in the declining of the Diſeaſe. Sweat breaks forth ſomtimes and follows the Criſes: Otherwhiles bleeding at the Noſe, or by termes, is critical or judicial, ſometimes it is not. The Stools and Urin are very much changed, and divers in ſubſtance and colour: The Sweat is ſomtimes ill ſcented, ſometimes of none. All which changes and what they preſage we ſhal ſpeak of before the Cure.

A longer malignant and Continual Feaver, is often among Putrid malignant Feavers not much differring from the former, which is acute and putrid, only it is more vulgar like the Plague, among people of age, and eſpecially men. It comes ſecretly upon ſome, and ſuddenly deſtroies them. This is prolonged ſome weeks as the putrid, and is ended by a Criſes, and ſome evacuations as the others, but not ſo certainly.

A putrid malignant Feaver is a ſort of a Continual Feaver.

There are alſo the ſame accidents which are in a putrid Feaver; but greater and more dangerous. Yet the heat is more diſorderly and unequal.

The pain of the Head and doting is the moſt manifeſt, firſt and chiefeſt ſymptom.

Alſo Inflammation of the Jaws and Tongue.

Alſo there is a ſort of malignant feaver which came firſt out of *England* into all *Europe*, which declared it ſelf by a continual Sweat, and deſtroied many. This was called *The Engliſh Sweat*.

The Engliſh Sweat is a ſort of putrid malignant and Continual Feaver.

Alſo a dayly conſtant Feaver alone, which continueth not only ſome weeks but months is a ſort of Hectick. This comes from a change, when another feaver ends in a Hectick, as a Diary, if it turn not into a Putrid, ends in a Hectick after three or four daies, or a putrid Feaver of long continuance, or very burning, as alſo intermitting Feavers if long and vehement. Theſe end in Hectics, and kill a man at a diſtance.

The Hectick Feaver is a kind of Continual.

As for the accidents, the Patient feels no great heat, and thinks he is not feaveriſh, except an hour or two after meat; and that the Arteries are hotter, and more ſtretched out and hard, and ſwifter in motion, as in other Feavers.

Extenuation follows this Feaver, or it is increaſed after it was begun in the putrid that went before it, ſo that at length the whol body is pined away; for which cauſe (as the Conſumption is in the beginning, increaſe, or State) there are three ſorts of Hectick, not accounted ſo from the heat but Conſumption, they are called, Beginning, Increaſed, or confirmed Hectick. In the laſt there is nothing left but ſkin and bone, and it is called *Maraſmodes*. Alſo when Fat is voided by Urin, or like Bran, or Orobus, the Feaver is named from thence, but we ſhewed that they could not be but from diſtemper of the Reins and Bladder.

Maraſmodes *is a Hectick.*

By reaſon of long continuance, there muſt needs be great weakneſs; ſo that the Pulſe though quick, is ſmal and weak.

Compound Feavers are when divers ſorts meet in the body, at the ſame time, which happen divers waies either by mixture of continual with continual or intermitting Feavers.

Compound conſtant Feavers.

Divers ſorts of conſtant Feavers aforeſaid mixed together do afflict the body, as when a putrid is joyned with an Hectick of its own producing.

A Feaver compound of a putrid and a Hectick.

In this the vehement heat doth ſo hide the gentle, that the putrid is thought the chief, only the Hectick is diſcovered by the Conſumption eſpecially when the putrid declineth. And this Hectick ſooner diſpatcheth the Patient. And it is diſtinguiſhed from a melting Feaver that comes after a burning, becauſe in that the Feaver is moſt ardent and ſooner killeth.

Alſo all other continual Feavers may be joyned with an Hectick which went before, and wil ſooner deſtroy the Patient, as other diſeaſes coming after an Hectick. This mixture is known by the new heat of what ſort it is, and by its ſigns.

A putrid Feaver mixed with an intermitting is a ſemi-tertian.

Continual Feavers are often mixt with intermitting, and make alſo continual Feavers called perſevering, and theſe are diſcerned eaſily, by a new chilneſs coming at the time of the fit of the intermitting Feaver. All continual Feavers may be joyned with an intermitting, and ſeem to be one when joyned with continual acute, called Putrid. And becauſe an intermitting tertian is uſually joyned with a quotidian, it is called a ſemi-tertian, and it is greater when joyn'd with a continual quartan, alſo a continual and intermitting Quartane may be joyned together.

If the continual Feaver be firſt, it begins with aſtoniſhment and horror or trembling, if the intermitting be firſt, with chilneſs; and there are two fits in a day, one is from chilneſs of the intermitting, the other is an increaſe of the continual without horror: And the ſecond day they make but one fit, and keep that order til they both go together or follow each other. Only an intermitting Quartan joyned with a continual, hath two fits the fourth day.

Every Feaver hath ſymptomes according to its kind, eſpecially becauſe cold falls in with the heat of a continual Feaver which hath inflamed the body, and then in the fit of the Tertian the Patient feels both heat and cold, this is called *Epiala*. Now the heat in theſe compounded is greater than in ſimple Feavers, becauſe the heat of the Tertian is every other day joyned with the heat of the continual: Hence the ſymptomes of heat are vehement and alter the body and the excrements, and weaken, and cauſe ſwooning at their meeting. And *Rondoletius* made a ſwooning Feaver one with a ſemitertian.

Epiala *a ſort of ſemi-tertian.*

A ſwooning Feaver is a ſort of ſemi-tertian.

An Intermitting Feaver compounded with an Hectick.

Alſo an intermitting Feaver may be joyned with a Hectick which it cauſed, this is known by great leanneſs, and in the day of reſt the lingring Feaver wil be preſent which is known by the pulſe and other ſigns. And ſo alſo you may know when a Hectick comes after an intermitting Feaver.

Accompanied conſtant Feavers

They are called continual accompanid Feavers, when there is another diſeaſe from them, or cauſing them, adjoyned. Theſe have diſtinct ſymptoms that come from that Diſeaſe and change the nature of the Feaver. Of this ſort ſome are pure others impure, malignant, peſtilential, venemous, and hectical; if theſe Feavers go before the diſeaſe they are called *Primary*, if they follow, *ſecundary* and *ſymptematical*. And they differ in that the Diſeaſes accompanying are apparent outwardly, as Inflammations or Tumors, as Carbuncles or Spots: Or are inward, as Pain, Cough, ill habit, and ſhew themſelves by things voided.

An Ephemera *with an external Inflammation.*

Somtimes a day's Feaver called *Ephemera* or a *Synochus* follows an external Inflammation and hath its accidents.

But if Inflammations come from a poyſonous ſting or bite, and have a Feaver, it is called a venemous Feaver, this ſtaies not above a day and hath grievous accidents, as Trembling, Convulſion, and the like.

A pure Synochus *and Carbuncle with an external* Eryſipelas.

A pure *Synochus* ſends forth an *Eryſipelas*, and this denominateth the Diſeaſe the Germans call it *Carfunkel* or Carbuncle, like a jewel or Hyacinth of a red yellowiſh color. This goes on as a ſimple *Synochus*, and is ended or changed in ſome few daies: And hath the like accidents, ſending alſo forth a Tumor, the ſame day or the ſecond or third day, or inflammation in the Legs or Face, ſeldom in other parts; and the kernels thereabouts do ſwell. Theſe remain ſomtimes after a Feaver, as we ſhal ſhew in Tumors.

An Ephemer, pure Synochus, Peſtilential, or venemous, joyned with a Carbuncle.

An Ephemera or pure Synochus produceth a Carbuncle, as the other, an Eryſipelas thus differing; it comes under the Ears, in the Arm-pits or the Groyns, with pain and redneſs. This Feaver is called by the Germans *Carbuncle* as alſo the *Ephemera* and *Synochus*.

Alſo a Peſtilent Feaver ſends forth one or more Carbuncles or Bubo's at the firſt, or not long after, in the Groyns, Arm-pits, and behind the Ears, with pain. theſe continuing and being inflamed turn Apoſtems and are grievous, and bring a new Synochus. Sometimes they lie hid, eſpecially in fat men, and diſcover themſelves only by pain and redneſs of the part.

We ſhal ſhew in the Cauſes how that great pains may be in both Groyns in a venemous Feaver.

An Anthrax or Carbuncle may be with a pure, or putrid, or malignant peſtilent Feaver.

Anthrax comes often forth in ſome Feavers, eſpecially Peſtilential; at firſt it is but like a Wheal, itching and burning, and after it is an hard Ulcer. From this we have often obſerved (which is a deadly ſign) a long red line to the Bubo commonly accompanying it, or to the heart.

Somtimes a continual, putrid, or ſingle, or malignant Feaver goes before an Anthrax, not peſtilential, and follows not except there be great burning.

A Feever, Synochus putrid and malignant accompanies the ſmall Pox.

Ecthymata or ſmall Pox are thruſt out by ſome continual Feavers, and they are commonly putrid malignant, few children eſcape them, and many are infected in a place, aged people have them ſeldom. Theſe Feavers are ſhorter ſomtimes in which the pulſes ſooner come forth, ſomtimes longer, and then they come forth ſlower. And the Feaver laſteth a week, and longer in people of years. They end without a Criſes certain, but by degrees and with a ſtinking flux of the belly ſomtimes.

The accidents are the ſame with thoſe of Synochus putrid, but milder in Children, greater in men; and worſt when moſt malignant. They come forth the third or fourth day without a Criſes or loſs of the Feaver, over moſt part of the body, til they turn to matter, and then depart, as ſhal be ſhewed.

There hath been a peſtilent Feaver like ſmall Pox which hath killed many Children and ſome men.

A Synochus pure, putrid, malignant, peſtilent, or venemous is joyned with the Meaſles.

The Meazles come from the ſame Feavers, and as the other are puſles, ſo theſe are ſpots, red and broad over the body, and eſpecially the Face and Breaſt: Some Children have them both but at divers times, the Feaver is alike in both.

In putrid malignant Feavers, red ſpots ſuch as after flea-bites, or black, or blew, break forth in the height or ſtate of the Feaver, theſe are ſigns of malignity and Death. Sometimes there is a broad ſpot under the breaſt, as I ſaw in a maid before her Death, in a malignant Feaver. And in the yeer 1649. I ſaw a blew ſpot which

which turned black upon the Heart of an old woman, before her death, and her neighbour died of a Carbuncle in that place, where it appeared ten years before, when he had the Plague.

The like in a Peſtilent feaver, ſhew the infection and death, and are called the tokens.

In venemous feavers, divers ſpots declare the Poyſon.

Alſo a ſmal *Ephemera*, or pure *Synochus* may be with the Gout, Colick, Stone, bloody Flux, and breeding of teeth, and in hard travil, but this hath no great Symptoms.

A pure *Synochus*, which degenerateth at the end, may have other pain and accidents from internal Inflamations, but if it follow them it is not long or vehement nor dangerous, but by reaſon of the Inflamation. If the feaver be firſt, and the Inflamation follow (which is ſomtimes very ſudden and doubtful, which was firſt) if there be a cough of bloody and filthy matter in the Lungs, and a pain, as the Pleuriſie; or heat and ſtretching pain in the Liver or Spleen, with this feaver, it laſteth longer, then a ſingle *Synochus*, and according to the Diſeaſe accompanying, it is longer, or ſhorter, or changed into a putrid feaver: As in the cauſes ſhall be ſhewed. The accidents of theſe feavers are leſs then thoſe of a ſingle *Synochus*, they ſeldom have the Headach, although the Symptoms of the Diſeaſe accompanying be great and dangerous. And they are not called by the name of a feaver. But if a doting in a true Phrenſie, or Suffocation in a quinſie, which follow theſe feavers, as the Inflamation of the Tongue follow the Diſeaſe called in High-dutch *Brenne* come here upon, the companion of the feaver is as the former. Albeit other dangerous accidents (for which theſe are called very ſharp Diſeaſes) come from the Diſeaſe.

The Tyſick accompanies a Hectick Feaver.

There is with a Cough and mattery ſpitting and Conſumption, at firſt a gentle feaver which turneth into a Hectick, this is not unlike a ſimple feaver, but kills at a diſtance. This heat being ſmal, breeds no great Symptoms, except at the night. The Pulſ is often ſwift and inequal, but not ſtrong, when the feaver increaſeth, by reaſon of the Patients weakneſs. The Urin is little changed.

Cachexy, or evil habit joyned with a gentle Feaver.

There is ſomtimes a gentle Symptomatical feaver joyned with Cachexy or evil habit, which is either when the body is ſwolen and diſcoloured, as in *Leuco-Phlegmatia*, or grown leſs, as in *Atrophy*, the heat of this feaver is not ſharp, but ſo gentle that the Patient feels it not: Like a Hectick, for which it is uſually taken; It is commonly in new born Children, and when they are weaned, and in Virgins before they have their Terms. It is known by ſharp breathing, beating of the Heart, and Conſumption of the body, which is ſeen by the ſticking forth of the Sword-bone in the breaſt, and of the Ribs and Shoulders; it turns ſomtimes into a true Hectick, and is cured by taking away the Diſeaſe that cauſed it.

A gentle Feaver from the Retention of foul humors, or the like.

When the After-birth, a dead Child, or Worms, or congealed Blood is retained, there is a preternatural heat, and a Feaver known by the Pulſ and other ſigns that laſt not long, becauſe the cauſe is not of long continuance, as ſhall be ſhewed. This is at firſt gentle and Symptomatical.

Intermitting Feavers.

Intermitting Feavers, that go and come at certain times, are of one ſort, and are called impure Acute, becauſe there is an apparent moleſting heat, which is pricking and impure: Yet in reſpect of the daies in which they come, they are divers.

Theſe are ſolitary or alone, not accompanied with others, as continual feavers are; for though they produce another Diſeaſe, yet it is diſtinct from the feavers; Beſides they follow not Diſeaſes, for as we ſhall ſhew in the Cauſes, when a Diſeaſe cauſeth a feaver it muſt be continual; nor are they Symptomatical but Primary, and begin of themſelves.

But intermitting feavers are ſingle, as the continual are, in which not one alone, but two or three ſorts come in divers fits: and therefore it is called a ſingle, a double, or a triple intermitting feaver. Any of theſe joyned with a continual, is Compound, as the Semitertian, or the like, wherein the Patient is alwaies in a feaver.

The Courſe, of this Acute impure intermitting feavers, of what kind ſo ever, is the whol time of the other, ſomtimes for a week or longer, or for many months. In which time a feaver coming extraordinary in the time of the fit: by which we know the time. This is properly called the worſt time of the feaver, and the time of reſt is called remiſſion: both which are named from their circuite, which from the acceſſion either returnes the ſame day, or the following, third, fourth, or fifth.

An intermitting Tertian.

Thoſe that return the third day are the moſt frequent, called Tertians, and ſomtimes they come at the ſame hour, often ſooner: but later when they decline. The acceſſion of theſe feavers, is ſomtimes at four hours, twelve, or fourteen hours diſtance, and there are ſo many fits, or more before it ceaſeth. They are moſt in Summer, and young people: When they come in *Autum*, and in old men they laſt longer, and are dangerous.

An intermitting Quartan.

Thev which come the fourth day are called Quartanes and are uſual, either ſooner or later, the fits are as long, or longer then thoſe of a Tertian, and the whol courſe, ſeldom laſting leſs then three or ſix months: Somtimes above a year, or two, Theſe begin in *Autum* and ſcarſe ever leave till the beginning of the next Spring, and are more frequent with people of a middle Age.

An intermitting Feaver.

They which come the next day are called quotidians, and *Amphimerinæ*. The aceſſion is eight hours, and the intermiſſion ſix, according to the ancients, but we know it not. Theſe Quotidians are of the kind of Tertians, or quartans, not a new ſort, for if either ſeaze upon a body, and another feaver followeth, as is uſual, either preſently or a little after, of its own nature, or of another ſort; Then there being divers, one cometh one day and another the other, ſo there are divers acceſſions or fits dayly, not equal nor at the ſame hour; till one is gone and the other returnes to its former order, either the third, or fourth day: as in double Tertians, and triple quartans, but if it be a double quartan, the fit is two daies, and the intermiſſion one: If a Tertian meet with a quartan, the fit is three daies together and the intermiſſion one day, if it return the ſame day, it is not a new ſort; but when quotidians come ſooner, one may come, when another departeth. And if the later feaver, that it fal in with the former in the time of the fit, then the fit is longer; and may continue eight or ten hours, but it is two

A double Tertian.

Triple Quartan.

Double Quartan.

fits,

fits, of two Agues, the one begins with a new chilneſs at the end of the other.

A Quintan, or Sextan Feaver. Some return the fifth or ſixth day, but they are but quartans, which ſtaied longer away than uſually.

There are divers accidents of intermitting feavers, which are troubleſome, as cold, heat, thirſt, Head-ach, and change of Excrements.

Intermitting feavers not only begin, but return with a cold fit firſt, as the continual do, with yawning, ſhivering, and coldneſs of Hands, feet, Noſe and Ears, firſt; then ſhaking: the Germans therefore call it *Kaltwee* or *Frierer*, from the cold. This is greater or leſs, according as the Ague is. Somtimes the body is very cold, and the chilneſs come ſooner in a Tertian, ſlower in a quartan, the Body ſhaketh, the teeth gnaſh. Both begin ſomtimes with leſs cold, but then they laſt longer; ſomtimes the cold is felt inwardly and outwardly alſo; ſomtimes more within or without; And when every part feels cold with heat, it is called *Epiala*. But we ſuppoſe that this is, becauſe intermitting feavers meet in the ſame day, and the cold of one begins, before the heat of the other is paſt. Or when intermitting feavers meet with continual, as we ſhewed Semitertians, for in the continual, there is alwaies heat, and when the intermitting comes, it begins with cold.

An Ague, in High-dutch called Kaltwee *or* Frierer.

The heat which follows the cold and ſhaking, or mixeth with it, in moſt vehement Tertians, preſently kindled, diſperſed through the body, ſharp, quickly at the highth, and quickly declining. In others it is gentler, not ſo general in the whol body, but like the burning of green wood, as in tertians that have laſted long. It is alſo vehement in quartans, but not equal over the body, but with mixture of cold, and as it were pain of the joynts and bones.

Thirſt is the greateſt Symptom in tertians and quartans; they call for drink, as for life. And ſomtimes in the cold fit, eſpecially when the cold is outward and the heat inward, they deſire drink.

Somtimes there is Head-ach, at firſt, but it ceaſeth before the end.

The change of Functions, is ſeen chiefly in theſe: They ſomtimes dote in the time of the fit, they are unruly, and toſt, when the heat is at the highth: And they cannot ſleep ſomtimes: Somtimes they ſleep too much, as in Children. They draw much breath: the Pulſ at the firſt is ſmal; afterwards quick and often, and great, and more or leſs uneven. There is weakneſs, except the ſtrength be renewed, in the time of intermiſſion: There is in ſome a ſwounding from whence it is denominated. At the end of the cold fit there are often bitter Vomitings. Alſo after every fit there is plenty of vaporing and hot ſwear, by which they decreaſe, and by which they are judged: Somtimes they void much Urin often, and have ſomtimes the Hæmorrhoids, or Courſes.

A ſwounding feaver, is a ſort of intermitting Feaver.

There is alteration of Excrements to be ſeen by the Urin, which is of a yellow or flame color and ſubſtance, and in Tertians preſently, or in quartans at a little diſtance; they turn white and wateriſh at firſt. Alſo a black Urin is not alwaies bad in a quartane, if the matter of the diſeaſe be thereby purged. The ſtools are cholerick and yellow ſomtimes black.

The Cauſes.

The firſt Cauſe of all Feavers is a Diſeaſe, which is an hot diſtemper or preternatural heat making all the body hotter than it ſhould be. The heat which diſturbeth the Patient is a ſymptom. Firſt we ſhal conſider the place, then the eſſence of this heat whether it be a Diſeaſe or a Symptom.

A hot diſtemper is the cauſe of all Feavers.

The place affected is not one but all parts of the body: not only the fleſhy parts which are ſooner inflamed, but the Membranes and bony parts take this preternatural heat. The heart grows firſt hot and then all other parts more or leſs begin to burn by conſent, as they are by nature hotter or colder: But this is not a Feaver, except the heart be alſo inflamed though the whol body burn with the blood, ſpirits and other principal parts, as the Brain, Liver and the like. Nor can the heat of the heart cauſe a Feaver if it be little, or if it be ſhort, though vehement, ſuch as comes by Anger, or Motion, except it be fixed.

In all Feavers the whol body is the ſeat of the hot diſtemper.

The eſſence of this preternatural heat in Feavers is not the ſame in all, and the difference thereof makes different Feavers. For this heat is either adventitious and mutable, which is called a fiery heat, and that is either pure and ſingle which inflameth only the body and cauſeth pure or not putrid Feavers. Or impure and mixed with putrefaction, infecting the body, and making putrid or impure Feavers. Or it is malignant and putrid together, or alone, and infecteth, cauſing malignant putrid, peſtilent and venemous feavers. Or this heat is fixed and conſtant, or a change of the temper of body into a more hot, hence come thoſe called Hecticks. How theſe come, whether of pure heat, or filthy, ſhal be ſhewed in theſe three cauſes.

A pure ſimple heat when it only is a little increaſed, firſt in the Spirits and Blood, Veins and Arteries, and ſo ſent to the Heart and fixed to the matter that nouriſheth it, and ſo communicated to all parts cauſeth pure, ſimple and continual feavers: when the heat being once kindled goeth not out till it be quenced. Theſe are either ſolitary, or without any other diſeaſe in their courſe; or accompanied with another diſeaſe that went afore or cometh after. The cauſe of this variety is when the cauſe of the diſeaſe is either in the veſſels or out of them.

A pure heat is the cauſe of pure or not putrid Feavers.

If Blood is kindled or inflamed in the veſſels, that is, in the Veins and Arteries, and ſo the heart ſet on fire, and a feaver produced, and it continue to the end without moving into other parts, then the feavers are called Solitary, or accompanied, or ſymptomatical, as they come from or not from the diſeaſe.

Heat of blood and ſpirits coming to the heart is the cauſe of pure continual Feavers.

Heat remaining in the veſſels cauſeth ſolitary Feavers.

If no Diſeaſe cauſe theſe Feavers; but the blood is inflamed in the Veſſels, then they are called Solitary, and Primary, being accompanied with no other Diſeaſe, or accidents: and as the heat is more, or leſs, they are ſhorter, (as for a day, except they turn into putride feavers:) or longer, when the heat is more fixed which cauſeth the Hectick. And this is not, as ſome would have it, that if the ſpirits are only inflamed, the heat ſhould depart

depart in one day, which cauſeth Ephemeral feavers. And if the blood be enflamed, the continuing longer cauſeth a *Synochus*; if the heat be in the ſubſtance of the Heart, a conſtant Hectick: Becauſe in all theſe kinds, neither the Spirits nor the Blood can be enflamed by themſelves, being confuſedly together in the Veſſels, and the ſubſtance of the Heart muſt be inflamed together with them: And every Feaver, and other Diſeaſe, muſt have ſome ſolid part to ſubſiſt in, as their ſubject, and not the Spirits and Humors. But this diverſity of feavers, comes from the *Cauſe*, from whence they proceed, and the *Subject* (which is the body of man) wherein they are.

In reſpect of the external cauſe, as it worketh theſe in the body, and continueth longer. Theſe Feavers differ in time and greatneſs: and this external cauſe, is either from things without, or taken in, or from excerciſe.

Of things without, theſe by themſelves inflame, as hot Air, or Water, if long continuance be made therein by accident, theſe vehement cold and ſudden, eſpecially taken when the body is hot, by outward Air, or Water. Becauſe the heat being ſuddenly ſtruck inward by the cold external, inflames the Spirits, Humors, Bowels and the very Heart. And this is more probable, then to ſay (as others) that it comes from the ſtoppage of the Pores of the Skin by cold, whereby the Air, which ſhould paſs through to cool and Ventilate (as they call it) is hindered, and ſo the blood is inflamed and putrified. But we ſhewed formerly that the neceſſity of Reſpiration, or Breathing was ordained not to cool the Heart, which being in health, it needeth not; and the uſe of tranſpiration was not to cool the blood, which being temperate, it needeth not; But for the Evacuation of Excrements, as we ſhall ſhew in putrid Feavers, which proceed from the want of that.

Things taken in, which actually or potentially inflame, eſpecially if they peirce ſuddenly, do the ſame; as ſtrong Wine, and ſtronge Waters drunk in great quantity, and the Anacardine Confection being very hot. And we ſhall ſhew that neither crudities nor corruption of meats, as ſome think, can produce theſe pure Feavers, but other Diſeaſes, or putrid Feavers.

Vehement motion, eſpecially running, by heating, may cauſe the ſame, as we ſee in Horſes after Races, that we perceive to be feveriſh, from their ſhort breath extream heat and ſweating. And Women long lying in hard Travail, by a continual motion, and hard, and often throws are in a feaver, which is increaſed by pain. Alſo immoderate motion of mind by watchings, chiefly ſudden motions by anger, frights, or joy, if they do not only ſtir the ſpirits and blood, but enflame the heart, alſo cauſe feavers. But we ſuppoſe that fear and ſadneſs cannot cauſe theſe feavers, except there be alſo putriſaction.

From the ſubject Body, afflicted with theſe feavers, they are alſo divers. Any conſtitution is capable of them, from an external cauſe, by which heat being ſtirred up, may differ in reſpect of the conſtitution, as it is temperate, hotter, or impure.

Inflamation of the Blood, or Spirits, (from an external cauſe) in the Veſſels may cauſe an Ephemera.

If a temperate body be inflamed from without, in regard that heat cannot continue long, but the body muſt return to its former temper, there may be a ſhort feaver called *Ephemera*. And the heat being united, there is no great change made, and being not impure it begins not with ſhaking, or Criſis, and it goes away by degrees through ſwear, which is cauſed by a gentle breathing, or exhalation from the ſame heat.

That is an over hot conſtitution, which is more fit to receive heat, and if it be enflamed from an external cauſe, then from the double heat comes a *Synochus* ſimple Feaver, which laſteth longer, and is hotter. This conſtitution is either Sanguin, or Cholerick.

A ſanguine Synoch, is cauſed by blood and ſpirits inflamed in the Veſſels from an external cauſe.

The Sanguiue conſtitution, is ſooner enflamed, when there is more blood or heat then ordinary. Therfore young perſons and Plethorick, or full bodies, and hot, and ſuch as want their uſual bleedings by Hæmorrhoids, Terms, or at the Noſe, are ſooner in theſe Feavers. And theſe, by reaſon of the efficient cauſe meeting with the adjuvant, or aſſiſting continue above one day, to the third, or fourth day, and are called ſimple bloody *Synocks*. Theſe have a greater heat, and other Symptoms from the cauſes mentioned, but otherwiſe they begin and end as the Ephemeræ.

A cholerick Synoch, is cauſed by Inflamation of Blood and ſpirits in the Veſſels, from an external cauſe.

A Chollerick conſtitution being hotter, is eaſily enflamed from the ſame cauſes, with a Feaver like a *Synoch*, called a ſimple Cholerick *Synoch*. And it keeps the ſame progreſs with a Sanguine except ſome accidents ariſe cauſed by choller by which it is turned putrid.

A Synoch which degenereth, is cauſed by Inflamation of blood and ſpirits in the Veſſels of an unclean body.

If a foul body take a feaver from an external cauſe, then if the blood be apt to putrifie, the feaver is no longer ſimple and pure, but an impure *Synoch* and of longer continuance. But if the blood be ſomwhat impure, and yet not apt to putrifie, then the *Synoch* is pure, but the accidents are more and greater then in the former. There is alſo a *Synoch* called accompanied, when nature driveth out of the Veins ſome of the impure blood.

The cauſe of pure Symptomatical accompanied Feavers, is a hot diſeaſe that enflames the blood and ſpirits.

If theſe Feavers come from a Diſeaſe and the blood being enflamed ſtay in the Veſſels, then becauſe they follow a Diſeaſe, they are called Symptomatical ſimple Feavers These are like the Ephemeral or Synoch Feavers, except they be turned into Putrid, by the Diſeaſe that cauſed them, or their Courſe, or Symptoms altered thereby.

The Diſeaſes that cauſe Symptomatical feavers, are of ſome part, and ſend forth ſuch heat, that firſt it inflames the blood in the part, and then the whol Maſs, and the Heart; and the blood in the part is commonly more then ordinary, by reaſon of the Diſeaſe and pain which attracteth. Theſe hot Diſeaſes which cauſe feavers from hot humors, as Blood and Choler may produce them without corruption; for Blood and Choller only of all the Humors, can produce feavers, without putrefaction.

A Diſeaſe of Blood, is the cauſe of Ephemera, or Synoch.

Or,

Symptomatical Feavers.

When Blood gets out of the Veins, not from the Feaver aforegoing, (of which hereafter) but from ſome other cauſe, as heat or pain, and fals into a part where it begets either a bare diſtemper, which may cauſe a Feaver in tender bodies: or an Inflamation, or *Eryſipelas* of divers

ſorts according to the variety of the Flux; if it enflame it begets a Feaver, in which the inflamed blood ſomtimes falling out of the veſſels (as hereafter we ſhal ſhew) may renew the old, or cauſe new inflammations. Theſe feavers are ſimple and pure, not putrid, and as the heat of the Diſeaſe is, they increaſe or abate, and end before it be quite over except there be a ſuppuration or a new pain or putrefaction. Theſe ſymptomatical feavers are in divers hot Diſeaſes, of the Bowels, Membranes, and other parts. And the more vehement or long as the Diſeaſe is neerer to the Heart, and the parts adjacent, or great Veins, or as the heat is greater, or the body by nature more hot, as in Infants who have a Feaver many times only by the breeding of Teeth. They are milder and ſhorter when they are from the fountain of heat, or outwardly, in theſe there is little heat, but horror, and ſomtimes not that.

A cholerick diſeaſe is the cauſe of the ſymptomatical Feaver of the Ephemera or Synochus.

The Cholerick humor being moſt hot, ſeldom cauſeth theſe kind of feavers. But when it is not in its proper place where it doth no hurt, nor mixed with the blood, nor qualified with the Whey which ſo tempereth it that it cannot produce a feaver, as we obſerve in the Jaundies, but ſeparated into ſenſible parts the Stomach and Guts, and gets into their ſubſtance, cauſing Eryſipelas, about the Belly & the fever Lipyria in which the inward parts burn with intollerable heat and pain as *Aetius* obſerves, about thoſe parts and great thirſt, except it be caſt forth by nature, it fires all the parts adjacent with the blood and Spirits, and cauſeth ſmall feavers which follow ſuch Diſeaſes. Theſe we often ſee in the diſeaſe of Choller, when it is vomited and purged, and in the Dyſentery, and in the Colick coming from Choller and Eryſipelas in the Guts, as we ſhal ſhew. And they cannot be great feavers becauſe their cauſe is far from the Heart, and lodgeth about the Meſeraick Veins,

Some Blood inflamed & ſent out of the veſſels into other parts cauſeth a Synoch primary & accompanied

If Blood inflamed from the cauſes aforeſaid, get out of the great veſſels into any part internal or external and inflame the heart, and cauſe a Feaver (as it uſually doth by its plenty, heat, or thinneſs, or impurity, either at the beginning of a Feaver, or after by the force of Nature, as in the Criſis of theſe Feavers we may ſee by their bleeding at the Noſe) Then it cauſeth a new diſeaſe in the part where it comes, and a Feaver which is accompanied therewith, but not ſymptomatical, becauſe it follows not the Diſeaſe, but goes before it as I ſhal ſhew. And theſe obſerve not the courſe of other ſimple Feavers, but being increaſed or abated by the accidents of the Diſeaſe they are longer or ſhorter, greater or leſs: And when nature hath ſent a good quantity of burning blood from the Veins, thy are not ſo hot, nor ſo thirſty, nor ful of Head-ach as in ſolitary Feavers. And this chiefly when the blood flows into the bowels or ſuperficies of the body.

The effuſion of inflamed blood into the inward pars is the cauſe of Synochus accompanied with Inflammation of the Bowels.

Sometimes this flux of blood in Feavers is into the Bowels capable thereof; eſpecially ſuch as are moſt fleſhy and bloody and ful of Veins joyning to the great Veins and neer to the Heart, and chiefly into the Lungs, which it inflameth and cauſeth a Peripneumonia and ſomtimes Pleuriſie (as ſhal be ſaid.) Theſe Inflammations go not before the Feavers, becauſe the Feavers ſhew themſelves before there is a pricking pain or ſigns of Inflammation, with horror and heat following, and ſometimes go ſome hours afore: Nor are they cauſed by thoſe inflammations but as they were firſt raiſed from Feavers and increaſed by a new heat in ſome part neer the Heart which ſhews that the Feaver did not there firſt begin, and that is not putrid (as others thought) becauſe the heat raiſ'd from the Inflammation increaſeth the feaver rather by its quantity then filthy quality. Nor doth it acquire or get any putrefaction from the inflammation, eſpecially when it firſt comes, except the blood ſuppurate, and then as *Hyppocrates* ſaith it is increaſed. But we ſuppoſe this may be rather from the pain that is then increaſed, and not a new putrid feaver from a putrid exhalation, becauſe it preſently ceaſeth. Except this happen from an Ulcer that follows theſe inflammations, as when a Pleuriſie or Peripneumony turns into Phthiſis, the feaver being turned into a putrid ſymptomatical Hectick, or from blood which is putrified and ſent out of the Veins, as I ſhal ſhew in putrid feavers. Theſe happen, as in the Lungs from the ſituation and for to receive the flux. So may inflammations which follow theſe feavers and increaſe them, be from blood in a Synoch ſent into the Liver or Spleen, becauſe they are boody parts, and have large veſſels. Theſe feavers in all the ſaid inflammations of bowels, are longer than other ſolitary Synochs, in reſpect of the Diſeaſe accompanying them. And they vary as the inflammations are true, as Phlegmons, from whence ſome are called *Phlegmonodes*. Or *Eryſipelas*, wherein the feaver is more ſharp called *Typhodes* though this name be proper to the feaver in the Eryſipelas of the Liver. As the feavers from the Eryſipelas of the Lungs are called *Cymodes*. The ſame may come from blood ſent into the brain in feavers, which hath large cavities and is eaſily filled: And then an inflammation of the Brain is joyned with the feaver, which turns ſuddenly with doting into a Pleuriſie, with a pain of the Head which went before, and cauſed blood to come thither and makes the feaver more dangerous and violent. This may be alſo in the Stomach, Guts, Womb, Bladder, when the blood is ſent thither in feavers. But when another way which leads into the fleſhy parts being membranous have only meſeraick veins, or are far from the great veſſels and the Heart, it comes to paſs that when theſe parts are inflamed by pain which comes quickly to ſuch ſenſible parts, that the feavers rather follow the Inflammation than go before them and are (as is ſaid) ſymptomatical. As that inflammation which is in fleſhy parts which are not ſo ſenſible of pain, comes from the feavers and is a ſymptom of them.

Inflamed blood ſent into the habit of the body cauſeth a Synoch, theſe inflammations are red and painful.

Theſe Feavers ſend blood from the veins into other internal parts, as in the muſcles of the Neck and Glandules and maketh inflammations in the mouth, Tongue, and Jaws, and Quinſie. And though they begin not from feavers but other cauſes, yet when a feaver comes, they increaſe. Somtimes theſe feavers go before pains and ſwellings of the Gout, when Nature by them drives blood into the Joynts, and then they are red and ſwollen except the tumor lie very low. So that ſuch as are inclined to the Gout (being eaſily taken with this Feaver Nature being uſed to disburden her ſelf into the outward parts, joynts, or skin) are ſubject to theſe Diſeaſes. Alſo, albeit theſe feavers go

before

before Defluxions or Catarrhs, and promote them, yet becauſe they do it not by affording matter to them, but by moving the flux with their heat, they are not differing from ſolitary feavers, though they may alſo be joyned with other diſeaſes.

Inflamed blood in a Feaver ſent to the ſuperficies of the body is the cauſe of Synoch with a Botch, Eryſipelas, ſmal Pox, Meaſles or Carbuncle.

Nature doth often diſcharge blood into the ſuperficies of the body, the Skin eſpecially Glandules, and internal Membranes in theſe Synochs, and cauſe there Redneſs, Heat, Tumors, or Puſtles, ſooner or later, and as the blood is Pure, Thin, Thick, Yellow Black or Wateriſh; or impure, yet not putrid (as we ſhall ſhew) the Tumor and Heat and Pain are different. This Difference is chiefly in reſpect of Tumors and Puſtles.

Theſe Feavers often produce Tumors or Redneſs called Carbuncles. Theſe are ſo uſual to ſome Natures (by reaſon of the Heat, Thinneſs and Wateriſhneſs of the blood, or Impurity) that they have them upon the leaſt occaſion at certain times if the blood be but a little inflamed; nor do they ſpare old or gouty people. They are diary as we ſhewed, and a Tumor follows them, ſeldom the ſame day, but two or three daies after, either in the Glandules of the great Veins, in the Groyns, Arm-pits, and Chine, if blood go along with them: And theſe are with pain, and ſometimes with inflammation. The blood often falling into the loweſt parts of the Legs, there is often an itching and then a burning in the Ankles, and after a redneſs with Yellow or Black as the blood is in thickneſs, if it be an Eryſipelas. Somtimes it ſwels and is inflamed if it be an Eryſipelas with a Flegmon, when better blood flows thither, and if the blood bewateriſh, the whol Leg ſwels with an œdematous Eryſipelas. Theſe have a Bubo or ſwelling in the Groyn going before them; the feaver commonly abates at their coming forth, ſo that former Writers were deceived that thought the feavers began with them, and were ſymptoms to them, which are the contrary, for the feavers appeared before there was ſign of inflammations, And if the Glandules only ſwel, there is no great heat, and it cannot be from a feaver.

The ſmal Pox, though it be uſual in malignant feavers are ſomtimes in pure feavers; And the Meaſles in Infants by reaſon of the fulneſs of blood or diſpoſition to be inflamed, they come forth the third or fourth day, but in a pure feaver they are not infectious, and depart themſelves.

Nature labors alſo to do the ſame in Synochs, not putrid if the blood be black which it deſires to expel, by a Carbuncle not peſtilential either alone, or with a Bubo. And many fear they have the Plague through ignorance.

A putrid heat cauſeth putrid Feavers.

A Heat mixed with Foulneſs firſt raiſed from putrid humors or parts of the body, and ſo carried to the Heart; and inflaming it, and ſent from thence to all the parts of the body, cauſeth putrid feavers, which continue or return while the putrid vapors or humor go to the Heart; which they wil do, becauſe they are bred in the Veins and Arteries by which they may be directly carried therunto: For theſe go to the heart with great Orifices conveighing humors and ſpirits into it, and they cannot be carried another way. For if a ſtinking Vapor could paſs the the cavity of the Breaſt another way into the Heart to inflame it, we ſhould alwaies have a Feaver from the vapors ſent from the Excrements, which though thin and hot, ſo that they may be let flie, and burned to flame, yet cannot reach the upper parts to infect them, unleſs it be by making a ſtinking breath: As we ſhall ſhew. And although a poyſon or venemous quality can reach the heart whereſoever it is bred, or by any paſſage, yet theſe vapors bred in a thick putrid matter conſtrained to a certain place, but by the manifeſt paſſages aforeſaid. By which means as a ſimple heat ſent to the heart in the ſpirits and blood cauſeth a pure ſimple Feaver, ſo doth a putrid vapour, or matter by the ſame way, cauſe a putrid Feaver; which is divers according to the divers places, in which the matter is bred, which matter alſo is not alwayes of the ſame Nature. The ſtinking Matter is either bred in the veins or arteries, or out of the veſſels in the humor of ſome part, or ſubſtance thereof.

The Humors that cauſe putrid Feavers, either putrifie in the veſſels, that is the veins and arteries, either continued to the heart, or in them that are not joyned by continuity to the heart, but can ſend a vapour by veſſels that are continued. And this is cauſe why among putrid Feavers ſome are continual, others intermitting.

Foulneſs of blood in the veſſels continued to the Heart is the cauſe of putrid continual Feavers.

The veſſels continued to the Heart are the Veins and Arteries except the Meſaraicks. If any humor putrifie in theſe, being largeſt and diſperſed through the whol body, becauſe the way is open to the Heart, the vapor and part of the humor go to the Heart and ſets it on fire, cauſing continual feavers, becauſe the cauſe is included in the veſſels. Theſe if they kill not by the vehemency of the cauſe and the Diſeaſe, or melt the body with heat, go ſlowly off, and and continue til the heat of the Feaver hath conſumed the matter by Vapors, and Nature hath made Concoction of it and diſcharged it by a perfect Criſis.

The humor putrifying in the veſſels, is blood, which being too hot and moiſt, eaſily putrifieth, as we may obſerve by it out of the veſſels. But all wil not putrifie but from a great fault, but a little only: ſome remaining good (though by reaſon of the Diſeaſe and faſting the Patient gets no new) and this is ſeparated from the bad into other places: And if it were mixed and grew hot, yet it did not ſtink, but the filth being ſeparated it returns to its former purity. As we obſerve in letting blood it flows ſomtimes pure, ſomtimes impure, and ſomtimes confuſed or mixed. Moreover though blood hath divers parts, yet one cannot be corrupted alone, but all is made thinner, thicker or fatter rather than cruder (which cannot make perfect blood as I ſhewed) for the blood in the Veins is made of them not diſtinct but confuſed or mixed (though they ſeem divided) in cold blood; and there is no part of blood but is made of them. This is manifeſt by the Urin and Sweat when the ſerum is putrified Hence are divers ſorts of putrid feavers, not becauſe divers parts thereof called humors, as Blood, Flegm, Choler or Melancholly are corrupted, but from the place in which the humors putrifie, and the diverſity of the blood ſo corrupted.

There are diſtinct Feavers in reſpect of the place wherein the humor corrupteth, firſt in the reſpect of the veins and arteries.

The corrupt Blood that cauſeth putrid Feavers, is conſtantly in the branches of the hollow Vein, and in the greateſt of them, in which more may be contained and from which the Heart may be ſooner reached which cannot be done in the leaſt branches. Therefore

fore in the trunk of the hollow Vein, which paſſeth upwards and downwards from the Heart, by the Backbone, or in the great branches that come from it into Throat and Groyns, this corruption of blood, being contained and alwaies diſturbing the heart; it cauſeth divers putrid feavers, as the filth is nearer, or further the Heart.

Corruption of blood in the hollow Vein near the Heart, is the cauſe of putrid Synoch, cauſon, Leipyria.

Any corruption near the Heart which ſends it ſelf, or vapors to it, maketh a *Synoch* feaver, which increaſeth, or decreaſeth, or ſtands at a ſtay, according to the corruption. And in a cauſon, or bruning feaver, becauſe its heat is near the Heart, there is no manifeſt change, becauſe the heat is equal; eſpecially when the heat is at the height and cannot be raiſed, but by death. Yet the Patient may find about the Breaſt, Midriff, Back, where the corruption lodgeth, a burning which troubleth the Heart and parts adjacent: And this is the cauſe why in a *Leipyria*, which is a ſort of cauſon that the inward parts do burn.

Blood corrupted in the hollow Vein remote from the heart, is the cauſe of a Synoch exaſperated.

When the corruption is in the branches of the hollow Vein diſtant from the Heart, becauſe it cauſeth not ſo much heating, it begets Feavers with fits, which have different heat. For when the Vapors, whoſe matter is forced of, are hindered by the long paſſages, and cannot come in order, and the ſame meaſure to the Heart, it comes to paſs when it is increaſed it comes with more violence and encreaſeth both the heat and fits, without horror, as at the firſt, becauſe the feaver was before. Theſe fits go away when the Vapors are diſcuſſed, but not the feaver, for heat once kindled, although the cauſe abate, cannot thereby be extinguiſhed: as we ſhewed concerning ſimple heat from an external cauſe, which cauſe being removed the Feaver ceaſeth not, till the Heart return to its former temper. And this is the true cauſe of fits, which come ſomtimes twice in a day when the ſtinking vapor is much and not far off: and the other day once, becauſe the day before ſome part was diſcuſſed, and keep or change their courſe in reſpect of the cauſe which acteth. Alſo when the cauſe is far of, or is leſs, the fits come every third day at firſt, and ſo continue for a time, ſeldom the fourth or every other day. For which cauſes theſe putrid continual Feavers are called ordinate, or inordinate quotidians, Tertians, or quarrans. But in thoſe whoſe cauſe lurketh in the Veins remote from the Heart, there is a heavineſs, or pain, or burning in the part, where the matter lodgeth in the Neck, Loynes, or Joynts. There is alwaies a pain of the heart alſo, not that the matter lodgeth there, but from the hot Vapors.

A Portion of putrid blood which cauſeth a putrid Feaver, ſent from the hollow Vein into other parts cauſeth continual Feavers accompanied with other Diſeaſes.

Alſo in all theſe putrid Feavers whether the matter be near or far from the Heart, a part of it may be forced by nature out of the Veins, as in pure Feavers, by which ſhe is disburdned into ſome internal or external parts, producing Tumors, Puſtles, or Spots, which are not ſignes of Inflamation, but Putrefaction. As in Children, the ſmal Pox and Meazles break forth (as *Fernelius* ſaith) plentifully in a Feaver, like a putrid *Synoch*: but they are not infectious, but in Malignant Feavers.

It is a queſtion whether blood can thus corrupt in the Arteries to cauſe Feavers. For it being hot and ſpritful, may eaſily burne and conveigh a ſimple pure Feaver to the Heart, but it can ſcarſe alone, or ſeperated from the blood of the hollow Vein, which is very pure, be corrupted; though with it, it may, or be infected by neighboring humors: eſpecially becauſe vapors that come from putrid blood, are carried that way to the Heart, both in putrid and intermitting Feavers. But if corruption ſhould be in the Arteries, from the cauſes aforeſaid, the feaver will be moſt violent: as in a cauſon, when corruption is in the trunk of the great Artery near the Heart. Theſe feavers alſo differ in reſpect of the blood, in reſpect of its temper, or diſtemper, before it cauſed them.

Corruption of blood in the great Artery cauſeth a burning Feaver.

Temperate blood which offendeth only in quantity and which is not naturally inclined to putrefaction, if it corrupt, cauſeth a putrid *Synoch*, which is either made ſo from a Simple *Synoch*, wherein the blood was firſt inflamed, and then corrupted, or from the external cauſes at the firſt. Therefore ſome call the beginning of them, putrid Ephemera, which come from outward Cauſes. But we, becauſe this putrid heat ends not in one, or ſomtimes many dayes as a ſimple doth, cannot call the ephemeral, but putrid Synochus, becauſe in them the heat is milder then in other continual putrid Feavers, and more equal, from the temper of the blood, having no fits from the equality of the blood, and becauſe being near the heart in the great veſſels, it is firſt afflicted with the external cauſes, and ſo the heart beats with an even Pulſe: As we ſhewed.

Corruption of temperate blood in the Veſſels, is the cauſe of a putrid Synoch.

If the blood be diſtempered, before it corrupt, it muſt be hotter then ordinary, for if it be too cold or crude, it rather cauſeth Cachexy or ill habit of Body then Feavers. And if it be ſo, before the feaver come, whether it be too thin or too thick or corrupted, it cauſeth Inflamation, and the more when it is in the Arteries, or any place near the Heart, hence come burning feavers continuing in the ſame ſtate, ſo violently burning that except they kill, the ſubſtance of the Heart is melted away therewith and dryed, ſo that the whol body conſumeth, as we ſhewed in a melting feaver.

Corruption of hot blood in the Veſſels cauſeth a burning Feaver.

Corruption of hot blood in the hollow Veins and Arteries near the Heart cauſeth a melting Feaver.

Præternatural Heat or fault in the blood is the antecedent Cauſe of Corruption of it in the Veins.

If the blood beinflamed with heat, we ſhewed, that it cauſed diary feavers, within a ſanguine and full Body, as we ſhewed in a ſimple Synoch, except the heat abate of it ſelf, or by cooling medicines, cauſe a ſuppuration, either in the blood or in the parts. So that the maſs of blood being corrupted by long heat, there is not a ſimple heat but a compounded feaver, with putrefaction. And this is the cauſe why a Synoch not ending the ſecond or third day, becomes putrid. This is known by the ſigns of an Ephemera and ſimple Synoch, the one whereof is, that the heat began externally. And this is the reaſon why fulneſs of blood which many ſay is the cauſe of putrid feavers, cauſeth a change of ſimple feavers into putrid.

Foul or evil blood, which hath the ſeeds of corruption

tion in it, or is disposed thereunto, if it be gone so far by its plenty or corruption, that nature cannot order it, that is amend or purge it, causeth by putrefaction divers putrid feavers differing according to the place wherein, or the matter of which, the putrefaction is. These are foreseen before they come, by a constitution, not perfectly sound, nor sick, by reason of some secret fault in the blood: in which there is a lazines, haviness and pain of the Head, troublesom dreams, stretching of the sides or Hypochondria, Heart pain, Nauseousness, loathing of Meat, change and stink of usual Excrements, or not usual as sweat, spitting, vomiting, belching. This fault of blood comes either from things taken in, or from Excrements retained, or from outward things.

Things taken, as meat and drink, which are the matter of which blood is caused, if they be of evil juyce or corrupt, cause this fault in the blood.

Meats of evil juyce, though after they are eaten they are somwhat changed by concoction, and turned into blood, yet in regard the former condition remains, if they be often taken produce these putrid feavers: which are popular or common, when the meats ordinary eaten by most people from necessity, are such, as Herbs and Fruits, or Corn eaten in too much plenty, when unsound, as in time of dearth, these infect the blood, and cause Epidemical Feavers in Cities and Armies.

Also if the food be naturally good, and be putrified before it be taken, it infects the blood. As when they are too old or corrupt by too much moisture, whether Flesh, Fish, or Cheese, by stink and Putrefaction, being long taken, infect the Blood, and cause Feavers. And common Feavers come by corrupt Water, Bread, or Flesh at Sea, or from Corn, that is mowed up wet.

Those most easily corrupt, being eaten, which have much Excrementitious moisture, as summer fruits, the eating of these in summer abundantly, causeth Feavers in *Autumn* or the Spring following. Things that nourish, as Milk and Eggs, or sweet things, soon corrupt in hot Stomacks, and turn to Choler, which causeth other Diseases rather then Feavers: So do hard Meats and slimy, when the Stomack, Liver or Spleen are afflicted, for want of concoction cause crude blood and obstructions rather than Feavers: Except there be other accidents.

The retention of the Vapors and Excrements of blood usually sent forth by insensible Transpiration, or sweat infects the blood and causeth Feavers. This may be from divers causes, from idlness and sluggishness of nature in expelling of Excrements, obstruction of the Skin and pores thereof, and want of Aire. Not that the blood is inflamed and then corrupted for want of Air through the pores to cool it, as we shewed in the causes of a Diary Feaver; Nor that it can come from a sudden cold taken in while the body is hot. But because the skin being made thick, the Excrements usually purged by the pores cannot come forth. And because the body cannot be refreshed with Air, to consume the moist Excrements under the skin; As we may observe by things kept in close places, where fresh Air comes not, they grow mouldy and musty: so by the long retention of these moist Excrements, for want of Air the blood may be infected, and Feavers follow.

When the Air is infected with evil Vapors from stinking Carkases, and taken constantly into the body, it infects the Spirits, Blood and Heart, and causeth putrid Feavers, and they are somtimes popular, when many live in it, and are disposed for it. Or contagious, when the putrefaction comes from the breath or sweat of sick men. This is from a malignant or venemous quality, rather then a simple corruption.

Corruption of blood in the meseraicks, is the cause of intermitting putrid Fevers.

The vessels not continued to the heart of veins and arteries are only the meseraicks, branches of the gate-vein which comes from the liver, dispersed through the bowels in the lower belly, and no where else, never coming forth to the skin but in the Fundament, where they are called *Hæmorrhoids*. For the Arteries which accompany these, as also those that accompany the branches of the hollow Vein, coming all from the great Artery, are continued to the Heart thereby. Therefore if a humor corrupt in the meseraicks: though their passage be intercepted by the substance of the Liver, in which all their branches are, yet because the branches of the hollow Vein are also in the same substance of the Liver, and are joyned to the mouths of of the branches of the Gate-vein, and because there is a constant passage of the Blood in the Liver by them: And also because the Arteries coming to the Heart, are joyned to the Meseraicks in the Spleen, Stomach, and Guts. By this communion and vicinity it happens, that as oft as evil vapors rising from the Meseraicks, do fill the branches of the hollow Vein and great Artery, they pass that way to the Heart, and cause putrid Feavers by their stink; but these are not continual, but intermitting. And because the putrid Matter is not far from the Heart in continual Feavers, they may a little intermit, but not wholly ceas: For the Heart once on fire, before it be wholly quenched, and a new vapor in the Veins that come unto it, must have fits at certain times: As we shewed. Also this is from other Causes, a filthy vapor in the Meseraicks, which causeth a Feaver, which doth not constantly touch the Heart with the same force, by reason of the distance, this is not alwayes unequal, but wholly ceaseth, by reason of the stoppage of passages to the Heart. And so long intermitteth while the putrid Matter confined to its fire, swells, and sends forth a vapor to the Heart, with some of it self. For it being abundant, and of an evil quality, provokerh Nature to send it into the branches of the hollow Vein and great Artery, and so into the Heart, where it causeth Feavers, to continue so long, till all the fuel be burnt up, or sweat out: After which manner a Feaver wholly ceaseth, till a new fit cometh by a new motion and heat of the Matter, sooner or later, and not in the same form: As shall be shewed. Now let us consider what humor it is that putrifieth in the Meseraicks, what is the conjunct cause of intermitting Feavers, and the antecedent Cause of Corruption.

The humor contained in the Meseraicks is Blood, yet not so pure as that in the Liver purged from the wateris and cholerick Excrements, and fit for nourishment, although some part of it for nourishing the membranes be pure, it is wateris, and some part thick, it is full of excrementitious Humors that pass with the Chyle, and being purged from these in the second concoction it is sent into the hollow Vein. These excrementitious Humors seem whey-like and cholerick, for Serum or Whey coming from much drink, and moist food, and passing through the Meseraicks, and carrying with it other crude humors, passeth in greater quantity to the emulgent Veins, and so to the Reins and Bladder. The cholerick Matter, rising from Meats and Drinks mixed with Blood, is first purged by the liver, and then sent to the Gall. Besides these two Hu-

mors for which nature hath made two receptacles, we can find none; nor can we by reaſon or ſenſe perceive that the Spleen was ordained for that purpoſe. Therfore a putrefaction in the Meſeraicks nor in the hollow Vein cannot be diſtinct in any part of this blood, or in the excrements mixed therewith, but muſt needs corrupt the whol maſs. And if it come to the height that it ſends moſt hot vapors (which only can reach the Heart) then it produceth theſe fevers. Nor can they come from a crude or wateriſh blood which wil not ſo corrupt and grow ſo hot to ſend ſuch vapors, but other Diſeaſes may. As when the matter which aboundeth in this blood is cholerick, and is not ſufficiently cleanſed in the Gall, but makes the blood too cholerick, and putrifieth it, then cauſeth intermitting Fevers by hot and ſubtile vapors ſent to the Heart. And for this cauſe we affirm that this blood corrupted with yellow or black Choler, ſuch as we have ſeen voided by the Hæmorrhoids in the Cure of ſuch fevers; and Children have voided abundantly by ſtool, cauſeth theſe intermitting fevers. Thus, The cholerick blood being long in the Veins before it produce a fever, at length corrupting, and ſwelling and burning about the Midriff, and ſending forth dry vapors (which firſt offend the ſenſible Nervous parts) by pricking the expulſive faculty cauſeth cold at the beginning of the fit (the heat being ſent in with the blood) and when nature ſtrives to ſhake off that which offendeth yawning, chilneſs, ſhaking; as we may obſerve in other places when any ſharp matter ſtrikes upon ſenſile parts the body ſhivereth, alſo Vomiting is often in the beginning from the ſtirring up of the expulſive faculty. Theſe are at the beginning, but after when the Vapor from the Midriff aſcending to the Heart by the waies aforeſaid, enflameth it, a heat follows, and the cold and ſhaking ceaſeth, except the Vapor go ſo ſoon to the Heart that the heat appears before the cold be gone, and there be both heat and cold at the ſame time, as in the fever *Epialn*. This heat being raiſed from the Midriff, the whol body is inflamed, a great thirſt and other accidents from heat continue ſo long, til the Vapors being diſcuſſed by inſenſible tranſpiration or ſweat, the fever departs or intermits, ſo long til new matter corruptiug in time of reſt, cauſe as many vapors as may make a new fit. And this courſe of fits continueth till all that matter which was apt to corrupt be taken away by help of Nature and the Phyſitian, for in every fit part of that cholerick matter corrupted is turned into a Vapor & diſcuſſed by heat, or ſweat or t, or piſſed forth, the Urin being after the fits yellow, red, ſharp and ſtinking: ſometimes the whol Diſeaſe is diſſolved by ſweat; and if any thick part of the choler ſtick in the skin, there followeth the Maunge or Scab, or the like: ſomtimes by vomiting flegm and choler ſent into the Stomach from the Gall is voided by wh ch the cauſe is taken away and the Ague cured. Theſe are by Art or Nature ſeparating the feveriſh matter from the blood in the Meſeraicks, and the Vomits and Stools are bloody often, when there is a Cure, but it is dangerous becauſe the way is not ordinary, except the cauſe of the fever come forth with blood at the Hæmorrhoids, by theſe means we have ſeen quartans cured, which could not be by other bleeding, which draws from the branches of the hollow vein only, and the Meſeraicks only appear at the Hæmmorrhoids. Nor can the cauſe be ſo taken away, except when the branches of the hollow vein are emptied, the feveriſh matter gets into them out of the Meſeraicks. But if there be ſuch a paſſage, and the putrid blood be mixed with that in the branches of the hollow Vein, an intermitting fever is made a Continual as I have often ſeen by unſeaſonable bloodletting, when the cholerick matter is purged from the blood and the blood tempered with ſerum and carried thereby into the branches of the hollow vein, and ſo into the habit of the body and Urin which it tincture th, then the fever either ceaſeth with the Jaundies if the the whol cauſe be carried thither. Sometimes this matter isinfuſed into the fibres or ſmal veins of the Guts and produceth Eryſipelas and Colicks, the fever ceaſing or not as the matter is wholly or in part carried away: from whence if Convulſions ariſe they are dangerous as I ſhewed. *Fernelius* ſaies that he found a pound of this cholerick matter about the Membrane of the Liver and the Nerves of the Back in one that he diſſected after his death of a Fever. Therfore if cholerick blood corrupt in the Meſeraicks, it is the true cauſe of all intermitting fevers, they come and go, by reaſon of ſtoppage of the way to the Heart and thinneſs of the Vapors. The diverſity of them comes from the diverſity of the place and matter.

The matter of this putrifying cholerick blood is not alwaies the ſame, but as we ſee choller ſeparated from the blood, is now yellow, now green, and black, thicker or thinner, ſo is this divers in the Meſaraicks, eſpecially thinner or thicker.

Corruption of thin blood in the Meſaraicks cauſeth an intermitting Tertian exquiſite when pure. Nothus or Baſtard tertian when impure.

The Corruption of thin choller in this blood before it can cauſe a feaver, muſt be three daies after the firſt Corruption is diſcuſſed; hence it is called a Tertian, which comes every third day. And if as much be corrupted as before it comes at the ſame hour; or if more be corrupted, it comes one hour or two ſooner; when leſs corruption or matter for it remaineth, the fits are later and the feaver decaies. But as this chollerick matter is pure or impure, the courſe of the whol feaver and its fits varieth.

Pure Choler which is mixed with blood being hot makes an exquiſite Tertian: and becauſe the vapors are ſooner diſcuſſed the fits are ſhorter, and the feaver laſteth ſcarce ſeven fits by reaſon of the quick motion of the matter.

If it be impure mixed rather with crude than flegmatick humors and blood, it cauſeth a baſtard tertian, in which the fits are longer, more diſorderly and the fever longer, becauſe the matter is much and unequal.

Corruption of thick blood in the Meſaraicks cauſeth an intermitting quartan, or ſextan exquiſite or Nothus as the mater is pure or impure.

If the Choller be thick and burnt; becauſe it is longer corrupting, it requires a longer time to get to the Heart to make a fever, therefore the fit is not til the fourth day, and it is called a Quartan. This comes ſooner or later, is exquiſite or baſtard, hath a ſhorter or longer courſe for the ſame cauſe that a Tertian from which in heat and other accidents it is much different, only by reaſon of thickneſs of the humor it is longer and worſe to be abated. And if the matter grow ſo tough that it corrupteth not under five or ſix daies, to ſend up vapors that cauſe a feaver, then theſe feavers which are rare are called quintans or ſextans.

Theſe vary according to the place as the matter is in one or divers places.

If in the ſame it putrifie, the feaver is a ſimple-tertian or quartan, exquiſite or Nothus in reſpect of the matter.

If in divers places, it wil be either in the Meſaraicks only, or alſo in the branches of the hollow vein.

If

The cauſe of a double tertian or triple quartan, or confuſed, is when thin blood putrifieth in one place and thick in another place of the Meſaraicks.

If Choller corrupt in the Meſeraicks only not in one but two or three places about the Liver, Spleen, Meſentery or Caul, the feaver is double or treble, and one ceaſing another follows the the next day, or the ſame. Hence it is that Quotidians are, not as ſome talk from flegm though they cannot prove it, for they are double tertians or treble quartans, which have every day a fit or more, for I obſerved in a double baſtard tertian two fits in a day, and three in twenty four hours. And to theſe may the double quartanes (which come two daies and intermit one) be referd, and as theſe are when Choller of the ſame nature corrupts in divers places. And when the Choller is divers in divers places, as thick in one, thin in another, there are Tertians mixed confuſedly with Quartans divers daies. Theſe are known by their ſymptoms.

A ſemi tertian is cauſed by corruption of blood in the Meſaraicks and veſſels continued to the Heart, at the ſame time.

If blood corrupt not only in the Meſaraicks but Branches of the hollow Vein, then there is a continual with an intermitting feaver called a ſemi tertian; where in reſpect of the diverſity of the matter tertians or quartans, ſingle or double, baſtard or legitimate, are joyned with a continual feaver, that either hath no fits, or upon certain daies. Hence it is that the feaver is alwaies either with ſharpneſs from the continual, or fits from the tertian.

The antecedent cauſe of this corruption in the humors of the Meſeraicks which cauſeth fevers is either efficient or adjuvant.

The efficient is meat and drink by which hot, ſharp, chollerick or burnt juyce is bred in the ſtomach or firſt paſſages. This being long gathered nor wel ſeparated from the blood, but in the Meſaraicks or another place, or divers, when it corrupteth it cauſeth feavers agreeable to its humor ſhorter or longer, or otherwiſe differing. This juyce comes from food that hath ſuch in it ſelf, or gets it by corruption.

Theſe have ſharp chollerick juyce, Onions, Garlick, Leeks, Rotten Cheeſe, and like, naturally.

By corruption theſe turn into ſuch juyce, eſpecially in hot ſtomachs. Sweet things which eaſily turn into choler, and fat. Raw fruits, by eating whereof in Autumn come Dyſenteries or bloody fluxes from choller, and alſo quartans. Alſo other moiſt meats as Eggs and Milk, which nouriſh much, by corruption turn into ſharpeſt choller; of which this filth proceeding if it be not purged, it is carried into the Veins and, gets feavers, though the vulgar impute them to other cauſes.

The cauſe adjuvant is the diſpoſition of body in reſpect of conſtitution or ſeaſon.

They who are hot and chollerick are ſooneſt taken, and they of middle age, and Infants by intemperance, and have the matter from the Womb like black chollerick blood, and bring theſe feavers into the world with them. Somtimes they ſuck them from their Nurſe, as *March* 27. 1640. I had a Son born in the ſeventh month when the Mother had the third fit of a baſtard tertian, which had at firſt the feaver at the ſame time with the Mother, and two fits after, it had ſucked, and in the third with ſome light Couvulſions it departed being not fourteen daies old. Sometimes old men have them, but they are ſeldom. The hotteſt time of the yeer and when the diet is worſt, is the time to get Agues in Autum tertians and quartans are uſual by reaſon of the Summer Diet, in Spring and Summer, Tertians are frequent.

Corruption out of the Veſſels is the cauſe of gentle ſymptomatical Feavers.

Putrefaction out of the Veins and Arteries cauſeth feavers, when it ſends evil vapors or corruption to the Heart and afflicteth it with a ſtinking heat, hence come ſymptomatical feavers which follow a diſeaſe cauſed by this corruption. Theſe are gentle and unequal, becauſe the matter out of the veſſels, cannot ſend to the Heart ſo much as when it is in the veſſels, nor keep that order: theſe are quicker or ſlower to the taſt, as the matter is; either in a Natural or Pretertatural humor, or a Natural or preternatural body or part thereof.

Corruption of ſome humors out of the veſſels cauſeth gentle ſymptomatical Feavers.

When a few humors contained out of the veſſels corrupt without the putrefaction of the parts containining they cauſe putrid feavers. Some ſay all humors whether hot or moiſt being corrupted out of the veſſels wil cauſe it, but this we ſhal examin. Theſe are hot, *viz.* natural blood falling out of the Veins, and divers cholerick excrements, Theſe are moiſt, the wateriſh and flegmatick humor.

If blood flow from the veins into any part and cauſe inflammation it cauſeth only a pure ſymptomatical fever and not a putrid though it corrupt, except the part corrupt alſo. But if blood coming from veins open or broken congeal, and by continuance corrupt, eſpecially in great quantity, and in a place neer the Heart, as in the breaſt and Lungs, then putrid but gentle Fevers follow theſe Affects or Diſeaſes, but ſeldom when it is in the ſtomach or Guts, becauſe it cannot ſtay long there; or in the Reins or Bladder, becauſe the Urine waſheth it away.

If either that Choler which comes from the Meſaraicks into the Gall or Spleen to be purged as they ſay, or that which breeds in the ſtomach of things eaten; either corrupt in its own place or in another, ſome think it begets putrid Fevers if yellow, Tertians, if black, quartans, exquiſite or Nothus as it is pure or mixed. But we not obſerving any ſuch black Choler in the ſubſtance of the Spleen, and perceiving no Gall or Bladder to receive it, as there is for the yellow Choler in the Liver, and knowing that the uſe of the Spleen is more excellent than to be the Receiver of Melancholy, not finding any other black Choler than that which is made of the yellow, cannot be convinced, that ſuch a humor in the Spleen can produce either quartan or other Agues. And if they call the melancholick juyce corrupted ſo, and make it the cauſe of a quartane, we wil not grant that to be in the ſubſtance of the Spleen or elſwhere diſtinct from the blood whoſe dreg it is. But if they underſtand by it, the thickeſt part of the blood, in that they confirm our Opinion which teacheth that ſome of the blood in the Meſaraicks corrupting cauſeth intermitting fevers: becauſe Fæculent blood is rather in the great Veins of the Meſaraicks than in the ſmal of the Spleen by reaſon of the plenty of Arteries filled with thin rather than thick blood; In which Meſaraicks if corruption in the dregs of blood cauſeth quartans, as they grant, then they muſt confeſs that the cauſe of Tertians is from the ſame blood, but in a divers part as we ſhewed: But we do not affirm either excrementitious choler gathered out of the Veins, whether yellow, green, or black, to be the cauſe of intermitting fevers if it putrifie, in regard

gard it is a very hot and ſharp humor being in the Belly, eſpecially if it corrupt, or be heated more, and it cauſeth rather Colicks, Heart-pains, Vomitings and Cholerick fluxes by pulling the parts than Fevers, except by inflammation through pain there be a little fever which ſeldom follows theſe Diſeaſes. And if it be ſo hot it cannot ſtay ſo long, to raiſe corrupt vapors and ſend them to the Heart to cauſe a fever: but this being moved and hot by a feveriſh heat brings forth accidents that ſignifie Choler as we ſhewed, of which the fever is rather the cauſe, than Choler the Cauſe of of the Fever; which being naturally mixed with the excrements and corrupting with them and ſending ſtinking vapors doth not infect the ſuperior parts.

They ſay that ſuperfluous flegm in the Stomach, Guts, Meſentery and about the Bowels, corrupting cauſeth Agues called Quotidians, and if it be glaſſie or ſharp, Epiala's. And ſome ſay that the corruption of wateriſh flegm cauſeth a gentle Fever in Dropſies called Leucophlegm and Cachecticks. But how can flegm which is cold, get ſo much heat from putrefaction that it may produce ſharp and hot vapors, to cauſe Fevers, becauſe if it be long kept, and the part be hot, it wil turn rather ſlimy than putrid. And no Authors mention any kind of putrid flegm, moreover theſe Fevers anſwer to the three humors excrementitious as they ſay *viz.* to Flegm, Choler, and Melancholy. And there is another cauſe of Epiala in which heat and cold are both at a time. As for the wateriſh flegm that brings a Fever we ſhal ſhew (treating of the ſerum) that ſerum is the cauſe thereof and not flegm.

For as Serum or Whey waſheth the blood, and by its moiſture allay's the heat and the Choler in the Blood, in the Jaundies: So when it is mixed in the Meſeraicks with Cholerick blood putrified, in a great quantity it cauſeth lingring and long baſtard Fevers. But this Whey being ſeparated from the blood into the Abdomen that is Belly or Breaſt, or under the Skin, and there contained a long time corrupting, and turning, ſtinking, and ſharp, as we have often ſeen it green and ſtinking, when it hath been let out in Dropſies: It cauſeth little Feavers, eſpecially when it is near the Heart, being hot and thin, and corrupting the parts that contain it. Such Feavers are in Virgins that have the green ſickneſs, ſaith *Fernelius*.

Fleſhy moiſt Bodies, becauſe they eaſily corrupt, and ſo have a preternatural heat, beget putrid Fever cauſed by the humors, which are out of their veſſels whether they be Natnral as parts of the Body, or contained in the Body as a dead Child, or Secundine, or preternatural, as Worms.

Corruption of ſome parts cauſeth gentle ſymptomatical Feavers.

Corruption of ſome parts of the body, cauſeth gentle putrid Fevers, if any part of the corruption or Vapor from it get to the heart. And theſe are of long continuance eſpecially if there be corruption of any noble part or neer the Heart, by which means *viz.* the continuance of the Fever and corruption of the part, the body conſumeth. This corruption begins from ſome humor fixed and ſtinking, corroding or infecting the part. Or from an Ulcer or Impoſthume after Inflammation, or outward hurt, or a Vein broken: We ſhal ſhew the reaſon why this falling in ſome parts cauſeth Fevers, in others not.

In the Phthiſis or Conſumption the Lungs are uſually ulcerated, corrupt, and filthy, and conſumed for the moſt part, and the heart being conſtantly by their neerneſs infected, there is a gentle ſymptomatical Fever, which turns into an Hectick, which from the loſs of a noble part makes the whol body lean and deſtroyeth it.

Corruption of the Liver and Spleen, by reaſon their ſubſtance is alike, cometh from the ſame cauſes in both, which we find often after Death with great ſtink: and it brings lingring ſymptomatical Fevers which produce Atrophy and Cachexy, and the vulgar take to be Hecticks, from the want of blood, moſt uſual in Virgins and Children, ſuch Children may have at the time of ſucking and in the ſmal Pox when they refuſe drink, and want moiſture to cool them, the Liver growing hot, hard or ſwollen.

Corruption of the Reins cauſeth no conſtant Fever, becauſe it goes away by Urin: neither doth the body pine away, for if one Kidney be conſumed, the other wil officiate for it, & ſo a man may be long preſerved.

The Brain and the Heart, being noble parts, cannot be corrupted to produce a Fever while a man is living. Though Ulcers have been obſerved in the Heart, which have cauſed Death, before a Fever.

Alſo corruption in the Membranous parts about the Stomach, Guts, Bladder, and Womb, the Meſentery and Cawl cauſeth a lingring Fever. Alſo in any part of the body inward or outward, and the farther from the Heart, the corruption is, the more uneven is the Fever and intermitting.

If the Child in the Womb with the Secundine joyned by the Veſſels to the Womb be putrified, and continue til the Womb be infected, and other adjacent parts (as I have ſeen) there is a Fever of the ſame ſort, which diſturbeth the body after a divers manner and is long, if the Patient die not.

Corruption of preternatural bodies cauſeth lingring ſymptomatical Fevers.

Alſo preternatural things bred in the body, as Worms or Fleſh joyn to other parts, corrupting and infecting other parts produce the ſame Fevers which ſhake and conſume the body: but not except they corrupt; albeit Infants that have live Worms are feveriſh, and it is like a Synoch from an external cauſe, ſharp not gentle, and as that hath other accidents, ſo in this Children have Worms.

A great heat with a malignant quality ſtrikeing the Heart, gets conſtant malignant Fevers, and if it infect others, contagious; thus differing, as the heat comes only from malignity or corruption with malignity.

A malignant putrid heat cauſeth putrid malignant Fevers.

Corruption with a malignant quality, not only offending the Heart by it ſelf as we ſhewed in putrid Fevers, but with malignity, cauſeth malignant, and contagious but not peſtilential Fevers, theſe are in Infants in the Meazles and ſmal Pox, ſeldom in men: but in them it cauſeth common Epidemical Fevers without Bubo or Carbuncle, or great ſymptoms, but Head-ach and doting, which deſtroy. We ſhal ſhew how this corruption gets malignity and in what place, and what is the cauſe thereof.

The place in which this corruption is bred, is the ſame in which ſimple corruption is bred in the veſſels of the hollow Vein, or in the Meſeraicks, or without them; and it is as I ſhewed in the ſame humors and bodies.

Corruption of blood in the veſſels that go to the Heart cauſeth putrid malignant continual Fevers and of divers ſorts, from the ſame cauſes as other putrid Fevers are divers

If blood corrupt in the great veſſels of the hollow Veiu, and hath a venemous quality, which is communicated to the heart by the veſſels as we ſhewed in putrid Fevers, diſturbing it with ſtinking and malignant heat, it cauſeth

cauſeth continual Fevers, dangerous for two qualities. In which if Nature ſend any of that malignant blood into the pores of the Skin or the Membranes, it cauſeth Spots and Pimples ſmal Pox and Meaſles aforeſaid, but if not, nothing breaks forth, but ſome ſmall ſpots which declare the ſecret venom and Death. But then theſe Fevers differ in reſpect of the corruption and malignity which meet together.

The fevers that come from putrefaction of blood are like putrid Synochs and other continual Fevers, and as the blood corrupted was temperate or diſtempered, or is neer the Heart,or farther off,the ſymptoms are better or worſe, and the whol courſe of the Diſeaſe varieth. Hence ſome of theſe are like Synochs, and have no ſtrong Fits, as in Children of the ſmall Pox; when Nature ſends the filth forth, the Fever is milder. In malignant Fevers in men, if the Corruption be not great, and apear not in Urin or Blood, there is great heat, and accidents following. And if the Corruption increaſe, in an intemperate body neer the Heart or other princcipal part, then it begins with Horror and Heat as other continual Fevers and ſomtimes it is like a Cauſon or burning Fever in the ſymptomes.

From a malign quality joyned with Corruption, if it prevail and weaken the Heart, in regard Nature being hindered cannot valiantly and in order encounter the Diſeaſe,it happens theſe fevers whether leſs or greater or more hot, keep not a certain motion,nor time by which they are to be known. Yet ſomtimes they end with a Criſis. Thoſe like Synochs putrid end not ſo, but by filth ſent forth, as in the ſmall Pox.

Choler in the Meſeraicks, if it be malignant as wel as putrid, it produceth intermitting malignant Fevers, if it be green blew or black and venemous, Nature offended therewith, preſently labors to expel it by fluxes or Vomits, and a malignant intermiting Fever is ſeldom ſeen, but if it come by the long reteining of that malignity, thoſe Stools or Vomitings are deadly.

When humors corrupt out of the Veſſels, in regard they can ſcarce produce ſimple Fevers; If malignity happen, it begets not putrid malignant Fevers but ſwounings, Convulſions, and other accidents; and if there be venom which of it ſelf cauſeth Fevers without putrefaction, then it begets ſuch Fevers which may come only from malignity, of which hereafter.

The cauſe of this malignant quality in the blood joyned to Corruption, from whence theſe putrid malignant Fevers ariſe, is either from things about us, or things taken in and retained.

Air or other bodies about us, if they be not only unclean but malignant, and we receive the malignity by breath or touching to infect the blood, then it produceth theſe Fevers, eſpecially when the blood was foul before. When it comes from things about us, it comes from great changes, or exhalations.

Change of Seaſons or inordinate great and ſudden tempeſts, foreſhewed by Meteors going afore or then appearing, or demonſtrated rather than cauſed, cauſe theſe faults in the Air which produce theſe malignant epidemical Fevers like the Plague. Among theſe, is a wet ſpring with much Southerly Wind.

Exhalations ſtinking and venemous coming from the Earth, Ditches or Pools, and the excrements of living Creatures formerly infected, as ſweat, breath,bodies, pollute the Air to infect the body,and cauſe theſe Fevers, moſt common to them that live in the place from whence the ſeed of the infection ſprang.

Corrupt Diet which not only fouls the blood, but is malignant, if it offend the blood cauſed by it both waies, makes not only ſimple but malignant Fevers, ſuch as they have who have been in a Famine, as the Greek Proverb is, *After a Famine comes a Plague.*

Corrupt blood long retained in the body, as when it is ſent out of the Veins into ſome part, and turns venemous, cauſeth ſuch ſymptoms as they have who are ſtung with venemous Beaſts. Alſo Blood corrupted in the Veins and growing old where it cannot produce a Fever and malignant, cauſeth not only putrid Fevers, but malignant and ſpotted Fevers; theſe are in ſome men of impure conſtitutions when there is no epidemical Fever, that have been il diſpoſed a long time before. This malignity is known by the ſudden failing of ſtrength, ſpots and other ſigns of ſecret poyſon. Al ſo Infants though Nature preſently caſts forth the venom have ſuch Fevers from the ſame cauſe, by which they caſt off the filth of blood they brought with them, and after they renew their bodies by Scabs, and Itch, and other natural purgations. This came not only from the Mothers Courſes as they ſuppoſe, becauſe the Child is not nouriſhed in the Womb with impure but good blood, and the excrements gathered to the time of bringing forth, after the Child is born are ſent forth by ſtool not only red and green, but black. But there may be new corruption and venom from change of Diet.

A malignant heat is the only cauſe of malignant Fevers.

A malignant quality alone, and without corruption may cauſe a Fever peſtilential and venemous. This quality is ſeldom ſeen in the body, but a Corruption went afore it to which it is joyned, ſuch as hath power to ſtrike the Heatt as ſoon as it is taken, and to infect it and the whol body, ſpirits, humors and parts, getting Fevers like Ephemera's or Synochs, with great weakneſs alone, or joyned with other Diſeaſes. But theſe Fevers differ in reſpect of the Poyſon taken in. For there are divers ſorts of Poyſons which ſtrike at divers parts of the body, and afflict the Heart, and ſome inflame it and cauſe Fevers, and indeed we cannot declare what this propriety is, but we know by the effect that it doth ſo. We ſhal therefore make two kinds of poyſons which cauſe Fevers from the diverſity of the effects which they produce. The one we wil call manifeſt inflaming poyſon, the other ſecret peſtilent poyſon.

Inflaming poyſon is the cauſe of malignant venemous Fevers.

We conclude that there is an inflaming Poyſon from ſtinging and biting of venemous Beaſts which cauſeth venemous Fevers, from inflammation of rhe whol body, great Thirſt, Horror and Shivering, as *Nicander* and *Dioſcorides* deſcribe it. *Nicander* that the biting of the Serpent Dipſas inflames the Heart. Theſe Fevers are proper to them that are ſo ſtung, and have the aforeſaid and other accidents. In which if any part of the Venom be ſent forth by nature to the extream parts, there are blew ſpots in the Skin. And ſometimes there are Bubo's as in the Plague, as *Nicander* ſaith, when they are ſtung with the Serpent *Ceraſta*, and have great pain in both Groyns; ſomtimes where the ſting is and the poyſon entred,there is a Puſtle or Inflammation which ſhews the way by which the Poyſon entered.

Peſtilent Poyſon cauſeth Malignant Peſtilent Feavers.

A Peſtilent Poyſon of what kind ſoever cauſeth a Peſtilent Feaver: for there is ſeldom a Plague, without a Feaver, though in ſome it is diſcovered only by the Pulſe, this is deadly and contagious or the cauſe of Popular infection. It is manifeſt that this Peſtilent poyſon comes firſt to the Body from without, becauſe it ſtriks a Man ſuddenly. But when it invadeth pri-

vately we know not the place whence it came, being internal, except we ſuſpect ſome body that was infected, and near the Patient. Some ſay this Venom is in the Air, and gets into the Bodies therewith, either ſent from Heaven into it, or by change or exhalations, it is ſo corrupted, that it hath not only malignity to cauſe putrid, malignant Feavers, but alſo Peſtilence. But omitting many other Arguments: We ſhall conclude it not ſo from hence. That after great and long tempeſts, though there be other Diſeaſes, there is often no Plague, eſpecially where the Contagion of dead Bodies is avoided. And the Plague is many times, when no change of times, or Stars went afore, or is preſent, as in the year 1564. in that great Plague in *Germany* no man could accuſe the Air of Intemperance. But chiefly, if the Plague ſhould ariſe from a poyſoned Air, every Man that breaths therein, ſhould be infected, becauſe it is the Nature of Poyſons, that being contrary to us in their whole ſubſtance, they ſeaſe upon Bodies howſoever they are diſpoſed. This coming to paſs, that the Plague taking but here and there ſome that are in the ſame Air, we cannot conclude that it is in the Air and ſo communicated to Mankind. But it is more probable, that as other Poyſons are bred in ſome Bodies, from the beginning of the World, ſo this peſtilent poyſon is not only in ſome bodies infected, and others not feaveriſh as yet, but in their Cloaths, and ſo paſſeth from body to body, not only by touching but by the Air intervening; This Peſtilent Poyſon, taken by breathing in, preſently ſtrikes the Heart, and makes a Feaver in a moment; Or getting into ſome part of the Body, gets by degrees into the Heart by ſecret paſſages: Or ſtaying there ſomtimes infects the Body but not with a Peſtilent Feaver. But by this the ſame body or another may be infected ſooner or later.

Hence it is that ſome infected perſons flying from the place infected to another, where there is no infection, and there ſtaying, have the Plague after many daies, or infect others before they are themſelves infected therewith. As we know by experience, and *Fernelius* witneſſeth, that a Harlot that hath laien with a man that hath the Pox, hath not been infected herſelf, and yet hath given the Pox to another, And therefore we dare affirm that this Seminary Plague, lodgeth alwaies in ſome part of the world (as other Poyſons do) in ſome bodies and from thence goes into others, by the way we ſhewed. As we know the Pox doth, which came firſt from the *Indies*, and ſo crep from body to body to us, and is no where but in mens bodies. And it ſomtimes appears not in ſome places, and ſomtimes it doth, and is carried by men from one Country to another. So the Plague although it hath long been unſeen in ſome places, yet being in ſome bodies upon the Earth, it is derived in time into others, ſo that it is not neceſſary when we hear no news of it, to think it is taken out of the World, or that it is newly begot in the Air, when it returns. Although we deny not but that the Air may be infected, and may get into the body, as in Putrid Malignant Feavers was ſhewed: As the Plague may come from infected bodies by the Air, but that it took the beginning from the Air, we cannot allow for the reaſons mentioned. All which as they are probably to be found in the ſeat and original of this peſtilent Venom, ſo it is very difficult to explain how this poyſon goes from body to body, and why it infects one rather than another in the ſame place, in regard this is not done ſo plainly as in other poyſons but ſecretly: But it is eaſier to ſhew, why Fevers differing in nature, accidents and ſigns ſhould come from thence. All theſe happen either in reſpect of the Venom, or the diſpotion of the ſubject body ſo infected, or in reſpect of ſtrength.

The contrary effects which cannot come only from the conſtitution of the body affected ſhew that Peſtilent venome, is not all of the ſame nature: for ſome Plagues take all or moſt with one diſtinction, others only few; others kill all they touch: others are moſt of them cured. But we cannot deſcribe what lieth hid in the venome that cauſeth the variety and whence it comes.

To find out a fit diſpoſition of Body, ot of the Heart, as *Fernelius* ſaith, to receive this poyſon is as impoſſible as to ſhew the nature of it: becauſe men of all conſtitutions, and thoſe that are not only foul bodied, but pure and ſound are eaſily infected: ſo that no diſpoſition is required, or if any, it is difficult or impoſſible to be known, as *Fernelius* ſaith and we confeſs. And therefore in the former caſe and this, we fly to divine providence, which ſtirreth up this Plague here or there for the puniſhment of man, and ſends it to what place he pleaſeth, to kill thoſe he marked out, and to chaſtiſe others. Yet though we can no otherwiſe deſcribe this diſpoſition which makes men fit or unfit for the Plague, in regard the Peſtilent Feaver is not one and the ſame that comes from the venom, we can prove that it comes from the diverſity of the ſubject body that is affected. As fire burnes more or leſs according to the variety of the fuel, ſo when the Plague is in any body, it hath a different Feaver in reſpect of the different conſtitution.

If it gets into a temperate body (for it ſpares not ſuch as Children, Virgins, Youths and well habited bodies) it cauſeth ſomtimes a mild Feaver like a Diary, only the ſpirits being inflamed with the Heart, and then the heat and the accidents following are milder, nor is the Urin changed much.

If the Plague ſtrike a Sanguine or Plethorick perſon then it will be like a Synoch Feaver and the Spirits and Blood will be inflamed with the Heart: in which there is greater heat, and accidents as Head-ach, redneſs of Face and the like, that diſturbe the Patient grievouſly.

If the Plague ſeize upon Cholerick perſons, then by reaſon of the heat of the Heart, Spirits and Humors, there is with other Symptoms of heat, Vomiting, Stools, and other accidents from choller which are grievous.

Unclean bodies, eſpecially that have corrupt blood, and ſubject to Feavers, if they take the Plague, then it is putrid continual and Malignant with great heat and other Symptoms, and then are foul excretions by reaſon of corruption.

The reaſon why they who have the Plague are in more or leſs danger, is in the ſtrength as well as the poyſon, for ſtrong perſons oppoſe it more then weak. And this is the reaſon why ſome have ſpots and others none: for if nature be weak the poyſon will lie at the Heart and no tokens thereof appear. But if nature ſend it forth, then it inflameth every part it toucheth and burns it red, with pain and impreſſion under the Arm-pits, or Tumors under the Ears, or Carbuncles, which inflamed increaſe the Feaver. And when nature disburdens her ſelf by the pores of the Skin, there are Spots and Puſtles: Theſe are cauſed by the Poyſon ſent out by Nature: And are not ſent as markes or tokens, as ſome call them, of the Plague, at its firſt entrance: for though ſome appear at the firſt, Nature doth cauſe it by expelling from the Heart that which ſo ſuddenly ſmore it: except a Puſtle come by touching of a dead body infected, as I once had in my hand, but

when

when I felt the pulſe of a man in a mortal ſweat, that died of the Plague; and both I and my Chirurgion that was with me had a puſtle in our Feet which ſuddenly vaniſhed and though we were infected we had neither Feaver nor any other inconvenience. And in the year 1634. I touched the pulſe of a ſweating man dying of the Plague, and preſently after I had black ſpots from my middle Finger and the outſide of my Hand to my Wriſt; yet they preſently went away after I had waſhed my Hands with Vinegar and Treacle. And Bubo's come in the Plague ſomtimes, not from the poyſon ſent to the Emunctuaries, but from the heat and pain of ſome Carbuncle that is near, as in other Inflamations: Yet ſomtimes they come from both cauſes, and there are divers in the ſame, or divers places, and theſe being inflamed and brought to ſuppuration joyn a new Feaver to the former. I have by long obſervation found out theſe things, having ſix times been a practiſer in the time of great plagues to the end of them, and been conſtant to my patients, and therefore I declare them for Favor of no man, but for Love of the truth.

Heat fixed in the Body, is the cauſe of Hectickes.

A fixed conſtant heat in the Heart and other parts, not mutable or that called fire by the Greeks, which comes and goes without change of temperament, (the parts that were hot returning to their former ſtate) as *Fernelius* ſhews may be in the ninth Chapter of his Book of temperaments. But when the temperament and proportion of the Elements to uſe the words of *Fernelius* are turnd hotter and dryer, ſo that the heat can ſcarſe be removed or the temperament changed, then Feavers will be continuing long and conſtant, never to be cured. Hence they are called Hecticks, becauſe they are in the habit of the body, called in Greek ἕξις and cannot be eaſily removed, as habit is not eaſily taken away; And in regard the heat in them is not fiery, as in other Feavers, but a change of the temperament into more hot and dry, as I ſhewed: thefore they ſcarce feel the heat, although all ſimilar parts of the Body are changed and dryer and hotter to the touch, and the Heart is perceived to beat quicker and harder. This heat is not alwaies alike, but when the body is more inflamed, as after meat, which they alwaies perceive, or violent motion and other cauſes, it is increaſed with the pulſe and motion of the Heart. Alſo the Conſumption called Maraſmus which follows theſe Feavers, is not the melting of the body by violent heat, by which means they ſay ſome pieces of the body come away by Urin, but falſly, for that is only from the foulneſs of the Reins and Bladder, and otherwiſe in the moſt burning Feaver the parts cannot be ſo roaſted and melted. But this leanneſs comes from the temperament of the ſimilary parts turned hotter and dryer by reaſon of the heat of the Heart. And this is the reaſon why they are not rightly nouriſhed, but fall and pine away in a Conſumption.

Another Feaver going before it, is the cauſe of an Hectick, becauſe the heart cannot looſe its temperament ſo much from any other cauſe then the heat of a violent Feaver, which by its ſtrength and continuance may at length change the Heart. Hence it is that theſe Feavers come ſeldom from a ſimple and pure heat and Diary Feavers. But if they end not in an exact time as they uſe to do, and turn not into putride, they turn into Hetticks. But more uſually they come from putrid Feavers alone or Malignant, which laſt long, eſpecially when the Heart hath been long ſcorched, and after quenched and then Diſtemper remain, which cauſeth a long Hectick which conſumeth the Body, when the burning Fever is gone. This is not that Fever which while the burning Fever remaineth, ſo broyleth the Heart by its violent heat, that the whole body is ſuddenly conſumed which is called, A melting Hectick. Alſo Hecticks may be produced from long intermitting burning Fevers after the ſame manner. And *Fontanonus* teacheth, that they may come of continual Fevers when a ſemi-tertian abides long. Alſo from other putrid Fevers though gentle, if long, and heat the Heart conſtantly, may a gentle Hectick follow gentle and lingring putrid Fevers, as in Cachecticks and Conſumptions, becauſe the Cauſe is more neer the Heart. Alſo they begin and are joyned with Putrid Continual Fevers which are known as we ſhewed, by the accidents of the aforeſaid Fevers ſtil continuing, and a greater Conſumption then was in Putrid fevers; As when an Hectick is joyned with an acute Putrid, Lingring, or Intermitting; This is cauſed by the diſpoſition of the Heart, if it be by nature too hot which grows ſooner hot and dry by the fevers aforeſaid. And by a Heart that is tender and quickly receives other heat which deſtroies the Natural. For this cauſe yong Children have often Hecticks, not only after a long but a Diary fever.

The Cure.

The general Cure of all Fevers the Indication being taken from the Diſeaſe is moiſtening and cooling becauſe they are hot and dry. But becauſe the heat is not alwaies the ſame in every kind of Fever, and the cauſes divers, the Cure muſt be divers. The chief kinds are ſolitary or alone Fevers without another Diſeaſe, and theſe are ſimple or compound; or accompanied with another Diſeaſe. The Cure differs according to the Cauſe of theſe three kinds of Fevers.

They are ſimple ſolitary Fevers which are of one kind, under which are divers ſorts in reſpect of the divers Cauſes, for which the Cure is different. When they come from a ſimple or ſingle heat, they are pure and ſingle called Ephemeral and Synochs; when from a putrid heat, they are Putrid, Continual, and Intermitting: When from a malignant heat, they are Putrid, Malignant, Peſtilential and Venemous. When from a fixed heat, they are Hecticks. To theſe eight kinds we ſhal preſcribe particular Cures.

The Cure of an Ephemeral Fever.

An Ephemeral Fever Pure, Single or Alone, ends of it ſelf many times the firſt day before twenty four hours paſs, and brings no danger. If it continue longer by ſome error or greatneſs of the Cauſe, it turns to a Synoch, ſeldom to a Hectick: To prevent which they muſt be thus ordered by Altering and Evacuating means.

For the Evacuation of the matter which is thin, and and ſooty, and diſſolves and breaks forth by heat increaſed, by the pores inſenſibly or Swear, we ſhal help Nature thoſe waies, for ſhee wil of her ſelf do it, if ſhee be not hindred.

By keeping the body warm, leſt the Vapor be ſtruk in.

By giving no meat before the Fever decline leſt we hinder Natures motion, or very little and that when the body is weak.

By giving to drink ſometimes ſuch things as help tranſpiration or ſweat as we ſhal ſhew in the Synoch accompanied.

If the Belly be looſe there is leſs danger of its turning

ing into a Synoch, this is better done by Clyſters and Suppoſitories than by other means.

If the Fever come from a Surfet, or Wine eſpecially, a Vomit wil not be amiſs.

Altering things, in regard the heat is ſmall, are not many. If the Air be too hot in the Chamber, it muſt not be too much cooled but qualified, leſt we increaſe the Fever by ſudden ſending the heat to the Heart, or by ſtopping tranſpiration or ſweating. And we refreſh them with moderate drinking, if they thirſt, by which they wil ſweat better.

The Cure of a Synoch not putrid. A ſimple pure Synoch if it be alone, although the heat be great, if it be wel ordered departs the third or fourth day at the fartheſt without hurt either by tranſpiration or Swear. If not, it turns to a Putrid or a Hectick. But uſually when ſome blood gets out of the Veins, it produceth Eryſipelas, Bubo, or inward Inflammations, as we ſhal ſhew in treating of Synoch accompanied.

To prevent theſe betimes while the the Fever is ſolitary, eſpecially leſt Inflammations ſhould ariſe which are very dangerous, we ſtudy ſpeedily to quench the blood, and keep it from going out of the Veins, and diſcuſs whatſoever is turned into Vapors, and to correct the greateſt accidents, By the things following, obſerving the conſtitution whether it be ſanguine or cholerick.

Blood-letting is the firſt thing to cool that Inflammation, and to draw it from falling into noble parts, and cauſing dangerous Inflammations (*Fontanonus* therefore ſaith it muſt be done quickly, and by ſo ſaying, he affirms my Opinion that theſe Inflammations go not before but follow a Synoch) Therefore in plethorick perſons it muſt be done ſpeedily, if it were omitted the firſt day expecting an Ephemera, the next, becauſe the Fever remaining concludes it to be a Synoch. And a general Vein opened, and a great quantity taken away, even to ſwounding in ſtrong plethorick perſons, as *Galen* ſaith. Or which is ſafeſt it muſt be done often. In cholerick and yong perſons it muſt be uſed ſparingly, if there be danger of Inflammation I fear not to open a Vein in a Child of ten yeers old.

Purging is to no purpoſe, becauſe it takes away none of the Cauſe, and only inflames the body. But before blood-letting it is good to looſe the Belly, By a Clyſter is the quickeſt way, and it alſo cooleth. Thus, Take *of the four emollient Herbs, each one handful; Lettice half a handful, Barly a pugil,* boyl them, add *Caſſia one ounce, or juyce of Beets and Lettice each half an ounce; Honey, Butter, each an ounce*; with a little *Salt* make a *Clyſter*. And this may be given again after bleeding if the body be bound.

Or give two ounces of Syrup of Violets or Roſes with water, or ſimple Diaprunes, or other gentle Electuaries, by which the Cacochymie or evil juyce is diminiſhed. If Nature be accuſtomed to it, and tend that way, a Vomit may be allowed, eſpecially if the Fever come from a Surfet of Wine, or Eating, or the like. And if Choler be hot and troubleſome in the Stomach it will help much.

We give alſo things to quench the heat of the blood, or allay it; and to thicken it that it may not get out of the Veins eaſily, theſe are actually or potentially cold; and ſuch as keep away putrefaction, which blood inflamed is eaſily turn'd into, to prevent a Putrid Synoch. They are ſharp, or ſour things which do both cool and hinder Putrefaction, and are excellent when Choler is much inflamed. Alſo they take away the bitterneſs of the Mouth and Thirſt. Theſe are in divers formes,

Drinking of cold water is good to allay the heat of Blood. This done in abundance to ſatiety, and blood-letting till they faint, was accounted ſufficient for the Cure. But cuſtom and conſtitution muſt regulate the quantity of theſe.

Crude or boyled Water, with Barley, a little Vinegar, or Juyce of Pomegranates, Lemmons, or the like, to ſharpen it, is good to be given inſtead of Drink.

Alſo diſtilled Waters of Purſlane, and Sorrel, with the Decoction of Barley, or the Decoction of Lentiles which is beſt when an Eryſipelas appears to ſend the matter forth.

Alſo Juleps of Syrup of Currants, Pomegranats, Lemmons, Sorrel, Citrons or Jujubes, are good mixed with Waters to thicken the blood, as thoſe uſual of Roſes, Violets, Maidenhair.

If the Belly be bound Thus. Take *Syrup or Julep of Violets* (the one is made of the *Juyce*, the other of the *Water* of Violets) *each one ounce and an half; Syrup of Ribes or Currans one ounce, Barley water ſix ounces, Bugloſs and Sorrel water, each two ounces*; make a *Julep*, with a little *Cinnamon* or *Galangal* to ſweeten it.

If the Belly be too looſe. Take *the Alexandrine Julep or Julep of Roſes* (which by reaſon of the Roſe water aſtringeth, the Syrup looſen) *two ounces, the Decoction of Barley four ounces*, drink often.

You may give a ſpoonful or two of the ſyrups aforeſaid.

Put Oyl of Vitriol ſome drops in Water to make it ſharp for a Julep. And the Chymiſts commend in theſe fevers the Spirit of Niter, and the Salt called *Lapis Prunella* or Cryſtal Mineral in cold or diſtilled water in a good quantity.

You may give Conſerves thus. Take *Conſerve of Roſes one ounce, Conſerve of Sorrel and Barberries, each half an ounce; Candied Citron peels half an ounce*, with *Syrup of Barberries*.

Or thus. Take *Conſerve of Roſes, Sorrel, Barberries,* (if the Belly be looſe) *each two drams; Coral one dram, red Sanders half a dram*, with *Sugar of Roſes*, make a *Conſerve*.

We alter by external Remedies to the Heart, Liver, and Reins that are cold, by conſent of which parts all the body is cooled.

To the Heart with this Epithem. Take *Roſe water three ounces, Bugloſs and Burrage water each two ounces, Vinegar of Roſes half an ounce, Juyce of four Apples and Lemmons, each two drams; red Sanders a dram.*

To the Liver with this. Take *Endive and Sorrel water, each three ounces; Vinegar of Roſes half an ounce, Spikenard a ſcruple*, mix them.

We anoynt the Reins with *Galens* white Cerote or Oyntment of Sanders.

It is good to bath in ſweet water in the declining of the fever to refreſh and to diſcuſs the Reliques, if after you anoynt with Oyl the whol body or Backbone.

Friction or Rubbing is alſo good in the declining of a fever to diſſolve the Vapors raiſed from the hot blood, if it be gentle with a hot Cloth, and anoynt the body with Oyl of Chamæmel.

Sleep Refreſheth, takes away Thirſt, and provokes Sweat.

For correcting the accidents, let the Diet be thin and nouriſhing to ſuſtain ſtrength, as Barley-Cream, Ptiſans, Almond milk, boyled fruits, with other Cordials to reſtore the Patient.

Let Head-ach, Watching, Doting, Thirſt, Drineſs, of

of Mouth, Roughneſs of Tongue be amended as we ſhewed how. But if the the former things be rightly adminiſtred they ceaſe of themſelves.

The Cure of Conſtant putrid Fevers.

A Continual ſolitary fever though it hath divers kinds as a Continual Tertian, Quotidian, Quartan, and that called inordinate which is moſt uſual, and a putrid Synoch and Cauſon, yet becauſe their Cauſe is the ſame, that is blood corrupted in the Veins, though the ſpecies or kinds are different in reſpect of the place and blood, we ſhal ſpeak of the Cure of them altogether becauſe moſt if not all the Remedies may be applied in part to every one.

As for the Prediction, in regard *Hippocrates* ſaith the Judgment of acute Diſeaſes, meaning Fevers is uncertain, we muſt not raſhly pronounce Health or Death. But we may declare danger or good hope by obſerving ſigns and accidents, and chiefly the Critical daies, and among them thoſe called Indices or declaring daies, to foretel what will be (from the ſigns) in thoſe daies following good or bad, from whence as the Ancients did, ſo can we with warineſs pronounce ſomthing, all things diligently conſidered: for if the Criſis ought to tend to the beſt, which leads to health, upon the directory day good muſt happen, which is the ſeventh of the firſt week, & the fourteenth of the ſecond, and the twentieth not one and twentieth of the third. And after in the ſame order the twenty ſeventh, thirty fourth and fortieth. Theſe are indicated by the fourth the eleventh, and ſeventeenth and the reſt, alwaies going before them three daies, and therfore are called Indices. If the Criſis or Judgment ought to be for the worſt, which brings Death, the Directory fals upon an evil day, which is the ſixth or eighth or tenth or twelfth: that is an uncertain Criſis in which the fever abates not at all, and therefore called Imperfect or doubtful, tending to good or evil at its return. This is often the third, fifth, or ninth day. But the Prognoſtick ſigns and accidents by which we judg of the event of fevers are theſe chiefly that follow.

The Urin is to be obſerved all the courſe of the fever, becauſe the matter is in the Veins, and therfore it is much changed. If it be Saffron-like, or high as Gold, it ſhews heat, or purging of Choler by Urin. Black ſhews greater heat and danger, except the melancholick humor ſent forth by a critical evacuation cauſe it. If it be thin, of what color ſoever, or crude it is worſe than thick, if it be perſpicuous or to be ſeen through, whether thin or thick it is good, becauſe it is neer to the natural. Troubled Urin portends no ill, if it come ſo from the cold Air external, becauſe that which is concocted is uſually ſo. if it be piſſed ſo it is evil, except it be critical or a natural diſcharge; a ſediment in the Urin is good if it ſtay at the bottom, and together, not diſperſed, equal, white, and thickiſh, eſpecially in a critical day. That Urin which is otherwiſe is worſe.

The pulſe doth declare chiefly the heat and ſtrength, which the oftener and quicker it beats, eſpecially in the Diaſtole or dilatation ſhews greater Heat: And as it is ſmall or great declareth the ſtrength. An unequal, intermitting, creeping Pulſe ſignifies no good.

Difficult Breathing ſmall and ſtrained is not good.

Sweat which the Patient liketh, and wetteth the whol body, and is hot, is good. If it ſtink and come in due time, it is not hurtful. Cold ſweat is ill and a forerunner of Death.

Much Piſſing is good, and in a good Critical day takes away the Fever.

Bleeding at the Noſe and Courſes coming unſeaſonably do not eaſe, but coming critically cures the fever.

A Looſneſs, or Diarrhæa following, except it help to take away ſome of the cauſe, weakneth and is dangerous. And black ſtools ſhew malignity.

If the ſharpneſs of the fever be conſtant and the body burning continually, or if it be dayly, or twice or thrice in fevers called inordinate and quotidians, it is dangerous.

Toſſing of the body, reſtleſsneſs, caſting off cloaths, and going to the feet, as *Hippocrates* ſaith ſhews the greatneſs of the fever and loſs of ſtrength. If Sleep cauſe trouble it is an ill ſign according to *Hippocrates*. When the Temples fall, the Noſtrils are ſharp, the Tongue dry and black, the outward parts cold, they are evil ſigns. And a ſudden conſumption of the body ſpoken of in a melting Cauſon.

Long and often Swounding, Hiccupping, Sighing continuing, Convulſion and Carus, are perverſe and deadly accidents.

The Cure of continual putrid Fevers.

Though Nature cures continual putrid fevers, which only doth it ſomtimes, yet by the help of a Phyſitian ſhee doth it better and ſooner. If any part of the cauſe which maketh it, or increaſeth it, be evacuated, and the heat altered, and the ſtrength be preſerved to the ſtate and criſis: Let us take away ſymptoms, if they remain, and be violent which is done by divers means.

Things that Evacuate the Cauſe which produced, nouriſheth and increaſeth fevers, comprehend by blood-letting, evacuation of *Humors* and *Excrements* by ſtool Urin and Sweat.

Bloodletting (except hindered by fear of Swounding and weakneſs, which appears in a ſwounding fever by the moving of the Choler in a Diarrhæa) is the the chiefeſt means to abate the Cauſe and the Accident.

It wil take away the cauſe, to open any apparent Vein in the Arm. This is a principal Remedy, becauſe the Cauſe lurketh in the Blood, and in the branches of the hollow Vein, from whence the blood is drawn: for with the blood ſome corruption is taken away, as we may plainly ſee at the firſt bleeding, for nature throws ſome of the cauſe of the Fever into the great Veins in the skin, which makes them ſwel where it is moſt: and perceiving this at the firſt opening of the Vein, I ever thought it beſt to open the Vein which ſwelled rather than another, becauſe they all come in one place from the hollow Vein againſt the Throat, and the Chirurgeons may uſe this obſervation rather than thoſe of the the ſigns in Heaven. Alſo hereby is the Heat abated.

The time for bleeding is the beginning of the fever, to hinder the increaſe of the Diſeaſes, and to take away ſome of the Cauſe while there is ſtrength. And if it be neglected at firſt, it may be done in the increaſe. But in the ſtate and heigth, which is ſomtime ſooner or later, we muſt avoid it leſt we hinder the motion of Nature: For as *Hippocrates* ſaith, if any thing be to move, let it be moved in the beginning, but when the Diſeaſe is at a ſtand, be quiet.

The quantity of blood muſt be taken according to the cauſe and the Diſeaſe. As for the Cauſe, if the blood be foul let it run, if not, ſtop it ſooner. And if the foulneſs was not ſeen when it ran forth being hot, as it appears when cold and congealed, at it again if need require, and again if there be no hinderance and the ſtrength permits. In reſpect of the Diſeaſe, meaſure

the blood alſo: in a putrid Synoch, or in a ſimple, which is in a Plethorick body looſe much blood, And in a Cauſon or burning Feaver, by reaſon of great heat although they condemne it, who ſuppoſe it to come from pure choller which we deny. In other Feavers as the heat is more or leſs, bleed more or leſs obſerving the conſtitution and ſtrength.

The accidents removed by bleeding, are Head-ach and Doting, which are uſual in theſe Feavers, and the vulgar obſerve moſt. In which, becauſe the matter is carried to the Head after a general Blood-letting, bleed at the Feet, and ſcarifie in the extream parts, to make revulſion. And to derive the matter, open the Vein of the Fore-head, eſpecially in a Delirium or under the Tongue, eſpecially when you fear Inflammation in the Neck, Jawes or Tongue: Alſo Scarification is good in the Neck and Shoulders.

Somtimes we purge the Humors and Excrements to prepare and remove the cauſe that nouriſheth increaſeth and alſo produced the Feaver.

The cauſe may be the retention of Excrements in the Guts and Stomack.

Theſe may two waies hurt, firſt if they be many the Veins being empty by bleeding, take filth from the Meſeraicks which they drew from the Guts. Therefore before blood-letting we looſen the Belly: Secondly, if we will purge humors, and the Excrements of the Belly be not firſt cleanſed, nor the body as *Hippocrates* ſaith made fluid, the Medicine will be hindered by them and take leſs of the reſt away. And therefore we give Laxatives afore purges. But thirdly and chiefly, in regard there are divers putrid and chollerick Excrements in the Belly, if they be long kept, by their ſtinking vapors they will increaſe the heat of the Heart or the parts near, which they can reach unto (for as we ſhew'd they cannot come to the Heart) and ſo make the Feaver and its Symptoms, eſpecialy thirſt and Head-ach greater. Therefore it is good to prevent coſtiveneſs all the time of the Diſeaſe with giving Laxatives: Such as may cleanſe and not inflame; temperate and moiſt and cooling. In theſe following forms.

Clyſters work ſooneſt, and are beſt, and therefore we give them before bleeding, which muſt not be delayed. Theſe by moiſture waſh the Guts, and provoke not, nor inflame, as things given at the Mouth, and they bind not after, as uſually they do. And they may be given the whol time of the diſeaſe, if there be coſtiveneſs by reaſon of heat, when we dare not ſtir up nature with other things, as in the ſtate of the Diſeaſe.

Make an eaſie looſning moiſtning, cleanſing cooling Clyſters thus: Take *Barley and Bran, each a pugil*; *Mallows, Violets, each two handfuls*; *Houſleek three or four leaves*: boyl them, and in a pint diſſolve *Honey two ſpoonfuls, Salt butter three ſpoonfuls, juyce of Beets one ounce*: Make a Clyſter.

The following is more pricking and cleanſing. Take *the four Emollients, Blites, Spinach, Beets, Cole, Lettice, each an handful*; *Marſh-mallow roots one ounce, Pellitory and Mercury, each half an handful*; *Prunes ten, Linſeed half an ounce, Gourd ſeeds half an ounce bruiſed*: inſtead of *Cold ſeed*, which are uſually muſty, boyl them and in a pint diſſolve *red Sugar and Honey, each one ounce*; theſe cleanſe and reſiſt corruption, *Oyl of Violets three ounces, two yolkes of Egs, Caſſia or Diapruns ſimple one ounce, Turpentine of the larke Tree*, diſſolved with the *yolk of an Egg two drams*, this is moſt pricking, with a little *Salt*: Make a Clyſter.

When you will cool more, as in a Cauſon: Take *the Emollients Lettice, Purſlane, Houſleek and Endive, each one handful*; *flowers of Violets, Water-lillies and Barley, each a pugil*; *Gourd ſeeds half an ounce, Melon ſeeds two drams, ſweet Prunes ten*; boyl them and in a pint diſſolve *red Sugar one ounce, Honey of Violets one ounce and an half. Caſſia half an ounce, juyce of Lettice an ounce*, with a little Salt make a Clyſter.

If the party be flegmatick or old and the Feaver not violent, ſuch as they called a Quotidian continual, then chooſe more temperate things, and mix gently hot things and more abſtergents or clenſers: Thus, Take *Mallows, Pellitory, Mercury Beets, each one handful*; *Barley and Bran a pugil, Rayſons and Figs, each twelve pair*; *Fennel and Carua ſeed, each one dram and an half*; *Cordial and Chamomil flowers, each a pugil*: boyl them and in a pint diſſolve *Honey of Roſes and red Sugar, each two ounces, juyce of Beets or Mercury one ounce, Oyl of Chamomil and Violets, each an ounce and an half, with a little Salt*, make a Clyſter.

Suppoſitories may be inſtead of Clyſters if they cannot be given, theſe will provoke nature to thruſt out the Excrements: the common is that of Honey and Salt; or that of Figs or yolks of Egs and Salt, or a Sugar Violet comfit for Children.

Things are given to looſen before bleeding and purging. Thus,

In a Bolus: As, Take *Caſſia new drawn, pulp of Tamarinds, each half an ounce*; *with Sugar or without it*: make a Bolus.

Or: Take *Diacatholicon, Diaprunes ſimple, each three drams*; *with Sugar*: make a Bolus.

In a Potion: Thus, for the Delicate ladies; Take *Manna one ounce and an half*: give it in Peaſe broath.

Or: Take *Damask Prunes ten, Rayſons ſtoned half an ounce, Dates four, Cordial flowers one pugil, Gourd ſeeds half an ounce, Melon ſeeds bruiſed two drams*: make a Decoction, diſſolve *Caſſia, ſyrup of Roſes ſolutive, each half an ounce*: make a potion.

In hot and cholerick perſons: Thus, Take *ſyrup of Roſes ſolutive and Violets, each one ounce*; *Caſſia new drawn one ounce*; give it.

Theſe may be repeated if the Belly be bound at any time.

Or this which I uſe: Take *Syrup of Roſes ſolutive and of Violets, each three ounces*, give it in boyled water like a Julep for conſtant drink: abſtaine from it, if by rumbling of the Belly, or the like ſigns, you fear a Flux.

If crude Humors are in the Stomack, uſe the ſame gentle Medicines, eſpecially becauſe then there is inclination to Vomit, and if Choller, great thirſt and bitterneſs of taſt, and nature muſt be helped to caſt out her enemy: by tickling the Throat, or with gentle Vomits which looſen and cleanſe and cool.

As this: Take *a draught of warm Water, and a little Vinegar*.

Or, Take *warm Water or fat broath, with ſyrup of Vinegar or Oxymel one ounce and an half, common Oyl one ounce*.

Although bleeding takes away the filth which is the conjunct cauſe of a Feaver, the beſt, yet becauſe that Evacuation may be made from the Veins thereby we may provoke ſtools, Urin and ſweat alſo.

We uſe purges to cleanſe the Guts and Stomack and alſo the firſt Veins which cauſeth corruption in the other: for nature by them provoked draws preternatural Excrements from the ſecreteſt places to the ſink. Therefore after Laxatives and the next after bleeding when the diſeaſe is urgent and the matter turgent, and needs no more preparation, we give purges: Somtimes after the Feaver hath been ſome time, after a

prepa-

preparative: But we aovid ſtrong purges that are hot, or we qualifie them that they ſtir not the Body too violently nor enflame. And though practitioners uſe not divers purging Medicines in intermitting and continual Feavers, yet becauſe in the well daies when the feaver is abſent we may uſe ſtronger then in a continual Feaver. And we muſt alter the purges according to the nature of the Feaver, and moderate them in continual Feavers.

In a Cauſon called a burning Feaver, they muſt not be hot but qualified. As: Take *damask Prunes ten, Raiſons ſtoned one ounce, Sebeſtens twelve, Tamarinds one ounce, Dates four, Cordial flowers, each a pugil: the great Cold ſeeds, each an ounce, of the leſſer Cold ſeeds, each half a dram*: boyl them, add if you pleaſe *Endive and Lettice water to abate heat*, and diſſolve *Manna* (which they ſay being thus mixed turns not ſo ſoon into Choller) *Caſſia each half an ounce*; (this ſomwhat ſharp like Tamarinds and therefore excellent) *ſyrup of Violets one ounce, or of Roſes and Violets, each half an ounce*: make a Potion.

Or thus ſtronger: Take *Caſſia newly drawn and Tamarinds pulped, each half an ounce*; *Electuary of juyce of Roſes two drams*; make a Bolus: or diſſolve it in broath or Barley water.

Or: Take *Diaprunũ and Electuary of the juyce of Roſes, each one dram and an half*; *ſyrup of Violets one ounce, with Barley or Endive*: make a Potion.

After theſe Scammoniate Medicines, give *an ounce and an half, of ſyrup of Violets with Endive water* to qualifie them, or after the purging to hinder the increaſe of heat.

Some deny Rhubarb becauſe of its binding but that is not to be feared, if it be infuſed.

Take *Syrup of Violets one ounce and an half, of Roſes ſolutive one ounce, Rhubarb infuſed in Endive water and ſtrained half a dram*: make a Potion.

Or thus: Take *Rhubarb four ſcruples, Spickuard one ſcruple*, infuſe them in *Endive water and Whey*, diſſolve therein *Manna one ounce, Caſſia ſix drams, ſyrup of Violets one ounce*: make a Potion.

In a putrid Synoch and a ſanguine Conſtitution uſe the ſame. Or this: Take *Rhubarb*, infuſed in *Endive or Sorrel water four ſcruples, Citrine Myrobalans*, infuſed in *Whey three drams*, ſtrain and add *ſyrup of Roſes Solutive two ounces*, for a draught.

In Tertians and Cholerick bodies take of hot and ſtrong purges for fear of a Diarrhæa, therefore beware of Scammonials and uſe the aforeſaid mentioned in a Cauſon, which provoke Choler. As take the Decoction of looſning flowers and fruits, as much as is fit thus made: Take *Prunes ten, Tamarinds one ounce*; *Sebeſtens and Jujubes, each ten*; *Raiſons one ounce, Dates five, flowers of Violets, Bugloſs and Borage, each one pugil*; *Gourd ſeeds half an ounce*: infuſe in this Decoction, *Rheubarb four ſcruples, Citron Myrobalans two drams, Spike one ſcruple*, ſtrain it, and add *Caſſia half an ounce, Manna ſix drams*: make a Potion.

Or thus: Take *ſyrup of Roſes ſolutive, with the infuſion of Rheubarb one ounce and an half*, diſſolve it *with Bugloſs or Endive water*.

Or: Take *ſyrup Diaſereos* (which hath many cooling and opening things) *one ounce and an half*: diſſolve it as afore.

Or thus, to provoke Urin alſo: Take *Succory, Graſs and Aſparagus roots, each two drams*: infuſe them in ſharp Wine: *Endive, Burrage and Sorrel, each one handful*; *Tamarinds one ounce, the three Cordial flowers, each one pugil*; *Senna three drams*: make a Decoction, diſſolve in the ſtraining *ſyrup of Violets and Roſes ſolutive, of each one ounce*.

Or thus: Take *Diaprunũ Lenitive, and Caſſia, each half an ounce*; *Electuaries of the juyce of Roſes two drams, with Sorrel, Bugloſs and Violet water*: make a Potion.

To Cure quotidians we give things that purge flegm, but in regard theſe Feavers do weaken much you muſt purge warily, with the things aboveſaid rather then ſtronger: Yet in flegmatick Conſtitutions: Take *Agarick one dram, Carthamus ſeeds skin'd three drams*: ſteep them in *Oxymel, Endive, Violet, and Maidenhaire water*, add *Catholicon one ounce*: make a Potion.

Or thus: Take *Aggregative Pills two ſcruples, with Endive water*; make Pills.

In continual quartans, add things againſt Melancholly: As, Take *Rhubarb four ſcruples, Indy Myrobalans two drams*, infuſe them in *Whey*, and diſſolve that ſtraining with a Decoction *of Mercury one handful, Epithymum two drams, Senna three drams*, add *ſyrup of ſweet Apples one ounce*.

Before the ſtate of the diſeaſe, or when after an imperfect criſis, the Feaver is not gone, you muſt again purge, diligently obſerving: firſt whether nature endeavor to evacuate by any other way, as Bleeding, Urin or Sweat, if ſhe doth not before the ſeventh day, or ſhew ſome ſigns thereof, purge again and open obſtructions.

Thus: Take *Rhubarb four ſcruples, Myrobalans chebs and Indies, each one dram and an half*: infuſe them in *Endive, Wormwood water and a little white Wine*, then ſtrain and add *ſyrup Bizantinus, ſyrup of Roſes ſolutive, of each one ounce, or with the infuſion of Senna half an ounce*: make a Potion.

Or thus: Take *Diaprunũ lenitive ſix drams, Electuary of juyce of Roſes two drams, ſyrup of Roſes ſolutive one ounce*, with the Waters aboveſaid or the common Decoction.

Or thus in ſtronger perſons: Take *Aggregative and Pills of Rhubarb, each one ſcruple*; *Pill Aureæ half a ſcruple, with Violet water*: make Pills.

In the Declination of the diſeaſe purge often with the ſame.

In the begnning of the Diſeaſe prepare the Humors, after a Lenitive, or in the progreſs if the Feaver continue: made with cold things to abate heat, and thin to make humors thick, and that reſiſt putrefaction and that cleanſe: adding alwaies openers that the Humors may paſs Urin, Sweat or Stools. And theſe are the better when they ſuppreſs heat and are prepared for the Heart and Liver which two parts are moſt hot. Theſe preparatives are given according to the cauſe and conſtitution of the ſick.

In a burning Feaver called Cauſon, whrch is an acute Diſeaſe and grants not long truce, we purge and alter with the coldeſt things.

In Synochus which is uſually in ſanguin perſons, prepare the Humors thus: Take *ſyrup of Lemons or of the juyce of Citrons, ſyrup of Vinegar and Violets, each one ounce and an half*; *water of Sorrel, Endive, Purſlane, Bugloſs, each two ounces*: mix them, give it three daies together.

Or thus: Take *ſyrup of Pomegranats, Lemons and Sorrel, each an ounce*; *of water Lillies half an ounce, Violet water, Lilly and Lettice water, each two ounces*.

Or thus: Take *ſyrup of juyces of Endive, Plantane and Purſlane, each half an ounce*; *Endive, Plantane and Purſlane water, each two ounces*; *ſyrup of Currans half an ounce*.

In a Tertian, and in Cholerick bodies, the ſame things are good, becauſe they allay Choler. Or thus, Take *ſyrup of Sorrel, Vinegar and Violets, each an ounce*; *water of Sorrel, Bugloſs and Endive, of each two ounces*; drink it two or three daies.

In

In Quotidians and Phlegmatick bodies and old folk, Take *Honey of Roſes, Oxymel, ſyrup Bizantine, each an ounce; waters of Maidenhair, Succory and Graſs, each two ounces.*

In quartans and Melancholick bodies: Take *ſyrup of Violets, Bugloſs, Borrage and Fumitory, of each an ounce; Purſlane, Fumitory, Bugloſs and Borrage water, each an ounce and an half*: make a Julep for three draughts, all theſe may be mixed with the Pouder of Sanders, or you may give after every draught a Lozenge of Trionſantalon, or Diarhodon.

Urin muſt be provoked and ſweat, for when the matter is concocted and prepared, nature doth uſually ſend it out thoſe waies, theſe are done by Aperitives which make thin; but you muſt obſerve whether nature moveth by Urin or Sweat moſt; if they piſs more then they drink, or the Urin be thick: or if they Sweat, you muſt provoke that way moſt to which nature inclines.

The Divreticks which open and attenuate, muſt not be hot but moderated howſoever with cooling things.

And ſomtimes purgers may be mixed therewith if the body be bound. It is done by this Decoction: Take *roots of Succory and Graſs, each an ounce; Liquoriſh, Fennel and Parſley, each half an ounce; Maidenhair and Endive, each an handful; Polypody roots ſix drams, Senna half an ounce, Annis ſeeds a dram, of the great and ſmal Cold ſeeds, each half a dram; Cordial flowers a pugil, Parſley ſeeds half a dram*: boyl them, diſſolve in the Liquor *the ſyrup of the opening Roots two ounces, ſyrup of Roſes one ounce*: make a Potion for twice.

Things that only provoke Urin, may be given three or four times, and then the purgers again. If nature provoke Urin, you may leave out the purgers, leaſt you hinder her intention.

The Decoction of Sparagus in broath, provokes Urin, and juyce of Pomegranats.

And this Julep: Take *ſyrup Bizantive, of Endive, each an ounce; water of Endive, Maidenhair, Wormwood, each an ounce.*

If you will open more: Take *Honey of Roſes, Oxymel, ſyrup of Maidenhair, each ſeven drams; Water or Decoction of Graſs roots, Sparagus, Succory, each an ounce.*

Make an Emulſion to provoke Urin thus: Take *ſeeds of Gourds half an ounce, Melon ſeeds two drams, Cowcumber, Pompion, Endive and Purſlane ſeeds, each a dram*; beat them, *and with Endive water*, make an Emulſion *with ſyrup of Sorrel one ounce and an half.* The ſimple Emulſion of the Cold ſeeds, is alſo good to take away wateriſh Humors.

Pills for to provoke Urin, are made thus: Take *the troches of Roſes, Eupatorium, each half a dram; of Cappars* (in Melancholick perſons) *a ſcruple, with Smalage water*, make Pills: give them every other day, drinking after a little Barley and Fennel water.

Fontanonus gives water of Maidenhair, with Barley and Fennel water only.

If nature incline to ſweat, as ſhe doth about the declining of the diſeaſe, ſhe muſt be helped by art. The Diureticks aforeſaid by opening and making thin do help, and other Drinks and Juleps.

Stilled waters alone, being very thin are uſually given as we ſhewed in a ſimple Synoch, to which the Chymiſts add ſpirits of Vitriol two or three drops, or ſpirit of Niter or of Salt, which ſtrongly reſiſt putrefation.

Anoynting of the Back and other parts, cauſeth ſweat: Thus, Take *Oyl of Chamomil and Dill, each half an ounce; Oyl of Violets and ſweet Almonds, each an ounce*; wet your Hands firſt in *Aqua vitæ*, and then uſe it.

Friction is good alſo to draw the matter outward.

Altering Medicines, are ſuch as cool and moiſten the heat of the fever, and reſiſt putrefaction; Theſe ſtrike at the Cauſe, and mend the ſymptoms that come from heat, as Head-ach, Watching, Reſtleſneſs. Therefore uſe Coolers and Moiſteners, in all Fevers, eſpecially Violent, when the blood is burnt and putrid. Sharp things are beſt, for they cool and reſiſt putrefaction alſo, if you add things that open Obſtructions. But there you muſt not cool ſuddenly as in a ſimple Synoch, but by degrees, leſt Concoction of humors be hindred, which cannot be made with Coolers only, for the corrupt part ought to be concocted. This is done by the means following.

For ordinary drink water is deſired and is good to cool, moiſten, and allay thirſt, it is given Crude, or Boyled, or prepared.

It may be given Crude if the Stomach be not weak, ſome wil not give it til the humors are prepared. Sometimes there is much given at a Draught, as in a Cauſon, or Synoch, or Tertian, to quench the great heat, and ſome by ſweating thereupon have been preſently cured. And leſt it be overcome by the heat of the ſtomach and turned into Choler (as they ſay) they give it often. And *Averroes* ſaith that he ſaved many times by giving four pints before Concoction. And if there be any hurt perceived by it, Vomiting cureth it, and laying hot cloths to the belly.

Boyled Water is better than crude in a weak Stomach, becauſe it is not ſo windy.

Somtimes it is compounded with things that nouriſh and reſiſt putrefaction, and make it pierce, or otherwiſe correct it.

Barley is accounted the beſt of Nouriſhers and Coolers. Therefore we give Barley-water, which nouriſheth very little, in a good quantity.

Bread beaten in Water til it be white makes it nouriſhing.

Salt-peter beaten with the white of an Egg in a Spring-water makes a cooling Drink that reſiſts putrefaction.

And ſo doth a little Sugar uſed the ſame way.

Almonds made like Milke with Water in a Mortar is uſual in *Germany*: But it nouriſheth too much, and muſt not be given in great quantity, becauſe little nouriſhment is required, and it is better for Food than a Julep to quench thirſt; with cold ſeeds it makes good Emulſion.

Things that reſiſt Putrefaction are uſually ſharp and ſweet.

Sharp things alſo cool and are very delightful, *Galen* puts a little Vinegar in Water, and juyce of Pomegranates. Wine of Pomegranates or the like is alſo commended.

Alſo ſharp Syrups mixed with Waters as of Vinegar Sorrel, Lemmons, Citrons, Currants, ſour Grapes, Pomegranats, Apples and ſour Plums, and ſharp Cherries are good. Things very ſharp may be given if there be a Flux as Syrup of Barberries.

The Waters to make the Juleps are of Endive, Lettice, Succory, Sorrel, and Roſes if you will bind.

Some ſweet things reſiſt putrefaction, and Sugar more than Honey, which eaſily turns into Choler, but becauſe uſually they hate ſweet things, therefore add Syrups that are ſweet and ſour. Alſo the Decoction of Currans is uſual and good.

Somtimes we add Correctors of Crudities when they are weak, the heat of which is overcome by the plenty

plenty of the Water. Cinnamon is moſt uſual being ſweet either boyled or infuſed, or Coriander ſeed boyled, or Galangal, red Saunders is good to cozen the Patients when they expect Wine, eſpecially if there be a little Pomegranate Wine to give it a ſcent,

There are divers Potions and Juleps which alter and correct the diſtemper of the humor and whol body, to be given all along, mentioned among the Preparatives.

And this Decoction. Take *roots of Succory, Aſparagus, each an ounce; Endive, Lettice, Purſlane, Liverwort, Ducks-meat, each one handful; Bugloſs and Burrage flowers, each a pugil; Barley a pugil, Gourd ſeeds half an ounce, Fleabane ſeeds* (which are very cold) *a dram*, boyl them, add *Sugar* and *Vinegar*, boyl them to a middle conſiſtence between a *Water* and a *Syrup*, give *two* or *three ounces* alone or with others.

Or thus. Take *Endive, Succory, Sorrel, Liverwort, each a handful: Barley a pugil*, make a Decoction, ſtrain them, add *Vinegar* for the Poor, and *Syrups* for the Rich.

Or thus. Take *ſyrup of Sorrel two ounces, the Mucilage of Fleabane ſeeds half an ounce*, give *three ſpoonfull* often.

Sick People refuſe ſolid things to be eaten and had rather have Drinks for their thirſt. but for variety, they may take ſometimes dried Confections as the Tablets of Trionſantalon or the three Sanders.

Or theſe. Take *pouder of the three Sanders one dram, Diarrhodon one ſcruple, the Troches of Camphire half a ſcruple, red Coral half a dram, Conſerve of Roſes, Violets, Bugloſs, each half a dram*; with *Sugar* diſſolved in *Roſe* or *Endive water*, make *Tablets*, give them morning and evening and *Endive water* after them.

Soft Electuaries made of Conſerves are given the day after purging to ſtrengthen and correct the heat cauſed by the medicine, and in the whol courſe of the fever. Thus made. Take *Conſerve of Roſes, Bugloſs, Violets, each half a dram*; with *Sugar* or *Rob of Ribes* make a *Bolus*.

This is pleaſanter. Take *Conſerve of Roſes and Sorrel, each an ounce*; *of candied Citrons, Lettice ſtalks, and Gourds, each half an ounce*, with *Syrup of Ribes* make an *Electuary*, give it often, and thereupon a little *Endive, Sorrel or Bugloſs water*.

Clyſters when they are bound, are good to looſen and to bring the humors into the Guts, and for to alter, but becauſe they cannot be given cold, they are not ſo good as other things to cool the Stomach and whol body, and quench thirſt, they are better to looſen than cool. They are mentioned among the Looſeners.

This is beſt to cool. Take *Lettice, Purſlane, Violets, Mallows, Houſleek, each an handful*; *Barley a pugil and an half, Cordial flowers a pugil, Guoard ſeeds half an ounce*, boyl them, add *Oyl of Violets three ounces, Honey of Violets two ounces, Diaprunis or Caſſia an ounce*, make a *Clyſter*.

Things may be given in the meat to nouriſh and cool, or for ſawce, but the Paeient muſt rather have them in drink, though the Vulgar love to be cramming them.

Boyl Lettice, Sorrel, Purſlane, Burrage, Endive, in Broath, and Spinach or Arrach, or Laxative herbs if need require it is pleaſant and good, to take Savory broath, made with Sorrel, Spinach and Arrach and with an Egg and a little ſharp Wine, or Vinegar and Water, beaten and boyled a little, pour it upon Sippets of Bread.

Or boyl theſe forms in Broath. Take *Lettice and Sorrel ſeed, each a dram*; *Melon ſeed two drams, Trionſantalon half a dram, Coral a dram, Diamargariton frigidum a dram and a half.* make them as big as Fetches.

Make ſawces of Orenges, Lemmons, Cherries, Pomegranats, Ribes, unripe Grapes, Barberries, dried Prunes, a little boyled or ſtoned, ſharp Apples and Lemmons, with Sugar and Roſe-water.

Alſo of the juyce of Sorrel, Vinegar, and Sugar and pickled Purſlane, with the juyce of Secalis in the Spring, with crums of bread, Vinegar, Cinnamon, and a little Ginger is good ſawce.

Outward things are to be regarded, as Air.

That muſt be very cold by nature or Art, for it is actually and potentially cooling for the Lungs, which being neer the heart, refreſheth it much. It is allowed for breathing but not to be naked in (as the Patients deſire in the extremity of heat) leſt the ſweat be ſtruk in. Beſides the body muſt not be inflamed with too many cloaths, eſpecially Feathers or Furs, and therefore it is good to change the Sheets, and Shirts, and Bed, and lay a Leather upon the Pillow. And to keep away the Sun and company, eſpecially at noon to keep out the Air, and not let it in, but when cool. To ſprinkle the Chamber with Water, and Vinegar, Flowers, and cool herbs, Willow leaves, Vine leaves and Water Lillies.

To the Heart, Liver, and Kidnies, apply coolers, and to the Brain in time of Head-ach, and Doting by reaſon of heat, and to thoſe parts which conſent with the Head, as the Stones. The Heart muſt be cooled at firſt in a burning Fever, in others in the increaſe after the matter is evacuated, becauſe all the parts are inflamed from thence; adding alwaies things that properly refreſh this noble part, and can carry the vertue to it. Theſe are to be applied to the Breaſt or Wriſts in form of Epithems or Oyntments. and to other parts where the Arteries beat, They are thus made.

In a Cauſon apply an Epithem preſently to the Heart, As, Take *Roſe water two ounces, Violet, Bugloſs, and Lettice water, each an ounce*; *Scabious water half an ounce, Vinegar of Roſes or Clove Gilliflowers, half an ounce, juyce of Lemmons or four Apples two drams, Diamargariton frigidum a dram*, mix them for an *Epithem*, apply it with Scarlet if the heat be great, cold, or otherwiſe warm.

Another, Take *Roſe water two ounces, Sorrel, Bugloſs, Violet and Water Lilly water, each an ounce*; *Water of Scabious, Balm, Vinegar, White Wine each half an ounce*; *juyce of Lemmons, or Orenges or Apples, two drams, Sanders one dram, Ivory and Harts-horn, each half a dram*; *red Coral and precious Stones, each two ſcruples, Pearl half a ſcruple, Cryſtal half a dram, Saffron half a ſcruple.* make an *Epithem* for the Heart and Pulſes.

Or bind this Bag to the Wriſts and Feet. Take *Flowers of red Roſes, Violets, Bugloſs, each half a dram*; *pouder of Cloves half a dram, of Saunders and Wood Aloes, each a ſcruple*; *Saffron five grains, Diamargariton frigidum half a dram*, bind them in two little bags, ſprinkle them with *Wine, Vinegar and Juyces*, and bind them to the *Pulſes*.

An Oyntment for the Heart and Pulſes. Take *Oyl of Violets and Roſes, each an ounce*; *the Mucilage of Fleabane ſeeds half an ounce, Gallia Moſchata a dram, Camphire ſix grains, Saffron half a ſcruple, juyce of Lemons two drams*, mix them.

Oyntments for the Liver and Epithems to cool it, and ſtrengthen and open it if ſtopped, for the Liver is hot in Fevers and inflames other parts. Thus, Take *Lettice, Water-lilly and Nightſhade Water, each one ounce and an half*; *Roſe-water an ounce, Endive and Succory wa-*

ter, each two ounces; Vinegar of Roſes an ounce, Camphire ſix grains: make an Epithem.

Another better againſt obſtructions: Take *Endive, Liver-wort and Succory water, each two ounces; Roſe water an ounce and an half, Lettice and Houſleek water, each an ounce; Wormwood water ſix drams, pouder of the three Sanders, Spike and red Roſe leaves, each half a dram; Vinegar one ounce, Troches of Camphire half a ſcruple.*

If you add Salt-peter or Lapis Prunellæ, theſe Epithems will cool more and reſiſt putrefation.

Alſo this Bag: Take *flowers of red Roſes, Violets and Succory, each a pugil; all the Sanders half a dram, ſeeds of Sorrel, Endive and Purſlane, each a dram; Parſley ſeed half a dram, Spikenard a ſcruple,* ſow them in a red cloth being bruiſed, ſteep it in *Vinegar, Roſe and Endive water,* apply it warm to the Liver.

After anoynt with Oyntment of Sanders: or with Oyl of Roſes and Violets, with Spike and Wax.

Becauſe the heat of the Reins is great, which inflameth other parts; uſe *Galens* cool Oyntment.

Or thus: Take *of* Galens *cool Oyntment two ounces, Oyl of Violets and Roſes, each an ounce; Vinegar half an ounce, Camphyre five grains:* Mix them, and anoynt.

The Stones have a conſent with the Reins and the whol Body, by reaſon of many Veſſels, therefore to cool them, abates Inflammation of the Body.

Thus: Take *water of Plantane and water Lillies, each four ounces; Vinegar of Roſes an ounce, red Wine an ounce and an half,* wet a clout therein and apply it cold.

Cold waſhings of the outward parts by reaſon of the conſent and the Veſſels under the Skin and the Nerves, do the ſame and cauſe ſleep.

Thus: Take *Lettice, Violet, Houſleek, Purſlane, Vine-leaves, Willow, each one handful; Poppy heads twelve, or the leaves,* if ſleep be wanting *one handful, Vinegar an ounce, white Wine half a pint, water as much as is ſufficient,* waſh the Hands, Arms, Legs and Feet, with the Decoction, warm at night.

It is good to hold cold things as Stones and Apples in the Hand.

It is good in Feavers to keep up the ſtrength, if they are continual and acute, which we muſt have an Eye at. For when it fails, the Phyſitians labors in Vain, becauſe it is natures work to conquour a Feaver, and if ſhe yeild to the diſeaſe, there can be no perfect *Criſis*, but it is either imperfect or the Patient dieth in the battel. Strength is preſerved, by order in good Air, meat and drink, and the like, and by Medicines.

Air doth much refreſh, if it be cool and pure, for then it refreſheth and altereth.

Food as it is neceſſary for ſick & ſound to reſtore what is loſt, while they live; ſo it is required here, becauſe the body is diſſolved with heat, but becauſe it muſt be concocted by nature, by which means ſhe is hindered from concocting the matter of the Diſeaſe, eſpecially if any quantity be taken: Therefore let ſo much ſerve as will juſt ſuſtaine and not put nature to too much trouble to concoct it: Let it be thin as *Hippocrates* ſhews in acute diſeaſes, and that little nouriſheth, and given at certain times. Or extream thin; or indifferent thin: alwaies obſerving cuſtome which is another nature.

Hippocrates ſaith that an extream thin Diet is to be uſed in the vigor of the diſeaſe, this the Patient endures beſt at that time. And it is the better extream to give too ſparing a diet at that time then too much, by which the common people think to ſtrengthen nature to over come the diſeaſe.

This is the moſt ſparing which is given, but once a day: or twice when of little nouriſhment.

As Barley broath twice a day, in the ſtate only of the Feaver.

Or a Ptiſan which is ſtronger, this is the cream or juyce of Barley hulled and cleanſed. And it is given thinner or thicker, as you pleaſe, as you deſire it ſhould nouriſh. This allayes choler alſo.

And alſo the juyce of Wheat called Starch, or Rice, well boyled doth eaſier digeſt and leſs ſwel.

The *Germans* uſe Hen or Chicken broath with alterers. And they are good.

Alſo cream of Almonds or Emulſions is given not as drink but meat.

That ſlender diet which is fuller a little then this which *Hippocrates* ſaith muſt be at the beginning and continue to the ſtate, muſt be alſo uſed. But when the exacerbation or fit comes, or a little before, the Patient muſt not eat, not only to prevent the hindering of natures motion but to keep the heat from increaſing which it doth after meat as we ſhall ſhew in Hecticks.

The fuller but ſparing Diet: is that which is given oftner as twice or thrice in a day, and hath more nouriſhment.

As the beaten fleſh of a Chicken well boyled firſt, and waſhed with its broath, or ſtronge broath of the ſame.

Eggs, becauſe in cholerick perſons they quickly corrupt, are not to be given raſhly: nor Milk, for the ſame reaſon, which *Hippocrates* proclaimes to be naught in Feavers.

To this Diet belong ſops in broath.

Prunes, Apples, Peares, not ſharp but freſh or new gathered, or throughly dryed, (for then their juyce is moſt excellent, and therefore the Germans keep all ſorts of fruits ſo preſerved and dryed) or boyl'd in their Liquor or ſyrup wherein they are kept.

The other are made of Plants and are given for alteration rather then nouriſhment, as ſower fruits.

Wine is beyond all for refreſhing, and is not allowed but in the declining of the Feaver, by reaſon of its heat, eſpecially when they ſweat, and alſo becauſe it cauſeth Head-ach which is uſual in a Feaver. But in the declining it may be given to provoke Urin and refreſh, and alſo a fuller diet, often and of little nouriſhment.

Sleep refreſheth, yet of ſome it is denied all the time of the Feaver while the heat goes outward, leaſt by ſleep it ſhould come inward. But it is in vain to fear it, becauſe heat by ſleep goes outward rather then inward at which time we ſee men are more hot and ſweat, and alſo becauſe it allayes thirſt. Moreover nature makes better concoction in time of ſleep, and is active at that time in overcoming the cauſe of the diſeaſe. Nevertheleſs in the exacerbation or fit of the Feaver it is better to abſtaine from ſleep. And at othertimes to permit it according to age cuſtome, and as they are well or ill after it, that it be not immoderate or unſeaſonable. And if the patient be long without ſleep, to give and apply things to provoke it.

Frictions inſtead of excerciſe, in regard they cannot perform more, do ſtir up the ſtrength, to expel the cauſe of the diſeaſe.

A reſolute mind alſo, not too ſad, eſpecially confidence in God and his Miniſter the Phyſitian, with hope of ſafety in this, or the life to come, is a great help to ſtrength.

As for Medicines we have ſhewed reſtorers among the alterers, which alſo hold up the ſtrength: beſides which, we have declared many in our treatiſe of Sowning, and in ſwoning Feavers.

When

When the ſtrength is wholly dejected give this julep. Take *Roſe, Bugloſs and Scabious water, each one ounce and an half; Cinnamon water made with Wine* (for the heat thereof is not then to be feared) *half an ounce, Species Diamargariton frigid, half a dram,* ſtrain them, and add *Manus chriſti perled one ounce, juyce of Lemons one dram,* give a ſpoonful at a time.

Or thus: Take *Confectio Alkermes a dram,* (if there be no looſneſs which will be provoked by the *Lapis Lazuli* in it) *ſyrup of Poppies half an ounce, Cinnamon water two drams, with Bugloſs water,* give it ſomtimes with a little added.

The external things to be applied to the pulſe and Heart, are mentioned in the alterers.

As for the Symptoms, many of them are mentioned in the Cure of the cauſe and the diſeaſe, though ſome require a peculiar cure, which ſhall be ſhewed in the practice, but here we ſhall ſhew briefly how we are to proceed.

Head-ach and doting that follows preſently after, which are the chief, are amended with the things that are given againſt the cauſe and the diſeaſe; becauſe they ſuppreſs vapors and burning in the Head. Yet when they are ſtrong we open the Vein under the Tongue, and uſe Scarification, Cupping and Friction for revulſion. And apply to the Head topicks at firſt to repel, then to aſſwage pain, and afterwards to diſcuſs as we ſhewed in the Treatiſe of Head-ach.

We hinder too much watching or waking with ſleeping Medicines and Narcoticks in time of neceſſity mixed with Cordials above mentioned, and coolers to correct them becauſe they would heat alone given, and increaſe Head-ach. If they ſleep too much we take it off with revelling means.

Thirſt is quencht with cold drink and ſharp, many give candied things which cauſe it by ſweetneſs; Alſo it is allayed as we ſhewed by ſleep, reſtleſneſs is abated with cold things eſpecially drink, and by changing the place which by continuance in they make hot, and by taking cool Air.

We ſhall ſhew hereafter the Cure of the Tongue, Mouth and Jaws inflamed, and the quinſie which is in Feavers alſo of the dryneſs and clammineſs of the Mouth and blackneſs of the Tongue.

The pain of the Heart is cured by anoynting of the Stomach; The Swoning, as we ſhewed afore: The heat of the Hypochondria or ſides by things applied to the Liver and Reins as we ſhewed.

For the ſhortneſs of breath we anoynt the breaſt: in a Diarrhæa or Flux we apply things to the belly and give inward things that bind without heat, as ſyrup of quinces: when the body is bound we give Laxatives. If a Hectick is ſuſpected from the leanneſs of the body we apply to the Heart and Breaſt, Epithems and moiſtning Oyntments, and give often the mentioned Cordials, and ſuch as ſhall be explained in the Cure of the Hectick.

The Cure of intermitting putrid Feavers.

Intermitting putrid Feavers are Tertians or quartans ſimple, whereof ſome have one well day others two: or double which come every other day: and theſe are either equiſite made of a ſimple Humor, or baſtard from mixed Humors of divers kinds. We make no more kinds of theſe which others mention are either comprehended under theſe, or not known; we ſhall ſpeak of Feavers Compounded of intermitting and continual by themſelves.

The judgment of all theſe is more certain then of continual Feavers: for (as I ſay) tertian are ſhorter, if exquiſite and in Summer or Spring, but longer if baſtard and begin in harveſt: quartanes are longeſt that begin in Autum, they continue ordinarily ſix months, and ſomtimes but three, and by want of knowledg are kept ſomtimes a whol year: All double Feavers keep their own nature.

Theſe Feavers of themſelves are not deadly, although the exquiſite are very ſharp, becauſe their cauſe lyeth far from the Heart in the lower belly about the Excrements as we ſhewed, for whence alſo it may better be purged. Except it be carried into the great Veins and cauſe a continual Feaver, which is dangerous. It hapens alſo often that if intermitting Feavers laſt long or come often, that new diſeaſes follow from hurt of the Liver, Spleen, Stomack and Guts, and greater Symptoms, as the Colick, Jaundies, Dropſie and the like, by error of the Patient or Phyſitian.

We ſhall ſhew the Cure of all, both Tertian and quartans. Becauſe they are all from the ſame cauſe that is choller and in the ſame place that is the Meſeraicks: although ſome have treated of them in reſpect of diverſity of Humors natural and preternatural, making baſtard Tertians, from Citrin, yellow Choller which is mixed with thin flegm or from yolk-like Choller, which is mixed with thick flegm, calling both of them Tertians of greater fame, and call the other a Tertian of leſs fame, which is mixed with Melancholick juyce, and preſcribe a particular Cure for that which comes of green Choller like verdigreeſe. And will have the divers baſtard quartans from, not only the burnt dregs of blood, but from Choller and Flegm burnt. And will have quotidians, not only from ſimple flegm but ſweet, ſower, ſalt, glaſſie, called *Epiala* and *Lipyria*, and ſay they come from that flegm mixed with Melancholly or Choller, and teach a particular Cure for them all: as alſo of Syncopal or Swouning Feavers as if they were divers kinds. Hence come the many confuſed treaties of Feavers and the diverſity of purges according to the diverſity of humors that cauſe them as they ſuppoſe, which if any ſhould follow, they may as ſoon Cure their patient by leaving the whol work to nature, which often times doth it alone.

Therefore we ſhal ſpeak of the Cure of all Agues, or intermitting fevers together. Firſt ſhewing what is to be done, by Evacuations to remove the Cauſe, and by Alterers, and Reſtorers or Stengtheners, and to be obſerved in Diet. And laſt what is to be done to the Symptoms.

In reſpect of the Cauſe we muſt take it away, or abate it by Evacuations, which we ſhewed was putrid cholerick blood in the Meſaraick Veins. And if thin be not firſt taken away, they which go about by other means to hinder the fits and ſtop their courſe, and the motion of Nature, by which thee ſhakes off ſome of the Cauſe, as moſt Empericks and unlearned Phyſitians do; bring greater Diſeaſes, as Colick, Jaundies, Cachexy, either with the Fever or after it. Therefore firſt take away the Cauſe by Evacuations, by which means the heat of the Diſeaſe and the ſymptoms wil be abated, This is done as followeth.

Taking of blood from the meſaraicks, is the chiefeſt Remedy (becauſe the Cauſe is in it) to Cure Agues, as opening the branches of the hollow Vein, is to Cure continual Fevers. But none of the Meſaraicks come to the skin to be cut open, as the branches of the hollow Vein do, nor is it ſafe to make them bleed by corroding Medicines as hath been done by the uſe of Coloquintida, whereby the blood is ſent into the Stomach and Guts, and ſo forth by Vomit and Stool, for fear

fear of Dyſenteries or Bloody fluxes. Therefore we do it thus.

The Flux of the Hæmorrhoids cures not only Quartans but Tertians of all ſorts, though of long continuance, when all meanes fail: And it is no marvail, ſince theſe Veins are branches of the Meſaraicks, and evacuate, by bleeding, the cauſe of the Diſeaſe. Therefore if the Hæmorrhoids bleed naturally, as in ſome, they muſt not be ſtopped, and if little, they muſt be provoked. But in Quartans which laſt long, it is moſt proper, by reaſon the blood is thick and beſt let out this way. eſpecially if nature incline that way by ſome ſigns of blood, or itching of the fundament, it muſt be helped. This is done by beginning with Fomentations and applying of Leeches, which is the beſt way of all, or rubbing with Fig leaves or the like, as we ſhewed in the Hemmorrhoids. Some open them by cutting, but this muſt be warily done, for fear of a wound in the Fundament, which I have known to cauſe grievous pain.

If the Courſes be ſtopt in Women, although theſe come not as the Hæmorrhoids from the Meſaraicks, but from the branches of the *Vena Cava*, and ſo ſeems to take away none of the Cauſe of the Fever, yet becauſe it is natural, and ought to be at a ſet time, and though the whol body is made foul thereby, they muſt be provoked. And ſo the body wil be clenſed, and it wil do as much as blood-letting. Eſpecially in regard nature uſeth to clenſe her ſelf this way, and it may be there is ſome paſſage from the Meſaraicks to it, by reaſon of their neer joyning. Theſe Veins although by reaſon of their ſmalneſs, they open not wide, yet when they are ful they are ſtretched as the reſt. Therfore provoke the terms if they flow not, or flow diſorderly, divers waies, firſt by opening the *Saphena*, this wil either provoke the terms or take away the matter, and although a Vein was opened afore for general Evacuation, yet the next day you may open the *Saphena* by which means the fever either preſently ceaſeth or more eaſily removeth with help of other medicines. Alſo Purges do not only void the Excrements but open the Hæmorrhoids and terms as we ſhal ſhew.

Somtimes we allow, and ſomtimes diſallow of opening a Vein in the skin. It is to be omitted in exquiſite tertians and others which have great heat by reaſon of the burning Choler which cauſeth them. Alſo in flegmatick perſons, and aged, and the reſt it is not to be done raſhly, as the Vulgar do, who make it the chief part of the Cure: for it can do no good, becauſe it takes away none of the conjunct cauſe of the fever. But often being done raſhly, the matter is ſnatcht into the hollow Vein, and of an Ague it becomes a fever, or Continual, of Intermitting. Or the pure blood being ſent from the meſeraicks to fil up the emptineſs of the branches of the hollow Vein, that which remaineth behind being cholerick & putrid, becomes more fierce for want of good blood to temper it. Hence it is that I obſerved more hurt than good by opening Veins in Agues (except it be when we fear ſome inflammation of ſome internal part. In plethorick and cacochymick bodies we allow it, for theſe reaſons; when the plethory or fulneſs is great, which is known by the conſtitution, and red and thick Urin, and when there is heat after a fever, it may be allowed upon the wel day. Although ſomtimes in the beginning of a Fit it hindereth it, by repreſſing the heat and Vapors that aſcend, yet it cannot be good, becauſe the motion of nature is hindered, by which ſome of the cauſe of the Diſeaſe is taken away. Therefore blood muſt be let in time of reſt or intermiſſion, eſpecially in double fevers, not in the beginning, but in the increaſe, or ſtate of the Diſeaſe, in Tertians, ſcarce before the third or fourth Fit which uſeth tobe the greateſt, foretelling the greatneſs of the following fi; leſt they think it comes from blood-letting chooſing the common broad Vein in the Arm, rather than the Liver or middle Vein, let the quantity be from five to eight ounces. In quartans 'tis thought good to open the Vein in the left Arm after they have bin a while for they muſt be gently ordered at the firſt, leſt they turn double or treble, or the ſtrength do fail which ought be kept by reaſon of the length of the Diſeaſe which it uſually hath. Or if you open the Vein called *Salvatella* next to the little finger in the left hand, they ſay it is a ſpecial cure for a quartan. We allow a Vein to be opened in Cachecticks or bodies of evil habit becauſe the blood in the Meſaraicks is not only impure, either before the fever begins (for impure bodies are eaſily taken with theſe Agues) or in the time of the Ague, to take away ſome of the matter leſt the Fever increaſe, or a new one. And if the blood taken be foul, let it bleed longer and in quartans if it be thick and black blood more, otherwiſe ſtop it: and if need require, at it again another time. But leſt the the Choler ſhould be more fierce after the blood is taken away, give a little cooling ſyrup of Lemmons or Violets preſently upon it, or a little good Broath.

In Agues or intermitting fevers, we purge the thick humors by Vomit and Purges, and the thin by Sweat and Urin.

Firſt we give things to purge the Guts and clenſe them, both in the beginning, and in the progreſs of the Diſeaſe.

And this is done before bleeding and other medicines, that the medicines following may work better, and leſt bleeding ſhould draw the excrements into the Veins.

Clyſters do it ſooneſt, as thoſe mentioned in continual fevers, but we muſt alter them according to the Diſeaſe and conſtitution.

In Tertians and very hot fevers they are thus made. Take *roots of Marſhmallows one ounce, the four Emollients, each an handful; Barley a pugil, Gourd ſeeds half an ounce*, boyl them, and add *to a pint and an half, Caſſia half an ounce, Honey of Violets an ounce, Oyl of Violets two ounces*, with *Salt*, make a *Clyſter*.

In quartans. Take *of the four Emollients, Mecury and Beets, each a handful; Bugloſs roots two ounces, Prunes ten, the four great cold ſeeds, each two drams; Epithymum two drams, Aniſeeds, two drams*, boyl and diſſolve in them *Diacatholicon and red Sugar, each an ounce; Oyl of Violets two ounces, Chamæmel one ounce*, with *Salt*, make a *Clyſter*.

In flegmatick perſons, when flegm is much in the Guts, uſe this to clenſe more. Take *Liquoriſh two ounces, Mallows and Beets with the roots, Pellitory and Betony each a handful; Barley and Bran each a pugil; Agarick two drams, Figs ten, great cold ſeeds each two drams; Fennel ſeed three drams*, after boyling, ad *Diaphenicon and Hiera Picra, each two drams; red Sugar and Honey of Roſes, each an ounce; Oyl of Violets and Chamæmel, each an ounce and an half*; with a little *Salt*, make a *Clyſter*.

Two or three Suppoſitories given in a day work ſomtimes better than Clyſters.

If at the beginning the Stomach be diſturbed with Crudities, Flegm, or Choler, as we may perceive by the Heart-burning which uſually accompanieth it, Loathing and Vomiting, before bleeding or when it is not required when we give a diminiſhing Medicine, or a Vomit.

Diminiſhing Medicines clenſe the Guts and Stomach

mach from Crudities and thick excrements: by theſe as *Hippocrates* ſaith, we make the body fluid. Theſe are given in the day of reſt, and are not to be chooſen with that curioſity we uſe in continual fevers when the heat is conſtant. Theſe are of three ſorts as Clyſters are.

In exquiſite Tertians when the heat is great. Take *Caſſia ten drams, pouder of Aniſeed or Liquoriſh a ſcruple,* with *Sugar* make a *Bolus*: give it alone or with *Endive* or *Succory water.*

Or, Take *Caſſia and pulp of Tamarinds, each half an ounce, Aniſeed and Sugar* as aboveſaid.

Or, Take *Caſſia half an ounce, ſyrup of Roſes ſolutive* (or juyce thereof) *and ſyrup of Violets, each an ounce*; with *Succory and Bugloſs water* make a *Potion.*

Or, Take *Damask Prunes ten, Tamarinds twelve,* boyl them in *Broath* or *Water,* ſtrain and drink it.

This is ſtronger. Take *Rhubarb four ſcruples, Spikenard one ſcruple,* infuſe them in *Endive water,* and diſſolve *Caſſia half an ounce, ſyrup of Roſes ſolutive an ounce,* make a *Potion.*

In long melancholick quartans. Take *Caſſia one ounce, pouder of Epithymum one dram,* with *Sugar* make a *Bolus,* or diſſolve it with *Bugloſs water.*

Or, Take *Epithymum two drams,* boyl it in Broath, and add *two ounces of Manna.*

Or, Take *Prunes ten, Dates two, Epithymum two drams Cordial flowers a pugil,* diſſolve in the ſtrained Liquor boyled, *Catholicon ſix drams, ſyrup of Peach flowers an ounce,* make a *Potion.*

This is ſtronger. Take *Confection Hameck one dram and an half, Catholicon half an ounce,* diſſolve it in *Bugloſs and Fumitory water.*

In flegmatick perſons give the ſame or ſtronger. Take *Catholicon half an ounce, Diaphœnicon two drams,* with *Sugar* make a *Bolus.*

Or, Take *Dates five, Prunes ten, Raiſons ten pair, Figs four, Liquoriſh half an ounce,* boyl them, and diſſolve *Diaphœnicon and Diacarthamum, each a dram.*

If they wil rather have Pils. Take *Pils of Agarick, Rhubarb or Maſtich, two ſcruples.*

Or theſe ſtronger. Take *Aggregative Pils half a dram,* with *ſyrup of Roſes* make *Pils.*

A Vomit often doth good and is to be reckoned among theſe, for it takes away the crudity and flegm of the Stomach, and Choller, alſo if by the motion of the Feaver it get thither. but if the Body be bound, it muſt be firſt looſned, as we ſhall ſhew when we declare that the cauſe may be taken away by the ſame Medicine, where we ſhall mention Vomits. we muſt begin with the weakeſt.

We muſt alſo purge to take away the putrid matter of the Feavers from the Meſeraicks. This doth it by degrees, and cureh the Feaver, but firſt we take away the thick Excrements and then prepar the Humors, if it be at the beginning, but afterwards if the matter be much, it ſeeks away out of it ſelf and needs no preparation. And then natures motion muſt be helped, but if the Feaver abate not, we muſt come again to preparatives and purges, three or four times in obſtinate Agues.

At the firſt prepare and purge thus, for preparation is neceſſary in intermitting and continual Feavers alſo, becauſe the matter lieth in the Meſeraicks, which is foul and needs more preparation and concoction, and we muſt hinder putrefaction and open the paſſages, that the matter may come from thoſe Veins into the Guts by Medicines purging. which that they may work better, ſome anoynt the Hypochondria with Oyl of Chamomil and white Wine. Theſe are divers according to the Ague and the conſtitution.

In acute Tertians to allay heat, expel putrefaction and quench Choler. Take *ſyrup of Sorrel and Vinegar, each ſix drams, ſyrup of Endive and Violets, each half an ounce, Endive and Sorrel water each three ounces*; make a *Julep* to take three daies.

Or thus. Take *ſyrup of Citrons or Lemmons an ounce, ſyrup of Endive and Violets, each half an ounce*; *Endive and Lettice water each enough*; give it thrice.

For the Poor. Take *Sugar two ounces, Wine-vinegar half an ounce, Decoction of Barley and Endive a pint and an half, juyce of Ribes or ſharp Apples an ounce,* boyl them, then give it three or four times.

Or this. Take *roots of Succory and Dandelion the whol, each half a handful*; *Endive, Lettice, Liverwort, Sorrel each a handful*; *flowers of Bugloſs and Violets, each a pugil*; *of the great cold ſeed, each a dram*; boyl them, and in *a pint and a half* diſſolve *ſyrup of Sorrel and Vinegar, each two ounces*; *or Pomegranate Wine four ounces,* give it at four or five times.

In long Baſtard Tertians with obſtructions; Take *Oxymel ſimple an ounce, ſyrups of Endive and Succory, each half an ounce, Water of Maidenhair, Endive, Succory, each an ounce*; make a *Syrup*, repeat it three or four times.

Or, Take *Oxymel and ſyrup of Succory compound, each an ounce*; *ſyrup of Maidenhair half an ounce, Endive water and of Maidenhair, each two ounces*: mix and repeat them as afore.

Or thus. Take *roots of Succory, Graſs, Aſparagus, Plantane, each an ounce*; *Fennel and Parſley roots, each half an ounce*; *Endive, Succory, Dandelion, Maidenhair, and Liverwort, each a handful*; *Bettony half a handful, the four cold ſeeds, each two drams*; *Endive and Purſlane ſeeds, each a dram*; *Fennel, Anniſe, and Parſley ſeed, each half a dram*; *Barley a pugil, Prunes ſix, Cordial flowers, each a pugil*; boyl them, and diſſolve *Oxymel ſimple three ounces,* perfume it with *Sanders one dram,* make a *Julep* for three or four *Doſes.*

For the Poor. Take *Honey, Water and Vinegar* to make it ſharp.

In quartans prepare thus in the beginning while the heat is great, for by continuance the heat abateth. Take *Oxymel ſimple, ſyrup Byzantine each one ounce and an half*; *ſyrup of Fumitory an ounce, water of Bugloſs, Borrage and Hops, each three ounces*; give it at thrice.

Or thus. Take *ſyrup of Sorrel, Byzantine, Bugloſs, each an ounce and an half, Fumitory, Bugloſs, Borrage and Endive water, each three ounces.*

Or this Decoction. Take *roots of Bugloſs, Brambles, Sparagus, Succory, ſteept in Wine, each an ounce*; *Fennel and Parſley roots each half an ounce*; *Liquoriſh ſix drams, Tamarisk bark half an ounce, both Bugloſſes, the Capillaries, Germander, Groundpine, Bettony, each a handful*; *Cordial and Broom flowers, each a pugil*; *Raiſons ſtoned two ounces, Prunes ten, great cold ſeeds, each two drams*; *Dodder, Parſley and Endive ſeeds, each a dram*; *red Peaſe a pugil,* boyl them, and add *ſyrup Byzantine two ounces, Oxymel ſimple three ounces,* with a *dram of Cinnamon,* make an *Apozem* for three *Doſes.*

Purge whether the humor be concocted or no, if it be much, and give an hour after a waſhing Medicine, of Barley or other Broath, with Sugar of Roſes: and the day after, give a Strengthener.

In exquiſite Tertians that are ſhort and fiery, and in double Fevers, uſe mild things. Take *Rhubarb four ſcruples, Spike ſix grains, yellow Myrobalans rub'd with Oyl of bitter Almonds two drams,* Infuſe them in *Endive water,* but firſt ſprinkle them with *Wine,* after twelve hours ſtrain them, add *ſyrup of Roſes two ounces, ſyrup of Violets an ounce.*

Another. Take *Caſſia half an ounce, Electuary of the*

juyce of Roſes two drams, ſyrup of Roſes and Peach flowers each an ounce, with Endive and Violet water: Make a Potion.

The third: Take *Barley a pugil, Prunes ſix, Jujubes and Sebeſtens, each ten; Tamarinds half an ounce, Cordial flowers a pugil, Senna two drams*: boyl them, add *Manna an ounce, ſyrup of Diaſereos or Roſes, with Rhubarb an ounce.* Make a Potion.

In baſtard Quartans and Tertians that are of long continuance, and in a flegmatick conſtitution: Take *roots of Succory half an ounce, Liquoriſh an ounce, Cordial flowers a pugil, Prunes ten, Polypody ſix drams, Carthamus ſeeds half an ounce, Annis ſeeds one dram, Senna three drams*: add *Rhubarb infuſed in white Wine and Endive water a dram, ſyrup of Diaſereos an ounce.*

Another: Take *Rhubarb a dram, Spikenard a ſcruple, Agarick infuſed in white Wine and Endive water a dram, with ſix grains of Ginger infuſed in Oxymel*, ſtrain them, and add *Manna two ounces.*

The third: Take *Catholicon half an ounce, Diaphenicon and Electuary of the juyce of Roſes, of each two drams; with Bettony and Endive water*: make a Potion.

Pills: Take *Pills Aggregative a dram*, made up with ſweet Wine.

A Pouder: Take *Rhubarb a dram, Cinnamon half a ſcruple, Turbith two ſcruples, Ginger a ſcruple, Senna a dram and an half*: give it with Peaſe broath.

In Quartans give not ſtrong Medicines while the heat is great: Take *Rubarb a dram, Indy Myrobalns prepared two drams, Spike, Cinnamon, each ſix grains; Epithymum two drams*, infuſe them in *Whey*, add *ſyrup of Peach flowers an ounce*, or that of *Apples* made by *Rondeletius*, which hath *Hellebor, an ounce.*

Another: Take *flowers of Borage, Bugloſs and Violets, each a pugil; Ceterach a handful, tops of Time and Epithymum, each two drams, Liquoriſh an ounce, Rayſons and Sebeſtens, each ten; Annis ſeeds two drams, Dodder ſeeds a dram, Polipody ſix drams, Senna half an ounce, Tamarinds half an ounce, rindes of Indy Myrobalans three drams*: boyl them, and add *in four ounces, ſyrup of Peach flowers or of Roſes or Senna an ounce, or of ſweet Apples.*

The third: Take *Catholicon half an ounce or ſix drams, or Diaſenna as much,* (which is good in quartans) *Confectio hamech two drams and an half, ſyrup of Bugloſs and Fumitory, each an ounce; with Bugloſs water*: make a Potion.

Vomits albeit they ſeem to take away only the matter from the Stomach, yet by natures motion they take the conjunct cauſe from the Meſeraicks, and either abate or take away the Feaver: and if the Feaver be of long continuance, as quartans, and will not be gone by purges, we give three or four Vomits to Cure them. And it is uſual by Vomiting abundance of Choller which is not very ſafe, for the Cholerick matter of the Feaver in the Meſeraicks, as it is taken from the Veins of the Guts by purges, ſo it is taken from the Veins of the Stomach by many and great Vomits.

Therefore Vomits are approved in all kinds of intermitting Feavers, eſpecially if there be loathing, cuſtom, or Heart-ach; and when nothing forbids, as binding of the belly; for if that be not open, except the Vomit by violence open it, it will be worſe: ſome diſallow them while there is crudity in the Belly as in quotidians, and will not give them before ſeven or eight daies: And ſay they are ſafer after ſigns of Concoction, and when Oxymel of ſquils or the like are mixed therewith to cut the Flegm, but that is little to the purpoſe for flegm is not the next cauſe of a Feaver. We have known quartans more cured by Vomits then any other: whence *Avicen* called Vomits the root of the Cure of Feavers. The time of vomiting is ſomtimes the well day. And if they Vomit eaſily, it muſt be given upon an empty Stomach, otherwiſe a ful: And before vomiting give broath of Peaſe, or Chickens, or fat Bacon (as in *France*:) Radiſhes, Cole-worts, Salt-fiſh to cleanſe and ſweet Wine, and after the Vomit taken they provoke it. Alſo a Vomit given at firſt, or in time of the fit and repeated is good and makes the Feaver gentler and ſhorter, eſpecially if it be given a little a fore the fit, for then the feveriſh matter being moved is eaſily expelled.

When the perſon is weak and the heat little, it is provoked by gentle things, but in long Agues with ſtrong, as quartans, and flegmatick Stomachs, which can indure ſtrongeſt Medicines. Thus: If the Throat be tickled with the Finger or a Feather or the like it is better that will ſerve alone ſomtimes when they are accuſtomed to Vomit after a ful Stomach. And if after the Vomit is taken it worketh not in a quarter of an hour, give a little Chicken broath and tickle the Throat:

The gentle Vomits are theſe: Take *a large draught of Endive water*, and put your Finger in your Throat to provoke Vomiting.

Or: Take *Oxymel ſimple an ounce, or an ounce and an half, or two, or three ounces*; and drink it with warm water.

Or: Take *Oxymel ſimple two ounces, the Decoction of Honey and Radiſh ſeed in water, ſix ounces.*

Or: *Three ounces of the diſtilled water of green Nuts.*

Or: Take *Chamomil flowers an ounce, Roſemary and Dill flowers, each half an ounce*: boyl them in *Radiſh water. Rondeletius* ſaith this hath Cured many at the firſt.

Some approve of the ſtinking Dock called *Lapathum, Atriplex* and *Purſlane*, ſo taken.

Or: Take *Atriplex ſeeds, Dill and Radiſh ſeeds, each an ounce*: boyl them in water, and if the flegm be tough in the Stomach, add *Oxymel ſimple or of Squils.*

Theſe are ſtronger: Take *Rocket, Leek and Radiſh ſeed, each half an ounce; Atriplex ſeed two drams, Aſarum roots a dram*: boyl them, and diſſolve *two ounces of Oxymel ſimple therein.*

Rondeletius highly commends the ſeeds of Aſarum and the roots, and Broom ſeeds with Cinnamon and Mace, boyled in Wine, according to *Dioſcorides.*

Or: Take *roots of Palma chriſti one dram and an half*, give it with Sack, in Poudar.

Take *Aſarum with the roots half an ounce*: boyl them to drink, or give *a dram*, or *half a dram in Wine*, or the like. I prepare them thus, I ſlice and cleanſe the roots and ſteep them two or three daies in Sack, and dry them in the ſhade, and keep the Pouder. The Doſe is *half a dram, or a dram*, to the ſtrongeſt.

Or: Take *Phaſeoli a pugil, of Dill, Atriplex and Radiſh ſeeds, each three drams; dryed Calamints a dram and an half*: boyl them, and to *four ounces* add *Oxymel ſimple or of Squils*, if flegm be tough.

Many have been cured by Stibium and other ſtrong Vomits, as white Hellebour: and then they Vomit abundance of flegm, with yellow and green Choller: and there is a great Evacuation from the Meſeraicks by nature moſt ſtirred up. But becauſe this is dangerous they muſt not be given raſhly to any as Empericks do.

We repeat purges differing according to Feavers oftentimes.

If after purging, an exquiſite Tertian double and Acute ceaſe not, it is ſufficient afterwards to keep the Belly

Belly open with a Clyſter, and to invite nature to ſend out the humor from the Meſeraicks, for which the Clyſter above mentioned muſt be often given or a ſtronger.

Or this, every other or third day. Take *Barley, Peaſe, each a pugil; Mallows, Violets, Beets, Atriplex, each a handful; Chamomil flowers a pugil, Annis ſeeds a dram*: make a Decoction, diſſolve *Honey of Violets, red Sugar, each an ounce and an half; Oyl of Violets three ounces, with the yolk of an Egg and a little Salt*: make a Clyſter.

If the Feaver ceaſe not give a gentle purging Clyſter as broath made of Orach, Violets, Spinage, Mallows, or a Potion of Rheubarb or Caſſia as aboveſaid.

In baſtard Feavers eſpecially long laſting, you muſt purge a freſh and prepare firſt, with thoſe above mentioned uſed diſcreetly and altered if need be,

Theſe Medicines that prepare the way and matter and evacuate are commended, if they are ſomtimes uſed and then a ſtronger given: In divers Formes.

As this Apozem: Take *roots of Succory, Aſparagus, Graſs, each an ounce and an half; Dock and Sorrel roots, each an ounce; Parſley and Fennel roots, each half an ounce; Liquoriſh ſix drams, Endive, Succory, round Sorrel, Maidenhair, Bugloſs, each a handful; Bettony, Burnet, each half a handful; four great Cold-ſeeds, each two drams; Annis ſeed a dram and an half, Fennel ſeeds a dram, Cordial flowers a pugil, Chamomil flowers half a pugil, Prunes and Sebeſtens, each ten; Tamarinds ſix drams, Carthamus bruiſed an ounce and an half*: Steep the roots in ſharp Wine and then boyl them all in water, and while the ſtrained Liquor is hot *Agarick half an ounce*: boyl a little, adding *yellow Myrobalans and Rhubarb, each half an ounce; with a dram of Cinnamon, a ſcruple of Spike, and three drams of ſyrup of Roſes Laxative*, give it every other day a good draught, and according as it works give more or leſs the next time.

You may boyl the half of it with Sugar, to make it laſt. And uſe ſomtimes the Apozem, and ſomtimes the ſyrup, or give it being all a ſyrup alone or with convenient liquor, or Barley or Peaſe broath.

While this Syrup is preparing, you may give ſyrup Diaſereos, or of Roſes ſolutive, with Rhubarb.

An infuſion in Wine is good becauſe many delight in Wormwood Wine, and Wormwood doth better allay the ſtink of Senna then anything, and amends the hurt that purges do to the Stomach, and the Wine being opening, helps it by piercing, and the heat can do no hurt being but a little.

Opening Wine is thus made: Take *Succory roots an ounce and an half, Graſs roots an ounce, Parſley and Fennel roots half an ounce; Orris roots two drams, Wormwood three drams, Germander, Ground-pine, Maiden hair, of each two drams; Sorrel, Liver-wort, Maudlin, each two drams; Cordial flowers, each a dram; Annis ſeeds a dram, Parſley ſeed half a dram, Senna one ounce and an half, Rhubarb three drams, Spike half a dram, Agarick four drams, Ginger bound in a cloute with the Spike a ſcruple*: pour upon them all of ſtrong Wine, daſhed with a little water, and of *Endive water five pints* (becauſe ſome part will be drunk up by the ingredients. Let them infuſe a night, and boyl in the morning, and cool by degrees, uſe it as the Apozem. Before mentioned, after three or four daies heat it again, to keep it from corrupting.

You may make Electuaries for the ſame thus: Take *Caſſia new drawn two ounces, Tamarinds pulped with Endive water an ounce and half, Manna an ounce, Catholicon, Diaprunis and Lenitive Electuary half an ounce; Rhubarb infuſed in white Wine til it be ſoft two drams, Spike a ſcruple, Senna a dram and an half*, (firſt ſprinkled with Wine) *Cinnamon and Annis ſeed, each half a dram, with ſyrup of the five roots and Succory with Rhubarb*: make an Electuary, take firſt *half an ounce* to try and then increaſe the Doſe by degrees, give it every other day alone or with Liquor as he pleaſeth.

Theſe are the uſual Pills: Take *Agarick two drams, Turbith a dram, Ginger a ſcruple, Rhubarb three drams, Spike half a ſcruple, Diagredium prepared with juyce of Roſes a ſcruple, extract of Wormwood a dram, with ſyrup of Roſes*, make a Maſs, take *half a dram* in the morning faſting every other or third day, drinking after a little ſyrup of Violets with Endive water.

If the Feaver abate not with theſe, uſe ſtronger as this Potion: Take *Liquoriſh an ounce, Rayſons an ounce and an half, Prunes ſix, Tamarinds ſix drams, tops of Time a dram, Polypody, Senna, each half an ounce; Carthamus ſeeds ſix drams, Annis and Fennel ſeed, each a dram*: boyl them, infuſe *Rhubarb four ſcruples, Spike half a ſcruple, Agarick a dram and an half*: ſtrain and diſſolve *Diaphœnicon a dram and an half*.

Or: Take *Electuary of juyce of Roſes, Diaphœnicon, Confectio hamech, each a dram and an half; ſyrup of Roſes, made with the infuſion of Senna an ounce, with Wormwood Wine and Endive water*: make a Potion.

Or theſe Pills: Take *Aggregative, of Myrobalans and fine Quibus, each a ſcruple*: make nine Pills, *with white Wine*.

In long Quattans you may ſomtimes reſt a month and then prepare and purge again. The humor being Cholerick and thick, blood is thus prepared: Take *ſyrup of Fumitory and Epithymum, each an ounce; ſyrup of Violets and of Endive, each half an ounce: waters of Fumitory, Bugloſs and Endive, each an ounce and an half*: add *yellow Sanders*, and drink it five or ſix daies.

In Spring when Herbs may be had, or *Autumn*: Thus: Take *of both Bugloſſes, Hops, Fumitory, each a handful; beat them with two ounces of Vinegar*: ſtrain and add *the juyce of ſweet Apples a pint, with Sugar*, drink it often.

Afterwards purge as formerly. Or thus: Take *Damask prunes ten, Rayſons, Jujubes, Sebeſtens, each twelve; Cordial flowers a pugil, Annis ſeed a dram*: boyl them in water and white Wine, add *yellow and Indy Myrobalans rubbed with Oyl of ſweet Almonds, each three drams; Rhubarb a dram, Spike ſix grains, Senna half an ounce, Epithimum and tops of Time, each a dram and an half*; ſtrain and add *ſyrup of Roſes ſolutive an ounce and an half; Catholican half an ounce, Confectio hamech a dram*: make a Potion.

Or with theſe Pills: Take *Pills Aggregative, of Myrobalans and Turbith in Pouder, each a ſcruple*: make Pills *with five grains of Ginger and white Wine*.

To prepare and purge together, make this Apozem, Take *Sparagus and graſs roots, each an ounce and an half; Smallage and Parſley roots, each an ounce; Tamarisk and Elder, of each an ounce*: ſteep all in Wine, add *Borage, Bugloſs, Maidenhair, Ceterach, each an handful; Germander, Ground pine and Bettony, each half an handful; green Mercury a handful, Cordial, Roſemary and Broom flowers, each a pugil; Annis and Parſley ſeeds, each two drams; Dodder and Fennel ſeed, each a dram; four great Coole ſeeds, each two drams; Rayſons two ounces, Prunes ten*: boyl, ſtrain, and infuſe *Carthamus ſeeds an ounce and an half, roots of Polypody four ounces, Senna two ounces, Agarick three drams, Myrobalans, Indy and Citron, each half an ounce; Epithymum and tops of Time, each three drams*: infuſe them hot, then boyl them a little, add *a quart of the juyce of ſweet Apples with Sugar and Cinnamon two drams*: make a ſyrup, give *an ounce*, or more alone, or with Whey or Bugloſs or Borrage water.

You

You may infuſe the ſame in Wine, allaying it a little with Water, and adding Wormwood, for bitter Wine is more pleaſant than bitter Decoctions.

A gentler Infuſion is made of dry things thus. Take *Graſs, Succory, Parſley and Fennel roots, each an ounce; Wormwood, Germander, Groundpine and Bettony, each a dram; Fumitory and Hearts-tongue, each two drams: Cordial flowers a pugil, Epithymum and tops of Thyme, each two drams; Aniſe and Fennel ſeed each half a dram; dryed Polypody roots and Senna, each two ounces; Agarick three drams; Ginger half a ſcruple,* infuſe them in *Wine* and *Water*, and boyl as formerly. It needs no ſweetning, for the ſcent of the *Wormwood* muſt prevail.

An Electuary thus. Take *Catholicon an ounce, Diaſenna, Confectio Hameck, each half an ounce; Carthamus ſeeds peel'd and bruiſed ſix drams, Turbith two drams, Ginger infuſed in Oxymel a ſcruple, Senna two drams and an half, Aniſeed half a dram,* with *ſyrup of Epythimum* make an *Electuary*, give *ſix drams* alone or in *Whey*.

Or theſe Pils. *Take* Indy and Citrine Myrobolans rubbed with Oyl of ſweet Almods, each a dram; Rhubarb two drams, Turbith a dram and an half, Thyme and Epithymum each a dram; Senna a dram and an half, Cream of Tartar a ſcruple, Ginger and Spike, each ſix grains, *with* ſyrup of Epithymum *make a* Maſs, *give* two ſcruples or more as you ſee fit.

In quartans Pils of Agarick with Juyce of Eupatorium are good.

And after the uſe of them they muſt be purged again every third day.

Alſo Clyſters may be given all along to draw from the Meſaraicks, and to looſen: for by long lying, and heat, and faſting, the belly is often bound: We ſhewed you Clyſters of ſharp and opening things.

In melancholick fevers uſe this often. *Take* emollients each a handful; Balm, Fumitory, both Bugloſſes, each a handful and an half; Chamæmel, Melilot, Broom, and Elder flowers, each a pugil; Carua ſeeds a dram, Fænugreek and Line ſeed, each two ounces; Bran a pugil and an half, Senna an ounce, *boyl them, and add* Honey of Violets and Roſemary flowers, each half an ounce; Confectio Hamec and Benedicta Laxativa, each two drams; Oyl of Chamæmel and Violets, each an ounce an half; *with a little* Salt, *make a* Clyſter.

This Clyſter is for Baſtard fevers, and flegmatick perſons. Take *Lilly and Marſhmallow roots, each an ounce and an half; emollient herbs, Atriplex, Mercury, Baulm, Bettony, each a handful; Figs ſix pair, Dill and Fennel ſeeds, each a dram; Carthamus ſeeds bruiſed ſix drams, Senna ten drams, Chamæmel, Elder and Roſemary flowers, each a pugil*; boyl them and to *a pint*, ad *Catholicon and Diaphœnicon each two drams*; *Hiera* Galeni *three drams, Honey and red Sugar, each an ounce; Oyl of Violets Lillies and Chamæmel, each an ounce*: with a little *Salt*, make a *Clyſter*.

Faſting belongs to Evacuations, for by it the humor is kept from increaſing, and that which is in the Meſeraicks is taken away by the Guts and Stomach, and ſo the fever is cured. *Theſſalus* cured fevers with his three daies faſt, and Empericks in our time labour to do the ſame. But in regard the Choler rageth by faſting conſtantly, and hurts the parts that draw it to them, eſpecially when it faſteneth to them producing the Colick, as I ſhewed, and brings worſe Diſeaſes, we wil not raſhly prefribe faſting againſt fevers, by which means Sweat and Urin wil be hindered.

The thin humors paſs away by ſweat, or inſenſible tranſpiration or Urin, and cure the fever if the thick matter was firſt purged. This Nature doth ordinarily of her ſelf, when ſhee is fit for it. And therefore the Phyſitian being her ſervant ought to imitate her when ſigns of Concoction appear, in the declining of the fever, to take away the remainder, with Purgers, by Urin, Sweat, and inſenſible tranſpiration, aforementioned.

We mix things to purge Urin with Preparatives with an Eye to the fever, and ſomtime we uſe them after purging in the declining.

In ſhort and ſharp Tertians we uſe the gentleſt, that leaſt inflame, as Melon ſeeds and red Peaſe, and Parſley roots in broath.

Or Decoction of yong Sparagus in Ale, or an Emulſion of the cold ſeeds with Almond Milk.

Pomegranate Wine of the moderate taſt provokes Urin.

In Baſtard tertians and long fevers uſe theſe, and ſtronger as Chicken broath, with Parſley, Fennel roots, Borage, and Peaſe, and the like mentioned in the Diet.

Or thus. Take *red Peaſe a pugil, Barley half a pugil, Liquoriſh an ounce, Raiſons an ounce and an half; Fennel and Parſley roots, each two ounces; Melon and Gourd ſeeds each two drams*; boyl them in *lean Chickn broath*, drink it in the mornings.

Or thus. Take *Barley water a pint*, with *Fennel roots boyled in it*, and add *ſyrup of Maidenhair two ounces*.

Make it ſtronger thus, if the heat of the Fever be not great. Take *roots of Brambles, Sparagus, each an ounce; Fennel, Smallage, and Parſley roots, each half an ounce; Aſarum roots a dram, Endive, Liverwort and Maidenhair, each half a handful; Hyſop a handful, Fennel ſeed two drams, the four cold great ſeeds, each three drams; Peaſe a pugil*, boyl and add *Sugar* or *Honey* and *Vinegar* for old Folk.

This Decoction is admired of ſome. Take *tops of Wormwood two drams, red Peaſe ſix drams*, boyl and give *four ounces* after the back is anoynted as ſhal be ſhewed.

The Decoction of Dill with Rue, Honey-wine or Hyſop do the ſame.

Water of Gentian, Centory, Wormwood, or of Graſs, Aſparagus, Smallage, Parſley, Lovage, Valerian, may be uſed inſtead of the others.

Theſe Pils provoke Urin. Take *troches of Wormwood, Roſes, and Eupatory, each a dram*; with *Gentian water* make *Pills*, give a dram every day, drinking after it the *Decoction of red Peaſe, Melon ſeeds and Parſley roots*.

White thin Wine with water is preſcribed for ſome in the declining time.

Or this Infuſion. Take *Fennel and Sparagus roots, each an ounce; Wormwood and Hyſop, each a dram and an half; Chamæmel and Dill flowers, each a dram; Fennel ſeed a dram*, infuſe them in *Wine and Water* boyled or otherwiſe.

In long Quartans you may give the former and ſtronger, if the heat be decreaſed. As, Take *Liquoriſh, Raiſons, each an ounce; Parſley roots an ounce and an half, Aſarum roots a dram, Maidenhair, Cetarach, Hyſop, each half a handful; Hops a pugil, Sparagus ſeeds three drams, Fennel ſeed a dram, Melon ſeed two drams, red Peaſe a pugil, Chamæmel flowers a dram and an half*, boyl them in *ſix pints of Water*, add *Pomegranate Wine four ounces*, and drink it mornings with *Sugar*.

Wine and Water is good againſt quartans.

And this Infuſion. Take *the three capillary herbs, each a handful; Hyſop half a handful, Chamæmel flowers half a pugil, Fennel and Smallage roots, each an ounce; Aſarum roots two drams, Fennel ſeeds a dram, Dodder ſeed a dram and an half*, infuſe them in *Wine*, give it as afore.

Some

Some give this diſtilled water every morning two or three ounces for an excellent medicine. Take *ſtrong Vinegar three pints, hot cruſts of new bread a pound, Gunpowder two ounces*, diſtil them in *Balneo*.

Or. Take *Balm water half a pint, Aqua vitæ a pint, the pith of Dwarf-elder half a pound*, diſtil them, and give *two ounces* every morning and evening.

Alſo theſe Pils. Take *Troches of Wormwood, Eupatory, Rhubarb, each a dram*; with *ſyrup Bizantine* make *Pils*, take them as formerly with *Peaſe broath* in which *Roots* are boyled.

Sweating is good if the critical Excretion tend that way, for it helpeth Nature in the declining time to expel the reſidue. It is done by theſe following, and the gentleſt, if they cauſe not ſweat, cauſe tranſpiration.

Frictions are good before the Fit two hours, and in the beginning of it when the heat begins to diſperſe the vapors and heat, and if violent they cauſe heat.

If Sweat be wiped off often it cauſeth more ſweat.

And boyled Water with Wine and alone in great quantity cauſeth Sweat. Therefore they who deny Drink to ſevers and almoſt Kil men with thirſt, do ill, for it hinders Sweat, and inflames the body, cauſing a Hectick.

Bugloſs water taken in great quantity, cauſeth much ſweat, and is excellent in quartans. And alſo Fumitory, Scabious, Carduus, and Hearts-tongue Water.

This following Decoction provokes Sweat and Urine. *Take* of Barley a pugil, roots of Smallage, Parſley, Kneeholm, Sparagus, Nettles each an ounce; Orris and Elicampane-roots each half an ounce; Bayberries twelve, Chamæmel and Dil flowers, each a pugil; Pennyroyal, Calamints, each half a handful, Cummin, Aniſe, Fennel, and Citron ſeeds, each a dram; *boyl them in much* Water, drink it often.

Treacle is given for the ſame, and the like, which we ſhal declare among things that hinder Fits.

Alſo anoynting the back with looſning Oyls doth the ſame, and other things there to be mentioned.

A Bath is good in long fevers, to provoke Sweat, and refreſh, and moiſten, of ſweet water; in which Barley and moiſtning herbs are ſomtimes boyled. This muſt be uſed on the wel day, or five hours before the fit, not too hot. And after let the Patient take a dram of Mithridate or Diaboraginatum and ſweat in his bed. Thus many have been cured of quartanes.

Altering things reſiſt the heat and drineſs of the Diſeaſe, and are cold & moiſt, and muſt be mixed with Reſiſters of putrefaction, things that open obſtructions, and ſtrengthen, becauſe theſe differ not much, we ſhal diſtinguiſh them by Forms and not by Kinds of Fevers.

The beſt way is to give them in drink for they are refreſhed thereby and delight in it.

In the fit becauſe they are then drieſt, give crude or boyled water as we ſhewed. or Barley water, but in the fit Barley is too nutriſhing, therefore give little. that water is beſt, in which Sorrel and Graſs roots are boyled, with ſteel prepared and Cinnamon, nor muſt they be kept from drink after the ſhaking Fit, for as *Fernelius* and *Joubertus* in his Paradoxes affirms that if the Patient be not relieved with Drink in his great heat and thirſt, there wil follow a melting of the ſolid parts, and wil they not ſweat. In this alſo there is a moderation to be uſed, leſt ſudden cooling hurts the bowels, and cauſe a Dropſie, as in quartans its uſual, this is to be regarded when the ſtomack is offended with cold drink, for then we give not much but corrected and qualified water, with an Eye to cuſtom.

Out of the fit if the body be little cholerick, and not very hot: we give Wine with Water or Bugloſs water in quartans and thin, ſharp Wine in Baſtard Fevers which rather cools than inflames. And it provokes Urin and ſtrengthens. Therefore ſome boyl Hyſop, and by *Galens* command Pepper or Cloves. Others give Ale to provoke Urin.

Out of the fit, and in the fit, we give theſe cool and moiſtening Drinks following. *Take* Endive, Sorrel, and Bugloſs water, each four ounces; Pomegranate Wine two ounces, *with* Sugar *make a* Julep, or ſharp Syrup, as of four Apples, Ribes, Currans, Sorrel or Vinegar.

Or, *Take* one meaſure of boyled water, ſyrup of Lemmons or Citrons, two ounces, ſyrup of Violets an ounce.

Or, *Take* Saſſaphras three drams, red Sanders and Sortel roots, each two drams; Cinnamon a dram, *(with Sugar two ounces, if you wil have it ſweet) cut and bruiſe them, tie them in a clout, boyl them in water, to be given at any time.*

Or this ſyrup. *Take* ten pints of Water, Vinegar four ounces, Sugar four ounces, *boyl and drink.*

The Alexandrine Julep of Sugar and Roſe-water, and others metioned in Thirſt, the juyce of Purſlane is commended by *Dioſcorides*.

There are alſo divers Electuaries.

Give this the day after purging to ſtrengthen. *Take* Conſerve of Roſes and Violets, each a dram; Trionſantalon half a ſcruple, *with* Sugar *make a* Bolus.

In baſtard quartans. *Take* Conſerve of Borage flowers and Bugloſs roots, each a dram; Citron peels candied half a dram, Diamargariton frigidum half a ſcruple.

Or give a dram of Treacle with half a dram of Conſerve of Bugloſs.

In the Fit give we Electuaries to quench Thirſt which muſt not be ſweet. Theſe are to alter.

Take Conſerve of Roſes and Bugloſs each an ounce; of candied Citrons pulp and peel, each two drams; Rob of Ribes half an ounce, ſpecies Diamargariton half a dram, *with* Sugar of Roſes *make a* Mixture.

Or this, *Take* Conſerve of Roſes, Rob of Ribes, ſharp Cherries and ſharp Prunes preſerved, each an ounce; Conſerve of Bugloſs half an ounce, *give it in time of Thirſt.*

To alter and ſtrengthen all the time of the diſeaſe *Take* ſpecies of the three Sanders with a double quantity of Rhubarb a dram, Diarrhodon Abatis a ſcruple, Diamargariton frigidum half a ſcruple, Conſerve of Roſe and Bugloſs roots, each a dram, *with* Sugar *diſſolved in* Roſe *and* Endive water, *and a little* Vinegar: *if the heat be great, make* Lozenges *to be eaten on the wel daies.*

Sugar of Roſes by it ſelf or with other things, is much commended, and that called *Manus Chriſti*, and Trionſantalon, and Diacorallium.

In quartans for Melancholly. *Take* ſpecies of Diarrhodon, Trionſantalon, each half a dram; Diamoſchu half a ſcruple, *Lætificans Galeni* half a ſcruple, *with* Sugar *diſſolved in* Roſe *or* Bugloſs water, *make* Lozenges.

Soft Electuaries. *Take* Conſerves of Cordial flowers, each an ounce; Conſerve of Hearts-tongue, Maydenhair and Ceterach, each half an ounce; candied Citron peels two drams, ſpecies of Diarrhodon, Diatragacanth frigid, and Diamargariton frigid, each a ſcruple; with the ſyrup of Citrons.

Or thus. *Take* Diabugloſſati and Diaboraginati, each an ounce; Letitiæ Almaſoris two drams, ſpecies

de Gemis, Aromatici Roſati, each half an ounce, with ſyrup of Apples.

Or for Melancholy: *Take* the four Cordial conſerves, each an ounce; Species Cordial for meat, fragments of precious, Stones and Pearls, each half a ſcruple; Gold leaves with ſyrup of Currans and Cherries or Sower Apples: *make an Electuary.*

Cooling Pills: *Take* Troches of Camphire two ſcruples, with Vinegar: *make Pills, give* half a ſcruple.

Mollifying Clyſters all the time of the Diſeaſe do alter.

And alſo moiſt Dyet.

Moiſt fleſh, as of young beaſts, Veal, Pigs, Kids, Chickens boyled, alſo brook Fiſh, ſeaſoned with Pepper. In quartans rare Egs are good, but in Cholierck ſtomachs, they ſoon corrupt.

Grapes are very refreſhing, alſo Peaches and Pippins.

Give bread ſopt in broath, and Cream of Barley.

Make broath with Lettice, Borrage, (and Bugloſs in quartans) with Endive and Sorrel, ſuch as we preſcribed for continual putrid Feavers, and give Bugloſs water in broaths.

Make ſawce of ſower Grapes and Vinegar, Capers and Olives well waſht from the Salt and our Compound called in High-dutch *Sumpiſt.*

Alſo Confections of ſower fruits, and the ſame crude (except there be other things that hinder) or dryed and ſoftned again are good.

Sallats alſo of Lettice and Vinegar and a little Oyl and Succory roots boyled and eaten with Oyl and Vinegar.

Let the Air be cool by nature or art.

Apply Epithems to cool the Liver. Thus: *Take* water of Succory and Endive, each four ounces; Wormwood water two ounces, yellow Sanders and Roſes, each a ſcruple, Spike half a ſcruple, Vinegar of Roſes half an ounce.

Then anoynt with the Cerot of Sanders, Oyl of Violets waſhed with cold water, each an ounce; Spike half a ſcruple.

For the Heart, this is a good Epithem: *Take* Roſe-water two ounces, Borage and Bugloſs water, each an ounce; Balm water half an ounce, Vinegar of Roſes ſix drams, Cordial ſpecies or Diamargariton a dram, Saffron a ſcruple.

Then anoynt the Heart and Pulſes with this: *Take* Treacle two drams, Oyntment of water Lillies a dram, juyce of Lemons half a dram, Saffron and Camphire each five grains: *make a Liniment.*

If the Reins be hot: *Take* the mucilage of Flea bane ſeeds, made with Roſe water an ounce, Sanders two drams, Camphire half a ſcruple, Oyl of Roſes and Violets, each an ounce; with Virgins Wax, *make an Oyntment.*

A moiſt Bath of moyſtning things is good in quartans to alter, and is beſt out of the fit, if the Ague hath been long. Albeit the vulgar people fear to moiſten in intermitting Feavers, and if they walk but near a River they fear a relapſe; And therefore by old Wives ſuperſtition forbid any that are recovered to croſs over a Bridge, or go by Sea, or in a Boat, or walk upon new broken up or tilled ground, wheras that moiſting of the body in long Feavers, when the heat a little abateth, is good eſpecially if there be a Conſumption.

There muſt be a good courſe of Diet in reſpect of food, Air, Sleep, and excerciſe, to keep up ſtrength, if the Feaver be ſharp, leaſt he fall, or to hold him up, if it be long.

The Air muſt be pure and free and ſomtimes perfumed.

Meat and Drink muſt be thin in the beginning of all intermitting Feavers. In which *Avicen* teaches that hunger and thirſt endured the firſt week conduceth much to the Cure.

And if they be long and Chronical as baſtard Agues and quartans, and they live ſparing the firſt three weeks, they are eaſily Cured. Afterwards a fuller Diet is allowed, and when the choller grows hotter in Tertians and quartans, and they cannot endure faſting.

In the fit we give no food leaſt nature ſhould be hindered in concocting the matter of the Diſeaſe, and leaſt the food ſhould be corrupted with preternatural heat and the Feaver increaſed, for we ſee that after meat it doth as in Hecticks. And then we deny nouriſhing drink, if but of Barley in any quantity, and Almond Milk, eſpecially when thick. But if the patient be cholerick and thin bodied, leaſt choller ſhould be enraged or an Hectick follow, we allow even in the fit, a little food, as to Children in reſpect of cuſtom.

Out of the fit Cholerick perſons may eat in the declining of the Feaver, and before it cometh two or three hours; But in long Agues, as quartans, it is good to faſt the whol day wherein they have their fit, and let food be given ſix or ſeven hours before the fit, or ſo long time before as a Concoction may be before it come. And this is to be obſerved in double Feavers that come every day, alwaies chooſing that time of reſt which is fartheſt from the fit, and feeding preſently after the fit, becauſe the Diſeaſe returnes ſoon. And let it be eaſie of Digeſtion, as we ſhewed in altering things and continual Feavers.

Wine is good in quartans and other baſtard Agues, becauſe it refreſheth: but give it out of the fit at meat and not immoderately, and if thirſt be great, give it with boyled water, white thin and new Wine is beſt eſpecially in cholerick perſons: old wine inflames; you may give red Wine if it be clear and daſht with water.

Sleep refreſheth, in the declining of the fit, as waking hurts: and ſleeping is hurtful in the beginning of the fit.

In quartans moderate excerciſe is good.

Paſſions of minde if ſad and immoderte hurt, and pleaſant and moderate do good.

We have ſhewed what Medicines are fit to preſerve and reſtore ſtrength, in the alterers.

The Symptoms abate and depart with the diſeaſe: and if any of them be extraordinary, the Cure thereof ſhall be regarded; either by reſpecting all the accidents together, by hindering the fit: or by reſpecting that in perticular: of which hereafter.

The Paroxyſme or fit is when all the accidents from heat and cold appear; and departt with the fit: which fit and accidents, if hindered there is a Cure in part that is of the Symptome, not of the cauſe, but of the evaporation or motion that inflames the Heart. Things that take away chilneſs which is the firſt fit, do this; and then though heat follow the vulgar ſuppoſe the Ague to be cured or abated. And ſomtimes it comes to paſs that when ſhaking, by which means the feaveriſh matter paſſeth through the Body, is hindered, then both the hot and cold fit are prevented, and the whol feaver is taken away by giving that which prevents ſhaking. But this cannot be done ſafely before the matter be prepar'd and purged; for if the cauſe remain, though the Feaver ceaſe, worſe Symptoms may follow: As Empericks find, who ayming at nothing more but the Cure of the

fit,

fit, bring Cholicks, Jaundies and Dropſies. And ſomtimes we do willingly according to reaſon take away eth fit before the cauſe, if it be ſo great that it deſtroy the ſtrength, or at leaſt abate it with extraordinary Medicines, yet ſo, that we go on ſtill Methodically to take away the cauſe. And it ſomtimes hapens, that after the cauſe is removed there are fits which come from cuſtom or habit: to prevent theſe at the firſt when they ſtretch and yawn, we give things againſt ſhaking which we mentioned, when we ſpake of depraved Motion. Thoſe things do it, either by taking away the matter which getting by degrees into the body, cauſeth the ſhaking: or by ſtupifying the ſences, or by heating the body ſuddenly at firſt, before the fit comes. All theſe are to be done warily, and not before preparation and purgation, and then you may give either a ſpecifical evacuation, or ſtupefactive or an alterer or a Medicine made of all theſe together.

It comes to paſs often, that by large eating before the fit, that nature removes from the cauſe of the diſeaſe to the Concoction of meat and hinders the fit. Hence the German Proverb *Sie haben das feber abgeſſen.*

The ſame thing is done by evacuations when nature is buſie to ſend Excrements upwards and downwards.

The fit is hindered by vomiting in the beginning of the fit, becauſe by it a revulſion is made of the matter from the Meſeraicks to the ſtomach, and the Feaver is quite taken away, ſomtimes by throwing out the cauſe by the Stomach and Guts.

Gentle purges prevent the fit, the ſame way (but ſtrong purges are dangerous to be given before it, becauſe they will work in the time of the fit and weaken) as Agarick, Senna, with ſome alterers. Theſe are the beſt compoſitions that follow. A Decoction: Take *Epithimum and Time, Polypody and Senna, each a dram*; *Borage flowers a pugil:* boyl and ſtrain, and give a draught afore the fit, with a little *Wine.* This is beſt in a quartan.

Or a Pouder: Take *Senna three drams, Turbith a dram, Pepper a ſcruple, Ginger half a ſcruple, Cinnamon, Myrrh, each half a dram; with Sugar as much as all*: make a Pouder for three Doſes, give one in white Wine afore the fit.

Helidæus gives a dram of Agarick with juyce of Fumitory and Feunel.

Others mix a dram of Diagredium with three ounces of Syrup of Violets, and give as much as a Cheſnut an houre afore the fit.

Some give ſtrong bodies the Pouder of Mercury, with ſtrong Vinegar, Treacle and Sugar. And the Chymiſts inſtead thereof give Mercurius dulcis, or Mercurius vitæ, or Panchymagogum Rubrum.

Stupefiers are given afore the fit becauſe they take away the ſenſe of the parts, and provoke ſweat.

As Treacle a dram and an half, or more or leſs in Wine is highly commended; or in wormwood Wine, Carduus, Mints or Roſe water, ſome add Diatrionpiperion, that of the three Peppers, others Mirrh as *Dioſcorides.*

Alſo Panchreſtum Nicolai with Wine, or Methridate.

Dioſcorides commends three or four leaves of Henbane, with a dram of the ſeed thereof given in Sack at the beginning of the fit. If you repeat it twice or thrice it is a ſure remedy. Alſo ſyrup of Poppies given afore the fit prevents it.

Alſo divers alterers do the ſame, inwardly and outwardly, and motion of the Body.

Inwardly we give both hot and cold Medicines.

Hot becauſe they preſently inflame the body and drive away ſhaking, and then the heat which uſeth to follow the motion of the cold fit either goes away or is abated. And hot things do it by diſperſing the matter eſpecially when it is thin. And they cauſe ſweat. But vehement hot Medicines are not to be given before a Concoction of the matter, leaſt the thin be conſumed and the thick remain; and of a ſimple Feaver, there prove a double, or treble Ague, or a continual Feaver. This muſt be obſerved in giving of Treacle and other hot things, and Stupefiers above mentioned. Of hot things theſe by experience are found beſt. Take *Ginger half an ounce, Pepper a dram, Nut ſhels two drams:* boyl them in two pints of aſtringent Wine, and to five ounces ſtrained, add *an ounce of ſyrup of Violets,* give it two or three hours afore the fit and cover him to ſweat.

Or: Take *Gentian roots an ounce, Centaury tops and Serpyllum, of each three drams*; boyl them in Wine, and give a draught as aboveſaid.

Or thus: Take *juyce of Calamints three drams* or *an ounce and an half of the ſyrup,* give it with Wine and Borage water.

Or this: Take *Gentian, Centaury and Plantane water, each an ounce and an half*; drink it with a drop of Oyl of Vitrial, or ſome drops of ſpirit of Salt or Niter.

Or: Take *Plantane a handful, Sorrel half a handful, Vinegar and Treacle, each four ounces*; Diſtil them, give three ounces of the water half an hour afore the fit.

Or give three ounces of the juyce Plantane with an ounce of the juyce of Purſlane half an hour afore the fit.

Of this Pouder commended in all Feavers though Peſtilential: Take *Sugar candy three drams, Ginger two drams, Camphire a dram*; make a Pouder, give *a dram* in hot water. This *Crato* commends.

Another: Take *the Pouder of Cray-fiſh, Mans ſkul and Ivory, each a ſcruple*; *Cinnamon half a dram, Saffron a ſcruple,* give a dram in Wine.

A third: Take *Myrrh a ſcruple, Pepper ſix grains, Ginger half a ſcruple, Sugar three drams,* give *a dram,* or make Pills, *with juyce of Gentian.*

An Electuary: Take *the Troches Rubiæ of Nicolas a dram*: give it with white Wine: or the Electuary of *Aſa,* in *Meſue, Trionphyllon Nicolai.* Electuary of *Peter Arnold* of *Villanova.*

Or: Take *Cinnamon two drams, Pepper a dram, Saffron half a dram, Myrrh, Storax, Serapine, each half a dram*; *Benzoin three drams, Gentian roots two drams with Honey*: make an Electuary, give *half a dram or two ſcruples,* two hours afore the fit.

Coolers do it ſomtimes and ſtop the fit, but they are better external, becauſe they muſt be very cool, which will ſuddenly hurt the Heart, given inwardly.

Cold water, drunk largely in the fit cures many: Hence the Proverb *Das feber abtrincken.*

Two ounces of Pomegranate wine given in the fit, removes it, if you anoynt the Pulſes with the Oyntments following.

A famous Phyſitian gives the Cryſtal mineral in a great quantity in Spring, Plantane or Sorrel water in the fit.

Somtimes, External things do it, as excerciſe, Applications, Injections, Amulets and Superſtitious things.

Excerciſe doth it by heating the body and provoking ſweat before the fit. As Running, Riding, &c. Inſtead of excerciſe in weak bodies, you may rub them and cover them warm with cloths, or uſe Oyntments before the cold fit.

Alſo

Alſo Applications to the Wriſts, Temples and Ankles are uſed. They are ſuch as either divert or revel the matter from the Heart, and are ſharp: or ſuch as alter the diſtmper of the Heart, ſo that it will not eaſily be enflamed by the vapor, and defend it, being ſharp and temperate and cooling ſomtimes, mixed with piercing things to reach the Heart.

A burning, bliſtering Medicine is made thus: Take *leaves of Crow foot or Dove foot bruiſed with Salt and Vineger, or the leaves of Thlapſus bruiſed with Salt and Vinegar, or of Shepheards purſe, of Dentilaria Rondeletij, Rue, Savine, Marigold, Angelica, Nettles.*

As thus: Take *Elder leaves, Rue, Marigold and Nettles, each a handful*; bruiſe them, *with Salt and Vinegar, or apply Garlick and Onyons* bruiſed, to the Wriſts.

The more cool are: Take *Plantan and Sowthiſtle, of each a handful*; bruiſe them, *and with a little Soot of a Chimney, Salt and Vinegar*, apply it.

Or this, which makes a black ſpot and a little corrodeth: Take *the inward bark of the Hazel Tree*, ſteep them in *Vinegar*, and apply it. I have uſed this often with good ſucceſs.

Alſo bread ſteept in Vinegar and applyed to the Pulſes.

This Remedy is approved by many: Take *a little Oyntment of Poplar tree*, and mix it with clean *Cobwebs*: make great Pills, apply two to the Arms, two to the Feet, and two to the Temples, with a Vine leave before the fit: Repeating them after, if they Cure not at firſt.

Anoynt the Pulſes, Back and Body,

The Pulſes, Thus: Take *juyce of Rue, Boys piſs, each equal parts*; waſh the Pulſes before the fit.

Or: Take *Oyl of Chamomil* and boyl Spiders therein anoynt the Pulſes and Back-bone, or Oyl of Toads.

For the Back to prevent ſhaking: Take *Oyl of Chamomil three ounces, Oyl of Bays one ounce, Oyl of Caſtor half an ounce, Spiders and Earth worms, each ten*; *Aqua vitæ two ounces*: boyl them till the Aqua vitæ be conſumed and anoynt.

Mathiolus ſaith that anoynting from Head to Foot with Oyl in which the balls made of *Anthemis* flowers are diſſolved, cureth Agues.

Some commend the Fume of Cats dung.

Others give Anthemis in Clyſters.

There are divers Amulets, theſe are accounted of many the moſt infalible, a Spider hang'd about the Neck in a Nut ſhel. Mouſe-ear gathered in the decreaſe of the Moon tied in a knot of cloth about the Neck, or to cary the Snail ſtone, Jaſper ſtone, or to hold a Mole in your Hand, in the time of the fit til it die.

We will omit ſuperſtitious Characters and Charms as trifles.

And although we have ſhewed the Cure of Symptoms, yet we ſhall here ſpeak of them as they are in the time of the Feaver.

If watchings and Head-ach by reaſon of Vapors do offend, we hinder the vapors from riſing and provoke ſleep. If ſleep be too much we look to that.

We uſe things mentioned among the alterers againſt thirſt and dryneſs of Tongue by heat and Vapors.

Evacuations reſtore Apetite, and when the diſeaſe declineth, we ſtudy to hinder it leaſt they eate too much.

In Swounding Feavers we look firſt to the Symptom, and if it come from choller in the Mouth of the Stomach, the ſharpneſs thereof muſt be allayed. And then we give ſtrengtheners.

If there be pain in the Stomach from yolky or Leeklike Choler, or from Wind with rumbling, or from too much drink, they muſt be cured with things that abate ſharpneſs, ſtrengthen, and diſcuſs Winds.

A Looſneſs often comes from Choler, which muſt be cured, as we ſhewed in pain of the ſtomach, by Clyſters, as that of Barley water, and red Sugar two ounces.

There is ſomtimes a Colick with the Ague, by reaſon of Choler in the Guts, and ſomtimes after, when the cauſe is not removed, and it is cured as I ſhewed in the Colick. They ſay it comes from Glaſſey flegm in the fever *Lypira*, but we have ſhewed that a fever cannot come from this moſt cold humor.

There is often alſo Cachexy or ill-habit, Dropſie, hardneſs of the Hypochondria, Oedæamatous tumors in the Legs, in long fevers by reaſon of the hurt of the internal bowels, the cure of which is in their places.

In the declining there is a Leanneſs from Atrophy, or want of nouriſhment, or from the beginning of an Hectick after a double and acute fevers.

In a quartan often, there is a Tumor behind the Ears.

And ſometimes Worms are voided; to which we ſhal preſcribe particular Medicines.

The Cure of continual putrid Fevers.

A continual putrid malignant ſolitary Fever, which is often epidemical, or ſimply malignant, called by *Rondoletius* ſymptomatical, is cured as a putrid fever that is not malignant, and alſo a ſemi-tertian which ſome account malignant.

As for the predictions, they muſt be made by the ſame ſigns ſhewed in Putrid Continual fevers. Theſe ſigns being doubtful in putrid not malignant, and their Judgment uncertain, are more uncertain here where there is malignity, which ſo inſinuateth it ſelf into the heart, that when ſigns of concoction appears, the Patient dies of a ſudden, unexpectedly. Morover, Nature doth not keep her critical motions ſo orderly as in fevers not malignant, being more oppreſſed: And therefore we muſt be more wary here of pronouncing our Judgment of Life or Death from ſigns, among which the ſpots like Flea-bitings, or black, foretel Death.

The Cure of malignant fevers is done, as in other ſimply putrid. And we take away ſtil ſome of the Cauſe, which is putrid and malignant, and we alter the heat with things that cool and reſiſt putrefaction, and hold up the ſtrength, and prevent other accidents.

We Evacuate both blood and Humors, as followeth.

We preſcribe bleeding by Lancet, or Scarification, as in continual putrid, with reſpect to the ſtrength.

We purge other Humors, as in other putrid fevers, with things added to reſiſt malignity, ſuch as we ſhewed in malignant fevers, that ſend out Small-Pox and Meazles.

We alſo provoke Urin and Swear, as in others.

We alſo uſe Alterers, adding to Coolers, reſiſters of Corruption, and Cordials, as ſharp things, and external applications.

We keep up the ſtrength by Diet and Cordials, and more in theſe malignant than in other fevers, therefore allow a little ſharp Wine ſomtimes to refeſh.

We correct accidents as formerly ſhewed.

The Peſtilent Fever, or the Plague being a contagious Diſeaſe proceeding from an external venemous quality, paſſing from body to body, by the touch, or by the Air. We ſhal ſhew how to preſerve the ſound, and cure the ſick.

Preſerva-

The preventing and cure of the Plague.

Preſervation is made by declining the external Cauſe, or correcting it, or preparing the body to prevent Infection. albeit the ſeeds of the Plague are hidden and pierce into the body unknown to us.

We decline the Cauſe, by avoiding the place where the Plague is, as far as our calling, piety, and honeſty wil permit, and the Garments and cloaths infected, the Houſes and Streets, and in regard we know not where it is, many carrying the ſeeds of it with them, that are not infected, we avoid the concourſe of people in publique meetings, Bathes, and Danciug-meetings. And becauſe infection may be conveighed by dead and liviug creatures, it is good to go quickly far off, and return at leaſure.

We amend the peſtilent cauſe to keep it from infection, or to remove it, by Ayring and waſhing of coaths infected; ſome wil waſh their money at ſuch a time, before they receive it.

Others that think the infection of the Air is the cauſe of the Plague, amend that, which we approve, though we ſay the ſeeds of the Plague are in the bodies and not in the Air: for ſome things that purifie the Air purifie the Body, and the Air is often the conveigher of the Plague from one body to another. This is done diverſly, firſt we remove all putrid and corrupt things that may infect the Air. Some perſwade themſelves, that the ſcent of and old Goat evening and morning, prevents the Plague. And therefore they bring up Goats in the ſtable among Horſes, who uſe to have a kind of Plague, and the ſtink of the Goats frights away Mice alſo from thoſe places.

It is good to let in pure Air that is dry, and keep out ill. They ſay Sparrows and other Birds kept in a Chamber, purge the Air, and that Birds will not ſtay about infected places. Alſo good fire purges the Air by which *Hippocrates* ſtopt it.

Alſo Fumes of any ſcents correct the Air, as Juniper, Savine that beareth berries, or Bayes, Roſemary, or Agnus Caſtus. Or make fires of Oak, Vine, Oſiers, with Rue and Juniper.

Some burn Juniper berries upon Coals, Maſtich, Frankincenſe, Amber, Cloves.

Or theſe troches. Take *Benzoin and Storax, each half an ounce*; *Juniper or Berry-bearing Savin a dram, Angelica roots a ſcruple*, with *Gum-traganth* infuſed in *Roſe-water* and a little *Muſk*, make *Troches* for a *fume*.

Or theſe Candles which ſmaok. Take *Myrrh and Frankincenſe, each two drams*; *Benzoin, Storax, each three drams*; *Labdanum a dram and an half, Amber half a dram, Juniper berries two drams, dried Pomegranate peels a dram, Citron peels and Sanders, each half a dram*; *Juniper a dram, Wood Aloes and Cloves, each a ſcruple*; *Char-coals made of Willow or Tile tree as much again as all the reſt, with Infuſion of Gum traganth and ſix grains of Muſk* make black *Candles*.

Perfumes not burnt are thus made. Smel to Rue, Citrons, Lemons, Orenges, or a ſpunge or rag dipt in Vinegar and Roſe or Rue water.

Or thus. Take *bruiſed Rue a pugil*, and with *Vinegar* take out the *juyce*, add *Angelica roots half a dram, Camphire and Saffron, each half a ſcruple*: with a *Spunge* as before.

Or this Balſom, to anoynt the Noſtrils or Lip, made of Oyl of the ſeeds or roots of Angelica drawn with with Wax.

It is good to carry ſweet Apples or Balls in the hand. Take *roots of Angelica and Myrrhis, each two drams*; *Zedoary half a dram, red Roſes a dram, Lavender half a dram, Angelica, Nigella, and Coriander ſeeds, each a ſcruple*: *ſeeds of Baſil half a ſcruple, dried Citron peels two ſcruples, Nutmeg and Cloves, each half a dram*; *Cinnamon, Wood Aloes, Juniper and Storax, each half an ounce*: *Benzoin two drams, Myrrh a dram, Camphire ſix grains*, with the *Infuſion of Gum traganth made in Roſe or Angelica water*, make a *Ball*, and add a little *Oyl of Cloves or of Angelica ſeed*, and roul it over with a little muskefied piece of Silk or Cotton.

It is good to waſh the Face, Hands, Armholes, Privities, with *Vinegar of Roſes, or Roſe-angelica, or Lavender water, with a little Camphire, or the water of Citrangle flowers called* Aqua Naffe.

Droetus drops perfumed diſtilled waters into the Eats And perfumes the Garments, and adviſeth perfumed Gloves or Bags in the boſome, of *Cipres* and *Violets* in *Pouder*.

Or thus. Take *roots of Angelica half an ounce, Orris roots two drams, Coriander ſeeds, Juniper, each a dram*: *Benzoin and Storax, each two drams*; with *Muſk* or *Amber* if you pleaſe, make a *Pouder*.

We preſerve the body by keeping the humors from violent motion and inflammation, and by avoiding repletion and impurity, with Antidotes.

Let men take heed of inflammations at the time of the Plague, which wil ſoon receive a Fever or malignity.

Let them take heed of too hot Air, as Baths by which many have been infected.

And of violent motion by Running, Leaping, or Dauncing, and of violent paſſions as Anger, Joy, &c.

And of hot meats and Wines immoderately taken, but let them be corrected with cold ſharp things.

It is naught to ſtir the humors, for then they are ſooner infected by external cauſes. And Fear cauſeth the Infection to ſeize upon men ſooner than when the mind is quiet. Alſo Venery is denied by reaſon of the imagination. Alſo much unſeaſonable bleeding.

All Repletion is forbidden, for though every body is capable of the Plague, yet plethorick and cacochymical are ſooneſt infected: Therefore keep the body clean, and cleanſe it if it be foul.

Thus Blood-letting is good in men, if the body be plethorick, though it muſt not be done raſhly in young men who are ſubject to the Plague moſt, leſt the humors be diſturbed.

If ill humors abound, give a Clyſter every other day.

In Cacochymicks purge, but trouble not the humors too much, but uſe gentle things, accuſtomed in Spring and Fall after preparation of the humors abounding, adding things that reſiſt the Plague and putrefaction.

Pils are beſt that have Aloes called peſtilential Pils of *Ruffus* the Author of them. They are thus made right. Take *Aloes, Ammoniacum, Myrrh, equal parts*, with *ſweet Wine* make *Pills*.

Since, they make them thus. Take *Aloes a dram, Myrrh and Saffron each half a dram*: with *Wine* or for hot natures with *Syrup of Lemmons* make *Pills*, to which you may add divers *Antidotes*.

As theſe that are good to open obſtructions in the Meſeraicks. Take *Extract of Gentian a dram, the leſſer Centory and Carduus, each half a dram*; *Rue, Wormwood, each a ſcruple*: *Pouder of leſſer Centaury four ſcruples*: *Troches of Myrrh a dram and an half, Troches of Eupatory and Capars, each a dram*: *Troches of Wormwood half a dram*, with *Elixir of propriety* make a *Maſs*, give *a dram* twice in a week.

Theſe Purge more: Take *Aloes two drams, Rhubarb,*

Myrrh, each a dram; Zedoary, Saffron, each a ſcruple; with juyce of Citrons, or Limons: make a Maſs for Pills.

Or: Take *Aloes three drams, Rhubarb in pouder and ſprinkled with Cinnamon water one dram and an half, Agarick in Troches a dram, of the beſt Myrrh and Gum Ammoniack, diſſolved in Vinegar, each two drams; Saffron half a dram, Camphire a ſcruple, Oyl of the roots of Maſterwort two drops, with Vinegar*: make Pills.

Theſe may be uſed twice or thrice in a Week half a dram or a ſcruple, made into two Pills, the one at night and the other in the morning, they may be given to Children, if they can ſwallow them.

Theſe are ſtronger that follow to be given in foul bodies and ſeldomer: Take *the former maſs, with Agarick or Rhubarb*, add *Aggregative pills a dram, Diagridium a ſcruple, with ſyrup of Roſes*: make Pills.

The Antients gave Pills of Turpentine inſtead of Ruffi, And we give Roſin of the Larch tree, which purgeth very wel: Thus, Take *Turpentine Roſin, or Laricea* boyled, that it may be poudered, *Rhubarb ſprinkled with Cinnamon water, each two drams; Turbith a dram, Ginger half a ſcruple, with pouder of Liquoriſh*, make a Maſs, give *a dram or more*, as you deſire to Purge.

A dram of Turpentine, diſſolved with the yolk of an Egg and Carduus water purgeth well.

Divers Potions alſo may be made for the ſame: As, Take *Triphera Perſica* (commended by *Meſue*) *from half an ounce to ſix drams, with Scabious, Carduus and Sorrel water*, mix it, and give the ſame every fifth day.

You may give infants Manna in broath or Rhubarb, thus, Take *the extract of Rhubarb, with juyce of Roſes and Sugar and Sorrel watar*, make Lozenges. *Droetus* makes candied Rhubarb for Children.

There are many Antidotes mixt with Rhubarb and Triphera.

In very foul bodies give ſtronge purgers of Diagridium, Coloquintida, roots of wild Cucumber, Armenian Earth, Subium.

As this pouder: Take *the Troches of Alhandal, Diagrydium, Turbith, each a dram; Euphorbium a ſcruple, Maſtick half a dram, Saffron a ſcruple, Snake weed roots, and Burnet, each half a ſcruple*, make a Pouder, *take half a dram*, in convenient Liquor.

Or this Electuary: Take *wild Cucumber roots, Smallage, Coriander and Houſleek with Honey and Pepper*: make an Electuary, give as much as a ſmal Nut. This is highly commended of *Honoratus Caſtellanus* for preventing and curing the Plague.

As the true nature of venom of the plague is yet unfound, ſo is the true Antidote, but experience hath found out more then reaſon. Therefore we give that which is good againſt poyſon in general: The chief and approved ſhall be ſet down. Either as they are eaten, chewed or applied to the pulſes or Heart, or uſed as Amulets.

Of Antidotes taken in, they are either very hot, or leſs hot, or cold, rather then temperate, given with regard to the conſtitution and Age, and the hotteſt are not to be given raſhly as Euphorbium and Aqua vitæ which prooves water of death ſomtimes to young people: ſome are given in a liquid form to drink, as this Decoction. Take *roots of Tormentil and Burnet, each an ounce; roots of Valerian half an ounce, roots of Elicampane and Angelica, of each two drams; of Galega leaves called Goats Rue, and Sanguiſorba, each a handful*: boyl them in Wine and Water, add *a little Vinegar and Saffron*.

Of this infuſion in Wine, to take away ill taſt. Take *roots of Tormentil, Dittany, Endive, Burnet, each an ounce and half, Valerian, Maſterwort and Angelica roots, each an ounce, Snake weed and Gentian roots each half an ounce; leavs of Carduus and Coriander ſeeds each a dram, Cinnamon three drams*, ſlice and infuſe them in four Wine or white Wine and Vinegar, drink every morning often hereof.

Sheeps Milk drunk faſting, is an Antidote commended.

Presbyter Veſantinus Ydeleyus, that often attended in Plague times, in his book of the Plague, highly commends the drinking of a mans own Piſs, in a morning faſting; and inſtead thereof the Chymiſts have a Balſome of Urin more pleaſant.

In Sawces and Sallats uſe ſowre Herbs and Juyces, as Vinegar, Citron juyce, Ribes, green Grapes, Peaches, Cherries, Prunes, Apples.

Alſo the juyce of Clove-gelli-flowers, or Vinegar thereof juyce of Goats Rue, with Treacle, according to *Mathiolus*, juyce of Vervain, with Wine or Broath, and juyce of Onyons, are given divers waies.

It is good to have things by, that will laſt in time of Plague, at hand.

As Inſpiſſate juyces, called *Rob* by the *Arabians*, or extracts by us, as of Carduus, Vervain, alſo the extract of Juniper is good and uſual. Infants may take it, it is ſo pleaſant.

And Syrups with Sugar, thus. Take *Vervain, Scabious, Goats Rue, each a handful; Juniper berries a pugil*: boyl them in water and a little Vinegar and with Sugar, make a Syrup.

Alſo Conſerves, or Preſerves, or dryed and candied with Sugar, Honey, Vinegar and Salt may be kept.

As Zedoary ſliced and eaten in the morning or drunk with Wine.

Or Cloves ſteep'd in Vinegar.

Citrons or Oranges candied,

Or Vervain eaten in the morning.

Roots of Tormentil with Harts-horn and Vinegar or candied with Sugar, and Burnet.

Alſo Sorrel, Bugloſs, Borage and roots of Moulin are ſo prepared.

Alſo roots of Butter-bur, ſteep'd in Vinegar, and roots of Myrrhis and Juniper berries ſteeped in Vinegar.

Or thus mixed: Take *Rue, Sage, Plantane, Bay-berries*, ſtamp them with Vinegar, eat a ſpoonful every morning with a little Bole Armenick.

The Antidote of Nuts is thus made, for the whol Family. Take *Nut kernels, Rue leaves and juniper-berries*, ſtamp them with Vinegar.

Another commended made by *Apolonius*, or by *Mithridates*: Take *four ounces of Nut kernels, three ounces of Figs, dried Rue two drams, with Vinegar and Salt, or Honey*, if they have ſweet things mix them.

A greater Compoſition thus. Add to the former, *Tormentil and Burnet, each half an ounce; Bole Ammoniack prepared ſix drams, Saffron a ſcruple, with Vinegar, Salt and Honey*. You may add alſo ſome of the following Pouders, and Mirrh.

We make divers confections of pouders and all the reſt into Lozenges for Antidotes. Theſe are either temperate or more pleaſant, or unpleaſant, bitter and ſtupifying.

The temperate confections are for Infants, Women with Child and dainty Perſons, they move not the body, and hurt not by long uſe.

As Diamargariton frigid, the cordial Electuary of

Nuts

Nuts and Angelica Confection of Hyacinth made by *Falcon* againſt the plague. Alſo Bezoartick pouders. The Chymiſt extol the ſpecifical Elixir peſtilentiall of *Crollius*, alſo the Gold ſpirit of Life made with Camphire. Thus made: Take *of the beſt ſpirit of Wine a pint, Camphire eight drams*, if choſen in Summer, *ten* in Winter diſſolve it in the ſpirit of Wiue, and hang in it after *Saffron half a ſcruple*, give a ſpoonful every morning.

This confection is alſo good againſt Worms: Take *of Bole Armenick prepared, with juyce of Lemons two drams, ſhaving of Harts horn half a dram, Citron ſeeds peel'd a ſcruple, Tormentil roots a dram, Diamargariton frigid half a dram, Sugar diſſolved in Sorrel and Purſlane water*, make Lozenges, *or with Syrup or Honey* an Electuary.

Another Compoſition: Take *Citron and Sorrel ſeeds, each a dram, Baſil ſeed a ſcruple, Tormentil roots a dram and an half, Angelica roots half a dram, Bole prepared two drams, Coral half a dram, Pearl a ſcruple, ſhavings of Ivory a ſcruple, Smaragds and Hyacinths, each half a ſcruple*; *Cinnon a dram, all the Sanders half a dram, Sugar ſix drams*: make a Pouder, or diſſolve *the Sugar*, and make Lozenges, or an Electuary.

I made in the year 1593. in the Plague time a ſtronger Pouder, thus: Take *Bole prepared half an ounce, Coral two drams, Amber a dram and an half, Ivory and Hearts horn, each half a dram*; *Tormentil roots a dram and an half*; *roots of Dittany, Carline, Burnet, Angelica, Maſter-wort, Myrrhis, each a dram*; *of round Birth-wort, Zedoary, Limon peels, Cloves, each half a dram, Cinnamon two drams, Sorrel ſeeds a dram, Carduus, Angelica, Bazil and Coriander ſeeds, each half a dram*; *Citron ſeeds a ſcruple, Saffron half a ſcruple, red Roſes, Vervain, Rue, Scordium, Carduus, each half a dram*; *Goats Rue a dram, Species Diamargariton frigid a dram*, make a Pouder, give *a dram with an ounce of Sugar*, in any form. If you add *of Camphire* to theſe pouders, about *a dram*, they will be ſtronger, but not ſo fit for Women with Child and Children.

Muſk and Amber-greece are Cordials and perfume the reſt.

For Infants theſe ſimples troches: Take *roots of Angelica half a dram, Bole prepared with juyce of Lemons half an ounce with Muſk, Sugar* and the infuſion of *Gum-Traganth*: make Troches.

A Compound Pouder with Muſk. Take *roots of Angelica, Myrrhis, Maſter-wort, each two drams*; *roots of Tormentil, Burnet, Dittany, Scorzonera, Vincetoxicon, Croſs wort, Devils bit, Elecampane, Zedoary, Galangal, each a dram, roots of Birth-wort, Gentian, Cukowpints, or Dragons, each half a dram, all the Sanders a dram, Cinnamon two drams, wood Aloes half a dram, Carduus, Scordium, Balm, Sage, each a dram*; *Rue half a dram, Scabious, Vervaine, Sorrel, Lyſimachia, Cordial flowers, each a dram*; *ſeeds of Sorrel, Fennel, Carduus, Coriander, each a dram*; *Citron and Baſil ſeeds, each half a dram*; *Juniper and Bayberries, each two drams*; *Nutmeg and Mace, each half a dram*; *Amber three drams, Ivory and Harts horne, of each a dram, Unicornes horn a ſcruple, precious Stones a dram, Bezoard ſtone, Pearl, each a ſcruple*; *Bole prepared half an ounce, Coral half a dram, Muſk and Amber-greece, of each half a ſcruple, Camphire* (but it overcomes the ſent of the Muſk) *a ſcruple*, make a Pouder, and to *a dram* put *an ounce of Sugar*, and give it in any form.

Theſe are unpleaſant but profitable, made of Mirrh, Alloes and Caſtor, and beſt in Pills.

This following pouder is called the King of *Spaines*. Take *Myrrh, Maſtick, Bole, ſealed Earth, wood Aloes, Cloves, Mace, Saffron, each equal parts*: make a Pouder take it every morning.

Another: Take *Sorrel ſeeds two drams, Citron ſeeds a ſcruple, Tormentil roots a dram and an half, Bole prepared three drams, Aloes waſht, Myrrh, red Coral, each a dram*; *dryed Citron peels Cloves and Cinnamon, each half a dram*; *Saffron half a ſcruple, ſpecies of Diamargariton frigid and Trionſantalon, each half a dram*: make a Pouder.

Caſtor is ſomtimes added to great Compoſitions and in a ſmal quantity by reaſon of the ſcent.

Antidotes made of Opium are to be taken in ſmal quantity.

As Treacle, Methridate, and *Mathiolus* his great Antidote.

Alſo the Electuary of the Egg, thus, better made to prevent burning of it. Take *the yolk of a hard Egg*, add as much *Saffron in weight*, beat them together, adding *the pouder of Tormentil and Dittany roots, of each half an ounce; Angelica roots an ounce, roots of Vincetoxicum or Swallow-wort, Devils bit, Zedoary, each two drams*; *Rocket ſeed a dram, Mirrh a ſcruple, with Treacle and Mithridate*, make a Maſs, give *a dram* with *Water, Wine, and Vinegar*.

In the year 1582. this was our Electuary which was very ſucceſsful. Take *roots of Angelica, Maſter-wort, of each two drams*; *of Tormentil, Carline, Swallow-wort, Burnet, Devils bit, Valerian, each a dram*; *Zedoary half a dram, juniper berries two drams, Bay-berries a dram, Angelica, Sorrel, Carduus ſeeds, of each a dram*; *Citron ſeeds half a dram, Rue, Carduus, each a dram*; *Saffron, Pepper, Mace, each half a dram, Hearts horn and Ivory, each a dram*; *Bole prepared with juyce of Citrons half an ounce, Opium a ſcruple, Camphire half a ſcruple, Nut kernels, Figs, each half an ounce*; *fine Sugar two ounces, Honey twelve ounces*; make an Electuary, or Lozenges, give *a dram* with *an ounce and an half of Sugar*.

Theſe aforeſaid are taken alone or with other.

Of Mithridate theſe are uſual Lozenges. Take *Mithridate half an ounce, Sugar and Sugar candy, each four ounces*; *with Spaniſh wine*, make them up.

Or this Electuary: Take *the beſt Treacle three ounces, Tormentil roots, juniper-berries, Carduus and Sorrel ſeed, of each two drams*; *Bole prepared half an ounce, Ivory a dram, Coral a dram and an half, ſpecies Diamargarit frigid a dram, with ſyrup of Citrons*: make an Electuary, give it alone or with *Wine* or *fit Waters*.

If Treacle be added theſe aforeſaid are Opiats.

Stilled waters are Antidotes and expel and provoke ſwear, In the Cure of the Plague we ſhall declare thoſe that preſerve or Cure, or both.

Some things may be held in the Mouth to preſerve, becauſe its thonght the Plague is taken by the breath, when we go forth into ſuſpected places.

As Angelica root which is well ſented, and Zedoary, roots of Elicampane, Galangal, Citron rind or Orange peels or ſeeds, or Fennel ſeed. We ſhall not adviſe things without ſcent, as Vervain which is commended highly, five leaved Graſs, nor unpleaſant things which cannot be long held in the Mouth.

For to be held in the mouth are Troches made; Thus, Take *Angelica roots two drams, Orris roots a dram, Zedoary half a dram, dried Citron peels, Coriander ſeed, each half a dram*; *Cloves, Nutmeg, yellow Sanders, each a dram*; *Cinnamon two ſcruples, Bole prepared with juyce of Lemmons or Vinegar a dram and an half, Sugar ſix drams*: with the *Infuſion of Gum traganth in Roſe-water* and a *grain or two of Muſk or Amber-greece* make *Troches*.

Others eaſier made and pleaſant. Take *Angelica roots one dram, Juniper half a dram, Wood Aloes a ſcruple, Sugar half an ounce*: with *Infuſion* of *Muſk* make *Troches*.

The Angelical Balls of *Percovius* are made thus. Take

Take *red Coral and burnt Hearts-horn prepared with juyce of Scordium, each an ounce: Sugar diſſolved in Scordium water two pound, the diſtilled Oyl of Angelica half a dram.*

Some only chew Myrrh, troches of Musk are made only of Bole, and Sugar, and Musk.

External Remedies are applied to divers parts, eſpecially to the Heart and Pulſes which are good before the Heart be ſmote, or in a Fever. Therefore it is guarded with Cordials and Poyſons alſo, as they ſay, one poyſon expels another.

Cordial Applications are beſt in a bagg, or Oyntments for Epithems dry quickly.

Make a Bag thus. Take *Cordial flowers, each a pugil; Roſemary flowers half a pugil, Scordium, Marjoram, Balm, each a handful; Angelica roots, half an ounce, dried Citron peels two drams, Orris roots a dram, Sorrel and Coriander ſeeds, each two drams; Baſil ſeed a dram, Citron ſeeds, yellow Sanders, Nutmegs, Mace, Wood Aloes, each half a dram; Saffron a ſcruple*: make a *Pouder*, baſt it with *Cotton* in a *fine cloth* or *ſilk* for a *Bag*. add *Muſk* or *Amber-greece.*

Anoynt or bathe the Heart, and Pulſes, and Noſtrils, with this. Take *Angelica roots half an ounce, cordial flowers and clove Gilliflowers, each a pugil; citron peels ſix drams, Saffron, Camphire, each a dram; Balm and Cardiaca, each a handful; Treacle two drams*, add *Roſe-water* and *Vinegar.*

Or with this Liniment. Take *the beſt Treacle two drams, of the yellow Oyntment of Water-lillies three drams, Cordial ſpecies half a dram, with juyce of Lemmons.*

Or with this ſweet Balſom. Take *diſtilled Oyl of Cloves and ſeeds or roots of Angelica five drops*: with *white Wax* and a little *Moſch*, Anoynt.

Or with this. Take *juyce of Cardiaca and Balm, each two drams; diſſolved Camphyre in Aqua vitæ half a dram, Saffron a ſcruple*: with *Honey* make a *Liniment* for the *Pulſes.*

Not only Empericks, but ſome learned men commend highly ſome poyſons to be applied to the Heart, to defend it from the Plague.

Mathiolus highly extols Oyl of Scorpions, thus eaſily made. Take *two drams of right Oyl of Scorpions, with Treacle a dram*: apply them to the *Pulſes* with a *clout.*

Some add Rhubarb, as the Oyl of Scorpions of *Clemens.*

Some commend this of Arſnic. Take *white and red Arſnic, each equal parts*: make a *Pouder*, add the *white of an Egg* or *Mucilage of Traganth* to make a hard *Cake*, which muſt be carried about the Heart in a double Scarff.

Somtimes Arſnic is mixed with cordial Pouders thus. Take *fragments of precious ſtones, coral, Pearl, and Hearts-horn, each a dram; Orris half an ounce, Saffron a ſcruple, white Arſnic an ounce, Orpiment half an ounce*: make a *Pouder* for a *Bag* with a little *Ambergreece.*

Some do mix with good ſucceſs two ounces of the Pouder of a Toad.

If the Liver be anoynted with Oyntments that cool and ſtrengthen, ſome think the body is ſafer from the plague.

Some hold it for a great ſecret to anoynt the Emunctuaries, as the Arm-holes and Groins with Benzoin, Storax, Labdanum and Litharge.

Alſo to keep open old Ulcers, is good in time of plague to preſerve.

And an Iſſue in the Arm or Legg.

In the year 1564. a Monke at *Leyden* in time of the plague had a hole in his Cod with an Hellebore root, kept open by which he preſerved himſelf, and perſwaded others to uſe the ſame for ſafety.

Amulets are highly eſteemed, a Nut-ſhel filled with Quick-ſilver, ſtopped and hanged about the Neck. This is commended by *Marſilius Ficinus* by many examples, and by others, ſome ſay it muſt touch the region of the Heart.

They think Saphires, Smarradgs, Hyacinths, Unicorns horn, and Ivory about the Neck do the ſame.

Alſo Five-leav'd graſs and Dittany roots, and Bettony with the roots held in the hand.

The Cure of a peſtilential fever is divers according to the humor they ſuppoſe it comes from, which they evacuate: But we ſay it came from a peſtiferous quality infecting the body, and therefore aim at the oppoſing and altering that, conſidering the age of the Perſon.

Firſt we give a prognoſtick becauſe all Plagues are dangerous, and more die than live, In which there is no hope, and the Phyſitian labors in vain, except in the ſpace of twenty four hours Nature throws all or moſt part of the poyſon from the Heart. Spots are deadly when they appear, becauſe they are not critical. Buboes and Carbuncles appearing give hopes of recovery. Sudden loſs of ſtrength, eſpecially Swounding and outward cold are evil ſigns. If a woman with child having the Plague, miſcarry, as ſhee commonly doth ſhee dieth uſually.

The Cure is by Nature and the Phyſitians help, for many do recover. Therefore we ſtrike at the Diſeaſe, keep up ſtrength, and correct ſymptomes.

We ſaid the Diſeaſe was a venemous quality fixed in the Heart, and ſo upon the whol body in the ſimilar parts, with a preternatural heat and fever. Therefore we firſt labor to take away this quality from the Heart, and the humors which increaſe the ſame. And to alter the venemous force thereof and abate the heat.

Things that evacuate this poyſon, and put it from the heart, and expel the humors that increaſe the fever muſt be uſed in this order and manner.

Blood-letting was the firſt and uſual means. And many perſwaded themſelves that much poyſon was taken from the the heart thereby. But it is a general rule that it muſt not be til ripe age. And in women with Child not ſo much as in the Foot, for fear of miſcarrying; for others, I cannot perceive how bleeding can take the Venom from the heart or body when it is not conteined in the blood: but it rather is a cauſe of drawing the Plague more inwardly the Veins being emptied. Beſides, the motion of nature is hindered thereby, which at firſt labors by Sweat, and Puſtles, and ſwellings to expel it. And the ſtrength which ſhould be kept to encounter with the Diſeaſe is loſt. Neither doth it bring ſo much good as hurt, for taking away the cauſe or cooling the heat which is not very great in the Plague, for the reaſons aforeſaid. Therefore they are all to be blamed that obſerve not theſe circumſtances, but let blood raſhly, except in Children, though Nature be laboring to ſweat it forth, or caſt out Botches: and though they ſee many die after bleeding, they wil go on their road of bleeding preſently and plentifully. But we are to bleed only when the Plague is in a plethorick or cachectick body, which cauſeth not a ſimple fever by plenty of blood, but a putrid Synoch, and then the heat and ſymptoms wil be abated. And then it muſt be ſparingly done to preſerve ſtrength, and not at all except the repletion mentioned require it, if there be weakneſs. For we have often found by experience that more people in yeers have ſcaped that were not blooded,

blooded, than that were. Some approve no bleeding, but ſuch as is til the Patient fainteth, and brag of many that have been cured thereby.

We think it ſafer to omit it, than raſhly to uſe it: and if it doth good, it is more for the fever than the venemous quality, which is not in the blood, but comes to the heart from without, and ſo cannot be expel'd by bleeding. The time if it muſt be, is at firſt, within twenty four hours, or not at all. And if ſweat appear as uſualy it doth, it muſt be defer'd til it be paſt: and it muſt not be ſtop'd either by bleeding or nakedneſs, which is required when the Vein is opened. But when ſweat is paſt and the Patient is refreſhed with meat or medicine, it may be done if need require, or before ſweat if it appear not: nor muſt we ſtay to looſen the body firſt, as at other times before bleeding, for there is no dallying. If pain be, take blood from the ſide, if not take the common Vein. Open the *Saphena* or Vein in the Foot if there be a ſwelling in the groyn. If it be above, open the Arm or Hand-vein on that ſide. If under the Arm-holes, open the Baſilick vein, if under the Ears the Head vein, if in the Face, under the Tongue. Some clap on Cupping-glaſſes to the Carbuncles before bleeding, that the venom ſent thither may ſtay there, and be drawn inward by bleeding, by which way we have known bleeding do much hurt. And I have obſerved that Empericks have with very ill ſucceſs raiſed blifters with Veſicatories upon the Botches at firſt appearance. Some do draw the venom out at the orifice, after bleeding apply Scordium or Jack of the hedg, which is of the ſame nature, others apply living Oyſters for the ſame.

In yong people Cupping-glaſſes are inſtead of bleeding, and they are better for old than bleeding with the Lancet, which weakens and draws in the venom, if they are applied at firſt to help nature to drive out the venom, when ſhe is in motion with ſweat; and in thoſe places where nature expels, as when a peſtilent ſign is above, to the Neck and Shoulders, when in the Groyns, to the Buttocks, Thighs and Hands.

Scarification before Cupping in the ſame places, draws outward more powerfully, and becauſe the ſuperficial blood is only taken away, thereby doth it weaken or hinder Natures motion.

Horſleeches may be inſtead thereof applied to the ſame parts.

A Veſicatory to the great Toe or Ring-finger made of Crowfoot or Flammula deriveth the Venom, and the more if it be kept open with a Thred and Beet or Colewort leaf, or anoynted with Butter.

A quick Pidgeon cut in two, and bound to the ſoles of the feet, or a Tench, or a bruiſed Radiſh, or Nettles with the roots, or Ground-Ivy bruiſed doth the ſame.

Some commend a live Pigeon opened and laid hot to the Head.

In the yeer 1584. in plague-time, I obſerved that a Cock pluckt at the Rump, and his feet bound cloſe together, and his mouth ſtopt with the hand of a man, was applied to the Heart, with admirable ſucceſs.

Evacuation made by ſweat or inſenſible tranſpiration, draws the venom from the Heart, or outwardly to the ſuperficies, and is the chief way of Cure. This Nature at firſt doth endeavor for the moſt part. And the Phyſitian muſt help her motion, or provoke her to it.

This is done ſomtimes by things given inward, ſomtimes by Fumes or Frictions, by ſweating medicines, and by Blyſters, and by things that experience teacheth us do reſiſt poyſon. Theſe are called expelling medicines, and are of divers forms.

Theſe muſt be uſed at the firſt, and if poſſible before the Venom ſtrike the Heart and beat it down, which it doth ſuddenly if not reſiſted and expelled with the ſpirits and heat outwardly, the ſooner the better, for it is the Key of the work, and if it be not done in twenty four hours (in which time the Plague ſomtimes killeth) what is done after wil ſignifie nothing, and except Nature of her ſelf do it we ſhal labour in vain, after this opportunity is neglected. Neither ought bleeding or purging (though required) hinder this; although ſome perſwade to ſweat after bleeding, and if the Phyſitian come after it may be done, but not ſo wel, and repeated the next day, and all the time of the Diſeaſe if ſtrength hold and Nature offer to diſcharge that way. The Patient muſt not be forced much to ſweat, except Nature tend that way; for the Venom of the Plague may be carried away by inſenſible tranſpiration without ſweating.

They are in divers forms, bnt the moiſt is beſt, as a Decoction, or Water, or Infuſion, or Potion, or you may give an Electuary.

A ſimple Decoction, or a common Decoction uſed in the ſmal pox to drive them out as is there mentioned may be given here.

For Children. Take *Peaſe and Barley, each a pugil; Figs ten, Dates five, Tormentil and Dittany roots, each a dram*; boyl them, add a little *Wine*, give it.

Or a Decoction of *Tormentil, Dittany, Angelica, Burdock, Butter-bur or Celondine roots.*

Or of *Sorrel, Plantane, Tanſie, Vervain, Scordium, Rue in Water and Vinegar, or Wine and diſtilled Water.*

Or *Garlick* boyled in *Honey'd water* to *two ounces*: which wil cauſe *ſweat* and *Urin.*

Alſo this Decoction of Lignum vitæ. Take *Guajacum two ounces, Sarſaparilla an ounce, Juniper and Bayberries, roots of Angelica and Elicampane, each two drams; with a little Cinnamon.*

Juyces are not given alone, but mixed with other things, yet *Rondoletius* ſaith that *three ounces of the juyce of Marygolds* is excellent.

The beſt diſtilled Waters are, that *of Orange flowers*, and of *juyce or flowers of Limons.* Alſo *Angelica water with Aqua vitæ* produceth *ſweat* violently to my knowledge, or *water of Citron leaves*, and *Aqua vitæ*, and to chew them is a good *Antidote.* And 1534. I never uſed other when I viſited my Patients of the plague.

Alſo *Diſtilled water of Oak leaves, wild Vetches, Sorrel, Burnet, Tormentil, Dragons.*

Alſo Celondine boyled in Wine and Vinegar.

Or this. Take *Burdock roots a pound, of the inward bark of an Aſh two handful*, diſtil them, give *three ounces.*

Alſo *Water of green Nuts.*

Or this. Take *Sorrel, Scabious, Vervain, Rue*, (not ful ripe) *each a handful; Nightſhade and Houſleek, each half a handful*; cut them ſmall, diſtill them. And if you add *Vinegar* before ſtilling, it wil cauſe Vomit, but Sweat howſoever.

Or, Take *Limons ten*, cut them, add *Borage and Sorrel, each two or three handful; white Wine three pints*, diſtil them, give *two ounces.*

The firſt choiſe Water: Take *Angelica roots, Maſter-wort, Tormentil, Valerian and Dittany, Devils bit, Burnet and Snake weed roots, each an ounce; Vervaine and Scabious, each a handful*; diſtil them in *Aqua vitæ* or *ſtrong Wine*, give *an ounce.*

The ſecond: Take *Rue, Marigolds, Sage, Vervain, Scabious, each a handful; Burdock and Devils bit roots; each*

two ounces; diſtill them in *white Wine*, give *an ounce*.

The third: Take *Guajacum half a pound, roots of Angelica, Maſter-wort, Gentian, of each an ounce; Orris and Zedoary, each half an ounce; Carduus, Rue, Scordium, each two handful; Baſil a handful, Lemons ſliced ſix*: diſtill them thrice, give *half an ounce*.

The fourth, which I have often uſed ſucceſsfully: Take *roots of Valerian, five leaved Graſs, white Dittany, Smallage, Burnet, Dragons, Tormentil, each an ounce; Gentian half an ounce, Dane-wort, Birth-wort, Angelica roots, of each two drams; Galangal ſix drams, Valerian, Smallage, and Celandine, each a handful; Rue half a handful, Bay and juniper-berries, each half an ounce; wood Aloes two drams, Cinnamon ſix drams*: cut and bruiſe them, diſtill them in *Aqua vitæ, Borage, Bugloſs, Sorrel and Scabious water*, give *two ounces*.

The fifth: Take *Tormentil, Burnet, Dittany, Swallow-wort, five leaved Graſs, Burdock, Butter-bur and Devils bit, of all the roots, each an ounce; roots of Angelica, Maſter-wort, Elicampane, Mockchervil, Valerian, each half an ounce; roots of Gentian, Birth-wort, each three drams; Zedoary, Galangal, Ginger, each two drams; roots of Dragons, Cookowpints, Garlick, Onyons, of each two drams; Laurel bark a dram, Scabious, Vervain, Marigold, Celandine, Willow herb, Scordium, Rue, Tanſey, Sage, Balm, Plantane, Pauls Bettony, Carduus, Wormwood, each three drams; flowers of Roſemary, Bugloſs, Borage, Water-lillies, Violets, each a dram; Saffron half a dram, Coriander, Baſil, Citron and Angelica ſeeds, each a dram; Carduus and Sorrel ſeed, each two drams; Bay and juniper-berries, of each an ounce; Nutmegs, Cloves, Mace, each a dram; Lemons ſliced five, Wall-nut kernels fifteen, Bole prepared an ounce*, cut them ſmal, and cover them with *Wine*, add *two ounces of Roſe-water, and four ounces of Aqua vitæ*: diſtil them, or infuſe them in ſpirit of *Wine*.

Camphire is good if it be added to all theſe waters: diſſolved firſt in *Aqua vitæ*.

And therefore we commend the golden ſpirit of Life with Camphire, above mentioned, for the Cure of the plague.

Treacle alſo and Mithridate, and other Antidotes, as the Electuary of the Egg may be added before you ſtil and then they are Treacle waters.

Thus: Take *the beſt Treacle five ounces, Mirrh an ounce and an half, Saffron half an ounce, Aqua vitæ ten ounces*; diſtil them, give *half an ounce*, with *a drop of ſpirit of Vitriol*.

The ſecond Treacle water approved often: Take *white Onyons ſliced ſix, Garlick pickt three heads, Rue, Celandine, Plantane, each a handful, Treacle a dram and an half, Aquæ vitæ two ounces, Vinegar an ounce, Wine two ounces*: diſtill them, give *half an ounce*.

The third made by me for the poor 1594. I uſed few others. and it cured many: Take *roots of Tormentil, Burdock, Valerian, Burnet, Devils bit, each four ounces; roots of Maſter-wort, Angelica, Dittany, Gentian, Dragons all dry, each an ounce; Onyons and Nuts not ripe, each ſix ounces; Rue, Sorrel, Carduus, each two handfuls; Camphire a dram and an half*, diſſolved in *an ounce of Aqua vitæ, Mithridate an ounce and an half, with white Wine, and two ounces of Roſe Vinegar*, draw a Water, give *two ounces; with ſyrup of Vinegar or Lemons*, if you pleaſe.

The fourth: Take *Angelica roots two ounces, Zedoary half an ounce, roots of Black-hellebor two drams, Devils bit, Tormentil, Diſtany, Carline, Gentian, each an ounce; Treacle four ounces, Green Nuts twenty, water of Pauls Bettony three pints, Vinegar a pint and an half*, diſtil them, give *two ounces and an half*.

Infuſions may be uſed inſtead of waters, and they are ſtronger, you may make them of the things mentioned: Or thus, Take *Camphire half an ounce, white Ginger an ounce, Cloves an ounce and an half, Sugar candy an ounce*, infuſe them in *Aqua vitæ*, give *two drams*.

Another: Take *Mithridate or Treacle two ounces or an ounce of each, Aqua vitæ ten ounces, ſyrup of Limons or Citrons five ounces*, infuſe them a moneth; or in *Balneo*, give *an ounce*.

The third: *Take* ſpirit of Wine four times diſtilled a pint and an half, Sack two ounces, ſyrup of Lemons or Citrons two ounces, Treacle or Mithridate ten ounces, Angelica roots half an ounce, Zedoary two drams, Camphire a dram, Saffron half a dram, ſpecies Diamargariton frigid a dram and an half, Cinnamon two drams, Musk half a ſcruple, *infuſe them, give* an ounce.

The fourth: *Take* roots of Angelica, Maſterwort and Zedoary, each two drams, wild Angelica, Burnet, Valerian, Swallow-wort, Tormentil, Perſonate, Carline and Elicampane, each three drams: Juniper and Bayberries, each an ounce; Angelica ſeeds a dram, Cinnamon a dram and an half, long Pepper half a ſcruple, Saffron a ſcruple, Mirrh half a dram: *make a Pouder, add* ſpirit of Wine, ſyrup of Lemons, Citrons or Sorrel two ounces, *ſet it in the Sun*, or in *Balneo*, *give* an ounce, with Treacle, Mithridate, or *Mathiolus* Antidote a dram, *if the Patient be young and hot give leſs, and diſſolve it with* Marigold water.

Other Pouders above mentioned may be ſo uſed.

Syrups alſo of the Decoctions or Juyces mentioned. Or thus: *Take* roots of Angelica, Tormentil, Dittany, Burnet, Croſs wort, each an ounce; roots of Maſterwort and Zedoary, each half an ounce; Carduus, Vervaine, Rue, Celandine, Marigold, Sage all dry each three drams; Juniper-berries two ounces, Bayberries an ounce and an half, *boyl them in* Wine, *and with* Sugar, *make a ſyrup*: *give* an ounce.

Extracts of Angelica, Vervain, Elicampane and Rob of Elder are commended.

Mathiolus gives a ſcruple of Oyl of Vitriol with proper waters.

Pouders are mixed in potions, or Electuaries, or made into Lozenges for Children.

Theſe may be given to Women with Child: *Take* Angelica roots half a dram, Tormentil and Dittany roots, each an ounce; Treacle half a dram, Diamargariton frigid half a ſcruple, with Sugar, diſſolved in Sorrel water, *make Lozenges*, *give* two drams.

A pouder for weak perſons: *Take* Tormentil and Butter-bur roots, each half a dram; Diamargariton frigid a ſcruple, *give it with* Sorrel water and ſyrup of Lemons.

A ſecond: *Take* Bole Armenick prepared two drams, Hearts horn a ſcruple, Pearl half a ſcruple, juyce of Lemons two drams: *give it with* Sorrel or Carduus water.

A third, that is bitter: *Take* roots of Tormentil Dittany, Gentian, leaves of Carduus, each half a dram *Bole and Coral prepared, each a dram*; *give it with* Sorrel water.

A fourth: *Take* white Amber and Coral, each half a dram, Pearl a ſcruple, Elkes Hoofe, Ivory, each half a ſcruple: *make a Pouder, give it in* purſlane or Scabious water, *or make Lozenges*.

A fifth unpleaſant: Take *Diamargariton frigid two ſcruples, Harts horn a ſcruple, Baſil ſeed half a ſcruple, Sorrel ſeed a ſcruple, Citron ſeeds ſix grains, Mirrh half a ſcruple with Vinegar*: make a Potion.

Pouders with Camphire are thought to cool: As, Take *Troches of Camphire a dram, ſyrup of Citrons an ounce, with Scabious and Sorrel water*: make a Potion.

Another

Another pouder which cures all Feavers and is good againſt the Plague, made of hot things, and Camphire. Take *Camphire a dram, Ginger two drams, Sugar candy three drams.* give *a dram with Carduus, Scabious or Marigold water.*

This may be infuſed alone or with Treacle.

The Italians commend Euphorbium, and make this Pouder: Take *Euphorbium and Maſtick, each half a ſcruple, Saffron five grains, Sugar candy a dram:* make a pouder, give it with *Sorrel water and Vinegar of Roſes half an ounce.*

Or thus: Take *Euphorbium, Maſtick and Gum Elemni each half a ſcruple; roots of Tormentil and Angelica, of each half a dram; Camphire half a ſcruple:* make a pouder, give it with *Sorrel water and Roſe Vinegar half an ounce.*

The Chymiſts commend their Salts and *Crato* alſo. As *Salt of Angelica, Scabious, Scordium, Carduus, Zedoary, Aſh, Guajacum, Wormwood ten or twelve grains, with Conſerve of Roſes, or Citrons, or a dram of Salt of Polypody in Wine,* it doth wonders.

Alſo *Salt made of Vine boughs a ſcruple,* given in *Wine or proper water,* if you take three hours after *a ſcruple or half a dram of Antidote-Colubrine,* or the like to provoke more ſweat.

Crato ſaith Diaſulphur right made, is a ſtrong expeller.

And the Chymiſts uſe Antimonium Diaphoreticum but not ſafely.

Hartman commends his Panacea or ſulphure of Antimony fixed, which he teacheth in his Chymical practiſe.

There are divers Electuaries made of the mentioned things, and may be given to Cure, as well as to prevent. You may make them of the pouders with Honey or Syrup.

The mixture among the preſervatives made of roots of wild Cowcumbers with Smallage and Houſleek is commended by *Honoratus* and *Crato* for to Cure alſo.

Opiate Antidotes are good againſt all poyſons and the plague.

Treacle and Mithridate are the old ſtanders a dram at a time, or with Philonium of *Geſner.* The later are Diaſcordium, *Mathiolus* Antidote, and the Electuary made of an Egg, or Diacroceum.

Or thus firſt: Take *Treacle or Mithridate, or Electuary of the Egg, or* Mathiolus *Antidote a dram and an half;* diſſolve it with the Decoction of *Zedoary,* add *ſyrup of Vinegar an ounce.*

The ſecond: Take *Treacle a dram, juyce of Scabious, Carduus, each an ounce;* diſſolved *in Wine.*

A third: Take *Treacle or Mithridate a dram, Angelica roots, Sorrel ſeeds and Hearts horn, each a ſcruple;* give it with *Angelica water.*

A fourth: Take *Treacle two ſcruples, Pouder of Vervain a dram, Saffron ſeven grains, water of green Nuts four ounces,* drink it hot, 'tis from *Helidæus.*

A fifth: Take *Treacle a dram, prepared Bole half a dram, Species, Liberantis and Diamarganton frigid, each a ſcruple; Sorrel, Carduus and Scabious water, each an ounce with half an ounce of ſyrup of Limons.*

A ſixth: Take *Treacle and Mithridate, each half an ounce; Electuary of the Egg two drams, ſpecies liberantis a dram, Bole prepared half an ounce:* with *ſyrup of Sorrel* make an *Electuary,* give *two drams.*

A ſeventh. Take *Treacle a dram, Vervain half a dram, Saffron and Camphire, each half a ſcruple;* with *Nut water and Vinegar* make a potion.

An eighth. Take *Treacle three drams, Ginger, Camphire, Sugar candy, each half an ounce;* give *a dram.*

The ninth: Take *Tormentil, Dittany and Angelica roots, each two drams; Zedoary and Gentian, each a dram; Scordium two drams, Vervaine a dram, Ginger, Camphire and Saffron, each half a dram;* make a pouder, add *Treacle and Mithridate, each two ounces;* give *a dram and an half,*

The tenth: Take *an Onyon a little boyled,* ſteep it in *Vinegar,* and ſtrain it, add *Treacle a dram, ſyrup of Limons an ounce,* you may add *Garlick* for ſtrong Bodies.

An eleventh: Take *Caſtor half a ſcruple, roots of Birthwort, Gentian and Treacle, each half a dram,* give it *with ſtrong Vinegar and Sorrel water.*

A twelfth called *Mountpelior* Wolf: Take *juyces of Rue, Sage, Burnet, Centaury, Pennyroyal, Wormwood, Valerian, Mother-wort, green Wall-nuts, each equal parts, Honey half as much as all:* boyl them to a ſyrup: Take *an ounce thereof to Treacle half an ounce, Bole and ſealed Earth, of each two drams; with Vinegar and Wine,* if he be not hot, give it at the firſt lying down.

A thirteenth: *flower of Brim-ſtone a ſcruple, Saffron half a ſcruple, Frankincenſe half a dram, Treacle a dram,* give it *with convenient waters.*

A fourteenth: Take *Treacle a dram, Electuary of the Egg half a dram, Oyl of Vitriol ſeven drops, ſtrong Vinegar an ounce, Sorrel and* Borage *water, each an ounce.*

A fifteenth very hot: Take *Cookow pints or Dragon roots a dram, or each half a dram; Angelica roots a dram, Rue and Vervain, each half a dram; Saffron a ſcruple, Camphire half a ſcruple:* make a pouder, give *a dram, with Treacle a dram,* diſſolved in *Vinegar and Scabious water.*

A ſixteenth of Laurel prepared in Vinegar: Take *of the Saxon Antidote and Treacle, each half a dram,* diſſolve it in *Sorrel water with Vinegar of Roſes ſix drams, ſyrup of Limons half an ounce.*

Some uſe this Fume to provoke ſweat: Take *Sorrel, Rue, Scabious, each a handful, with Aloes, Mirrh, Maſtick, Saffron,* ſteeped in *Water* and *Vinegar,* and ſprinkled upon a hot Brick; make a Fume for the whol Body.

A certain phyſitian to provoke ſweat boyled Guajacum, Tormentil, Danewort and Burdock roots and with a little Sublimate Mercury, dipt a ſheet in it and wrapt the patient hot therein.

Some ſweat with the Fume of Cinnabar or Antimony, as in the pox.

Alſo Frictions draw forth and cauſe ſweat, or make inſenſible tranſpiration. It muſt be done before ſweat appears, it is beſt with a hand dipt in warm water or with ſcarlet, and let the body be wel covered and quiet, alſo Friction is good after ſpots appear to make them come forth.

Vomiting is alſo uſed, when Vomiting is a Symptom eſpecially, and to expel the venom by a violent motion and to caſt out the Botch. Some give it at the firſt, others after a Clyſter, or after an Antidote, others give it preſently after bleeding, and brag of Miracles.

The gentleſt are of looſners and cutters, as ſyrup of Vinegar, or two ounces of juyce of Eryſimum with Scabious, Carduus, or Bugloſs water. One ſaith that he Cured the plague miraculouſly with water of wood Sorrel, Vinegar and Oyl of Vitriol, others give Aſarabacca and an Indian Nut.

The Empericks give the ſtrongeſt, *Droetus* writes that a Chirurgion gave a Vomit of Chalcanthum prepared preſently after bleeding and did wonders.

Mathiolus gives five grains of Stibium with the Electuary Liberantis, and an Emperick did imitate him here in 1564.

Mathiolus

Mathiolus alſo gives præcipitate in Sugar of Roſes.

Or we muſt give Clyſters and purge.

Before bleeding give a Clyſter or ſuppoſitory and it makes an Antidote work better, when no Vein is opened, but a Clyſter given. And one brag'd that he cured the plague by only a Clyſter, Bleeding and an Antidote. Therefore we uſually give Clyſters, if the body be not very weak. Becauſe they work ſpeedily and looſe no time.

That which clenſeth and looſneth is beſt. As the common Decoction, with Caſſia, Catholicon or Tryphera *Crato* gives a Decoction of pauls Bettony with ſalt-Butter, others add Barley cream to temper the Humors.

Purging doth little becauſe it cannot expel the cauſe, except nature being at firſt ſtir'd up by a ſtrong purge caſt ſome of the Venom out, but that is dangerous becauſe it weakneth, & ſtrength is required to go through it. And becauſe they are ſubject to a Flux of the Belly and it may carry them away: as one was by ſtibium given by an Emperick, which he called a preſent Remedy, who died upon the ſtool with violent evacuation. Therefore firſt conſider whether the body be clean or foul, if clean purge not raſhly, for it wil do hurt if foul, from whnce a putrid Feaver may ariſe, we may purge, not to expel the venom, but the filth which will cauſe a Feaver. But have a care of the ſtrength: and defer it to the declination when the ſtate of the Diſeaſe is beſt: if ſtrength be at firſt, purging may do a little good, except the botch comes forth and commands forbearance, nor muſt they hinder the chief Medicines which expel, for they muſt be given firſt, and nature inclines to that at firſt. After an hour or two ſweating at the firſt, if ſtrength be good, and we perceive the putrid Feaver to over top the venom, we give a gentle purge to take away filth which will increaſe the Feaver, that when that is gone, nature may be ſtronger. Time permits not long preparatives, but all the time we may give altering Medicines to allay the foul Humors and ſtrengthen the Heart: And when the venom is gone and a putrid Feaver remains, we then begin to prepare and purge as in putrid Feavers.

When need therefore requires, we may give theſe following, with reſpect to the Age and conſtitution. Tryphera perſica or Sarracenica a dram, with Sorrel, Scabious or Bugloſs water.

Or thus: Take *Yellow and Chebs Myrobalans, each a dram and an half; Tamarinds an ounce, Cordial and Scabious flowers, each a pugil;* boyl them, and add *Rhubarb a dram, Cinnamon half a dram,* ſtrain it, and add *Tryphera perſica two drams, ſyrup of Roſes laxative half an ounce.*

It is good to give at firſt ſome Ruffi pills, after which I have preſently ſeen the botch appear.

Rhubarb reſiſts venom, therefore we give the extract and *Hartman* ſaith that many have been preſerved by conſtant uſe thereof.

We ſpake of Stibium and Præcipitate among Vomits.

And of Alterers which reſiſt Venom, and drive it out. And of things againſt putrid fevers. But here we ſhal chooſe ſuch which abate heat, reſiſt corruption, and are Cordials, and keep up ſtrength.

Some are given inwardly.

As cold Water in which Harts-horn, Ivory, or Gold is ſteept or boyled, or Gold quencht in it, is good.

Or a Decoction of Sorrel roots or Tormentil in Water.

Crato commends a Decoction of Groundſel in Ale.

Boyl Sorrel, Borage, Purſlane, Scabious, Succory, and Endive in his Broaths.

And put juyce of Limons, Citrons, Oranges, Pomegranats, Vinegar, green Grapes, Barberries in Broath or Drink.

Alſo Sorrel, Roſe and Scabious water.

And divers ſharp Syrups preſcribed in continual fevers.

For Juleps thus. *Take* ſyrup of Citrons or Limons, and Sorrel, each two ounces; of Pomegranates an ounce, Sorrel and Bugloſs water, each five ounces; *make a* Julep.

A ſecond. *Take* ſyrup of Ribes or Pomegranate Wine, two ounces, juyce of ſharp Apples an ounce, Sorrel, Scabious, Balm and Bugloſs water, each four ounces: *make a* Julep.

A third. *Take* juyce of Sorrel, Borage, ſweet ſcented Apples, Scabious, each an ounce and half; Roſe-Vinegar half an ounce, water of Carduus, Roſes, and Scordium, each four ounces; *add* Sanders *and* five grains *of* Camphire, *drink it often.*

A fourth. *Take* Roſe, Sorrel, and Borage water, each two ounces; Cinnamon water an ounce, white Wine half an ounce, ſyrup of Citrons or Limons an ounce and an half, Manus Chriſti with pearls, half an ounce, Bole one dram, Hearts-horn half a dram, *boyl and ſtrain it.*

A ſcruple or half a dram of *Lapis prunellæ* is good to be added to theſe. Or thus, *Take* roots of Tormentil an ounce, Angelica roots half an ounce, Zedoary a dram, Cordial and Scabious flowers, each a pugil; Wood-ſorrel a handful, Saunders a dram: *boyl, ſtrain, and add* ſyrup of Sorrel or Citrons or Limons an ounce. *They add* Unicorns horn *for great people.*

Pouders. the firſt. *Take* Bole thrice waſhed in Roſe water, and Coral each a dram; Hearts-horn and Ivory each half a dram; Cinnamon half a dram, Manus Chriſti an ounce: *make a* pouder, *take it in* Broath *or* Wine.

A ſecond, *Take* Confection of Alkermes (*if there be no Looſneſs*) a ſcruple, ſpecies Diamargariton frigid, Ivory and Hearts-horn, each half a ſcruple; Bole prepared a ſcruple, ſyrup of Limons half an ounce: *with* Sorrel *and* Carduus Water *make a* Cordial potion.

A third. *Take* Confection de Hyacyntho (*which is proper for the Plague*) a ſcruple, ſyrup of Limons an ounce: *give it with convenient* Waters.

A fourth. *Take* juyce of ſcabious and Vervain, each an ounce; ſyrup of Limons half an ounce, Diamargariton frigid, Electuary of Bole and Gems, each half a ſcruple; *with* Roſe, Bugloſs and ſorrel water *make a* Potion.

Diſtilled Waters are alſo good as, *Take* ſcabious Balm, ſorrel, Vervain, each a handful; Tormentil and Dittany roots, each an ounce; Roſe, Violet, Bugloſs and ſcabious flowers, each a pugil; ſorrel ſeeds two drams, Citron ſeeds half a dram: *boyl them in* Chicken broath, *add* Diamargariton frigid, Electuary of Bole, Gems or Bezoar, each a dram; juyce of Apples three ounces, Cinamon half an ounce, Sanders a dram, *diſtil in* Balneo, and give it in broath or otherwiſe.

Another: Take *a Capon prepared,* boyl it, add *half a pound of white bread, two ſliced Limons, Borage flowers a pugil, Citron ſeeds half a dram, Coriander ſeed a dram, Harts-horn two drams,* pouder them, add *Sack four ounces, Conſerve of Cordial flowers, each an ounce;* diſtil them, give *the water with Cinnamon water, Julep of Roſes or Vinegar and Sugar, or alone.*

This reſtoreth more: Take *a Capon dreſſed from the fat,* beat his bones, and add *a piece of Veal,* cut them, *and*

and a little Salt, a dram of Diamargariton frigid, conſerve of Sorrel, Water-lillies and Bugloſs each an ounce; Cinnamon three drams, Roſewater an ounce, Wine an ounce: boyl them to a *Gelly*.

Or thus. Take *a Capon or Hen dreſſed from the fat*, break and cut it with a *piece of Beef and Veal, with a little Salt, Ginger, and Pepper three corns, a little Marjoram, juyce of Limons, and Wine, each an ounce*; boyl them to a *Gelly*, give it alone, or with other *Broaths*.

Conſerve of Roſes, Violets, both Bugloſſes, Water-lillies, Sorrel and clove Gilli-flowers, Scabious, Balm, Roſemary flowers, Plantane, candied Citron peels, ſharp fruits preſerved and Berries are good.

Theſe are given alone or mixed in a Bolus. every third day we give Mithridate or Treacle in ſome of thoſe Conſerves.

Or with Pouders and Syrups make an Electuary. As, Take *the four cordial Conſerves, each an ounce; conſerve of Scabious flowers an ounce and an half, Citron peels candied an ounce, Bole prepared a dram, Coral half a dram, Ivory a ſcruple, red Sanders half a dram, Diamargariton frigid a ſcruple, bezoard pouder half a ſcruple, with ſyrup of Limons*: make an *Electuary*.

Another Cordial. Take *the four cordial conſerves of Sorrel, each an ounce and an half; conſerve of Balm half an ounce, candied Citron peels an ounce, Bole and Coral prepared, each a dram; Pearl prepared a ſcruple, Ivory, Unicorn or Harts-horn, each a ſcruple, ſeeds of Citron, Sorrel and Coriander, each half a dram; fragments of precious ſtones a ſcruple, Bezoar half a ſcruple, leaves of Gold ten, Camphire five grains*: make an *Electuary*.

Alſo Lozenges of Diamargariton, Bezoar and Bole. And give for the Liver, Diatrionſantalon and Diarrhodon.

Or theſe. Take *red and white Saunders, and Citron ſeeds, each half a dram; Cinnamon two ſcruples, Coral, Bole, each a dram; Pearl a ſcruple, red Coral a ſcruple, Saphires, Smaragds, Rubies and Granates, each half a ſcruple, filings of Gold a ſcruple, Ivory and Harts-horn, each half a ſcruple*: with *white Sugar* diſſolved in the *juyce of Limons* make *Loxenges*.

Theſe are good to be put into Broths when they are almoſt boyled. Take *Sorrel ſeeds half an ounce, Melon ſeeds two drams, Citron ſeed half a dram, all the Sanders two ſcruples, Coral a dram and an half, Diamargariton frigid half a dram*, make forms of them.

Pils of the Troches of Camphire, with ſyrup of Limons are Cordial and do reſiſt Poyſon: give two or three.

The Chymiſts highly commend *Aurum Potabile*, Salt and Magiſtery of Pearl, and the Tincture of Coral.

Crato gives an ounce of Oyl of Scorpions to the infected.

Divers Applications may be made to the Heart, Liver, Pulſes, Reins, Brain and Stomach, and Teſticles, and the Air amended.

After ſweating lay Epithems to the Heart and Pulſes. Thus Sorrel, Scabious, Vervain, Balm, and Roſe water, each two ounces; Roſe-vinegar an ounce, juyce of Limons half an ounce, Sack an ounce, Sanders, red and white, a dram, Citron peels a ſcruple, Troches of Camphire a ſcruple, Diamargariton frigid a dram, *make an* Epithem.

An Oyntment for the the Heart and Pulſes, or to be applied twice a day with Scarlet. *Take* Treacle half an ounce, juyce of Limons half an ounce, Roſe-vinegar two drams, Camphire a ſcruple, Saffron half a ſcruple, Muſk three grains.

Or uſe Vinegar in which Angelica Roots are ſteeped.

Or this Emplaſter. *Take* red Roſes pouder'd; *boyl them well in* Roſe-water; with Vinegar, juyce of Apples, Citron peels, Sanders: *make a* Plaiſter for the Pulſes.

Matthiolus anoynts the Pulſes with Oyl of Scorpions.

And the Balſom mentioned among the Antidotes is as good.

Or the Bag there mentioned.

Uſe to cool the Liver cold and ſtrengthening means, as in the cure of putrid Fevers, and to the Reins.

Roſe-vinegar to the Head if it be hot.

And to the ſtomach ſtrengthening Oyntments if it be weak.

And becauſe the Stones have great conſent with the principal parts, apply this to moderate the heat. *Take* Roſe Water four ounces, Roſe Vinegar half an ounce, Sack an ounce, juyce of Pomegranates half an ounce, *wet cloaths therein and apply them*.

It is good to change the Air and place, and remove the Patient from others that are infected and change his ſhirts, ſheets, bed, Pillows, and ſprinkle the chamber with Roſe Vinegar, Lavender, Roſe and Citron water; and in ſummer, to ſtrew Herbs and Fruit, and to perfume as we ſhewed in the Antidotes.

To keep ſtrength uſe this Diet.

Contrary to all other acute continual Fevers; Let meat be given often, but little at a time, and they muſt be compel'd to eat, if they refuſe. Let it be of good nouriſhment, that a little may ſerve.

As Broath or Chickens, Kid, wood Fowl, Partridg, Veal, and theſe make divers diſhes and Gellies. avoid Eggs which eaſily corrupt, and fat things. and give fruits, and things allowed in putrid Fevers. and let this meat be eaten with Vinegar or ſhap Juyces.

Let the Drink be Juleps mentioned, or Capon Ale, or Broath, or of Veal and Calves feet. Wine temperately taken is allowed.

This is a pleaſant Water. *Take* the fleſh of the Loyn of Veal half a pound, and a Calfs foot wel cleanſed, *add* Sugar two ounces, *boyl them in* Water, *add* a dram of groſs Cinnamon, *and ſtrain it*.

Let them not ſleep while they ſweat, ſome keep them from it twenty four hours after the Botch appears. But in regard ſleep refreſheth and carrieth the heat outward rather than inward, as I ſhewed, it muſt not be hindered.

Let him rejoyce and be in good hope either of Cure or eternal happineſs.

The Botch and Carbuncle are the chief ſymptoms. their cure ſhal be ſhewed hereafter, and how the Venom ſhal be dawn out.

The firſt thing is to hold up the ſtrength, as we ſhewed. And if ſwouning or Heart-beating come, give Cordials, and apply them outwardly. If ſwouning be from the ſtomach, anoynt and comfort that. and give a little Wine, or a ſop in juyce of Pomegranates-Grapes and Wine, put the Hands and Feet in warm water, and rub the Face and other parts.

Take away Doting and Watching with a puppy applyed, or with Opiates, or waſhing externally. If ſleep be much, uſe Vinegar of Roſes.

Aſſwage thirſt with this Julep. *Take* water newly diſtilled of Sorrel and Bread, each ſix ounces; Roſe and Scabious water, each four ounces, Vervain and Bugloſs water, each two ounces: *with* Sugar *make a* Julep.

Or with this. *Take* conſerve of Sorrel and Roſes, each an ounce; Rob de Ribes an ounce and an half, Diamargariton frigid a dram, with Sugar of Roſes *make a* Candy.

If a Diarhæa come it is dangerous, then give a Clyſter of Barley water and Sugar.

And, Take *Tormentil roots half a dram, or Bole with red Wine*, and anoynt the Belly with aſtringents.

Women with Child, do often miſcarry, when they are infected, this is deadly, and to be much regarded.

The other Symptoms, as of the Tongue and Jaws are cured, as in putrid Feavers.

The Cure of venemous Feavers. The Fevers that come from the biting of venemous beaſts, inflaming the Heart: kil in a few hours, or in the firſt day, except prevented.

The Cure is by drawing the Poyſon forth at the Wound; and by an Antidote, as we ſhewed in Poyſons.

If the Feaver be great uſe Cordials inwardly and outwardly, as I ſhewed to chear the ſpirits.

The Cure of a Hectick feaver. A ſimple Hectick, whether it follow continual Diary, or putrid burning, or intermiting Fevers (not that which is melting and a Symptom of a burning Fever) or free from that Fever which cauſed it: is to be Cured, according as it is either in the beginning, or increaſe, or ſetlement.

In Children and Infants, becauſe their Heart is eaſily altered in temper, it may be ſooner Cured, if not confirmed: but it is difficult in Men and Women. And in old people uncurable.

The cauſe of this diſeaſe is the temperament of the Heart and the whol Body made hotter and dryer, not nouriſhed by a Humor or Excrement, when the Body is freed from the Fever that cauſed it; Therefore purges are needleſs, except the Excrements and Crudities increaſe by long continuance of the Diſeaſe, and then gentle Clyſters or Laxatives may be given. But we muſt chang the temper of the Body, And hold up the ſtrength that decaies, And amend the accidents, if any be.

At the firſt we muſt alter the dryneſs, with moiſtners of the Heart and Limbs, and gentle coolers, becauſe the heat is not violent and may be allay'd by temperate and moderate coolers. Some give Narcoticks or Medicines to cauſe ſleep to cool the Body, but we ſay they are not cold, and rather inflame the Body, as I ſhewed, and therefore give them not but when ſleep is wanting. In the progreſs when the Conſumption is begun we refreſh, with nouriſhers that are moiſt, for they will diſperſe themſelves ſooner through the Body. This is done by internal and external means.

We give them a moiſtning Diet that refreſheth, boyl'd things, moiſten moſt, and roaſted increaſe the radical moiſture more.

Veal, Kid, and Porke, brains of Hogs and Calves are commended.

Alſo the ſtones of beaſts that are not very Lecherous, as of Sheep, Calves, and young Kids.

And Hens fleſh, Capons or Pullets fed with Barley, or crammed with Dow, made up into pills, with Cray-fiſh, Frogs fleſh, and Wheat flower or Barley flower.

Alſo Birds boyled, or moiſt roaſted, for *Galen* ſaies meat over roaſted turns eaſily into choller, but I rather lay the fault in the Dripping, the brains and ſtones of theſe are beſt.

Alſo Brook fiſh, Cray fiſh, Turtles of the woods and water Frogs are good meat in Hecticks, and Snailes, but ſome diſallow of them, becauſe they are ſo ſlymy. The *Carthuſian* Friers, make up the tailes of Cray-fiſh, with Barley, Almonds and Sugar, which is excellent.

And yolks of Eggs boyled with Wine and Sugar called in Dutch *Beinwarme*, and green Cheeſe.

Alſo a Panado of bread boyled in broath: Or this. Take *crums of bread* ſteept in *Milk*, and add *Almond Milk, Roſe water and Sugar*. Or *Barley cream* made with broath.

Alſo Almonds, Pine nuts, Piſtachas alone, or with Milk, or Sugar, are good.

In meat give Eryngus and Satyrion roots and purple flowr'd Goats beard, Purſlane, Bugloſs, Mallows, Violets, Endive, Spinage, Betts, Colewort and moiſt fruits.

In drink which they love beſt, becauſe they muſt not endure thirſt, give theſe.

Wine that is of a middle ſort berween ſweet and ſower is moſt refreſhing, if it be ſtrong, daſh it with water, Wine taken much inflames and muſt not be given here or when there is a Phthiſick or cough.

When the Conſumption is manifeſt and there is no ſuſpition of any remainder of the putrid Feaver, give Milk, for a long time every day: riſing from four ounces to a pint. Womans Milk that hath been four moneths delivered is beſt: the next is Aſſes, which cure, if it be curable. Then Goats milk, after the butter is taken out, and if you fear it will corrupt, add ſugar. If yout fear a looſneſs, infuſe ſteel in it: the reſt ſhall be ſhew'd in the Phthiſick.

Make Almond milk with pine Nuts, ſeeds of Melons and Gourds or Poppies into Emulſions.

Or give Cock broath, ſtrained from the fat continually, or a Decoction of Capons fleſh and Cray-fiſh.

Or Barley in Chicken broath.

Or this Julep: Take *Violet and Roſe water, each four ounces, white Sugar half a pound, Bugloſs water two ounces*; boyl them to a Julep, give it with boyled water or lean broath, or Barley water.

Or thus: Take *juyce of Purſlane* (highly commended in this cauſe) *three ounces, of Bugloſs an ounce*: boyl them to a Julep with *Sugar*, give a good proportion often.

Some commend, the juyce Burnet and Turneps.

Another Syrup: Take *Bugloſs and Eryngus roots, each two ounces; Satyrion roots an ounce, green Liquoriſh three ounces, Lettice, Purſlane, each a handful; Violets, Bugloſs and Borage flowers, each a pugil; Jujubs and Sebeſtens, each eight pair, Cold ſeeds bruiſed two drams*, boyl them, ſtrain and infuſe *red Sanders a dram*: make a ſyrup with *Sugar*, to be taken alone or otherwiſe.

Give Children that hate Medicines, Purſlane and Scabious water. Alſo waters diſtilled from Snails, Cray fiſh and Mans blood, and from new milk.

Or theſe: Take *Capon broath of hus fleſh*, well boyled, add *a pugil of Turtle, Cray fiſh or Frogs fleſh, conſerve of Roſes, Borage, Bugloſs, Scabious, Violets, each an ounce; Diamargariton frigid, Diatragacanth frigid, each a dram; Cinnamon two drams*, diſtil a water from them.

Another very profitable: Take *the Lungs and Heart of a Calf, the fleſh of ſix Cray fiſh or ſeven, Frogs four*, cut them ſmal, and add *Diatragacanth frigid ſix drams, Cordial temperate ſpecies two drams, Cold ſeeds bull'd and Purſlane ſeeds, each half an ounce; Henbane ſeeds*, if there be a Cough, *a dram*, add *Purſlane and Linden flower water, each three ounces; Lilly water four ounces*, diſtil them in *Balneo*: give this alone, or with *Julep of Roſes*.

There are divers reſtoring confections that are pleaſant.

Marſh-pane, thus made: Take *the paſt of which Marſh pane* is made *a pound, Cold ſeeds cleanſed an ounce, Pine nuts two ounces*, ſteep them in *Milk*, and bruiſe them

them, *Diapenides and Diatraganth frigid, each a dram*; *Diamargariton frigid half a dram*, make Cakes.

Or thus: Take *Capons flesh and Frogs, Hips and Crayfish tailes*, boyled in *Purslane and Rose water, each two ounces*; beat them, add *sweet Almonds blanched two ounces Pine nuts and Pistachaes*, steept in milk, *each an ounce*; *Gourd seeds cleansed half an ounce, white Starch two ounces, Sugar four ounces, Pearl half a dram*, sprincle them with *Cinnamon water*, and make a past with *Milk and yolks of two Eggs*, make Cakes.

Or thus: Take *flesh of Frogs Legs and Cray fish or Turtle flesh of the wood*, if you can get it, *each four ounces*; boyl them in *Barley and Purslane water*, add *the four great cold seeds, each a dram*; *white Poppy seeds two drams, Raysons stoned and Sebesten, each an ounce*; then add *the species of the resumptive Electuary, Diatragacanth frigid, Diapenidies without species, each half a dram, Penidies and Sugar-candy, each two ounces*; *Pine and Pistacha Nuts, each half an ounce*: make Cakes with *Gum Traganth*, dissolved in *Rose water*.

They must often take Sugar of Roses, or Sugar boyled in Violet or Purslane water.

Or this mixture: Take *conserve of Violets, Purslane, Bugloss, of each an ounce*; *Conserve of Roses half an ounce, Diamargariton frigid a dram, Sugar*: make a mixture.

For outward means and cold Air is better then hot and dry.

Baths do good by moistning and cooling the body which is hot and dry, and by loosning the parts that nourishment may come to them. The antients used them three waies: first they bath'd in hot water to relax: secondly in warm water to moisten: and thirdly in cold to keep in the moisture, by closing the Pores.

We use River or Raine water, which is thought best, so hot as may neither heat the body too much or cause thirst or sweat which must not be. And he must not be in above an houre, once or twice in a day, before meat. Some think it good to let the Patient take in the Fume of the Bath by a Linnen cloth before he goes in.

An artificial Bath is made of roots of Marsh-mallows, Mallows, Violets, Purslane, Bugloss with the roots, Chamomil flowers in tripe broath, Veal or Mutton broath that is fat, And for the Rich we add milk, Oyl or Butter.

I would allow of Sulphur baths, if they be near, used by degrees, because they make the body Oyly, as I have found by experience.

For this cause we anoynt after bathing, or at other times, morning and evening: the Back, Sides and Belly with loosning Oyls.

Or thus: Take *Mucilage of Fleabane and Quince seeds each half an ounce*; *Gum Traganth* infused in milk *half a dram, fresh butter an ounce, white Hens and Ducks grease, each an ounce*; *Oyl of sweet Almonds and Violets, each two ounces*; *with white Wax*: make a Liniment.

Anoynt the Breast and Heart thus: *Take* Oyl of Violets, Gourd seeds and sweet Almonds, of each half an ounce, Ducks grease an ounce, *or use the resumptive Oyntment*.

Some anoynt the Liver with the same, but we omit it, because the Liver will have little benefit thereby and the belly may be loosned therewith, which is naught. Neither do we put flesh in Oyntments, as some do.

We apply Epithems to the Breast, Heart and Pulses, because the Arteries are hot: As, *Take* an Emulsion of sweet Almonds made with Decoction of Barley, Purslane and Violets: *add* fresh Butter and Capons grease Dip cloths therein and apply them warm.

A Cordial Epithem: *Take* Violet, Rose, Purslane, Scabious, Bugloss and Borage water, each two ounces; juyce of Apples an ounce, juyce of Housleek or Lettice half an ounce, white wine an ounce.

If bruised Purslane, be laid to the Stomach, it is thought to be good.

And gentle Frictions after bathing to draw the nourishment.

The nourishers prescribed, both strengthen and restore. It is a good rule for Hecticks to eat often and little, and for all weak persons.

When meat is loathed and they are very weak, some give nourishing Clysters: Thus, *Take* milk half a pinte Capons broath two ounces, two yolks of Egg, *give it often and let it be kept long*,

Take heed of things that weaken, as fasting, which they cannot endure. And of strong motions of the Body, Mind, And of watching, for sleep is good. And all Evacuations, especiall Venery, are hurtful.

The chief accident is a loosnes of the Belly, and it hastneth death if it continue, we look to that with anoynting the Belly, and the like.

Somtimes constant binding in the Belly is troubsom to them, which we prevent by a gentle moistning Clyster: Thus: *Take* Chicken or Tripe broath, *boyl therein* Lettice and Mallows, *add* Cassia or Tamarinds an ounce, Oyl of Violets and Water Lillies, of each two ounces; Honey an ounce, *give it*.

Or this gentle Potion, Manna with Chicken broath, or Cassia, or syrup of Roses solutive, or of Violets.

The Cure of double or treble putrid fevers.

We call them Compound Feavers, when divers Feavers are at once, In these the Cure chiefly altereth; For if two putrid Feavers, or three or two continual Feavers, or double intermitting or triple Fevers meet, being all of a kind and differing only in respect of the cause, in this that it is putrified in divers places, but in the same Vessels, and the fits come not the same daies. These are rather divers then Compounded Fevers, and the Cure must be, as if there were but one, as in putrid intermitting and continual Fevers was said.

But if the Fevers be compounded of divers, which may be two waies, as when a putrid continual is joyned with a putrid intermitting, or a putrid continual, or intermiting with a Hectick; when the causes are divers and meet together. Then the Cure must be directed to both, and it differs from the Cure of simple Fevers.

The Cure of a Semi-tertian.

If a continual putrid be joyned to an intermitting in a Semi-tertian, of what kind soever it be, because the cause is double and the filth is in the hollow Vein and the Meseraicks also, and doth not only constantly perplex the Patient, but brings fits every other or third day, increasing the heat and Symptoms, we say it is very dangerous. Especially if there be swounding when the Fevers meet. Therefore a Semi-tertian useth to turne into a Hectick, or leave a Dropsie behind it,

The Cure of a Semi-tertian, is as in other Fevers, first taking away the Excrements, and Bleeding and Concoction of both matters, by purging and provoking sweat and Urin, often: with things proper for the Humor, whether Choller, Flegm or Melancholly, which breed the Fever. All Physitians first give remedies against the swounding, and Cordials which resist

Poyson.

Poyſon and Peſtilence. And we apply them inwardly and outward firſt of all.

And for the Fever we direct evacuations, preparing and altering Medicines agreeable to the conſtitution and the humor predominating, as the firs riſe or abate: as we ſhewed in continual and intermitting fevers; And if other accidents beſides ſwounding do happen, we correct them as was there declared.

The Cure of a Hectick joyned with a putrid Fever.

If a Hectick be joyned with the Fever that produced it, it wil not be a pure Synoch for that continueth but three or four daies, but a putrid continual, which we know by the conſumption of the body, or an intermitting long Tertian, or Quartan, and then we perceive the Hectick, not only by leanneſs, but by a feveriſh Pulſe after the fit. This makes us regard both. Thus,

When we concoct the matter and open obſtructions we added ſomthings that reſiſt the Hectick: As, Take *ſyrup of Endive and Violets, of each an ounce; Endive and Purſlane water, of each two ounces; with a little Diamargaritum frigid:* mix them.

Purge gently: Thus, Take *Rhubarb a dram,* infuſe it in *Endive and Purſlane water,* ſtrain it, add *ſyrup of Roſes ſolutive and Manna, each an ounce.*

Theſe præperatives and purges, if the Fever require and the Hectick be not hurt thereby, are to be repeated.

The altering means muſt moiſten ſoundly, by reaſon of the great diſtemper in the Heart, therefore we let them drink freely. We grant no milk, by reaſon of the putrid Feaver and Head-ach, as *Hippocrates* teacheth, except out of the fit, we allow a little for cuſtom ſake.

In Juleps and Conſerves and the like, we put moiſtners mentioned in the Hectick to open obſtructions and reſiſt corruption in the Fever that is joyned therewith.

At firſt before the Hectick comes when we fear it, we apply in the Feaver more moiſtning and cooling Epithems to the Heart and Pulſes, then ordinarily.

And we begin to uſe Baths ſooner, eſpecially in Quartans.

Allo accompanied Fevers, with other Diſeaſes joyned, whether they go before the Diſeaſe, or are Symp- and follow after, have a different Cure. As they are joyned with Eryſipelas, or Botches, or other hot Diſeaſes, or Meazels, or ſmal Pox, or Phthyſick, or Cachecy, or evil habit, or other accidents. And we ſhall in order ſet down the cure of the ſix ſorts of accompanied Fevers.

The preventing and curing of Synochs & Ephemeal Fevers that produce Botches and Eryſipelas.

If a putrid Synoch or Ephemera be with an Eryſipelas or Botch, it ends in reſpect of the Fever as a ſingle Fever doth, nor is it more dangerous than that, but in reſpect of the humor. But it is moſt troubleſome when it comes once a yeer with the Gout, as in old men which are moſt ſubject to it.

For whoſe cauſe in regard worſe accidents are feared, as internal Inflammations, Pleurifies and Impoſthumes in the Lungs, we ſhal ſhew how to prevent, and cure if it be come.

We prevent this Synoch, if the blood abound, by hindering its increaſe; if it be hot, by tempering it; if thin, by thickning it; if impure by purging and cleanſing it.

In full bodies we let blood ſpring and fall, and at other times to prevent.

And uſe ſcarification every month, and after cupping in the ſhoulders.

And we purge before and after Winter, and oftner if there be a foul body: but I have obſerved that violent purges have brought and not hinderd this Fever, by moving of the matter,

Tops of Hops, Fumitory, Elder buds, Senna, Epithymum and Polypody boyl'd in *Whey* is good to be drunk all the month of *May* in yong and ſtrong people.

Or with this Apozem. Take *Polipody three ounces, Senna an ounce and an half, Carthamus ſeeds an ounce, Thyme, Epithymum, each half an ounce; Tamarinds two ounces, Dock roots an ounce, Liquoriſh an ounce and an half, Succory roots two ounces, Violet, Endive, Lettice and Bugloſs, each a handful; Prunes and Sebeſtens, each twenty pair; Raiſons ten pair, Aniſe half an ounce, Cordial flowers a pugil, cold Seeds half an ounce:* boyl them in *a pint* of the *ſtrained liquor,* diſſolve *juyce of Roſes and Bugloſs, each an ounce; juyce of Apples three ounces, with Sugar and a little Cinnamon,* make a *Syrup,* give *an ounce* by it ſelf, or in *Whey,* or other *Liquor.*

Sharp waters drunk often for ſome weeks hath preſerved many.

Inſtead of Spaw waters you may make a Drink to cool a hot Liver, and the blood and ſpirits.

It is good to ſweat often in due ſeaſon, for thereby the blood is purged from excrements, eſpecially ſuch as are thin. This muſt be done by Exerciſe, Stuphes, or Fomentations, and by things taken into the Stomach.

Let the Diet be moderate in quantity. And beware of all things which eaſily inflame the Blood and Spirits.

The Cure is directed partly to the Fever, partly to the Diſeaſe that accompanieth it. As for the Fever, becauſe Nature from the beginning doth of her own accord ſend forth the Vapors which riſe from the Inflammation of the blood by tranſpiration or ſweat, we muſt do the ſame in helping her, that ſo ſome part of the cauſe being taken away, little or none may be carried to the emunctuaries or pores, or other places internal which are worſt. Wherefore ſince Nature in this Fever goeth about firſt to expel by ſweat, which ſhe doth later in a Synoch, let us at the firſt give things that cauſe ſweat (but not very ſtrong, leaſt the body hot before be worſe inflamed thereby) or that help, and make them ſweat more freely.

Let the Patient be quiet and covered, and not expoſed to the cold Air, which hath been ſo dangerous to ſome, that many fear to apply a cold wet cloth outwardly, or to an Eryſipelas.

Some adviſe plenty of Barley water to be drunk, and to boyl Lentiles therein, to ſend forth the matter, and to ſweat, as in the ſmall Pox. And if Nape and Citron ſeed be added, the Decoction wil cauſe more ſweat.

Alſo the Decoction of Sorrel roots with burnt Harts-horn and Lentiles huſked, and Nape ſeed with a little Cinnamon provokes ſweat.

And divers diſtilled waters, but here we make choyce of the moſt temperate in regard of the Fever, as that of the three colored Violet highly comended, alſo of Fumitory, Carduus, Marygolds, Chervil, and ſuch as are uſually given in other Fevers, which begin in the ſame manner.

To theſe Waters we add Rob, or ſyrup of Elder, or of Danewort, or ſyrup of Ambroſia or Treacle. Alſo we refreſh in the ſweat, or after it eſpecially; with a little Bread toſted and dipt in Water and white Wine, with a little Cinnamon and Sugar, and if you do ſo at firſt, they wil ſweat the better.

Blood-

Blood-letting is not so requisite here as in solitary Fevers, except there be fear of greater internal inflammation, and a Plethory; for the sending of blood into the Emunctuaries, and the extremities is not so much to be feared, that it should be stopt by letting blood.

The Belly must be loosned if bound, as in a solitary Synoch, and purged a little, if there be ill humors with Cassia or Manna.

And the Alterers must be given in, and applied outwardly, if the heat be great, as in a solitary.

And the Accidents corrected as there said.

As for the Botches, or Buboes, they somtimes vanish of themselves, without any application, except in the Neck, where they are kept from the Air with a cloth or a Fur. When they are ill ordered, they burn to an Imposthume, as we shewed.

As for Erysipel as, that departs presently after the Fever, but if it be hot and painful, asswage it, as shal be shewed. When it is ill cured, it turns to an Ulcer, and somtimes into a Gangrene. And therefore commonly they say, that if any Ulcer, or Tumor, or scurf, come after, it was caused from the evil curing or wetting of the Erysipelas.

The Cure of Fevers coming from external Inflammations.

If a Synoch be joyned to a hot Disease or Inflammation, and their Accidents, and there is an outward Inflammation with a tumor, Contusion, Wound, or Gunshot, that causeth a Fever, if it be small, little is given, but such as may be mixed with the medicines against the Tumors: as bleeding which is good for Revulsion. And loosning of the Belly, and other altering Medicines used in other Feavers.

The Cure of Feavers that produce internal Inflamations.

When there is internal Inflammations of the Lungs, or in a Pleurisie, or Peripneumony, or in the Liver, Spleen, or other parts, we direct our Medicines to the Inflamation, rather then to the Fever, which requires no such hast, as the Inflamation, and goes away with the Disease, except as I shewed in the causes, it springs again: Yet we so order the Inflamation that we increase not the Feaver. And the Medicines are best, which are contrary to both.

Blood-letting is exeellent in both, for it is the chief remedy in a Synoch, and it hinders Inflamation by drawing the blood from the Noble part. Therefore it must not be neglected, but let out freely and somtimes repeated.

It is good also against both Fever and Inflammation to keep the Belly open with gentle Laxatives or Clysters. Strong Purges are Enemies to both, because they take away more of the cause, but inflame the body, and stir up the blood to flow to the Inflammations and abate the strength which is here precious. And they are to be feared least they bring a Diarrhæa which is here dangerous and deadly. Therefore imitate not the Empericks in giving them.

Things that are given cold, though they are contrary both to the Fever and the Inflammation, yet they must be given warily with regard to the part where the Inflammation is, lest they hurt one, when they profit the other. Although much cold water is good against a Synoch, yet it would hurt internal inflammations by a sudden repercussion, Therefore we give it prepared for that part, and in Diseases of the Breast we give Pectorals, and in Diseases of the Liver openers of Obstructions mixed therewith. And therefore sharp waters though they may do good in Fevers and many internal inflammations, yet we give them not in diseases of the breast, especially if they bind and are very sour. This rule is to be observed not only in ordinary Drink, but in Juleps, Syrups, and Conserves.

Remedies applied outwardly must be profitable for both, they must not increase Inflammation as Epithems, though they are in all Fevers profitably applied to the Heart, yet in Inflammations of the Lungs, they wil do hurt.

The Diet which is thin for a Fever, is good in an Inflammation, also while the matter flows, that while the hungry parts catch away blood for nourishment it may less come to the part affected.

But we have shewed at large in our Practice how to order internal Inflammations with a Fever, whether it went afore or followed them.

The Cure of Synochs putrid, malignant, or pestilential, which produce Meazles or small Pox.

Fevers with Meazles or Small Pox which are Synochs, or putrid, malignant, or pestilenlial, are judged and cured according to their divers causes and the age of the Patient. These are less dangerous when they come not from a malignant cause, and then they keep the same course with Synochs, Solitary, Putrid, or not Putrid. But if there be a malignant cause not pestilential, these Fevers alone kil not Infants, because Nature sends out the putrid malignant cause in the blood, by many pustles, outwardly, but if not, they are dangerous, especially if pustles be in the Jaws, Lungs, or Eyes. But in people of age, whether the Fever send forth Pustles or Spots, because the cause is alwaies malignant, and hath long lurked in the blood, never purged out, or not having the small Pox in their Infancy, it is dangerous, and it observes the course of malignant Fevers which are popular, or epidemical; though this is seldom. We Prognosticate by the Pustles, for if they come forth when signs of Concoction appear in the Urin, and the pulse is better, and the accidents of the Fever abated, it is a good sign, if otherwise, it is ill. If a pestilent Fever brings forth the Pustles rather than others, which is seldom seen, it is deadly: And we have shewed that many thousands of Infants have been so taken away.

The Cure is, when the Fever is come, and we suspect the pustles wil come forth, because it is ordinary in that place, or because they appear; we must help Natures motion to expel them, and the rather when the cause is malignant, with the expulsive medicines mentioned, and order the Fever with Evacuations and Alterations, look to the strength, and correct the accidents, Thus.

We give the expulsive medicines mentioned to expel from the Center to the circumference at the first, with respect to the cause, whether putrid, malignant, or pestilential, to yong, weaker; old, stronger; beginning with the weakest means thus.

Take *Figs dried twelve, Barley and Lentiles, each a pugil*; boyl and drink them.

Or, Take *Lentiles and Barley, each a pugil*; *dried Figs twelve, Jujubes fifteen, Dates four, Raisons twenty pair, Liquoris half an ounce*: boyl them, you may add *Sugar* and a little *Saffron*.

Or add to the same *Fennel seed two drams, Quince seeds, Gum traganth and Gum lac, each a dram*; *Saffron half a dram*: boyl them.

The *Arabians* make it thus. Take *dried Figgs seven drams, Lentiles and Gum lac, each three drams*; *Gum traganth and Fennel seeds each two drams*: boyl them to the third part.

If there be Obstructious and a foul body. Thus,

Take *Graſs and Aſparagus and Fennel roots, each an ounce*; *Liquoriſh an ounce and an half, Sorrel and Maidenhair, each an handful*; *Cordial flowers a pugil, Figs twenty, Rayſons ſtoned twelve pair, Fennel ſeeds a dram*; boyl them, diſſolve in a draught of it *ſyrup of Citrons or Limons half an ounce, Mithridate a ſcruple, with waters of Sorrel and Marygold.*

Alſo: Take *Carduus ſeeds a dram, Nape ſeeds a ſcruple, Citron ſeeds half a ſcruple, Sorrel ſeeds half a dram*, bruiſe them, and add *Carduus, Sorrel and water of Pauls-Betony, each an ounce and an half*: make an Emulſion, add *ſyrup of Limons or Citrons an ounce, Harts horn burnt a ſcruple, Pearl half a ſcruple, Bole half a dram, Diamargariton frigid half a ſcruple*: make a Potion.

Or: Take *Barley and Lentil water, and a dram of Sorrel ſeed, Grains of Paradice a ſcruple, Citron ſeeds half a dram*: boyl them, add *ſealed Earth a ſcruple*: give it.

Or give our Antidote in Pouder, if the heat be not great mentioned in the Cure of the Plague.

Or thus: Take *roots of Mock chervil* (which is never omitted, if it be to be had) *two ounces, roots of Tormentil, white Dittany, each two drams*; *Cordial flowers a pugil, Sorrel a handful, Lentils half a handful, Earth of Lemnos a dram*: boyl them in two pints of water, ſweeten it with *Sanders, and five ounces of Sugar*, drink often.

Or this which makes the Puſtles come forth ſpeedily, Take *Monckes Rhubarb, Tormentil, white Dittany and Graſs roots, each an ounce*; ſteep them in ſpring water, boyl them to the conſuming of the third part, add *Sugar four ounces, Vinegar an ounce, or juyce of Citrons an ounce, or an ounce and an half of the ſyrup thereof*: drink it two or three daies.

If the Feaver be great: This, Take *ſyrup of Citron, Vinegar or Limons with boyled water or Sorrel water and Bole and Bezoar ſtone*, drink it.

Anoynt the Back, to fetch out the Puſtles, as ſome do the whol Body. Thus: Take *Oyl of ſweet Almonds an ounce and an half, Oyl of Chamomil half an ounce, the reſumptive Oyntment an ounce.*

Or uſe this Fomentation: Take *Chamomil and Melilot flowers, of each a pugil*; *Mallows a handful*: boyl them.

Let the Patient be in bed, and keep from the Air.

Alſo Scarifications, with Cupping-glaſſes upon the Shoulders, fetch out the Puſtles and Spots, when they appear.

And rubbing with a red cloath.

The vulgar think, the beholding red things, makes the Puſtles red, and therefore cover them with ſcarlet.

If the Fever be a Synoch it is good to bleed at the firſt to take out ſome of the inflamed putrid or malignant Blood, and abate the Cauſe in Men and big Children, not in Infants. The Spaniſh Phyſitians taught by the Jews, did formerly and now alſo, with the French Phyſitians open Veins in Children in this Diſeaſe; but not when the Spots or Puſtles do appear leaſt natures motion be hindered.

If the Fever be very malignant, which bringeth forth theſe Puſtles, or the Patient in years, give the following.

Looſen the Belly at firſt, before Blood-letting (if it muſt be) leaſt the Excrements increaſe the heat, with a Clyſter or Laxative.

Or give this Potion to Men and Children in a leſs quantity: Take *Violets a pugil, Sebeſtens and Jujubes, of each ten, Tamarinds three drams*, boyl them, and add *Manna an ounce, Caſſia ten drams.*

Some men muſt have ſtronger purges, but take heed of a Fluz or Dyſentery, and add alwaies ſomthing to reſiſt Malignity.

As thus: Take *Rhubarb four ſcruples, Spike half a ſcruple, Scordium half a dram, yellow Myrobalans a dram and an half*, infuſe them in *Sorrel and Carduus water*: ſtrain and diſſolve *ſyrup of Peach flowers and Roſes with Senna, each an ounce.*

Or: Take *Tryphera perſica ſix drams, Manna an ounce and an half, ſyrup of Limons an ounce, of Violets and Roſes each an ounce*; *with Sorrel, Scabious and Carduus water*: make a Potion.

Or theſe Pills: Take *Aloes two ſcruples, Rheubarb a ſcruple, Myrobalans half a ſcruple, Agarick a ſcruple, with ſyrup of Sorrel*: make Pills.

Or this Clyſter: Take *Mallows, Beets, Mercury, Sorrel, Bugloſs, Borage, each a handful*; *Balm half a handful, Cordial flowers, Bran and Barley, each a pugil*; boyl and ſtrain them, add *Tryphera perſica an ounce, Caſſia ſix drams Honey an ounce, Oyl of Violets three ounces, with a little Sale* make a Clyſter.

Uſe alterers to cool, and reſiſt corruption, as in a continual putrid Fever and Malignant. It is not good to uſe cold things outwardly for fear of Repercuſſion, or ſtriking in the matter,

Reſtore ſtrength as there, with Lentils and Barley and give no Wine till the declination.

We have ſhewed elſe where how to order the Puſtles.

If there be a Diarrhea or Flux in the begining, (for in the end it often cureth) by the venemous Humors in the Guts, you muſt mix the Troches of Spodium or burnt Ivory with expulſives.

The Cholick is abated, with Clyſters or Oyl of ſweet Almonds.

Vomiting is ſtopt with a cruſt of bread dipt in Vinegar, given and applied.

For the Syncope or Swouning: Take *Pearl half a dram, Bole a dram, filings of Gold and Unicorns horne, each a ſcruple*; *Citron ſeeds half a dram, fragments of pretious Stones, each a ſcruple*; *with Sugar*, diſſolved in *Roſe water*: make Lozenges.

If the ſleep be great and cauſe aſtoniſhment, expel it with Rubbbing, Ligatures or Binding and Cupping.

The Cure of pure Synochs and of putrid Malignant fevers, which produce the Botch or Carbuncle.

With other Puſtles, as a Carbuncle not Peſtilential, if there be a Synoch pure, or a putrid, or malignant, but not the Plague, we ſhal proceed in reſpect of the Fever, as formerly. Uſing things to expel the cauſe, laying upon the Carbuncle things that draw out venom, and then we open a Vein, looſen the Belly and ſtrengthen the Heart inwardly and outwardly with coolers and reſiſters of venom, hold up the ſtrength, and correct accidents, and Cure the Carbuncle, as was ſhewed.

The Cure of lingring or Hectick Fevers which are joyned with Phthiſick and Cathexy.

A lingring Symptomatical fever turned into a Hectick, as in the Phthyſick is uſual, muſt be as a ſolitary Hectick. But if it be fixed and the Diſeaſe not gone that cauſed it, it is incurable. But if before it is a Hectick it hath little heat and ſmal accidents and is little alone regarded, but the whol cure is directed to the diſeaſe accompanying it, whoſe Symptoms are more urgent, as ſhall be ſhewed, having an Eye to the Fever in other preſcriptions for the Diſeaſe.

And we muſt take away no more nor leſs blood, becauſe there is a Fever.

But

But we purge in Cachecticks for the Fever with gentle things that inflame not.

If the altering Medicines muſt be hotter for the Diſeaſe, we muſt cool them for the Fevers ſake. And in a Conſumption before the Hectick is confirmed, we may uſe things that moiſten rather then violently cool.

The Cure of lingring Fevers riſing from a dead Child, After-birth, or congealed Blood.

If there be a Fever from retention of the After birth, a dead Child or congealed Blood, it is gentle and Symptomatical and to be cured as the other: except there be an Inflammation and then it is to be cured, as a Fever with Inflammation above mentioned.

CHAP. III.

Of Head-Ach.

The Kinds.

THe internal pains of the Head, which reach not ſo outward, as to be increaſed by the touch, as the internal, are either unuſual, or accuſtomed, or ſolitary, or accompanied: Hence ariſe all the Kinds of them.

Cephalalgia, or the Head-ach called Soda *by the Arabians.*

We call them unuſual, which are new from ſome freſh Cauſe, and which the patient never had before. This is call'd *Cephalalgia* or *Soda* by the Arabians. In this the Head either is pained in ſome diſtinct place, or here and there.

The laſt pain is called an indiſtinct or wandering pain, over all the Head: one while ſtretching it, as if it would tear it, which ſome think to abate by binding or preſſing, another while it beats only in the Temples, ſomtimes it pricks only in the Ears, ſomtimes it is a heavy pain like a weight & this is call'd heavineſs of the Head.

Heavineſs of the Head is a kind of Cephalalgia.

Somtimes the pain is diſtinctly in the fore part of the Head and Temples, or the right or left ſide or both or in the Fore-head or roots of the Eyes, as if they would fall out, the Eyes are red and the Temples beat with pricking, ſomtimes in the Ears, which are oftner in *Cephalalgia*; ſomtimes it is behind like a weight, but oftner in Women then Men, Somtimes in the Crown.

They are uſual pains which are old or return upon ſmal occaſions, they are on both ſides, or in one ſide only.

Cephalæa.

When pain is on both ſides of the Head, or the greateſt part, it is called *Cephalæa*. In this the pain is continual, which ceaſeth not, but is ſomtimes gentler and ſtronger othertimes. or intermitting or comming by fits: theſe are ordinate at certain daies, or weeks, morning, or evening, or inordinate returning from any light Cauſe.

Hemicrania.

If the pain be in one ſide of the Head as if it were cleaved it is called *Hemicrania*: This begins from the bearing of the Temples and goes to the Sagital or arrow like ſuture, dividing the Head long waies, and comes every third or fourth day: There is another ſort which at a ſet hour every day for divers weeks torments the Patient with a pricking pain in ſome part of the Skul, with this I was vexed ſome weeks about my right Eyebrow.

They are ſolitary Head-aches that come alone no diſeaſe going afore, as that of wine and drunkneſs, which begins after ſottiſhneſs and amazment therefrom is paſt.

Thoſe are called accompanied, which are joyned with other diſeaſes: which they follow for the moſt part, and are Symptoms, as when the chief Symptom in a Fever is the Head-ach, and thoſe Head-aches that accompany Melancholly and Falling-ſickneſs. Or thoſe which come from a Catarrh, before or behind with heavineſs; Or that come in the Diſeaſes of natural parts, accompanied with divers other accidents, as Cachexy and ſuppreſſion of Terms. Or when in the French Pox there is a *Cephalæa* that moleſteth at night moſt, both inwardly and outwardly.

The Cauſes.

The part affected.

Head-ach muſt needs be, within the Skul, or in the meninges, or filmes, or in the brain it ſelf; It may be in the meninges becauſe they are ſenſible. And they being two, the one thick the other thin, and cloſe joyned together and to the Veſſels can carry the pain from what ſide ſoever it begins. So that it is hard to diſtinguiſh which of them is moſt affected, but by conjecture, as when the diſeaſe is in the outward thick Membrane, the pain muſt be outward by reaſon of the Pericranium joyned unto it. But if the inward thin filme be afflicted, the pain is deeper and in the Brain as it were. In both the pain may come to the roots of the Eyes, becauſe the Balls of the Eyes have tunicles from the Membranes of the Brain. But in regard both the Tunicles are diſtinct with the Brain long waies in the middle of the Skul, it comes to paſs, that if the diſeaſe be only on one ſide, only half the Head is pained, but if on both ſides, the pain is on both ſides, now in one, then in the other, as the cauſe is more or leſs.

Many affirm that there can be no pain in the ſubſtance of the Brain, becauſe the ſubſtance of the brain is inſenſible: But we affirme that thoſe parts of the brain, to which the tender film, or Meninx grows, which produceth the ſenſitive Nerves cannot be without ſenſe, and that they may give occaſion of pain with the meninges by conſent, and yet without hurt to the mind, this pain is ſtupefying rather then ſenſible. And in heavineſs of Head I ſuppoſe that that pain or ſence of weight before and behind, comes from the brain offended in the part from whence the Nerves and Marrow proceed.

The Diſeaſe which is in the meninges of the brain, or the ſenſible parts thereof, where the Nerves begin, which cauſeth Head-ach, is either manifeſt when a hot diſtemper inflames the parts or cold, when it plucketh them or ſolution of continuity, ſtretching or otherwiſe hurting: Or it is a hidden quality which is offenſive to theſe parts. The helping Cauſe is the diſpoſition of theſe parts to ſuffer. From which cauſe, if they be little, the Diſeaſe is leſs; if great, or more cauſes meet the Diſeaſe is greater.

A hot diſtemper of the Brain cauſeth Head-ach.

A hot diſtemper is often the cauſe of Head-ach, for the Head (as I ſhal ſhew) eaſily is inflamed by reaſon of the plenty of ſpiritful blood, and is pained by a preternatural heat: And the rather when there

there is a matter which raiſeth the heat to ſtretch and diſturb it. Or if there be an evil quality in them that offendeth the brain, as it is uſually from a hot vapor or humor from blood and choler.

Vapors going to the Head cauſe Head-ach.

The Head being uppermoſt eaſily receives Vapors, eſpecially thin. theſe heat and pul, and give occaſion to Head-aches by conſent. This comes from outward ſcents, but it is rather the return of an old pain which was uſual, than a new. And ſometimes from things eaten, that with their Vapors ſtrike the Head. Theſe may cauſe new Head-aches if they fil the Brain, as in Drunkards who are pained in their Heads, from the thin hot vapors of the Wine, that heat and prick rather than ſtretch the Brain, by a force, as I ſhal ſhew, contrary to the Brain and Nerves. This pain comes after ſleep from the ſtupifying or Narcotick quality of the Wine, and the heat remaining and continues till the Vapors are thrown out by Snorting. Vapors ſent to the Head from hot, cholerick, and putrid humors in the Veins, cauſe the Head-aches in moſt Fevers; and out of Fevers they cauſe the fits of the *Hemicrania* or half Head-ach: And Choler in the Stomach ſending Vapors, cauſeth Suffuſions and Vertigoes or Giddineſs and alſo Head-ach by conſent.

Bloood in the Head cauſeth Cephalalgia.

Much ſpiritful Blood conteined in the large cavities and paſſages of the Brain, by ſtretching, or if it be hot by inflaming, it cauſeth a Dotage, or by heat, a Cephalalgia, or bloody Head-ach called *Soda*. This is Cholerick, Melancholick, or Flegmatick, as the blood abounding is thick or thin. This Blood comes into the Head, from a plethory in the Body, which is from divers cauſes. Or it is drawn thither by the heat of the Sun or Baths, Noyſe, Coughing, Stroaks, Falls, or great motion of the Body or Mind, and made hotter: Eſpecially in hot Diſeaſes, this is a Symptom, eſpecially in Fevers in which the blood inflamed with the ſpirits in the Head, as it is alſo in the great Veins. hence comes Head-ach in all Fevers, or from the Vapors, for in Fevers the Head is made hotter as wel as the body. We know when head-ach comes from blood, from things foregoing, and from the beating pain, and redneſs of the Eyes, and other cauſes.

Alſo if ſuch excrementitious Choler as comes pure from the Ears ſeparate from the water, go to the Brain and Meninges, it makes a pricking, but it can ſcarſe get thither without moiſture, nor doth it then cauſe pain, becauſe in the Jaundies, except other cauſes happen, there is no Head-ach.

A cold diſtemper of the Brain cauſeth Head-ach.

A cold Diſtemper may cauſe head-ach, as wel as pain in the Nerves, by binding and biting, and by its adverſe contrary quality to every ſenſible part. This may come from flegmatick excrements of the Brain, cooling the membranes and not the Brain (for then there would be ſleep or aſtoniſhment) as in the Defluxion called *Coryza*, there cometh ſomtimes actually cold water from the Noſe, and then the pain of the Head ceaſeth. Alſo pain riſeth from ſome external actual Cold, either becauſe it aſtringeth, or is otherwiſe an Enemy to the Head; from the Air, or Wind, or cold things applied to the Head, theſe cauſe Head-ach if they pierce inward. And a little cold external in ſuch as are uſed to have the Head-ach and to keep their heads warm, if they ſtand bare wil cauſe the Head-ach, therefore they defend their Heads Caps and long Hair. And they who are offended eaſily with heat, take off their Hair, and ſay, that if it be long they perceive the head-ach to trouble them, as we have obſerved in old Men and bald-pated, who uſe to be night and day bare-headed: Alſo by accident, external Cold by driving the external heat inward (eſpecially when from a cold place one ſuddenly removes into a hot) may cauſe Head-ach, rather by heating than cooling the Head.

Diſtention and Twitching in the Brain is the cauſe of Head-ach.

Solution of Continuity manifeſt by external cauſes, as a ſtroak, or Wound, that pierceth to the Meninges, make an inward Head-ach with an outward. But diſtenſion and twitching pains are cauſed by Vapors and hot humors, and flegmatick excrements abounding in the Brain, cauſe the ſame; not ſo much by their plenty, as by their coldneſs and ſharpneſs, which they have by corruption or ſaltneſs. And this Headach is joyned with a heat, and is before or behind, as the humor producing it, is in the fore or hinder cavity; and it is heavy like a weight, with ſtretching and twitching. And it is ſhorter when the excrements ſtay not, and longer when they do. and ſomtimes a Giddineſs or Defluxion doth go before or accompany it. And the plenty of theſe excrements being wateriſh, thin, ſharp, and hot (as we ſhewed in *Coryza* with Head-ach) flowing from the Eyes and Noſe ſhew the cauſe. And we have ſeen abundance of theſe humors voided, not only at the Noſe, but Ears, which have cured an old Ach.

A quality which is an enemy to the brain cauſeth Head-ach.

Any quality that is an Enemy to the Membranes of the Brain will cauſe pain in them firſt, and then in the Head, either by a hidden force, or a manifeſt quality. As Narcoticks afflict the Brain with their evil quality being taken, and alſo cauſe pain of the Head when they which took them come to their ſenſes, and it continues. And Drunkards are not ſo much hurt by the heat and vapor of the Wine, as by its evil quality. and after Beer we find Head-aches cauſed from the Hops, which are narcotick and ſtupefactive, by which quality we obſerve that Hops are deſtructive unto Flies. And we have often obſerved that Head-ach eaſily comes after the uſe of Opiates. And after the uſe of other things not narcotick, but otherwiſe offenſive, as of Saffron, Smallage ſeed, not only much taken, but ſmelt to. Alſo Head-ach, as other diſeaſes of the Head may come from evil vapors or humors, as in melancholly and the like. And in infectious Diſeaſes it may come from the Contagion, as in the French Pox where the quality doth not only outwardly torment the Perioſtium and Pericranium, cauſing outward pain, but the inward films or Meninges cauſing inward, which ſomtimes are both together. And the Plague or venemous quality hereof, or of any other poyſon may cauſe Head-ach by its enmity to the Brain as wel as the Heart, and not by the heat of the Fever only, though both may be cauſes of this Head-ach together, as when a putrid Fever is joyned with a malignant.

Weakneſs of the Brain or a diſpoſition to ſuffer cauſeth head-ach

When the diſpoſition or diſpoſition of the Head is to be pained, it comes from very ſmall occations, & this diſpoſitionis the cauſe of *Cephalæa* & *Hemicrania*. we cal this a parible or ſuffering diſpoſition: but we know not how to explain it, unleſs we call it too much ſenſibility, or that which comes from the Parents Hereditary. Or unleſs it comes from an evil cuſtom in ſuch who have often been pained, or be a weakneſs which makes the Head more ready to ſuffer

ſuffer ſuch as is after long diſeaſes of the head, wounds, or French Pox, cauſed by long and continual gathering of excrements in the Head.

A fault in the Organ or part cauſeth Head-ach.

Evil ſhape, called *Mala conformatio* is ſomtimes cauſe of a continual Head-ach, as when the ſutures or ſeams in the Skul (eſpecally the Dart-like ſuture called *Sagittalis*) is ſo cloſed or defective, that there can be no tranſpration of vapors and ſooty excreements. This may come from a preternatural rockey or hard conſtitution of the Skul in the Crown, as I have felt and ſeen often.

The Cure.

The Cure of Cephalalgia Cephalæa or Hemicrania of what cauſe ſoever.

A hot Cephalalgia comes from a hot, cholerick, or ſanguine vapor, whether pure or impure, which overheats, ſtriketh, and twitcheth the brain; and this comes from external or internal cauſes, of themſelves, or by conſent, in hot diſeaſes of the Stomach or other parts as in Feavers eſpecially. If it comes of it ſelf by Blood flowing to the Head, it muſt preſently be drawn away, and driven down, and the heat raiſed thereby allayed, and the pain aſſwaged, leaſt it renew the flux, and the reſidue diſcuſſed and conſumed. If it come by conſent from vapors ſent up, the Cure is to be directed to the Diſeaſe of which this Head-ach is but a Symptom, and the cauſe of this ſymptom, eſpecially the fuel from whence theſe vapors ariſe muſt be purged, and the vapors are to be ſtopped, and drawn from the Head and diſcuſſed. a cold Head-ach if it come from external cold, either of it ſelf departeth, or is cured by moderate heat by degrees eaſily. A flegmatick Head-ach if new called *Cephalalgia, Cephalæa*, or old, called *Hemicranæa*, muſt be cured as other diſeaſes ariſing from the excrements of the Brain, by general and particular evacuations of the Brain, and by altering and ſtrengthening, and diſcuſſing the humors gathered, and fetching them forth by ſecret or manifeſt waies opened by Nature or Art. Head-ach from Narcoticks, eſpecially Wine, or other things that are offenſive to the Brain, or from malignant vapors is cured by evacuateing theſe cauſes and ſuppreſſing their ſtrength. If it be from the French Pox it is ſtrong and not cured but by many and great Evacuations; as I ſhewed in thoſe Diſeaſes of which Head-ach is a ſymptom. But we ſhall ſhew here what is to be done chiefly againſt this ſymptom of pain by evacuations and altering medicines, proper to the ſeveral Kinds and Cauſes of Head-ach.

Remedies to take away the Cauſe, are either to draw away the blood, and with that, humors and vapors from the part affected; or the heat; or the humors upward or downward by the Mouth or Noſe, or by ſweating, or particularly by the Skin of the Head.

Blood-letting when plenty and heat cauſeth Head-ach is appointed to repell, or pull it from the place affected, and to derive and direct it. We make Revulſion by opening the Veins remote from the Head, and this muſt be done at the firſt while the blood floweth to the part: And it wil alſo prevent an unaccuſtomed Headach in plethorick perſons to bleed Spring and fall. either in the Arm, or Foot, or pained ſide, opening the Vein moſt apparent, or that called Cephalick or head-vein in the Arm. or that in the great Toe proper againſt the Head-ach called by the ſame name. In women open the *Saphena*, eſpecially if the courſes be ſtopt. In all which you muſt obſerve the quantity, in a pure plethory you muſt bleed more, in an impure leſs, with reſpect to the conſtitution of the Body. And if the Diſeaſe wil give leave, firſt looſen the Belly. we derive the blood when much is flown to the part, by the Veins neer the Head: Firſt opening a Vein for Revulſion, after the Flux is ſtopped, and a new not feared. This may be done by opening the external jugular Veins in the Neck (as the Arabians teach and others that ſpeak of the Cure of old Head-aches) but for the danger of ſtopping them, by reaſon of their largeneſs, and ſwelling from ſtrong Ligature and Extenſion of Voice. And the rather, becauſe when they bleed much, they cauſe Sterility or Barrenneſs as *Hippocrates* ſaith. Therefore it is better, eſpecially if the diſeaſe be in the Fore-head to open the Branches of the Veins in the Temples or Forehead; And becauſe in the opening of them the Throat muſt be bound to make the veins appear and drive blood into the Head, it is better to open the Veins under the Tongue, which are branches of the internal jugular in the Mouth. Or you may open other branches in the Noſtrils. Or apply Horſ-leeches to the tip of the Noſe, or behind the Ears, or upon the external jugulars.

Many commend the opening of an Artery when there is ſtrong pulſation and heat, eſpecially if there be a giddineſs called *Vertigo*, which is done as we ſhewed in the Fore-head, Temples or behind the Ears.

Cupping-Glaſſes are uſed to ſupply the former, or after other bleeding to advance, becauſe they draw blood, and if ſcarification be made, evacuate it. Theſe are to be applied to the ſides of the Neck, the Shouſlders, Arms, Hips and Buttocks, beginning above, and ſo going down, often the ſame day or the day following. Scarrifying alſo afterwards if we wil make ſtrong attraction. Alſo it is good to ſcarifie between the Thumb and fore-finger, eſpecially in a *Vertigo*. or in the Wriſts. ſome uſe it to the Ears.

By Frictions we attract the heat, which are good not only to draw away blood but humors and vapors which cauſe pain. Theſe are made in the Arms, Back, and Feet, beginning above. It is good to comb the Head often, if it be done gently it cauſeth diſſolving of humors, if ſtrongly, attraction of humors to the ſuperficies of the Head. This is beſt in old Head-aches, or in the declining of the other. Ligatures or binding of the extremities, revel more powerfully than frictions or rubbing. Alſo waſhing of the body with a hot Decoction of Herbs good for the Head, draws humors and Vapors from the Head, And aſſwageth pain as we ſhal ſhew.

Glyſters are good, and uſually afore bleeding, becauſe they ſupple the belly and take away excrements. and after alſo, to draw down blood, ſpirits, and vapors; if they be ſharp, and well applied. And in conſtant heat they muſt be given often, the belly being bound, for the Diſeaſe comes or is increaſed by excrements retained, which ſend up vapors.

In a hot cauſe, eſpecially Fevers, uſe this. Take *Mallows, Violets, Marſh-mallows, Beets, Mercury, red Coleworts* (which beſides their pricking reſiſt Vapors and Drunkenneſs) *each a handful; Bettony* (proper for the Liver) *half a handful, Violets a pugil, Chamæmel flowers half a pugil, Barley, Bran, each a pugil; cold ſeeds half an ounce, Fennel ſeed a dram*: boyl and add *Honey of Violets and red Sugar, each an ounce; Juyce of Beets or Mercury an ounce and an half, Caſſia an ounce, Oyl of Violets two ounces, Butter an ounce*: with *Salt* make a *Clyſter*.

In other Cauſes, eſpecially old pains: Take *Lilly roots two ounces, the Emollients, Beets or Mercury, red Cole-*

worts, Pellitory of the Wall, Bettony, Sage, Hyſop, each a handful, flowers of Chamomil, Lavender or Stœchas, Roſemary and Bran, each a pugil; Figs ten, Annis and Fennel ſeeds, each a dram; boyl them, and add *Hiera picra and Diaphœnicon, each two drams; red Sugar and Honey of Roſemary, each an ounce and an half; juyce of Mercury or Beets an ounce, Oyl of Chamomil and Lillies, of each an ounce and an half; with a little Salt*: make a Clyſter.

If the pain come from Humors or Vapors from them or evil quality in them, or if the uncleaneſs of the Body increaſe or nouriſh it, we give divers purges ſuch as are for other Diſeaſes of the Head, coming from the ſame cauſe, differing in reſpect of the cauſe and conſtitution; when the cauſe or nature is hot, we uſe gentle and moderate, but in others ſtronger and hotter, reſpecting the Head in all: giving before them Clyſters: or letting blood, preparing the Humor firſt if need be. And we purge often, if the cauſe require, as in the Head-ach from the French Pox. Thus,

In Cholerick Body we prepare before purging: Thus, Take *Syrup of Endive two ounces, ſyrup of Violets and Sorrel, each an ounce; Succory and Bugloſs water, each four ounces; Vervaine water* (which is proper for the Head) *two ounces, and Bettony water an ounce*, give it at thrice, and a Tablet of Diarrhodon after every draught.

In Melancholly, thus: Take *ſyrup of both Bugloſes, each an ounce and an half; ſyrup of Harts-tongue and Epithymum, of each an ounce; Bugloſs, Vervain, Balm and Bettony water, each two ounces*: take it as the other.

In flegmatick and old pains, where the heat is not great: Take *Honey of Roſes, Oxymel ſimple and ſyrup of Maiden hair, each an ounce and an half; ſyrup of Hyſop and Stœchas, each an ounce, Marjoram, Bettony, Vervain, Balme, Hyſop and Sage water, each* as much as is fit, give it as the other with a Tablet of Diamoſchum after every draught.

Or this Decoction: Take *Fennel roots two ounces, the true Acorus or Calamus an ounce, Liquoriſh an ounce and an half, Bettony, Marjoram, Sage, Vervain, each an handful; Lavender, Stœchas and Roſemary flowers, each a pugil; Annis and Fennel ſeeds, each a dram; Rayſons ſtoned two ounces*: boyl them, and add *Honey*, then cleanſe it, and add *Nut-meg and Sugar*, give it three or four mornings.

As for purges, if the pain come from a hot humor, blood or choller, they are as we ſhewed in Fevers and other hot diſeaſes that cauſe Head-ach.

Or thus: Take *Caſſia, Tamarinds, Prunes, of each half an ounce*, take it with *Sugar or Whey*.

Or thus: Take *Caſſia ſix drams, Electuary of juyce of Roſes two drams, Diaprunis a dram, ſyrup of Roſes an ounce and an half, with Bugloſs and Roſe water*: make a Potion.

Or give this Decoction: Take *Beet roots green an ounce, Dock roots half an ounce, Violets two drams*, Bugloſs *flowers a dram*, (if freſh *two drams*,) *Cold ſeeds, of each two drams; Annis ſeeds a dram, Prunes and Tamarinds, each ſix pair; Polypody ſix drams, Senna half an ounce*: boyl them, and to one Doſe, add *ſyrup of Roſes an ounce, or ſix drams of the infuſion of Rhubarb*, this may be repeated often.

Or this infuſion: Take *Rhubarb four ſcruples, yellow Myrobalans two drams, Spike half a ſcruple*, bruiſe them and ſprinckle them with a little *Wormwood Wine* till they are ſoft, then infuſe them in *Whey* or *Endive* and *Vervain water*, ſtrain them, and add *Diaprunis two drams, ſyrup of Violets an ounce*: give it.

We uſe this Apozem often in Cholerick perſons, which tempereth the Humor. Take *roots of Succory, Bugloſs, Beets, each an ounce; Endive, Succory, Borage, each a handful; Mercury half a handful, Cordial flowers, each a pugil; four great cold ſeeds, each two drams; Purſlane, Lettice and Annis ſeeds, each a dram; red Peaſe a pugil, Rayſons ſtoned and Tamarinds, of each an ounce and an half; Prunes twelve, Sebeſtens ten pair, Polypody two ounces, Senna an ounce and an half, Carthamus ſeeds an ounce*, boyl them and add *juyce of Roſes two ounces, Manna an ounce, with Sugar and Cinnamon*: make an Apozem for three mornings.

If he had rather have Pills uſe thoſe of *Aſſajereth*, which are good for Head-ach coming from the Stomach, or Aggregative, or *ſine Quibus*, a dram of either.

In Melancholick perſons, when the cauſe is not ſo hot, purge as in other Diſeaſes of the Head cauſed by Melancholly. Or thus: Take *Catholicon half an ounce, Diaphœnicon two drams, Hamech a dram*, take it with *Sugar, or an ounce of ſyrup Fumitory, or with Whey, or Cock broath*.

Or uſe this Decoction: Take *Bugloſs roots an ounce, bark of Tamariſk half an ounce, Bugloſs and Scabious flowers, each a pugil; Stœchas, french Lavender half a pugil, Melon ſeeds a dram and an half, Rayſons ſtoned an ounce, Prunes ten, Dates five, Polypody ſix drams, Senna half an ounce, tops of Time two drams*, boyl and infuſe them, *Indian and chebs Myrobalans, each a dram*; ſtrain them, and add *ſyrup of Roſes and Peach flowers, each half an ounce with Sugar and Nutmeg*: make a Potion, repeat it if need be.

Meſues ſyrup of Apples made with black Hellebore, or that with white Hellebore corrected by *Rondeletius* is good, an ounce and an half given alone or with convenient Liquor.

Or this: Take *the opening roots, ſteep'd in white Wine Vinegar, barks of Capars and Tamariſk, each ſix drams; Liquoriſh an ounce, Bugloſs with the roots, Fumitory, tops of Hops, Eupatorium, by* Meſues, called *Ageratum, Maiden-hair, Cetrach, Germander, Ground-pine, each a handful; Balm and Elder, each half a handful; Cordial flowers and Tamariſk, each a pugil; Stœchas and Chamomil flowers, each half a handful; Fennel and Annis ſeeds, each two drams; Parſley and Dodder ſeed, each a dram; Rayſons ſtoned an ounce and an half, Figs and Prunes, each ten pair, Dates ſix, Polypody two ounces, Carthamus ſeeds an ounce, Senna an ounce and an half, tops of Time and Epithymum, each half an ounce; white Hellebore a dram or more, Schœnanth two drams*: boyl them, and add *of Myrobalans a dram and half*, add to the ſtraining, *juyce of ſweet Apples half a pint, with Sugar*, make an Apozem for three or four Doſes, or boyl it to a Syrup.

Or theſe Pills: Take *Pill Indy two ſcruples, Aggregative half a dram, with juyce of Fumitory or Balm water*, make Pills.

Or theſe: Take *ſpecies Hiera without Saffron, a dram and an half, extract of Polypody, and all the Myrobalanes, each two ſcruples; Hellebore and Scammony, each a ſcruple; Lapis Lazuly prepared half a dram, Oyl of Lavender flowers three drops with ſyrup of Fumitory*, make a Maſs, give it from *half a dram to a dram*.

If a *Cephalalgia*, or a long *Cephalœa*, or *Hemicrania*, come from flegm or wateriſh humors, they muſt be purged as other Diſeaſes of the Head mentioned.

Give Pills of *Hiera* or *Allephangine* often, which are good when vapors from the Stomach offend the Head, or ſtronger, as *Cochy*, ſtinking Pills called *Fœtidæ*, or more temperate, as of *Sarcocol* or Agarick.

Or theſe: Take *ſpecies of Hiera picra two drams, Agarick, Turbith, each a dram; Troches of Alhandal, Diagridium*,

dium, Nut-meg, each half a dram; Ginger a ſcruple, Sal gem half a ſcruple, Maſtick half a dram, Oyl of Cloves and Lavender flowers, each two drops; with ſyrup of Stœchas, make a Maſs, give *two ſcruples,* and repeat them in old Head-aches, and add *Pills Cochiæ,* if they work not enough.

Or this Pouder: Take *Turbith two ſcruples, Diagrydium three grains, Tartar of white Wine, Gingar and Lavender flowers, of each a ſcruple; with Sugar* give it in broath.

Or this of Dr. *Ruland* called *Pulvis Diatartar,* it is very pleaſant: Take *Senna ſix drams, Cryſtal of Tartar an ounce, Fennel and Annis ſeeds, each a dram; Cinnamon half a dram, Sugar of Roſes a dram and an half or two drams,* make fine Pouder, give *a ſpoonful* or more at a time often.

Or give Tablets of Diacarthamum or Diaphœnicon.

Or this Potion: Take *Liquoriſh ſix drams, Calamus Aromaticus half an ounce, Hyſop and Marjoram, each half an handful; Stœchas and Roſemary flowers, each a pugil; Figs five pair, Dates three, Annis and Fennel ſeeds, each a dram; Senna two drams, Carthamus ſeeds three drams,* boyl them, and infuſe *Agarick a dram, Ginger a ſcruple,* ſtrain them, and diſſolve *Diaphœnicon and Electuary Indy each a dram,* make a Potion.

Or this Apozem: Take *Liquoriſh an ounce and an half, Parſley and Graſs roots, each an ounce; Acorus, Orris and Galangal, each half an ounce; Bettony, Sage, Marjoram, Hyſop, Vervain and Maiden hair, each a handful; Roſemary, Stœchas, Lavender, Bugloſs flowers, each a pugil; Fennel and Annis ſeeds, of each two drams; Parſley, Carua and Seſeli ſeeds, each a dram; Piony ſeeds a dram and an half, Rayſons ſtoned twelve pair, Figs eight pair, Dates five pair, ſweet Prunes eight, Polypody two ounces, Senna and Carthamus ſeeds, each an ounce and an half; Agarick half an ounce, Turbith three drams,* boyl them, and add *Honey* as much as is fit, *Cinnamon two drams, Ginger a dram, Cubebs and Nutmeg, each two drams;* make an Apozem for three or four Doſes, or a ſyrup if you pleaſe.

There are things purge the Head by the Noſe and Mouth, good when flegm abounds. And theſe are beſt when the Humor was wont to paſs that way and is ſtopped. Alſo they are good in Choller and Melancholly pains, but they muſt be uſed after other Evacuations. Thoſe that cauſe Neeſing, cauſe heavineſs of Head ſomtimes: if the Head-ach be from vapors, they preſently take it away, as it doth from drunkards, whom it comes upon and takes away Head-ach. They are thus made, as in other Head diſeaſes.

A Maſticatory to chew: Take *Maſtick half an ounce, Angelica ſeeds and Nutmeg, each a ſcruple*: mix them with *Wax* or chew them in a clout.

A ſtronger: Take *Maſtick two drams, Staphiſager and Pellitory roots, each a dram; long Pepper, Cubebs and Nutmeg, each a ſcruple,* make Pouder, and with *Wax,* make forms to be chewed.

A Gargariſm: Take *Orris, Capper and Pellitory roots, each half an ounce; roots of maſterwort two drams, Hyſop, Organ, Sage, Time, each a handful, Stœchas and Roſemary flowers, each a pugil; Muſtard ſeed half an ounce, Nettle ſeed an ounce, Nutmeg two drams,* boyl them in *Wine* and *Water,* in a pint and half ſtrained, diſſolve *Oxymel of Squils two ounces.*

An Errhine to ſnuffe up: Take *juyce of Marjoram an ounce and an half, juyce of Brooklime, Beets and Vinegar of Squils, each an ounce; Manna half an ounce.*

Or this Liniment for the Noſtrils: Take *Scammony a dram, Gith ſeeds, Pellitory and Sowbread roots, each a ſcruple; Gall of any Fiſh five drops, Oxymel of Squils:* make an Oyntment.

Or put in this Peſſary to the Noſe: Take the Medicine laſt aforeſaid, add *Orobus flowers* to thicken it, or bruiſed *Marjoram,* or *a Beet root,* the inward being taken off, or if you will neeſe the inward part of *Hellebore,* like pith, or the Pouder of it.

It is moſt convenient to give a Vomit, when Head-ach comes from vapors, riſing from the Stomach, as in drunkneſs, for it preſently takes away the Cauſe. Therefore if nature doth not of herſelf, give a vomit, as we ſhewed in other diſeaſes of the Head, Giddineſs and Drunkenneſs. But in other caſes, when the Head ſuffereth from its ſelf, it is not good to vomit raſhly, while the Head akes violently. Becauſe by the ſtrong motion and ſtraining to vomit the Head will be ſhaken and blood ſpirits and humors ſent to it, which will increaſe the pain. But a vomit may ſomtimes be allowed out of the fit to hinder increaſe of Excrements.

Sweating is good when Head-ach comes from watery Excrements after general purging, becauſe the Excrements are drawn forth thereby, therefore in old *Cephalæas* and in thoſe pains from the French Pox they are given, to Cure the diſeaſe and Symptom, by way of Decoction with ſlender Diet, for ſome time, as we ſhall ſhew. But it is not good in a hot cauſe or Cephalgia, becauſe ſweat cannot be raiſed without great heat which will increaſe pain.

In the extremity of Head-ach, the laſt remedy is to Evacuate by the Skin of the Head (for ſo the whol body may be cleanſed) by applying things thereto, that make great Evacuations, (thoſe that purge only the remainder ſhall be mentioned in the altering Medicines. But theſe are good in old diſperate Head-achs to draw the Excrements from the Membranes of the Brain and let them out. Theſe are very hot attracters of humors that conſume them alſo. Lixivium or Lie and Oyntments: and Cupping-glaſſes or things that inflame, or make the Head red, or burning Veſicatories that bliſter: or Cauteries that cauſe an Eſchar actually or potentially. They are applied behind in the Neck, ſuch as we mentioned in other diſeaſes of the Head.

Cutting or Trepanning in the Head, that is, taking out a peice of the Skul, to make way for the humor, is alſo a laſt remedy for old and deſperate Head-aches.

Medicines to alter are given, as in other diſeaſes of the Head, according to the humor predominating cold or hot, and ſtrengthening, and that beat down vapors if the pain come from the ſtomach, and allay Choller. Theſe are given in Diet as well as Medicine.

Firſt take heed of things that by ſcent hurt the Head, as Wine, Muſtard ſeed and the like, which in a Flegmatick caſe, would be good, and Wine alſo, which cheriſheth the Head and Cures the hurt it cauſed, hence the drunkards take a Hair with the old Dog, and till they drink Wine again are not well, or eat with it to repreſs vapors. And Milk although being corrupted it cauſeth Head-ach, yet thus drunk it abates it.

We are ſomtimes urged to give Stupefactives in great pain of the Head, eſpecially if they cannot ſleep and in a hot diſtemper. As ſyrup of Poppies or other gentle Narcoticks, as Pouder Diapapaveris. In other caſes we give not Narcoticks, or ſleeping Medicines, becauſe as we ſhewed, when their ſtrength is ſpent, they leave a Head-ach behind them, except well corrected, as Treacle or Mithridate, or Diacodium, or *Requies Galeni,* but in a very ſmal quantity: All this may be alſo done by a large drinking of ſtrong Wine which hath alſo a Narcotick quality.

The Remedies to be applied outwardly are of three ſorts,

ſorts, Coolers, Anodynes or Removers of Pain, or Healers. If it come from a hot cauſe, or Cephalalgia, give Coolers, and at firſt Binders, when the flowing of blood is to the Head, or is feared. and after mix moiſtening things therewith to abate the heat. Anodynes which with moderate heat not too dry cheriſh the part, or by cauſing ſleep or aſtoniſhment, keep the pain from being felt; when the pain is great and at the firſt, to hinder the Defluxion may be given, not ſo wel alone, as with cold mixture. Hot things which dry and diſcuſs humors and thin vapors, may be given in the declining of a hot Head-ach to take away the remainder, and fix the weakned part, firſt mixed with the aforeſaid, then alone. With theſe the Head is waſhed from an high, or Stuphes, or Clouts, or Spunges are put therein, and applied to the Fore-head and Temples, or the parts anoynted therewith, or they are applied in Bags, or Caps, wet or dry, as followeth.

When we wil cool and repell together, we apply Vinegar of Roſes thus. Take *Roſe water four onnces, Roſe-vinegar two ounces, Oyl of Roſes an ounce*: mix them, if you wil aſtringe more, add more *Vinegar*.

It is better, Thus with Juyces. Take *Roſe water three ounces, Roſe-vinegar an ounce, juyce of Oſiers and Plantane, each an ounce*; with *the white of an Egg* to make the moiſture ſtick longer. if it come from Drunkenneſs, add *juyce of Ivy*. apply it.

Or uſe this Decoction more repelling and cooling. Take *Plantane and Oſier leaves, Vine and Nightſhade, each a handful*; boyl them, to *ſix ounces* ſtrained, add *juyce of Plantane and Houſleek each an ounce an half*; *Vinegar of Roſes an ounce*: mix them.

Anoynt the Fore-head and Temples with repelling Oyntments as the Cerote or white Oyntment of *Galen* or that of *Roſes*.

Or, Take *Oyl of Roſes, juyce of Oſiers, Vinegar of Roſes, whites of Eggs, each equal parts*: beat them a good while and apply them.

Or this. Take *Oyl of Myrtles two ounces, of Roſes one ounce, juyce of four Pomegranates, Vinegar of Roſes, each an ounce; Oyl of Olives a dram, Myrtle, Barberry and Coriander ſeed, each half a dram; with Turpentine of the Larch tree*: beat them, apply it as the other.

Or this Emplaſter. Take *juyce of Willow and Vine leaves, or of Plantane in the winter and Houſleek each an an ounce and an half*; *Vinegar an ounce, with Line ſeed flour, and the white of an Eg*, make two *Plaſters* for both the *Temples*.

Galen makes a Frontal or Plaſter for the Fore-head of red Roſes ſteept in Wine, which is red and aſtringent, or in Vinegar.

Freſh and green Vine leaves and Willows applied do the ſame, and better if beaten or bruiſed or ſteept as the Roſes.

If you wil repel and eaſe pain alſo. Take *Roſe water three ounces, Plantane water two ounces, juyce of Willows, or Plantane an ounce and an half, Vinegar and Poppy flowers, two ounces, Oyl of Roſes and Violets, each ſix drams*; *whites of Egs and Mucilage of Fleabane ſeed, each an ounce*: beat them wel.

Or uſe this Cap or Frontal. Take *red Roſes two drams Violets and Water-lillies, each a dram; Coriander ſeed two drams, Myrrle ſeed 4 dram, rinds of Mandrakes half a dram, red Sanders a dram and an half, red Coral a dram*: make a *Pouder*.

To Cool and Moiſten, we uſe this. Take *Lettice, Water-lillies and Nightſhade water, each two ounces*; *Vinegar of Roſes* (to pierce and repel) *half an ounce*: apply it to the *Head*.

Apply Nightſhade alſo and Purſlane bruiſed.

If you intend to allay pain at the ſame time. Take *Lettice and Nightſhade water, each two ounces; the mucilage of Marſhmallows and Mallow ſeeds, each half an ounce*; *Camphire half a ſcruple*: mix them.

Or this Decoction. Take *Marſhmallow roots, Lettice and Nightſhade, each a handful; Houſleek half a handful, Roſes, Violets, and Water-lillies, each a pugil*; *Barley half a pugil, Line ſeed half an ounce*: boyl them in *Water*.

Or this Epithem to aſſwage pain. Take *Roſe water two ounces, Henbane water an ounce, Vinegar half an ounce, the Emulſion of fifteen Peach kernels made with the Liquors mentioned, Oyl of Roſes half an ounce*.

Or anoynt with this Anodyne. Take *Oyl of Roſes and Violets, each an ounce; Oyl of Poppy ſeeds, Lettice and Chamæmel, each half an ounce; Vinegar of Roſes two drams, Milk an ounce and an half*, mix them with the *white of an Egg*.

This is ſtronger. Take *Oyl of Violets and Roſes, each an ounce and an half*; *Oyl of Poppy ſeeds half an ounce, juyce of Houſleek and Nightſhade, each an ounce; Vinegar half an ounce*: boyl them till the juyce is conſumed, add *white and red Sanders rinds of Mandrakes, each half a dram; Lettice and Purſlane ſeed, each a dram*; *the Mucilage of Fleabane ſeed an ounce, Camphire diſſolved in a little Aqua vitæ a ſcruple*: with *Wax* make an *Oyntment*.

Populeon is a good Oyntment againſt pain.

Or this Cataplaſm. Take *Peach kernels and ſweet Almonds, each two ounces*; beat them, add *Starch an ounce, meal of Fleabane ſeed half an ounce, Henbane ſeeds two drams, Oyl of Roſes and Violets, each an ounce*; with *Milk* make a *Cataplaſm*.

Theſe following are only againſt pain.

An Anodine Epithem. *Milk warm from the Cow, with white of an Egg and any Mucilage*, beat them wel and apply.

Or this Decoction. Take *the broth of a Sheep or Calfs head, and boyl in it Mallows a handful, Chamæmel flowers a pugil, Lineſeed an ounce and an half, Fleabane and white Poppy ſeed, each half an ounce*; boyl and apply them.

Or theſe Liniments which may be alſo dropt into the Ears. Take *Oyl of Violets and Willows, each half an ounce*; *Oyl of Poppy ſeeds two drams*, anoynt the *Forehead* and *Temples*.

Another. Take *Oyl of Apple-bearing Nightſhade an ounce, mucilage of Fleabane ſeed, cream of Milk half an ounce*, mix them.

Of Opium theſe. Take *Aqua vitæ an ounce, Opium a ſcruple, Saffron half a ſcruple*: make a *Liniment* for the *Temples* by gentle boyling.

Or thus. Take *cream of Milk an ounce, Opium half a dram, Saffron ſix grains, burnt Ivory and Starch each a dram*; mix them, and anoynt, or add *Oyl of Violets* or *Water-lillies*.

The *leaves of Henbane, Mandrakes and Poppies* applied to the Head, take away pain by ſtupefaction, eſpecially if firſt bruiſed. Some roaſt Henbane in the Embers in a Clout and apply it. But *Rondoletius* ſaith it will cauſe Madneſs.

If we wil diſcuſs, and add Coolers and Anodynes, uſe theſe. Take *Marſhmallow roots an ounce, of Willow, Plantane, Bettony, each a handful; flowers of Chamæmel, Elder and Dill, each half a pugil*; *Senna three drams, Dill ſeed two drams*: boyl them in *Wine* and *Water*.

Or this Plaſter that diſcuſſeth a little. Take *Violets, and Water-lillies, each half a pugil*; *white Poppy and Lettice ſeed a dram*: pouder them, and add *Barley meal an ounce*, with *Vinegar* make a *Plaſter*,

Some make Frontals of *the Conſerves of Violets and Water-lillies* with other things.

Or

Or thus. Take *Roſes, Violets, Dill, Chamomel flowers, each a pugil*; *Juniper berries half a pugil*: boyl them in *Milk*, beat them, add *Bean flour an ounce, flour of white Poppy ſeed two drams, Lettice ſeed a dram, Oyl of Roſes and Chamomel, each an ounce and an half*: make a Frontal.

Dill any waies applied to the Head diſcuſſeth, takes away pain, and cauſeth ſleep.

This diſcuſſeth more. Take *Oyl of Dill an ounce, Oyl of Lillies and Wall-flowers, each half an ounce*; *juyce of Vervain an ounce, the infuſion of Marygold flowers in Aqua vitæ half an ounce*; boyl away the *Juyces*, add *Capons greaſe an ounce*, and with a little *Wax* make a *Liniment*.

Chiefly the Oyntment of Alablaſter diſcuſſeth, and is good in all Head-aches without a Fever, whether they be of themſelves or from ſome other part by conſent, Thus made. Take *juyce of ſweet Chamomil four ounces, juyce of Roſes and Marſhmallow roots, each two ounces*; *juyce of Rue and Bettony, each an ounce and an half*; *Sallet Oyl a pint and an half, the fineſt ſifted Alablaſter three ounces*: ſteep, and then boyl them, and with *Wax* make an *Oyntment*: to which ſome add *Bramble berries, whites of Egs, and Rue, and the juyce of Vervain.*

The Oyntment of Dialthæa is alſo good.

And the Plaſter of Frogs or of *Vigo* applied to the ſhaved head is good if continued.

This Pouder for a Cap doth aſſwage pain and diſcuſs. Take *Coriander ſeed prepared three drams, Dill ſeed two drams, Lettice ſeed, Couchineel, red Roſes and Dill, each a dram, all the Sanders half a dram, Nutmeg two ſcruples*: make a *Pouder*.

Another that diſcuſſeth and ſtrengtheneth. Take *Coriander ſeeds prepared half an ounce, Dill ſeed a dram and an half, Chamomel, Melilot, Dill, Lavendar flowers, each a dram, Marjoram, Balm, Roſemary flowers, each half a dram, yellow Sanders a dram, Cloves half a dram.*

Theſe Amulets to hang about the body are thought proper, as a wreath or Garland of Vervain.

Or Ivy upon a Drunkards head, or a Snakes Skin, or the ſtone *Ophites*.

Some things are ſnuffed into the Noſe to alter, as Sweets not too ſtrong, as Camphire diſſolved in *Vinegar* and *Roſe water*, and ſmel too.

Or thus. Take *Camphire half a dram, Oyl of Storax a dram and an half*, which *Dioſcorides* commends, mix them: with a little *Labdanum*, make a *Ball* to ſmell too.

Or thus. Take *red Roſes and Violets, each a dram*; *Dill and Chamomel flowers, each half a dram, Coriander ſeeds prepared a dram, Lettice ſeed half a dram, all the Sanders a ſcruple*: with *Camphire half a ſcruple*, make a *Pouder*, tie it in a Clout, and dip it in *Roſe water* and *Vinegar* to ſmel to.

Or take the Fume of this Decoction hot. Take *Willows, Nightſhade, Lettice, each a handful*; *flowers of Roſes, Violets, Dill, Water-lillies, Melilot, each a pugil*; *Lettice ſeed two drams, Poppy ſeed a dram, Baſil ſeed half a dram*: boyl them, and add *Vinegar* and *Water of Roſes*.

Or ſnuff up Vinegar and Roſe water.

Or ſtupefie with this Oyntment. Take *Oyl of Water Lillies an ounce, Opium and Camphire each ſix grains.*

This is good to be dropt into the Ears alſo, and the other cooling Anodine (and hot Oyntments mentioned when you wil diſcuſs) And you may mix a little Oyl of Safiron, and Oyl of Dill, and drop it into the Ears.

Waſhing and ſtroaking downward, divert from the Head, cauſe ſleep, and abate pain, and if the Head-ach be hot, do cool it. It is made with *leaves of Willows, Lettice, Violets, Briony water, Lillies, with Mallows and Chamomel flowers, with Head herbs, as Bettony, Calaminth, Southernwood*, and ſomtimes Narcoticks, as *the heads of Poppies* boyled in *Water* with a little *Wine* or *Capital Lee*.

Alſo it is good to waſh the Face with Roſe water and Vinegar.

Head-ach coming from the ill ſhape of the Head, as abſence of a ſuture, as the Arrow-ſuture or rocky conſtitution of the Skull about that ſuture or ſeam called *Sagital* is incurarable, and if you will attempt by reaſon of the great pain, uſe the Trepan to take out a piece of the Skul there.

The cure of a pain coming from the ill faſhion of the Head.

CHAP. IV.

Of Pain in the Eyes.

The Kinds,

WE comprehend under the name of Pain in the Eyes; all Diſeaſes in the balls and corners of the Eyes, and in the inſide of the Eyelids, and we leave other pains outwardly in the Eybrows to another place. When pain is in the ſaid parts it either hath no other accident, or is with other accidents, as chiefly Redneſs, Tumor, or Inflammation in the Eye or great corner, or there is a bladder in the Eye, or unevenneſs in the Eyelids, or a corroding or excoriation, or ulcer, or wound in the Eye or Eyelids. Theſe kinds of pain are according to their accidents.

Itching in ſound people coming from Wind or Watching, wil cauſe redneſs if it be rubbed. Alſo Prickings are in the Eye alone without any other hurt, or with a Head-ach called *Cephalálgia*, where the pain comes to the roots of the Eyes. Alſo ſome have a twitching pain in their Eyes after ſleep, before their Eyes are well opened, which hinders the motion of the Eyes.

Itching, Pricking, or contraction of the Eye alone without other ſign.

When the pain is with Redneſs and without Tumor or Inflammation, it is called a falſe *Ophthalmy*, and it is red all over, or in part, or in the inſide only of the Eylids Blood-ſhot, but the veins are not ſo ſwelled as in a true *Ophthalmy*: nor is there ſo great burning, but a cutting pain, or itching in the corners or the edges of the Eybrows, and it called *Xenophthalmia*. In this the Eyes are commonly moiſt, and the tears are firſt thin, and then thick. If they flow many and cauſe another Diſeaſe, it is called *Epiphora*, eſpecially if pain be in the Eylids, or *Taraxis* or moiſt Blear-eyedneſs, in which at length is thick matter, and the corners are foul, and the Eyelids cling together, eſpecially in ſleep, and they cannot be opened til they are clenſed. And there is ſand in the corners, and it is called the *Sclerophthalmy*. Sometimes the Eyelids ſwell outwardly, and fall and riſe. When the Eyes are red

A falſe Ophthalmy or pain in the Eye.

Xenophthalmy is a kind of falſe Ophthalmy.

Epiphora is a kind of Pſeudophthalmy.

Taraxis or Bleard-eyedneſs.

Sclerophthalmy a kind of Epiphora.

Xerophthalmy, a kind of falſe Ophthalmy.

and dry it is called *Xerophthalmy* and is either new or of long continuance, eſpecially an *Epiphory* in which the Ey-lids are only red and wet and the Eye little offended. This is uſual in old men and drunkards, and ſcarſe to be cured in them, nor is it troubleſome except it increaſe and bring another infirmity by itching and ſhooting, theſe ate called *Lippi* or bleareyed. If Eyes be red and hotter only then ordinary, without pain, as when the body is hot it fall often out we ſhall ſpeak of that in Deformity, by reaſon of the ill-favored ſight of the Ey-lids turned out.

A true Ophthalmy.

It is called a true *Ophthalmy*, when it is with a Tumor and redneſs, over all the white, and the Veins appear: when the Tumor is great tis called Chymoſis. I have known it as big as my fiſt. In a true *Ophthalmy* there is great burning, ſo that the Eyes cannot be opened, but a true inflammation is ſeldom in the Eyelids.

Chymoſis a ſort of Ophthalmy.

Agilops.

Agilops is in the great corner of the Eye with tumor and redneſs, and pain of the Head, Temples and parts adjacent, and beating in the Eye. In this there is a red puſh in the middle, and a pricking pain, and I have ſeen their Ey-lids and Cheek inflamed therewith.

The bliſters in the Eyes.

When there is a bladder or bliſter in the white of the Eye, it is red, and the part round about it. And if it be in the black of the Eye, it is not painful, but clear and ſhining called *Phlyctæna*. And there are other filmes and ſpots of that part that rather hinder the ſight then cauſe pain.

Roughneſs in the Eyes.

Somtimes there is a ſenſe of roughneſs in the ſide of the Ey-lids, eſpecially when they are moved, and then there is commonly ſomewhat in the Eye, and though it be out again, yet the roughneſs remaines.

Scabs of the Eyes.

Somtimes in the corners of the Eyes there is a curting and itching pain with *Excoriation* and ſenſe of roughneſs. *Dioſcorides* mentions it, it is often in the ſide of the Ey-lids,

Dry Lippitude called Xerophthalmia.

and there is a ſcab and it is called *Pſorophthalmia*, but ſome call it a dry blearing, or Lippitude, or *Xerophthalmia*

Ulcers in the great corner of the Eyes.

There is often a pricking and itching pain in the great corner of the Eye, after an Egilops turned into an impoſtum and broken. Hence comes a

A malignant Ulcer in the great corner of the Eye.

ſimple Ulcer, that hath concocted matter, or a creeping and malignant called *Phagedænicum*, and the matter is ſomtimes Concocted and ſomtimes crude, ſomtimes it eats through the lower Ey-lid, and makes a Tumor in the Skin, which being broken, there is an Ulcer there alſo ful of the ſame matter. And when it enlarged, it is a Fiſtula

The weeping Fiſtula in the great corner of the Eye.

called *Lacrymalis* or weeping. In this ſtinking matter flows through the next Noſtril, and tears are ſtill in the Eyes. Somtimes the little fleſh of that Eye being conſumed by the long malignity of the Ulcer, there is a little hole in the bone that weeps perpetually, and I have ſeen ſome of that thin bone with ſtinking matter fall forth. Of this we ſhall ſpeak in deformity.

Ulcers in the ball of the Eye.

There is ſomtimes a pain in the bal of the Eye with an Ulcer, either ſuperficial blood red and inflamed, or deep following Inflammations, that were Impoſtums, this becauſe it is filthy and mattery, is called *Epicauma*, and if the Lips be hard it is called *Condyloma*. This healed leaves a ſcar, and when it gets into the hollow of the Eye, it cauſeth the humors to fal out ſomtimes, within four daies after the Inflamation, and we have ſeen the Cryſtalline humor upon a mans beard.

Epicauma and Condyloma, what.

Worms in the Eyes.

If there be a prick or cut in the Eye there is pain, with redneſs, weeping and ſomtimes true Inflammation. And if the wound peirce through the ball of the Eye, the humors of the Eye fall out and the Eye ſinkes in. Alſo if any ſharp thing fall into the Eye, the inſide of the Ey-lids may be wounded with pain and redneſs, as we ſhewed in Excoriation or rawneſs.

The Cauſes.

The Cauſe of all pain in any part of the Eye, is a diſeaſe in ſome ſenſible part of the Eye. For the outward skin of the Eye, is very ſenſible under the Ey-lids, and there are many thick Muſcles about the Eye, beſides which, the ball of the Eye, made of the horney Tunicle and other Membranes and ful of humors, (as we obſerve in the pricking of a Cataract without pain) there is no ſenſe, except it be without in the Circumference, by reaſon of the Tunicle called *Adnata* for whoſe cauſe pain, goes to the Ball of the Eye. The diſeaſes that cauſe pain in theſe parts, are either diſtemper or afflux of a bloody wateriſh humor, or ſolution of continuity manifeſt, or hidden.

A hot cold or dry diſtemper cauſeth itching or pricking in the Eye.

A ſimple hot diſtemper that yet hath cauſed no flux, cauſeth rather heat and itching then pain in the Eyes, but when pain comes there is a flux preſently, as we may ſee in hot Diſeaſes when they rub their Eyes, their Noſe fals a bleeding. Alſo a cold diſtemper from cold Wind, eſpecially, and the like cauſeth itching of the Eyes by biting. Alſo too much dryneſs makes itching and roughneſs in the Eyes, and therefore they who watch long either in or out of a diſeaſe, have itching Eyes, which they rubb, except heavineſs of Eyes, when ſleep is at hand cauſe this itching.

Dryneſs cauſeth roughneſs of of the Eye.

A hot diſtemper with a Flux of blood, is the cauſe of an Ophthalmy not true.

If there be a hot diſtemper in the Eyes and Lids with a Flux of bloody humor, and redneſs, in regard the Inflammation is not true, the *Ophthalmy* will be falſe and not ſo ſtrong as a true, and it will be moiſt from the tears, proceeding from the ſenſibility of the part, or dry when they are wanting, from the dryneſs of the brain, or it is called dry and hard, if the matter be flymy and produce ſome thing which glueth the Ey-lids together.

Inflammation of the Eye cauſeth a true Ophthalmy.

But if in this Flux of blood if it flow not only into the Veins but Tunicles and Ey-lids and cauſe a true Inflammation, the *Ophthalmy* is called true, with greater accidents and ſtronger pain, with Head-ach ſomtimes by reaſon of the Connexion and conſent of the Pericranium with the adnate Tunicle: and the pain is greater when the blood flows into the Muſcles of the Eyes, as into the horney Tunicle or under it. And the pain is greater, as the blood is

hotter

Inflammation of the great corner of the Eye is the cauſe of Agilopy.

hotter, more Chollerick or ſharp. When this fals into the great corner of the Eye inflaming it, there follows an Egilops. The cauſe of this flux of blood into the Eyes, is Plethory or abundance, or thinneſs, ſharpneſs, or heat. When it is from plenty, it is called an *Ophthalmy*, from plenitude. Moreover if the Veins of the Eyes be diſpoſed to receive this flux, by reaſon of their largneſs having been formerly filled therewith, the diſpoſition of the Eyes is the helping cauſe. Alſo too much light which they cannot endure, who have an *Ophthalmy*, they ſcarſe open their Eyes and ſhut them ſoon. This is cauſed alſo from hot Air, and cold wind that nips the Eyes, or Smoak, or things fallen into them, for the Eyes cannot be ſafely touched by any thing, eſpecially that is rough or ſharp, as Pouders duſt or flies. And crooked hairs in the Ey-lids cauſe the ſame. Alſo hot burning things, as Pepper, or ſharp things, as Salt getting into the Eyes. Oyl and all unctious things burne, if they get into the Eyes. Great hurts or wounds cauſe a true and falſe *Ophthalmy*. And weeping either makes an *Ophthalmy* or increaſeth it, if the tears be ſharp and hot. All theſe cauſes trouble in the Eyes, if they cauſe itching, and makes men rub, this rubbing may cauſe a new Flux.

A ſimple wateriſh humor, or mixt with Flgem falling into the Eyes or Lids cauſeth no great pain, if it be near to the Nature of water, but continual flux of tears and ſomtimes outward ſwelling of the Ey-lids, of this

A Flux of water to the Eye, cauſeth itching and Epiphora.

in the Chapter of Tears over-flowing. But if the humor be ſerous and partly ſalt it cauſeth ſome itching. If it be ſharp and hot then there is an *Epiphora*, that is a pain redneſs, itching and burning and weeping in one or both Eyes, (for one ſuffers often with the other) This *Epiphora*, if it be very painful, cauſeth a flux of blood and an *Ophthalmy*. Aboundance of this wateriſh humor in the heat within or without the Skul, is the material cauſe of this defluxion, and many Excrements. The efficient cauſe that moveth the defluxion into this or that part, comes from the things that provoke the Eye either to natural tears or preternatural Tumors, of this we ſhall ſpake in the cauſes of blood-ſhot and tears.

All theſe are helped by the diſpoſition of the Eyes to receive them, when they are made weak and looſe by former Fluxes, hence it is that when this diſeaſe hath long continued and theſe cauſes met, they have alwaies red and wet Ey-lids, and ſomtimes ulcers and little pain but itching,

Some ſay pains of the Eyes may come from wind, but in regard wind can no way get into the Eyes, nor ſtay there, and if it were there, it cannot dilate the thick ball of the Eye, or cauſe pain being the part is inſenſible, I cannot allow it. But without the ball of the Eye, if vapors get between the Muſcles, there is a

Vapors cauſe Convulſion, or Contraction of the Eyes.

looſneſs and a twinkling rather then pain, if they be not many, but if they be many, there may be a ſhort twiching pain before the Eyes are opened, after ſleep. As we ſhewed in the windy Cramp.

Twitching of the Eye cauſeth itching roughneſs Ophthalmy and Epiphora.

Solution of continuity cauſeth divers pains in the Eye. If it be hidden and only a twiching, not yet ſeperating any thing in the Eye it cauſeth itching and roughneſs, and if it continue and increaſe pain, it cauſeth *Ophthalmy* and *Epiphora*. If the ſolution be manifeſt and the adnate Tunicle ſeperated from the Eye, it fils the part with water and cauſeth a Bladder. If the Tunicle be divided in the corners or the Ey-brows, there is Corroſion, Scabs or Ulcers. If it be deep it cauſeth a ſimple or a hollow Ulcer, or Fiſtula, or Wound. All

Solution of continuity, if manifeſt, is the cauſe of bladders, roughneſs, Ulcers, Fiſtulaes and wounds in the Eyes.

theſe have divers cauſes. Somtimes they come from outward hurts. As ſtrong and hot rubbing, from itching cauſeth the *Phlyctænæ* and Excoriations of the Eyes. Things falling in, if they be rough, may not only exaſperate the Eye, but take of the Skin. Things that are ſharp and burn alſo, do not only inflame, but take of the Skin and cauſe *Phlyctænæ* and Eroſions, as the juyce of the wild Cowcumber. It often comes from ſtrong Medicines that are uſed to take away ſpots, and all theſe Eroſions may turn to true Ulcers. If things that prick or cut fal into the Eye, they may both diſturb and wound it, as we ſee in the couching of a Cataract, there is Inflammation. Alſo Tears, and wateriſh humors that wet and provoke the Ey, do at length corrode and cauſe Scabs in the Ey-brows, and Ulcers, as alſo diſeaſes that went before, cauſe ſolution of continuity. As *Phlyctænæ* broaken leave excoriation behind them. A true *Ophthalmy* turns into an Impoſtume, when the Inflammation will not diſcuſs, but ſupurate, which broken, there is ſomtimes a deep Ulcer. Alſo an *Ægilops* after the flegmon breaks, turns to an Ulcer, either ſimple or Malignant, as the blood is that cauſed the Inflammation, or hollow, if the matter be ſharp and long kept, before the Impoſtume opened, corroding within. And laſtly if the Lips by continuance of the Ulcer be hard, or grown over with a Skin, there is a Fiſtula that deſcends into the Noſe. And when the Caruncle, or bit of fleſh in the Eye is conſumed by ſharp matter or Medicines, which they uſed to heal the Ulcer; the diſeaſe called *Rhyas* follows. And the thin bone adjoyning is eaten away and loſt.

Rhyas, is the conſumming of the little bitt of fleſh in the Eye.

The Cure.

The Cure and Prognoſtick is according to the divers Cauſes of theſe pains.

Prognoſticks in all Eye ſores.

A Simple hot diſtemper without a Flux, that cauſeth itching and ſomtimes pricking, if it come in a *Cephalalgia*, and the pain of the Head reach to the roots of the Eyes, muſt be Cured as the Head-ach. In theſe heat and redneſs and largneſs of Veins, in a critical day foretel bleeding at the Noſe. But if the Eyes itch or be red from any other cauſe beſides theſe diſeaſes, as heat, violent motion, wind or watching, theſe cauſes muſt be removed, and the Air amended, and they are eaſily the cured.

A heavineſs of Eyes and Lids after ſleep, ſuch as wrings them, and ſuffers them not to be eaſily opened foretelleth heavineſs of head and aboundance of Vapors and Humors, theſe muſt be prevented.

If a falſe *Ophthalmy* come from a Flux of blood there is little danger, except it turn true. But if Inflammation of the Eyes follow, the true *Ophthalmy* is more dangerous, eſpecially if a great Tumor cover the black of the Eye. That is worſt which ſuppurates and turns into an Impoſthume, and ſo into an Ulcer, which if deep there is danger of looſing the Eye, alſo a

not ſuppurated Ophthalmy true or falſe if long of continuance, darkneth the Pupil, or leaves a ſpot, and cauſeth dimneſs or blindneſs: But the Inflammation made in the outward corner of the Eye in an Ægilops, goes ſomtimes ſoon away, but neglected ſuppurateth and proveth a laſting and perverſe Ulcer, which turns to a Fiſtula and is ſcarſe cured.

An Epiphora alſo is very ſtubborn from a wateriſh humor, and continues many daies or months, ſometimes a whol Winter, and in old Perſons all their lives.

I have known Phlyctænæ or Pearls coming of outward cauſes that were cleer and not red, to go away of themſelves, and they which are red and painful, and break, leave excoriation behind them.

Excoriations and Scabs by reaſon of the moiſtneſs of the part, are not ſoon cured, and are worſe if they ulcerate, if it turn mattery or callous, it is ſtubborn, and ſomtimes incurable, piercing the Eye, and putting it out, or covering it with a Callous or Scar.

When a Wound of the Eye pierceth the *Cornea* or horney Tunicle the humors fall out and the Eye ſinks in and is blind. An outward or ſuperficial wound turns to an Ulcer, hard or eaſie to be cured. A puncture cauſeth Inflammation if it be not looked unto.

All kinds of Eye-ſores as Itching, Punćture, Ophthalmy true or falſe, Ægilops, Roughneſs, Scabs, Ulcers, Wounds, Fiſtulae's are cured by taking away the Cauſe.

As for the Cure. when any of theſe Diſeaſes will not away of themſelves, then have at the Cauſes, which either are external as hard bodies that get into the Eye, or hairs of the Eye-brows, or Air, or Light, which moleſteth. Or alſo from things taken in, or from motion extraordinary of mind or body. or from filth or tears. If any of theſe Cauſes procure an Ophthalmy, or exulceration, or the like, or increaſe them, they muſt be removed, or amended, or prevented. But if an Ophthalmy come from a Defluxion of blood, or an Epiphora from a Defluxion of flegm or if the Eyes formerly weak have new Defluxions then we muſt evacuate by opening a Vein or Artery, or cutting or burning of holes, or by Cupping, by Leeches, Fricćtions, or the like, or by Stool, Noſe, Mouth, by Vomitting, Sweat, Urin, or derive the humor another way, and ſo conſume it by things given or applied, and ſtop the flux to the Eyes by outward applications. But the cauſe of the Diſeaſe it ſelf muſt be cured by Topicks to the Eye according to irs condition. All which ſhall be done as followeth by the order declared being appropriated to the Cauſes and to the Diſeaſe.

Things that get into the Eye, if they be thin, come out again of themſelves, if they be more ſolid, they get out by the motion of the Eyes and Lids and tears that come from thence to waſh them away. But if they ſtick, they muſt be taken out by Art.

This is done eaſieſt when they are in the corners of the Eyes, and may be ſeen when the Eye is opened or the Eyelids lifted up, And then make a tent of Linnen and the like, and wipe them out.

But if they lie out of ſight, or having been ſeen, return upon touching, or the motion of the Eye, then they muſt be taken out with ſmooth and ſlippery things put into the Eye, and by putting one Eyelid over the other, theſe are beſt when pouderous, as little ſmall Pibbles or precious ſtones, as the Swallow ſtone which is made of Mamor, or the Jaſper ſtone, or the Crayfiſh ſtones called Crabs-eyes, which ſeem to be made for that very purpoſe, to be put into the Eye, the one ſide being hollow or concave for the Ball of the Eye, the other convex for the Eyelid.

Rhaſis ſaies this may be better done with a little Penſil anoynted with Turpentine, drawn through the Eye under the lid, that they may ſtick unto it, and ſo be brought forth, but this way wil preſently fail by the watering of the Eye.

Sneeſing or often blowing of the Noſe are good to ſhake out, or at leaſt to remove things in the Eye, they appear to be ſtrongly driven through the Noſe, by which the Eyes are moved, and the tears provoked to waſh them out.

For which Waſhing other things are good that provoke tears, as of often motion of the Eye, when the Eyelids are kept open, this drives things out.

When crooked hair in the Eye-brows prick the Eyes by reaſon of ſome fire that ſinged or dried them, or the like, they muſt be cut off, and then they will grow better, if the pores be not in fault, and then if they be, they muſt be conſtantly cut, or pul'd out, or the Eyebrows burnt, which being not to be done without pain, and ſeeing it is not decent to want hair upon the Eyebrows, they may be ſet right with the infuſion of Gum traganth, Maſtick, or the like, as ſome do their Muſtachoes to keep them out of their mouth, and which ſome take for an Ornament.

Hot Air, becauſe it is naught for red inflamed Eyes muſt be tempered, or avoided, or changed, for cold Air which is good in this caſe: but very cold Air, eſpecially with Wind, is hurtful in all Diſeaſes of the Eyes. And Smoaks, eſpecially of new quenched Lime which is ſharp and pricks the Eyes, and very ſtrong ſcents as Oyl of Spike, of ſtinking things or Jakes, all theſe are to be avoided in ſore Eyes.

Alſo Brightneſs from flame eſpecially, which cannot be endured, or from light at which the Patient is unwilling to look. And therefore they ought to have a black Veil before the Eye if other things are not applied to keep away light.

Meats and Drinks muſt be avoided, that inflame the body and make the Face and Eyes red, as ſtrong Wine, Onyons, Muſtard and Radiſhes. And it is good in an *Epiphora* to keep a ſlender Diet, and abſtain from Suppers.

Alſo 'tis hurtful to ſore Eyes to move them much, to look too ſtedfaſt upon any thing, or to read or write much, or to move the Head too much, or hang down the Head: therefore let him ſtand upright, and ſleep with his Face upward, on the contrary ſide. Alſo it is naught to rub the Eye, from which they hardly abſtain.

Alſo to watch long, or lament, to cauſe crying and ſhedding tears; theſe all muſt be abſtained from.

And from things that are apt to get in, as duſt flies. And take heed what midicines are uſed, leſt they be too ſharp.

Alſo remove other Impediments as glewing of the the Eyelids together which is painful when they are opened, the glew therefore ſlime or ſand muſt be gently taken off with the hand, and Roſe-water if need be, in which ſome Mucilage or white of an Egg is.

Other filth that is in the Eyebrows before the Pupil eſpecially to hinder the ſight, muſt be gently thruſt to the corners, and there taken out.

When tears flow, the leſs you wipe your Eyes if they be ſore, the leſs you wil offend them, but if you muſt dry your Eyes, do it gently by preſſing not wiping.

Blood-letting is good againſt ſore Eyes if the pain comes from flux of blood thither, as in an *Ophthalmy* and *Ægilops* and in an Ulcer or Wound, when we fear a new flux of blood by reaſon of pain, eſpecially if there be

Inflammation

Inflammation, and Plethory or fulneſs, then they muſt bleed much, and often in the ſame or divers veins. the Shoulder-vein in the Arm is opened for Revulſion or that which appears moſt, on the ſame ſide the Eye is ſore while blood flows to the Eye according to the *Arabians*. alſo in the Thumb or Foot; ſome open that between the Shoulder-blades. When we intend to fetch the blood and derive it from the part where it is, we open nearer veins, as in the Forehead, Temples, or under the Tongue. Or ſome wil in the fore part of head. And it is good to take blood from the Noſe any waies.

As we ſhewed in Head-ach opening of an Artery is excellent againſt an Opthalmy or great old pain of the Eyes, or an Epiphora which hath continued long: for when the ſerous humor deſcends by the our vard Veins which cauſeth weeping there is a certain Cure.

Paracenteſis or a Seton or opening of the skin of the Head at the root of the hinder part, and ſo putting a skein of Silk or Hair through it to keep it open, is the laſt Remedy in an Epiphora to divert the flux.

In a long flux whether Epiphora, or Ophthalmy, or the other, it is an excellent way to burn or cut an Iſſue in the Neck oppoſite againſt the ſore Eye, or in the middle of the Nape, or in the coronal ſuture of the Head.

Cupping-Glaſſes are good in all fluxes, whether blood or water in the Eyes, alone or with Scarification, eſpecially if it be blood, they muſt be applied to the ſides of the Neck upon the Shoulders and Arms, and repeated often if need require, for they revel and derive mightily. Some highly eſteem of Scarifying of the Ears on that ſide the Eye is ſore,

I ſhould like of better the making an Iſſue in that part of the Ear which the Greeks call Τραγος the Latines *Hircus* or Goat, and the ſame is excellent in an old Tooth-ach.

Leeches applied in Head-ach are as good as other bleeding.

And Friction of the body to revell.

Alſo to looſen the Belly with Clyſters or Suppoſitories to cleanſe the Guts before bleeding, or with Laxatives is good. Theſe revell alſo if often given, they may be made more mollifying or ſharper as you pleaſe as we ſhewed.

Alſo light purging to take away the binding of the Belly which hurteth the Eyes, and to take away the firſt excrements, muſt be given in all caſes, as in Inflammation leſt ſtinking vapors ſhould offend, but we muſt take heed of hot things in them, without cool to temper them. Theſe are alſo good in a falſe Ophthalmy which hath no inflammation but heat and redneſs, in which ſtronger may be uſed, eſpecially in the progreſs of the Diſeaſe when tears begin to moleſt. Examples of theſe are in cholerick Diſeaſes and in Head-ach from a hot cauſe, but add to them alwaies things proper for the Eyes.

Prepare firſt thus. Take *ſyrup of Violets an ounce, ſyrup of Water-lillies and of red Roſes dried, each half an ounce; with Vervain, Roſe and Plantane water* make a *Julep*, drink it often.

Then purge thus. Take *ſyrup of Roſes an ounce and an hal, ſyrup of Violets an ounce, Diagridium two or three grains*: with *Endive* and *Roſe water* drink it.

Or, Take *ſyrup of Roſes ſolutive with the Infuſion of Senna* (which is thought proper for the Eyes) *an ounce and an half*: drink it with *Whey*.

Or, Take *Caſſia an ounce, Electuary of juyce of Roſes two drams*: with *Sugar* make a *Bolus*, or give it in *Bugloſs water*.

Or, Take *Rhubarb four ſcruples, yellow Myrobolans a dram*: ſprinkle them with *Wine* to take out the ſtrength, then infuſe them in *Roſe* and *Violet water*: ſtrain them and add *ſyrup of Roſes an ounce*.

Or this Decoction. Take *Fennel roots half an ounce, Cordial flowers a pugil, Fennel ſeeds half a dram, Violet ſeeds a dram, Tamarinds an ounce, Prunes ſix, yellow Myrobalans three drams, Senna two drams*: boyl and diſſolve *ſyrup of Roſes or Violets half an ounce*.

The Pill *Sine quibus* (proper for the Eye) doth the ſame in half a dram.

If water flow to the Eyes and tears fall, we uſe ſtronger purges, and hotter, eſpecially in Epiphora or Ophthalmy when the humor is not ſo hot, and in Ulcers with Fluxes, as in the weeping Fiſtula: they are almoſt the ſame preſcribed in melancholick and flegmatick Head-ach.

A Preparative. Take *Honey of Roſes an ounce, ſyrup of Bettony and Maiden-hair each half an ounce, with Celondine, Bugloſs, and Succory water, and a little Sanders* give it, and repeat it.

Or When a Flux is more than heat. Take *ſyrup of Hyſop an ounce, of Stœchas and Bettony each half an ounce; with Fennel, Vervain, and Eyebright water*, make a *Potion*.

Then purge with cooling Purges while redneſs and heat remain, but if Flux and tears are moſt, uſe things to purge flegm, and if the Diſeaſe be old, Epiphora or Ophthalmy, or Ulcer, repeat them often.

Theſe are the beſt Pils of *Fumitory, Sine quibus or Lucis majores a dram of either, with Eyebright, Vervain, or Fennel water, or ſyrup of Stœchas*. Or *Pil cochiæ or Aggregative* may be given.

Or *Diacarthamum, Diaphœnicon*, or our *Diacaryon* and other purgers of flegm and water with proper waters for the Eyes.

Or this Decoction. Take *Fennel roots an ounce and half, roots of Calamus and Liquoriſh, each an ounce, green Fennel, Eyebright, Vervain, Celondine, Fumitory, each a handful; Rue half a handful, flowers of Roſemary, Stœchas, and Roſes, each a pugil; Fennel ſeeds and Siler montane, each two drams; Senna two ounces and an half; Carthamus ſeeds bruiſed two ounces*: boyl, and infuſe in it hot *Agarick three drams, Rhubarb two drams* (this is uſed in watry fluxes) *Spikenard half a ſcruple*, ſtrain them, and with *Cinnamon* and *Sugar* give it three mornings.

If this purgeth not ſufficiently, give Pils.

We have ſhewed fit Purges for the Eyes in the Cure of flegmatick humors in the Brain, producing weakneſs of ſight.

And how the Head and Stomach is after to be ſtrengthened.

In a hot Cauſe it is not good to purge by the mouth or Noſe, for that wil inflame them, and cauſe bleeding and inflammation of the Eyes, nor ſneeſing which makes the Eyes red and weeping. In other caſes when Tears are without Heat, or from Ulcers, things to chew called *Maſticatories*, or Gargle called *Gargariſms*, draw Humors to the Mouth, by the Noſe, from the Eyes: And ſo the Head is purged, and the Flux ſtopped, after other Purgings. Theſe may be done by Errhines, or things to ſnuff, but that by Sneeſing, they diſturb the Eyes, for tears flow Naturally and preternarurally from the Eyes, through the Noſe, and it is good to help it.

Sore Eyes are not to be cleanſed by Vomit, for by ſtraining, the Blood flows to the Eyes, and Tears are produced, and the Cauſe is increaſed or renewed, and the Pain alſo.

Sweating is not good in hot Diſeaſes of the Eyes, becauſe the Eyes would be inflamed more by it, But if there be Ulcers without heat, and tears then Sweating

is good to dry the body and conſume Excrements, and it may be often with ſparing Diet.

In the declining of an *Ophthalmy* Baths are good to conſume the reliques, and wine, though both are nought at firſt while the Eyes are hot.

It is good to provoke Urin to take away the cauſe and wateriſh humors. Therefore in Fiſtulaes of the Eyes, we give drinks that dry and provoke Urin.

Thus: *Tanſey, red Coleworts, Agrimony, male Fearn, Dropwort, burnet, Ceterach, each a handful, of Myrrh half a handful, roots of Lquoriſh an ounce, red Peaſe two pugils,* boyl them, take it for five draughts, ſweeten it with *Sugar*, give it for the weeping Fiſtula of the Eye.

We uſe things to conſume the humors in the Head, in an Epiphera and Ulcer in the Eye. Theſe dry and ſtrengthen the Head inwardly and outwardly, ſuch as we preſcribed in diſeaſes of the Head. Some are good to be lookt upon, and to be carried about, as in an *Ophthalmy* it is good to look upon an Agate; and to carry a Dock root dig'd up in the Moon increaſing, and to put the ſtone found in the Gall of an Ox into the Noſe, as ſome think.

We ſtop the humor flowing to the Eyes, whether it be blood or water by the paſſages, and by coolers to ſtrike them away, in an *Ophthalmy* or beginning of an *Ægilops* and in an *Epiphora*, and in other cauſes when a Flux is feared. They are applied near to, or upon the Eye, being firſt cloſed.

To the parts near which humors flow we apply theſe on that ſide the pain is, over all from one Ear to another, if both Eyes ſuffer. Somtimes down upon the Cheeks. They are good in an *Ophthalmy* to aſſwage the force of the blood, appli'd upon the jugulars. And they are ſuch as aſtring and dry and cool, and they are ſafer near then upon the Eye.

Epithems made of a cloth ſtrained, from convenient Liquor or a Spunge ſpueezed that more get into the Eye are good in a true *Ophthalmy*, or in great heat. They repercuſs more, when they are actually cold; but very cold as Snow muſt not be uſed, for it may hurt, and as I knew, make blind. They are mentioned in hot diſeaſes of the Head. Only leave out Oyls and Vinegar which hurt the Eyes. Theſe may be applied to the Forehead or jugilares, and mixed with very cold things.

An Epithem of juyce of Plantane with the white of an Egg is good.

Emplaſters, becauſe they ſtick long and fal not into the Eye, may be applied to the ſaid places. And renued every third day if need be. As in other Defluxions.

Or thus: Take *Maſtick, Frankincenſe, Varniſh, each two drams; Starch or finer Flour a dram, with the white of an Egg and infuſion of Gum Traganth*: make a Plaiſter.

Another: Take *Pitch and Oyl of Myrtles, Varniſh, Frankincenſe*: make a Plaſter, this is good to the nape alſo.

Or this Aſtringent: Take *Bole half an ounce, Dragons blood, conſerve of Sloes, each two drams; Pomegranate peels and Galls, each a dram*; make a Pouder, *and with the white of an Egg and red Vinegar*: make Emplaſters for the Forehead and Temples.

A better: Take *Bole, burnt Chalk, Blood-ſtone, each two drams; Vitriol half a dram, Aſphaltum, Frankincenſe, Maſtick, Varniſh, each a dram and an half; Dragons blood, Conſerve of Sloes, Acacia, Pitch, each a dram; flowers and peels of Pomegranats, Galls, Cypres nuts, each half a dram*; Pouder them, and add *Starch half an ounce, with infuſion of Gum Traganth, the yolk of an Egg and Vinegar and Oyl of Roſes*: make a mixture.

Or a Plaiſter of *Maſtick*, or that for the *Rupture*.

Some ſtop Fluxes *with a ſcruple of Opium* in one Plaſter, and if there be Head-ach we allow it to help, and for *Poppy ſeed* inſtead of *white Poppy ſeeds*, we mix *ſyrup of Poppies*.

The ordinary defenſative is of *Bole, Vinegar and whites of Eggs*, this applied behind the Eares, is good alſo in an *Ophthalmy*.

Of theſe with Oyls, you may make Oyntments to anoynt about the Eye, eſpecially if it ſwel they muſt be thick, that they may ſtick and not fal into the Eye, and uſed at nights when the Eyes are ſhut.

Such may be made of juyces without Pouders, leaſt when the Oyntments are dry they fal into the Eyes: Take *juyce of Plantane two ounces, red Vinegar an ounce, white Vitriol a ſcruple, Dragons blood, Acacia, Hypociſtis or conſerve of Sloes, Labdanum, each half a dram*; diſſolve them, and add *white of an Egg and Oyl of Roſes and a little Turpentine*.

Somtimes they are applied upon the cloſed Eye and Lids, for theſe are too ſtrong to be put into the Eyes, and Aſtringents which would make Eyes rough, which ought to be ſmooth.

Or thus: Take *fat Bole three drams, Barley flowers an ounce and an half, infuſion of Gum Traganth in Myrtle or Roſe water an ounce, Camphire half a dram, with Cream and juyce of Plantane*, to keep it moiſt, make an Emplaſter, apply it to the cloſed Eye.

Coolers do the ſame, as we ſhall ſhew for ſtopping of blood at the firſt and after in ſtopping of Tears.

Topicks in all kind of ſore Eyes.

Topicks or Medicines applied to the Eye. Or put in to it, are either Simple waters, or mixed with others, called *Collyria* are in form of Troches to be at hand for uſe: and they may be dropt in, injected or put into the great corner of the Eye or upon the Ey-lids. Some have a Silver and Bone Pen, which they rowle in wet Pouders and put into the Eye, then they cloſe the Ey-lids and draw it through leaving the Pouder behind. Somtimes we blow very fine Pouders into the Eye, ground upon a ſmooth ſtone, or a little Plaſter upon the great corner and the Noſe. And others by way of Fomentation. theſe are divers in reſpect of the Cauſe and diſtemper, if from heat, cold, drouth, or in reſpect of the Flux of blood in an *Ophthalmy*, or *Ægilops*, or of water, as in an *Epiphora*, or in reſpect of wounds, as in a *Phlyctæna*, Excoriation, Ulcer, Fiſtula.

The Cure of itching or pricking in the Eye.

A ſimply hot diſtemper without Flux that cauſeth only itching, is cured by preventing a Flux with Cold and aſtringent things.

If they itch, and wax red from cold, add ſharp things. Theſe ſhall be mentioned in *Ophthalmy* and *Epiphora*.

If they itch, or are rough from dryneſs of the Ey-lids uſe Anodynes, and the Vapors of hot water into the Eye.

The Cure of Contraction in the Eye.

If the Eyes be heavy after Sleep, or contracted, open them by degrees and rub with a warm hand.

The Cure of true and falſe Ophthalmy.

If an *Ophthalmy*, true or falſe, be with a Flux of blood, with or without Inflammation, then uſe Topicks, firſt to allay pain and ſtop Flux, then to dry and after to degeſt, and laſt of all to diſcuſs the reliques. Thus,

You muſt take away pain at firſt, not only becauſe it is troubleſom, but becauſe it will bring a Flux, and alſo

cool

cool and ſtop and allay the heat; uſe this or that as the pain or Flux moſt requireth.

Thus: Apply the white of a new laid Egg, beat to a froath, to take away pain by it ſelf, or with others. Or that liquor that ſweats out of a roſting Egg, or the yolk alone or both together roſted. The white boyled hard and beaten with Roſe water, and applied like a Pultis doth beſt take away pain and heat.

And all ſorts of Milk, eſpecialy Womens, are Anodyne.

Alſo Freſh Cheeſe, doth the ſame.

Or Veal new waſhed and applied, is a brave Emperical Medicine.

Or the Papp of ſweet Apples roaſted, ſome think rotten Apples beſt. The Mandrake Apples, or love Apples do the ſame againſt pain, but to ſtrike back the Flux uſe ſharp Apples and Pears or Quinces, as the former.

Houſleek, Purſlane, Nightſhade, Henban, Mandrakes green, and bruiſed or heated in a cloth, take away pain, when applied. If you will bind, apply Plantane, Bramble and Mirtle leaves beaten or boyled. It is good to add Barley meal or bran to them, all to make them ſtick.

Roſe water is in great uſe to cool, and if we will aſtringe, take the water of the green cups of Roſes or of Plantane, Self-heal or Myrtle, or if you will abate pain uſe water of Purſlane, Nightſhade, or Strawberries, or the water of hard whites of Eggs.

When we will take away pain and heat together.

Firſt: Take *the white of an Egg, with Roſe water and Milk*, beat them. And if you uſe the Decoction of *white Poppies*, 'tis better.

The ſecond: Take *Fenugreek ſeeds half an ounce, white Poppy ſeeds two drams*: boyl in *Roſe water*, and add *the white of an Egg*.

The third: Take *crums of Bread* ſteept *in Roſe water or Milk*; apply it or drop the juyce of it.

The fourth, Uſe *ſweet Apples*, ſo boyled. Or *Bread and Apples*.

The Chirurgions apply a Pill of *Elder* ſteept in *Roſe water*.

Another Anodyne: Take *Mucilage of Fleabane, Quinces, Fenugreek, Gum Arabick, or Traganth*, diſſolve it with *Roſe water and Milk*.

If pain be great: Take *Mucilage of Fleabane ſeed and Fenugreek, each an ounce; infuſion of Gum Traganth*, made in *Roſe water, whites of Eggs, each half an ounce; Camphire five grains, Opium two grains, Saffron a grain.*

Or this Emplaſter: Take *crums of bread* ſteept in *Milk, Pap of ſweet roaſted Apples and Barley meal, each an ounce and an half; Mucilage of ſeeds of Fleabane and Fenugreek, each an ounce; two yolks of Eggs, Camphire half a dram, Saffron three grains, Opium two grains, Oyl of Roſes, ſweet Butter, or Cream ſix drams*, the Unctious things are to keep the Medicines from being dry) make a Cataplaſm and put to the cloſed Eye. Some apply it to the Forehead to eaſe pain, or mix cooling juyces, as of *Purſlane, Nightſhade*, if heat be great.

Or this Anodyne of *Dioſcorides*: Take *the yolk of an Egg roaſted and with a little Saffron and Oyl of Roſes*, apply it to allay pain.

Or this: Take *juyce of Chamomil and Melilot, each half an ounce; Womans Milk and whites of Eggs, each two ounces; Roſe water an ounce*, beat them, and wet a clout for the eyes, *two grains of Opium* added, will allay pain.

Or this Decoction to foment: Take *flowers of Mallows, Violets and Roſes, each a pugil; Chamomil and Melilot flowers, each half a pugil; Fenugreek ſeeed an ounce, Linſeed and Fleabane ſeed, each two drams; white Poppy ſeed a dram*, boyl them.

An Anodyne Cataplaſme: Take *Chamomil and Melilot flowers, each a pugil; Fenugreek ſeeds an ounce*, boyl them, and ſtrain, add *three ounces of crums of Bread, two yolks of Eggs, and a ſcruple of Saffron with a little Milk*; make a Cataplaſme.

When you deſire rather to repel and aſtring then cool: Take *Roſe cup water two ounces, juyce of Plantane an ounce, whites of Eggs half an ounce*, mix them, *the juyce of Bramble berries* added, doth repel alſo, if dryed.

An aſtringent Decoction: Take *Plantane, dryed red Roſes, each a dram; flowers of Pomegranats two drams*, boyl them in *Roſe and Plantane water*.

When you will aſtring and alſo take away pain: Take *Plantane, Purſlane*, (or Houſleek in Winter) *Nightſhade, each half a handful; Roſe and Violets, each half a pugil; Fleabane and white Poppy ſeed, each two drams*; boyl them in *Water, and two drams of Mandrake roots*, will allay the pain ſooner.

Or this Cataplaſme: Take *Pap of ſower Apples or of Pares or Quinces*, boyled in *Roſe and Plantane water*, or the aſtringent Decoction mentioned, or *Wine* as *Galen* preſcribeth, make a Cataplaſm.

Or this: Take *the Pap of boyl'd Quinces, or the other two ounces, Barley flowers an ounce, Sumach and Pomegranate peels, each a dram; with the juyce of Purſlane, Houſleek and Plantane*: make a Cataplaſm.

Somtimes ad dryers, to the ſaid repellers and Anodynes to conſume moiſture, and when the heat is decreaſed and the diſeaſe, increaſe the quantity, and add digeſters.

Eye-waters are madee of white Ceruſs, thus: Take *Ceruſs waſhed with Roſe water two drams, Plantane* (or *Myrtle water*, if you will repel, or *Womens Milk*, if you will aſſwage pain) *two ounces, whites of Eggs half an ounce*, mix and apply them.

Or: Take *waſht Ceruſs two drams, Mucilage of Fleabane and Quince ſeed, or Line, or Fenugreek ſix drams with Roſe water and Milk*.

The white Troches of Ceruſs to make eye waters, are thus made: Take *Ceruſs waſht half an ounce, Starch two drams, Gum Traganth, infuſed in Roſe water half a dram*: make Troches. If pain be great, add *half a ſcruple of Opium*, diſſolve theſe in *Water* and *Milk*, when you have occaſion.

Add Sarcocol when you will digeſt, as in the Troches of *Rhaſis*: Take *waſht Ceruſs ten drams, Sarcocol ſteept in Womans Milk three drams, Gum Traganth a dram, with Roſe water*, make Troches, *with a ſcruple of Opium*, if you pleaſe.

Somtimes add Camphire: As, Take *waſht Ceruſs two drams, Starch a dram, Mucilage of Fleabane, Fenugreek or Lin ſeed, each half an ounce; Sarcocal ſteept in Milk a dram, Camphire a ſcruple, Roſe water two ounces, Milk and whites of Eggs, of each half an ounce*; add *ſix grains of Opium, or Decoction of Poppy, or Henbane, three or four grains of Saffron*, in the increaſe of the Diſeaſe. Tis counted a Corrector of Opium, and will make the water yellowiſh.

Tutty is proper for the eye, and makes a good water, it is burnt and waſht for that purpoſe: or thus, waſh it in cold water, Pouder it, and ſteep it in juyce of Quinces or in a Quince, and in a clout bake the Quince, and then infuſe it in white Wine Vinegar, then dry and Pouder it, and put it into Roſe water. After Water, Make it to fine Pouder for your uſe.

It is thus uſed. Take *Tutty prepared half a dram, Roſe water an ounce, whites of Eggs beaten half an ounce.*

With Camphire thus. Take *Tutty prepared a dram, Camphire four grains, Plantane, Roſe and Fennel water, each an ounce:* mix them. *a ſcruple of Sumach* will make it ſtronger, *half a dram of Sugar candy* is good in the height of the Diſeaſe.

Galen makes a white eye-water with Ceruſs thus. Take *Tutty waſhed four drams, Ceruſs a dram and an half; Starch and Gum Traganth, each a dram;* with *Rain-water* make an *Eye-water*; add *a dram of Opium* in pains.

Or thus. Take *Tutty prepared a dram and an half, Ceruſs water a dram, Starch half a dram, mucilage of Fœnugreek ſeeds half an ounce, Fennel water an ounce, Roſe water two ounces, with half a ſcruple of Camphire.*

In great pain a yellow Eye-water is thus made. Take *Tutty burnt and waſht in womans milk half an ounce, Ceruſs waſht an ounce, Gum Traganth a dram, Saffron two drams, Opium half a dram,* with *Rain-water* mix them, uſe it with the *white of an Egg.*

The *Oyntment of Tutty* or *Nihili* are good for the Eyes alſo.

Or thus. Take *Butter, or Hogs greaſe, or Oyl of Roſes, well waſht, or new, with white Wax or Oyntment of Roſes or of Alablaſter an ounce, Tutty prepared a dram and an half, Pompholyx half a dram,* mix them, *Camphire a ſcruple, Antimony half a ſcruple.*

When we wil digeſt as in the beginning of the declination uſe theſe.

The yellow pouder of Sarcocol of *Rhaſis.* Take *Sarcocol five drams, Aloes waſht in Roſe water a dram, Tragacanth half a dram, Opium half a ſcruple, and Saffron ſix grains.*

Roſe water, or Milk, or both having Frankincenſe quenched in them, is good for the ſame.

Or this Eye-water. Take *Frankincenſe half a dram, Sarcocol a dram and an half, Aloes half a dram, Saffron half a ſcruple, Mucilage of Fœnugreek ſeeds half an ounce, Eyebright and Roſe water, each an ounce and an half,* with *Fennel water* in the declining of the Diſeaſe.

The Eye-water of *Rhaſis* digeſts alſo and ripens. Take *Frankincenſe five drams, Sarcocol and Ammoniacum, each two drams and an half; Saffron a dram,* with *juyce of Fennel* apply it.

When we wil dry more if there be pain, uſe this of *Galen.* Take *Frankincenſe and Tutty, each five drams; Ceruſs ten drams, Gum Traganth and Opium, each a dram and an half:* make it with *Rain-water,* ſomtimes he adds *Pompholyx.*

To dry and digeſt. Take *Sarcocol a dram and an half, Tutty prepared a dram, Aloes a ſcruple, Myrrh a ſcruple, Mucilage of Fœnugreek ſeed half an ounce, Vervain water two ounces, Fennel water an ounce.*

If heat remain. Take *Sarcocol four drams, Tutty prepared two drams, Aloes a dram, Sugar candy a dram and an half, Camphire four grains, Saffron three grains, Roſe water four ounces:* mix them and ſhake often.

In red Itching Eyes. Take *Tutty prepared half a ſcruple, Aloes and Sugar, each five drams, Camphire two grains, white Wine and Fennel water, each two ounces:* mix them.

To diſcuſs the remainder in the declination uſe

This Fomentation. Take *Eyebright and Pennyroyal, each a handful; Chamomel, Melilot flowers, and red Roſes, and Oat chaff, each a pugil: Fœnugreek ſeed two drams, Fennel ſeed a dram:* boyl them, add a little *Wine,* dip *Clouts* and apply to the Eyes. The Fume of the Decoction is alſo good.

Or this Cataplaſm. Take *Southernwood a handful, Chamomel flowers a pugil, Fœnugreek ſeeds an ounce, mucilage of Fœnugreek ſeeds an ounce, Fennel ſeeds a dram, Cummin ſeeds half a dram:* boyl and bruiſe them, add *Bean flower an ounce, mucilage of Fœnugreek and Line ſeeds each half a dram; Saffron a ſcruple,* with *Milk* make a *Cataplaſm.*

To ſtrengthen the Eye, uſe aſtringent Wine and Fennel water laſt of all.

A roaſted Egg or Apple laid hot to the Eyes takes out the remaining redneſs.

If the Inflammation Impoſthumeth it muſt be ripened with a Plaſter upon the Eye thus. Take *Marſhmallows a handful, Chamomel flowers a pugil:* boyl them in *Milk,* beat and add *Barley meal and Fœnugreek ſeeds, each an ounce;* with *Oyl of Chamomel* make a *Cataplaſm.*

The Eye-water of *Rhaſis* and Oyntment of Tutty doth the ſame.

When the Impoſthume is broken, cure the Wound as followeth.

The Cure of an Ægilops.

If an Ægilops come from cholerick blood in the great corner of the Eye, you muſt apply things uſed in the Ophthalmy if there be an Inflammation that repel and take away pain, and then diſcuſs the Tumor with eye-waters there mentioned which dry and digeſt, before it come to ſuppuration, which is ſooner when there is little or no inflamnation, and the Tumor came by degrees.

A Diſcuſſer. Take *Plantane, Mallows, Chamomel with the flowers:* bruiſe them and with *kernels of old Walnuts,* make a *Cataplaſm* for the corner of the eye. if you add a little *Salt* and *Hen-dung* it wil be better.

The herb Ægilops bruiſed is good alſo according to *Dioſcorides.*

Others uſe Emplaſter *Diapalma, Divinum,* and *Ceroniacum.*

If the Tumor impoſthumate it muſt be preſently opened, leſt the matter retained corrode and cauſe a hollow Ulcer. Then Cure the Ulcer as we ſhal ſhew in Ulcers.

The Cure of Epiphora.

If there be an Epiphora from a wateriſh humor falling upon the eye-lids chiefly, with redneſs, Heat, and Itching and pain, we muſt at the firſt ſtop the flux, and abate pain and itching with medicines mentioned in Ophthalmy, and with thoſe we muſt mix afterwards things that dry up moiſture, which is plentiful in this caſe, and uſe eye-waters of Ceruſs and Tutty there mentioned.

When *Epiphora* lafteth long, and there is a weeping, itching and redneſs without burning we muſt uſe ſtronger Dryers.

As againſt Itching. Take *Antimony prepared half a dram, Roſe and Fennel water each two ounces;* uſe it ſtrained.

A Pouder. Take *Lapis Calaminaris a ſcruple, Tutty prepared a dram, Coral and rinds of Myrobalans torrefied or parched, each a ſcruple;* make a *Pouder* for the *Eye.*

Or this. Take *Antimony prepared half a dram, Tutty prepared a dram, Coral three drams, Pearl two ſcruples, the cryſtal humor of the Eyes of boyled fiſhes half a ſcruple:* make a fine *Pouder.*

An eye-water of Blood-ſtone. Take *Blood-ſtones, Antimony waſhed, each a dram; Tutty prepared two drams, Lapis Calaminaris a ſcruple, Aloes a dram, Camphire a ſcruple, burnt Stones of Myrobalans half a dram, Pomegranate-wine two ounces, Roſe water four ounces.*

To digeſt alſo. Take *Antimony waſht, Tutty prepared each a dram; Myrrh, Aloes, each a ſcruple; Saffron half a ſcruple:* diſſolve them in *Fennel* and *Eyebright water* with a little *Wine,*

Uſe

Uſe Fumes alſo of ſuch things as dry without biting or ſharpneſs, as of Frankincenſe, Pitch, and the like, but be wary.

A Fume of boyled Salt, drieth well, without any biting.

Then are ſtronger drying eye-waters of ſharp Juyces to be uſed, when the *Epiphora* is ſtubborn, and itcheth much, which is helped with ſharp things which exaſperate pain in other Diſeaſes.

As a little white Vitriol diſſolved in Roſe water, it is good in Itching, and Redneſs, and Heat, the Germans call this *Augstein*, ſome apply a little of it in Inflammations, the Chymiſts uſe a drop of Oyl of Vitriol in Water, others the Salt of white Vitriol in Water.

Another. Take *white Vitriol half a ſcruple or twelve grains, Tutty prepared half a dram, whites of Egs hard four,* in a *Clout* bruiſe them, adding by degrees *Roſe water four ounces:* make *Philtration*, uſe this *Water* cold to the eyes.

Another. Take *white Vitriol half an ounce, whites of Eggs fifteen, water a pint:* mix and boyl them, then in a Glaſs, add *Camphire tied in a clout one dram.*

Or thus. Take *white Vitriol two grains, Camphire four grains, Tutty prepared half a ſcruple, white Pompholyx ſix grains, Roſe water an ounce, Fennel water an ounce*: make an *Eye-water.*

Or: Take *white Vitriol two drams, Camphire half a dram, Tutty prepared one ounce, Aloes a dram, Sugar candy two drams*: make a *Pouder*, mix it with *Roſe, Fennel, Vervain, Celondine water*, and a little *Wine.*

If you fear burning, add Narcoticks: as, Take *white Vitriol, Tutty each a dram; Nutmeg half a dram, Sugar half an ounce, white Wine two ounces, Celondine water a pint*: boyl, ſtrain, and keep them for your uſe.

Or thus. Take *white Vitriol half a dram, Camphire a dram, Tutty prepared two drams, Ginger, Cloves, each half a dram*; pouder them, and add *old white Wine* in which *a Gad of Steel* was quenched *an ounce, Roſe water, Fennel, and Celondine water each two ounces*: boyl or ſteep, and then ſtrain and keep them for your uſe.

An Eye-pouder. Take *white Vitriol half a ſcruple, Camphire a ſcruple, Tutty two drams, Pompholix, Ceruſs, Lapis Calaminaris, Coral, Mother of Pearl, rinds of yellow Myrobalans each half a dram; Aloes, Myrrh, each a ſcruple; Sugar candy a dram, Ginger, Cloves, each a ſcruple*: make a *Pouder*, and put a little thereof into the *Eye.*

An experienced Oyntment. Take *Verdegrece twelve grains, Camphire a dram, Tutty prepared half an ounce, freſh Butter with Roſe water boyled a little, ſix drams*: mix them for an *Oyntment*, put as much as a Peaſe in the corner of the *Eye.* and anoynt the *Ey-lids.* This is a ſingular experiment againſt *Epiphora* and *Itching.*

A Verdegreece water very excellent. Take *a Barbers Baſon and anoynt it with Honey, and turn it with the mouth downward upon Sheeps Dung for fourteen daies, and keep ripe Bramble berries in a Glaſs cloſe ſtopt in a Horſe Dunghil, after fourteen daies waſh the Baſon with the Bramble berries, and ſtrain the Berries*, and mix with the *Liquor* a little *Camphire* and *white Vitriol.*

Another. Take *a Baſon*, put therein *ſix ounces of Bramble berries, Salt two ounces*, one above the other in rows, keep them in a *Celler three weeks*, then ſtrain the *Liquor* from them, and let it ſettle til the *Salt* be at the *bottom*, and pour it off, and do the ſame the ſecond time til no *Salt* remain, put this *Water* into a *Tinn Veſſel* that it may be ſweet kept for your uſe.

The Cure of the Bladder in the Eye.

If the tunicle of the eye called *Adnata* ſeparated from the *Cornea* raiſe a Bliſter full of Water, whence cometh alſo pain and redneſs, the pain muſt be abated, the humor ſtopt, and the Flux dried, as in *Epiphora*, and by the medicines mentioned in *Ophthalmy.* If it break and leave a Corroſion, it muſt be cured as a Corroſion, with medicines that dry without biting, mentioned in *Ophthalmy* and *Epiphora*, and ſuch as we ſhal ſhew in Ulcers.

The cure of roughneſs, and taking off the Tunicle of the Eye.

If after the tunicle of the Eye is taken off, there follow a roughneſs of the eye-lids, and there be alſo redneſs, heat, and pain, we uſe the ſame Remedies mentioned in *Ophthalmy*, then we dry ſtrongly if it cauſe no pain, with things mentioned in *Ophthalmy* increaſed, and ſhall be mentioned in Ulcers. Or with theſe.

Tutty prepared with *juyce of Quinces* and *Vinegar* and laid in *Pouder* upon the eye-lids, cures the Scabs and Roughneſs.

Or this Pouder. Take *Tutty prepared a dram, Eggſhels ſteept in Vinegar half a dram, Cuttle bone a ſcruple*: make a *Pouder.*

A third Pouder. Take *Tutty prepared a dram, Pumice ſtone half a dram, Coral burnt and waſhed a dram*: make a *Pouder.*

An Oyntment. Take *Tutty prepared, Acacia, each a dram; Blood-ſtone and Antimony, each half a dram*; mix them with *Gum Traganth*, or *Honey*, or *Pomatum*: anoynt the *Eye-lids.*

Another: Take *Tutty prepared, Ceruſs waſht, Marchaſites quenched in Vinegar, each a dram; Hypociſtis, Frankincenſe and Antimony, each half a dram; burnt Ivory, Pumice ſtone and Cuttle bone, each a ſcruple*; Pouder them.

After, uſe ſharp Medicines.

The Remedy of *Dioſcorides.* Take *Juyce of Onions and burnt Ivory equal proportions.*

Another: Take *the Gall of a Tench, or other Fiſh, and Cuttle-bone equal parts.*

Dioſcorides uſeth the *Milk of Figs*, but becauſe it ulcerateth, *Tutty* and other Driers muſt be added.

Uſe alſo the Medicines mentioned in *Epiphora* made of *Vitriol* and *Verdegreece.*

Somtimes the Scab is taken away with a Rag or rough Leaves til the blood cometh and then we uſe Driers afterwards.

The cure of an ulcer in the Eye.

If a true Ulcer follows excoriation, or be left in an *Ophthalmy* after an Impoſthume, then firſt clenſe, and after dry, and make a Scar.

Uſe gentle Clenſers, if the Ulcer be not foul, and ſtronger, as Cauſticks if foul, or the Lips hard, ſuch as we ſhewed in films of the eye and weakneſs of Sight.

The gentle are ſuch. Take *Goats or Womans milk an ounce, Sugar candy a dram and an half, Myrrh a ſcruple.*

Or: Take *Honey water diſtilled an ounce, Sugar candy half a dram, Lizards dung half a ſcruple.*

Water diſtilled from *Turpentine* is good.

A ſtrong Clenſer and Healer. Take *Turpentine half a dram, a yolk of an Egg*, beat them, and add *Plantan* and *Roſe water.*

If you need ſtronger, uſe thoſe mentioned in a *Fiſtula of the Eye.*

After all theſe uſe Driers mentioned in *Epiphora*, or the *Oyntments to the Eyes and Eyelids.*

A white drying Medicine. Take *Ceruſs waſhed in Plantane water a dram and an half, Starch a dram, white Coral and Harts horn burnt and waſhed, each half a dram; the mucilage of Comphrey half an ounce, with the juyce of the Grinding of the Stone Galactides, with Roſe water*: mix them.

A red drying Ointment: Take *juyce of Hypociſtis, Dragons blood, each half a dram; Aloes a ſcruple, Myrrh half a ſcruple, barke of Frankincenſe half a dram, infuſion of Gum Traganth in Plantane water half an ounce, the juyce of Blood-ſtone, ground with water of Horſtaile, as much as is fitting.*

A black drying Eye-water: Take *the ſoot of burnt Pitch as much as a Hazel-nut, and Oyl as much,* mix them *with the yolk of an Egg.* This *Dioſcorides* approves againſt corroding of the corners of the Eyes.

Or: Take *ſoot of burnt Pitch and Turpentine as formerly and Acacia, each half a dram; the white of an Egg beaten half an ounce, with ſyrup of dryed Roſes:* mix them.

Another Eyewater: Take *Sarcocol, Frankincenſe, each half a dram; Myrrh, Aloes, Lycium, each a ſcruple; Tutty prepared half a dram, Antimony a ſcruple,* mix them Poudered *with Honey of Roſes.*

A ſtronger: Take *Tutty prepared a dram, Antimony a ſcruple, Braſs, Lead, Coral, Hearts-horn,* all burnt and waſht *with Horſe-tail water, each half a dram, Sugar two ſcruples,* mix them, *with the white of a hard Egg.*

Rhaſis his Eye water of Lead, good in ſuppuration after Inflammation and in an Ulcer: Take *burnt and waſht Lead, Antimony, Pompholyx waſht, burnt Braſs, Gum Arabick, Traganth, each three drams and an half; Opium half a ſcruple and ſix grains,* Pouder them, and uſe them in Rain water.

Eleiſer, or the Eye water of *Rhaſis,* good when we fear the Pupil will come forth, after an Inflammation and Ulcer: Take *Antimony and Blood-ſtone, each five drams; Acacia a dram and an half, Aloes half a dram,* mix them *with juyce of Quinces.*

Rhaſis his Eye-water, called *Polycreſtum,* that makes fleſh in Ulcers, and keeps the pupil from coming forth and cleanſeth ſcars: Take *Tutty, Pompholyx, Ceruſs waſhed, Antimony, Frankincenſe, each a dram; Mirrh half a dram, Sarcocol two ſcruples ſix grains, Cinnabar, Aloes, Opium, each half a dram.*

The Cure of an ulcer in the corner of the Eyes.

An Ulcer after an Impoſtume in an *Ægilops,* is to be cleanſed and dryed, as we ſhewed in the Ulcers of the Eye, chooſing the ſtrongeſt meaus, becauſe the water and filth ſtill gathereth to the part.

This is done well by a Lixivium, to waſh or ſquirt into it, though it come out at the Noſe, any Lixivium or Lye made of Aſhes or burnt bones, will do it, uſing ſtronger or weaker, as you may know by the ſliminels of it.

Alſo uſe Urin uſed in the ſame manner.

A ſtronger Lixivium: Take *Lixivium a pint and half, Roſe-vinegar half an ounce, Pomgranate flowers and Galls, each half an ounce; Rue half a handful,* boyl and uſe them.

Another: Take *Lixivium half a pint, Allum half a dram, white Vitriol a ſcruple,* theſe muſt be moderated, as you find occaſion.

A drying cleanſing Decoction: Take *roots of Snakweed, Tormentil, Moulin dryed, each half an ounce; Agrimony a handful, Rue, Chamomil, each half a handful; an old Nut kernel, Pomegranate flowers and Galls, each half an ounce,* boyl them in *red Wine,* add *a little red Vinegar.*

A clenſing Ointment: Take *Aloes a dram, Myrrh half a dram, Honey a dram, Gall and Saffron, each half a ſcruple; with Turpentine:* make an Ointment.

Another: Take *juyce of Plantane and Agrimony, each an ounce; juyce of Rue, red Vinegar and Honey, each half an ounce; Oyl of Roſes an ounce,* boyl them thick, *and with a little Turpentine,* make an Ointment.

An Ointment to heal, a cleanſed Ulcer: Take *Antimony, Lead, burnt and waſht, Tutty, Litharge, each a dram; burnt Allum two ſcruples, Verdugreece half a ſcruple, Blood-ſtone a dram, Dragons blood, Aloes,* diſſolved in *Vinegar, each half a dram; round Birthwort two ſcruples, burnt Ivory and Coral burnt, each a ſcruple; with Honey and Turpentine:* make an Ointment.

Or thus: Take *filings of Iron a dram, and burnt Chalcitis half a dram, burnt Lead and Antimony, each two ſcruples; with Butter and white Wax:* make an Ointment.

A good Plaſter to Cure the Ulcer: Take *Bole a dram and an half, Dragons blood, Mummy, Acacia, Hypociſtis, Frankincenſe, Maſtick, each half a dram; Acron cups, round Birth-wort, Gall and Cypreſs nuts, each two ſcruples; with Iſing-glaſs, infuſed in Vinegar:* make a Plaſter: apply a little Plaſter to the corner of the Eye.

The Cure of the weeping Fiſtula.

If there be a Fiſtula that weeps alwaies, then take of the Callus with that part of the bone that is foul, and then fill up the Cavity with fleſh, with as little ſcar as may be.

Ægyptiacum takes away a Callus, put in often with a Tent. Or other Ointments of Verdigreece, or a little qualified Aqua fortis, or ſublimate water boyled, or ſublimate it ſelf put in, and the like, as hereafter.

I have uſed my Cauſtick, which cauſeth no pain and it hath cauſed an *Eſchar.* But an actual Cautery doth it ſooner, if the bone be foul. Which you may know by opening the fleſh with your Lancet. It muſt thus be burnt, firſt defend the Eye with a Linnen cloth dipp'd in whites of Eggs, and Roſe water, and with a ſilver ſpoon, and then conveigh a red hot Iron with a round head, through an Iron quil, to the part, once or twice, til the Eſchar fals off, uſe Mucilages with yolks of Egs and Butter.

Then increaſe Fleſh: As, Take *Birth-wort roots, Orris and Frankincenſe barke, each a dram and an half; Myrrh, Maſtick, Sarcocol, Aloes, Lapis Calaminaris, each a dram, with Honey and a little Verdigreece:* make an Oyntment.

I have ſeen in this Diſeaſe, being old and above a years continuance, that a piece of the bone, with the ſtinking fleſh hath fallen off, of it ſelf, into the Noſtrils and neither tears, nor matter, hath often come forth at the Eye. But through the Noſe and the part hath been healed up.

If the Eye be hurt from a ſtroak or wound, you muſt preſently uſe things to ſtop blood, dryers and healers. The blood of a Pidgeon, or Hen, or Turtle, put into the Eye ſtops bleeding.

The Cure of Wounds in the Eyes.

And this: grind Brim-ſtone with Milk, put it into the Eye.

Or: Take *the red juyce of Blood-ſtone ground with Milk an ounce, the white of an Egg beaten half an ounce, juyce of Hypericon a dram, Frankincenſe half a dram,* add *a little Opium,* if then pain'd.

Then: Take *the white of an Egge beaten, the Mucilage of Comfrey roots, each half an ounce, Ceruſs and Tutty waſhed in Plantane water, each half a dram; Antimony a ſcruple, water of St. Johns-wort and Shel'd water, of each an ounce.*

Then Cure the Ulcer, as we ſhewed in Ulcers.

CHAP. V.

CHAP. V.

Of the Pain of the Ears.

The Kinds.

THe Kinds of inward pains in the Ears are from the diverſity of the propriety, as there is any thing in them or not, we ſpeak not here of outward pains.

Itching of the Ears. Somtimes there is only an itching in the Ear, ſuch as the finger or an Ear picker can ſcarſe allay.

A pricking, beating, ſhooting and burning in the Ears. Somtimes there is a pricking pain and beating, more or leſs, with burning, and pain on that ſide of the Head, and it is either increaſed or not, with things put into the Ear.

In theſe pains there is a Diſeaſe ſomtimes apparent, as redneſs to the whole Ear, or more inward to be ſeen by the light: or Exulceration. Often blood, matter, floweth out, of it ſelf, or by preſſing the lower part. We have ſeen water come forth in abundance, as in a Girle after a fal, firſt blood, then water with pain, and after blood and water, and then death followed, after a few daies ſleep. Somtimes worms come forth. Somtimes pain is deep without theſe ſigns.

The Cauſes.

The place affected. The Membranes only are ſenſible, which are about the Cavities and the pain is from them, either from the Membrane moſt outward, before the drum, or from that within, behind the drum, being dilated by the Nerve; and then the pain is with noiſe. The Diſeaſes that cauſe this pain in the Membranes are cold or hot diſtemper or Malignant, a ſtretching, or manifeſt hurt of the Membrane.

A hot diſtemper cauſeth itching in the Ears. A hot diſtemper cauſeth itching in the Ears, but an Inflamation cauſeth pain, that is pricking, beating or ſhooting with burning. This pain is as the blood that flowes thither is hotter, or more inflamed. And they have a little feaver with ſhivering and with Head-ach. And when the Inflammation turnes to an impoſtume the pain encreaſeth, and when it breaks the pain ceaſeth, and bloody matter comes firſt, then concocted or diſcoulered: this matter retained cauſeth itching and new pain, and corrupting cauſeth worms ſomtimes. We thought this matter had come from an Ulcer without the canal of the Eare, becauſe the Ear being preſſed near therto, it came forth. The cauſe of this hot diſtemper is either pains from outward injuries, that cauſeth the defluxion into the part: or fulneſs and heat of blood in the Veins, that flows upon the part, with a Feaver and Head-ach going afore.

A cold diſtemper cauſeth pain in the Ears. A cold diſtemper from cold Air outwardly or wind diſturbs the Membranes in the outward Cavity of the Ear and cauſeth pain, or cold water in the Ear: It is ſomtimes in the inward Chamber of the Ear from the defluxion of a wateriſh humor, ſuch as we ſee fall cold from the Noſe, which diſtempers the inward Membranes.

A Malignant quality cauſeth pain of the Ears. An evil qualitie that cauſeth the pains in the Head and bony parts in the french Pox and other diſeaſes, may hurt theſe Membranes in the Cavities of the Ears, and cauſe a pricking pain.

Provoking or rubbing cauſeth itching of the Ears. The itching in the outward part of the Ear or tickling comes often from irritation, or provokling, as from hot blood, boyling in the Veſſels of theſe Membranes, or from matter, or cholerick filth in the Ear, or other things fallen into the Ears, which chiefly offend the outward Membrane.

A ſtretching by which theſe Membranes ſeem to be as it were pulled from the bones to which they are joyned, cauſeth a ſtretching pain in the Ears, this ſame thing is from wind, from which there is rather a ſtrange noiſe, then a pain, as we ſhewed in the hurt of hearing, except it fil the inward Chamber of hearing ſo that preſſing the Membranes it cauſeth a kind of pain. Or being bred under the Membranes of both Cavities internal and external (as wind, may bred in the whol body and is moſt conſtrained between the Membranes) it cauſe a twiching and tearing pain, by drawing the Membranes from the bones. I have known this diſtenſion in the Ears with much pain by conſent of the Membranes through the whol body, come from ſtraining much in going to the ſtool, and in piſſing forth a ſtone from the neck of the Bladder, and in great and loud Vociferation and whooping, and alſo in difficult Child bearing, as in one who had no pain during her travil, but in her ears. And ſhe was dul of hearing all the time of her lying in and long after.

Stretching in the Ears, cauſeth pain.

A wound or other hurt cauſeth pain in the Ears. A manifeſt hurt from outward injuries or things fallen in or thruſt into the Ears, which prick or cut the Membranes cauſeth pain. And if there were violence and blood comes forth, there is a manifeſt wound; And Inflammation come, the pain is increaſed, and the more, if an Impoſtume follow, which being broken, matter cometh forth.

The Cure.

The Cure is divers, in reſpect of the Diſeaſe, as it is a hot diſtemper Inflammation or Ulcer, or a cold diſtemper Malignant, or other hurt.

The Cure of itch in the Ears from a diſtemper. If the Ears only inwardly itch from a hot diſtemper it goes of it ſelf away, eſpecially, if the Air be cool, or by cold Medicines, which I ſhall declare; Or if hot blood remaining in the Veſſels, cauſe the itching, it is cured by revelling that, and purging and cooling it.

The Cure of Inflammation in the Ears. But if Inflammation cauſe pain, you muſt perſently draw back the Flux of blood from the part, and ſtop it from returning, allay the heat, aſſwage the pain, and diſcuſs what remains. Or if it come to an Impoſtume and being broken, leaves an Ulcer, you muſt proceed, as in that caſe. Thus,

We revel and derive the Flux of blood, by letting blood, by Scarifying and Cupping and by Horſleeches, and by Friction, as in *Opthalmy*.

And

And we uſe the ſame Clyſters and Purges if the body be bound as in *Ophthalmy*.

We give to drink things that cool and thicken to ſtop the courſe of the blood when hot eſpecially, and things that by propriety aſſwage pain in the Ears, as they ſay the fleſh of Dormice made up with Honey doth.

We uſe the medicines mentioned in *Ophthalmy* to the jugular veins and temples to hinder the Flux, and if there be Head-ach, we uſe Vinegar of Roſes and other things to oppoſe both pains.

Into the Ears we drop many Liquors, two or three drops, and if theſe fill the Ear, after they wet the ſides thereof, that they may not longer hinder the Hearing, eſpecially if ſtrong, leaſt they hurt the Drum, you muſt turn the Head that they may fall out of the Ear again. Or you muſt apply outwardly hot Cataplaſms upon the Ear, ſo that they may fill the Cavity. or a Fomentation with a Spunge. or a hot Fume. and we uſe Allayers of pain when it riſeth, and things that repell or drive back at the firſt if there be a flux, and Coolers, and in the progreſs and declination we uſe Digeſters, and if it impoſthumate, we uſe Digeſters thus.

To aſſwage pain, *new warm Milk or the white of an Egg beaten to Liquor, Ducks or Hens Greaſe, Oyl of ſweet Almonds and yolks of Eges, or Oyl in which Earth-worms or Snails have been boyled, which have been firſt taken out of their ſhels with the ſlime, or in which Hog-lice or Millipides have been boyled, or Oyl of Poppy, or Henbane ſeed, or the juyce of Poppy or Henbane.*

Or drop theſe Compoſitions into the Ears. Take *Womens Milk two ounces, the white of a an Egg beaten half an ounce; with Gooſe Greaſe two drams:* mix them.

Another. Take *mucilage of Fleabane and Fænugreek ſeeds, and whites of Eggs beaten, each half an ounce; Gooſe greaſe two drams:* mix them with *Oyl of Almonds* and *Milk*; add *three* or *four grains of Opium* to make it ſtronger.

A third. Take *Oyl of ſweet Almonds two ounces, juyce of Mallows half an ounce, Myrrh half a dram, Saffron half a ſcruple, Opium three or four grains.*

A fourth. Take *Oyl of white Henbane ſeed a dram, as much Saffron and Caſtor as a Peaſe*; mix them.

An anodyne Emplaſter. Take *crums of Bread a pound*, boyl them in *Milk*, add *flour of Line ſeed and Fænugreek each an ounce*; *Oyl of Chamæmel an ounce and an half, two yolks of Eggs*: mix them, and if you add *Opium* it wil be better.

Or: Take *Marſhmallow rootts an ounce, Mallows, Nighſhade, St. Johns wort, each a handful*; *flowers Dill, Chamæmel, Roſes, each a pugil*; *Line ſeed half an ounce, Mallows, Marſhmallows, and Poppy ſeeds, each two drams*: make a *Decoction* in *Water* or *Milk* for a *Fomentation* or *Fume*: If you add *Leaves of Poppy*, or *Henbane*, or *Mandrake roots*, or *Poppy heads* when there is pain it will be better.

O: Take *the fæces of this Decoction*, and beat them with *Hogs greaſe, Calves marrow, mucilage of Fleabane and Fænugreek, each an ounce*; *Oyl of Chamæmel and Violets, each an ounce*; *freſh Butter an ounce and an half, Saffron half a dram*: make a *Cataplaſm*.

To drive back and to eaſe pain. Take *Oyl of Roſes, and Violets, and ſweet Almonds, each equal parts*, add *Earth-worms, Sows, Snails*, and with a little *white Wine*, boyl and ſtrain them.

Or: Take *Oyl of Roſes two ounces, Vinegar an ounce, Saffron half a ſcruple, Opium three or four grains*, boyl them til the *Vinegar* is conſumed, or inſtead of *Opium* and *Saffron*, add *Philonium Romanum two drams*, boyl them in *Oyl* and *Vinegar*.

To cool and drive back, put in *Oyl of Roſes or Violets, juyce of Plantane, Nighſhade, Willow, Venus navel*, and the like.

Or this: Take *Oyl of Roſes an ounce and an half, juyce of Pomegranates and Plantane, each half an ounce*; *white Wine Vinegar two drams*: boyl them till the Juyces are conſumed.

Or this Fomentation. Take *Plantane, Willow, Violets, Lettice, each an handful*; *red Roſes a pugil, Pomegranate flowers half a pugil, Pomegranate Pills half an ounce*, boyl them in *red Wine*, and with a little *Vinegar* foment the *Ear*.

Or: Take *the reſidence of this Decoction*: add *meal of Lentiles a pugil, oyl of Roſes and Myrtles, each an ounce and an half*; *one raw Egg*, make a Cataplaſm for to be laid upon the Ear.

To diſcuſs the Inflammation, mix hot things, and in the decreaſe uſe them alone, as *Oyl of Chamæmil, Melilot, Dill, Lillies*, dropt into the Ears, and other hot things inwardly and outwardly, ſuch as ſhal be mentioned when it proceeds from a cold cauſe.

The Cure of Impoſthumes in the Ears after Inflammation.

If the Inflammation tends to maturation which is known by the beating and not ceaſing of pain uſe things to digeſt as Baſilicon with Line ſeed Oyl into the Ears.

Outwardly apply this Cataplaſm which aſſwageth pain. Take *a great Onyon and white Lilly roots*, roaſt them in the *Embers*, beat them, add *Lineſeed meal an ounce, Butter an ounce and an half, oyl of Chamomel and Line ſeed each half an ounce, Saffron half a dram*: make a *Cataplaſm*.

The *juyce of an Onyon* openeth a ripe Impoſthume with *Leaven* diſſolved in it.

The Cure of an Ulcer of the Ear after an Impoſthume.

If an Ulcer follow the Impoſthume opened firſt cleanſe, then add Driers, and heal it with the ſame.

Uſe the ſame Clenſers as were preſcribed for Hearing hindered. And theſe,

Sugar, or *Sugar candy*, or *Honey* diſſolved in *Whey* or *Barley water*.

Theſe are ſtronger, *Honey of Squils, juyce of Smallage, Fennel, Beets, Onyons, Leeks, Horehound, Wormwood, Centory*, alone, or with *Honey*.

The Decoction of *Lupines* and *Agarick* do the ſame.

Wine clenſeth wel, and alſo *Lixivium* or *Lie*.

Turpentine with *Honey* and *Wine* doth the ſame.

Ægyptiacum is the ſtrongeſt, for a ſordid Ulcer, tempered with *Honey* if you pleaſe.

To heal and dry. Take *Plantane, Shepheards pouch, and Shepheards rod, Scabious, Birthwort, Solomons ſeal, Fleabane, and the thickned juyces of green Grapes, Oyl of Olive and Hypociſtis* alone or with *Wine Vinegar* and *Honey*.

Or the *Decoction of Birthwort, Galls, Pomegranate peels*, and other Driers in *Wine* or *ſteeled Water*.

Ruſt of Iron in aſtringent Wine and a little *Vinegar* is excellent or the *Decoction of Litharge*.

This is beſt. Take *fine pouder of Steel half an ounce, Vitriol a dram*: boyl them in *Wine* and *Vinegar*, or *Vinegar* alone if you wil have it ſtronger, and ſtrain it.

A good Liniment. Take *Cinnabar and Litharge, of each equal parts, and with Honey or ſyrup of dried Roſes*: make a *Liniment*, drop a little into the *Ear*, or put it upon a *Tent*.

Or this to breed fleſh. Take *Ceruſs, Tutty prepared*, each

each a dram; *roots of Birthwort, Myrrh, Sarcocol, Aloes each half a dram*; *Orris a ſcruple*, make a fine *Pouder*: mix them with *Honey* or *juyce of green Grapes*.

It is ſtronger with Verdegreece and filings of Iron quenched and ground with Vinegar, eſpecially when a Scar is to be raiſed.

You may uſe divers Waters for the Eyes here, and the ſtrongeſt, becauſe the Ear is leſs offended therewith than the Eye.

To Cure an Ulcer in the Ear, a Fume is excellent, becauſe it gets through and dtieth, as of Pitch, Turpentine, Frankincenſe, and other Gums burned, which are Driers. Or the Pouders mentioned white a little Cinnabar which is very drying.

The Cure of worms in the Ears.

If Worms breed from the filth of the Ear and provoke, you muſt draw them out or kill them, as was ſhewed in the Defect of Hearing from things fallen in.

Juyce of Wormwood is the beſt to kil them, and of Centory, Arſmart, and Peach Leaves, and of wild Cowcumber.

Or a Decoction of Lupins, Coloquintida, white Hellebore in Wine vinegar.

Or Beaſts Galls.

Or bitter Oyls, as of Peach kernels, and bittet Almonds.

Or thus. Take *Coloquintida half a ſcruple, white Hellebore a ſcruple, Aloes half a dram*: with the *juyce of Peach leaves* make a *Liniment*.

In the Worms of the Ear for killing and drawing forth, as in the Worms of the Noſe and Brain, the Oyntment of Capons Greaſe, and Oyl of Hazel, with a little Mercury precipitate or ſweet is good, if it be put into the Ears with Cotton. And the Decoction of Hemp diſtilled.

The Cure of pain in in the Ear from a cold diſtemper and diſtenſion.

If the pain come from a ſimple cold diſtemper, or with matter from Wind, then if the Humor or Wind be preſent, we uſe Cupping or Friction to revell it, and Clyſters and Purges which do the ſame, and evacuate the humor. And we derive the matter by the Mouth and Noſe, as is ſhewed in the *Hurt of Hearing*, from theſe cauſes, and we diſcuſs with Baths and other Sudoroficks. If it be only a diſtemper, we alter it with heat and hot Diet, as with the fleſh of Dormice as we ſhewed, which hath a propriety.

We uſe the ſame things inwardly and outwardly to the Ears, or theſe.

Take *Oyl of biter Almonds, of Peach kernels, Chamomil, Melilot, Dill*, alone or together.

When the pain is intollerable. Take *Oyl of Henbane ſeeds half a dram, Caſtor half a ſcruple, Saffron ſix grains*.

Or: Take *a hollow Onyon* and put into it *Caſtor, Euphorbium, each half a ſcruple*; *Opium ſix grains*, fil it with *Oyl of bitter Almonds* roaſted in the *Embers*: ſtrain and uſe it.

Or: Take *a piece of a Snakes skin*, boyl it in *Oyl of Worms*, add *Sows* or *woodlice*, and ſtrain it, you may add a little *Oyl of Scorpions*.

Or: Take *juyce of Pellitory, Horehound, each an ounce; Oyl of Bayes an ounce and an half, Ox gall a ſcruple, Hens greaſe a little*: boyl them til the *Juyces* are ſpent, anoynt and drop into the Ear.

A little *Spunge* dipt in *Vinegar* with a little *Salt* is good to be applied cloſe to the *Ears*.

This Decoction or the Fume thereof is good for the Ear. Take *Organ, Pennyroyal, Rue, Baies, each a handful*; *Wormwood half a handful, Chamomel, Melilot, and Dill flowers, each a pugil*; *Bay, Elder, or Ivy berries, each an ounce*; *Fænugreek ſeeds two drams, Carua ſeeds a dram*: boyl them in *Wine* and *Water*.

Make Bags of theſe Driers.

Or thus: Take *Panicum a pugil, Organ, Marjoram, each a handful*; *Chamomel flowers a pugil, Saffron half a dram*: pouder them for a *Bag*.

Or: Take *roaſted Onyons and Leeks, each three ounces*: beat them, add *meal of Line ſeed and Fænugreek, each half an ounce*; *Peach kernels an ounce*, boyl in *Milk* and ſtamp them, add *Gooſe greaſe an ounce, Oyl of Dill*, or *Earth-worms*, or *Butter two ounces, Saffron a ſcruple*.

They ſay it is good againſt pain to rub the Ear with Garlick, becauſe it draweth the matter outwards: but the roots of Squils, Sowbread, Cuckow-pints, or Dragons, are ſtronger.

Some apply green Tobacco leaves to the Ears, and then dry them, and apply them again.

The Cure of pain in the Ear from malignity.

If an evil malignant quality as in a long Head-ach and French Pox produce pricking in the Ears with noiſe; after long and ſtrong evacuations by Sweat eſpecially, it ceaſeth with the Diſeaſe, and if any remain it is taken away by the Topicks mentioned in a cold cauſe and moiſt, in the Cure.

The Cure of pain of the Ears and Itching from Irritation or Provocation.

Provocations, Itchings, and other pains of the Ears, if they come from filth in them, or that falls into them, we ſhewed you how they may be removed in the hinderence of Hearing.

The Cure of a pain of the Ear by a wound.

The violent hurts which cauſe a Wound, are cured as other puncturs and wounds. Firſt if Inflammation be feared, let blood, and repell it with things put into the Ears. Then drop in things that aſſwage pain, and ſtop the Flux, after uſe Driers and Healers, as we ſhewed in Ulcers.

CHAP. VI.

Of Diſeaſes or Griefs of the Noſtrils.

The Kinds.

THe Kinds of Pains or Diſeaſes in the Noſtrils are divers.

Itching or tickling in the Noſe.

There is an often Itching, or Tickling, Sneefing follows it ſometimes, and the Noſe droppeth.

Burning in the Noſe.

Somtimes it is Burning, and the Noſtrils are hot, and red, and inflamed, with a tumor within, or Inflammation that obſtructeth the paſſage.

An ulcerous pain in the Noſe.

Somtimes there is a pain like an Ulcer and blood is blown out, or hard flegm: Or Snot or ſtinking matter, and there is a ſtink in the Noſe which the people preſently perceive more than the Patient in that called *Ozæna*. And there is a deformity of the Noſe therewith, which ſpoileth the whol Face. The Voyce is hoarſe, and as coming from a hollow place, the Palate is eaten through with a great hole, and the breath

ing is hindered, as we have ſeen alwaies in the Elephantiaſis, often in the French Pox.

The Cauſes.

The Grief of the Noſtrils, proceeds from a Diſeaſe, which is either Irritation or Provocation, or a hot diſtemper or ſolution of continuity.

The Irritation of the Noſtrils, cauſeth itching and tickling.

The Noſtrils being very ſenſible are eaſily provoked, hence comes tickling or itching, and ſomtimes ſneefing from the ſame Cauſes that we ſhewed, ſneezing proceed, as externally from light and ſplender, ſtrong ſcents, things put into the Noſe that are ſharp, or intetnally from thin blood in the Veſſels, or from wateriſh and ſharp blood, with tears that come from the Head and twitch the Noſtrils. And Choler which is uſually purged at the Ears, may be brought to the Noſe and cauſe the ſame.

A hot diſtemper and Inflammation of the Noſtrils, is the cauſe of burning pain.

A great heat may cauſe burning in the Noſe, to which is joyned ſomtimes a true Inflammation with tumor and obſtruction, as may happen from an outward hurt or internal, when the cauſe is very pricking, from whence the Noſtrils are uſually afflicted, as in *Coryza*, where the Noſe is outwardly red and inflamed, as well as inwardly.

Excoriation, wound or ulcer, is the cauſe of ulcerous pain in the Noſe.

A Solution of continuity, within or Excoriation, or Wound, or Ulcer, reacheth ſomtimes outwardly. Theſe may be from picking, as with the Nayles, or burning Errhines or Noſe Medicines, ſuch as we uſe in Cure of *Polypus*. Somtimes from a ſharp defluxion that hath long paſſed that way, the Noſe is ulcerated inwardly and outwardly, with the help of often blowing it.

There are in the ſpungy bones at the bottom of the Noſe foul, ſtubborne and long Ulcers, ſomtimes ſuch as corrode and creep on, ſomtimes they pirce the thick runicle of the pallate and eat of the bridg of the Noſe which cauſeth it to fal. Often alſo the bones which are near the upper Jaw are conſumed and leave a great ſpace in the palate through which a ſtink hath paſſed that anoyed the whol room where we were. And it is manifeſt that worms have been bred of this filth and come forth.

Worms in the Noſe.

Theſe may be from the cauſes mentioned, as if the Noſe be deeply hurt, or the Ulcer neglected, or the remedies come not to the part by reaſon of its moyſture and cannot have operation. Theſe called *Oznæ* come chiefly from the Flux of burning or malignant humors ſent by nature to the part and there are perverſe and cancerous Ulcers and tumors. But becauſe this is not only in this part, but a malignant humor and quality in other places, eſpecially the Membranes, as in the *Elephantiaſis* and French Pox, then they of the Noſe grow together with other putrid and Malignant Ulcers which eate away the Noſe and the bones, and produce other accidents.

The Cure.

The Cure of itching of the Noſe from provocation.

If the itch of the Noſe come from provocation, remove the cauſe whether internal or external, and if it ceaſe not, qualifie it. As we ſhewed in neeſing which often followeth, and ſhall be ſhewed in defluxions and in *Coryza*.

The Cure of heat and Inflammation of the Noſe.

If the Noſe be hot or inflamed then there is redneſs heat and tumor external, to be cured as we ſhewed in the greifes that come from diſeaſes in the ſuperficies of the body.

The Cure of ulcers of the Noſe.

Ulcers of the Noſe, internal and ſimple, without matter or ſtink, are cured with ſtrong dryers, becauſe the part is very moiſt. But matter muſt be firſt cleanſed, as it abounds. Or is ſtinking, or as the fleſh grows rank, which is hard to be cured. Somtimes they are incurable and leave deformity. Before theſe topicks purge Excrements, if they produce theſe Ulcers or nouriſh them. If they come from evil and Malignant hnmors, you muſt uſe divers Evacuations of the whol body, as in Elephantiaſis, eſpecially by ſweat in the French Pox, as ſhall be declared.

Theſe are put into the Noſe, ſnuffings or oyntments with Cotton, or Suppoſitories, or Fumes, or Pouders blown up. And if you will not have them fall into the mouth, through the Noſtrils, hold cold water in the mouth, when you take them.

Other gentle clenſers are made of Whey with Honey, or red Sugar, or Wine and Honey, or Oxymel.

Lixivium and Urin cleanſe more, eſpecially it you add a little Allum, or if you keep them in a braſs baſin to gather Ruſt or Verdigreeſe.

The Decoction of Gujacum in a Lixivium, with Honey will clenſe more, but aſtringent Wine will dry more, eſpecially in the French Pox.

The juyce of Ivy clenſeth, filleth in the Noſe, and is approved by *Dioſcorides*.

A clenſing and drying Errhine: Take *juyce of Pomegranates and Plantane, each two ounces; Honey and Wine, each an ounce; with Allum and Vitriol*: mix them.

Another Oyntment: Take *juyce of Ivy and Plantane, each two ounces; Pomegranate, wine Vinegar and Honey of Roſes, each an ounce; Oyl of Roſes and Myrtles, of each an ounce and an half*; boyl them, add *green Wax*, made with *Verdugreeſe*.

Ægyptiacum. if uſed in foul Ulcers alone, when you muſt clenſe much and when the fleſh is foul.

You may with warineſs apply *Aqua Fortis*, or Sublimate, or Spirit of Vitriol, with a quil to the Ulcer. Or water of Lime quenched in it.

Make a dry and heating Errhine: Thus, Take *Plantane, Horſe-tail, Agrimony, Brambles, Solomans ſeal or Rupture wort, of each a handful; Pomegranate peels an ounce, Galls, Comfrey roots, each half an ounce*: boyl them in *Water and red Wine, and a little Vinegar and Honey*.

Or thus, when the Griſtle of the Noſe begins to be corroded and the Noſe bend: Take *juyce of Plantane, Agrimony, Mouſe-ear, Burnet, Roſes and Smallage, each an ounce; Vinegar and Honey, of each an ounce; Allum two drams, Frankincenſe and Myrrh, each a dram; Chalcitis a ſcruple*: mix them, for an Errhine to be ſnuft up.

An Oyntment for the ſame: Take *Litharge and Ceruſs waſht in Plantane water, of each half an ounce; Tutty prepared and Lead burnt and waſht, each two drams; Myrrh and barke of Frankincenſe, each a dram; round Birth-wort half a dram, with juyce of Plantane and Oyl of Roſes*, mix them.

Or thus: Take *roots of round Birth-wort, Pomegranate peels or flowers, of each two drams; barke of Frankincenſe, Myrrh*,

Myrrh, Aloes, Labdanum, Dragons blood, Gum Traganth a little parcht, of each a dram; Lime often ſlaked two drams, Allum and Chalcitis, each half a dram; Oyl half an ounce, Mucilage of Iſing-glaſs, infuſed in Plantane water an ounce with Oyl of Roſes, and red Wax, and Cinnabar prepared, make a Liniment, or thick Ointment, or a Maſs to put into the Noſe.

A Pouder: Take *Tutty prepared, Coral burnt and waſhed, of each a dram; barke of Frankincenſe, roots of Birthwort, each half a dram:* make a Pouder, and ſnuff.

Many Medicines mentioned in the Ulcers of Eyes and Ears are good in the Noſe.

Smoak which comes beſt at an Ulcer, when profound or deep, doth well to dry and to burn, if they be vehement and Malignant hold the breath while they are applied, and remove them, till breath be fetcht.

Thus they are made: Take *Frankincenſe, Maſtick, Labdanum, each two drams: Storax, Benzoin, Gum of Juniper, each a dram and an half; Sanders a dram, wood Aloes half a dram:* make a pouder, ſprinkle it upon live coals for to ſmoak.

In the worſt Ulcers: Take *the pouder aforeſaid,* add *Myrrh a dram, Marcaſites, red Oſpiment, Cinnabar* (in the French pox) *each half a dram*; make pouder for a ſmoak or fume, make Balls of them with *Turpentine or Gum.*

The ſmoake of Cinnabar with which the whol body is fumed in the French pox, coming to the Noſe, doth not only Cure this diſeaſe, but other diſeaſes of the Noſe of the like ſort, if the Head be a little held therein.

There is a Candle made of red Wax and Cinnaber, which if lighted and put out will ſmoake to the Noſe.

Or thus, *Wax as much as a Nut,* add ſome of the firſt or ſecond mentioned pouder, make it with your hands into a Candle with a wick: uſe it as the former.

Another that maketh much black ſmoake: Take *Pitch and Roſin, each equal parts, with a little Brim-ſtone,* diſſolve them at the fire, and with a wick make a Candle, let it be lighted and the ſmoake paſs through a funnel to the Noſe, and be preſently removed.

If there be cruſts in the Noſe that ſtick faſt to the Ulcer, take them of with Butter or Mucilage.

If there be proud Fleſh, Cure it as I ſhewed in *Polypus.*

The Cure of wounds in the Noſtrils.

The wounds in the Noſtrils are cured with the ſame means, as they in the Ears, with things put in that ſtop blood, then dry and heal, if they ulcerate, Cure them as others Ulcers.

CHAP. VII.

Of Griefs or Pain of the Mouth.

The Kinds,

THe Griefs of the fleſhy parts of the Mouth, as the Tongue, Gums, Cheeks and Palate, in any or all of them: come ſomtimes to the Jaws, of which we ſhall ſpeak hereafter: they are diſtinguiſhed, as they have ſenſe of roughneſs, or heat, or burning, or pricking, or are ulcerated.

Roughneſs of Mouth and Tongue.

There is moleſtation in the mouth and tongue, only with ſenſe of roughneſs, becauſe the taſte and Speech are offended, we ſpeak thereof in the hurt of Speech and Taſt.

Pricking and burning of the Tongue, when no Diſeaſe appeareth.

I have ſeen ſome that have had burning and pricking in the ſides and tip of the Tongue many years without any appearent diſeaſe. Sometimes in this part only, ſomtimes in the tips and other parts of the body, as we ſhall ſhew in pains of the habit of the body.

A heat alone or with Tumor and burning and ſomtimes with clefts and puſtles of the Tongue and parts of the Mouth.

Somtimes the tongue is troubled only with heat, ſomtimes with burning alſo and a manifeſt diſeaſe. And then it is not exactly red as other parts that are white, but yellow and ſwels and is inflamed, and is ſomtimes alſo very dry and rough and is cleft, and hath pimples ſomtimes, which ſo moleſt the Patient that he cannot ſpeak without pain and ſtammering, and the part near and the jaws are afflicted therewith, and there is a quinſie and the patient is in danger of ſuffocation. Theſe are moſt in feavers; but not alone as I ſhewed in Feavers continual and malignant, called in High-dutch *Breune.* Alſo this Inflammation of the mouth, may come from the uſe of quick-ſilver in the French Pox.

The Gums often ſwel and are hot, at the roots of the Teeth, with a tumor appearing outward, as in the Tooth-ach, and the pain is great, eſpecially when the inflammation Impoſtumateth, as ſhall be ſhewed in pains of the Teeth.

Alſo the Cheeks and Palate by conſent of the parts, and of themſelves do ſwel and are inflamed.

Frog under the Tongue.

There is ſomtimes ſuch a pain with ſwelling and Inflamation in the looſe fleſh under the tongue, in the diſeaſe called the *Frog,* which extendeth alſo to the parts adjoyning, and being ſuppurated it turns to an Impoſtum. And I ſaw a long ſtone which came from thence after great pain. Concerning the tumor, without pain I ſhall ſpeak elſewhere.

The ſtone under the Tongue.

A pain in the Mouth and Tongue with an ulcer, excoriation or clefts.

There is alſo in divers parts of the mouth a ſharp pain, with burning or without: with Puſtles in the tongue or Palate or cheeks or Gums, often in Infants by means of the ſmal Pox.

Somtimes it is with Excoriation after the Puſtles are broken.

And with clefts in the tongue, long and croſs, there is great pain, and that with dryneſs and Inflammation of the tongue. And this pain is increaſed by hot or ſharp meats.

There is alſo pain with Ulceration, after Excoriation, or Rawneſs, or Puſtles broken, or after an Inflammation impoſtumated, eſpecially under the tongue, or at the root of the Gums in the Tooth-ach.

Aphtha or *Thruſh* called *Alcola by the Arabians.*

Little Ulcers are called *Aphthæ* or *Thruſh*, they are in the Cheeks, Sides of the tongue and root thereof, Gums or Palate, in one, two, or more places. Theſe are in Children uſually, and in the French Pox; they are at the firſt ſmal, as Lentiles ronnd and white in the middle, and red about; inflamed and painful, they ſpread preſently, if you prevent not, and infect the parts adjoyning,

From

A Cancer in the Gums.

From theſe neglected cometh a malignant Ulcer in Children eſpecially, or from other cauſes, it is in the Gums with little or no pain, *Rhaſis* cals it the Cancer of the Gums. It is firſt white and mattery, then yellow, after black, it creeps on, and is hollow, and eats up the Gums where it is, and the Jaw-bone, and turns to a *Sphacelus*, And I have ſeen a piece of a rotten Jaw with the Teeth taken out which deformed the Face. And in two Children of a Merchant my Country-man, that bred teeth, I ſaw an Ulcer that eat up the upper teeth before, and another after the drawing of the tooth, that eat up the lower Jaw-bone, tongue, and palate, and at length after great torment cauſed their Death.

The Scurvy or Scrobute.

The Tumor and Ulcer of the Gums in the uſual Diſeaſe, in Northern Sea towns called the Scurvy may be referred to this: In which the Gums ſwell and ſweat blood, are rotten and ſo conſumed that the roots of the teeth are bare. We ſhal only ſpeak here of this Scurvy as it is in the Mouth; but in Diſeaſes that foul the body, we ſhal ſpeak fully of it as it infects the Feet with Spots, and Swellings, and Ulcers.

Somtimes there is a pain with a Wound made by a Prick, a Cut, or a Bite with Inflammation alſo. If this pierce the Cheek, it is in the number of outward Wounds.

The Cauſes.

The Diſeaſe which cauſeth theſe pains in the mouth is either in the Nerve, and appears not, or in the ſenſible parts of the Mouth mentioned. And it is either a hot Diſtemper alone, or with Inflammation or Solution of Continuity.

A Diſeaſe in the Nerves is the cauſe of pricking & burning of the Tongue without an apparent Diſeaſe.

There is a burning often of the tongue when no hurt appears from the Nerve afflicted, it is long and tedious. How this is cauſed we ſhal ſhew in Diſeaſes of the habit of the body as we did in Aſtoniſhment and Palſie.

A hot Diſtemper cauſeth heat only, but an Inflammation cauſeth Swelling, Burning, Clefts, & Puſtles in the Toung and other parts of the Mouth.

A hot Diſtemper alone cauſeth only heat in the Tongue, if it be with Inflammation, it cauſeth heat and burning with ſwelling. And thence come Puſtles, and Excoriation or Rawneſs, if it come from outward things that burn the Tongue. But theſe come commonly from an inward cauſe, as a hot Vapor in hot Diſeaſes and Burning malignant Fevers, which flies up and infecteth, and if the inflammation of the Tongue cauſe a flux of blood to the jaws with heat and pain, there is a Squinſie. The ſame may be from a bloody humor pure or impure that comes to theſe parts, and the Tongue and Gums may be inflamed chiefly. This may happen in divers Diſeaſes, and in the French Pox.

If it flow to the looſe fleſh under the tongue it raiſeth a tumor there with Inflammation, and that ſuppuarted turns to an Impoſthume. This Flux to that part is cauſed by a Stone bred there from a wateriſh humor which cauſed great pain, often from pain of the Teeth, as ſhal be there mentioned, there is a Defluxion upon the Gums cauſing an Inflammation and Swelling.

A Solution of Continuity is the cauſe of

A Solution of continuity is the cauſe of an Ulcerous Pain, with Excoriation, or Cleſts, and ulcer in the Mouth and Tongue.

ulcerous pain with excoriation, clefts, and ulcer in the Mouth & Tongue.

This comes from things put into the Mouth that wound it, but moreuſually from a mans biting himſelf by the Tongue or Cheeks.

Burning things actually or potentially raiſe up the Skin, and cauſe bladders and excoriation after they are broken. In a tender Mouth, as of an Infant, ſharp things may cauſe it, they ſay the *Aphtha* or Thruſh is cauſed by ſharp milk or Bread gnawn by Mice: If ſharp things are alſo piercing they do it more, whereof I have obſerved in my ſelf and others that if young Children eat green Nuts and Grapes together, their Tongues wil be cleft and pained.

Alſo where the Tongue is too dry from Cauſes mentioned in the hurt of Taſting, it is cleft.

Theſe Puſtles or Thruſh and Ulcers, ſomtimes malignant. may come from hot cholerick melancholick ſharp and ſalt Blood abounding, as in other parts of the body in theſe moiſt and tender parts.

And if ſuch matter be in the ſpittle it may come from thence, as we have obſerved by the force of Quick-ſilver the Spittle hath been ſo infected in fluxing for the Pox that Inflammation and Ulcers have followed.

Alſo theſe Ulcers come from a Diſeaſe that went afore, as from an Impoſthume after Inflammation. A Wound or ſimple rawneſs by reaſon of the moiſtneſs of the part is eaſily turn'd into an Ulcer, and the Thruſh neglected. In an Elephantiaſis or Leproſie and in the French Pox though they uſe no Quick-ſilver, and in the Scurvy, by reaſon of their venemous quality (as ſhal be ſhewed) there are Ulcers in the Mouth and Jaws.

The Cure.

The Cure of heat & Inflammation of the Tongue, Jaws, Cheeks, and Palate.

If Inflammation and preternatural heat of the parts of the mouth come from other Diſeaſes, as Fevers, they muſt be firſt cured, as we ſhewed in Fevers, by letting blood for the Fevers, and Sweating, and by cooling the Heart, Liver, and Reins, reſtraining the corruption, and preſerving the ſtrength. But chiefly for the Tongue when much afflicted, to prevent a Squinſie and Death by the Inflammation going to the Jaws, open the Vein under the Tongue, although you have let blood before for the Fever and uſe diverſions, by Cupping, Scarifying, Rubbing often, and things that heat and keep down foul vapors, and quench the great heat, not only for the Fever, but for the tongues ſake: Examples of which we ſhewed in Fevers. In other Cauſes, uſe diverſions, as in Fevers by bleeding and the like, as when the Gums are inflamed in the Toothach.

Leſt the mouth be inflamed by the uſe of quickſilver, before you apply it, waſh the mouth often with Milk, fat Broath, Butter, or Oyl of ſweet Almonds, and anoynt the Tongue therewith.

If it be a ſimple heat, waſh the mouth with cold things, and moiſten it, if it be dry, and if you fear Inflammation Aſtringe, and Repell, adding Clenſers, by reaſon of the ſlime in the Mouth, and ſomtimes Reſiſters of Venom, and then uſe Digeſters and Ripeners if it tend to an Impoſthume.

We ſhewed in the hurt of Taſting what wil allay the heat and drineſs of the tongue.

When

When in the beginning of an Inflammation, we will repel and cool, together uſe theſe following.

Spring-water, and Rain water, aſtringe a little; and Wine Vinegar or Roſe Vinegar added to ſharpen it.

Alſo waters of Violets, Water-lillies, Night-ſhade, Purſlane, Lettice, and theſe Aſtringents, Roſe water, Plantane, Privet, Honey-ſuckle, and Myrtle water; chiefly water of Self-heal, uſed with Vinegar or other waters, for it cooleth not much of it ſelf.

Thus: Take *water of Prunella or Self-heal four ounces, Roſe, Plantane, Straw-berry and Purſlane water, of each two ounces; Roſe Vinegar and Honey of Roſe, each an ounce; with a little Allum, or a drop or two of Spirit of Vitriol,* and then it will bind more.

Alſo ſharp Juyces, as of Mul-berries, Bay-berries, Grapes, Cherries, Oranges, Limons, Citrons and Sorrel with Vinegar or alone, and the juyce of Lettice is counted beſt, theſe may be chewed or the juyce taken often.

Or you may boyl the Fruits, and waſh the Mouth with the Decoction.

Or give the Juyces with Honey or alone.

Or the ſyrups made of them, chiefly that of Mulberries, may be mixed with Mouth water, or licked. In the French Pox, ſyrup of Violets, with the Decoction of Barley and Roſes, cureth the Inflammation.

The vulgar High-dutch uſe the diſtill'd water of that Liquor, in which they pickle Cabbages, called *Sumpiſtbren*, or the liquor it ſelf, if it be ſhaken together. To which you may add other juyces.

A cooling and repelling Decoction: Take *Violet leaves, Lettice, Plantane, Prunella or Self-heal, Willow, Sorrel, Vine, Straw-berry, each a handful; red Roſes, Antirrhinum the great, Mallows, Barley, each a pugil; Gourd ſeeds two drams, Bar-berries a dram, ſoure Berries ten pair, ſoure Prunes ſix,* boyl them in *Water* and *ſharp Wine*, add *a little Sugar* and *Honey of Roſes*, uſe it ſo, or with Juyces, or Syrups.

Another more aſtringent: Take *Mouſe-ear, Privet, Self-heal, Plantane, Brambles, Myrtles, each a handful; red Roſes, Water-lilly, Barley, Vetches, each a pugil; Prunes or Cherries, Cornil berries or Cerviſes or Quinces ſome few, Bar-berries dryed an ounce,* boyl all in *red Wine*, add *Honey three ounces, ſyrup of Pomegranats two ounces*, waſh the Mouth therewith.

In the increaſe of the Inflammation, add Digeſters, thus: Take *Liquoriſh an ounce, Self-heal two handfuls, Plantane a handful, Hyſop half a handful, Mallow flowers, red Roſes, each a pugil; Sage and Roſemary flowers, of each half a pugil; Beans and Lentiles, of each an ounce; Fenugreek and Linſeed, each half an ounce; Acron cups ſix drams, Figs ten, Rayſons not ſtoned twenty pair,* boyl all in *Water*, add *a little Wine and two ounces of Honey, ſyrup of dryed Roſes an ounce, ſyrup of Mul-berries half an ounce.*

Or thus: Take *Self-heal two handfuls, Ground-ſil, Croſs-wort, Honey-ſuckles, Plantane, Hyſop, Sage, Maiden-hair, each a handful; red Roſes a pugil, Myrrh two drams, a little Saffron, and two ounces of Honey:* boyl them in *Water*, add *a little Allum.*

Or thus: Take *Water of Self-heal ſix ounces, Plantane, Roſe, Sage and Hyſop water, each two ounces; Honey of Roſes, and a little Allum.*

I have done much in theſe Inflammations, with deep Ulcers, with Salt-peter prepared, called *Lapis prunellæ*, diſſolved in Sage water, waſhing the Mouth warm therewith.

In Inflammations ready to ulcerate. from the uſe of quick-ſilver, ſome anoynt with Treacle, Aqua vitæ and Vinegar, or diſtil a water of them, and add Bole or other dryers, by this they believe the Poyſon of the quick-ſilver, is taken away, and they alſo waſh with a Decoction of Lignum vitæ.

When Inflammations tend to Maturation: Take *Marſh-mallow roots an ounce and an half, Figs twelve, Dates ſix, Tamarinds and Caſſia with the ſeeds ten, Fenugreek and Lineſeed, each half an ounce; Mallows and Chamomil flowers, each a pugil;* boyl them in *Goats Milk*, diſſolve *the white of an Egg and a little Honey and Saffron.*

If the Inflammation be not only in the Tongue, but in other parts, you may anoynt under the Chin, at firſt with repelling Oyls, as of Roſes, after with diſcuſſers, as Oyl of Chamomil and Lillies.

If the Inflammation under the Tongue tend to ſuppuration, make Cataplaſmes of Marſh-mallow roots, Linſeed, and other meats with Saffron, theſe aſſwage pain, and ripen, or boyl them in Milk and waſh the Mouth. We ſhall ſhew the forms of theſe and ſuch as open Impoſtums, in the treatiſe of Inflammations of the Jaws. If a quinſie be joyned with an Inflammation of the Tongue, or follow it, there are Medicines.

The Cure of Puſtles, Rawneſs, clefts and Ulcers of the Mouth and Tongue.

In ſolutions of continuity, Puſtles, Rawneſs, Clefts and Ulcers, if they come from an internal cauſe that muſt firſt be evacuated. If they come from other cauſes, yet if the body be foul or Plethorick, the Cure will be ſooner done after purging. If the cauſe be malignant that muſt be firſt taken away, as in the French Pox, Leproſie and Scorbute. If that cannot be taken away, the Ulcers that come from thence can never be cured, theſe firſt done, apply Topicks for Puſtles, Fiſſures, Rawneſs and Ulcers.

In Puſtles, if there be an Inflammation, the Medicines there, are proper, if they are without Inflammation, they break of themſelves and leave an Ulcer, which muſt be cured, as the Thruſh. If they continue long and are troubleſome, apply Leaven to ripen, or Starch with Urine, and a little Wine.

If there be an Inflammation, with Clefts, you muſt look to that firſt. If it be from dryneſs Cure it, as in Depraved taſting. If the Clefts are deep, dividing the tongue and cauſing pain, Cure them with dryers, as other Ulcers; adding ſome mollifying things, for the tongue which is naturally moiſt and ſoft: Such as ſhall be deſcribed in the outward Clefts of the Lips and Skin.

To which add this: Take *burnt Allum half a dram, true Bole two drams, with Honey of Roſes and Mucilage of Gum Traganth or Fleabane,* make an Oyntment to anoynt the Clefts of the tongue.

In other Excoriations or Ulcers in the tongue and cheeks, or palate, or thruſh, or ulcers of the Gums, creeping or other wiſe, corrupting, uſe ſtrong dryers, by reaſon the part is moiſt: adding clenſers, if there be foulneſs, and ſuch as take down proud fleſh. If there be Inflammation with the Ulcers, add cold repellers, as in the Inflammation of the Mouth was ſhewed: they bind and dry: Alſo if there be malignity, add things againſt it.

Theſe are diverſly applied, the Mouth may be waſhed, or they may be chewed, or uſed in ſmoake, or applied only to the Ulcers.

There are divers Mouth waters to be kept long where the Ulcer is.

A drying and clenſing Decoction of Plants, ſharp binding and clenſing: Of Privet, Plantane, Mouſe-

ear, Agrimony, Horſtayl, Sun-flowers, Blew-bottles, Olive leaves, Dayſies, Honey-ſuckles, Golden rod, Bramble, Yarrow, Herb Robert or Crains bill, leaves of the wild Pear tree, Beech tree, Solomons ſeal, Rupture wort, Ceterach, Myrtle, Maſtick tree, Hazel, roots and leaves of five leaved Graſs, wild Plumes, Comfrey, Barbery barke and Pomegranate peels, red Roſes, Pomegranate flowers, Acorn cups, Labruſca, Barberies, Barley, Lentils, Cypreſs, Myrtle ſeeds, Coriander, Slows, Sumach, Mulberries, Seruiſes and Gals. If the mouth be ſlymy and foul, add Sage, wild Time, or Gum, wild Mints, Bay leaves and roots of Flower-de-luce, and in the Scorbute, Scurvey Graſs, Watercreſſes and Brook-lime, of theſe or ſome of theſe make a decoction with water that hath ſteel quencht in it, adding a little Wine, or Roſe, Vinegar, or Honey, or Sugar of Roſes, or ſyrup of Roſes, Myrtles, Mulberries, or juyce of the Plants aforeſaid, or of Pomegranat, with Vinegar, Salt, or Allum, or Vitriol to make it a little ſharp, or Bole, or juyce of Blood-ſtone ground.

It is excellent to uſe juyce of Oranges, Brook-lime, Water-creſſes in Ulcers of the Gums.

Another Decoction to dry ſtrongly: Take *Bole an ounce, burnet, Plaſter of Paris half an ounce, Allum two drams, Vitriol a dram*; boyl them in *white Wine*.

Or make Mouth waters of Aſtringents, diſtilled waters of Roſes, Privet, Plantane, Honey-ſuckles, and the like, with things aforeſaid diſſolved in them, increaſing their quantity, becauſe diſtilled waters dry leſs then Decoctions.

Or: Take *unripe Grapes three pounds, Purſlane and Plantane, of each two pound; whites of Eggs ſix, Allum a pound*, beat them and ſtill them, waſh Ulcers therewith.

It will be ſtronger, if before the ſtilling, you add *a pound of Pomegranate peels, three ounces of Vitriol, and four ounces of Vinegar*.

Or uſe this Allum water of *Libathious*: Take *juyce of Plantane, Purſlane and Allum, of each a pint; whites of Eggs twelve*, ſtir them and diſtill them in *Balneo*.

For Ulcers in the French Pox, uſe this water to repreſs Venom: Take *Treacle with Aqua vitæ and Vinegar* and diſtill a water from them. Or uſe this Gargariſme: Take *Roſe and Plantane water, of each two ounces; Aqua vitæ and Vinegar, each half an ounce; ſyrup of Mulberries and Honey of Roſes, each three drams; Treacle, Bole or Earth of Lemnos, each half a dram*.

Mouth waters of the juyce of Fruits, are made more pleaſant, then of Herbs, and cleanſe more, as Juyce or Wine of Pomgranates, or Wine that is ſharp and red, or Roſe Vinegar, or Vinegar of Squils alone, or mixed with other waters, Ulcers waſht with theſe will ſeem as it were boyled afterwards; therefore to make the dryers work better, we firſt waſh with theſe. Alſo juyce of Quinces, is excellent.

Some things chewed, leave their ſtrength in the Mouth and heal Ulcers, as ſharp Fruits, not ripe, as Mulberries, Cornil-berries, Quinces, Medlers and leaves of Privet, though not ſo pleaſant, theſe eaten Cure the Thruſh. And other Plants mentioned are good to be chewed.

Fumes are alſo good to dry, and thoſe of Quick-ſilver, though it cauſe Ulcers, when inwardly taken, yet the ſmoake taken in at the Mouth, doth Cure them.

Theſe following are alſo good. The Chirurgions uſe to anoynt the Mouth with Honey of Roſes and burnt Allum to cleanſe.

Or with the juyces of Herbs mentioned, mixed with Honey and boyled thick, the juyces of Mulberries and green Grapes are the beſt, theſe heal, and when we will cleanſe, we add Allum or white Vitriol.

Pouders made of Plants dryed are uſed, Honey, juyce of Grapes or Mulberries,

A drying Pouder: Take *Myrrh ſeeds, Bay-leaves, burnt Harts-horn or Ivory, of each half a dram; burnt Coral a dram*.

Another ſtronger: Take *Galls, Pomegranate peels, each a dram; Dates ſtones and Acron cups burnt, Cypreſs roots, each half a dram, red Roſes a ſcruple*.

This is ſtrongeſt: Take *Acacia, Hypociſtis, of each a dram, white Vitriol half a dram, Sal Gem a ſcruple, Angelica roots half a ſcruple*: make a Pouder.

A cleanſer for the Gums ulcerated: Take *Pumice ſtone two drams, Crab and Snail ſhels burnt, each a dram; Tutty prepared Allum and Tarter, each half a dram; Orris roots two ſcruples*: make a pouder.

The Pouder of Briony for the Cancer of the Gums: Take *Tutty prepared in roſe water two drams, Gum Traganth torrified a dram; Sarcocol, Morlick, Frankincenſe, each half a dram; Orris roots and Calamints burnt, of each a dram*: make ponder and mix it with *juyce of Briony*, dry it in the Sun then pouder it again, and add more *juyce of Briony*, do thus five times, rub the Gums with this Pouder and *Honey* till they bleed.

Or uſe Ægyptiacum for ſordid ulcers of the Mouth and Gums.

When the Gums begin to conſume: Take *roots of Comphory, Pomgranate peels, each a dram; Frankincenſe, Myrrh, each half a dram; Chalcitis burnt a ſcruple, white Vitriol half a ſcruple*: make a Pouder.

Touch Ulcers with ſtrong Liquors and after waſh the Mouth with Wine.

As with Inke, made ſtronge with Verdigreece.

Or with this gteen Water: Take *Verdigreece a dram, Orpiment a dram and an half*, pouder and boyl them in *white Wine two ounces, to half*. When it is cold, add *Roſe and Nightſhade water an ounce and an half*.

Or thus: Take *Verdigreece, Orpiment, Niter, Allum, each a ſcruple, and Galls as much*: boyl them in *Roſe and Plantane water*.

A ſimple Decoction of ſublimate, is made with *a dram of Sublimate*, boyled in *Roſe or Plantane water*, touch the Ulcer gently therewith, or make it milder with *an ounce or two of Nightſhade water*.

Or thus: Take *Sublimate three drams, red Lead a dram and an half, Verdigreece, Vitriol, each half a dram; burnt Allum an ounce, Bole two drams, white Wine ten ounces, Roſe water two ounces*; boyl them.

Theſe Ulcers and the thruſh, and Ulcers of the Noſe are cured, by being gently touched with *Aquæ fortis*.

Potential Cauteries, alſo of Lime and Wine Lees are good to touch Ulcers, if by art you can keep them from the ſound parts: but an actual Cautery is more certain, if it be uſed ſuddenly, for an Eſchar wil be made and when that is gone, the Ulcer will be cured.

CHAP. VIII.

Of Tooth-Ach.

The Kinds.

THe Tooth-ach is any pain in or about the Teeth, and it is either a true Tooth-ach, or ſuch only as a little diſturbeth.

A true

Tooth-ach. A true Tooth-ach, is in or about one tooth, only ſomtimes in more, ſeldom in the Fore-teeth, but in the ſides, and commonly but on one ſide, ſomtimes on both, ſomtimes in the upper, ſomtimes in the lower jaw, ſeldom in both, This is the proper Tooth-ach which is often and grievous.

Tooth-ach in Children which breed Teeth. This pain is in Infants that breed their grinders, which they declare by crying and reſtleſſneſs, and it is known by the redneſs and heat of the Cheek, and when the teeth appear out of the ſwolſen and open Gums, there is alſo a little Feaver known by heat and other ſigns. Somtimes convulſions, but not ſo dangerous, as when they come from other cauſes.

There is alſo a tooth-ach which comes to people of all Ages, from which few are free, eſpecially ſuch as have hollow or broken teeth. This is often violent and laſteth long or returns often, with ſtretching and beating, which they ſuppoſe they feel in the tooth it ſelf, which is pained. The Gums are then very hot and red ſomtimes ſwollen with the Cheek, alſo which being ſwollen the tooth-ach abateth, ſomtimes there is an Impoſtum at the bottome of the tooth, and when that breaketh the tooth-ach ceaſeth, and there cometh forth foul and ſtinking matter. And the Ulcer ſomtime remaineth long after, or turns hollow, peircing the lower Jaw and opening it ſelf outwardly, ſending forth wateriſh and ſomtimes thick matter for a long time.

Somtimes when theſe appear not, there is a great pain in the teeth, ſuch as we uſe to feel at our Fingers ends in cold weather. In this the Patient ſpits much, and if the teeth be hollow, he ſeems to feel a cold Air coming from them, to his tongue, when he toucheth them there with.

Pain of the Teeth when a Tooth is drawn. There is a kind of tooth-ach, when a tooth is drawn, ſomtimes greater, ſomtimes leſſer: but uſually it is gone after the tooth is drawn, except by the violent motion of the part or hurt of the Inſtrument, or when a little part is only drawn out, there be a pain after.

Numneſs of the Teeth called Hæmodia. There is a Moleſtation, rather then pain in teeth at the time of eating, in the diſeaſe called *Hæmodia*, this is a preſſing of the teeth, when one is longer then another.

The Cauſes.

The part affected. It is certain that that part is affected in in the tooth-ach which hath the ſenſe of feeling and that moſt exquiſitely, becauſe the pain is great. But we have ſhewed that the teeth want all ſenſes, becauſe they are all the hardeſt of bones neither have they a Perioſtum or Skin about them, as other bones have and there is no Nerve that goes into them. Therefore not the tooth, but that part which is ſenſible and which is near the tooth, muſt needs ſuffer, and the reaſon why the tooth is thought to ake, is becauſe the part affected is ſo near unto it. The part is commonly a membrane, which compaſſeth the holes in which the teeth are fixed, and which is next to the roots of the teeth: to which the Fibers or ſmal branches of the Nerves, which go to both Cheeks, are ſo joyned, that they cauſe an exact feeling, ſo that the pain ſeems not to lie deep, but as it were in the very tooth.

Alſo the Gums, and the *Perioſtia*, or Membranes under the Jaws, if they be hurt, ſeem to communicate pain to the teeth.

The Diſeaſes, with which theſe parts affected cauſe a ſeeming pain in the teeth, are either a hot or cold diſtempers, or Irritation, or Solution of Continuity.

A hot diſtemper and Inflammation, cauſeth Tooth-ach. A hot diſtemper with Flux of blood and Inflammation alſo ſomtimes, afflicting theſe Membranes, cauſeth the tooth-ach ſo called, not only by heat and ſtretching, but by ſwelling in a ſtrait place, which cauſeth the teeth being hard to preſs upon them, this is a ſtretching and beating pain, which though the beating be in the little Arteries, under the Membranes, which beat upon the teeth, yet it is ſo manifeſtly felt, that *Galen* thought this beating and Inflammation alſo was in the tooth it ſelf (which cannot be, becauſe the tooth is a ſolid bone, having neither Veins nor Arteries, and therefore can neither be inflamed, nor beat:) though he wrote that he experienced this in himſelf. Moreover if there be a Flux of blood upon the Gums or Perioſtium under them, as is uſual in the beginning or continuance of the pain which raiſeth a new Flux, the pain is increaſed, and the more if there be an Impoſtum, till it be broken and made an Ulcer and ſend forth matter.

The cauſe of this Flux is as of other Fluxes: Namly fulneſs and heat of blood, or pain that was before from another cauſe, which raiſeth the Flux and doubleth the pain: or other external cauſes.

A cold diſtemper, cauſeth Tooth-ach. A cold diſtemper by its enmity to the Nerves and Membranes, afflicting theſe parts, cauſeth alſo pain, called alſo the tooth-ach, from the Vicinity or nearneſs. It is ſo bitter and often, that it is no wonder the vulgar ſay that cold is an enemy to the teeth.

This comes from external cauſes, as Air, Meats or Drinks that are cold, that ſuddenly cool the teeth and make the Membranes adjoyning ſenſible thereof. And it comes ſooner when the tooth is hollow or broken, and the cold ſtrikes preſently to the Membranes. Hence it is that bad teeth are ſooneſt pained, and the pain is thought to be in the teeth, though they are dead and not as formerly, which no reaſonable man will ſay can be ſenſible.

This comes alſo from a cold flegmatick Defluxion not upon the tooth which cannot receive it, but upon the Membranes underneath. And there is then a tooth-ach, without ſigns of heat, but of cold, as if cold wind come from the hollow tooth, as I ſhewed: Except the pain cauſeth a Flux of blood, and then heat, tumor and impoſtume may follow.

Irritation or provocation, is the cauſe of Tooth-ach. Alſo Irritation of this very ſenſible Membrane, may cauſe this pain called the Tooth-ach.

This comes to the Membrane from the proper tooth when it is broken, or diſcovered from its place, or otherwiſe unuſeful, then it hurteth the Membrane in chewing or keeps them from chewing on that ſide.

This alſo may come from pricking the hollow tooth or from hard meat gotten into it, in chewing, becauſe the Membrane cannot endure the touch of a ſtrange body.

And if the teeth be whol and yet there be a force to put them out of order, eſpecially when pained, or of any thing be gotten between them in chewing, which ſticketh cloſe, becauſe then the teeth are thruſt at one ſide and the Membranes that grow to the roots of them are

are conſtrained there is alſo pain. Therefore men are very buſie to pick there teeth when any things get either into the hollow of the teeth, or the ſpaces between them.

Roughneſs of Teeth, cauſeth Hæmodia, or an edge upon the Teeth.

Moreover not only when the teeth are fowl or ſtreight bound or forced aſide are theſe Membranes provoked: but when they are exaſperated and looſe their ſmoothneſs; and then the Membranes feeling this roughneſs and unevenneſs are pained in chewing, as if ſome ſtrange body were faſtned to them, as we ſhewed in Hæmodia, with a numneſs (as we ſhewed in the hurt of touching) from the coldneſs of thoſe things, that make the teeth rough infecting the Membranes, ſo that the teeth ſeem to be num, by whom the Membrans are ſo affected (but this is but imaginary, for they are inſenſible.) this exaſperation & cold comes from eating of ſome kind of fruit, or from ſome humor like ſuch fruit or from ſome humors like ſuch fruit, or from vomiting and firſt the teeth and then the Membranes, as when they are ſower: by their binding and ſharpneſs (which is an enemy to the Nerves and bones) they peirce and afflict the teeth and their Membranes. And the ſooner when the teeth are ſoft and not grown hard with Age, therefore is this more uſual in young then old people.

Alſo the Tooth-ach comes from a Defluxion of thin ſharp, or ſalt flegm, which provokes the Membranes rather than cools them, & uſual to them that are troubled with ſuch Excrements, and to ſuch as the Flux ſals thither from a looſneſs and weakneſs of the part through bad teeth, or the like. And to ſuch that ſpit much, and have much humor come from their Noſtrils.

Solution of continuity, cauſeth Tooth-ach.

Solution of Continuity alſo cauſeth the ſame ſame, as when a Tooth is drawn from the Membrane under it, and the Gums that grow to it, and it is the greater pain when the Root is deeper, as in the great Teeth. And when it grows to the Jaw, ſo that ſome part of it comes away therewith, which cauſeth great accidents. As befel a Merchant my Country-man, of whom we ſpake in Pains of the Mouth, who had after the drawing of of a tooth an Inflammation and Cancerous Ulcer which tormented and killed him. This is thought to be eaſily done by the common Chirurgeons if the Dog or Eye-tooth be drawn.

Alſo in Infants while the teeth grow and pierce through the Gums, if they be great teeth eſpecially this pain may be by ſtretching the Gums. And though this pain comes only from the Gums, yet it is called the *Tooth-ach*, as other pains mentioned from ſolution of Continuity, in which the ſenſible parts mentioned do rather ſuffer than the teeth.

The Cure.

The Cure is according to the diverſity of the Cauſe as it comes either from a Defluxion of blood or other excrements, or from a cold diſtemper or provocation, from rotten teeth or other compulſion or exaſperation, or from ſolution of Continuity when the Gums are pierced, or the teeth drawn forth.

The cure of Tooth-ach from a hot diſtemper or cold, or from flux of blood or flegm.

If tooth-ach come from flux of Blood or Water, then take away the cauſe of the Defluxion by keeping the humor from falling upon the part, and ſending it another way, and conſuming it, and correcting the diſtemper which comes from thence, and in the mean while aſſwaging the pain, by theſe means.

Blood-letting at firſt when it is from a bloody flux, and there is pain of the Head, is good to revell or draw away from the part.

Alſo Scarification and Cupping in the Neck and Shoulders is good in all Defluxions: By theſe means at certain times uſed, the Vulgar prevent the tooth-ach. And to take it away, uſe Scarification in the Wriſt, or in the back of the Hand, between the thumb and fore-finger, on that ſide the pain is.

We divert theſe Defluxions alſo by Veſicatories and Cauteries as others. And apply Vſicatories to the Wriſts and back of the Hand: as a head of Garlick ſtampt.

And we uſe Frictions and Ligatures, as in other Defluxions.

And Purgers by the Noſe in a flegmatick Defluxion to divert it from the part affected. By blowing the Noſe often, and uſing of Errhines or ſneeſings to the Noſe, amongſt whtch juyce of Brooklime and Marygolds is accounted the moſt proper for the tooth-ach.

Alſo things that draw flegm from the Mouth which ſhal be after ſhewed: But this muſt be done after general purging, eſpecially if humors abound, and are flowing, leſt evacuations by the Noſe and Mouth draw the humor more to the teeth.

We alſo purge by ſtool with divers medicines, as in other Defluxions.

And apply things to the temples in all humors to keep them from the teeth, uſing ſuch things as were mentioned in Defluxions of the Eyes, eſpecially Plaſters in the hollow between the Forehead and the temples, upon the ſide pained night and day, which ſometimes retain the humor flowing, that the pain ceaſeth, and cometh to the temples.

If the Defluxion be hot, in the beginning we apply to the teeth aſtringents that heat not, to repell it, but when it ceaſeth to flow, we apply to the teeth things that diſcuſs and conſumes the humor. In a cold Defluxion, at firſt we uſe hot things with Repellers, after very hot things alone. Theſe are of divers forms, ſomtimes to be held between the teeth, or otherwiſe applied to them, or put into the hollow, or uſ'd as Fumes or Smoak, they are made of the following ingredients.

When we aſtringe chiefly, and ſo ſtop the Flux, we make Decoctions to be held hot in the Mouth, as the Decoctions of Tormentil which is beſt, and of Vervain boyled in Wine, and of the inward bark of an Aſh.

Or this compound Decoction. Take *roots of Tormentil, Snakeweed, five-leav'd Graſs, Mullein, each half an ounce; Cypreſs roots two drams, bark of Box tree, or Mulberry and Capars, each half an ounce; Ivy, Vervain, Plantane, each a handful; Pomegranate flowers and red Roſes, each a pugil: Cypreſs Nuts, Galls, and Acorn cups, each two drams; Coriander ſeeds, Myrtles and red Sanders, each a dram:* boyl them in *red Wine*, add *Vinegar*, if you wil have it ſtronger.

Roſe water is good to bind with *Plantane water, red Wine* and *Vinegar*.

Water of Mullein is counted excellent.

Or: Take *filings of Iron a dram and an half, Vitriol a dram:* boyl them in *Wine* and *Vinegar*.

After the Defluxion add ſome hot things thus: Take *roots of five-leav'd graſs or Tormentil an ounce, roots of Pellitory half an ounce, Cypreſs roots two drams, Leaves of Ivy,*

Ivy, Sage, Hyſop, each a handful; red Roſes, Lentiles, each a pugil; white Poppy ſeeds two drams, long Pepper a dram: boyl them in *Wine.*

Or thus: Take *Sage, Hyſop, Vervain, each a handful;* boyl them in *a pint of Wine:* add *two drams of Allum.*

Or: Take *Galls, Snakeweed roots, each two drams; Orris roots a dram, Hyſop a handful, Frankincenſe, Sandarach, each two drams; Juniper berries an ounce:* boyl them in *red Wine.*

Or: Take *Maſtich an ounce, Sage, Hyſop, each a handful:* boyl them in equal parts in *Wine* and *Vinegar.*

Or this Pouder: Take *Snakeweed roots a dram, Allum and Pellitory, each a ſcruple:* make a *Pouder,* apply it or rub therewith.

When we wil heat chiefly, hold theſe Decoctions in the Mouth, ſo hot as may be, and take it in again as faſt as it cooleth.

The Vulgar uſe roots of Pellitory, or Pepper, or Ginger boyled in Wine.

Another: Take *Calaminta, Organ, Pennyroyal, Hyſop, Sage, each a handful; Marjoram, Bay leaves, each half a handful; Juniper berries half a pugil:* boyl them in *Wine.*

Or this which hath often profited: Take *wild Time, Sage, Roſemary, each a handful; Ginger a dram, Caraway ſeeds half an ounce, red Peaſe, Salt, each a pugil:* boyl them in *white Wine.*

Or this: Take *Pellitory roots half an ounce, Angelica roots, each two drams;* add *Garlick and Radiſh, Hyſop, Savory, Sage, Marjoram, Pennyroyal, wild Time, Roſemary flowers, and red Roſes, each a dram;* or *a handful* if they be freſh, *long and black Pepper, Cubebs, grains of Paradiſe, Cloves, Muſtard ſeed, Gith and Staveſacre, each half a dram; Salt or Niter, each two drams:* bruiſe and boyl them in *Wine,* or infuſe them, and uſe the ſtrained *Liquor.*

The Decoction of Coloquintida in Wine is bitter, but very profitable.

Sage and Roſemary diſtilled in Wine is alſo good.

Alſo *Aqua vitæ* or Spirit of Wine or Juniper berries applied do work quickly and ſtrongly.

Or this: Take *Pepper, Ginger, grains of Paradiſe, each a dram; Cloves two drams, Cinnamon half on ounce:* add *white Wine,* ſteep and diſtil them.

Or thus: Take *Pellitory, long and black Pepper, each two drams; Muſtardſeed, Water-creſſes and Gith ſeed, each a dram:* pouder them, and with *Aqua vitæ* uſe it as the other.

Or of the ſimples in the hot Decoction mentioned dried and poudered, make an Infuſion and Diſtillation.

The Oyl of Juniper berries, or Spike, or Spices diſtilled, and dipt in Cotton, and put into the tooth doth well.

Somtimes we uſe Bags to the teeth to be bitten by the tooth affected thus made: Take *Sage leaves,* and bruiſe them, and with a little *Salt* and *Pepper,* make a *Bagg.*

Or thus: Take *Pellitory, Pepper, Muſtard ſeed, Salt, each equal parts;* pouder them for a *Bag,* dip it in hot *Vinegar* and apply it to the teeth.

Or thus: Take *Pellitory, long Pepper, Staveſacre, each equal parts:* make a *pouder,* and apply it in a *Bag* ſprinkled with *Aqua vitæ.*

Somtimes we give things that inflame the Jaws, as bark of Laurel taking of the outward rind that is hard, alſo the roots of Spurge and Crow-foot, according to *Dioſcorides,* theſe are put between the teeth, leſt they ſhould burn the Jaws by touching them, but if you boyl them in white Wine they they are milder.

This latter Decoction is ſo uſed, made of Solomons ſeal roots, and white Hellebore, and bark of Laurel in Wine and Vinegar.

The Anodynes following are alwaies to be uſed, when the Defluxion ceaſeth eſpecially, becauſe they work by propriety.

Hot Milk, Butter, and common Oyl, or Oyl of ſweet Almonds are good to be held in the mouth.

Alſo Bread chewed and applied as a Cataplaſm between the teeth and Cheeks.

Alſo warm Broath and the Decoction of Marſhmallow roots, Bread, and Lineſeed in Milk.

Another that draws forth water. Take *rooots of Marſhmallows and Liquoriſh, each an ounce; Sage a handful, Figs twelve, Fænugreek ſeeds an ounce:* boyl them in *Water.*

A Decoction of Guajacum and Salt is commended.

Or Leaven applied with Vinegar in the Decoction thereof held in the Cheeks.

Or this: Take *Sandarach or Varniſh half an ounce, Wine or Vinegar, or both four ounces, or ſix:* boyl them ro the conſumption of the third part, and hold it in the mouth, or diſſolve Sandarach in Vinegar and apply it.

Gum Galbanum, Ammoniacum, Sagapenum, alone, or ſoftened with *Aqua vitæ* and Vinegar put into a hollow tooth, or ſpread and laid as a Plaſter to the teeth, cures the tooth-ach.

Or this: Take *Camphire half a dram, Aqua vitæ an ounce:* boyl it til the *Camphire* be conſumed, and apply it: or with *Wine* and *Vinegar.*

Alſo Camphire and Oyl of Cloves, or of ſweet Almonds, or Oyl of Camphire.

The pouder of Camphire with the pouder of Henbane root equal parts, ſuddenly taketh away the tooth-ach, the ſeeds of Henbane may be uſed for the root, and they wil be ſtronger.

A Snakes Skin alſo boyled in Wine and Vinegar, or dried in an Oven, or burnt to pouder and mixt with Oyl, to anoynt the teeth is commended, or the Skin of a Toad uſed the ſame way, is an excellent medicine.

Dioſcorides writes that the prick in the tail of the Fiſh *Paſtinaca* applied to the tooth takes awy pain.

In great pain we uſe Stupefactives with caution that they be not ſwallowed.

As the Opiate Antidotes freſh made as *Philonium Romanum,* Treacle, Mithridate, to rub the teeth, to a dram of which a ſcruple of Pellitory and Nigella or Gith ſeed, and a grain of Opium may be added.

A ſmall pil of Opium alone put into the tooth preſently takes away the pain, and it is good to add a little Wax that it may not fall out.

Or this: Take *Opium and Henbane ſeed, each four grains Smallage ſeed two grains,* with *Aqua vitæ* make *Pils.*

Or thus: Take *Camphire a ſcruple,* boyl it in *an ounce of Aqua vitæ* til it diſſolve, then add *Opium three or four grains,* dip a little *Cotton* therein and thruſt it into the tooth.

Or thus: Take *of ſpirit of Wine two or three ounces,* add *Camphire two drams,* ſet it in the *Sun* til the *Camphire* diſſolve, then diſtil it: apply this ſpirit as the other.

Other Stupefactives are made of Henbane ſeeds, Pepper, roots of Pellitory and burnt Allum equal parts made up with *Aqua vitæ* into a Maſs.

Or thus: Take *Henbane ſeed half a dram, Pellitory and Ginger each two drams; Smallage ſeeds a dram, Maſtich three drams, Roſes a pugil:* boyl them in *Wine* and *Vinegar* to waſh the Mouth.

Or: Take *roots of Mandrake a dram, Henbane ſeed*

half a dragm Pepper, Cubebs and Stavesacre, each a dragm, Pellitory two dragms, bark of the root of Mulbery and Capars three dragms. Boyl them in red Wine.

Or Take *Henbane roots a dragm, white wine half a pint.* boyl them.

Or uſe fumes with a Funnel to the teeth, made of wormwood, Savory, and the like hot herbs, in wine and water, and take the vapor hot, add leek ſeed to make it ſtronger.

Alſo a fume of Sandarake caſt upon live coals, or leek or onion ſeed mixt with pitch and wax to make the fume thicker: the fume of burnt henbane ſeeds is accounted beſt, but it is beſt when the ſeed is firſt mixed with virgins wax.

Somethings are to be applyed to the cheek outwardly, to take away pain.

An Anodine emplaſter. Take *Crums of bread the pap of apples, each three ounces*: boyl them in *milk*, add *lineſeed, oyl of Roſes or of Chamomile, each an ounce, Saffron a ſcruple.*

Or uſe Treacle or other opiats for a plaiſter.

Another approved, Take *the white of an egge*, beat it with *Roſe water* and ſpread it upon flax with a litle pouder of *Pepper*, and apply it all over the cheek where the pain is.

Or thus, Take *the yolke of an egge with Aqua vitæ and a litle Saffron, with ſome meal or flower*: make a plaſter to diſſolve the tumor,

In a hot Cauſe. Take *juice of Nightſhade and Houſleek, each two ounces, Roſe-water and Milk, each an ounce and an half, Oyl of Roſes an ounce*: ſtirr them and dip a clout therein, apply it to the Cheek.

In a cold cauſe thus. Take *roſted Onyons three ounces, oyl of Dill and Chamomile each an ounce, flower of Fœnigreek an ounce and an half*: make a Plaſter.

Or thus, Take *Lilly roots three ounces, Mallows an handful, flowers of Chamomile, Melilot, Dill, each a pugil: Fœnigreek and Lineſeed, each half an ounce: Cabbage ſeed two dragms, Peach kernels or bitter Almonds an ounce.* boyl them in wine, foment the Cheek without, heat the reſidence of the Decoction, and with *oyl of Chamœmel* and *Dill*, make a *Cataplaſme*.

Alſo apply *bagg of Millium or Panicum, Wormewood, Chamœmile flowers, Dill and Salt.*

Juice of Garlick, Rue, Ivy, Daffadil roots: dropt into the contrary eare, Cures the toothach.

Alſo *hot oyls* as of *Rue, Bayes, Coſtus, Earthwormes*, with *Caſtor* boyled therein the diſtilled oyls are beſt.

Or five Ivy berries, boyled with oyl of roſes and pomegranate peels, and the liquor dropt in doth it according to *Diaſcorides*.

A Clove of Garlick peel'd and put into the ear on that ſide the pain is, cureth.

Among Amulets the roots Lepidium hung about the neck, cureth according to *Diaſcorides*.

If a tumor ariſe on that ſide inwardly or outwardly, or on both ſides, and the pain abateth: then it goeth away of it ſelf, or with bags or hot oyls, very eaſily.

If pain increaſe with the tumor becauſe then there is an Impoſtume, the Anodyne Cataplaſme wil do wel to ripen it.

Eſpecialy Barley meal boyled in milk and Olibanum added in pouder, and applied ripens the Impoſtume.

Alſo hot milk held in the mouth in which roots of Marſhmallows, Lineſeed, Houſleek and Lillyes are wel boyled.

The Impoſtume opened of it ſelf inwardly, or by force turnes to an ulcer, which wil cure of it ſelf: or with the remedies mentioned in the ulcers of the mouth, if it come outwardly it is eaſier cured as another ulcer: but if the teeth are rotten and the ulcer reach them, it wil hardly be cured til they are drawn, and there is comonly a disfiguring ſcarr left after the cure.

The Cure of the Toothach from a ſimple cold diſtemper.

If the toothach come from a cool diſtemper from the matter flowing thither, the cure is mentioned in a flegmatick defluxion by hot means: which cureth a ſimple diſtemper: Then take heed of al actualy cold things, as Air meat and Drink and medicines, becauſe cool things are ſo averſe to the teeth, that in a hot cauſe, actualy cool things are not good though they give eaſe, but after rather increaſe the pain.

If toothach come from rotten teeth, it will hardly be cured, and return eaſily, and if a defluxion be, cure it as we ſhewed in a defluxion.

The Cure of toothach from Irritation, from teeth rotten or bound.

If toothach be from hollow teeth: Take heed that nothing gets in, and chew upon the ſound ſide, or chew wax or maſtick afore to fil the hollow, but experience teacheth that that may cauſe as much pain as the meat. And therefore that is better in ſtinking breath cauſed by meat corrupting in the teeth as we ſhal ſhew.

When rotten teeth bring ſuch trouble and pain, upon every light occaſion, and infect their neighbors, eſpecially if they be unuſeful, they either muſt be drawn by the arts mentioned in corrupt bones, or the place under them muſt be made inſenſible: This is done by burning in the cavity with *Aqua fortis* or fig milk, or Spurge or Sory, as *Diaſcorides*, taken in with Wool or Cotten and ſtopt in with Wax from falling out, this done often breaks the teeth out, or burn the rotten teeth with a hot Iron, that the part under may looſe ſenſe, and the tooth fall out.

If any trouble follows drawing, becauſe the teeth wil be bound by things that get in between them, uſe a toothpicker of maſtick wood or juniper, uſe it gently in time of pain, for a litle thing diſturbs, as only the motion of the tongue againſt them when pained, or picking with your fingers, and they who think to abate pain by picking, are miſtaken, and increaſe it rather.

The Cure of Hæmodia or teeth on edge.

If from the edg or roughneſs of the teeth you chew with difficulty, chew purſlain til it be gone, it is a certain and ſure remedy.

Crums of bread or toſted cheeſe or a yolk of a hard egge chewed hot, doth, it but not ſo quickly.

Or Almonds, or Nuts, or Wax and ſalt chewed.

The Cure of Tooth-ach in children that breed them.

If children feel pain when they breed teeth, from the peircing through their gums, then anoint the gums with the brains of a Cony or Hare, boyled in Wine, or with ſweet Butter and Honey, and other gentle mollifying things, often.

Marbiolus ſaith the ſtone found in the head of a Snail without a ſhel, wil do the ſame.

If the Gums are too hard, and hinder the teeth, which cauſeth great ſymptomes, as Convulſions, Fluxes, called *Diarrhœas* and Death, then preſently cut them with a Lancet, this may be done ſafely without fear of inflamation, pain or bleeding: By this means I ſaw a famous Chirurgion cure many.

We ſhal ſhew the cure of other accidents in their places.

The

The Cure of pain from a tooth pulled out or drawn.

The pain that is while the tooth is drawing goes away when it is out, & that alſo that went before, for which cauſe the tooth was drawn. But if it be only moved or broken, it is worſe, and the Patient muſt ſuffer again at the drawing of the ſtump. To ſtay bleeding is dangerous if it continue; and when an Artery is broken, the Cure whereof ſhall be mentioned in Hæmorrhages or Bleeding.

CAHP. IX

Of Pain in the Jaws.

The Kinds.

THe Kinds of pains in the Jaws or Throat, either in the uper Jaw, which is the receptacle into which the two Tonſils meet like an *Iſthmus*, and in whoſe middle there is a Caruncle or lump of fleſh called Gargareon root, or Palate: or thoſe pains which are in the lower Jaw joyned to the Neck, whether in one place or more, or theſe pains which reach to the parts of the Mouth mentioned: are diſtinguiſhed firſt as they move divers Senſes, Somtimes there is a roughneſs only or troubleſome imitation, ſomtimes a true pain, which is either ſtretching, or burning, or ulcerous.

Roughneſs of the jaws.

Roughneſs of the Jaws is moſt hurtful to the Voyce, and therefore declared in Hoarſneſs.

An irritation in the jaws.

Somtimes there is felt an Irritation with endeavor to Swallow or Vomit.

Falling the Gargareon Uvula or Palate

And then either ſomthing itches in the Jaws, or the *Gargareon* or *Uvula* being grown longer and thicker hangs upon the Jaws, and if it ſtop them any way, it cauſeth difficulty of breathing and ſpeech. the enlarging of which is called *Columella* or κιων in Greek, or the falling of the *Uvula*.

A ſtretching pain in the jaws with difficulty of Breathing.

A ſtretching pain in the inſide of the Jaws, when a Cavity appears in the Neck by reaſon of the Vertebra or bone thruſt out, hindereth Breathing of which we ſpake in the defect of breathing. This from the likeneſs of a Squinzy, we called *The ſixth kind of Squinzy*, which is very ſeldom ſeen. There is often this ſtretching pain from a Deſluxion (as we ſhal ſhew in the cauſes) without Burning or Inflammation, ſometimes with ſtraitneſs of Breathing: ſomtimes with hinderance of Swallowing and Voyce: ſometimes with, ſomtimes without a ſwelling in the Jaws, or outwardly in the Neck. And this Diſeaſe is called *A baſtard Quinſie*.

Pariſthmia what.

With the accidents whereof, the tonſils or Almonds ſomtimes ſwel in one or both ſides round like a Ball, and appear open like a Spunge, This is called *Pariſthmia*.

An inflaming pain in the Jaws with difficulut Breathing. A true Quinſie or Cynanch.

There is a Burning, Sharp, and Pricking pain, alſo in the Jaws in the Diſeaſe called *A true Quinſie* with difficulty of Breathing, which is ſmall and often, and fetcht with ſighing, ſometimes that endangereth Suffocation, ſo that Breath cannot be fetchr but by holding the Neck upright, & men gape like tired or mad Dogs. This Diſeaſe is called *Cinanch*. In this ſwallowing is hindered, & Drink comes forth at the Noſe, or it is ſwallowed with difficulty, & the endeavor increaſeth pain. There is often a Fever joyned with it, and the accidents thereof, as Heat, Redneſs of Face, Thirſt ſeen alſo by the Pulſe and Urin. There is ſomtimes a manifeſt tumor, ſomtimes not, for which cauſe there are three ſorts of Quinſies: for if there be no tumor nor Inflammation within or without, it is the firſt time in which are the worſt accidents: But if a tumor appears in the ſtraitneſs of the Jaws, it is the ſecond kind and hath great ſymptoms, but if there be an outward tumor in the Neck, it is the third kind, and the ſymptoms are leaſt.

Antiades

Uva or Uvula.

There is a tumor with Redneſs and Heat in in the tonſils or Almonds, this is called *Antiades*. Somtimes this pain is in the roof, and is called *Uva* or *Uvula* when it ſwells or grows black with Inflammation. In theſe the accidents are mild, as in the gentler Quinſie, except that meet with it. If the Inflammations in theſe three places turn to Impoſthumes, pain and other accidents increaſe, and when it is broken they abate and an Ulcer followeth.

Conſumption of the Roof.

Somtimes there is an ulcerous pain in the Jaws, either in the upper part of the throat, or in the Almonds or roof, with an Ulcer reaching to the Palate, and ſomtimes the roof is conſumed wholly in part, or this pain is felt below, or deep, and follows the Quinſie mentioned, and matter is ſpet forth. Or if it come alone, the pain reacheth downwards to the ſtomach with great burning, eſpecially when they ſwallow, which is hindred: But when it is in the upper parts it hinders ſwallowing, breathing, and voyce alſo.

The Cauſes.

The part affected.

The Cauſe of theſe Diſeaſes, namely of Moleſtation with Irritation (we ſpake of roughneſs of the Jawes elſewhere) and of pains, with Diſtenſion, Inflammation and Ulcer, is either in hidden parts, as in the muſcles of the Jaws and parts adjacent, or in the lower Glandules joyning to the rough Artery, or in the paſſages through the inſide of the Neck, *Oeſaphagus* or Gullet (for the Diſeaſes of the rough Artery are deſcribed in defect of Breathing) Or is in manifeſt places of the Jaws, as in the tonſils roof or the tunicle by which it gets often to the Palate. The cauſe of all theſe pains is either a Flux of Blood or excrements, or ſolution of continuity. Of ſolution of Continuity, we ſpake in Defect of Breathing, how it comes from a Vertebra or Bone ſtarted in the Neck, which cauſeth ſixth kind of Quinſie.

Inflammation of the Jaws, Tonſils, Roof, is the cauſe of a true Quinſie, the Antiades or Uvula.

If Blood fall into the Muſcles of the Jawes it cauſeth a true Inflamation or Quinſie, which is gentler or worſe, as the Flux is more inward or outward. for if it fall upon the inward Muſcles of the *Larynx*, Jaws, and bone called *Hyodes* which ſerve for Breathing, Voyce, and ſwallowing, becauſe the pain is great, and as it were ſuffocating, it cauſeth the firſt and worſe ſort of quinzy. But if it fal upon the outward muſcles of the neck, it leſs hindereth thoſe offices, and cauſeth a gentler quinzy, which manifeſteth it ſelfe with an external tumor, which

which is the third ſort. But if the Defluxion fall upon both inward and outward muſcles, it is between both, & cauſeth the ſecond ſott of Quinzy, in which the tumor is not ſo hidden as in the firſt, but may be ſeen in the inſide of the Jaws: Thus we better diſtinguiſh Quinſies, than as the Defluxion falleth upon this or that Muſcle for they being hidden it cannot be diſcerned by us upon which they fal) to call them *Cynache*, *Paracynanche*, *Synanche*, *Paraſynanche*. Moreover if the blood flow rather upon the Glandules on both ſides of the rough Artery, which are eaſily inflamed by reaſon of the veins into which they are wrought, there is a kind of Quinſie (and rather becauſe the Muſcles adjacent are alſo inflamed) better or worſe as the Inflammation is ſpread in thoſe muſcle. If the Defluxion falls upon the upper Glandules or tonſils, or upon the Weaſand, it cauſeth the Inflammation of thoſe parts called *Antiades* and *Uvula*. theſe Inflammations ſpread to the parts adjacent, and are more uſual than a Quinſie, becauſe the Blood wil ſooner flow to theſe loſe Glandules that have many great Veins than to other.

The Inflammation of the Gullet and its Cauſes.

If it fall upon the Gullet or *Oeſaphagus*, which is ſeldom, it cauſeth a far greater pain, eſpecially in ſwallowing, from the beginning of the Gullet to the very Stomach, but not with ſuch difficulty of breathing, except it extend to the parts adjacent.

The Cauſe of this Flux of Blood and Inflammation that cometh from thence is the ſame with that of other Inflammations, namely plethory or fulneſs of Blood, or Heat, or thinneſs of the ſame, which ſends it ſelf thither rather than to another part by reaſon of the diſpoſition of the place: this comes often from a Synoch Fever, when the Blood is firſt burnt in the Veins, and then a part therof is ſent thither (as I ſhewed in Fevers) hence Quinſies and Inflammations of other parts, as Gullet, Mouth, Tongue, are the ſymptoms of theſe Fevers, that begin with them, or come preſently after them. Alſo Blood carried thither from other Cauſes may make Inflammations in the Throat, but a Fever is not joyned therewith, except it come from other Cauſes. But it may come from the pain which theſe parts receive from other Diſeaſes, or from Inflammation of the Jaws, by actually or potentially hot things, as Pepper, Cuckowpints, Laurel, given in jeſt ſometimes. Or from very cold Drink while the body is hot, by reaſon of the ſudden repercuſſion, when the blood flieth back and returneth again with force, becauſe the blood is ſtir'd up and ſent out of the Veins; except it come from a Synoch, as we ſaid: Alſo I obſerved that this came from too much ſtraining in Child-bearing, the blood being driven to the upper Veins of the Neck in a Woman that died. And it is probable that it may come from other ſtrainings, roaring, or holding breath at going to ſtool.

A defluxion into the Jaws, Tonſils, Palate, is the cauſe of a Baſtard Quinſie, falling of the Almonds, and Uvula.

A Humor falling from the Head, under the tunicle of the Palate, if it be carried to the Muſcles of the Throat wil cauſe a Baſtard Quinſie: which is ſtronger or weaker, as the Flux is upon the inward or outward muſcles, as we ſhewed in the Flux of Blood: and for that Cauſe wil cauſe a tumor more or leſs apparent, but if the Flux fall upon the upper Glandules or Tonſils, or the Palate only, which being a looſe and ſoft piece of Fleſh eaſily receive the humors, it will cauſe the *Pariſthmia* and *Columella*.

The natural and efficient cauſe is the ſame with that of all Defluxions, the adjuvant or helping cauſe is a fitneſs of the parts to receive it, becauſe they are cloſe under the Head, or becauſe they are looſe or weak: and they are ſooner hurt if they have formerly been offended from other Cauſes.

An Ulcer in the Jaws Tonſils, or Almonds, Palate, Gullet, is the cauſe of an ulcerous pain and Conſumpion of the Palate.

The Solution of Continuity cauſeth pain expreſſing the ſenſe of an Ulcer. This is an Ulcer, an Excoriation, or Rawneſs, or Wound in the Jaws from divers cauſes. An Uulcer comes often after the ſaid Inflammations of the Jaws, Tonſils and and Palate ſuppurated and turned to an Impoſthume after breaking. or from a ſharp defluxion that firſt cauſed a tumor, or preſently exulcerated, there comes an Excoriation of the tunicle of the Jaws, Tonſils or Gullet, which infects the Palate, and ears upon other parts adjacent. Alſo it may come from a malignant matter which ſeizeth upon the membranes ſo much in the Leproſie and French Pox, hence come thoſe ſtubborn Ulcers in the Palate, and Jawes, and Noſtrils, that eat up the Glandule and Uvula. Alſo the Gullet may be cleft and excoriated from Vapors that are hot and ſharp in malignant and ſharp burning Fevers, from whence they may feel pain a long time after in ſwallowing, down to the Stomach. Alſo a pain in the Gullet may be from ſharp and pricking things fallen by chance into the Jaws and Gullet, that wouud them, and the greater if there be an Inflammation. If theſe wounds come externally they ſhall be ſpoken of in external wounds.

A Wound in the Jaws and Gullet, cauſeth an ulcerous pain in them.

The Cure.

Prædiction or Foretelling.

If theſe diſeaſes come from a defluxion of humors upon the parts of the jaws, and there is Inflamation in the firſt ſort of a true Quinzy, it is very violent and kils in eighteen houres ſpace, the other is ſharp and is judged the ſecond third or fourth day at fartheſt; The hope of Cure is more when the tumor is outwardly, and admits of applications, and may be better cleanſed when broken. The third is leſs dangerous, becauſe the tumor is outward. That which is in the lower Glandule is more or leſs doubtful of Cure, as it is joyned with any kind of Quinzy. The ſafeſt is the Inflamation of the Tonſills and Palate becauſe they are more viſible, or of the Gullet to which Remedies may be ſwallowed, except the Inflamations bring greater danger by ſpreading to other parts. But if a Defluxion of any other humor cauſe a baſtard Quinzy, it is not without danger if it obſtruct inwardly, that is better which extends outwardly and cauſeth a tumor in the Neck. That humor that fills the Almonds and Pallate is eaſier cured.

The Cure of a true and falſe Quinzy, Pariſthmia, Uvula Columella, or Gulet inflamed or ſwallow, by taking away the Cauſe.

As for the Cure, it differs as the Defluxion is of blood, or an Inflammation of the Jaws, or Almonds or Tonſill or Palate or Gulet the cure of which agrees in many things, or as the Defluxion is of another humor upon the Jaws in a baſtard Quinzy, or upon the Tonſills or Uvula or Gulet, then the cure differs from the former. In al we proceed as followeth.

In every Inflamation of the Jaws, or any part of them a vein is to be opened when it is great, or to preven-

vent it from being great, especialy when the body is plethorick, in a Quinzy especialy it must be quickly done, open a vein in the arm first for revulsion, that that which is most visible or the cephalike or head vein which is most usual, or that by the thumb, bleed soundly, and if need be often, *Hippocrates* perscribes the vein under the breasts to be opened for women, or that in the foot, if their courses be stopt. In women with child bleed also but sparingly, after revulsion open that vein under the tongue for derivation, the same day, or presently after, because the disease is acute. *Archigenes* opens the forehead vein, others that in the neck. In a cold Defluxion if there be pain or streightness, bleed also.

Cupping glasses to the shoulders neck and under the breasts, do the same, especialy if they be placed in a Quinzy in the top of the neck upon the second *Vertebra*, that they may breath and swollow better and they are better with scarification, which is good also under the Chin and in the Cheeks, also Horsleeches may be applyed instead thereof, and in great necessity, Veficatories and Caustick, to the neck or head, this is done by way of prevention to those that are subject to this disease, all these are good in other Defluxions.

Also Frictions and Ligatures and washings are good in al Defluxions, to cause revulsion.

We apply to the head things that stop fluxes, and strengthen it, after purging.

An Emplaster for the crown or hinder part of the head, Take *Pitch two dragms, Frankincense, Mastick, Labdanum each a dragm, with Gum Ammoniak dissolved in Vinegar*: Make a large round plaster.

A stronger drawer, Take *Pigeons and Mouse Dung two dragms, seeds of Melanthium infused in vinegar a dragm, Frankincense, Mastick, each a dram and half, with Galbanum dissolved in vinegar and honey anacardine.* Make a Plaster.

A Pouder for the Head morning and evening, after rubbing and combing: Take *Mastick, Gum of Ivy each a dram and half, Citron peels, Galangal, red Roses, Organ, Gith seeds, and Cortander prepared in vinegar, Bay berries, red Saunders, each a dram, Nutmegs and Cloves each half a dram, grains of Kermes two scruples, Salt a dram.*

When other medicines cannot be swollowed, use Clysters, before bleeding, and after if need be, to provoke stools and draw down humors.

If the Inflamation of the Jaws come from flux of blood, of what kind soever, give emollient and cooling Clysters as in Fevers, as this: Take *the common Decoction, Cassia an ounce, course Sugar an ounce and an half, oyl of Violets three ounces, with a little Salt.*

When you wil provoke more and draw down, Take *Mallowes, Beets roots and all, an handful, Bran a pugil*, boyl them: add *Honey of Violets, an ounce and an half, Electuary of the juice of roses half an ounce, Hiera picra two drams, oyl of Violets three ounces, with juice of Mercury or Beets an ounce, and a little Salt*, make a Clyster.

If a bastard Quinzy come from a wateriſh defluxion, or swelling of the tonsils, or falling down of the Uvula, use Clysters prescribed in those Defluxions.

Or this, Take *Mallows, Marsh-mallows, Arrach, roots and all, each an handful, Orris roots an ounce, Sage and Marjoram, each half an handful, Chamæmel Melilot and Lavender flowers and Bran each a pugil, Carua seeds two drams*; boyl them, add *Hiera Colocynthidos three drams, Honey of Roses two ounces, oyl of Chamæmile and of Nuts, each an ounce and an half, with Salt*, make a Clyster.

we use Errhines to the nose to divert Flegm from the tonsils and Palate, or masticatories that cut Flegm, and fetch it from the Jaws.

Somtimes instead of Clysters we give if they can swallow liquid things, in Inflammations of Cassia, Tamarinds, Manna dissolved in syrup of Roses, Violets and the like; as in Fevers. In other Defluxions stronger Remedies are given, as Hiera Picra commended in a Bastard Quinsie two scruples, in Pils, after a short Supper, they say it cured many of the Quinsie in *Rome* when it was deadly. Also a Decoction of a dram of Turbith with Liquorish, Manna, or Cassia is good if often given.

Prepare the humors with thickners if it be hot, as syrup of Violets, Poppies, an Emulsion of Cold seeds, Rose water, or Diacodium, and other things in a Catarrh.

Or if the Defluxion be cold give things to correct it, as syrup of Maidenhair, Bugloss, or Scabious water.

Or thus: Take *Liquorish an ounce, Maidenhair, Bugloss, each a handful; Violets & Scabious, each a pugil; Raysons stoned, Jujubes, Sebestens, each six pair, Barley a pugil, the four cold seeds, each a dram and an half*: boyl them, and in *a pint and an half* dissolve *simple Oxymel* and *Honey of Roses each an ounce and an half*; *Sugar an ounce*: make a *Julep* for three or four *Doses* with *a dram of Diatragacanth frigid.*

Also the Decoction and Water of Violets.

In a cold cause, give syrup of Hysop, Horehound, and Liquorish, with Colts-foot and Horehound Water.

Or thus: Take *roots of Elicampane two drams, Liquorish six drams, Hysop a handful, Figs ten, Dates five, Anise seeds two drams, Rosemary flowers a pugil*: boyl them, and in *a pint and an half* dissolve *Honey of Rosemary two ounces, Sugar an ounce and an half*; *Sugar candy an ounce*, make a *Julep* for some Doses with a dram of *species Diareos.*

The Topicks for a true and false Quinsie.

To the place affected we apply Topicks inwardly and outwardly, inwardly Mouth-waters or things to lick, or Fumes, outwardly things to the Neck, as the part is affected.

In a Quinsie from what Defluxion soever, you must use Repellers at the beginning, while the matter flows, with Coolers if it be true; or without, if it be a false Quinsie. after a Defluxion add Concocters and Resolvers, which we use alone at last. alwaies while there is pain and straitness, give Lenitives to asswage pain and dilate the passages with other things, and things which clense and cut tough flegm which useth to stick there in a cold Defluxion. the examples are as followeth.

At the first give Repellers. the first Gargarism. Take *Rose, Plantane, Honey-suckle water, each four ounces*; add *Vinegar* or *Pomegranate Wine or the juyce of sour fruits, and two ounces of Diamoron or Honey of Roses.*

Another: Take *Plantane water four ounces, Rose water two ounces, Sugar of Roses or Honey of Roses an ounce, Allum a dram*: boyl them a little or dissolve.

A third: Take *Pomegranate peels, flowers of Pomegranates, Cypress nuts, each an ounce*; *and Teazle, Galls half an ounce, Lentiles, red Roses, each a pugil*; *Myrtle seeds half an ounce, Plantane seeds two drams*: boyl them in *Water* and *Honey* and in a pint dissolve *Diamoron, four Pomegranate Wine four ounces*, add a little *Allum* to make it stronger, *Repelling Pouders* are blown in, as of *Plantane leaves* and *red Roses* and the like.

In progress of the Disease use Repellers and Dissolvers together: As, Take *water of Self-heal, Plantane, Willow, each three ounces, Cassia, Diamoron, each an ounce.*

Or: Take *Liquorish an ounce, Cypress roots, peels of Pomegranates, each half an ounce*; *Pomegranate leaves two*

drams, red Roſes a pugil, Figs ſix, Dates three, Raiſons twelve pair, Jujubes and Sebeſtens, each ſix pair; Barly a pugil, Fœnugreek and Lineſeed, each half an ounce: boyl them, and in a pint, diſſolve *Diamoron compounded with Saffron and Myrrh two ounces, Caſſia and Oxymel each an ounce.*

The juyce of Ivy drunk from three drams, to half an ounce, is good to repel and digeſt. This Plant is ſo powerful in Diſeaſes of the throat and Neck, that the Vulgar think Spoons made of Ivy do good.

At length uſe Reſolvers, and Concoctors and Cleanſers.

Thus a Gargariſm. Take *water of Dwarf-Elder and Self-heal water, each an ounce; Hyſop and Roſe water, each two ounces.* Or this Decoction. Take *Liquoriſh an ounce, roots of Dwarf-Elder and Radiſh, and Oris, each half an ounce; red Roſes, Mallows, Chamœmel and Elder flowers, each a pugil; Hyſop half a handful, Radiſh ſeed two drams, Fœnugreek ſeed half an ounce, Figs ten, Dates five, Bran a pugil*: boyl and in ten ounces diſſolve *Sapa, Honey of Roſes, each an ounce and an half; Swallows neſt, two drams, Myrrh, Mummy, each a dram; Saffron, Sal Armoniack, each half an ounce.*

Or this: Take *ſpecies of Diaireos a dram, Pepper half a dram, Saffron and Myrrh, each a ſcruple; Juyce of Liquoriſh a ſcruple, with ſyrup of Hyſop two ounces*: make a *Lenitive.*

Or thus: Take *Pepper half a dram, Saffron and Myrrh each half a ſcruple; Orris roots a dram, Honey three ounces,* mix them. Or uſe the Eclegma of *Scribonius Largus.*

A white Dogs-turd called *Album Grecum* finely poudered and blown into the Mouth, or mixt with theſe Eclegma's is excellent, or with ſyrups. A Gooſe-turd dried doth the ſame.

Alſo the pouder of ſalted and dried Swallows a dram, with convenient Water is good according to *Dioſcorides.*

Or a dram of the pouder of a Boars tusk with Linſeed Oyl.

Or the Smoak of Amber taken in with a Funnel.

Or theſe Lenitives and Dilators when there is pain and ſtraitneſs.

As a Gargle of hot Milk, Goats is beſt.

Another. Take *Milk half a pint, the white of an Egg well beat, the mucilage of Fleabane, Quince or Line ſeed each an ounce, Penidies half an ounce.*

Bran or Bread boyled in Water and ſtrained or Almond milk doth the ſame.

The common white Troches are good alſo to be held under the Tongue.

Or: Take *ſpecies of Diapapaver or Diatragacanth frigid, each a ſcruple*; with *pulp of Tamarinds*, make *Troches.*

Or hold troches of Diapapaver or Diatragacanth frigid in the mouth.

Or this Eclegma. Take *ſpecies of Diatragacanth and Diapapaver each a dram*; with *ſyrup of Violets and Jujubes* make a *Lohoch.*

Lenitives that cleanſe the ſlime are thus made. Take *Liquoriſh two ounces, pulp of Raiſons two drams, juyce of Liquoriſh half a dram*, with *Gum traganth* infuſed in *Poppy water*: make a *Lohoch.*

Another in the progreſs of the Diſeaſe. Take *ſpecies Diapenid and Diaireos, each a dram*; with *ſyrup of Hyſop* make a *Lohoch.*

Apply outwardly to the Neck or under the Chin, or where a tumor appears at the firſt, not things that repel, but that draw forth, as theſe relaxing.

As temperate Oyls, of Olives, ſweet Almonds, Violets: or moderate warm, as Oyl of Chamœmel, Lillies, Orris, Wall-flower, and the like: anoynt the parts and dip Wool therein and lay thereupon. *Dioſcorides* commends Oyl of Frogs, or of Wood-lice, or Sows.

Alſo Oyntment of Marſhmallows, and that which reſtoreth called Reſumptivum, with thoſe Oyls and a little Saffron.

Menſtrual Blood with Vinegar is good againſt all Inflammations of the Jaws and parts adjacent. Alſo the leaves of Horſ-radiſh.

Uſe Fomentations firſt before you anoynt, made of flowers of Chamœmel, Lillies, Melilot, Linſeed and Fœnugreek.

But when you deſire not only to draw out the humors, but alſo to dry, Conſume and Digeſt, uſe the following.

Make a Pultis of a Swallows Neſt cleanſed and poudered, and boyled in Wine and Water, and ſtrain or mix the pouder with the Oyls and Oyntments mentioned. if you wil Digeſt, apply it with Honey.

Swallows dung in Pouder, or the Aſhes of it burnt, mixed with the reſt, or applied with Honey, or a dried Dogs-turd, or Birds dung, chiefly of Hens and Pigeons: For it is neither neceſſary nor decent to apply Mans dung when other wil ſerve.

Alſo uſe Sows or Wood-lice dried and poudered with Honey.

Other Digeſters. Take *Aloes two drams, Ox Gall a dram, Pepper half a dram, Allum a dram*, with *Honey* make a *Liniment.*

Another. Take *juyce of Danewort and wild Cowcumber, two ounces, Ox Gall half an ounce*: with *Honey* make an *Oyntment.*

Rhaſis uſeth Honey Anacardine.

Another. Take *juyce of Danewort two ounces, juyce of Onyons an ounce, juyce of wild Cowcumbers as much* (if it may be had) *Oyl of Flower-de-luce and Lillies, each an ounce and an half*; boyl them, add *Swallows neſt prepared half an ounce, Litharge a dram and an half*: with *Wax* make a *Liniment*, or with *Wax* and *Pitch* make a *Plaſter.*

Or this Cataplaſm. Take *Lillies and Onyons, of each three*; roaſt them, ad half as much of a *rotten Apple* and a handful of *Wormwood*, boyl them in *Wine* and *Water* beat them, and with *Bean flower two ounces, Oyl of Chamœmel and Wali-flower, each an ounce and an half*; *Hens or Pigeons dung two ounces*, make a *Cataplaſm.*

The Cure of an Impoſthume in the Quinſie.

If an Impoſthume come in a Quinſie, as we may know by the pain and other accidents increaſed, and the humor cannor be Digeſted or Reſolved by the Remedies internal or external mentioned, uſe Maturatives or Ripeners inwardly and outwardly.

Inwardly we ripen with this Gargle. Take *Lillies, Onyons, or Leeks, each two ounces; Liquoriſh an ounce, Hyſop, Scabious, each a handful*; *Figs ſix, Raiſons ſtoned an ounce, Fœnugreek and Linſeed, each half an ounce; Mallow and Colewort ſeed, and Swallows neſt, each two drams*: boyl them in *Water* and with *Honey* make a *Gargle.*

Outwardly ripen with theſe.

Apply a Pultis of Line-ſeed meal with Goats Milk.

Or thus: Take *meal of Fœnugreek and Line-ſeed, each two ounces*; *crums of Bread four ounces*, with *Hogs greaſe and Oyl of ſweet Almonds* make a *Pultis.*

Or this Cataplaſm. Take *Marſhmallow, Mallows roots and all, Henbit and Pillitory of the Wall, each a handful; green roots of Lillies two ounces, green Orris and Briony roots an ounce, Chamomel flowers and Violets, each a pugil*; *Figs twelve, Dates five*: boyl and ſtamp them, add

meal

meal of Line-ſeed, Fœnugreek and Barley, each two ounces: with Butter and Hens greaſe, Oyl of ſweet Almonds and Chamomel, mix them.

If the Impoſthume in a Quinſie break not, you muſt endeavor to open it before it be perfectly ripe.

With this Gargle, hot uſed. Take *juyce of Onyons or Leeks and Lemons equal parts, with Goats milk.*

Or: Take *of the Gargle mentioned a pint,* add and boyl therein *Pellitory roots and Muſtard ſeed, each two drams; Myrrhe half a dram, Saffron a ſcruple, Oxymel ſimple an ounce.*

This is ſtronger. Take *of that Junket that is made of Muſtard and Honey,* diſſolve it in *Honey* and *Water,* and with a little *Vinegar* make a *Gargle.*

Or: Take *Muſtard ſeed two drams poudered, Oxymel an ounce, Vinegar of Squils and Wine, each half an ounce:* make a *Gargle.*

Vociferation or Roaring may do ſomthing to break it, but ſwallowing may do more, if it be with great force, and of ſomthing that is hard as a cruſt of Bread.

Or: Take *a Spunge or a piece of ſalt Pork* and tied to a thred faſt, let it be ſwallowed down and drawn forth again.

We open the Impoſthume if it can be ſeen and reached, with an Inſtrument, or with the Finger or Nayl, or a wax Candle, or other wooden or Iron Inſtrument that wil cut.

Remedies for the Tonſils or Palate inflamed, or for the Antiades or Uvula.

In the Inflammation of the tonſills and Uvula, we firſt uſe inward medicines as in the Quinzy, which are aſtringent, after reſolvers, and at laſt things only to be ſwallowed: alwayes mixing things that clenſe by reaſon of the ſlime that ſticketh there, and that mitigate pain if it be great, ſo that many medicines mentioned in the Quinzie are here good, and ſuch as are mentioned in the Inflamations of the parts of the Mouth, or theſe.

An aſtringent and cooling Gargle, Take *Roſe and Honey-ſuckle water, Privet and Plantane water, each two ounces; Juice of Barberyes, or Pomegranates, or ſower Cherries three ounces, juice of Quinces, Roſes or Sorrel, each an ounce; ſyrup of Mulberies, Vinegar of Roſes or green Grapes half an ounce.* mix them.

An aſtringent and cooling Gargle Take *ſower Prunes dry twelve, ſharp Cherries twelve paire, dried Pears five, Sorrel, Purſlain each an ounce, red Roſes a pugil.* boyl them in a pint add *juice of Currans and ſyrup of Mulberies each two ounces, Vinegar of Roſes as much as fit.*

When you wil bind more, Take *roots of Mulberries an ounce and half, Acorn cups,* Pomegranate Peels, *each an ounce; Bramble tops,* Plantane, *Agrimony, Solomons-ſeal Shepheards purſe, Harts tongue, each a handful and half, red Roſes a pugil, Pomegranate flowers half an ounce, Galls two drams,* make a *Decoction,* in a pint thereof diſſolve *ſyrup of Quinces and red Roſes dried, Pomgranate wine each an ounce and half, with a little Allum.* mix them.

Cardan comends this following remedy for al Inflamations of the Jaws, drineſs aud Clefts of the tongue.

Take *a good quantity of Houſleek, and to halfe a pint of the juice, add Salt Ammoniak two drams, put it in a moiſt place under the earth til the Salt be diſſolved, then diſtil it in Balneo and waſh the mouth in all Inflamations of the Jaws.*

In the Inflamation of the *Uvula,* a Pouder is made of the ſtone called *Ageratum* by *Galen* or the blood-ſtone, this muſt be laid upon the *Uvula,* or blown in with a quil.

When you wil aſtring and clenſe alſo; Take *Liquoriſh two ounces, Agrimony, Vervain, Coletworts each an handful; red Roſes and Mallows, each a pugil; Barley, Lentils leaves bruiſed, each half a pugil: Figs ſix:* boyl them in *red Wine* and *Water,* and in a pint, diſſolve *Oxymel ſimple three ounces, Dianucum half an ounce, juyce of Roſes an ounce, ſyrup of Quinces an ounce.*

You may make Lohochs to clenſe mentioned in the Quinſie, and Sugar'd or Honeyed Biskets.

When you wil Clenſe and conſume the reſidue, or Digeſt. Take *Liquoriſh two ounces, Calamus and Galangal half an ounce, Hyſop, Pennyroyal, Savory, each a handful; Roſemary flowers, Violets and Mallows, each a pugil; Barley a pugil, Raiſons ſtoned two ounces, Dates ſix, Figs twelve, Myrrh and Frankincenſs, each two drams;* boyl them in *red Wine* with *ſteeled Water,* and in a pint, diſſolve *Honey of Roſes three ounces, ſyrup of Liquoriſh two ounces, ſyrup of Hyſop an ounce:* make a *Gargariſm.*

A Digeſting pouder in the increaſe of an Uvula inflamed. Take *Orris half a dram, Frankincenſe a dram, meal of Orobus half a dram, Saffron a ſcruple:* make a *Pouder.*

Topical Remedies for the Pariſthmia or ſwelling of the Almonds.

In the Swelling of the Almonds from a flegmatick Defluxion, the former Remedies are good: but you muſt uſe leſs Coolers, and mix Clenſers and Digeſters.

Topical Remedies for the falling dotwn of the Palate or Columella.

In the looſneſs of the Uvula from a cold Defluxion you muſt preſently uſe Aſtringents and Dryers to make it ſhorter, and bind it that it may not fall down, as thoſe mentioned or theſe following.

A Gargle. Take *roots of Celondine an ounce, Agrimony, Harts-tongue, Self-heal, Golden Rod, Privet, each a handful;* boyl them in *red Wine, red Roſes and Barley, each a pugil; Galls half an ounce,* boyl them in *red Wine,* add a little *Vinegar,* and *ſyrup of Mulberries an ounce.*

Or: Take *Pomegranate peels two ounces, flowers of Pomegranates half an ounce, red Roſes, Lentils, each a pugil; Myrtle ſeeds two drams:* boyl them as formerly, in the increaſe of the Infirmity, add a little *Pepper,* and *Pellitory roots,* and *Chamomel flowers.*

The Water of Phyllitis or Harts-tongue is a good Gargle.

Or Vinegar and Water.

Alſo juyce of Pomegranates and four Grapes,

Troches to be held in the Mouth. Take *Acacia Hypociſtis, each a dram and an half; the beſt Bole a dram Starch two drams, Sinakeweed half a dram,* with *Gum Tragganth* make *Troches.*

If you take fine pouder that is aſtringent in a little Spoon, or upon a Spatula, and depreſs the Tongue and touch the Uvula therewith, it wil preſently be made ſhorter.

It is commonly made of Pepper, the long Pepper is beſt.

Or of Allum or Salt Armoniack burnt, or flour of Braſs according to *Dioſcorides.*

Or: Take *as much Salt as an Hazel Nut,* burn it in an *Iron ſpoon* til it be red, add *long Pepper a dram, Ginger and Pellitory, each half a dram;* make a *Pouder.*

Alſo burnt Snails ſhels, Dill roots and all, and Nut-ſhels burnt are good.

Or the Pouder of Sandarach.

Or: Take *Galls, or Pomegranate peels a dram, Bole, Maſtick Myrrh, Acacia or Hypociſtis, each half a dram; Pellitory and Pepper, each a ſcruple:* make a *Pouder.*

I have often found the Pouder of *Lapis prunellæ* is a ſpecial Remedy againſt the falling of the Uvula, becauſe it ſqueezeth forth the Humors that fils it.

As for the Cutting we have already ſpoken thereof.

If

If the Defluxion be only upon the Tonſils or Almonds or Palate, we apply outwardly firſt things under the lower Jaw, as relax not, as in the Quinſie: for there is not ſuch danger, that we need draw it ſuddenly forth; but ſuch as dry the humor and aſtringe or bind the part.

They are made of Conſumers of the Humors and Digeſters, with ſome Aſtringents mentioned in the Quinſie.

Or thus: Take *a Swallows neſt prepared two ounces, dried white Dogs dung and Cypreſs Nuts, each an ounce; round Birthwort half an ounce, red Roſes a dram,* with *Oxymel* apply them.

Or: Take *Swallow neſt prepared an ounce, Litharge half an ounce, Aloes three drams, Allum two drams, Salt a dram,* with *Honey of Roſes or Oxymel.*

In the increaſe of the Diſeaſe, uſe only Digeſters or Emollients leſt it turn to a Scirrhus, as in the Scrophulus, and if the tumor doth turn Scirrhus, then uſe things to be mentioned in Scrophulus.

If the Inflammation or Uvula turn to an Impoſthume of the Almonds, uſe Ripeners as in the Quinſie.

And open the Imopoſthume if ripe, which is eaſie, becauſe you may come better at the part.

This may be done in the Uvula, and alſo before the ſuppuration to prevent it, by Scarification.

If the Uvula cannot be cured, but remains corrupt, and black, after the Inflammation, take off the corrupt part. Or if it remain longer or greater by reaſon of the Defluxion, take off the top of it, becauſe it cauſeth impediment.

This is done beſt by a ſharp pair of Sizers, this done ſtop the blood with cold and aſtringent Mouth-waters or Cauſticks, as we ſhal ſhew in Hæmorrhages or bleeding.

The ſame is done by an actual cautery, through an Iron quil, if you allay the pain after with Anodines, or Milk held in the mouth, but a potential cautery cannot be uſed ſo wel.

In the Inflamation of the Gullet, uſe Aſtringents at the firſt, then Digeſters inwardly as we ſhewed, or theſe Lenitives.

Topical remedies in the Inflamation and Impoſthume of the Gulet.

Take *Cream of Barley, Mucilages, the white and yolk of Eggs,* and ſwallow them with *Sugar.*

Or Take *Sebeſtens twelve pair, Quince ſeeds half an ounce, Fleabane and Poppy ſeeds each two drams, Barley a pugil:* boyl them, and in the *Mucilage* diſſolve *Penides.*

It is good alſo though the Gulet ly deep, to apply outwardly things, preſcribed againſt Inflamation of the Jaws.

If there be an Impoſthume after Inflamation in the Gullet, and break not, things ſwallowed againſt the Quinzie are good, and the Impoſthume may be opened with an Inſtrument, ſuch as we mentioned in the difficulty of ſwallowing, for drawing things out of the Gullet.

It is good in all Inflamations of the Jaws, and parts thereof, to put oyl of ſweet Almonds hot into the ears.

Amulets are allowed as the head of a Viper hung about the neck.

Or if you ſtrangle a Viper in a ſcarlet ſtring, and after hang the ſtring, about your neck, it wil do miracles, in this caſe, according to *Galen.*

Alſo hang *Pæony* roots about the neck.

Or Colewort roots for the diſeaſes of the *Uvula.*

As for other accidents eſpecially in a Quinzie, we allow a ſlender Diet; And Drink to allay thirſt, if they can ſwallow with *Barley, Raiſons and Sugar.*

we allow but little Sleep, and let the Ayr be pure and cool.

For fear of Suffocation, let the Patient ly with his head high, and apply other things to the cauſe of the diſeaſe, to preſerve ſtrength, and to take away ſtraitneſs of paſſage.

Topical remedies againſt an Ulcer after an Impoſthume, in a Quinſie.

If there be an Ulcer after an Impoſthume in the Quinzie, known by the matter voided, take heed leaſt it get to the *Lungs,* and ſwallow it not but ſpit it out continualy.

Therefore cleanſe the Ulcer diligently, with Gargles of Wine and Honey.

Or with *Milk,* or warm *Whey* and *Sugar.*

Or with *Barley, Lentile,* and *Figg water,* with *Honey* of *Roſes.*

Then uſe driers as *Steeled Milk,* or *Milk* with *Comfrey* roots boyled in it, or mixed with *Bole,* or other things to be mentioned in ulcers of the Jawes.

If the Ulcer come outward it muſt be cured as other external Ulcers.

The Topical remedies for the Ulcers of the Almonds and Palate.

If there be an Ulcer left after Suppuration of an Inflamation of the Almonds and palat, or other external cauſes, preſently apply topical means. But if it come from evil humors in other diſeaſes, cure that diſeaſe firſt as ſhal be ſhewed.

As if it came from a Defluxion, firſt purge the body for that and make other diverſions as in other Defluxions, as we ſhewed in other diſeaſes of the Jaws from Defluxions.

With the aforeſaid topical Clenſers and Driers being ſtrong, as we ſhewed in Ulcers of the mouth, we may cure theſe profound or deep Ulcers, or with theſe following proper for the Palate ulcerated or rotten.

As Goats milk, or Cows, or Sheeps milk, with Flints or Steel quenched therein, it will clenſe and heal the Ulcer.

Comfry, Agrimony, Plantane, Nightſhade, and Endive water are excellent.

Alſo juyce of Agrimony, Coleworts, Vervain, Shepheards-purſe and ſyrup of Mulberries.

Or the Decoction of Dogs-tongue, and Herb Robert Danewort, and Burnet.

To which Waters, Juyces, or Decoctions, add Sugar or Honey of Roſes to clenſe more; and they will be ſtronger with Oxymel of Squils and Allum.

Alſo apply to the Uvula Honey of Roſes and Allum.

Alſo to dry ſtrongly. Take *fine Bole two drams, Dragons blood a dram, Ceruſs, Tutty, each half a dram; burnt Harts-horn a ſcruple:* with *juyce of Shepheards-purſe,* make a *Liniment.*

Or boyl Frankincenſe, Sarcocol, or Myrrh in Wine and waſh.

Or uſe Allum water preſcribed in Ulcers of the Mouth.

Or this: Take *Sugar half a pound, Allum two ounces, Salt an ounce:* diſtil a *Water.*

Or uſe Lime-water, that is Water with Lime quencht in it.

Or Sublimate Water to touch the Palate warily with them.

A Pou-

A Poudot. Take *quick Sulphur two drams, Allum a dram, Maſtick, Frankincenſe, Myrrh, each half a dram; Pellitory roots, and burnt Harts-horn, each a ſcruple:* make a *fine Powder*, to which add four ounces of ſublimated *Wine*.

If the Ulcer in the Uvula cannot be cured, cut it off ſpeedily before it eat off the Palate and other parts neer or burn it as we ſhewed.

Topical Remedies for the rawneſs or excoriation of the Gullet.

If the Ulcer or rawneſs of the Gullet come from a ſharp Defluxion, or a hot Vapor aſcending, theſe muſt be firſt turned away if they continue, the Flux muſt be ſtopped, and the Jaws lenified, and the ſenſe of feeling a little abated. Or if it be wounded from ſharp things that ſtil ſtick there, take them out by the Art explained in difficult ſwallowing.

Then Cure the Ulcer with Topicks chooſing ſuch in a ſimple excoriation which gently cleanſe and dry and that may be ſwallowed down to the part affected without trouble.

Such as we ſhewed in Ulcers of the Jawes after a Quinſie, to Gargle with, which ſwallowed will cure a ſore Throat.

If the Ulcer lie deep and be foul, you muſt uſe ſtronger Clenſers and Driers: Alſo if it be wounded from things ſwallowed, uſe the Remedies preſcribed in the Ulcers of the Tonſils and Palate made of faxſtarths, Bole or Lemnos Earth, and drying fruits juyced, as Acacia, green Grapes, and Dragons blood. Or thoſe that are made of Gums, as of Frankincenſe, &c. and other Aſtringents and Driers mentioned in the Inflammation of the Jaws.

Alſo uſe ſuch Fumes as are in the Ulcers of the mouth mentioned to dry.

And the outward means mentioned in Quinſie.

CHAP. X.

Of the Griefs or Pain of the Breaſt.

The Kinds.

THe inward Greefs or Pains of the Breaſt, are either Moleſtations only in divers ſtrait paſſages of the Breaſt following divers Diſeaſes. Of theſe we ſpake in Breathing hindered, becauſe the Breath is either hindered or depraved thereby.

A falſe Pleuriſie.

Of true pains in the Breaſt, ſome are alone, others mixed. A Pain alone, is when without other great accidents, there is a pricking in either ſide, eſpecially in breathing, in ſome certain place, or moving; hence comes the falſe Phrenſie, but not a true, becauſe there is neither Cough nor Fever, except there be ſome other accident. If this

A pricking pain.

pricking be great the breathing is little, and ſhort, becauſe if it be great, the pain is increaſed, and therefore the Party breaths gently. Of this there are two ſorts differing in the Cauſe, the one is from Wind, the other from Flegm If they come outward with tumor and pain, they belong to external tumors to be mentioned in the habit of the body.

A true Pleuriſie.

Of mixed pains, eſpecially with a Cough or Fever, ſome are pricking, called true Pleuriſies, and are ſometimes in one ſide ſomtimes on the other, in a certain place, eſpecially in breathing, which is alſo little and ſhort, and very hot. This pain is greater when they lie upon the ſound ſide, then when they lie upon the Back or the ſide affected.

Peripneumonia.

Another pain in the Breaſt unaccompanied with the aforeſaid accidents is great, contracting as it were the Breaſt and Back, and drawing aſide the Clavicle, with greater ſtraitneſs than the other, with pricking of the Breaſt ſometimes before, or behind, or on both ſides, this is called *Peripneumonia*, very like the Pleuriſie in all things, but in reſpect of pain. And the liker if there be a pricking pain in the ſide, and then is a Pleuriſie and *Peripneumonia* mixed together.

There is a Cough in both kinds, more or leſs, which increaſeth the pain, eſpecially if it be pricking; by which at the firſt ſooner or later, there is ſpit forth ſpittle mixed with matter or blood, ſometimes which is rare, it is without, afterwards there is matter bloodiſh, and at length true matter white, or yellow, or green, or black, concocted or not, ſomtimes clammy, ſomtimes ſtinking, ſomtimes otherwiſe.

In both the Pleuriſie and Peripneumonia there is a Fever with a pricking pain, and both Diſeaſes begin with horror and chilneſs, and a Fever following, Reſpiration is increaſed and the pulſe, and the Artery is hard and rough as a Saw when the pulſe is touched, though ſome think that in Peripneumony the pulſe is ſoft and wet. The Urin is high, and there is great thirſt: and in a Peripneumony the Cheeks are very red, and the Fever continues ſo long, with exacerbations or fits in the night til the diſeaſe declineth or changeth, as we ſhewed in Fevers.

There are other ſymptoms in both, from Diſeaſes of the parts adjacent, as Doting, Swouning, and the like, but then theſe Diſeaſes are mixed with others.

A Pleuriſie differing from the reſt.

Beſides theſe there is a pricking pain with burning in the ſide, with a Fever and Cough, like a Pleuriſie, only in that there is no bloody or mattery ſpittle, but a foul and dry Cough, and in that the pain comes outward, and makes the Breaſt ſore when it is touched, and ſomtimes there is tumor and redneſs. This being different from the other in reſpect of the part affected, as ſhal be ſhewed in the Cauſes, and we call it the Pleuriſie of the Membrane.

The Cauſes.

The place affected.

Theſe Diſeaſes are in the inſide of the Breaſt that cauſe theſe pains in the Pleuriſie and Peripneumony, and are either diſtenſion or Inflammation.

The Diſtenſion of the Membrane that girts in the inward parts of the Breaſt, ſo great that the Membrane is lifted up and down as it were aſide, if not torn or rent from the Ribs and Muſcles, cauſeth that pricking pain in a falſe Phrenſie. This may be from Wind or Humor.

Diſtenſion from Wind.

When Wind gets into the ſpaces, between the fleſh and the membranes, it cauſeth the pain called windy. And in the Breaſt when it gets between the Intercoſtal or Muſcles berween the Ribs, it diſtendeth the Membrane

and causeth the pricking pain of the Windy Pleurisie.

This Wind as in other Diseases comes from eating of crude and windy things; and it wil be sooner in the Breast, if there be outward cold; or it is driven to the Breast by straining, roaring, coughing, or the like, when the Muscles are stretched: hence it is that we have seen that after the Breath hath been exposed to the Air, or after great motions there have been pricking pains sudddenly, especially in bodies subject to wind; and they have abated by heat and rest.

A Defluxion of Rheum is the cause of a false Pleurisie called Flegmatick.

A Water or flegmatick humor falling down into the spaces betweene the Muscles of the Breast, and stretching them with its pleurity, as it causeth external pricking in the Breast (of which in external pains) so if it be caried to the inward Membrane which is easie if it be thin, causeth these inward pains, which are outward also, not only in the Breast, but Shoulders, and that false Pleurisie which they call flegmatick.

Besides which there is no other (as some hold) which causeth Inflammation and yet comes from flegm, for we shal shew that all Inflammations comes from blood.

Inflammation of the Lungs causeth a true Pleurisie and Peripneumony.

An Inflammation of the Lungs somtimes, and in the Membranes and parts adjacent together or asunder, as it is in this or that place causeth a true or false Peripneumony or Pleurisie, or that which is of the Membrane, either alone or mixed. how this is caused we shal declare.

The Inflammation of the Tunicle is the Cause of the girding Pleurisie.

It is the vulgar opinion that the Inflammation of the girding Tunicle causeth a true Pleurisie and of the Lungs a Peripneumony: But we wil prove not only from anotomies wherein we have seen the Lungs inflamed after a Pleurisie, but by solid reasons, that the Lungs are inflamed in a Pleurisie, as wel as in a Peripneumony. Because the blood which they so soon spit cannot be (especialy so quickly) carried through the Lungs and their vessels, from the Tunicle inflamed, nor matter except the Lungs be ulcerated, but rather if it come from thence, it should flow into the cavity of the breast, and cause an *Empyema*. Therefore because Blood and Matter are quickly and plentifully set forth in a Pleurisie and Peripneumony, they must come from the Lungs, and from no other part, as also the other accidents in both diseases, shew that the Lungs must needs be afflicted. Only this is their argument, that the Lungs are not only inflamed in a Pleurisie, because the pricking pain which is manifest in the Pleurisie, is obscure in the Peripneumony or none, and cannot be from the Lungs affected, but in a sensible and membranous part, which the Lungs are not. But this is not enough, to evince that though these prickings come from the membrane, yet the Lungs are not inflamed in a Pleurisie, as wel as a Peripneumony: But this is all that wil follow, that if the Lungs are only inflamed (as the truth is) the peripneumony is in one side (because the Lungs are divided by the Mediastine or Midriffe) and rather inwardly then outwardly, when there is no pain. But if the Inflammation be in the outside of the Lungs, then the pricking pains are from the Tunicle, but gentle, because the Lungs are not altogether insensible. But if the Inflammation be extended outward so that the Lungs are stretched, especialy in breathing (at which time pain is only felt) and the Fibers and smal veins and Arteries by which they are joyned to the girding Membrane stretched, they pul the Membrane from the breast, though there be no Inflammation, (as we shewed in wind,) and then the pain is in the side, and it is greater when the Membrane suffers by consent from the Lungs, inflamed by Swelling and Heat.

We deny not but it may be thus, and that the girding Tunicle may be also inflamed, and also the *Periostia* or bone Tunicles near it, (but we wil not acknowledge that it can be inflamed alone to cause any other kind of Pleurisie, as some write, because it sticks so close to the girding Membrane, where it is covered with Ribbs) which being so, there wil not be the true Pleurisie, which is without the Inflammation of the Lungs, which hath bloody and mattery Spittle, because the girding Membrane cannot be disburthened thereof: But there wil be that kind of Pleurisie, which we called peculiarly the Pleurisie of the girding Membrane. In which if there be great Inflammation, there must be pain increased from the pressing the breast, and it wil extend it self outwardly, because the Inflammation cannot be contained in the thin Membrane of *Periostia* but must reach to the muscles joyned thereunto, and so may be felt outwardly, because the Breast is not so thick, (as we have known in the Inflammation of the *Peritonæum*. And in this kind; If the Inflamation suppurate, the Imposthume wil rather be outward, then inward, and there open: But if it break inwardly, the matter gets into the cavity of the Breast rather then into the Lungs, because it cannot be carried so quickly unto them and pierce through them.

But as these Arguments prove, that this may be so, so it is probable that if the girding Membrane be inflamed together with the Lungs, and from them that that Inflammation in the Membrane wil be discussed rather then suppurated, because the great quantity of Blood in the Lungs at that time, cannot easily be in so thin a Membrane, or if it could be, it would rather be carried outward, as we shewed, and fil those muscles, and there come to suppuration. And hence it is that after a true Pleurisie, though the girding Membrane be also inflamed and nothing appear outward, yet an *Empyema* seldome followeth.

And this is like to be also when the dividing or intercepting Membrane is inflamed with the Lungs, in which as being a different disease, especially when the Inflammation reacheth to the *Capsula* of the Heart and *Diaphragma*, there are grevious symptomes that seize upon the mind and endanger the life.

These Inflammations both in a Peripneumony and true Pleurisie, being in any part of the Lungs, or elswhere, come from Blood, with which the Lungs abounding by reason of the many great vessels, and being hotter by reason of the Arteries and the nearness of the Heart, it is easily inflamed: And the Inflammations of the Lungs are more usual then of any other part. This Inflammation comes from Blood, (as others,) when it is got into the substance of the Lungs, out of its vessels which are the Arterial Veins, and Venal Arterie, and not into the branches of the rough Arterie, (for otherwise there would be a spitting of Blood) this Blood therefore fils the Lungs, and lifts them up, causeth Heaviness and Compression and streightness of the Breast, and inflames the Heart more, that before commonly had a Feaver; And by the Cough which it causeth, when it is sent into the branches of the rough Arterie, it makes the Spittle sometimes mattery and after bloody, at length this Blood being ripened and concocted or suppurated, is coughed up,

till

til it be all ſpent: The ſubſtance of the Lungs being unhurt, for if they be ulcerated a *Phthiſis* would follow. As we have ſeen often Blood alone and other humors turnd into Matter, the ſubſtance of the part not being ſuppurated or ulcerated, both in the eyes and other parts and in other Excretions made from the Lungs, by other means. Alſo it may chance that from Inflammation of the Lungs, the Blood may fall upon the near ſide upon the girding Membrane and inflame it, but not uſualy, becauſe the Veſſels are ſmal and few, and the vein to which the fault is laid called *Azygos* is only on the right ſide, and the Pleuriſie is often on the left; As from the Inflammation of the Lungs in a true Pleuriſie when the ſides are attracted and the girding Membrane pulled aſide, there may be a pricking. Hence it is that Pleuriſies are more uſual then the peripneumonyes, becauſe the inſide only of the Lungs are not ſo often inflamed, as it is in a peripneumony, but the Inflammation reacheth outward to the ſide adjacent, in which the pricking is greater when they ly upon the ſound ſide, and the Lungs hang down being Inflamed, and with their weight draw the girding Membrane, then there is more pain then when they ly on the ſick ſide, and the pain is greater if the Membrane be Inflamed. Upon which if ſo much Blood fall, from other cauſes and inflame it, the Lungs being ſound, there wil be another Pleuriſie differing from the true as we ſhewed, in which there is no ſuch Spittle.

All theſe accidents in the divers kinds of pleuriſies, are alſo in a peripneumony, which ſometimes begins of it ſelf and ſometimes followes a pleuriſie when the Matter is gathered inwardly, and becauſe the Heart is then more inflamed they cauſe a more ſharp Feaver, by which the Blood being heated alſo in the ſuperior parts of the Body, there is a redneſs in the Face and Cheeks. This is counted the peculiar ſigne of this diſeaſe, and it may be more obſerved to be in Peripneumony then Pleuriſie, and becauſe this diſeaſe is more uſual in old people, if their Cheeks be red it is looked upon as a ſtrange thing.

According to the variety of the Blood, theſe inflammations of the Lungs are divers, for if it be pure, ſuch as is in the veino is Artery it wil be a ſimple *Phlegmon*, in which Spittle is mixed with pure Blood; If the Blood be too thin or hot, as in the arterial Vein, there wil be a *phlegmon* with *Eryſipelas*, in which the Feaver is greater, as it is if the Blood cauſe an Inflammation, which is mixed with pure Choler, and then the Spittle is bloody and yellowiſh. Becauſe this is uſual, it cauſed ſome to write that Peripneumony comes from an *Eryſipelas* of the Lungs. Alſo if melancholy be mixed with the Blood cauſing the *phlegmon*, there is blackneſs with the bloody Spittle. And if Choller joyned with Blood, be the cauſe of this Inflammation, then there is a Pleuriſie, or tertian Feaver, as I have often obſerved. Oftentimes alſo without theſe Diſeaſes, there is a diſcolouring of the Spittle, and it is not bloody, but yellowiſh, greeniſh, blackiſh, from cholerick humors; when the Blood is any otherwayes impure, and mixed with vitious humors it cauſeth an impure *phlegmon*. But if a *phlegmon* comes from a crude and wateriſh Blood, it wil be an *OEdema*, with gentler accidents, and the Spittle leſs diſcoloured; as in the Peripneumony, called therefore crude. Alſo from this diverſity of Blood, If the Inflammation be in the girding Membrane, the Symptomes wil be greater or leſs.

Becauſe no *phlegmon* comes from any other humor ſeperated from the Blood, we cannot make the Defluxion of Flegm, or other humor upon the Lungs, or the gathering of it there to be the cauſe of a true Pleuriſie or Peripneumony, as ſome doe, and call it flegmatick for if theſe humors are in the lungs, they wil cauſe other Diſeaſes that hinder breathing, as we ſhewed in defect of breathing, and if they fall upon the Muſcles of the breaſt or upon the girding Membrane, they will cauſe a falſe Pleuriſie as I ſhewed.

The cauſe of this flux of Blood that cauſeth a *phlegmon*, is often a Synoch Feaver which from the Blood inflamed in the Veins ſendeth a portion into the ſubſtance of the Lungs, which produceth the Inflammation accompanied with a Synoch from whence it came: And therefore the ſame cauſes of a Synoch (as we ſhewed in Feavers) are the cauſes of theſe Inflammations. As Surfetting, Drunkenneſs, becauſe they cauſe Fulneſs and make the Blood too hot, are the cauſes of Synochs in young and old men, that live deliciouſly. therefore they are counted the cheif cauſes of peripneumony and pleuriſie, and therefore they preſcribed Abſtinence from Wine and fat Fleſh and Fiſh as Eels: from whence they ſay the peripneumony cometh, becauſe the Blood groweth too fat, from eating of fat Meats and therefore may be ſooner inflamed, except theſe fiſh have a peculiar force to inflame, as the Sea-Hare hath to ulcerate the Lungs. Hence it is that in Spring, and in the time when Synochs are rife, theſe Inflamnations are moſt uſual, in theſe ages eſpecialy which are ſubject to a Synoch, not only with an outward *Eryſipelas*, but that which produceth a peripneumony.

Theſe Inflammations are ſooner in the Lungs, then any other part, If with the cauſes of a Synoch, there be alſo a diſpoſition in the Lungs to receive them, which diſpoſition is the natural Heat and plenty of Blood, and thinneſs of Subſtance in the Lungs, as alſo a weakneſs acquired from a diſeaſe, which hath cauſed a Cough.

To which are added other cauſes which make them come out of the Veſſels and flow to the Lungs, as a hot diſtemper, from Air, Anger or a hot Diſeaſe, as a Fever, or an outward Cold by Air which pierceth the Breaſt and Lungs: hence it is that this may be when the Veins are aſtringed. Alſo vehement motion, or pain about the Breaſt, or other things that draw blood to the breaſt. As in that Woman which conceived with Child in old age when her breaſts that were formerly lank, grew great by the flowing of blood to them to breed milk, and fell into a Pleuriſie. And I have obſerved that divers Women in the middle of their time of breeding, eſpecially in the Spring after a cold Winter, from a ſudden cold and moiſture have falleni nto Pleuriſies by reaſon of much blood flowing to the breaſts to breed Milk.

Theſe Cauſes, except there be a Synoch ſcarſe produce an Inflammation alone, but rather a ſpetting of blood. Or if they produce an Inflammation in the Breaſt without a Synoch aforegoing there will be only a ſimple Pleuriſie by reaſon of the Muſcles affected from the girding Membrane. Or if the Lungs be alſo inflamed, in both, the Fever coming from thence will not be a Synoch which is the next cauſe of a pleuriſie and peripneumony, and begins with theſe Inflammations or goes before them; but wil be ſymptomatical, as we ſhewed in Fevers.

The Cure.

The Cure varieth as the Diſeaſe is divers which produceth theſe pricking pains in the Breaſt. And it is either an Inflammation of the Lungs in a true Pleuriſie and

and peripneumony, or of the Membrane in its pleuriſie, or a diſtenſion from Wind or tumor in the two kinds of falſe pleuriſies called Flatulent and Flegmatick.

The Prognoſticks of a true Pleuriſie and Peripneumony.

The Inflammation of the Lungs both in a Pleuriſie and Peripneumony is dangerous, but moſt in a peripneumony by reaſon of the nearneſs of the Heart, both cauſe Death, either in the fourth or fifth day, or in the fourteenth or twentieth. When it tends to health it paſſeth the ſecond or third week, and firſt the pricking ceaſeth, then the Fever, and laſt the Spitting of Matter, but if it continue above the time mentioned, and the Fever ceaſeth not, but is lingring, it is to be feared that it wil turn to an *Empyema* or *phthiſis*.

Theſe following rules wil declare how theſe Diſeaſes wil end. If from the Lungs inflamed they preſently ſpit mixed matter, it is good, eſpecially if they Cough and expel it eaſily; if otherwiſe, it is bad. This if it be blood or matter ſuch as cometh from the part inflamed which is the Lungs, it is allowed. But if from the beginning the blood flows plentifully, for ſome daies, or ceaſe and return again, it ſhews great hurt of the Lungs. But the ſooner they ſpit matter white or concocted, and the more eaſily and plentifully it is voided, the better it is; unleſs it be ſent forth in ſuch abundance (as I have ſeen in a man that had a peripneumony und was ready to die) that it fill a Baſon, this is a ſign that the Inflammation is great and that a ſuppuration follows and alſo Death. Purulent matter though yellowiſh is not bad till it be Yellow, that which is green is worſe, and black worſt of all, that which is white, ſlimy, and cleer prolongs the Diſeaſe. That Inflammation that comes from pure blood, is more gentle, that which comes from cholerick or impure blood is worſe and ſhorter; but that which comes from flegmatick blood is longer, but not ſo ſharp. And that which follows other long and acute Diſeaſes is harder to be cured. The peripneumony eſpecially or the pleuriſie in old people is deadly.

Great difficulcy of Breathing ſhews the greatneſs of the Inflammation, or a great collection of the matter; which ſuddenly flowing to the branches of the rough Artery, cauſeth mote trouble, and they breath with ſuorting, and if they do not preſently ſpet and hawk it forth, it ſtrangleth.

Cold of the outward parts, the Face ſunk, and the pulſe little, foreſhew Death as in other Diſeaſes.

If the Fever be ſtrong with Heat, Thirſt, and Watching, the danger is more, if gentle, leſs.

If there be a *Delirium* or Doting, which uſeth not to be in theſe Diſeaſes, nor from the Fever accompanying them, It is a mortal ſign becauſe it uſeth to come upon the diſtemper of the *Septum* or *Diaphragma*.

Bleeding at the Noſe cannot be had in the beginning, both in reſpect of the Fever and alſo for Revulſion. But towards the end it weakneth, eſpecially if much.

Plentiful voiding of Urin and Sweat, if they come ſeaſonably, cures the Fever: and if they piſs matter, they ſuppoſe the matter come from the Lungs, and the Diſeaſes to be ſent out of the way. But if matter can be carried from the Lungs by the hollow Vein which is more manifeſt rather than by the other obſcure veins in the Breaſt which joyn to the Emulgent (which ſome men ſo diligently ſeek for, and bragg that they have found out) then in other Diſeaſes there may be ſuch a paſſage: but this is very rare, becauſe in thoſe that have been extreamly phthiſical and empyematous no ſuch thing hath been ſeen.

A Diarrhæa preſageth Death, for, though ſome have thought otherwiſe, yet little of the cauſe of the Diſeaſe can be purged by ſtool. But if the Diarrhæa come at the firſt from other cauſes, and ſtay not long it may be harmleſs, eſpecially if it take away any filth which may increaſe the Fever. And I have often ſeen Pleuriſies after I have given Oyl of ſweet Almonds with pouder of a Bores tooth, to go away with a plentiful Diarrhæa.

The Cure of a true Pleuriſis and Peripneumony.

The Method of Cure for both is, to divert the Blood that flows to this noble part, & ſo to prepare that which is flown to the Lungs and inflames them, that it may be coughed and ſpet forth, becauſe, except Nature do it of her ſelf, it is in vain to purge it by Urin or Stool. Alſo ſtill abate the pain in the Pleuriſie which is very pricking, and in both caſes inlarge the Breaſt, and hold up the ſtrength, alwaies having an eye to to the Fever, as we ſhewed in Fevers; therefore abſtain from hot things, and uſe temperate things that incline rather to cold; all which are done as followeth.

The Defluxion of Blood to the part is diverted beſt by Blood-letting, and the heat of the Fever abated, therefore neglect it not, though the Patient be very young, for we obſerve that in other caſes and bleedings by cuts and falls they can looſe much blood without danger; and in this Diſeaſe they wil find much eaſe by it: nor let it be omitted in women with Child, or old People: nor when the Diſeaſe comes from impure and cholerick blood, nor when the pain goes down to the Hypochondria. But for theſe cauſes do it moderately rather than omit it. Blood-letting muſt be ſuddenly while the matter is flowing, the firſt day, at what time of day or night ſoever it be: or if it hath been neglected do it the next or the third day, taking much at a time, or fix ounces at a time, often, if the firſt bleeding do not abate the Diſeaſe, bleed then thrice a day, or two or three daies together: after the third or fourth day, except you fear the increaſe of the Diſeaſe, or a Relapſe from a new Flux of Blood (for which cauſe after many daies if there be ſtrength you may bleed again) you muſt not bleed raſhly.

You muſt open a Vein in the Arm (becauſe the Veins are larger and neerer the part) either the middle Vein or that which moſt appeareth which is alwaies beſt. And what vein ſoever in the Arm is opened whether it be on the right or left ſide the blood comes from the hollow Vein, from whoſe upper part above the heart the veins of the Arm come; and therfore by conſequence blood is drawn from the right ſide of the Heart into which the hollow Vein is joyned before it aſcendeth: and ſo alſo blood is drawn from the Lungs by the veiny Artery, by which the blood flows from the right ſide of the Heart to the Lungs. Except, becauſe the hollow vein is more on the right ſide, and ſends blood into the right ſide of the Heart, and only ſends out the vein without equal, or not paired to the right ſide only, you deſire to open the Vein in the right Arm for a directer way of bleeding. which ſome think to be neceſſary in a Peripneumony and Pleuriſie. Yet in a Pleuriſie it is thonght better to open a vein on that ſide that is pained, than on the contrary ſide (as the Arabians do who firſt open the contrary Arm for Revulſion and then for Derivation) not ouly from the right order and direct flowing of the Veſſels on that ſide, becauſe the ſame may be good in a Pleuriſie as wel as a Peripneumony, the Lungs being (as I ſhewed) affected in both: but becauſe in a Pleuriſie, the veins on that ſide where the pain is are more ſwollen with blood.

blood, Therefore if the pain be on the right side, open the Vein in the right Arm, if on the left, open the vein in the left Arm by reason of the Defluxion of blood caused through pain. And if the Vein in the Arm appear not, open that in the Hand on the same side: by which if the blood come freely there will be a greater Revulsion, and if not, a less. Also it is good to bleed in the Foot, or by the Fingers, after bleeding in the Arm, especially in Women who have this disease from stopping of the terms.

Cupping-glasses to the Shoulders, Emunctuaries, and Groyns make Revulsion, and the more if there be Scarification: these help the other bleeding, or supply when the other cannot be.

Also Frictions and Ligatures of the outward parts cause Diversion: or a Decoction to wash and rub the Hands and Feet, but it must be such as doth not heat.

Some adventure to use a Caustick to the sids, but it is neither safe nor profitable, nor Cupping-glasses to the Breast.

Clysters are given to loosen the Belly before bleeding, if it be bound, they are to be cooling and gentle, such as are mentioned in Fevers, and other internal Inflammations and Quinsie. And some advise clensing Clysters at the end of the Disease if the matter tend from the Breast to the Guts, lest it should hurt them, which they think to be possible.

Loosners are better than purgers, for it is not convenient in Inflammations of the Breast to give purgers: both because the matter cannot be purged by stool from thence, as also because they heat the body, and cause a Diarrhœa which useth easily to come with much hurt to the patient. These Laxatives must be good for the Breast, whereof Manna is the chief.

Next syrup of Violets three ounces, or Cassia, or simple Diaprunes two ounces, alone or with pectoral Decoction.

Or thus. Take *sweet prunes, Raisons stoned, each an ounce; Violets a pugil*, boyl and dissolve *Cassia half an ounce, Manna an ounce*: make a *potion*.

After the seventh day the Ancients used stronger purges, the humor being first prepared: but these are best in a false pleurisie as I shewed; or if the true pleurisie cealeth, they are good against accidents that remain, otherwise they hurt more.

We give to drink things that cause easie Coughing and Spitting, because the Humor being fastned to the Lungs and not to the Membranes, girding them cannot be sent a better way. This is done by Lenitives to the parts, and such as first thicken the Matter to stop the Flux of Blood if it be thin, and to make it more fit to be spit forth, and then by Concocters, Clensers and Cutters, if it be too thick and slimy. Or by things to ripen and cause matter to be spet forth lest it lying long there, the Lungs be corrupted by it, and a *phthisis* caused. Or if Nature endeavors to throw it out by stool or Urin (which is rare, and perhaps a meer Fansie) by such things as help Nature therein. These are done as followeth.

Lohochs to be swallowed by degrees, and so communicate their Vertue better to the Lungs are the best.

As the usual tablets of Diatragacanth frigid and Diapenidies without the species, held in the Mouth.

Or a Lohoch made of them with syrup of Jujubes or Violets to be licked.

Or this: Take *the species of Diatragacanth frigid two drams, penidies a dram*, with the *Syrup* aforesaid make a *Lohoch*, adding half an ounce of the *Diacodium* if the Cough be great. others add *Conserve of Violets*, but it is not so good to be licked.

Or this: Take *Penidies an ounce, Pinenuts and sweet Almonds blanched, each two drams; the great cold seeds and white Poppy seed, each a dram; Starch half an ounce; juyce of Liquorish a dram, Gum Traganth and Arabick, each a dram*; infused in *Violet water* while they swell, *pulp of Raisons half an ounce*, mix them for a *Lohoch* with *Syrup of Poppies, or a Diacodium half an ounce, and Mallow and Cotton seeds a dram*.

In the progress of the Disease when the Fever declineth, give tablets of Diatreos simple, Diapenidis without the species, Lohoch of Pine.

Or thus: Take *Lohoch de pino half an ounce, species of Diatragacanth a dram, species of Diatreos half a dram, penidies half an ounce*, with *syrup of Maidenhair and Liquorish* make a *Lohoch*.

Or thus: Take *Sugar-candy, penidies, each half an ounce; pine-nuts two drams, of great cold seeds, each a dram; Orris roots two scruples, Gum traganth infused in water of Maidenhair and mucilage of Quince seed half a dram, pulp of Figs or Dates, each half an ounce; juyce of Liquorish a dram, or roots of Briony and Nettle seed, each half a dram*; with *syrup of Hyssop*, make a *Lohoch*.

We use also stronger Expectoratives and cutting Medicines when they spet matter, especially if it be crude and slymy, and when the Fever is gone, and yet matter is voided. As *Lohoch of Colewort, of Coltsfoot, Horehound, Lochsanum*, and other other medicines used in other diseases of the Lungs from *Flegm* and *Matter*.

Lohochs are made of fat things thus, to open the Breast, to mollifie and help spetting, as of *Butter, Sugar, or Sugar candy, or Sugar of Violets*, used like a *Lohoch*, the German May Butter called *Mebumuf*.

The new drawn Oyl of sweet Almonds or Lineseed are good with Sugar to be licked and taken by degrees, or to be drunk in Broath, or any Decoction proper to allay the pains of the pleurisie to which some add *juyce of Marshmallows*. *Oyl of Nuts* also in the progress of the Disease concocts the matter and makes it fit to be expelled.

Of which make this Lohoch. Take *Oyl of sweet Almonds or Line seeds, or both Oxymel simple of Squils* (if the matter be tough) *each half an ounce*; with *Sugar candy* make a *Lohoch*.

Also Decoctions though they stay not long in the passage are good in respect of the Fever and Inflammation; give a draught once or twice a day, this.

If you wil thicken and lenifie use Barley water which allaies thirst, and nourisheth if you increase the quantity of Barley. If you wil clense more make it of whole Barley, with Raisons, Liquorish, and other sweet things as Sugar or syrup of Violets, Jujubes, and Maidenhair.

At first if you wil thicken and expectorate. Take *roots of Marshmallows an ounce, Violets and Buglosse flowers, each a pugil*; *Jujubes and Sebestens, each six pair: Barley half a pugil, the four great cold seeds, each two drams*: make a *Decoction* to a pint, sweeten it with *syrup* or *Sugar penidies*.

The Decoction of Corn-poppy made with Barley-water or Jujubes adding Sugar is good at first to stop a Defluxion and Inflammation: give three ounces at a time often, after boyl them in Scabious and Burnet-water to Concoct, or use the water of poppy instead of the Decoction, or give the dried flowers in pouder with Broath or Violet-water, or other Liquor. Neither ought we fear its coldness, because the force it hath to attenuate and digest, which *Galen* imputes to the sharpness doth shew otherwise, as in the other Narcoticks which we shewed in other places are not cold.

When we wil clense more, give Sugar and Water

boyled twenty parts water and half a part Sugar, and if you cleanſe more yet, uſe more Sugar and a little Cinnamon.

Another to cleanſe and lenifie. Take *Liquoriſh an ounce and an half, Violets, Bugloſs flowers, each a pugil; Figs ſix pair, Raiſons ten pair, Jujubes ſix pair, ſweet prunes five, Barley half a pugil, Gourd and Melon ſeeds, each two drams:* boyl them, add *Sugar* or *Syrups*.

When we wil concoct and prepare thick matter at the end, give boyled Honey with Wine, it is good in old people, or when the Diſeaſe is not very hot. Or Honey and Water, which may be made as ſtrong and hot as Sack.

Alſo the Decoction of Carduus or Leucacanth, or white-thorn roots, or Anthemis flowers.

Another to concoct and prepare. Take *Liquoriſh an ounce, Elicampane root two drams, Maidenhair a handful, Hyſop and Goats Organ* (eſpecially in a pleuriſie) *each half a handful; Violets, Bugloſs flowers, each a handful; flowers of Anthemis half a handful, Raiſons twelve pair, Figs ten, Dates five, Melon or Gourd ſeeds three drams, Cotton ſeeds, Mallow and Fœnugreek ſeed, each two drams; Aniſe ſeeds a dram:* boyl them, and add *Sugar, Honey or Syrups*.

Syrups to thicken are of Violets and Jujubes, to cleanſe, of Liquoriſh, and to concoct withall, of Maidenhair and Oxymel if the matter be tough, two ounces at a time may be given in a Decoction or Water of Violets, Bugloſs, Maidenhair, Scabious, Hyſop, like Juleps, or give julep of Violets, or the Syrups alone to be licked.

Alſo Spinage, Carduus, or Milk-thiſtle water, or of Anthemis flowers, or wild Lentils in a peripneumony.

Or water of ground Ivy four ounces in a pleuriſie four times a day, it is good to purge the breaſt from matter, and to defend from Peripneumony or Phthiſis.

Or the following potions. Take *Bores tusk or jaw of a Pike, Crabs Eyes, Buls pizle, in pouder, a dram or a dram and an half, with Broath or Wine, or Carduus water, or Violet or Barley water*, theſe are better known by good experience than by reaſon.

The tusk of a Bore poudered and given with Oyl of ſweet Almonds or Line ſeed is an excellent medicine in pleuriſie or Quinzy.

Or *Lapis prunellæ* given with Purſlane water, or of Bramble berries, or of Sorrel, with Coolers in a good quantity often, quickly makes men in pleuriſies to ſpit eaſily.

The Vulgar give the water wherein a Butchers Knife hath been laid ſome hours to cure the Pleuriſie.

The *roots of Daffodil or flowers, or of Dog-ſtones, Dockes, Goulden-hair, Lungwort*, In Peripneumony, *and ſeeds of wild Parſnepps and Carduus, pouder of Almonds or Nutſhells, each, a dram, or a dram and an half, with the Liquors mentioned:* are alſo good.

Alſo *roots of Centaury, the great Birthwort, and Coſtus agallochus, AEthiopis, and three leaved Daffadill leavs and ſeeds, Myrrh, Bdellium, Aſla fœtida*, are comended by *Diaſcorides with wine and water*. But he ſaith not in what kind of Pleuriſie true or falſe.

It is known by experience, that theſe following are good and preſently abate, or take away the pain in a pleuriſie: Take *a ſcruple of Bores Tuſk, or a dram, with two or three or four ounces of Oyl of ſweet Almonds, or with Lineſeed Oyl*, as in a Quinſie.

Another experiment: Take *Nut-ſhels, red Corral, each a dram*, make a pouder, give it with *white Wine*.

This is highly approved, Take *Roots of long Birthwort, Piony, Bay-berries, each halfe a dram; Stones of Medlars, a dram; Ivory ſhavings, Myrrh, each half a dram*; make a pouder, give it with *Tamariſck water or Wine*.

Yarrow alſo bruiſed and given in *Vinegar*.

Alſo *Turpentine* any wayes taken alone, or with the *Yoalk* of an *Egge*, and *Violet water*, or the like, or in pills with *Sugar*, and *pouder of Liquoriſh*.

They ſay that pills made of melted *Pitch* open an Impoſthume, and alſo *Watercreſſes* and *Muſtard ſeed*.

The Chymiſts give flower of *Brimſtone* alone, or with *Salt peter*, and *Salt* of *polypody*, or *St Iohns-wort* with *Wine*.

Inſtead of ordinaty Beer and Wine and Water to quench Thirſt, give Barley water, a little warmed as all Drink muſt be leaſt Spitting be hindred, and the Breaſt hurt. We allow Wine to refreſh the weak, but not afore the ſeventh day, a little and mixed with Barley water, and Sugar to cleanſe.

Give a thin Diet for two or four dayes, and ſuch as helps expectoration. as Cream of Barley, and of Almonds, thicker or thinner as you pleaſe; or ſweet prunes or Raiſons ſtewed with Sugar.

After uſe a fuller Diet, eſpecially after the ſeventh day, or ſooner if ſtrength fail, as boyled bread, or Marſhpane, or that of Almonds or pine nuts, and good Broaths and Jellies, as in the Hectick Feavor.

Or this. Take *the Brawn of an old Cock or Hen*, boyl it adding *Violet or Bugloſs water, or Scabious water, each two ounces*; give the Broath with freſh *Butter*, and a little *Salt*, and it is ſtronger if you bruiſe the Fleſh and and ſtrain it with the Broath.

Or add to that Decoction *three ounces of Crums of Bread*, and to a pint of the Broath add Conſerve of *Violets, Bugloſs, Maidenhair, to each an ounce, ſpecies of Diatragacanth frigid and Diapenides, each a dram; Diamargariton frigid, half a dram; of the four great could ſeeds Cotton and Mallow ſeeds, each a dram; penidies two ounces*, diſtil a Liquor, it wil reſtore.

To nouriſh more; Take a *Capon prepared, and a peice of Veal*, boyl them to a Jelly, give it alone, or with the former *Liquoris*. or give the juyce of a roaſted *Capon* ſtrained.

Alſo give according to *Mathiolus, Snails* in *Barley water*.

Alſo take of the top of a ſweet *Apple* and hollow it, and fil it with *Olibanum* poudered, lay on the head again to cover it, and tye it together and roaſt it, give it to be eaten, this is thought good to cure and prevent a Pleuriſie.

Or give an *Apple* roaſted the ſame way, with Juyce of *Liquoriſh, Sugar*, and *Starch*.

Some give Diureticks at the end of the Diſeaſe, when Nature diſchargeth it by Urine to help her.

Alſo the Decoction of Fennel, Sparagus, Kneeholm, Liquoriſh, red peaſe, Maidenhair, and the great cold ſeeeds. Such as we ſhewed in Fevers when we deſire to carry away the matter by Urin.

Sometimes we give things to purge when Nature is willing that way to diſcharge the matter (which is rare) as we ſaid of Clyſters which open and cleanſe.

Alſo it is good to apply things outwardly to the Breaſt, whether the pain be great as in a pleuriſie, or little as in a peripneumony (although the Diſeaſe be not in the Breaſt, but in the Lungs properly) becauſe the ſtrength of theſe Remedies may reach thither.

Not-

Notwithſtanding we muſt not at the beginning, give hot things to try if the Pleuriſie be true or falſe, for they wil inflame and make it worſe, for a true Pleuriſie is diſcerned from a falſe by other waies which are more ſafe. Nor muſt we uſe all thoſe things which are commended againſt Inflammations which they thought was in the girding Membrane, not in the Lungs, or eſpecially againſt the Impoſthume which they thought was there alſo, and therefore they apply things outwardly to ſuppurate and open: except the Inflammation of the girding Membrane follow the Inflammation of the Lungs, or come of it ſelf without them as we ſhal ſhew in the pleuriſie of the Membrane. But we muſt apply outwardly to the part pained, things that mitigate it, and dilate or open the Breaſt that they may ſpit more freely, and ſuch as digeſt the matter in the Lungs. This is done by Anodynes that are temperate, and but very little hot and looſning: or if there be no pain, as in a peripneumony, you may uſe cooling things alſo againſt the Inflammation, and after ſuch as ripen and diſſolve it. All theſe muſt be applied actually hot.

A Fomentation is chiefly good when there is pain, and if it be only of warm water in a bladder, it wil mitigate and relax.

But more if theſe following be boyled therein: As, Take *Mallows and Marſh-mallows with the roots, Pellitory of the Wall, each a handful*; *Violets, Chamæmel, Melilot flowers, each a pugil*; *Lineſeed an ounce, Bran a pugil, Figs ten pair, Anniſe ſeeds two drams*, boyl them for a *Fomentation*.

You may add *Branck-urſine and Colewort, each a handful*; *Fœnugreek ſeed half an ounce, Mallow ſeed two drams*, and in the progreſs if heat be not violent *white Lilly roots an ounce and an half*, and a little *Wine* to make it pierce. When the pain is violent the *Leaves, Heads, or Seeds of Poppies* allay it.

Alſo a *Bag of Bran* boyled, ſtrained, and applied abateth the pain. To which you may add the things aforementioned.

Alſo there are Anodynes and ripening Cataplaſms made of the reſidence of the Decoction mentioned beaten with *Barley meal*, with *Hogs greaſe* and *freſh Butter, each an ounce*; *Oyl of Violets two ounces, Oyl of ſweet Almonds, Chamæmel or Dill each an ounce*.

Or: Take *Barley meal four ounces, Line ſeed and Fœnugreek, each two ounces*; *Aſhes of green Coleworts two drams, Sagapen a dram*, with *Hogs* and *Gooſe greaſe*, make a *Cataplaſm*.

Pellitory of the wall alſo beaten and fried with *Oyl* or *Butter* is excellent.

Or *Snails* boyled and bruiſed.

An Epithem of lenifying and cooling things may be applied to the breaſt, but hot, though there be no pain as in peripneumony.

Thus: Take *a Decoction of Barley a pugil, Gourd and Lineſeed, each an ounce*; *Violets a pugil*, or you may uſe any *Epithem* mentioned in the *Hectick*.

In the beginning anoynt the ſide with Coolers and Looſners: As, Take *Oyl of Violets and ſweet Almonds, each an ounce*; *freſh Butter half an ounce, Mucilage of Quince or Line ſeeds ſix drams*, with a little *Wax*.

You may add *Oyl of Gourd and Line ſeed*.

When the pain is great in a pleuriſie. Take *Oyl of ſweet Almonds, Chamæmel, Melilot or Dill each an ounce*; *Duck or Gooſe, Hens or Capons greaſe, each half an ounce*; *mucilage of Fœnugreek and Lineſeed, each ſix drams*; *Galbanum, Turpentine, each a dram*; *Saffron a ſcruple*, with *Wax* make a *Liniment*.

The fat Caule of a Beaſts Belly laid hot to the ſide taketh away pain.

Alſo *Unguents* and *Cataplaſms* as the Reſumptive Oyntment, made of Fats, the Pectoral that of *Marſh-mallows*, or that of *Zacharies* ſon, or of *Meſue*.

It is good after anoynting to apply a Colewort leaf warm or anoynted.

Or to ſprinkle the Aſhes of burnt Coleworts upon the part anoynted.

It is counted alſo a ſingular Remedy againſt a Pleuriſie, to anoynt with Oyntment of Marſh-mallows, and to ſprinkle pouder of Cumminſeeds thereupon, or of Orris roots.

Let the patient ly upon the ſide pained, for ſo the pain wil be leſs, with his Head and Breaſt a little high, that he may breathſ omewhat eaſier: And let him beware of all violent motions of Mind or Body.

For other Symptomes if there be watching, or want of Sleep, give things proper for Diſeaſe alſo, as Almond Milk, with Emulſions of cold ſeeds and Saffron, ormixing Syrup of Poppyes, or the like, as we ſhewed in Watching.

If there be a Diarrhæa, becauſe it is dangerous you muſt uſe Syrup of Myrtles, with other Medicines, becauſe it both expectorateth, and ſtoppeth a Looſneſs, And anoynt the Belly and Reins, with binders, as we ſhewed in too much going to ſtool.

The Cure of a Pleuriſie, or Peripneumony, and the Pleuriſie of the girding Membrane when they meet together.

If there be an Inflammation in the girding Tunicle, (which then extends it ſelf to the inward Muſcles of the Breaſt, we diſtinguiſh it from the true Pleuriſie, mentioned by the name of a Pleuriſie of the girding Tunicle) and if it be with the Lungs alſo inflamed: Then we uſe the ſame way of Cure, as of a true pleuriſie, being they are both together, and by reaſon of this Inflammation joyned, we uſe ſuch Topical external medicines as are proper to the Inflammation, when alone.

The Cure of the Pleuriſie, which is only in the girding Membrane.

But if the ſide be only inwardly inflamed and not the Lungs, then we uſe revellers, and derivers, by bleeding, cupping, and ſcarrifying, and the like, as in a true Pleuriſie, and Clyſters, and Laxatives.

For the things given to expectorate in the Inflammation of the Lungs, when the Inflammation is in the girding Membrane, cannot reach the part affected, nor can the matter from thence come to the Mouth, to be ſpet forth as I ſhewed; therefore they will do more hurt then good by cauſing a Cough, and moving the pained Side, therefore let no things be given to cauſe Spitting, except other Accidents happen, but ſuch things as help in a true Pleuriſie, by a propriety, and ſuch as are mentioned there againſt Thirſt, and for Nouriſhment.

But the Topicks which we declared in a true pleuriſie, are good here, becauſe they aſſwage pain, looſen the breaſt, and concoct the Matter there faſtned, and the rather becauſe being applyed outwardly to the pained ſide, they come near the part, and ſooner and more directly ſpend their Virtue, then they can to the Lungs; therefore Fomentations, Cataplaſms, Oyntments, and plaſters, there mentioned may be applyed here, eſpecially becauſe by relaxing they draw the Matter outward, as I ſhewed in a Quinzy, and if the Inflammation be not great, and without a Tumor, they diſcuſſe and diſſolve it.

And as they are uſed in a Quinſie, to draw Matter, from the ſtreightneſs of the Jaws, ſo here to draw it from the breaſt, leaſt it impoſthumate there, & leave af-

ter

ter it is broken, an *Empyema* behind it. Therefore in both caſes, we abſtain from the beginning from all repellers, not becauſe theſe hinder breathing, by aſtringing or binding the breaſt, as the Vulgar Opinion, which cannot be great, and if there were an Inflammation only outward, this could not hinder the uſe of them: but for the Cauſe mentioned that we may draw out the Matter, rather then ſtrike it in by Repellers. Alſo we ſomtimes apply Cupping-Glaſſes to the breaſt, and other things that draw from within deeply, as Pitch malaxed with hot Oyl, with Roſin and a little Brimſtone, or with black Soap diſſolved with Oyls, theſe both reſolve and concoct the matter attracted, and preſently after we uſe Relaxers or Looſners. If the Inflammation will not ceaſe by ſo doing, about the end of the Diſeaſe, we apply hotter Remedies to diſcuſs the matter, that it ſuppurate not. Or if this cannot be done thereby but it doth Impoſthumate, we apply to the breaſt outwardly things that ripen it, and that it may open rather outwardly than inwardly, as a tumor enlarged uſeth to do, otherwiſe than we do in a true Pleuriſie.

In the progreſs of an internal Inflammation of the breaſt after we have uſed the Anodynes and Looſners mentioned in a pleuriſie, and when the pain begins to ceaſe, but is not quite gone, we uſe theſe following to draw out and diſcuſs the Reliques of the Inflammation.

We foment the pained ſide thus: Take *Lilly roots four ounces, Mallows, Orris roots green, two ounces, Mallows, Horehound, Calamints, each a handful; Chamæmel and Elder flowers, each a pugil: Roſemary flowers half a pugil, Fœnugreek or Line ſeed ſix drams, Carua and Cummin ſeed, each a dram and an half; Figs ſix pair,* boyl them in *Wine* and *Water*.

Make a *Cataplaſm* of the Reſidents of the Decoction beate with *Bean flower two ounces, Aſhes of burnt Coleworts two drams, Oyl of Lillies two ounces, Honey an ounce,* with an ounce and an half of *Doves dung* it will draw more.

Or anoynt the ſide with *Oyl of Lillies, Flower-de-luce* or *Wall-flower*.

Or dip Wool therein and apply it, or a Cabbage leaf to draw: for which purpoſe they uſe only a Clout dipt in Sulphur.

Or this Oyntment which diſcuſſeth very wel. Take *Oyl of Lillies two ounces, Oyl of Orris and Dill, each an ounce; juyce of Dwarf-Elder or Onyons an ounce and an half, Aqua vitæ two drams,* boyl them till the *Waters* are conſumed, add *Flower-de-luce root a dram and an half, Cummin ſeed a dram, Saffron half a ſcruple, Galbanum and Sagapenum diſſolved in Aqua vitæ, each a dram; Turpentine two drams, Hogs greaſe and* Oeſipus *or greaſe of wool, each half an ounce*; with *Wax* make an *Oyntment*. *Goats* or *Pigeons dung* and *Brimſtone, each a dram,* will make it ſtronger.

If you anoynt with *Oyntment of Marſh-mallows*, and ſprinkle *Cummin ſeed* upon the part, it is as good here as in a true Pleuriſie.

Alſo the *Plaſter of Diachylon* with *Orris*.

But if after the uſe of Anodynes the pain abate not but rather increaſe, eſpecially if the pain increaſe by being touched, and if a Tumor appear outwardly, then becauſe it tends to ſuppuration, apply things that may help it forward, ſuch as were mentioned for the Quinſie to be applied outwardly, or theſe.

A Fomentation: Take *Marſh-mallow roots three ounces, Roots of Lillies an ounce, Mallows, Scabious, Glaſſwed, each a handful; Flowers of Melilot and Dill, each a pugil; Figs ſix pair, Lineſeed an ounce,* boyl them in *Water* and *Milk*.

Beat the Reſidents, *and with Flower of Lineſeed, Mucilage of Quinces, and Marſh-mallow roots, each an ounce; Butter two ounces,* make a Cataplaſm.

This ripens better and opens the Impoſthume. Take *Onions and Lillies,* roaſt and ſtamp them, add *ſix ounces of Marſh-mallow roots bruiſed an ounce, Peaſe flower two ounces, Barley-leaven, or of French Wheat called* Spelt *an ounce and half, Pulp of Figgs an ounce, with Butter and Hogs greaſe* make a Cataplaſm, if you add *Goat or Pigeons dung an ounce, and Muſtard and Water-creſs-ſeeds, each a dram*; it will ſooner open it.

It may be broken by violent Motion of the breaſt, as Roaring, Neeſing, Vomiting, but not ſo ſafely.

The cure of a falſe pleuriſie of wind and water.

If in a watery or windy pleuriſie there be a ſtretching in the Membranes, from a Humor or Water gotten thither, which cauſeth pricking, you muſt uſe things that ſtop the Humor, and turn it from the breaſt if it ſtill flow, or if it be wind, give things that hinder the breeding of it, and keep it from the part. And in both caſes apply to the part things that diſcuſs, and digeſt, and conſume Wind and Water.

Diverſions are made by cupping, Friction, and waſhing, and other things that ſtop Defluxions and carry wind other wayes: but you muſt not open a Vein but when by reaſon of great pain you fear Inflammation, and only in plethorick bodies.

Sharp Clyſters revel alſo, with things to expel Wind, in which *Hiera* diſſolved is highly commended.

And purges with preparatives firſt, not only gentle to revell, but ſtrong to draw down and ſend forth wind and humors that produce it: theſe are better here than in a pleuriſie from Inflammation (which ſome do uſe in the pleuriſie called *Flegmatick* which they dream comes from an Inflammation) Therefore we rather uſe *Rhubarb, Agarick or Scammony, or Coloquintida or Hellebore* as the Ancients, eſpecially *Hiera of Coloquintida* commended ſo by *Galen* againſt a pleuriſie, here then in an Inflammation in which we can give no ſtrong Purges profitable, but with great hurt.

Theſe Purges are mentioned in Diſeaſes from Defluxions, here and there, and in palpitation from wind and in Rheums falling upon the breaſt.

And there you may find Altering Remedies alſo.

It is in vain here to give expectorating medicines as in a true pleuriſie, except a Defluxion fall upon the Lungs. But ſome things there mentioned which work by a hidden quality or by drying or digeſting may be given here.

As the *Carduus waters* (which ſome think cures pricking pains becauſe of the prickles) as that of the *Bleſſed Thiſtle* called religiouſly the *Carduus of Mary*, or their ſeeds, or an Emulſion made of them and of *Hemp-ſeed*.

The Vulgar Women keep a water for this made of Ice gathered in *March*.

There are alſo other Remedies that cure a pleuriſie without cauſing Coughing, as that of a Bores tuſk, and the like, which are good here. and many better for a falſe than a true pleuriſie, for divers of them are hot and dry which cannot be good in Inflammations, but by a hidden quality, and thoſe may work in this Diſeaſe by a manifeſt as wel as a ſecret vertue. Eſpecially thoſe there mentioned of *Dioſcorides* for pleureſies in general.

Alſo *Oyl of ſweet Almonds and Line ſeed* given to dilate the breaſt, are good here taken in good quantities.

And *Wine* if nothing elſe forbid it, and other Meats and Drinks mentioned in Defluxion and Diſeaſes of wind.

Apply

Apply outwardly things to diſſolve and diſcuſs wind and humors, and to take away pain.

As a great Cupping-glaſs to the part, with fire, which will draw out the Humor and Wind, by an attractive Vertue, not by Heat, (as ſome think) for Heat is not uſed to warm the breaſt, but to make the Glaſs ſtick.

Alſo actual Heat doth the ſame, if it be gentle, it qualifyeth the pain, if ſtrong, it diſcuſſeth and conſumes thin Humors and Wind, as the Heat of the Sun doth the Clouds. This may be done by any warm Cloths, or with warm Water, in a bladder or braſs veſſels, to keep the heat longer, made on purpoſe; Olive Oyl in a bladder hot, take away pain, But in a true Pleuriſie it muſt be but luke-warm.

Alſo Fomentations of things actually and potentially hot, with a Spunge felt, or Wool, ſqueez'd a little that it may not wet too much, or in a bladder rather then in braſs, that the vertue may pierce ſooner, and changed when cold.

They are made of Decoctions mentioned in Inflamation of the Membrane.

Or thus: Take *Marſh-mallow roots an ounce, Orris, Galangal, each half an ounce; Calaminta, Wormwood, Organ, Thyme, each a handful; Chamomil, Melilot, Roſemary and Stœchas flowers, each a pugil; Caraway, Cummin, and Fennel-ſeed, each half an ounce; Fœnugreek and Linſeed an ounce, Bay-berries an ounce and half*, bruiſe and boyl them in *Wine and Water*.

This is an excellent Experiment in all ſide-pains.

Take *Spirits of Wine ſix ounces, Camphire a dram*, boyl them till the *Camphire* is diſſolved, add where it is hot *Pouders of ſweet Sanders a dram and half*: wet Clouts, therein, and apply them hot.

Alſo dry baggs hot. As, Take *Bran, and the whole Seeds of Milium, or Grumwel, or ſeeds of Panicum, and Oats, each two pugils; Salt an ounce*, fry them, and make baggs to be ſhifted as in Fomentations. They are better, if you ſprinkle a little *Wine*, or *Aqua vitæ*, or *white Wine-vinegar*, to pierce.

This is ſtronger: Take *Bay-berries a pugil, Juniper-berries half a pugil, Caraway and Cummin, each an ounce; Fennel-ſeed a dram, dryed Hyſop, Savory, Thyme, Organ, Marjoram, each a dram; Roſemary and Chamomil-flowers, each a dram and an half; Orris roots a dram, Salt half an ounce*, make a Pouder for a bag, as before.

The reſidents of the Decoction mentioned, ſqueezed between two trenchers, is alſo good.

Or Cataplaſms made of them, as we ſhewed in the Inflammation of the Membrane, with Pouder of Caraway and Cummin-ſeed, *each ſix drams; Oyl of Rue and Orris, each an ounce; Pigeon or Goats dung half an ounce, with two Yolks of Eggs*.

Alſo Oyls or Ointments there mentioned, ſprinkle the part after with pouder of Cummin-ſeed, which is excellent in all Pleuriſies, to conſume Humors and Wind.

Or this Cerot: Take *Thyme a dram and half, Spike, Cloves, Sanders, each half a dram; Storax a dram, red wax an ounce and half*, with *Hogs greaſe* make a round Cerot, *and a dram of Orris pouder*.

Alſo the Emplaſter of Bay-berries malaxed with Oyl of Lillies, or mixed with the Cerot.

Or this: Take *Opopanax, Galbanum, Serapinum or Sagapenum, each two drams*; diſſolve them in equal parts *of Aqua vitæ, and white Wine-vinegar*, add *pouder of Cummin-ſeed half an ounce, Caraway, Seſeli, Lovage-ſeed, each a dram; dryed Rue half a dram, Brimſtone a dram*, with *Oyl of Rue, or Penny-royal*, and a little *Turpentine* make a Plaſter.

Another Plaiſter of Honey, and Oyl of Wormwood boyled, is good alſo.

And many outward Remedies mentioned in outward pains, from Humors or Wind.

CHAP. XI.

Of Pain of the Heart.

The Kinds.

THe pain of the Stomach is commonly called the Pain of the Heart, this is in the fore part of the Breaſt, in a ſoft and naked place, where the Ribs are parted, which is called the Hearts lodge, and reacheth to the left ſide, as far as the Back. In this place above the reſt, there are uſual pains and moleſtations, they differ in that they are either uſual or not. The moſt uſual, are ſuch as come new from a new Cauſe, or a Diſeaſe of which they are a Symptom. Their kinds are as they are diverſly manifeſt to ſenſe. *The pain of the Heart, is the pain of the Stomach.*

A Compreſſing or ſtretching pain called *Peristodyna*, is that in which there is felt a preſſing or ſtretching in the lodge of the Heart, more or leſs, with loſs of Appetite almoſt, and loathing ſometimes, and with belching, and ſomtimes vomiting, or purging. *A compreſſing or ſtretching pain of the Heart.*

This kind comes from ſome new Cauſe very often, and either ſtayeth a while, or comes after meat, and ends with concoction. Somtimes it is the Symptome of divers Diſeaſes, ſo that there is ſcarce a perſon but hath felt it in a Diſeaſe, or at other times.

A knawing pain is called Heart-eating, in which there is felt a biting, with pricking in the ſaid region of the Heart, with Compreſſion or Burning ſomtimes. *A knawing pain of the Heart called Cardiogmos.*

This is in many Diſeaſes, and in found men ſometimes when faſting, eſpecially ſome called *Picrocholi*, from ſharp Choler, have it when they want their Dinner, and it is often with bitterneſs of mouth, and hindrance of ſight.

Some have it chiefly before Supper, when they are given to writing, and lean upon their Stomaches, by which they looſe Appetite. They who fear, this prevent it by ſitting upright or ſtanding, when they write.

Some have it in the morning before they riſe, when they lye long waking, and after they are up, and have been at ſtool, or broke wind, it is gone. In others it comes as ſoon as they are up, and goes away with ſneeſing.

Alſo this Knawing with Compreſſion is after meat, when it is bad, or too much. Of which *Bairus* makes a private ſort of Heart-ach, when they are cold after meat, with ſenſe of this Compreſſion and difficulty of breathing; this is called a turning of the Meat into Flegm: Of which *Galen* ſpeaks.

This may be at all times, and from other Cauſes, as it is afore Vomiting, and from outward Injuries and Cold, or from things ſwallowed that hurt the Stomach. And when any fainting comes with this Diſeaſe called *Cordiaca*, as we ſhewed in Fainting. *Cordiaca Fainting.*

That pain which hath ſuch Heat that it ſeems to burn, is in ſound people often, whether full or empty. *Heart-burning.*

That is moſt uſual, in which when they would belch

they feel great burning, the flame as it were, being ſhut up in the Guller, and not able to get out, eſpecially after meat, or violent Exerciſe: the Germans call it *Boyling*, we call it a *Burning* boyling of the Stomach, of which we ſpake in Difficulty of Belching.

Boyling of the ſtomach, or burning.

Alſo this Burning is the Symptom of divers Diſeaſes, of the great pain of the Stomach, where it is burning, pricking, ſtretching and beating, and is increaſed by touching of the part, and reacheth to the Back, and girds the Body like a Girdle, and ſeems to draw down the Shoulders, and there is labour and pain to ſwallow and belch, and difficulty of breathing, being quick and little, and there is ſometimes a continual Feaver, by which means the Pulſe is quick, and Urin high, with Spitting of Blood or Matter. This is called the Inflamation or Phlegmon of the Stomach from the Cauſe of it. And the Impoſthume of the Stomach, though it is more properly ſo called, when it is turned to an Impoſthume.

Alſo a moſt burning pain, with vomiting, and other dangerous accidents, may come from another Diſeaſe of the Stomach, called *Eryſipelas*, as we ſhall ſhew in the Cauſes.

Cardilæa. The uſual pain in the lodge of the Heart is called *Cardilæa*, diſtinct from *Cardialgia*; this comes from a ſmall Cauſe, and returns often. There are two kinds of it according to the diverſity of the Nature, in which they are known by this ſome are of weaker, and others ſtronger Appetite.

Weakneſs of the ſtomach is called a diſturbance of the Heart. Such Natures as have weak Appetites and other accidents from weakneſs of Concoction, are ſubject to uſual pains of the Stomach, compreſſing or ſtretching, and ſometimes knawing, and are troubled from the leaſt offending meat, and other outward things, eſpecially cold, from which they are forced alwaies to defend their ſtomaches. Theſe pains come from Weakneſs of Stomach, and are there deſcribed, and are called by the ſame name.

A hot ſtomach is called a diſturbance of the Heart. Thoſe Natures that have ſtronge appetites, and eat greedily, and gorge themſelves, have pains of the ſtomach, as ſhall be ſhewed in the Cauſes. They are from great exceſs, and alſo ſharp, or ſalt Meats: theſe pains are called a hot diſtemper, and are deſcribed in a hot Conſtitution.

The Cauſes.

The place or part affected, is the region or lodge of the Heart, not the Heart it ſelf, for it is not under it, nor is it ſenſible, as I ſhall ſhew, but the Stomach which is in that region, or ſome parts of the Colon or Midriff, that reach thither.

The cauſe of Heart-ach is in the ſtomach. The Cauſe of this, is from the Stomach which is on the left ſide of this Region, and is very ſenſible, eſpecially at the mouth of it, which hath very remarkeable Nerves. And this mouth of the Stomach is called *Cardia*, becauſe it is next under the Heart, and there goeth through the Midriff, and joyneth to the Ventricle, and therefore the pains thereof are felt, as if they were in the Heart, and as it were communicated unto it, and cauſe a Swounding, if they be great; as we ſhewed in Cardiaca. All theſe pains in this region are called pains of the Heart, or *Cardialgiæ*. And the pains of the Stomach are divers, by reaſon of its exquiſite Senſe, and often injuries by things taken in, and brought to it, and becauſe it ſticks out, and is ſo expoſed to more danger. Theſe pains are either primarily in the ſtomach of it ſelf, from ſome cauſe afflicting it, as a Diſeaſe, which is either a hot or cold diſtemper, ſtretching, heavineſs, twitching, or irritation, eſpecially when there is a helping Cauſe, that is a Diſpoſition of the Stomach, from a weak or hot Conſtitution. Or they are by conſent in the ſtomach, from the nerves that are planted in it. Theſe pains I have ſeen but ſeldom, but they were with much grief and mourning, and ſomtimes a little doting, and they alwayes ceaſed after vomiting, they are chiefly in Semitertians. Of theſe in their order.

A hot diſtemper of the ſtomach, is the cauſe of heart-ach. A hot Diſtemper alone without matter, doth ſcarce cauſe pain, becauſe the ſtomach is delighted with hot things. and when it is very hot, from things taken in, or hot Diſeaſes, as in Feavers, Heat of the Liver, and the like, there is thirſt rather then pain, except another accident happen as we ſhall ſhew in the hot Conſtitution of the Stomach.

Inflammation of the ſtomach is the cauſe of heart-burning The Stomach is ſomtimes ſo inflamed, that from the Veins abounding there, Blood is ſent into the ſubſtance thereof, and then follows that burning pain, which we call an Inflammation. It is ſomtimes pure, ſomtimes with an Eryſipelas, when the blood that flows to it, is very thin and hot, and then the heat is greater. An Inflmmation is ſeldom in the ſtomach, becauſe it feeleth any hutt, and preſently rouleth up and down; or never, except it be from great violence, as a contuſion or ſtroak upon the Stomach being full, or from taking of very hot things actually or potentially, as Spaniſh-flies or Sublimate. Alſo it may be from heat of the blood in the Meſeraick Veins in Feavers or other Diſeaſes ſent to the Stomach, without any outward Cauſe. And this Inflammation is turned ſomtimes into an Impoſthume and then the pain increaſeth, and when it breaks, matis vomited.

A cold diſtemper of the ſtomach, cauſeth knawing of the Heart. A ſimple cold Diſtemper whether dry or moiſt (though ſome deny it) being an enemy to the Nerves, cauſeth pain in the ſtomach, which is with knawing, and as it were Fainting.

This comes from expoſing the naked ſtomach to the cold air, in lean people eſpecially, when they go not warm cloathed, and are hot or ſweat, and then open their breaſts: From whence I have known great complaints of Heart-ach, with Fainting. This may come alſo from other cold things as Water, and the like.

The ſame may come from drinking cold Water or Wine, with Snow-water, or Milk, eſpecially when the Body is hot, as often people do. From whence many grievous accidents have been to my knowledg.

The ſame may come from a cold Humor, ſuddenly falling upon the Stomach from the Head, which cauſeth Loathing and Compreſſion, or from glaſſie ſour Flegm flowing to the Stomach, for that which breeds in it by degrees, moiſtneth and looſneth it, and rather cauſeth weakneſs then pain, except it cauſe Heavineſs by the quantity, as ſhall be ſhewed.

A ſtretching, heavineſs, or a compreſſion of the ſtomach, is the cauſe of a preſſing and When the Stomach is ſtretched, or burdned, or preſſed inwardly or outwardly, it hath a preſſing pain, and ſomtimes knawing, this may come from

divers

ſomtimes of a knawing pain in the Heart.

divers following cauſes.

Meat rather then drink (which ſooner goeth through, and as *Hippocrates* ſaith ſooner filleth then meat) being taken abundantly, burdens the ſtomach and ſtretcheth it: Eſpecially after a ſupper, hence the old ſaying *ut ſit nox Levis, ſit tibi Cœna brevis.*

If you'l have a good Night.
Let your Supper be Light.

For they who feed too freely, hinder the free motion of the Diaphragma thereby, which cauſeth difficulty of breathing, ſo that they are in danger of Suffocation, as one whom I knew that eat bread for a wager, and a Virgin that had crammed her ſelf with Cheſnuts, were, and an old woman that died with eating of too much Meat and Eggs upon an Eaſterday. The ſame may be alſo when any hard thing is taken into the Stomach as when it is filled with Cherry ſtones, or other hard ſubſtance, as the Mountebancks, that eat flint ſtones for Money.

The inflation of the Stomach and the cauſe thereof.

Wind filling the ſtomach, cauſeth a ſtretching pain, which is called the Inflation of the Stomach. This comes from crude, wateriſh and windy meats and drinks, or a humor of that nature. Or from crudity of the Stomack, or from want of Concoction, which being bred there ſtretcheth it, and if it be much in quantity, maketh it heavy. The ſame may come by a humor, that comes out of the Guts into the Stomach, which is rare, and then the belching is ſower and as of roaſted fleſh.

If Air be taken into the ſtomach, as ſomtimes by greedy drinking, it doth the ſame if it be any quantity and remains there: but this is ſeldom, becauſe after meat taken in, it is forced up again by belching. But if Wind or Air be mixed with meat, as we ſee in Puddings while they are filling, then it ſooner offendeth and ſtretcheth the ſtomach.

A crude flegmatick excrementitious humor being in the ſtomach from crudity, or from the Head by Defluxion, offendeth it by diſtemper, if it be cold, and by compreſſion alſo, if it be much, and turns into wind. This crudity comes from weakneſs of the ſtomach, or want of Concoction. And if thereby crude flegm be produced, it cauſeth the diſeaſe called the turning of meat into flegm.

A hard preternatural tumor in the ſtomach, as a *Callus* after ſome hurt (ſuch as I have ſeen in the ſtomach of a Swine that was wounded formerly there, and in the bladder of a Cow) or any other hardneſs or ſcirrhus that breeds therein, doth burden and moleſt it, and the more after meat.

Alſo the ſtomack may be afflicted by the parts adjacent, when too ful or obſtructed, or ſwollen, or hard, they preſs upon it, or inflame it. As by the Liver over it, or the ſpleen under it, or the Reins near to it, or the Diaphragma inflamed, or by the colon Gut growing to it, when it is ſtretched.

Alſo from the bending inward of the ſword bone, when it is ſo confirmed, the ſtomach may be offended, when it is ful and ſtretched and hits againſt it. And it will be ſo, till the meat is digeſted, or the ſtomach fals off, by the patients lying upon his Back. This I have known in many.

The ſame may be from outward, hard and heavy things lying thereupon, not for guarding or keeping warm the ſtomach, but to make the body ſlender, which women much delight in, and therefore uſe busks and ſtreight bodies. Theſe offend the ſtomach, eſpecially after meat, and they endure it patiently, for pride feels no pain.

Twitching of the Stomach, is the cauſe of the knawing of the Heart.

Twitching and alſo tickling of the Stomach, cauſing ſtraining and vomiting, and turning of the ſtomach (as they call it) produce the pain that goes before. This is greater and longer in thoſe that cannot vomit, or with much difficulty do it. This is cauſed by all things that provoke loathing and vomiting, and is in all diſeaſes that have the turning of the Stomach. Alſo by worms rather moving then ſucking the mouth of the ſtomach, which is very ſenſible.

A ſtrong irritation of the ſtomach is the cauſe of a knawing or burning pain of the Heart.

A ſtrong provocation doth more turn and offend it, as when vomits are given of Hellebore, Stibium, precipitat, which burn, knaw or prick the mouth of the ſtomack, or poyſon taken, which offends both Stomack and Heart, and cauſeth both Cardialgia and Cardiaca.

Or ſharp Food, as Onyons, Leeks, rotten Cheeſe, or burning food, as Water-creſſes, Water-Parſley or the like, after the eating of which, they eſpecially who have hot ſtomachs, feel burning and knawing. Alſo this pain may come from meat, which is not of it ſelf ſharp, but turneth ſo by corruption in ſome Stomacks which eaſily corrupt. as from ſweet, fat and ſtinking meats, and moiſt; As Eggs, Milk, Cowcumbers, and other ſuch fruits, theſe by corruption, do not cauſe a cold matter (as they ſuppoſe) but that which is ſharp and cholerick. The badneſs alſo, and corruption of meats in hot ſtomacks eſpecially, may cauſe the boyling of the ſtomach, as when the hot burning juyce of the meat boyleth, in time of concoction, if there be a violent motion at that time, which diſturbeth the ſtomach, and confuſeth the meat therein, it ſendeth forth a burning vapor like a flame, from the bubles that break. This vapor laboring to come forth by belching (as we have ſhewed in difficulty of belching) gets into the ſenſible ſtreight paſſages of the mouth of the ſtomach, and then burneth it, and when it is diſcuſſed the pain ceaſeth, and when a new vapor ariſeth (as we ſee in the boyling of Haſty pudding) the heat returns, and ſo long till the concoction is finiſhed, or ſome drink is taken to quench it, or to allay the ſharpneſs of the juyce from whence the vapors ariſe.

The ſtomach is often provoked alſo from Choller yellow or green, or from Melancholly, and if it ſtick faſt it knaws and burns it.

This choller breeds in the ſtomach from things eaten, which have evil juyce, or breed choller, or is ſent into it by the gut called *Duodenum* and cauſeth knawing and biting, eſpecially when the ſtomach is empty, in thoſe called *Picrocholi*, or men of a ſharp cholerick conſtitution. If this choller get into the ſubſtance of the ſtomach, the burning will be longer. As it may from the gall touching it, for that part of the ſtomach that lyeth upon the gal and cloſe unto it, may be dyed yellow thereby, ſo that the ſtaine may reach to the inſide of the ſtomach, as we have often obſerved in Anatomyes of ſuch, who had alwaies burning ſtomacks. This is uſual with them, who have much choller in their Gall, which being waſhed, paſſeth through the bag that holds it, and infects all the parts near, inwardly and outwardly, as I have often ſeen. And this is moſt in them, whoſe ſtomach is ſeldom empty, but alwaies gorged. Or in ſuch who writing or the like bend their body, ſo that they violently preſs the ſtomach upon the gall, and

and as it were ſqueeze it, at which time alſo the burning is greater.

The Eryſipelas of the Stomach.

Alſo the pian muſt needs be great and burning and dangerous, when there is an *Eryſipelas* of pure choller, in the ſubſtance of the ſtomach. This is a ſad diſeaſe with continual vomiting.

If the ſtomach be cut or prickt from ſwallowing of Thorns, Needles, or Graſs, (as drunkards have often done) there is not only a knawing, but pricking and tearing pain.

The ſtomach is alſo pained from malignant and venemous humors, in other diſeaſes, and there is alſo fainting.

The weak conſtitution of the Stomach cauſeth the weakneſs thereof.

The weak conſtitution of the ſtomach called weakneſs of ſtomach, (which others call a diſtemper which weakneth, and cauſeth not pain) becauſe it cauſeth ſlow concoction and crudity from thence, produceth divers Symptoms, as loſt Appetite, loathing, belching, Cachexy and the like, mentioned elſewhere, and pains by reaſon of Excrements that come thither, and the *Cardilæa*, or Imbecillity of the ſtomach.

This weakneſs of ſtomach, is from want of natural heat, either at the firſt birth, or by old Age; or from long diſeaſes, by which the ſtomach hath been often weakned, or from great Evacuations and Venery, which have weakned the whol body and the ſtomach alſo. Or from coldneſs and moiſtneſs, which makes the ſtomach looſe, or from dryneſs, by which it cannot fitly embrace the Food; This diſtemper may come from external or external cauſes or diſeaſes that change the temper of the ſtomach to be cold, moiſt or dry, which cauſeth imbecility. Somtimes it comes from a fault in the Organ, or part it ſelf. As when it is too thin from too much diſtention through gluttony or drunkneſs. For the thicker the ſtomach is, the better it concocteth (as we may ſee in birds, whoſe thick ſtomach concocteth the hardeſt things.

The hot conſtitution of the ſtomach, cauſeth the hot diſtemper.

If the ſtomach be naturally hot, or by uſe of hot things in youth, ſooner then they ought to uſe them, or made ſo by a diſeaſe, which hath ſhriveled it though it be not a diſeaſe of it ſelf, if it be rightly ordered, yet it is a cauſe why ſome meats ſooner corrupt, and turn into choller and ſharp humors, and ſo by accident cauſeth a *Cardialgia*, which comes from ſuch humors. This diſpoſition of the ſtomach, is known chiefly by thirſt and delight in ſour things, and diſtaſt of ſweet. So that hot, ſharp and ſalt things and wine they heave, and digeſt the hardeſt meat ſooneſt, and the other eaſily corrupteth.

The cauſe of pain of the Stomach, is in the Nerves.

In almoſt all diſeaſes, with great pain the ſtomach ſuffereth by conſent of the Nerves, of which the mouth of the ſtomach is ful. Hence it is that in the colick and ſtone and other pains in parts diſtant, as of wounds and contuſions, we ſee not only the Appetite loſt, but a pain in the ſtomach, ſo that if they receive a wound when the ſtomach is full, they vomit.

Alſo the ſtomach being of moſt exquiſit ſenſe, doth eaſily receive an injury, though never ſo ſmal, and is greatly offended at a great, by reaſon of the Nerves. So that there is often a Syncope or ſwounding, moreover by reaſon of this conſent of the Nerves, in great paſſions of the mind, there is a Head-ach from the ſtomach offended, and other hurts, as loſs of Appetite and the like.

The cauſe of Heart-knawing, is in the Colon.

The pains of the Gut called *Colon*, which is at the bottom of the Stomach, and joyned unto it by the Caule, are referred unto Heart-pains alſo, becauſe they are in the region or lodge of the Heart. As if the Colon be ſtretched by Wind and Excrements, it comes to paſs that the pain ſeems as if it were in the ſtomach, yet it ſtops not long, but runs to the ſides downwards. And in other pains of the Heart, we find that they go upwards, and are about the ſtomach; ſo that ſome pains of the Colon ſeem to be pains of the ſtomach. Hence it is that when they lye long a bed in the morning, and ſleep not, becauſe the Excrements which they uſe to void preſently, when they ariſe being retained in the upper part of the Colon, not being able to go down while they are in bed, do pull and twich the Colon, and provoke the Stomach by conſent, and there is Loathing and Heart-pain, which ceaſeth when they are up, and the Excrements deſcend, eſpecially if they break Wind downward, or go to ſtool.

And hence it is that after a purging Medicine, when it begins to work, and the evil Excrements paſs through the upper part of the Colon, till they have a ſtool, they feel a noiſe and Heart-ach often, ſo that they ſwound and vomit, and the pain returns when they again to ſtool. All theſe things ſhew that the Cauſe is not in the Stomach, but the Colon: For if it were in the ſtomach it would have begun at the firſt taking of the medicine, and while it was in the ſtomach, and not a go long time after, when the Medicine was carried with the Excrements into the Colon, and laboured to get out.

The cauſe of preſſing-pain is in the midriff.

When the Midriff is afflicted, which toucheth the ſtomach all over behind, and groweth to it; there are pains in the region of the Heart, becauſe the Midriff being moleſted with evil and many vapors, as in the night-mare, mother and the like, it cauſeth beſides ſhort breathing, a pain which girts the Body like a Girdle: And if the ſtomach conſent, that condoleth. As a difficulty of breathing comes from a Diſturbance of the Stomach by the Midriff.

The Cure.

The Cure is according to the Cauſes thus. Firſt we muſt cure the Diſeaſes of the Stomach, from whence come divers ſorts of Heart-ach, hurt of Functions, and Crudities. The Diſeaſes are theſe; Inflammations of the Stomach, or coldneſs, or ſtretching, or windineſs, or heavineſs, twiching, or irritation; or elſe the weakneſs and hot conſtitution thereof: Or a Diſeaſe by conſent from the Nerves, and from the Colon and Midriff.

The cure of inflamnation of the ſtomach.

The Inflammation of the Stomach is ſeldom, and never but from a violent Cauſe, and is more dangerous, becauſe it is in a ſenſible and noble part, eſpecially if it be great, for then there is a great pain and alſo Convulſion. And it is better cured by diſſolving then by Suppuration; for ſo it wil turn to an Ulcer, which is a new Diſeaſe, and as dangerous as the former, hard to be cured, and which will leave a Callus or Hardneſs in the Stomach.

If it be beginning, your aim muſt be to hinder the increaſe, and abate the Heat, with reſpect to the Fever, and aſſwage the pain and fainting fits, which are uſual and to diſſolve the matter that is there, and if that cannot be done to bring it to Suppuration, and cure the Ulcer; thus.

At the firſt let blood in the Arm, for though the veins of the Stomach come from the branches of the Gate-vein, yet drawing blood from the branches of the hollow Vein, is good againſt the Feaver and for Revulſion.

Give alſo a cooling Clyſter to revel and abate pain, for that will reach to the Colon, and communicate its force to the Stomach, under which the Colon lyeth.

You muſt not give ſtrong Purges, for they going preſently to the part affected, will cauſe pain, and increaſe the Diſtemper by their Heat; but looſning temperate Purges in the progreſs of the Diſeaſe can do no hurt: As Caſſia which alſo aſſwageth pain, and pulp of Prunes, and Tamarinds, and the like.

Medicines to alter the Diſtemper muſt be cold, both actually and potentially, and in the beginning while the Humor floweth muſt be a little aſtringent, and afterwards moiſt, mixed with things that abate pain. Thus:

Thoſe Sauces which are good in a hot conſtitution of the Stomach, and cooling, as we ſhall ſhew are good here.

Cabbage chiefly, and Rapes, and other Fruits, boyled and kept in pickle, are good againſt heat.

And cold Spring-water, with Snow or Ice, is good drink in the opinion of ſome; but I think it not ſafe, for a ſudden Repercuſſion is dangerous. It is better at firſt with a little Vinegar, and more pleaſant with Sugar boyled like a Julep.

Cold Milk is good, and allaves pain.

Or an Emulſion of the cold Seeds to eaſe pain, and heat with Poppey-ſeeds.

Dioſcorides commends the Water of wild Vetches, alſo Plantane, and Roſe-water, and Vinegar, and Sorrel-water.

And the Julep of Roſes and Violets.

Or, Take *Roſe-water three ounces, Plantane-water two ounces, juyce of Sorrel or Pomegranates an ounce and an half, Sugar of Roſes an ounce*; boyl and ſtrain them, give *two ounces* at a time.

Or the Decoction of Barley, cold, with Violets.

Or thus: Take *Barley a pugil, Cowcumber-ſeed half an ounce, Liquoriſh an ounce*; boyl and drink them cold.

This is cordial alſo. Take *Liquoriſh an ounce, Citron-peels two drams, cordial Flowers, each a pugil; Flowers of Water-lillies half a pugil, Barley a pugil, the four great cold Seeds two drams, Purſlane-ſeed and white Poppey-ſeed, each a dram; Citron-ſeeds half a dram*: boyl and ſweeten them with *Sugar, or theſe Syrups*.

In the beginning give Syrups with ſpring or diſtilled Waters, thoſe that cool and bind; as that of dryed Roſes, Quinces, green Grapes, Ribes, ſour Pomegranates, Bar-berries. In the progreſs that cool and moiſten; as of Violets, Purſlane, Water-lillies. And if the Liver be alſo hot, as it is commonly, and for the Feaver give Syrup of Succory, and Endive. And againſt Fainting, Syrup of Bugloſs. And to aſſwage pain, Syrup of Poppies.

Or thus: Take *Syrup of Violets, and Quinces, Syrup of Ribes, or Pomegranates, or of Endive, each half an ounce; Syrup of Poppies three drams*.

Alſo the candyed or preſerved and conſerved Fruits aboveſaid and of Citrons, Gourds, or Lettice, or Coleworts.

This is cooling and cordial: Take *conſerve of Roſes an ounce, conſerve of Violets, Citrons and juyce of Ribes, each half an ounce; ſpecies Diamargariton frigid and Diarhodon and red Coral, each a ſcruple; with ſugar of Roſes*, make a mixture.

To reſolve the reſidue of the Inflammation, or the Impoſthume of the Stomach uſe theſe at the end.

Firſt, give *Chamomil and Endive water, then ſix ounces of Chamomil water alone*, often

Or: Take *Chamomil and Endive water, each an ounce and an half; Sack an ounce, ſpirit of Wine a dram, with a drop or two of ſpirit of Vitriol*.

Or this Julep: Take *ſyrup of Endive and Wormwood, each an ounce; Mint and Elicampane water, each an ounce and an half, with Triaſantalon half a dram*, give it now and then.

Turpentine waſhed with Wormwood water, given twice or thrice, diſſolves or ripens the Impoſthumes of the Stomach.

Apply outwardly coolers and anodynes, with ſtrengtheners.

As this Oyntment: Take *Oyl of Roſes an ounce and an half, Oyl of Violets, Roſe Vinegar and juyce of Hawkeweed, each an ounce*; boyl them till the juyces are conſumed, and *red Sanders a dram, red Roſes half a dram, Spike a ſcruple, Camphire half a ſcruple, with white Wax*, make an Oyntment.

This Cataplaſm is good for the beginning of the diſeaſe. Take *Violet-leaves, and Snakeweed, and Vine-leaves each a handful: Roſes, Violets, and Comfrey-flowers, each a pugil*; ſtamp them, add *Barley-meal, or Bran*.

In great pain. Take *Chamomil, and Melilot-flowers, Roſes, and Violets, each a handful; Wormwood half a handful*; boyl them in *Milk*, add *Barley-meal ſix ounces, Coriander-ſeeds and Sanders, each two drams; Oyl of Chamomil and Dill, each an ounce*: make a Cataplaſm.

Or this Fomentation againſt Inflammation. Take *Roſe and Plantane-water, each three ounces; Wormwood-water two ounces, Roſe-vinegar an ounce, red Sanders two drams*.

Or this Epithem againſt an Eryſipelas of the Stomach. Take *Roſe, Sorrel, Nightſhade, and Succory-water, each two ounces, Wormwood-water and white Wine, each half an ounce; Roſe-vinegar two drams, Diarrhodon a dram, Coral and Ivory, each half a dram*; apply it to the Stomach.

Uſe theſe to diſſolve the Impoſthume, as this with a Spunge. Take *Wormwood, Mints, and Snakeweed, each a handful; Chamomil and Dill-flowers, each a pugil; Fœnugreek and Bean-meal, each an ounce; Maſtick two drams, Nutmeg a dram*: boyl them in *Wine* for a Fomentation.

Then anoint with this: Take *Oyl of Wormwood and Chamomil, each an ounce and half; Turpentine half an ounce, Mucilage of Marſh-mallows and Fœnugreek-ſeed, each two drams; Maſtick a dram and half, Cloves a dram*, with *Wax* make an Oyntment.

Or this Cataplaſm. Take *green Wormwood a handful, and Mints half a handful*, ſtamp them, add *Bran and Linſeed-flowers, each an ounce; Roſes and Chamomil-flowers in pouder, each a dram; Mace half a dram*, add *Oyl of Wormwood*.

Or uſe Melilot-plaſter diſſolved with Oyl of wormwood.

The cure of an Impoſthume of the ſtomach after Inflamation.

If the Inflammation do impoſthume, ripen it with remedies in the Quinzie given at the mouth.

And with things there outwardly preſcribed, only ad ſome things that may reſpect the Stomach, being a more noble part.

As this Cataplaſm. Take *Orris and Lilly-roots, each two ounces; Wormwood and Mallows, each a handful; Chamomil-flowers and Roſes, each a pugil*; boyl them in *Wine* and *Water*, ſtamp them, and add *Wheat-flour four ounces, Linſeed poudred an ounce, yellow Sanders a dram, Saffron*

half a dram, Oyl of ſweet Almons two ounces: make a Cataplaſm.

Or uſe the Emplaiſter of Diachylon with Orris and Oyl of Mints.

To open the Impoſtume, uſe things mentioned in a Quinſie. Or this, Take *Wheat flower four ounces, Pigeons dung half an ounce, Oyl of Wormwood an ounce, Honey an ounce*, make a Plaſter.

Alſo Roaring, Neeſing, Coughing and rubbing of the Stomach and Vomit, will break the Impoſthume.

If they vomit matter, give Barley water and Sugar to cleanſe, with Honey of Roſes.

The Cure of Cardialgia, from a cold Stomach.

Then ſtrengthen the Stomach, as in imbecility.

If coldneſs of ſtomach come from outward injuries or cold water drunk and produce *Cardialgia*, give and apply hot things actually and potentially ſo. And the pain will be abated.

Of which we ſhall ſpeak in Imbecility of the ſtomach from cold.

And alſo of that cold that comes from a humor; for Imbecility, is the cauſe of both.

But if the cold be ſo great that not only the ſtomach, but parts adjacent ſuffer, & a Dropſie or *Cachexy* follow (which comes by drinking much cold water, when they are very hot (we ſhall ſpeak of the Cure of that, in the hurts of the bowels.

The Cure of Cardialgia, from Deſtention, Inflammation, and aggravation of the Stomach, by Wind, Meat, Humor, Tumor or Bowels adjacent, or outward injuries.

As the cauſe is, ſo muſt Diſtention, Aggravation or Inflammation of the Stomach be cured.

If it come from Wind, which proceeds from Meat, Humor or weak Concoction, it cauſeth a ſtretching pain: becauſe there muſt be good dyet to hinder the breeding of Wind and Evacuation, and hot remedies uſed to help concoction and diſcuſs wind inwardly and outwardly, we ſhall ſpeak of it in weakneſs of ſtomach, from crude humors.

If the Stomach be ſtretched by Air, taken in with drink, except it be belched forth again, we ſhall Cure it, as in the Cure of wind.

If there be ſtretching and heavineſs, from plenty of things eaten, and compreſſion after Concoction and Digeſtion, by excerciſe it will away.

But if it be great and will not yeild by reaſon of the quantity or quality it muſt be vomited up or purged & the ſtomach ſtrengthened. All which are uſed againſt thoſe cauſes that weaken the ſtomach, and becauſe there is alſo weakneſs, we ſhall ſpeak of it in Imbecility of the ſtomach.

As alſo if this ſtretching or heavineſs, comes from a crude humor, we ſhall ſpeak of it there, becauſe that is the cauſe of weakneſs, and this is the cauſe of that.

If it come from a hard Tumor, after a wound, or a Scirrhus, although it be difficult, and there will be alwaies ſome heavineſs after meat eſpecially, and weakneſs, let the Cure againſt weakneſs be ſufficient: yet uſe Emollients, as ſoon as you ſuſpect it, and conſume it, if you can.

The beſt way is to give Turpentine pills with Gum Ammoniack and Maſtick often.

Or theſe: Take *Gum Ammoniack*, diſſolved in *juyce of Orris, Maſtick, each a dram; Storax, Myrrh, Ladanum, each half a dram; with juyce of Orris*, make pills, give *half a dram* often.

Or give *a drop or two of Oyl of Myrrh or Maſtick with Sugar*, or otherwiſe.

And apply outwardly things mentioned in the hardneſs of Liver and Spleen.

Or thus: Take *Mallows or Wormwood, each a handful; Chamomil flowers a pugil, Schænanth two drams, Figs twelve*, boyl them in *Wine*, ſtamp them, and add *Gum Ammonick and Bdellium*, diſſolved in the Decoction, *and Myrrh, of each two drams; with Honey*, make a Cataplaſm.

If the ſtomach be oppeſſed, by the Liver, Spleen, Reins, Colon, Midrife being ſtopt, ſtretched, ſwollen, hardned or inflamed, Cure it, as in theſe diſeaſes, for the heavineſs will not away, till they be removed, nor the difficulty of breathing, though they complain leaſt of them.

If it come from the crookedneſs of the ſword Griſtle bent inwards and preſſing the Stomach, it is incurable, and no reſt can be, till the patient lye upon his Back, that the Stomach may remove from it: or till there is a compleat Concoction.

If it come from hard things, outwardly preſſing, remove them, and if they have done any hurt, mend it.

The Cure of Cardialgia, from twitching and tickling of the ſtomach.

If the twitching of the ſtomach cauſe loathing, rather then pain, Cure it, as in loathing. If worms cauſe tickling, expel them, and any other Diſeaſe that cauſeth it

The Cure of Cardialgia, from Irritation, or provoking, or from things ſwallowed, or from Medicines, or from poyſon bad Dyet, or evil humors.

If there be Irritation or reaching with pain, knawing, pricking or burning cauſed by things ſwallowed, that wound the Stomach; firſt remove them, if poſſible, not by force; as vomiting (for ſo the ſtomach wil be cloſed and the things that hurt will ſtick faſter) but by things that make way, and waſh, and make them deſcend, that they may not hurt the entrals for they do not eaſily fix though ſharp, but are caſt down by the Stomach and Guts, as other hard things, and ſtop not, till they come at the ſtraight paſſage of the Fundament. For we think it impoſſible (as ſome ſay) that they ſhould paſs through the Veins, by the Meſeraick and Gut out at the skin. Yet we have obſerved, from a Famous Chirurgion, from whoſe mouth I had it, with great admiration of the hearers, that a Needle ſwallowed, which ſtayed long in the body, came out at the Reins, by the right Kidney in an Ulcer. And I my ſelf ſaw and handled a piece of Glaſs, which came out by Urin, by a ſtrong Diuretick, after a great and ſharp pain in the Uriters and fit of the ſtone.

Theſe are waſhed away with great draughts, of fat things eſpecialy, which relax the paſſages, as of broath, Milk, Oyl or Butter, which done, if by the pain we ſuppoſe that a Needle or a thorn be faſtned, then we prevent, or Cure an Inflammation, as we ſhewed in Inflammations. If by reaſon of great hurt they vomite blood, we muſt ſtop it, as we ſhewed in vomting of Blood. If matter come forth, we muſt give cleanſers, as was ſhewed in Ulcers of the Jaws and Gullet, and then dryers to heal, as was there alſo ſhewed. But this is hardly done in this noble part ulcerated, and if it be done it leaves a *Callus*, which cauſeth weakneſs. Here we ſhall ſhew how theſe two laſt are to be done.

Whether it be from things ſwallowed or Choller, or evil juyce, vomiting is good, and though it come of it ſelf, yet nature is to be helped, if it be not ſufficient to caſt out the offence.

The Vomits muſt be ſuch, which waſh the ſtomach, and

and make the vomiting eaſie. as warm water, Broaths or Drink plentifully taken; with Oyl, Butter or the like, which turn the ſtomach and allay ſharpneſs; or with Honey and Sugar, which alſo cleanſe. Alſo Barley water is good.

In a cholerick ſharp juyce, give things to abate it, as water, or the like, with Vinegar, ſyrup of Sorrel or Oxymel, and other Vomits mentioned in Feavers.

Alſo gentle Clyſters to draw it out of the Stomach. And though the body be looſe (as it needs muſt be by the provoking of the expulſive faculty) yet Clyſters are good to take away pain in the Stomach and Guts, for they can get into the Stomach by the Colon.

Alſo Suppoſitories revel and do ſome thing thereby, examples of all theſe are in the Colick.

When there is choler, or ſharp juyce, or any violent thing ſwallowed, whether Medicine, or Poyſon, or other things that hurts the ſtomach, it is good to purge, becauſe nature tends that way. And there are many purgers of choler mentioned in cholerick Feavers, good in this caſe, if they be ſo ordered that they may not trouble the ſtomach: thus.

Take *Caſſia ten drams, or Catholicon ten drams, or three drams of the Electuary of juyce of Roſes*, or the like, *as Diacydonites with Scammony alone, or with Sugar, or with Wormwood water, or of Endive*, when you will temper choler; but when you will cleanſe, with *Barley or Peaſe broath*. But when you will looſen more, with a Decoction of Fruits and old Cocks broath. *Rondeletius* commends Fiſh broath, or Whey, or Poſſets: or if bitter things will down, the Decoction of Wormwood, which is cleanſing, and is good againſt both choler and flegm.

Or give *three ounces of ſyrup of Roſes, or an ounce and an half of ſyrup of Roſes with Rhubarb, or Senna, or that of ſuccory with Rhubarb, or of Wormwood.*

Or this Decoction: Take *ſweet Prunes and Tamarinds, each half an ounce; Endive a handful, Violets a pugil, Barley a pugil, ſenna half an ounce, Polypody ſix drams. Epithymum two drams, Annis ſeed a dram*, boyl them, *with ſugar, ſyrup of Violets, or Roſes*: make a Potion.

Or this infuſion: Take *Rhubarb four ſcruples, Senna two drams, Wormwood a dram, Spike half a ſcruple*, bruiſe and ſprinkle them *with white wine*, and add *Endive and wormwood water*, infuſe them, and add *ſyrup of Roſes an ounce*, give it. You may mix with it the *Laxative* afore mentioned.

Another infuſion in wine of wormwood, better for the ſtomach: Take *Senna an ounce, Rhubarb a dram and an half, yellow Myrobalans three drams, wormwood two drams, Cordial flowers a dram, Spike a ſcruple, Fennel ſeed a dram*, ſteep them, (being bruiſed) in *white wine* that is *ſmal, twenty four hours*. Give every day a draught.

Pills for the ſame: Take *Aloes* (which is good to cleanſe both choler and flegm) *a ſcruple, Rhubarb half a dram, Spike three grains, Scammony two or three grains, with juyce or ſyrup of Roſes*: make a Doſe of Pills.

Or give *a dram of Pills of Rhubarb, or ſcammoniate Pills*, if need require.

If the ſtomach be provoked by a bad Medicine, or poyſon, or burne, or be corroded; give things to alter by moiſtures to abate the force, or by ſlymineſs to defend the ſtomach, and that will heal, and reſiſt Poyſon.

As warm Milk, or Cream of Almonds, or Pinenuts, or of Cold ſeeds, or Barley Cream.

Or the milky juyce of Goats beard, Hawkweed, Sowthiſtle, Sycomore, in Corroſions are good.

Or the Mucilage of Lineſeed, Fleabane, apples Pears or Quinces.

The Decoction alſo of Lineſeed heals the Stomach, when it is corroded by taking of Spaniſh Flyes.

Or: Take *Marſh-mallow roots an ounce, Comfrey roots half an ounce, Lime and Quinceſeed, each a dram*; boyl them in *Water*, and add *Sugar*, drink often thereof.

Or oyl of ſweet Almonds, in a good quantity, or the oyl of Seſamum, commended by *Dioſcorides*.

If the ſtomach be poyſoned, give Treacle and Mithridate and the like, which are proper to take away the cauſe and the pain. But after a violent purge, they do more by ſtupifying the expulſive faculty, then by the way of Antidote.

You may alſo give Antidotes, without Opium, which are contrary to poyſon, by a peculiar quality, or general Antidotes; ſuch as are preſcribed againſt the Plague, and biting, and ſtinging of venemous beaſts.

If the ſtomach be burnt and reacheth from choller or ſharp juyce, give things that moiſten, and are ſharp and cool, and will hinder the reaching, and alſo ſuch as take the ſenſibility away, and aſſwage the pain.

As ſour Fruits take away the burning of the ſtomach, Citrons, Limons, Orenges, Pomegranats, Apples, Plums, Cherries, Grapes, and Strawberries, and chiefly Currans and Berberries.

Alſo Lettice, Endive, Violets, Borrage, Sorrel, wood-Sorrel, Vine leaves and Berberry leaves in ſallets, or otherwiſe.

Dioſcorides commends ſimples againſt the burning of the ſtomach and ſome of them are hot, as ſcordium, Pennyroyal, ſpicknard, ſmallage, flowers of Comfrey, ſweet ruſh, Piony ſeeds, and wild Laurel, and juyce of Liquoriſh.

Alſo Fleſh, or Barley broath, with cooling and moiſtning herbs, and Vinegar, or other ſour juyces, or the Decoction of Wormwood, or the juyce of the Fruits aforeſaid, or ſharp Herbs alone, or with ſugar, or ſyrups, if they be two ſharp.

In a cholerick ſtomach, wormwood wine doth quickly help, by cleanſing flegm and Choler.

Or a ſharp ſyrup alone, or with waters, or Decoctions, as of ſorrel, or Vineger, or Oxyſacharum, or of Pomegranate juyce, or of the ſyrup of them, or of Apples, Plums, Limons, Citrons, unripe Grapes, of Currans, Berberies, ſorrel, or that of juyce of Quinces boyled, or quidiney of Quinces with wine, or Vinegar to make it ſharper. And ſo you may mix other ſyrups, that are too ſweet, to beat down and ſuppreſs choler, which two ſweet things will breed. Alſo ſyrup of Violets, Roſes, or Juleps thereof, alſo of Endive, ſuccory and Water-lillies, and the like, well mixt with waters, or Decoctions, for ſo they ſuppreſs choler not only by cooling, but wetting, eſpecially if they be ſharp, to all which, add ſyrup of wormwood to cleanſe choler.

Alſo Conſerves and Candites of the ſame Fruits and Herbs are good, (but alwaies be ware of ſweet, they will heat choler) and Conſerve of quinces, Citrons, Gourds, Lettice, Colewort.

Alſo juyce of ſharp fruits without ſugar, as the ancients did, or with Vinegar, uſually they are without ſugar, as of Currans, Berberries, unripe Grapes, or theſe.

Make Electuaries of theſe mixed, as that called

Diacydonites

Diacydonites of Quinces without the Spices, which is made of the Pulp of Quinces, boyled with Honey and Pouder of Diacydonites.

Or thus: Take *Conserve of Roses and Sorrel, and Citron-peels, each half an ounce; Conserve of Currance an ounce, of Myrobalans candied one, the pouder of our Diacydonites, or Trionsantalon, or Diarrhodon a dram,* with *Syrup of Sorrel or unripe Grapes* make an Electuary.

And this: Take *Citron-peels, candied Quinces, and conserve of Quinces, each two drams; juyce of Currance without Sugar,* all well dryed *half an ounce, the Pouder of our Diacydonites* (which I shall after shew) *Cinnamon, each a dram; with Rose-water and boyled Sugar* make Lozenges.

Or give Crumbs of Bread steept in Juyce of Pomegranates, Lemmons, or the like, with Vinegar and Rose-water, to make it pleasant.

Or Barley-meal, with Capon-broath, and Juyce of Pomegranates, which is *Hippocrates* his remedy against the heat and reaching of the stomach.

Or Pine-nuts eaten, and Juyce of Purslane drunk after, are good against burning of the stomach.

The usual Pouders for Choler in the Stomach are Diatrionsantalon, which hath no other spice but cold seeds, Roses, Gums, Starch, Juyce of Liquorish, burnt Ivory, and Camphyre, and Rhubarb. Also Diarrhodon Abbatis which hath all the former Ingredients, and other cold, and Mastich, and some spices of hot Seeds and Cordials.

The Pouder of Diacydonites without the hot Spices is added to this Electuary, when we will only cool, and is used after Meat, and Trionsantalon, Barbary, and Sorrel-seeds, Roses, and burnt Ivory.

Instead of which; Take *dryed Quinces half an ounce, all the Sanders, each a dram; red Roses two drams, Sorrel and Barberry-seeds, each a dram; the Antispodium of* Dioscorides made of *Quinces half a dram,* make a Pouder, mix them with Pouders after Meat, or Electuaries.

Also the Pouders of the Troches of burnt Ivory, Camphyre, Bar-berries, allay the heat of Choler (they all have burnt Ivory) and Antispodium of Quinces also.

Instead of all these Pouders for hot Stomaches, use this. Take *dryed Quinces half an ounce, Citron-peels a dram, red Sanders two drams, white Sanders a dram, Liquorish two drams, red Roses two drams and half, cordial-flowers a dram, great cold Seeds two drams, small cold Seeds half a dram, Sorrel, Purslane, Barbery, Coriander-seeds, each a dram; white Poppy-seeds, Gum Traganth, and Arabick, each half a dram; Coral a dram, Antispodium made of Ivory, or Harts-horn half a dram,* and to please the Stomach *Cinnamon and Aniseseed, each a dram; sweet Sanders half a dram, with Mastick* make a Pouder: Give it with *Sugar of Roses,* or in Lozenges made with *Sugar and the Waters mentioned,* and a little *juyce of a Lemmon or Vinegar.*

A bitter Pouder easie to be made against Choler in the Stomach. Take *Wormwood a dram, tops of Centaury, and Masterwort-roots, each half a dram;* give a spoonful with Wine.

A Pouder against Burning of the Stomach. Take *white Chalk half an ounce, Nutmeg a dram, Sugar an ounce:* Give a spoonful.

Or this: Take *Crabs-eyes two drams, Bole half a dram, red Roses a dram, Sugar of Roses half an ounce:* Use it as the other.

In great Pains give things to abate Sense, as Antidotes to be mentioned in Imbecillity, which are good here if new made, though they have many hot things, and opiate Electuaries; as *Philonium Romanum two scruples,* in Pills or Electuaries of Juyce of Roses to purge Choler, or requires *Nicolai half a dram,* with *Wine.*

Or this Drink: Take *Syrup of Poppies six drams, Syrup of Roses and Wormwood, each an ounce;* give it with convenient *Water* or *Wine.*

If you leave out the Syrup of Poppies, and boyl in the other a grain of Opium gently, and give it with Chicken-broath, it is excellent.

In time of danger, give Narcoticks and that often, I have often with good success given my Nepenthe in a cholerick Vomiting from anger, when there hath been great pain and heat of the Body.

Outwardly of what cause soever in heat or corruption, we use Astringents and Coolers, as to keep the flux of Choler from the Liver, adding alwayes some hot things proper for the Stomach, because outwardly they cannot do hurt, but strengthen, and cause piercing: they must all be used warm.

The usually cold Oyls of Roses and Omphacine, that is of unripe Olives, Quinces, Myrtles, Mastich, with hot; as of Mints and Spike, are used with Vinegar to make them pierce, or Wine to strengthen, boyled in them till they be consumed.

A cooling strengthning Oyntment. Take *Oyl of Roses and Quinces, each an ounce; Oyl of Myrtles, or Mastick, Wormwood, or Mints, each half an ounce; Vinegar of Roses six drams,* boyl them till the Vinegar be consumed, add when they cool *Pouder of Citron-peels, Coriander-seeds, red Roses, Wormwood, each half a dram; Coral a dram, Sanders red and white, each half a dram; Spike two scruples, Camphyre a scruple* (to pierce rather then cool) with Wax make a Liniment, or with *Labdanum two drams, Aloes a dram, and Turpentine* make a Plaister.

Galens cold Oyntment of Roses, and the Cerot of Sanders, are good in Burning of the Stomach, and of other Bowels.

In a great Heat when you will cool more; Take *Oyl of Roses omphacine two ounces, juyce of Sowthistle, Solomons-seal, Vinegar, each half an ounce; Pouder of Alabaster half an ounce,* with *Turpentine wash'd* make an Oyntment.

Or use the Oyntment in the Inflammation of the Stomach mentioned.

Or a Cataplasm of Purslane, Nightshade, Solomons-seal, Vine, Sowthistle, Harts-tongue, Venus-navel, Water-lillies, wild Vine, Roses, with Wormwood, and Mints, or Chamomil-flowers in pain, boyled in water, or Rose-water, or Horstongue-water, well beaten to a Pultis, with the Oyls aforesaid *two ounces, Mastick half an ounce, Alabaster three drams, Horstongue poudered two drams, Sanders and Cloves, each a dram;* make a Pultis.

If the pain be great, use an anodyne Cataplasm mentioned in the Inflammation of the Stomach.

Or this: Take *Toasts of Bread dipt in Vinegar of Roses half a pint, Pulp of Quinces so steeped also three ounces,* add a little *red Wine, and juyce of Quinces, and pouder of Mastick half an ounce, dryed Wormwood two drams, Chamomil-flowers and Mace, each a dram; Oyl of Roses and Chamomil, each an ounce;* mix and apply them.

Or the Fomentation mentioned in Inflammation, or of the Herbs mentioned, or of the Oyls, with Vinegar, and Juyces of Herbs.

If there be pain: Take *Roses, wild Vine, Chamomil, Melilot or Dill, each a pugil; Wormwood or Mints, each half a handful; Marsh-mallow roots six drams, Coriander-seeds and Myrtles, each half an ounce; Mastick two ounces, Cloves, Sanders, each a dram;* with Water and red Wine make a Fomentation.

Or use an Epithem of Rose-water and Vinegar, with a Linnen-clout, or a toast of Bread.

Or,

Or, Take *Roſe-water two ounces, Harts-tongue, and Wormwood-water, each an ounce; all Sanders, or Diatrion-ſantalon two drams, Coriander-ſeeds, Antiſpodium, each a dram*; mix and apply them. Or uſe that mentioned in Inflammation.

A Pouder for a bag, or to be ſprinkled after anointing in Burning of the Stomach. Take *Coriander-ſeeds prepared in Vinegar half an ounce, Myrtles, or Barbery-ſeeds, red Roſes, Sanders and Citron-peels, each a dram and half; Wormwood, red Coral, each a dram; Sanders and Nutmeg, each half a dram*; make a pouder.

If Choler riſe from the Liver to the Stomach, apply Cupping-glaſſes to the Liver to draw it back, and it will eaſe.

The cure of weakneſs of the ſtomach from defect of Natural heat, diſtemper cold, or moiſt actual cold, ſtretching, inflammation, looſeneſs, or other fault in the member.

Weak Conſtitution of the Stomach that hinders the Functions, and cauſeth Excrements, and ſo Cardilæa or uſual pain; If it come from want of Natural heat by birth or age, or by a Diſeaſe, and be inhærent in the Stomach, becauſe it cannot be cured, we muſt provide that by decent Diet and Stomach-medicines, that bind gently and ſtrengthen it, and heat, that it may be ſtrengthened, and the want of Natural heat ſupplyed. If this Weakneſs come from a cold or moiſt Diſtemper, and be fixed, it is difficult to be cured as the other (called the Coldneſs of the Stomach) and we muſt only keep it from growing worſe as the former, and with hotter Medicines. The cold and moiſt Diſtemper that is acquired, is taken away with hot Medicines after the Excrements are removed. But when the Stomach is too looſe and thin, though it can ſcarce be mended, yet by uſe of Aſtringents and hot Remedies in cold and moiſt Bodies, or of temperate in other Bodies, we muſt labor to bring it to its former ſtate. If it be too ſtrait and dry, we uſe Moiſtners to looſen it.

The Method of curing of which, and other Diſeaſes of the Stomach, as Coldneſs, or Stretching, or Humor crude or cold; or Inflation from Wind, is as was formerly ſhewed. Except the dry Diſtemper of which we ſhall ſpeak in the Cure of Weakneſs, becauſe it requires contrary Remedies. And the Medicines muſt be fitted divers waves, either by Diet, Vomits, Belchings, Clyſters, Purges, Alterers, inwardly and outwardly as ſhall be ſhewed.

Diet for the weakneſs of the ſtomach

Firſt in theſe Diſeaſes of the Stomach keep a good Diet, becauſe Meats goes directly into it, and muſt be digeſted by it, and we muſt have a care that it fail not therein, from whence moſt Diſeaſes of the Stomach come, or are increaſed. This is done by a decent quantity and quality of Food.

In a weak Stomach, theſe are to be chiefly obſerved in the quantity, that they eat little at once, taking heed that they be not ſo filled to feel weight, or compreſſion after Meat; and that they breath not ſhorter then afore Meat. In the manner, take heed of eating too greedily, but a little at a time, that the Stomach may cover it, not continuing ſo long at it till concoction be begun, which will be offended by adding more Meat. To refreſh them therefore that have weak Natural heat, becauſe they muſt eat little at a time, let them eat oftner then they that have ſtrong Stomaches. They who have very cold and foul Stomaches, muſt eat moſt ſeldom, and not before the firſt Food is concocted, and they have an Appetite; therefore one Meal a day is ſufficient for a foul ſtomach. And they whoſe ſtomach is pained for abundance of Food, muſt abſtain till it is digeſted. And in a fit time as in the morning, five or ſix hours after ſleep, and if they can eat twice or thrice a day, three hours afore ſleep at night, after a Digeſtion and when there is an Appetite. And before they ſleep after Supper, let there be a kind of Concoction, that the Vapors which ariſe at the firſt plentifully, may be partly diſcuſſed by waking, and may not go too much to fill the Head, by ſleeping preſently. This rule is not ſo ſtrictly to be obſerved by old and weak perſons, that ſleep not the whole night, but they may ſleep preſently after Meat at noon and night, as they deſire, which refreſheth them, and doth not hurt them, becauſe the Vapors are not ſo many as in Youth, wherein more is eaten.

For the quality of Meats obſerve the ſubſtance and the Juyce. Let it be eaſie of Digeſtion, leaſt while it is long a concocting, the ſtomach be grieved, or if it be not, or not ſufficiently concocted, there be Crudities and Wind. As the Fleſh of young Creatures, or ſlender, ſoft, and juycie Food which is eaſily concocted, when hard, dry, and tough, or ſlimy is hard, except it be artificially prepared, by roaſting, boyling, mincing, and other wayes. By which means ſomtimes good Meat is ſpoiled, as by ſmoaking, ſalting. Alſo it muſt be of good Juyce, that weak ſtomaches may be better, and ſooner refreſhed thereby, and fewer Excrements bred, which is required in all weak ſtomachs. This commendible Juyce is in all Nouriſhment from Beaſts or Plants that are true, and have not a Medicinal vertue (which is diſtinguiſhed by taſt or ſcent) except by muſtineſs, rottenneſs, and the like, they be corrupted, or made ſo that they preſently corrupt in the ſtomach, or breed Excrements or Wind by their moiſt and crude Juyce, which they have beſides the good, or otherwiſe are hard of Concoction, by reaſon of their tough ſubſtance. Meats that are eaſie of Concoction and of good Juyce, muſt have theſe qualities, and it would be too tedious to mention all. The Meat for Nouriſhment muſt be temperate, a little inclining to Heat in cold and windy Stomachs; as it may be made by ſauces, which we uſe for medicine as well as for cuſtom.

As for other things, namely the Motion of the Body and the Mind, Exerciſe is good afore meat for a weak ſtomach, and if it be much, and can be endured, it ſtirs up the Natural heat, and warms the Body, and makes it fit for other Functions, and gets a ſtomach. After Meat uſe not ſtrong Exerciſe to diſturb the meat in the ſtomach but walking or ſtanding, that the meat may go to the bottom of the ſtomach, and be better concocted. Alſo moderate reſt refreſheth and helps the Stomachs actions. And it is better after meat then great Exerciſe, which may cauſe corruption or hinder Concoction. Reſt by ſleep may help Concoction by accident (not by the ſleep but by the quietneſs of the Body and Mind) becauſe we ſee that when the Animal Functions are quiet, the Natural are moſt exerciſed. For the Concentraction or meeting of Heat in the Center which they ſay doth concoct in the time of ſleep, cannot be true, becauſe Heat comes outward more in that time, therefore they ſooner ſwear, and therefore if ſleep help Concoction, it is from ſome other Cauſe; for in the time of waking, by reaſon of motion, as we ſhewed the Concoction and Diſtribution of Meat is ſooner made. And if waking they find Crudities, it is from intemperance and eating of what is not fit, which hindereth ſleep. Alſo there muſt be a Natural voiding daily of the Excrements to eaſe the Stomach from them, but too much Evacuation, eſpecially by Venery, as it weakens the whole Body, ſo it doth the Stomach, and troubles of Mind, but recreation is good.

Remedies fit for to cleanſe the ſtomach.

Vomiting is good in all fulneſs of the ſtomach, for if it be pained by ſtretching it is preſently eaſed thereby, if it can be which is hard, when it is much dilated, when breath is difficult. Eſpecially vomiting is good, when there is heavineſs from crude flegmack humors; And from weakneſs, in which it is good every month; otherwiſe, if there be no Excrements, it will do hurt, eſpecially if they be unfit, or unacuſtomed to it. And in wind, when there is no other Humor, vomiting is not to be uſed raſhly.

It is cauſed by tickling the Throat and rubbing the Stomach, or by gentle vomits, or ſuch as cleanſe and cure, if there be flegm that is tough. As Oxymels or ſyrup of Sorrel, with warm water, or Decoction of Radiſhes, Beets, Arach ſeeds, Aſarum, and Agarick, or ſtilled water of Nuts and Radiſhes. In weakneſs we add hot and bitter things, and that Cut, As wormwood Wine before, or Syrup thereof with waters, or Decoctions mentioned.

In all theſe Cauſes, belching is good, to take off the ſwelling and the Cauſe, if nothing but wind.

It comes of it ſelf after meat, by bending, we may willingly hold, but not ſend out a bulch. For they which make ſuch a noiſe like belching, do not break wind forth, but Air, that they firſt ſuckt in, and which they ſend from the Gullet, not the ſtomach.

And it is Cauſed by Fomentations and hot things actually and potentially, ſo as follow.

Clyſters do well, when the Stomach is burdned with Meat or Humors, or ſtretcht with wind to ſtir up nature and open the lower parts and empty the Guts. And in weakneſs of the ſtomach, if the belly be bound, they may be ſomtimes given, eſpecially if they work but little and are not Compounded. Of ſtrong things, which are forbidden in weakneſs of the Stomach.

But we may uſe ſharp Clyſters to draw down, and ſuch to expell wind, if it come from them, ſuch as ſhall be preſcribed in the colick.

If the ſtomach be deſturbed by crude humors, or flegm, or wind from them, or from weakneſs, it is good to purge often, but with gentle things, that we offend not the ſtomach. Yet in neceſſity, we uſe ſtrong purges, with correctors for ſuch things as offend the ſtomach; and ſtrengthenres. The forms whereof, we ſhall mention in relation only to thoſe diſeaſes of the ſtomach, which we have declared. Becauſe there are purgers in general for the ſtomach, in other diſeaſes mentioned here and there.

Pills are thought beſt for the ſtomach, by reaſon of the Aloes that is in them, which is thought the beſt purger for the ſtomach (though it ſtinketh and cauſeth loathing) and by reaſon of its bitterneſs and unpleaſantneſs, can be very ill taken. This Aloes is a thick juyce, as it is brought to us, and the redder it is, the better it is, that is, if it be of a redlike yellow, and it is called *Aloes Cuccotrine*, or rather *Succocitrine*, from its Citron color. And when it is hollowed within like a Liver and Brittle, it is called *Aloes Hepatica*. But it may be made better by præparation, when it is poudered and waſht from its filth, by which means it is never the leſs operative in purging (though it be commonly thought otherwiſe) But it is ſtronger when it is poudered and infuſed in convenient liquor, and diſſolved by ſteeping, and then juyce that ſwims at the top poured of from the reſidents, often, and then brought into a Body: If this liquor be Wine or ſpirit thereof, or other ſpiced Drink or Decoction, it will warm and ſtrengthen the ſtomach the more: and if it be done in wormwood Wine, the cleanſing and loſning vertue will be the greater.

I am very much pleaſed with *Aloe roſate* with *Rhubarb*, thus made: Take *the pureſt ſuccotrine Aloes three ounces*, waſht it nine times in the *juyce of Damask Roſes*, and dry it as often, then add *the pouder of red Roſes three drams, Rhubarb a dram, and of the extract of Rhubarb half an ounce, Spicknard a ſcruple, with ſyrup of Wormwood*: make a maſs for Pills,

Alſo the eſſence of Aloes is thus make: Take *Aloes ſuccotrine three pound or four*, pouder it, and put it into a glaſs, with *Sorrel water five fingers above it*, put it in *Balneo two or three daies*, then pour off the Tincture, which is reddiſh, and add again *Sorrel water*, but not ſo much, and put it in *Balneo* again, and pour of the tincture, do this till the water will take no more tincture, ſtill all theſe tinctures in *Balneo*, till there remain in the bottom a matter like Honey, ſhining and reddiſh, let this be mixed by degrees with juyce of Roſes and dryed ſo often, till three pints of the juyce be conſumed. Keep this eſſence.

Of this preperation, we give a dram or half a dram, as often as we pleaſe, when we will gently looſen, and not hurt, but help the concoction.

With other juyces, they are made ſtronger and better for the ſtomach. Let Aloes be finely poudered and ſprinkled with juyce of Roſes and dryed, and then poudered again, and ſo thrice ordered, it will leſs heat, this is called *Aloes roſata*.

If it be done with juyce of Wormwood, it is better for the ſtomach, inſtead of which you may uſe thick juyce of wormwood, which they call the extract with the Aloes.

You may add other alterers to Aloes, to make it work to your purpoſe: as when we will heat the ſtomach, ſpices: when we will ſtrengthen, Maſtick, Roſes, Spike: when we will cleanſe more, Aſarum and Myrrh: when we will concoct, Saffron and the like: as in the Pills of Hiera ſimple and Alephanginæ called Aromatical, from the plenty of Aloes; which we uſe chiefly in a looſe and weak ſtomach, and are called ſtomach Pills, and the Pills called *Aſajereth*, which have Myrobalans in them.

And we may add to it other purgers, when the ſtomach is very foul, but they muſt not be enemies to the ſtomach. Thus are the Pills to be taken before meat made, with Rhubarb and Aloes, called *Aggregative the leſſer* of *Meſue*, and Pills of Rhubarb and Agrimony proper for the Liver, or thoſe of Maſtich, made with Agarick, or thoſe mixed of both called *de Tribus* and imperial, which have Senna; or thoſe which have Turbith called the Stomach pills of Turbith. Theſe Pills are uſed divers waies, by themſelves or mixed.

Theſe we ſharpen with ſtronger, when we will have them work more, and rather with thoſe that have Scammony, then that which is more offenſive to the Stomach.

In immitation of all which we may make new ſtomach Pills thus, only to purge the Stomach from Excrements, with Correcters, which help them, rather then alterers, which may be given better without purging.

In a cold Cauſe, the moſt gentle, are theſe: Take *Aloes prepared or extracted, with Wine Simple or Compound*, as we ſhewed, *half an ounce, Cloves, Nutmeg or Mace, each half a dram; Pepper, or Ginger a ſcruple*, if the Head-ake not, elſe *half a ſcruple, with ſyrup of Mints*: make Pills, give *a dram* two hours afore Supper.

That

That they may work in *half a dram*, make them thus with Oyls: Take *Aloes prepared*, as was ſaid, *half an ounce, half a dram of Oyl of Nutmegs*, by expreſſion, of the diſtilled *Oyls of Marjoram, Mints or Cinnamon, each three or four drops, with ſyrup*, make Pills.

Or thus, to purge and ſtrengthen: Take *Aloes prepared with Wormwood juyce half an ounce, Maſtick, Galangal, each half a dram; red Roſes, Spike, each a ſcruple; with ſyrup of Wormwood*, make Pills.

When we will Purge more: Take *Aloes prepared with juyce of Roſes half an ounce, Myrrh, Aſarum, of each half a dram; Ginger a ſcruple, with Honey of Roſes*, make a Maſs.

Theſe are more purging; Take *Aloes prepared half an ounce, Rhubarb and yellow Myrobalans poudered and ſprinkled with Wine, each a dram; Maſtick half a dram, Cloves, Spike, each a ſcruple; with the juyce of Wormwood*: make Pills, give *a dram or more*.

They are yet ſtronger, thus: Take *choiſe or prepared Aloes half an ounce, Rhubarb and Agarick, each a dram; Myrobalans, Chebs and Indian prepared*, as aboveſaid, *each half a dram; Ginger and Cardamoms, each a ſcruple; Spike half a ſcruple, with ſyrup of Roſes*, make Pills.

They will Purge more yet, if to any of the former receits, you add *half a dram of Scammony prepared with juyce of Quinces*, or otherwiſe that it may not hurt the ſtomach, *or two drams of Turbith* rectified.

When we will purge the ſtomach, a Phyſick wine is convenient, becauſe the Wine makes the Medicines pleaſant, which are generaly unſavory, and if Wormwood be added, it will purge Choler and Flegm the better and take away the ſcent, and the ſtomach, will be leſs troubled, becauſe wine is a ſtrengthener: Eſpecially if we will purge ſtrongly, Wine is better then Pills, in which we can not put gentle things, by reaſon of the ſmal quantity.

In cold humors and wind, thus we purge, Take *Agarick or Mechoacan two or three drams, Senna ſix drams, dryed wormwood three drams, Marjoram two drams, Mints a dram, Fennel ſeed a dram and an half, Ginger a dram*, bruiſe and infuſe them in three pints of *Sack*, for three draughts.

In a looſe and weak ſtomach, that is flegmatick, thus: Take *Rhubarb two drams, Myrobalans, Citron and Chebs, each a dram and an half; Senna an ounce, dryed Citron peels three drams, Galangal two drams, wormwood three drams, red Roſes a pugil, Maſtick two drams, Spike half a dram*, beat and infuſe them as formerly.

When you will cleanſe and purge more: Take *Senna an ounce and half, Turbith two drams, Agarick three drams, Rhubarb two drams, Tartar an ounce, Aſaram a dram, wormwood half an ounce, Marjoram two drams, Mints a dram, Galangal and Calamus, each a dram and an half; Fennel ſeed two drams, Ginger a dram, Spike half a dram*, bruiſe them for four pints of Wine for four Doſes.

Of Electuaries that called *Hiera* of *Galen*, made only of Aloes that purgeth, and called *Picra*, becauſe of its bitterneſs, is chiefeſt, but ill to be taken: becauſe they muſt take an ounce to move the Belly, but *Rhaſis* prepares it without Saffron.

It may be thus made pleaſanter: Take *wormwood a handful, red Roſes a pugil, Schœnanth three drams, Cubebs, Carpobalſom, each two drams; Fennel ſeed and Siler mountane, each a dram*; infuſe them in a quart of *wine* and *water*: boyl them a little, and ſtrain them, then add *Honey or ſugar a pound*, boyl and ſcum it, til be like a Syrup; then add *ſix ounces, of fine Aloes, Maſtick two drams, Cinnamon half an ounce, Aſarum roots two drams, Spike a dram, Saffron half a dram*, make an Electuary: you may give *half an ounce*, ſomtimes more and ſomtimes leſs. And if you add *two or three ounces of Senna*, to the infuſion, it will purge more.

If there be obſtructions, make it thus: Take *Liquoriſh an ounce, Fumitory, Harts-tongue or Ceterach, each a handful; Agrimony half a handful, Cordial flowers a pugil, Rayſons four ounces, Polypody an ounce, Senna ſix drams*, boyl them in *Fennel and Annis ſeed water*, and add to the ſtraining *Aloes five ounces*, ſtrain and boyl them to an Electuary, and add *Maſtick a dram, Frankincenſe a dram and an half, or two or three ounces of ſenna*, to make it purge better.

Or if you add *Hiera Galeni*, whoſe corrector is *Agarick or Rhubarb* corrected by *Spike*, it will be nimbler and work in a leſs quantity, which is very acceptable, and the better with *Scamony prepared*. It is not good for the ſtomach, to give *Coloquintida*.

There are other purging Electuaries, not ſo bitter, ſtronger or weaker, here and there mentioned, that leſs hurt the Stomach, as the Lenitive Electuary, *Diacatholicon, Diaphœnicon*, of the *juyce of Roſes*, and the like.

Diaſpoliticum deſcribed by *Galen*, is an Electuary, made of *Salt peter*, to purge the ſtomach from flegm and wind and to cleanſe.

A pleaſant and powerful Conſerve, is thus made: Take *Agarick half an ounce, Rhubarb an ounce and an half, Senna four ounces, Cinnamon half an ounce, Ginger a dram*, infuſe them in four pints of *wine* and a pint of *juyce of Quinces*, boyl them a little, then ſtrain them adding *pulp of Quinces and Sugar, each a quarter of a pound*, boyl them to an Electuary, give *two or three drams*, if you will have it ſtronger, that a leſs quantity may ſerve, add *the extract of Scammony*, which will not hurt the Stomach.

A good Pouder to purge the Stomach, though bitter: Take *Agarick and Rhubarb, each a dram and an half; Turbith four ſcruples, Tartar a dram, Ginger half a dram, Spike a ſcruple, Gentian, Zedoary, each half a dram; wormwood a dram and an half, tops of Centaury and Fennel ſeed, each a dram*; make a Pouder, give *two drams with wine* and a little *Aloes*, if the Patient will endure the bitterneſs. If it be quickned with *Diagredium*, it will work better and in a leſs quantity.

You may with Sugar diſſolved in Wormwood, or Mints, or Cinnamon-water make Lozenges for the ſame.

A Stomach purging Potion. Take *Rhubarb four ſcruples, Spike a ſcruple*, infuſe them in *Wine*, ſtrain and add *ſyrup of Roſes*, with the Infuſion of *Senna an ounce, ſyrup of Wormwood half an ounce*, give it.

Or this Decoction: Take *Galangal half an ounce, Aſarum roots a dram, Wormwood two drams, Mints a dram, Senna half an ounce, Fennel-ſeed a dram*; boyl and infuſe *Rhubarb* and *Agarick* as before.

There are other Purges for the Stomach, here and there mentioned in other Diſeaſes.

Altering remedies againſt the weakneſs of the ſtomach.

All remedies given to the Stomach muſt be accepted of it by propriety and ſtrengthen it, and be hot more or leſs, according to the diverſity of the Cauſe, and fitted againſt the Weakneſs of it through want of Natural heat, or its cold Diſtemper, or againſt its Refrigeration, or for the preparation of Humors, altering or expelling of Wind: And as the Stomach is moiſter or looſer, they muſt aſtringe more or leſs, and if the pain be great, abate it. This is done divers wayes.

Among Drinks, ſweet Wine and old, as Muſcadel, Sack,

Sack, Malmſey, either at meat or otherwiſe, when it is cold, if it be drunk warm.

Alſo they are good when they are ſpiced.

Or made of Herbs, by infuſing or a little boyling, as that of Wormwood is moſt uſual, but unpleaſant to ſome. It muſt be made of ſuch quantity as may give it bitterneſs and good ſcent; it is good in all Diſeaſes of the Stomach from Repletion.

And Mints and Marjoram make it pleaſanter.

Or thus make it: Take *Roots of Maſterwort, Galangal, Zedoary, each three drams; dryed Citron-peels and Wormwood, each half an ounce; Mints, Marjoram, Coriander-ſeed, each two drams; Cloves, Nutmeg, each a dram and half; Maſtick two drams, Wine four pints*, ſteep them if there muſt be greater Cleanſing, as in a foul ſtomach and Obſtructions, add *tops of Centaury a dram and half*. If they hate bitter things, leave out the *Wormwood* and the *Centaury*.

For a windy ſtomach give Fennel, or Aniſe-ſeed, Wine and the like.

Or this: Take *the barke of Fennel-roots, and Roots of Calamus, each half an ounce; Mints, Marjoram, Spondilium, each a handful; Fennel, Caraway, and Seſeli-ſeed, each two drams; Juniper and Bay-berries, each an ounce*; infuſe them in Wine, add *a dram of Cummin-ſeed*, if the ſcent be not diſliked, if they love bitter, ad Wormwood.

Dioſcorides teacheth that Melilot boyled, or infuſed in Wine, is good againſt pains of the ſtomach.

Alſo Wine is made of Infuſion of Spices for the ſtomach, which may be ſweetned and ſtrained.

To make Hippocras ſweetned. Take *Cinnamon an ounce, Sugar a pound, wine four or five or more or leſs pints*, as you will have it more or leſs ſweet, add *Pepper, Ginger and Cardamoms, each half a dram*.

The Wine of *Mountpelior* called *Pimentum*, is thus ſweetned. Take *Cinnamon ſix drams or more, Ginger five drams, Pepper two drams, Cardamoms the great, Cloves, Nutmegs, each a dram; Honey five pints, Wine ten pints*, ſteep and ſtrain them.

A Claret artificial for the ſtomach. Take *Cinnamon an ounce and half, Ginger half an ounce, both Cardamoms, round and long Pepper, each a dram; Nutmegs, Mace, Galangal, Cloves, each a dram and half; Spike, Schœnanth, each half a dram; Honey, or Sugar, or both a pound and half, Wine five quarts*.

A ſpoonful or two of the Infuſion of Spirit of Wine, is good. As, Take *Cinnamon an ounce, ſpirit of Wine a pint, Sugar four ounces*, ſet it in the Sun, and add *Roſe-water*.

Or thus: Take *Cinnamon an ounce, Pepper, Ginger, Cloves, each three drams*; infuſe them in a *pint of ſpirit of Wine*, add *a ſpoonful or two of this to, Wine and Sugar*, and it will be excellent againſt the Wind of the Stomach.

Another againſt Pains of the Stomach. Take *Nutmegs two drams, of Wine two ounces*, with *Honey of Roſes* ſweeten it: If it muſt be preſently uſed, boyl it a little, give two or three ſpoonfuls: ſome boyl this till the ſpirit of Wine is gone, and make a Mixture.

Or infuſe Wormwood in Aqua vitæ, and mix ſome drops with Wine.

Or other Stomach-herbs.

Dioſcorides teacheth that the Broath of an old Cock expels Wind.

Or make Broath with Pepper, Ginger, Cloves, Nutmeg, Mace, or the like, with a little Saffron.

Some boyle the ſtones of Bay-berries in Broath, to make it pleaſant, and ſtrong to expel Wind.

Or Herbs, as Marjoram, and other Pot-herbs, as Mints, Hyſop, Savory-Broath; with Wormwood, is commended if it be not diſtaſtful.

If the ſcent may be endured, it is alſo excellent to boyl Chamomil and Melilot-flowers in Chicken-broath.

In a weak and windy Stomach: Take *Caraway-ſeed a dram, whole Pepper ten grains*, boyl them in Broath, with *a ſcruple of Maſtick*.

The only Decoction of *Maſtick* ſtrengthens the ſtomach.

Syrups to prepare afore Purging, when we will cut. Take *ſyrup of Mints, Hyſop or Stœchas, each an ounce; Honey of Roſemary-flowers half an ounce*, with *Mints and ſweet water* make a Julep.

When we will cleanſe alſo. Take *ſyrup of Wormwood and Bettony, each an ounce; Honey of Roſes, and ſyrup of Vinegar, each half an ounce*; with Wormwood-water.

When we deſire moſt to ſtrengthen. Take *ſyrup of Citron-peels, or of Nutmegs, or of Myrobalans an ounce, ſyrup of Mints, or Chamomil half an ounce*: Give it alone, or with *Wine*, or *Wormwood*, or *Marjoram-water*,

A Compound Syrup. Take *Fennel-roots half an ounce, Roots of Maſterwort, Calamus, Zedoary, Citron-peels, each two drams; Mints, Savory, Hyſop, Marjoram, Bettony, Spondylium, Sage, Roſemary and Stœchas-flowers, each a dram; Fennel and Aniſe-ſeed, each three drams; Caraway-ſeed a dram, Schœnanth half a dram*, boyl them in *wine and water*, add *Nutmeg half a dram*, and to the ſtraining of *Sugar ſix ounces*, boyl it to a ſyrup, give *an ounce and half* alone, or in *wine*.

Or, Take *ſyrup of Mints an ounce, ſyrup of Wormwood half an ounce*, drink it with Wine.

Or this to ſtrengthen: Take *juyce of Mints half an ounce, juyce of Wormwood two drams*, give it with *wine*.

Juyce of Chamomil and Melilot, each half an ounce; given with *wine* takes away pain preſently.

Stilled Waters to ſtrengthen and heat the Stomach, are of Wormwood, Mints, Calamints, Marjoram alone, or with Wine, or with other Drinks, or after Electuaries.

Cinnamon-water is refreſhing and healing, if it be made of Wine, with Sugar.

Or ſome drops of ſpirits of Wine or Aqua vitæ, preſently do help a cold flegmatick and foul ſtomach, therfore it is ſo common, and if it be compounded with ſpices tis the better. Or with hot Plants, and then diſtilled.

Some Natural Baths drunk to help the old Weakneſs of the ſtomach, when it comes from too great moiſture or foulneſs, eſpecially thoſe of Niter. *Italians* commend the *Porrectan-Spaws*, and Germans have many as good.

Chymical Oyls alſo of Plants and Spices are excellent, but not given alone, but with diſtilled Waters, or Wine a drop or two.

As Oyl of Cinnamon or Cloves, the reſt are not ſo pleaſant, and burn too much.

Or the Oyl of Marjoram, or Mints, or of Aniſe-ſeed and Fennel-ſeed, proper againſt Wind.

Alſo Oyls by expreſſion are good, as of Mace, and Nutmegs, and inflame leſs, if taken with Broath.

Or Oyl of *Palma Chriſti*, and baſtard Saffron, expels Wind.

Theſe are given in ſubſtance, Mints, Calamints, Greek Mints, Sage, wild Mints, Spikenard, Lavender, Tanſey, Goats-organ, Penny-royal-ſeed, and Root of Lovage. Alſo Roots of wild Parſley, and ſweet Cane to expel wind, according to *Dioſcorides*.

Alſo Roots of Maſterwort, Zedoary, Galangal, Calamus, Ginger, are drunk in pains of the ſtomach, and Rhapontick by *Dioſcorides*. Or Bithwort againſt the pains of ſtomach and guts.

Onyons eaten, take away the pain, and Piſtacha's and Rocket, help Concoction. Alſo Pears and Quin-

ces.

Or,

Or Mints fryed with Eggs. And Wormwood ſo fryed, is uſed at great mens tables, where I have been, they ſeem not ſo bitter to ſome whoſe ſtomachs delight therein.

Alſo Aniſe-ſeed, Caraway and Fennel, expel wind, and help Concoction.

Or ſeven or nine corns of Pepper whole, that they may not burn the mouth given with Wine, do quickly help a cold ſtomach, and alſo Ginger.

Or a dram of Pepper wrapt in a wafer wet in Wine, and three ounces of Wine after it.

Galen gives Pepper with wine preſently after Meat, if it turn to Flegm, and the Patient be cold, with ſhort Breath and weak Pulſe. This caſe *Bairus* deſcribeth, and ſaith it is rare, but it is all one with Cardiaca.

Nutmeg helps Concoction, and the Pouder given with Chamomil-water takes away pain of the ſtomach.

Alſo Cloves alone, or in Meats, with Cinnamon, and the like; Cubebs are highly commended againſt wind, and Galangal chewed, breaks the wind, as they ſay.

Or Maſtich ſwallowed whole, or in pouder a dram, or ſome grains often taken to ſtrengthen.

And Gum of Ivy ſo taken, is excellent againſt pains of the ſtomach. And Labdanum, and Caſtor, with Wine, and the poliſhing Stone.

There are divers compound Pouders for the ſame called *Species*, to be given as Meat or Medicine alone, or mixed.

When we will heat much, we chooſe the Burners, if pleaſant, as the Peppers, Ginger, Cardamoms, or the leſs pleaſant, when there is much Flegm, as Zedoary, Cubebs, Pellitory-roots. When we will ſtrengthen and bind, or aſtringe the looſe ſtomach, we give leſs ſharp, but ſweet things, as Nutmeg, Mace, Cloves, Galangal, Calamus, Cypreſs; or ſweet things, as cinnamon, caſſia, or ſweet cane, wood-aloes, yellow Sanders, Spikenard, Schænanth, with Saffron concoct. Of hot ſeeds theſe help concoction, and chiefly expel wind; as the Aniſe-ſeeds, Fennel, Caraway, Cummin, Smallage, Parſley, Ameos, ſeſely, or wild Parſley-ſeed. Of Herbs, ſweet and pleaſant, Thyme, Calamints, Lovage, Mints, Marjoram, Savory, with the Roots of Elicampane, and Citron-peels. And when we will ſtrengthen, they add red Roſes often, ſeldom Maſtich. And to theſe ſpecies, Liquoriſh is added to cleanſe, and Aſarum that is ſweet, but in a ſmall quantity, leaſt it turn the ſtomach, and *Galen* mixeth Niter. In ſome compound Pouders they put Muſk and Ambergreeſe for the Heart, but ſome love not the ſcent of it.

Of theſe divers Pouders are made, ſome are for Meat and Broath to make them pleaſant, as Cooks do.

Theſe following are ſold ready prepared for the cooks in *Germany*. Take *Ginger two ounces and half, Pepper an ounce, Nutmeg, Cinnamon, each two drams; Saffron three drams*, this is called the *Aromatical ſaffron pouder*.

Another more pleaſant. Take *Ginger four ounces, grains of Paradiſe half an ounce, Pepper two drams, Nutmegs, Cloves, each half an ounce; Galangal two drams, Cinnamon two ounces*, make a Pouder; this is uſed alone, or with *ſix drams of ſaffron*.

A more pleaſant pouder is thus made. Take *Cinnamon four ounces, Ginger an ounce and half, Cloves an ounce, Pepper half an ounce, Saffron two drams*.

A ſweet pouder for meat. Take *Cinnamon two drams, Ginger three drams, Cardamoms the greater, Pepper and Nutmeg, each a dram; Sugar two pound*.

You may alſo mix the other ſpecies or pouders with ſugar.

There is alſo a Salt compounded to ſeaſon Meat for moiſt and looſe ſtomachs. Thus, Take *ſalt parched an ounce, Galangal a dram, Cinnamon two drams, the Aſhes of Hens guts half a dram*.

Salt and Caraway-ſeed with a rear Eg, helps concoction, and keeps the Eg from corruption.

Pouders to heat and ſtrengthen the ſtomach, and expel wind and crudities, and cleanſe flegm and filth, are made af the aforeſeid mixed, to be taken alone, or with Broath, Wine, Waters, Juyces, Decoctions, with, or without ſugar; ſomtimes with eight times as much ſugar if they be unpleaſant, and Lozenges or Electuaries. We ſhall ſhew Examples of ſtomach-pouders.

Of Aromaticks alone to heat, we make pouders, the firſt: Take *round Pepper a dram, long Pepper half a dram, Ginger half an ounce, great Cardamoms, Nutmeg, Mace, cloves and Galangal, each a dram; Cinnamon half an ounce*.

The ſecond is more compound by adding to the former, *the leſſer Cardamoms, Zedoary, Wood-aloes, or yellow Sanders, Spike, each half a dram; Cubebs, ſaffron, each a ſcruple*.

The third: Take *Cinnamon an ounce, Ginger half an ounce, great cardamoms half a dram, round Pepper a ſcruple, Nutmeg, Mace, Galangal, each two drams; cloves three drams*.

Of this Pouder with ſugar a pound, you may make Lozenges; ſome leave out the Pepper and cardamoms; ſome add cubebs, and alter proportions.

Or we may uſe the ſpecies Diacinamomi of *Meſue*, which hath beſides the other Wood-aloes, Saffron, Elicampane, and Muſk.

A fourth leſs healing and more ſtrengthning. Take *calamints, Mints, Marjoram, Thyme, ſavory, each a dram; Liquoriſh a dram and half, Roots of Maſterwort, Elicampane, and Pellitory in flegmatick perſons, each half a dram; Aſarum-roots, dryed Citron-peels, each a ſcruple*; with *red Roſes two drams*, make a pouder.

A fift Pouder of ſeeds to expel wind. Take *coriander-ſeed, Aniſe-ſeed, each half an ounce; caraway two drams, cummin,* (if it be not offenſive) *Ameos, ſeſely, ſiler-mountain, Lovage-ſeeds, each half a dram*.

The ſixth very hot: Take *round and long Pepper, each half an onnce; Ginger a dram, Fennel, and Aniſe-ſeeds, and tops of Thyme, each half a dram*; make a pouder.

Or uſe Diatrionpipereon which is hotter, if it be *Galens*; or that of *Meſue* which hath alſo caſſia-wood, Spike, Smallage and Ameos ſeeds, roots of Aſarum and Elicampane.

Or uſe the ſpecies of the Electuary of ſpices, made by *Galen*.

Or the *Diaſpoliticon* of *Galen*, which cutteth flegm beſt, it is made of Pepper, Niter, Cummin and Rue.

The ſeventh, not ſo hot as the firſt: Take *Calamints or Mints, Marjoram, Time, Lovage ſeed and ſiler montain, each a dram; Pepper and Ginger, each half a dram; Cinnamon a dram and an half*: make a Pouder.

Diacalamintha of *Galen* or *Meſue*, doth the ſame thing.

The eight Pouder, which is alſo a ſtrengthner of the Stomach: Take *red Roſes an ounce, Cinnamon half an ounce, Cloves three drams, Nutmeg, Mace, each two drams; Galangal a dram, long Pepper, great Cardamons and wood Aloes, each half a dram, Zedoary and Spike, each a ſcruple; Liquoriſh two drams*: make a Pouder.

The Aromatical ſpecies of *Gabriel*, ſo much uſed is like this, it is prepared with and without *Muſk*, and the *Aromaticum Roſatum* of *Meſue*, to which is added *Cubebs, Troches of Diarrhodon* and *Gallia Moſchata*. And

Sack, Malmſey, either at meat or otherwiſe, when it is cold, if it be drunk warm.

Alſo they are good when they are ſpiced.

Or made of Herbs, by infuſing or a little boyling, as that of Wormwood is moſt uſual, but unpleaſant to ſome. It muſt be made of ſuch quantity as may give it bitterneſs and good ſcent; it is good in all Diſeaſes of the Stomach from Repletion.

And Mints and Marjoram make it pleaſanter.

Or thus make it: Take *Roots of Maſterwort, Galangal, Zedoary, each three drams; dryed Citron-peels and Wormwood, each half an ounce; Mints, Marjoram, Coriander-ſeed, each two drams; Cloves, Nutmeg, each a dram and half; Maſtick two drams, Wine four pints,* ſteep them if there muſt be greater Cleanſing, as in a foul ſtomach and Obſtructions, add *tops of Centaury a dram and half.* If they hate bitter things, leave out the *Wormwood* and the *Centaury.*

For a windy ſtomach give Fennel, or Aniſe-ſeed, Wine, and the like.

Or this: Take *the barke of Fennel-roots, and Roots of Calamus, each half an ounce; Mints, Marjoram, Spondilium, each a handful; Fennel, Caraway, and Seſeli-ſeed, each two drams; Juniper and Bay-berries, each an ounce;* infuſe them in Wine, add *a dram of Cummin-ſeed,* if the ſcent be not diſliked, if they love bitter, ad Wormwood.

Dioſcorides teacheth that Melilot boyled, or infuſed in Wine, is good againſt pains of the ſtomach.

Alſo Wine is made of Infuſion of Spices for the ſtomach, which may be ſweetned and ſtrained.

To make Hippocras ſweetned. Take *Cinnamon an ounce, Sugar a pound, wine four or five or more or leſs pints,* as you will have it more or leſs ſweet, add *Pepper, Ginger and Cardamoms, each half a dram.*

The Wine of *Mountpelier* called *Pimentum,* is thus ſweetned. Take *Cinnamon ſix drams or more, Ginger five drams, Pepper two drams, Cardamoms the great, Cloves, Nutmegs, each a dram; Honey five pints, Wine ten pints,* ſteep and ſtrain them.

A Claret artificial for the ſtomach. Take *Cinnamon an ounce and half, Ginger half an ounce, both Cardamoms, round and long Pepper, each a dram; Nutmegs, Mace, Galangal, Cloves, each a dram and half; Spike, Schænanth, each half a dram; Honey, or Sugar, or both a pound and half, Wine five quarts.*

A ſpoonful or two of the Infuſion of Spirit of Wine, is good. As, Take *Cinnamon an ounce, ſpirit of Wine a pint, Sugar four ounces,* ſet it in the Sun, and add *Roſe-water.*

Or thus: Take *Cinnamon an ounce, Pepper, Ginger, Cloves, each three drams;* infuſe them in a *pint of ſpirit of Wine,* add *a ſpoonful or two of this to, Wine and Sugar,* and it will be excellent againſt the Wind of the Stomach.

Another againſt Pains of the Stomach. Take *Nutmegs two drams, of Wine two ounces,* with *Honey of Roſes* ſweeten it: If it muſt be preſently uſed, boyl it a little, give two or three ſpoonfuls: ſome boyl this till the ſpirit of Wine is gone, and make a Mixture.

Or infuſe Wormwood in Aqua vitæ, and mix ſome drops with Wine.

Or other Stomach-herbs.

Dioſcorides teacheth that the Broath of an old Cock expels Wind.

Or make Broath with Pepper, Ginger, Cloves, Nutmeg, Mace, or the like, with a little Saffron.

Some boyle the ſtones of Bay-berries in Broath, to make it pleaſant, and ſtrong to expel Wind.

Or Herbs, as Marjoram, and other Pot-herbs, as Mints, Hyſop, Savory-Broath; with Wormwood, is commended if it be not diſtaſtful.

If the ſcent may be endured, it is alſo excellent to boyl Chamomil and Melilot-flowers in Chicken-broath.

In a weak and windy Stomach: Take *Caraway-ſeed a dram, whole Pepper ten grains,* boyl them in Broath, with *a ſcruple of Maſtick.*

The only Decoction of *Maſtick* ſtrengthens the ſtomach.

Syrups to prepare afore Purging, when we will cut. Take *ſyrup of Mints, Hyſop or Stœchas, each an ounce; Honey of Roſemary-flowers half an ounce,* with *Mints and ſweet water* make a Julep.

When we will cleanſe alſo. Take *ſyrup of Wormwood and Bettony, each an ounce; Honey of Roſes, and ſyrup of Vinegar, each half an ounce;* with Wormwood-water.

When we deſire moſt to ſtrengthen. Take *ſyrup of Citron-peels, or of Nutmegs, or of Myrobalans an ounce, ſyrup of Mints, or Chamomil half an ounce:* Give it alone, or with *Wine,* or *Wormwood,* or *Marjoram-water,*

A Compound Syrup. Take *Fennel-roots half an ounce, Roots of Maſterwort, Calamus, Zedoary, Citron-peels, each two drams; Mints, Savory, Hyſop, Marjoram, Bettony, Spondylium, Sage, Roſemary and Stœchas-flowers, each a dram; Fennel and Aniſe-ſeed, each three drams; Caraway-ſeed a dram, Schœnanth half a dram,* boyl them in *wine and water,* add *Nutmeg half a dram,* and to the ſtraining of *Sugar ſix ounces,* boyl it to a ſyrup, give *an ounce and half* alone, or in *wine.*

Or, Take *ſyrup of Mints an ounce, ſyrup of Wormwood half an ounce,* drink it with Wine.

Or this to ſtrengthen: Take *juyce of Mints half an ounce, juyce of Wormwood two drams,* give it with *wine.*

Juyce of Chamomil and Melilot, each half an ounce; given with *wine* takes away pain preſently.

Stilled Waters to ſtrengthen and heat the Stomach, are of Wormwood, Mints, Calamints, Marjoram alone, or with Wine, or with other Drinks, or after Electuaries.

Cinnamon-water is refreſhing and healing, if it be made of Wine, with Sugar.

Or ſome drops of Spirits of Wine or Aqua vitæ, preſently do help a cold flegmatick and foul ſtomach, therfore it is ſo common, and if it be compounded with ſpices tis the better. Or with hot Plants, and then diſtilled.

Some Natural Baths drunk to help the old Weakneſs of the ſtomach, when it comes from too great moiſture or foulneſs, eſpecially thoſe of Niter. *Italians* commend the *Porrectan-Spaws,* and Germans have many as good.

Chymical Oyls alſo of Plants and Spices are excellent, but not given alone, but with diſtilled Waters, or Wine a drop or two.

As Oyl of Cinnamon or Cloves, the reſt are not ſo pleaſant, and burn too much.

Or the Oyl of Marjoram, or Mints, or of Aniſe-ſeed and Fennel-ſeed, proper againſt Wind.

Alſo Oyls by expreſſion are good, as of Mace, and Nutmegs, and inflame leſs, if taken with Broath.

Or Oyl of *Palma Chriſti,* and baſtard Saffron, expels Wind.

Theſe are given in ſubſtance, Mints, Calamints, Greek Mints, Sage, wild Mints, Spikenard, Lavender, Tanſey, Goats-organ, Penny-royal-ſeed, and Root of Lovage. Alſo Roots of wild Parſley, and ſweet Cane to expel wind, according to *Dioſcorides.*

Alſo Roots of Maſterwort, Zedoary, Galangal, Calamus, Ginger, are drunk in pains of the ſtomach, and Rhapontick by *Dioſcorides.* Or Bithwort againſt the pains of ſtomach and guts.

Onyons eaten, take away the pain, and Piſtacha's and Rocket, help Concoction. Alſo Pears and Quin-

ces.

Or,

Or Mints fryed with Eggs. And Wormwood ſo fryed, is uſed at great mens tables, where I have been, they ſeem not ſo bitter to ſome whoſe ſtomachs delight therein.

Alſo Aniſe-ſeed, Caraway and Fennel, expel wind, and help Concoction.

Or ſeven or nine corns of Pepper whole, that they may not burn the mouth given with Wine, do quickly help a cold ſtomach, and alſo Ginger.

Or a dram of Pepper wrapt in a wafer wet in Wine, and three ounces of Wine after it.

Galen gives Pepper with wine preſently after Meat, if it turn to Flegm, and the Patient be cold, with ſhort Breath and weak Pulſe. This caſe *Bairus* deſcribeth, and ſaith it is rare, but it is all one with Cardiaca.

Nutmeg helps Concoction, and the Pouder given with Chamomil-water takes away pain of the ſtomach.

Alſo Cloves alone, or in Meats, with Cinnamon, and the like; Cubebs are highly commended againſt wind, and Galangal chewed, breaks the wind, as they ſay.

Or Maſtich ſwallowed whole, or in pouder a dram, or ſome grains often taken to ſtrengthen.

And Gum of Ivy ſo taken, is excellent againſt pains of the ſtomach. And Labdanum, and Caſtor, with Wine, and the poliſhing Stone.

There are divers compound Pouders for the ſame called *Species*, to be given as Meat or Medicine alone, or mixed.

When we will heat much, we chooſe the Burners, if pleaſant, as the Peppers, Ginger, Cardamoms, or the leſs pleaſant, when there is much Flegm, as Zedoary, Cubebs, Pellitory-roots. When we will ſtrengthen and bind, or aſtringe the looſe ſtomach, we give leſs ſharp, but ſweet things, as Nutmeg, Mace, Cloves, Galangal, Calamus, Cypreſs; or ſweet things, as cinnamon, caſſia, or ſweet cane, wood-aloes, yellow Sanders, Spikenard, Schænanth, with Saffron concoct. Of hot ſeeds theſe help concoction, and chiefly expel wind; as the Aniſe-ſeeds, Fennel, Caraway, Cummin, Smallage, Parſley, Ameos, ſeſely, or wild Parſley-ſeed. Of Herbs, ſweet and pleaſant, Thyme, Calamints, Lovage, Mints, Marjoram, Savory, with the Roots of Elicampane, and Citron-peels. And when we will ſtrengthen, they add red Roſes often, ſeldom Maſtich. And to theſe ſpecies, Liquoriſh is added to cleanſe, and Aſarum that is ſweet, but in a ſmall quantity, leaſt it turn the ſtomach, and *Galen* mixeth Niter. In ſome compound Pouders they put Musk and Ambergreeſe for the Heart, but ſome love not the ſcent of it.

Of theſe divers Pouders are made, ſome are for Meat and Broath to make them pleaſant, as Cooks do.

Theſe following are ſold ready prepared for the cooks in *Germany*. Take *Ginger two ounces and half, Pepper an ounce, Nutmeg, Cinnamon, each two drams; Saffron three drams*, this is called the *Aromatical ſaffron pouder*.

Another more pleaſant. Take *Ginger four ounces, grains of Paradiſe half an ounce, Pepper two drams, Nutmegs, Cloves, each half an ounce; Galangal two drams, Cinnamon two ounces*, make a Pouder; this is uſed alone, or with *ſix drams of ſaffron*.

A more pleaſant pouder is thus made. Take *Cinnamon four ounces, Ginger an ounce and half, Cloves an ounce, Pepper half an ounce, Saffron two drams*.

A ſweet pouder for meat. Take *Cinnamon two drams, Ginger three drams, Cardamoms the greater, Pepper and Nutmeg, each a dram; Sugar two pound*.

You may alſo mix the other ſpecies or pouders with ſugar.

There is alſo a Salt compounded to ſeaſon Meat for moiſt and looſe ſtomachs. Thus, Take *ſalt parched an ounce, Galangal a dram, Cinnamon two drams, the Aſhes of Hens guts half a dram*.

Salt and Caraway-ſeed with a rear Eg, helps concoction, and keeps the Eg from corruption.

Pouders to heat and ſtrengthen the ſtomach, and expel wind and crudities, and cleanſe flegm and filth, are made af the aforeſeid mixed, to be taken alone, or with Broath, Wine, Waters, Juyces, Decoctions, with, or without ſugar; ſomtimes with eight times as much ſugar if they be unpleaſant, and Lozenges or Electuaries. We ſhall ſhew Examples of ſtomach-pouders.

Of Aromaticks alone to heat, we make pouders, the firſt; Take *round Pepper a dram, long Pepper half a dram, Ginger half an ounce, great Cardamoms, Nutmeg, Mace, cloves and Galangal, each a dram; Cinnamon half an ounce*.

The ſecond is more compound by adding to the former, *the leſſer Cardamoms, Zedoary, Wood-aloes, or yellow Sanders, Spike, each half a dram; Cubebs, ſaffron, each a ſcruple*.

The third: Take *Cinnamon an ounce, Ginger half an ounce, great cardamoms half a dram, round Pepper a ſcruple, Nutmeg, Mace, Galangal, each two drams; cloves three drams*.

Of this Pouder with ſugar a pound, you may make Lozenges; ſome leave out the Pepper and cardamoms; ſome add cubebs, and alter proportions.

Or we may uſe the ſpecies Diacinamomi of *Meſue*, which hath beſides the other Wood-aloes, Saffron, Elicampane, and Musk.

A fourth leſs healing and more ſtrengthning. Take *calamints, Mints, Marjoram, Thyme, ſavory, each a dram; Liquoriſh a dram and half, Roots of Maſterwort, Elicampane, and Pellitory in flegmatick perſons, each half a dram; Aſarum-roots, dryed Citron-peels, each a ſcruple*; with *red Roſes two drams*, make a pouder.

A fift Pouder of ſeeds to expel wind. Take *coriander-ſeed, Aniſe-ſeed, each half an ounce; caraway two drams, cummin,* (if it be not offenſive) *Ameos, ſeſely, ſiler-mountain, Lovage-ſeeds, each half a dram*.

The ſixth very hot: Take *round and long Pepper, each half an ounce; Ginger a dram, Fennel, and Aniſe-ſeeds, and tops of Thyme, each half a dram*; make a pouder.

Or uſe Diatrionpipereon which is hotter, if it be *Galens*; or that of *Meſue* which hath alſo caſſia-wood, Spike, Smallage and Ameos ſeeds, roots of Aſarum and Elicampane.

Or uſe the ſpecies of the Electuary of ſpices, made by *Galen*.

Or the *Diaſpolticon* of *Galen*, which cutteth flegm beſt, it is made of Pepper, Niter, Cummin and Rue.

The ſeventh, not ſo hot as the firſt: Take *Calamints or Mints, Marjoram, Time, Lovage ſeed and of ſiler mountain, each a dram; Pepper and Ginger, each half a dram; Cinnamon a dram and an half*: make a Pouder.

Diacalamintha of *Galen* or *Meſue*, doth the ſame thing.

The eight Pouder, which is alſo a ſtrengthner of the Stomach: Take *red Roſes an ounce, Cinnamon half an ounce, Cloves three drams, Nutmeg, Mace, each two drams; Galangal a dram, long Pepper, great Cardamons and wood Aloes, each half a dram, Zedoary and Spike, each a ſcruple; Liquoriſh two drams*: make a Pouder.

The Aromatical ſpecies of *Gabriel*, ſo much uſed is like this, it is prepared with and without *Musk*, and the *Aromaticum Roſatum* of *Meſue*, to which is added *Cubebs, Troches of Diarrhodon* and *Gallia Moſchata*. And

the *ſpecies Roſata Novella* of *Nicolas*, which hath *Storax*, and the ſpecies of the Electuary of *Citrons* made by *Meſue*, and that of *Musk*.

The ninth Pouder for the ſame: Take *Galangal ſix drams, Calamus, Cloves, Cinnamon, Mace, each two drams; Ginger, both Peppers, great Cardamoms, each half a dram; Spike, wood Aloes, of each a ſcruple; Fennel, Carva, Annis ſeeds, dryed Mints and Marjoram, each two ſcruples*: make a Pouder.

Or inſtead thereof, uſe *ſpecies Diagalangæ* of *Meſue*, which hath *Lovage* and *Calamints* alſo.
